1648, June–October. Swedish Invasion of Bohemia. Hans Christoffer, Count von Koenigsmarck (ancestor of the future French military great, Marshal Saxe, and of George Sand, the French romantic novelist) led an army into Bohemia and besieged Prague. Piccolomini was withdrawn from Bavaria to protect Imperial lands from this more immediate threat. Königsmarck continued the siege, driving off Imperial relief efforts, and was preparing to assault the city in late October.

1648, July–September. Advance to Munich. The withdrawal of Piccolomini permitted Turenne and Wrangel to invest the Bavarian capital. But with peace negotiations close to culmination, Cardinal **Giulio Mazarin** of France (Richelieu's successor) ordered the allied army to withdraw into Swabia.

1648, August 10. Battle of Lens. Conde again commanded the northern army. He decisively defeated Archduke Leopold William in a final Hapsburg-Spanish attempt to invade France through Artois. Spanish military ascendancy was ended north of the Pyrenees.

1648, October 24. Peace of Westphalia. The Empire and France signed the **Treaty of Münster;** the Empire, Sweden, and the German Protestants signed the **Treaty of Osnabrück.** (The war between France and Spain continued; see p. 615.) Sweden received an indemnity and substantial Baltic coastal territories. France received Alsace, most of Lorraine, and the right to garrison Philippsburg on the east bank of the Rhine. In addition to minor territorial changes among the German principalities, there was a general amnesty, and the sovereign rights of the German princes were recognized by the Empire. Catholic and Protestant states were given complete equality in the Empire, with ownership of ecclesiastical states set as of 1624. Both treaties were guaranteed by France and Sweden.

War of the Grand Alliance, or War of the League of Augsburg, 1688–1697

By 1680, France under Louis XIV threatened to secure hegemony over the continent. Her population, approaching 19 million, was 3 times that of England or of Spain and nearly 8 times that of the United Provinces. The organizational reforms of Louvois, Minister of War, had created the most powerful army in Europe. Under the administrative and financial genius of Colbert (see p. 583), the French Navy was one of the three major powers in the Atlantic and, after the withdrawal of the English from Tangier (1684), was supreme in the Mediterranean. Unlike the United Provinces (the Netherlands) and Spain, France's economy was not dependent upon overseas commerce. Thus, Anglo-Dutch efforts to apply economic pressures on France failed.

Louis's obviously expansionist objectives, particularly his efforts to gain influence over Spain,

had aroused widespread fears. The Emperor **Leopold,** completing a successful war against Turkey, was strengthening the Imperial position in Central Europe to prevent French encroachment. The Protestant princes of Germany (notably **Frederick William** of Brandenburg) had begun aligning themselves with **William of Orange** of Holland in opposition to Louis. And in England, William's largely Protestant supporters were maneuvering to overthrow **James II,** a friend of Louis's.

Louis's revocation of the Edict of Nantes had made it easy for William to establish an anti-French coalition (League of Augsburg; July 9, 1686). Two years later, Louis provoked the League into preparation for war by claiming the Palatinate and meddling in the election of the Bishop of Cologne. Almost simultaneously, a revolution in England brought William of Orange to the English throne.

The war was fought mostly in the Netherlands, and was distinguished by the military incompetence of William of Orange and the naval myopia of Louis. Combat on land generally assumed the form of siege warfare. Naval engagements and maritime policy were essentially reflexes of the campaigns on land. After 9 years of inconclusive combat, economic and political pressures led the antagonists to conclude peace. Though French influence had increased on land, and English at sea, the basic struggles of Bourbon versus Hapsburg and England versus France were still undecided. The principal events were:

1688, September 25. Invasion of Germany. Louis, to encourage Turkey to continue its war with Leopold, sent a French army under the Dauphin into Germany before the German princes could be united in an effective anti-French coalition. Employing Vauban's techniques (see pp. 573–575), the French besieged and captured Philippsburg (October 29). This aggressive thrust, and subsequent devastation of the Rhine territory, consolidated German support of the Emperor.

1688, November–December. Revolution in England. (See p. 611.) The accession of William III immediately reversed England's pro-French foreign policy. An Anglo-Dutch military alliance was concluded, which resulted in Dutch naval support under English command, and English troops in the Netherlands.

1688–1689. Devastation of the Palatinate. To economize forces, Louis evacuated the Palatinate; to prevent the region being used as a base of operations against France, he ordered it devastated. Heidelberg, Mannheim, Speyer, and Worms were destroyed.

1689, April. Louis Declares War on Spain.

1689, May 1. Anglo-French Naval Skirmish at Bantry Bay. Thirty-nine French men-of-war, under Marquis **François de Châteaurenault,** clashed inconclusively with Admiral Earl **Arthur Herbert of Torrington's** 22 sail at Bantry Bay (Ireland).

1689, May 7. England and France Declare War.

1689, May 12. Treaty of Vienna. Alliance between the Netherlands and the Empire against France. England, Spain, Savoy, Brandenburg, Saxony, Hanover, and Bavaria soon subscribed to the provisions, to establish the "Grand Alliance."

1689, August 25. Battle of Walcourt. In Flanders, Prince **George Frederick of Waldeck,** commanding an army of 35,000 (including an English contingent of 8,000 led by **John Churchill, Earl of Marlborough**), defeated a French army under Duke **Louis de C. d'Humières** and Duke **Claude de Villars.** D'Humières was soon replaced by Marshal François de Luxembourg.

1690, July 1. Battle of Fleurus. In a bold double envelopment, using his cavalry superbly, Luxembourg with 45,000 men defeated Waldeck's English, Spanish, and German force of 37,000. The French lost 2,500 killed; the allies lost 6,000 dead and 8,000 prisoners. Luxem-

bourg wished to exploit the victory by striking deep into the Netherlands and Germany, but Louis ordered him to keep abreast of other French armies maneuvering on the Meuse and Moselle.

1690, July 10. Naval Battle of Beachy Head. Admiral de Tourville with 75 ships decisively defeated Torrington's Anglo-Dutch fleet of 59 sail. Torrington, who had wished to avoid battle against a superior force in order to maintain a "fleet in being," had been ordered to fight by the Admiralty. The allies lost 12 warships. Subsequently, Torrington was tried; he was unanimously acquitted, but was dismissed from his command. Louis rejected recommendations that he should exploit the victory by sending a powerful army to Ireland and by pressing vigorously at sea for control of the Channel. This was the worst military decision he ever made. Britain and the Netherlands feverishly built up naval strength unhindered.

1690, August–September. French Advance in Savoy. At the **Battle of Staffarda** (Piedmont), Duke **Victor Amadeus II** of Savoy was defeated by a French army commanded by **Nicolas de Catinat** (August 18). The French advanced through Savoy with little resistance.

1690, October. Recapture of Belgrade by the Turks. **(See p. 641.)** This eliminated the possibility of an early peace on the eastern front; Leopold's main army remained tied down on the Danube.

1691, April 8. Capture of Mons. In Louis's presence, Luxembourg stormed Mons. William, operating ineptly from Brussels, failed to interfere. Luxembourg soon took Hal (June).

1691, July. Death of Louvois.

1691, September 20. Battle of Leuze. After a rapid night march, Luxembourg's cavalry routed Waldeck's army as it prepared to retire to winter quarters.

1691. Other Operations. In Piedmont, Catinat continued to progress. In Spain, the French Army of Catalonia, commanded by Duke **Jules de Noailles,** captured Ripoli and Urgel (September).

1692, May 25–June 5. Siege of Namur. It was taken by Vauban, under Louis's direct command, and supported by Luxembourg. William, attempting to relieve the besieged Dutch-Spanish-German garrison, was hampered by persistent rains and the flooding of the Mehaigne (a tributary of the Meuse).

1692, May 29–June 3. Naval Battle of La Hogue (Barfleur). De Tourville's fleet of 44 men-of-war and 38 fireboats, mounting 3,240 guns, engaged an allied force of 63 English and 36 Dutch warships and 38 fireboats, mounting 6,736 guns, under the command of Admirals **Edward Russell** and **George Rooke.** Unfavorable winds had prevented the French Toulon fleet from making a planned juncture with de Tourville. Despite inferiority in numbers, the French attacked and were decisively defeated, losing 15 men-of-war. This was the decisive battle of the war. Louis abandoned plans for an invasion of England by 30,000 troops under Marshal **Marquis B. C. de Bellefonds.** Henceforth, England dominated the Channel—although French privateers, like **Jean Bart,** inflicted severe losses on English shipping.

1692, July 24–August 3. Battle of Steenkerke. After unsuccessful attempts to engage Luxembourg throughout June and July, William attacked the main French force entrenched at Steenkerke. The allies, after initial success, were beaten back by French counterattacks. William ordered withdrawal under cover provided by the British Guards. Each army lost about 3,000 men.

1693, June 27–28. Naval Battle of Lagos. Off Lagos, de Tourville intercepted an Anglo-Dutch convoy proceeding toward Smyrna. He defeated Rooke's protective squadron, then destroyed nearly 100 of the 400 allied vessels.

1693, July 29. Battle of Neerwinden (Landen). William, entrenched near Landen with 70,000 troops, dispatched 20,000 to support Liége, which was threatened by de Noailles. Luxembourg with 80,000 men attacked the allied position. After 3 unsuccessful assaults, the French cavalry penetrated the defenses; William's army was routed. The French suffered 9,000 casualties, the allies 19,000. Again

Luxembourg failed to pursue, or William might have been forced to sue for peace.

1693, October 4. Battle of Marsaglia. Catinat's French army again decisively defeated the Duke of Savoy. He advanced into Piedmont.

1693, October 11. Capture of Charleroi. The French consolidated control over the Sambre southwest of Namur.

1693. Other Operations. In Catalonia the French took Rosas. The allied cause suffered another setback when an Austrian attack on Belgrade was repulsed (October; see p. 641).

1694, May–August. Operations in Catalonia. De Noailles captured Palomas, Gerona, Ostabich, and Castel-Follit. Supported by de Tourville's fleet, he besieged Barcelona.

1694, June–November. The English Fleet in the Mediterranean. In order to cut the French interior lines by land and sea, Russell, reappointed commander after an Admiralty purge, sailed for the Mediterranean (June). The arrival of the English fleet caused the French fleet to withdraw to Toulon harbor; de Noailles' army raised its siege of Barcelona.

1694, July. The English Bombard Dieppe and Le Havre.

1695, January. Death of Luxembourg. The undefeated French general was succeeded by the incompetent Duke **François de N. de Villeroi.**

1695, June–September. William's First Successful Campaign. He captured Dixmude and Huy (June). He then besieged Namur, manned by 14,000 troops under Duke **Louis de Boufflers.** After 2 months the French surrendered (September 1). The economics of the campaign were more significant than its uninspired military character; it was financed by the proceeds of the newly established Bank of England (1694).

1696, Spring. French Invasion Threat. The Mediterranean fleet, under Sir George Rooke (he succeeded Russell, September, 1695), was recalled to England early in the year when the appearance of Marquis **François L. R. de Châteaurenault's** fleet near Brest stimulated fears of invasion. This diversion enabled de Tourville to proceed from Toulon to Brest, increasing the apparent threat to England.

1696, June. Amphibious Failure at Camaret Bay. A landing near Brest, under English General **Thomas Talmash,** found the French prepared, and failed completely.

1696, June. Treaty of Turin. The Duke of Savoy reached an accord with Louis, who returned all conquests. This neutralized Italy and enabled Catinat to proceed to the northern front with his 30,000 soldiers.

1696, Summer-Fall. William Immobilized in Flanders. The French, reinforced by troops from Savoy, thwarted William's inept offensive efforts. Discouraged, he began secret peace negotiations with Louis (1696–1697).

1697, May–August. French Successes in the Mediterranean. With the English fleet gone, the French Navy raided Cartagena (May) and seized Barcelona (August). Leopold decided to seek peace.

1697, September 20–October 30. Treaty of Ryswick. France, Spain, England the Netherlands and the German principalities agreed to restore all territories acquired since 1679 (**Treaties of Nijmegen,** see pp. 620). Significantly—in anticipation of his Spanish ambitions—Louis surrendered fortifications at Mons, Luxembourg, and Courtrai to Spain and permitted the Netherlands to assume control of vital strongholds in the Spanish Netherlands (for example, Namur and Ypres). In the following month, Leopold and Louis arrived at a similar accord (October 30).

WESTERN EUROPE

England, Scotland, and Ireland

The Early Stuarts, 1603–1642

1603–1625. Reign of James I. James VI of Scotland, son of Mary Queen of Scots.

1604, October 24. Unification of Britain. The union of the crowns of England and Scotland eliminated internal frontiers and, consequently, a primary need for a standing army; this reduction of the crown's forces augmented Parliamentary power at the expense of royal authority.

1624–1625. English Participation in Thirty Years' War. James decided to assist Frederick in the Thirty Years' War (see p. 586). James also agreed to provide financial support to the operations of Christian IV of Denmark in Germany. Ernst Mansfeld, a German mercenary, led a small English force of 1,200 men to the Netherlands. There the expedition collapsed, suffering severe hardships as a result of inadequate training, supplies, and equipment. Spain considered dispatch of this expedition as an act of war.

1625–1649. Reign of Charles I.

1625, October 8. Failure at Cádiz. An ill-equipped force of 8,000, under Viscount **Edward Cecil of Wimbledon,** was repulsed.

1626–1630, April 24. Anglo-French War. The **Duke of Buckingham's** expedition to the **Isle of Ré,** near La Rochelle, to support Huguenot forces besieged by Richelieu was a fiasco (1627). Since Parliament refused to appropriate funds, Charles secured a forced loan to finance the French campaigns and to satisfy his debt to Christian IV. Buckingham was assassinated while preparing a second expedition against the French (1628).

1628, May. Petition of Right. A parliamentary list of demands and grievances, including protests against royal taxation without Parliamentary assent, the imposition of martial law during times of peace, and the mandatory billeting of troops in private homes.

1630, November 5. Peace with France and Spain.

1639. First Bishops' War. Scottish unrest, stemming from the restoration of church lands (1625) and efforts to introduce an Anglican liturgy into Scottish Presbyterian services, erupted in rioting. Insurgents seized Edinburgh Castle. Charles led an army to the vicinity of Berwick; however, continuing lack of funds, and Scottish military competence (many had fought under Gustavus Adolphus), compelled Charles to agree to a compromise settlement in **Pacification of Dunse** (June 18).

1640. Second Bishops' War. With hostilities renewed in Scotland, Charles convened the "Short Parliament" (April–May, 1640) to secure financial support. When the Commons refused, Charles dissolved Parliament. The Scots defeated Charles's troops at **Newburn** (August 28), then penetrated Northumberland and seized Durham. The **Treaty of Ripon** brought hostilities to a halt (November).

1640–1660. The Long Parliament. Charles, again in need of funds to pay his own army and the Scots, reassembled Parliament (November 3). The presence of Scottish forces in northern England, the crown's pressing monetary needs, and riots in London enhanced the power of Commons. Charles acquiesced in the execution of his Lord Lieutenant of Ireland, the **Earl of Strafford** (see below), and passage of the Triennial Act (May 1641) permitting Parliament to assemble every 3 years without royal initiative.

1641, October. Outbreak of the Irish War. Irish opposition to Strafford's policies and those of his successors culminated in confused armed rebellion, which continued intermittently for nearly a decade (see p. 606).

1641–1642. Prelude to the Great Rebellion. The crown, in desperate financial straits,

required forces to cope with the Irish rising. Puritan dissidents in Parliament, like **John Pym** and **John Hampden,** feared the likely consequences of rejuvenated royal power in the form of a standing army. They secured passage of the **Grand Remonstrance** (December 1), a compilation of grievances spanning Charles's reign. Charles's inept attempt to arrest 5 leaders of Commons (January 3) prompted legislation providing for Parliamentary control of the armed forces and the ouster of ecclesiastics from the Lords. Charles, who had hastily established a military base of operations at York, rejected the bills (March). Parliament reiterated its earlier demands and also demanded Parliamentary consent to the appointment of officers commanding fortifications (June 2). Parliament established a force of 20,000 infantrymen and 4,000 cavalrymen under Earl **Robert Devereux of Essex** (July). Charles began to raise an army at Nottingham (August 22).

The First Civil War, 1642–1646

Royalist and Parliamentary partisanship in the Great Rebellion cut across social, economic, religious, and family lines. The aristocracy, the peasants, and the Anglican establishment in general supported Charles; the emergent middle and commercial classes and the Navy supported Parliament. The north and west tended to be Royalists; the south, the Midlands, and London inclined toward Parliament. At the commencement of the war, Parliament's army was somewhat larger and better equipped and organized. Both forces suffered from the lack of experienced troops (however, both possessed experienced officers, many of whom had served in the Continental war); they were plagued by the reluctance of local militia to leave their home grounds; most critically, both suffered from a dearth of weapons and material. (The Navy's allegiance to Parliament prevented Queen **Henrietta Maria** from shipping supplies for the Royalists from the Continent.) On both sides, superfluous garrisons proliferated; supplies proved inadequate, pay tardy, and recruiting (from 1643, impressment) insufficient. The principal events were:

1642, October. Emergence of Oliver Cromwell. Parliament appointed him to command a military association of 6 counties.

1642, October 23. Battle of Edgehill. Charles with 11,000 men clashed with Essex, who had about 13,000. Prince **Rupert,** son of the Elector Palatine, beginning his dashing career as a leader of the superior Royalist cavalry, drove the Parliamentary cavalry off the field, then pursued. Essex, rallying his forces, counterattacked successfully, but was forced to withdraw when Rupert and the Royalist horse finally returned to the field at night-fall. Essex then fell back toward London. Charles moved his headquarters to Oxford.

1642, October 29. Charles Marches on London.

1642, November 13. Battle of Turnham Green. Following a skirmish at Brentford (November 12), Essex, reinforced by London militia to about 20,000, faced the king. After a brief skirmish Charles withdrew to Oxford.

1643, March–September. Widespread Inconsequential Strife. Oliver Cromwell had the best of a cavalry engagement at **Grantham,** east of Nottingham (March). The Cavaliers (Royalists) were successful in Yorkshire under Duke **William Cavendish of Newcastle** (April–July). Royalists under **Sir Ralph Hopton** were successful against **Sir William Waller** at **Stratton** in Cornwall (May), at **Lansdowne** near Bath (July 5), and **Roundway Down,** near Devizes (July 13). Rupert won a victory at **Chalgrove Field** near Oxford

(June 18), and captured Bristol (July 26). Charles was repulsed from Gloucester (August 5–September 10).

1643, August 10. Conscription. Parliament empowered local authorities to impress troops. The Royalists followed suit.

1643, September 20. First Battle of Newbury. Charles, having retreated from Gloucester to Newbury in the face of Essex's advance, turned to fight an inconclusive engagement. He then returned to Oxford.

1643, September 25. The Solemn League and Covenant. To enlist Scottish military support, Parliament agreed to protect Presbyterianism in Scotland, with virtual establishment of Presbyterianism throughout Britain.

1644, January. Participation of Scottish Rebels. A Scottish army (18,000 infantrymen and 3,000 cavalrymen) under Earl **Alexander Leslie of Leven** crossed the River Tweed.

1644, January. "The Cessation" in Ireland. Charles concluded a temporary peace with the Irish confederation, permitting him to withdraw his troops from Ireland and to recruit Irish Royalists as reinforcements for his cause in England.

1644, January 25. Battle of Nantwich. Irish Royalists and local troops laid siege to Nantwich, Parliament's only stronghold in Cheshire. Parliamentary reinforcements, led by Sir **Thomas Fairfax,** routed the Irish, almost half of whom joined the victorious force.

1644, February–April. Operations in the North. The Scottish army advanced into northern England, ending Cavalier supremacy in Yorkshire. Newcastle marched to stop them (February). Taking advantage of Newcastle's move to the north, Fairfax defeated his lieutenant, Lord **Bellasis,** at the **Battle of Selby,** thus threatening Newcastle's rear (April 11).

1644, March–June. Operations in the South. Waller finally defeated his rival Hopton at the **Battle of Cheriton** (March 29) near Dover. Charles outmaneuvered Essex and Waller, inflicting a sharp defeat on Waller at **Cropredy Bridge,** north of Oxford (June 6).

1644, April–June. Siege of York. Newcastle moved from Durham to York (April 18), where he was besieged by the Scots and Fairfax. Charles ordered Rupert to proceed from Shrewsbury with reinforcements (May 16). Rupert's advance caused the Parliamentarians to abandon the siege and to march to the vicinity of Long Marston in an attempt to head off the Royalists. There they were joined by a Roundhead (Parliamentarian) army under Earl **Edward Montagu of Manchester,** with Cromwell second in command. Newcastle joined Rupert and the joint force (under Rupert's command) proceeded to Marston Moor, 7 miles west of York.

1644, July 2. Battle of Marston Moor. Both armies had approximately 7,000 cavalry; however, Parliament had about 20,000 infantry to the Royalist 11,000. Manchester, Fairfax, and Leven jointly commanded the Parliamentary-Scottish army, with Manchester evidently "first among equals." Cromwell, commanding his "Ironsides" and a Scottish force, defeated part of Rupert's cavalry on the Royalist right. On the left, however, Lord **George Goring's** horse turned back Fairfax and smashed the Scottish infantry, but became disordered in the process. Cromwell, swinging his disciplined Iron-sides to their right, routed Goring, then helped the remaining Parliamentary infantry crush the Royalist center. The Royalists lost nearly 3,000 dead, the Roundheads nearly 2,000. The defeat led to the capitulation of Royalist northern strongholds like York (July 16) and Newcastle (October 16). Rupert, with 6,000 survivors, escaped through Lancashire to rejoin Charles in the south.

1644, July–September. Charles's Success in the South. After Cropredy Bridge, Charles took the initiative from his opponents. He suddenly turned southwest, where Essex was attempting to consolidate Parliamentary control. Essex, trapped at **Lostwithiel** in Cornwall, escaped with his cavalry, leaving 8,000 infantry and his artillery to surrender (September 2). Southwest England was held for the Royalists. However, Manchester and Cromwell now joined Waller to threaten Charles's hold on south-central England (September–October).

1644, August 28–1645, September 13. Campaigns of Montrose in Scotland. James

Graham, Marquess of Montrose, raised the royal standard at Blair Atholl on August 28. His army numbered just 3,000 men and consisted of a crack brigade of Irish Macdonnels under **Alasdair MacColla,** Highland infantry, and a handful of cavalry. In a brilliant campaign, marked by victories at **Tippermuir** (September 1), **Aberdeen** (September 13), **Inverlochy** (February 2, 1645), **Auldearn** (May 9), **Alford** (July 2), and **Kilsyth** (August 15), Montrose defeated several armies of the Covenant, its militia, and allies. His final lopsided victory over General **William Baillie** at Kilsyth (6,000 casualties in a force of 6,800; the Royalists lost a few dozen men) threatened Edinburgh and alarmed Scottish commander the Earl of Leven in England. General David Leslie and a powerful force, mostly cavalry, were detached from Leven's army to crush Montrose. Montrose's force was surprised at **Philiphaugh,** near Selkirk, and surrendered on terms after a brief resistance (September 13, 1645). The Covenanters then massacred them, including the camp followers. Montrose escaped, but the Royalist cause in Scotland collapsed.

1644, October 27. Second Battle of Newbury. Charles, with about 10,000 men, met Manchester, Waller, and Cromwell, with about 22,000. The inability of the numerically superior Parliamentary forces to coordinate their attacks allowed Charles to retreat to Oxford after an inconclusive battle. Manchester refused to pursue.

1645, January–February. Treaty of Uxbridge. A brief truce, terminated when Charles rejected a set of Parliamentary proposals.

1645, January–March. The New Model Army. Meanwhile, Cromwell, who had long felt the need for major military reform, had urged Parliament to adopt a "frame or model of the whole militia," a proposal accepted by the Commons (January) and the Lords (February), which provided for a standing army of 22,000. The force was to be raised by impressment and supported by regularized taxation. The infantry, 12 regiments, totaled about 14,000 men; the cavalry's 11 regiments totaled 6,600 men, plus 1,000 dragoons (mounted infantrymen). Artillery, a stepchild of the British weapons family, underwent some reorganization and expansion, largely on the basis of the continental experience. Modeled loosely after Cromwell's Ironsides, the new scheme introduced several innovations as well as vastly improved organizational principles. For the first time, red garb became the general uniform for a British army. Most significantly, the traditional aversion of the local militia to campaigns beyond their home territories was overcome in the creation of this mobile professional force.

1645, April 3. The Self-Denying Ordinance. It required members of Parliament to relinquish their civil and military commands. Fairfax succeeded Essex as captain general; Cromwell was granted a dispensation and became lieutenant general while still a member of Commons.

1645, May 7, Royalist Dissension. Charles resolved the growing rivalry between Rupert and Goring by splitting his 11,000-man army, sending Rupert to the north and Goring to the west. Parliament sent Fairfax to besiege Oxford.

1645, May 31. Battle of Leicester. Despite severe losses, the Royalists carried Leicester by storm in an effort to divert Fairfax from Oxford. Charles then proceeded toward Oxford. Parliament ordered Fairfax to raise the siege of Oxford and to "march to defend the association." Fairfax was reinforced by a cavalry contingent under Cromwell (June 13). Charles, surprised by the approach of the Roundheads, elected to fight.

1645, June 14. Battle of Naseby. Charles had about 7,500 men; the Parliamentary strength was 13,500. Rupert's Royalist cavalry defeated the Parliamentary left and charged off the battlefield in pursuit. Cromwell, whose mounted charge had defeated the cavalry on the Royalist left, exploited the prince's reckless pursuit and smashed the Royalist infantry, most of whom surrendered. Upon their return to the melee, Rupert's men refused to engage the Ironsides. Charles fled to Leicester. The victory of Naseby contributed decisively not only to Charles's eventual defeat but also to the ascendancy of Cromwell and the Independents within the Parliamentary party.

1645, June–1646, May 5. Royalist Collapse. In the southwest Fairfax and Cromwell overwhelmed Goring at **Langport** (July 10). Royalist strongholds (Leicester, Bristol, Bridgewater, Winchester) yielded one by one. After his final field force was crushed at **Stow-on-the-Wald,** west of Oxford, Charles surrendered to a Scottish, in preference to a Parliamentary, force (May 5, 1646).

Interlude between Civil Wars, 1646–1648

Charles's Scottish captors turned him over to Parliament for £400,000, about one-third of the amount owed the Scottish army (January 1647). Meanwhile, tension between Presbyterians in Parliament and Puritan Independents in the army became an overt schism. Parliament voted virtual disbandment of the army, which was owed several months' pay. The army refused to disband (March). Under Cromwell's virtual leadership, the army seized Charles and occupied London. Cromwell pressed the King to accept the army's proposals; Charles meanwhile conducted clandestine negotiations with the Scottish Presbyterians (August–October). The King escaped to the Isle of Wight (November). He concluded an **Engagement** with the Scots, promising to impose Presbyterianism for a 3-year period in return for military support in a campaign to regain his kingdom (December 26). Parliament renounced allegiance to the king (January 15, 1648).

The Second Civil War, 1648–1651

Overthrow of the Monarchy

Churchill has written: "The story of the Second Civil War is short and simple. King, Lords and Commons, landlords and merchants, the City and the countryside, bishops and presbyters, the Scottish army, the Welsh people, and the English Fleet, all now turned against the New Model Army. The Army beat the lot."* The principal events were:

1648, March—August. Uprisings in Wales and South England. Dissident Welsh Parliamentarians proclaimed allegiance to the King. Cromwell besieged and captured their stronghold at Pembroke Castle (July). A simultaneous revolt in Kent and Essex was suppressed by Fairfax; the insurgents took refuge at Colchester, but eventually capitulated (August).

1648, July—August. Scottish Invasion. James, Duke of Hamilton led 24,000 Scots into England. From south Wales, Cromwell marched with 8,500 men toward Wigan and Preston. He moved too fast for his artillery to keep up; the Scots had no artillery. Although numerically superior, the Royalists were poorly equipped (they were compelled to gather horses en route to serve as ammunition carriers); moreover, Hamilton permitted his units to straggle for nearly 50 miles.

1648, August 17–19. Battle of Preston. Cromwell attacked Hamilton's advance guard at Preston, defeating the Scottish-Royalist contingents in detail in 2 days of hand-to-hand combat, in which the main reliance of each side was on its pikemen. The Royalist survivors were split into disorganized bands; the army was supreme in England.

1648, August—December. Army against Parliament. Learning that Parliament reopened negotiations with Charles (July), the Army occupied London and seized the King in order to bring him to trial. When Parliament defied the military, Colonel **Thomas Pride**'s

* *History of the English Speaking People,* Vol. 2, p. 274.

troops prevented the entry of over 100 members of the Commons ("Pride's Purge," December 6–7). Those members permitted to sit (the "Rump Parliament") instituted a High Court, which tried the king for treason.

1649, January 30. Execution of Charles. After a summary trial by the Army-dominated Rump Parliament, the King was beheaded. The Crown was abolished and a Commonwealth established under military control.

The Irish Campaign, 1649–1650

From 1641 to 1649, against the background of Royalist-Roundhead conflict in the south, Ireland was subject to incessant strife between the English Protestant Royalists, who held Dublin under Earl **James Butler of Ormonde,** and Irish dissidents. In turn, the Irish rebels were split into factions—a Catholic confederacy, led by Papal Nuncio Archbishop **John Rinuccini,** and the established Anglo-Irish gentry—reflected in the schism between **Owen Roe O'Neill**'s Ulster army and Earl **Richard Preston of Desmond**'s Leinster forces. O'Neill defeated a Roundhead force under Sir **George Monroe** at the **Battle of Benburb** (1647), while Ormonde surrendered Dublin to the Parliamentarians commanded by Colonel **Michael Jones.** Subsequent events were:

1649, August. Royalist-Catholic Alliance. Ormonde, leading the coalition, established tenuous control of Ireland in behalf of the Crown. This was disputed by the Roundheads under Michael Jones.

1649, September. Cromwell to Ireland. Parliament ordered Cromwell to reestablish Commonwealth authority. After quelling a mutiny, Cromwell embarked.

1649, September. Battle of Rathmines. Jones's Roundhead army defeated the Royalists under Ormonde. Thus, when Cromwell arrived, the Catholic-Royalists had taken refuge in fortified towns.

1649, September–1650, May. Cromwell's Reign of Terror. Immediately initiating systematic siege warfare, Cromwell captured the principal Catholic-Royalist strongholds: Drogheda (September), Wexford (October), Clonmel (May 1650). He ruthlessly massacred the defenders of every captured fortress, the most horrible atrocities in British history.

1650, May. Cromwell's Return to England. He entrusted the continuation of the campaign to **Henry Ireton, Edmond Ludlow,** and **Charles Fleetwood.** Two years later the last Royalist stronghold at Galway surrendered (May 1652).

Uprising in Scotland, 1650–1651

1650–1651. King and Covenant. Upon the execution of Charles I, Scottish Presbyterians proclaimed his son, **Charles II,** King of Great Britain. But before accepting Charles, they demanded that he accept the Solemn League and Covenant (see p. 603). Montrose had meanwhile brought a Royalist mercenary force from France. Suspected of being a Royalist without being a Covenanter, he was defeated by the Scots at **Carbiesdale** (April 27, 1650), captured, and executed. Charles, however, after entering into an agreement with the Presbyterians and agreeing to accept the Solemn League and Covenant, was invited to Scotland and crowned (January 1, 1651).

1650, July–September. Cromwell's Invasion of Scotland. Fairfax refused to lead a Scottish expedition. Cromwell was installed as commander in chief and crossed the border with a force of 16,000, including nearly 6,000 cavalry, and proceeded toward Edinburgh. David Leslie, commanding 18,000 Scottish infantrymen and 8,000 cavalrymen, maneuvered cautiously and defensively, his scorched-earch strategy forcing the Roundheads to rely on supply by naval transport. Cromwell vainly sought

a decision. Disease and exposure reduced Cromwell's army to about 11,000; the Roundheads pulled back to Musselburgh and then to Dunbar, the Scottish army ringing the surrounding hills. The Scots then moved at night down from the hills in expectation of an attempted Roundhead evacuation by sea (September 2–3).

1650, September 3. Battle of Dunbar. Cromwell gathered the cavalry on his left and struck at dawn. The surprise charge, led by **John Lambert,** overwhelmed the Scottish right wing. (At midnight, in the mistaken belief that no action was imminent, Leslie had ordered 5 of every 6 Royalist musketeers to extinguish their matches.) The victory was total: the Scots suffered 3,000 killed, while the Roundheads had less than 30 dead and captured 9,000 prisoners. Leslie retreated to Stirling, leaving Cromwell in control of southern Scotland and the route to Edinburgh.

1650–1651. Interlude. The illness of Cromwell, combined with discord between Scottish factions, caused a hiatus.

1651, June–September. Stirling-Worcester Campaign. Upon Cromwell's recovery, and following unsuccessful overtures to the Scots for a pacific settlement, Cromwell led his forces to Perth, threatening Royalist supply lines to Stirling, but also leaving the road to London deliberately unobstructed. Charles, thinking he could regain his throne in a bold move, fell into Cromwell's trap. With Leslie's army he marched southward, proceeding along the west coast (July 31). Cromwell instructed Lambert and his horse to follow the Royalists, ordered another force to move from Newcastle to Warrington, and ordered the Midlands militia northward. Then, after capturing **Perth** (August 2), Cromwell led the main Roundhead force at the rate of 20 miles a day, down the east coast, collecting volunteer militiamen en route. The four English contingents converged on the Scots at Worcester, Cromwell's engineers erecting bridges across the Teame and Severn.

1651, September 3. Battle of Worcester. Outnumbered, but not outfought, 16,000 Scots struggled hopelessly against 30,000 English, of whom 20,000 were the New Model Army. Few survivors reached Scotland, among them Charles II, who had fought with distinction. But he was soon forced to flee to France. Scattered Royalist strongholds held out until the capitulation of Dunettar Castle in May, 1652. The Civil Wars were ended.

The Commonwealth, 1649–1660

1649–1652. Naval Reform. Under Cromwell, zeal for military reform found expression in the Navy as well as the New Model militia. During the life of the Commonwealth, 207 ships were added to the Navy (40 between 1649 and 1651). The Royalist office of Lord High Admiral and the wartime Parliamentary Navy Board were replaced by the Committee of Admirals (1649). The committee improved food and instituted regularized wages and an incentive system of "prize money" for the capture or destruction of enemy vessels. It appointed three "Generals at Sea," former land commanders during the Civil War—**Edward Popham, Richard Deane,** and **Robert Blake**—the most important being Blake. The committee was transformed into the Commissioners of the Admiralty (1652); this body produced the original Articles of War.

1651, October 9. First Navigation Act. This anti-Dutch legislation forbade importation of goods transported by ships other than those of England or the vendor country.

First Anglo-Dutch War, 1652–1654

The essentially naval conflict arose primarly from maritime competition, particularly in respect to the East Indies trade.

1652, May 19. Action off Dover (or Goodwin Sands). War began when Blake, patrolling the Channel with 20 ships (later reinforced to over 40) engaged a Dutch fleet under **Maarten Tromp** after he was refused permission to search a Dutch East Indies convoy. The Dutch withdrew after the loss of two vessels.

1652, July. Declarations of War.

1652, September 28. Battle of Kentish Knock. Blake with 60 English ships defeated an equal number of Dutch; personal antagonism of Dutch **Cornelius Witte de Witt**'s subordinates impeded his efforts.

1652, November 30. Battle of Dungeness. Maarten Tromp, restored to command, led a reinforced Dutch fleet of 80 vessels, twice the size of Blake's fleet, in a decisive victory off England's south coast.

1653, February 18. Action off Portland. Blake, with 70 English ships, stalked a Dutch merchant convoy escorted by Tromp's men-of-war. Blake's squadron, separated from the main fleet by a dense fog, was engaged by 80 Dutch sail off Portland, the Dutch retreating upon the appearance of the main English force (February 18).

1653, February 20. Battle of Beachy Head. A 2-day running fight culminated in a bitter battle. Tromp escaped with difficulty after losing 17 men-of-war and over 50 merchant vessels. The English lost about 10 warships. Blake was badly wounded.

1653, March. First Issuance of the Fighting Instructions. This officially provided for line-ahead formations to make optimal use of the broadside.

1653, June 2–3. Battle of the Gabbard Bank. An English fleet, commanded by Deane and **George Monck** (another general turned admiral), followed the Fighting Instructions in an engagement with Tromp. The arrival of Blake with 13 ships and their subsequent loss of 20 vessels caused the Dutch to withdraw. The English pursued to the Dutch coast.

1653, June–July. Blockade of the Netherlands. Finally Tromp managed to engage Monck in a diversionary action, slipped away, and joined Cornelius Witte de Witt at sea (July 25).

1653, July 31. Battle of Scheveningen (or Texel). The combined Dutch fleet of 100 ships attempted to shatter the blockade. After a preliminary inconclusive engagement (July 30), the English fleet under Monck, about equal in strength, won a bitter 12-hour contest. Tromp and 1,600 other Dutch sailors were killed and the Dutch lost 30 men-of-war. English losses were less than half as great. There were no other operations of significance.

1654, April 5. The Treaty of Westminster. Holland indemnified England and agreed to respect the Navigation Act.

COMMENT. *This conflict was of particular interest not only because of the official introduction of line-ahead, close-hauled formations with 100-yard intervals separating ships but also in light of the English government's use of propaganda to consolidate public support.*

Struggle Between Army and Parliament, 1653–1660

1653, April 20. Dissolution of the Rump. The growing schism between the Army and the Rump—culminating in Parliamentary proposals to drastically reduce the military establishment—led Cromwell to dissolve the assembly and the council of state, and to establish a new Council and the Little, or "Barebones," Parliament.

1654–1655. Operations against the Tunisian Corsairs. Blake, with 24 ships, was ordered to the Mediterranean (November). After securing an indemnity from the Grand Duke of Tuscany, Blake engaged the corsairs, winning a brilliant victory at **Porto Farina.**

1655, March–May. Penrudock's Revolt. Colonel **John Penrudock** led a short-lived Royalist revolt in Wiltshire.

1655. Military Reorganization. Cromwell organized England and Wales into 11 military districts, each supporting an armed force (fi-

nanced by 10 percent taxes on Royalist property) and commanded by a major general.

1655. Capture of Jamaica. During underclared hostilities with Spain, an expedition of 2,500 soldiers, ill equipped, poorly disciplined, and afflicted with dysentery, commanded by Admiral William Penn and General **Robert Venables,** earlier dispatched to Barbados (December 1654), seized Jamaica (May). This led Spain to declare war.

1656–1659. Anglo-Spanish War. England joined France in an attempt to challenge Spanish hegemony over the Indies (see p. 615).

1656, September 9. Capture of Spanish Treasure Fleet. Seized by Captain **Richard Stayner** off Cádiz.

1656–1657. Blake's Last Victories. During the winter Blake successfully imposed one of the first extensive naval blockades in history on the Spanish coast. In the spring, in the most effective action of the war, he took his fleet into **Santa Cruz** harbor (Tenerife, Canary Islands) and destroyed 6 treasure transports, 10 escorts, and 6 forts (April 20, 1657). He died on the return voyage to England. (For land operations, see p. 615).

1658, September 3. Accession of Richard Cromwell. Upon the death of Oliver Cromwell, his son was proclaimed Lord Protector. Relations between the Army and the Parliament (convened in January 1650) deteriorated. After a military show of force, Cromwell dissolved the Short Parliament (April 22).

1659, May 7. The Rump (Long) Parliament Reconvenes. Richard Cromwell, unable to control either Army or Parliament, resigned. The Army, suppressing Royalist uprisings, seized control and dismissed Parliament (October).

1659, November 7. Treaty of the Pyrenees. (See p. 616.)

1660, February 3. Monck Assumes Control. In response to popular dissatisfaction with the extramilitary activities of the Army, Monck seized power. He restored the Rump Parliament and the ascendancy of civil over military authority (February–March 1660).

The Later Stuarts, 1660–1700

1660, May. The Restoration of Charles II. Charles II returned to the throne, thanks to the support of Monck. Prince James, Duke of York, was appointed Lord High Admiral (later assisted by efficient Samuel Pepys) and Monck Captain General. The Army was reduced to 5,000 men (October). A Covenanters' revolt in Scotland was easily suppressed a few years later (1666).

Second Anglo-Dutch War, 1665–1667

Again commercial competition fostered Anglo-Dutch conflict. In 1663, the English had attacked the source of the Dutch slave trade, the West African ports (October), and the following year seized New Amsterdam (see p. 663).

1665, May. Declaration of War. This followed Dutch recapture of the African ports and **Michiel de Ruyter's** attack on Barbados.

1665, June 3. Battle of Lowestoft. Lord **Jacob van Wassenaar Opdam** led a Dutch fleet of over 100 ships in the seizure of English supply vessels returning from Hamburg. A powerful English fleet of 150 ships, commanded by Prince James (assisted by Prince Rupert, Sir William Penn, and Earl **Edward Montagu of Sandwich**), defeated Opdam in a sanguinary battle, in which Opdam, Dutch Admiral **Kortenaer,** and English Admiral **John Lawson** were killed. Over 30 Dutch vessels were sunk. **Cornelis Tromp** (son of Maarten Tromp) skillfully covered the Dutch retreat. James's refusal to pursue the survivors led to his ouster from command; he was succeeded by Sandwich.

1665, August. Battle of Bergen. Sandwich, pursuing a valuable Dutch merchant convoy from the Indies into Bergen harbor, was

repulsed by Danish shore batteries. England declared war on Denmark. de Ruyter arrived soon thereafter and escorted the convoy to Texel.

1666, January. France Enters the War against England. (See p. 616.)

1666, June 1–4. Four Days' Battle. Monck, commanding 80 sail, detached Prince Rupert's squadron of 25 ships to intercept a French force mistakenly believed to be arriving from the Mediterranean (late May). De Ruyter sailed against Monck with 80 ships. The Four Days' Battle commenced off the North Foreland with an English attack (June 1); the arrival of Dutch reinforcements caused Monck to begin withdrawal (June 2). Rupert's squadron after being delayed by adverse winds returned (June 3, evening). Following a fierce engagement, in which 20 English ships were lost, Monck and Rupert retreated to the Thames (June 4), which de Ruyter blockaded.

1666, July 25. Battle of the North Foreland.* Having repaired and refitted, Monck attacked, broke the blockade, and defeated de Ruyter, who lost about 20 ships. Monck proceeded to the coast of the Netherlands and attacked **Vlie Channel,** destroying 160 anchored merchantmen.

1666, August–1667, June. Peace Negotiations. The Dutch were now as ready for peace as were the British, still suffering from the Great Plague (1665–1666). While negotiations were in progress, Charles, responding to the effects of the Plague and the Great London Fire (September 2–9, 1666) and against Monck's adamant advice, moored the fleet and disbanded the crews. The Dutch made a token gesture at disarmament.

1667, June. De Ruyter's Raid in the Medway. The Dutch fleet, in a surprise raid into the Thames estuary, advanced up the Medway to within 20 miles of London, devastating shipping and several men-of-war en route. This highly effective strike and the ravages of the domestic catastrophes led England to seek peace in earnest.

1667, July 21. Treaty of Breda. The terms were a standoff, slightly in favor of the Dutch, who did, however, acknowledge English possession of New Amsterdam. England received some West Indies islands from France; France received Acadia from England (see p. 661).

1668, January 13. The Triple Alliance. (See p. 617.) Prompted by English, Swedish, and Dutch fears of French aspirations in the Spanish Netherlands.

1670, May. Treaty of Dover. Charles executed an about-face and concluded a secret treaty with Louis XIV. This provided for English naval support of proposed French operations against the Netherlands (and the establishment of Roman Catholicism in Britain) in return for 200,000 per annum. The ships of the Royal Navy were hurriedly put back in commission.

* Sometimes called St. James' Day Battle.

The Third Anglo-Dutch War, 1672–1674

This was a deliberately provoked war of aggression by England and France. Holland had no desire to fight either nation, and certainly not both simultaneously.

1672, March 13. English Attack on Dutch Smyrna Convoy. Sir **Robert Holmes** attacked Dutch craft in the Channel, but the convoy escaped.

1672, March–May. Preparations for War. (For land operations, see p. 617.) While de Ruyter organized his fleet, British and French fleets, totaling 98 warships, concentrated in the Channel under the command of Prince James and completed their preparations off Sole Bay, Suffolk.

1672, May 28. Battle of Sole Bay. De Ruyter with 75 ships surprised the French and English. The rapid withdrawal of the 35 French vessels under Admiral Count **Jean d'Estrées** enabled de Ruyter to mass his ships against the slightly

smaller English fleet. The arrival of English reinforcements forced the Dutch to retire, but only after they had badly mauled the English. The Duke of York was twice forced to abandon his flagship. Lord Sandwich was killed.

1672–1673. Lull in Naval Actions. Parliament opposed a war of aggression in alliance with France. During an internal political debate the Duke of York was forced to resign as High Admiral because of his conversion to Catholicism. Prince Rupert replaced him.

1673, May 28, Battle of Schooneveld Channel. In preparation for an English invasion of the Netherlands Rupert attacked de Ruyter's fleet in its coastal anchorage. The Dutch were ready. De Ruyter counteratattacked, driving off the British with heavy loss.

1673, June–August. De Ruyter Takes the Offensive. In a series of minor engagements he forced the English fleet to retire to the Thames. His attempt to impose a blockade was frustrated by the outbreak of plague on his ships. An allied fleet then blockaded the Netherlands while the French prepared to invade by land.

1673, August 11. Battle of Texel. William of Orange ordered de Ruyter to sortie to protect an East Indies convoy. The French contingent, after a sharp fight, retired; following a more effective English defensive action, the French returned and the Dutch retreated. De Ruyter, however, had gained a clear-cut victory. He brought the convoy in, and he frustrated allied plans for a seaborne invasion.

1674, February 19. Treaty of Westminster. Due to growing public opposition to the war, the English government made peace. The war between Holland and France continued (see p. 618).

1679. Convenanter Rebellion. A Scottish rebel force defeated a Royalist force under **John Graham, Viscount Dundee** at **Drumclog,** south-central Scotland (June 1). **James Scott, Duke of Monmouth** (illegitimate son of Charles II) led a Royalist army that crushed the rebels at **Bothwell Bridge** (June 22). Monmouth then treated the rebels leniently.

James II and the Glorious Revolution, 1685–1689

1685, February 6. Accession of James II. Upon his death (February 6), Charles achieved a final political victory—the accession of his brother, James II, a Catholic and former Lord High Admiral.

1685, July 6. Monmouth's Rebellion. The Duke of Monmouth, leading a Protestant revolt as pretender to the English throne, landed in Dorsetshire with 82 men. After recruiting considerable local support, he led a desperate attack against a Royal army commanded by **Louis Duras, Earl of Feversham** at **Sedgemoor** (July 6), was repulsed and the rebellion crushed. Monmouth was captured and beheaded.

1685–1688. Unrest in England. English Protestants resented James's efforts to restore Catholicism to equality.

1688, November–1689, February. Accession of William III. Seven Tory and Anglican leaders solicited the assistance of William of Orange, Stadholder of the Netherlands (see p. 624; married to **Mary,** daughter of James II) and his army in countering James's efforts to assert royal authority over the Church of England. William accepted the invitation, with the intention of leading England into the anti-French League of Augsburg (see p. 597). He landed in November and advanced on London. James fled to France (December 11). William and Mary were proclaimed joint sovereigns of England (February 13, 1689).

1689, April 3. Mutiny Act. Renewable semiannually, it extended the control of Parliament over the Army by the grant for 6 months of the right of military commanders to try soldiers by court-martial. Parliament also made the year-to-year existence of the Army dependent on Parliament by passing the Army Act, which provided for the Army's annual appropriation (1689).

The Irish War, 1689–1691

This war, the British phase of the continental War of the Grand Alliance (see p. 597), was the product of disparate motives united by common opposition to William III: James's desire to regain the English throne, Louis's desire to divert William from operations in Flanders in order to secure unopposed access to the Netherlands, and Irish support for a Catholic king against the hated Protestant English.

1689, March–April. James II in Ireland. James, accompanied by a small French force, landed at Kinsale. With the exception of several Protestant strongholds in the north, a Jacobite army of 40,000, under Earl **Richard Talbot of Tyrconnel,** held Ireland. Protestants in Enniskillen and Londonderry immediately affirmed their allegiance to William. James and Tyrconnel proceeded northward.

1689, April–August. Sieges of Enniskillen and Londonderry. Initial English efforts to raise the Irish-French investment failed. Later Captain **John Leake** led a naval convoy with reinforcements through the Londonderry blockade and terminated the siege (August 9–10). Soon after, local militia, commanded by Colonel **William Wolseley,** compelled the Jacobites to raise the siege of Enniskillen.

1689, June–July. Jacobite Rising in Scotland. While the joint Irish-French forces besieged Enniskillen and Londonderry, **John Graham of Claverhouse, Viscount Dundee** ("Bonnie Dundee"), James's leading Scottish partisan, attempted to foment a Jacobite rising in the Highlands. While defeating a Williamite army under Major General **Hugh Mackay** at the **Battle of Killiecrankie** (July 27) Dundee was killed. The next month the Jacobites' new commander, Colonel **Alexander Cannon,** led an advance on Perth, but was checked at **Dunkeld,** by the Earl of Angus's newly-recruited infantry regiment (later the **Cameronians**) in sharp street fighting (August 21). This repulse broke the Highland army, and Cannon's remnants were finally defeated at **Cromdale** (May 1, 1690). Within months, most of the Highland chiefs swore allegiance to William III. The ensuing English pacification of the Highlands was brutal and marked by atrocity, the worst of which was the **Glencoe Massacre** (February 13, 1692). This treatment contributed to further Jacobite risings in Scotland in 1715, 1719, and 1745.

1689, September–November. English Offensives. English troops advanced into Ulster. Meanwhile, under orders from William, a small force led by Duke Friedrich **Hermann of Schomberg** landed near Belfast, but was repulsed at **Dundalk.**

1690, March–July. William in Ireland. William personally led an army of 35,000–40,000, including continental mercenaries, toward Dublin (June). Meanwhile, to the north, James's army—raised to 21,000 by the arrival of a relatively small contingent of French troops under **Antonin Nompar de Caumont, duc de Lauzun** (March)—encamped near the Boyne River.

1690, July 11. Battle of the Boyne. While the central infantry contingents of the 2 armies were engaged indecisively, the much more numerous English cavalry began an envelopment. James, competent and intrepid as an admiral, was unable to shift his Irish horse to block the English envelopment. He fled the field, and to France. His army fought well, and despite severe losses withdrew in good order to continue the war for another year.

1690–1691. William Consolidates. With the exception of western and southwestern Ireland, the island fell before William's advance. On the west coast, the Jacobite stronghold at Limerick, commanded by Earl **Patrick Sarsfield of Lucan,** resisted an English siege throughout the summer and autumn. However, Cork and Kinsale readily yielded to the Earl of Marlborough (September–October).

Louis denied James's request for support in a proposed invasion of England.

1691, July 12. Battle of Aughrim. Godert de Ginkel led a Williamite army against an Irish-French force of 25,000 under the Marquis de **Saint-Ruth,** who was killed. The allied effort collapsed. The English suffered some 700 casualties, while the allied army lost 7,000. This defeat ended James's Irish aspirations and the war, save for the continuing siege of Limerick.

1691, October 13. The Pacification of Limerick. The terms of the surrender of Limerick provided for the voluntary transport of Irish soldiers to France, freedom of religious (Catholic) belief in Ireland, and an amnesty. It was ratified by the English Parliament; however, the predominantly Protestant Irish assembly rejected the liberal terms and enacted a harshly anti-Catholic Penal Code.

COMMENT. *Had Louis XIV fully exploited his command of the sea prior to 1692, and sent an adequate force to Ireland, English and Irish history would have followed a far different course, and France might have achieved military hegemony on the Continent by the end of the century.*

France

The Age of Richelieu, 1610–1642

1610, May 14. Assassination of Henry IV. He had been preparing for war against the Hapsburgs on the Rhine to settle a succession dispute in Jülich-Cleves.

1610–1643. Reign of Louis XIII (9 years old). The queen mother, **Marie de Medici,** was regent during his minority.

1619–1624. Rise of Richelieu. The Cardinal Duke **Armand Jean du Plessis** became virtual dictator of France after political triumphs over the queen mother.

1625. Protestant Revolt. The Huguenots rose under the leadership of Duke **Henri of Rohan** and his brother **Benjamin of Rohan and Soubise.** Based upon La Rochelle, the revolt seemed destined to tear France apart, as had occurred in the previous century. Duke **Henry of Montmorency,** High Admiral of France, defeated a Protestant fleet under Soubise off **La Rochelle,** to begin a partial blockade of that Protestant stronghold (September).

1626–1630. English Intervention. **(See p. 601.)**

1627–1628. Siege of La Rochelle. Richelieu personally supervised the 14-month siege. After 3 months' blockade, a land investment was begun (November). Duke **Henry II of Lorraine and Guise,** with the royal fleet, carried out a maritime blockade while stone dikes were built to close the port. By spring the dikes and sunken hulks blocked the channel. Two English relief fleets were repulsed (May, September). After heroic resistance the garrison capitulated (October 29), and the Protestant city lost all of its former privileges.

1628–1629. Defeat of the Huguenots. With the defeat of the Duke of Rohan by Montmorency in Languedoc, the Huguenots were crushed as a major and semi-independent political-military force in France.

1628–1630. War with Savoy. Richelieu indirectly attacked Spanish power by conquering Savoy and reestablishing control of the Valtelline Valley of the upper Adda River, above Lake Como, leading to the Stelvio Pass, linking the Hapsburg possessions of Milan and the Tyrol, thus blocking the main military and logistical route between Spanish Italy and the Spanish Netherlands. The climactic victory was won by Montmorency at **Avigliana** (1630).

1631–1648. French Participation in the Thirty Years' War. **(See p. 591.)**

1632. Noble Revolt. This was led by the King's brother, and enemy of Richelieu, Duke **Gaston of Orléans.** Montmorency led the rebel army, which was defeated by Marshal **Henry Schomburg** at **Castelnaudary** (September 1). Montmorency was captured and executed.

1642, December 4. Death of Richelieu.

1643, May 14. Death of Louis XIII.

The Early Reign of Louis XIV, 1643–1661

1643–1661. Mazarin's Ministry. Louis was 5 years old. His mother, **Anne of Austria,**

became regent, relying completely on Cardinal **Giulio Mazarin.** (Unlike Richelieu, Italian-born Mazarin was a political cardinal, not a priest.)

The Fronde, 1648–1653

Resentment of nobles and people against taxation and the accumulation of royal power under Richelieu, and even greater resentment of Mazarin, his replacement and continuer of the policies, led to full-scale revolt as soon as the Thirty Years' War was over, even though the war with Spain continued.

1648, July 12. Beginnings of the First Fronde. Demands of the Parliament of Paris, addressed to Louis and his mother, were rejected by Anne and Mazarin.

1648, July–December. Unrest and Rioting in Paris.

1649, January 8. Rebellion of Parliament. Mazarin was outlawed by Parliament, which also ordered seizure of royal lands. The royal family and Mazarin had fled to St.-Germain. Civil war broke out with many nobles, including **Prince Armand of Bourbon and Conti,** on the rebel side.

1649, January–February. Condé Supports the Queen. Partly because of a feud against his younger Bourbon brother, Armand of Conti, the Great Conde led his army against Paris, captured the fortress of Charenton, and laid siege to the city. When Conti and other rebel nobles appealed to Spain for help, Parliament sought peace.

1649, March 11. Peace of Rueil. Parliament dismissed its troops and made peace with the court. Mazarin was reinstated. The Queen declared a general amnesty.

1649, August–December. Friction between Condé and Mazarin. The general, thinking his services warranted a greater voice in affairs, quarreled with Mazarin, then began negotiating with the formerly rebellious nobles.

1650, January 18. Imprisonment of Condé. Mazarin also imprisoned his brother, Conti, and brother-in-law, Duke **Henry of Longueville.**

1650, February–April. The Second Fronde Begins. While nobles raised insurrections in Normandy, Burgundy, and Bordeaux, Turenne took over military leadership of the Fronde, and agreed to join a joint Spanish-Frondist army to invade France from the Spanish Netherlands.

1650, June–October. Inconclusive Maneuvering in Northeastern France. The invasion failed to take advantage of an opportunity to march on Paris largely through mutual suspicions of Turenne and the Spanish leaders.

1650, October 15. Battle of Champ Blanc. Turenne, vainly attempting to relieve besieged Frondeurs in Rethel, was defeated by the much larger and better-trained royal army under Marshal **Cēsar de Choiseul, Comte du Plessis-Praslin.** Turenne escaped with only a small fragment of his army.

1651, February–September. Amnesty and Lull. In a general amnesty the princes were released from prison (February 15) and Turenne returned to Paris. Mazarin fled to Germany.

1651, September. Renewal of Civil War. Condé, Conti, and other nobles again revolted, then captured Bordeaux and made it their base. Condé signed an alliance with Spain. Turenne remained loyal to the crown, but the revolt spread throughout France. Louis called Mazarin back to Paris (November).

1652, March–July. Operations between the Loire and Seine. A most complicated and fruitless series of maneuvers and engagements took place between Turenne and Condé.

1652, July 5. Battle of St.-Antoine. A new royal army, brought up from the frontier, joined Turenne to trap Condé outside the walls of Paris, now benevolently neutral toward the royal cause. Condé, after a bitter struggle, was

on the verge of defeat when fickle Paris opened her gates to let him escape. He then fled to join Spanish forces and imperial troops of the Duke Charles IV of Lorraine invading France's denuded northeastern frontier. Turenne immediately marched north.

1652–1653. Operations North and East of Paris. Turenne outmaneuvered superior forces of the Spanish, Frondeurs, and Lorrainers, protecting the capital while the rebellion collapsed. Louis re-entered Paris (October 21, 1652). Mazarin returned (February 6, 1653). The Fronde was over, though the war with Spain went on.

Continuation of the Spanish War

1653–1657. Condé against Turenne. The pattern of the previous campaign governed. Despite superior strength, Condé, now a Spanish generalissimo, was unable to draw Turenne into combat under unfavorable conditions. In a war of maneuver and siege in northern France, Turenne won a victory at **Arras** (August 25, 1654), and was defeated at **Valenciennes** (July 16, 1656), but slightly outgeneraled his able opponent, who was hampered by Spanish suspicions and lack of cooperation.

1657. Franco-British Alliance. France and England being separately at war with Spain, Cromwell and Mazarin concluded a treaty of alliance whereby their forces were to attack jointly the coast towns of Gravelines, Dunkirk, and Mardyck. Dunkirk was to be ceded to England.

1657, Fall. Capture of Mardyck.

1658, May–June. Siege of Dunkirk. Turenne advanced rapidly from Mardyck on Dunkirk despite opening of the dikes by the Spanish. Investing the city—garrisoned by 3,000 men—he was joined by 3,000 English troops under Sir **William Lockhart.** The arrival of the English fleet boosted his force to 21,000 as siege operations began. Don **Juan of Austria,** viceroy of the Spanish Netherlands, gathered a relief army at Ypres under himself and Condé. This army consisted of 6,000 cavalry and 8,000 infantry plus 2,000 English Jacobites under **James, Duke of York** (later James II), furnished by pretender Charles II of England.

1658, June 7–13. Advance on Dunkirk. Don John and Condé moved into a camp site on the dunes, between beach and pasture lands northeast of Dunkirk.

Battle of the Dunes, June 14, 1658

Turenne decided to seize the initiative by a surprise attack. During the afternoon of the 13th, he collected 9,000 cavalry and 6,000 infantry for battle, leaving 6,000 men guarding the siegeworks. There was some skirmishing before dark.

Early in the morning, just before low tide, Turenne's army—deployed in two lines and a reserve—advanced across the dunes; the English infantry was on the left; the cavalry was divided between his flanks; half on the beach and half in the meadows on the land side of the dunes. Turenne's advance was slow, giving the Spanish time to prepare. This slowness was deliberate because his plan was based upon the changing of the tide.

The Spanish infantry held a line across the dunes, right flank resting on the beach. A cavalry contingent covered the left flank; the bulk of the cavalry was in reserve; none was on the beach, for fear it would be destroyed by fire from the English fleet maneuvering offshore. Don Juan commanded the right, Condé the left. Against Condé's advice, Juan had advanced so rapidly that he had left his artillery behind.

Initial contact was made on the Spanish right, where the English attacked, supported by guns of their fleet. The reserve Spanish cavalry belatedly tried to support the infantry but was badly

beaten by the French left-flank cavalry, led by the Marquis **Jacques de Castelnau.** In the center the French infantry slowly pushed the Spanish back. On the Spanish left, Condé's cavalry attack against the Marquis **François de B. de Créqui** was foiled by arrival of Turenne with cavalry from his left wing. Turenne's stratagem of using the change of the tide on the beach to enable him to carry out a cavalry envelopment around the Spanish land flank was a manifestation of his skilled adaptation of battle formations suited to the peculiarities of the battlefield. The battle, which lasted from 8 A.M. to noon, was a complete victory for Turenne, who only lost about 400 men. Don Juan's toll was 1,000 killed and 5,000 taken prisoner; the Spanish tercios were virtually annihilated. Turenne pursued vigorously until nightfall. Dunkirk subsequently surrendered and was ceded to Cromwell. It remained in English hands until Charles II sold it to Louis XIV in 1662.

1659, November 7. Peace of the Pyrenees. Spain ceded much of Flanders and other frontier regions. The Spanish Empire was crippled, the French monarchy stabilized. Louis XIV married Maria Theresa, daughter of Philip IV of Spain. The following year Condé asked and received the forgiveness of Louis XIV.

*The Personal Reign of Louis XIV, 1661–1700**

Upon the death of Mazarin, who had ruled in his name for almost 18 years, Louis XIV began his personal reign. His theory of government had emerged from the writings of Richelieu, the teaching of Mazarin, and his own experience. He was not inclined to share his authority with anyone—*"L'état, c'est moi."* The nation in turn empathized with the person of the king. Louis's finance minister Jean-Baptiste Colbert sought to balance the need for a strong army with a stabilized and increased wealth. Emulating the Dutch, he promoted commerce and navigation, thereby initiating an extensive colonial policy. The colonial companies were represented to the king as armies participating in an economic war. A virtually new Navy was created for the defense of the colonies, and Vauban constructed great fortified naval bases at Brest, Dunkirk, Le Havre, Rochefort, and Toulon. Colbert had 20 warships in 1661; there were 196 vessels in 1671, and 270 in 1677. The Army was reorganized through the efforts of Louvois and Vauban (see p. 577).

The reorganization of the Army, the creation of the Navy, and the increased wealth were instigated by Louis's ambition for fame and his desire for an increase in territory. His secretary for war, Louvois, was an opportunist who played to Louis's weakness for military expeditions. A feud developed between the practical Colbert, who frowned on military expeditions, and Louvois, who pointed out the failures of commercial enterprises. The most important events were:

1664–1666. Operations against the Barbary Pirates. Because of damage to the commerce of Marseilles, Louis dispatched a naval squadron to bombard Djidjelli in Algeria and made subsequent attacks on Algiers until an agreement was reached with the Dey of Algiers.

1666. War with England. By an agreement of 1662 Louis was obligated to aid the United Provinces in their second war with England (see p. 610).

* The last 15 years of the reign (1700–1715) are covered in the next chapter.

The War of Devolution, 1667–1668

Upon the death of his father-in-law, Philip IV of Spain (1665), Louis demanded the inheritance right of devolution, or succession, and claimed the whole of the Spanish Netherlands. Spain refused; **Charles II** became king (see p. 626).

1667, May 24. Invasion of the Netherlands. Turenne quickly subdued a part of Flanders and Hainault.

1668, January. The Triple Alliance. The United Provinces, England, and Sweden concluded a treaty to check French expansion.

1668, February. Invasion of Franche-Comté. Condé, leading French troops, completed the occupation in 14 days.

1668, March–April. Triple Alliance Demands Peace. Louis entered negotiations.

1668, May 2. Treaty of Aix-la-Chapelle. Franche-Comte was returned to Spain, but France was left with a number of fortified towns on the Spanish Netherlands' frontier and some strongholds in Flanders. The unsettled succession question was deferred.

The Dutch War, 1672–1678

Louis set about isolating the Netherlands from her allies. The Triple Alliance was undermined by the secret **Treaty of Dover** with Charles II of England (May 22, 1670; see p. 610). A similar treaty was concluded with Sweden (1672), as well as treaties with Cologne and Münster.

1672, March. Declaration of War. The French army of 130,000 men, under Louis's personal command, marched down the Meuse, bypassing the Dutch fortress at Maastricht, to establish a base at Düsseldorf, on allied territory. Louis's army was well armed and equipped. The growing French Navy had the support of the English fleet. The Dutch Navy had 130 ships, but the land army in 1671 comprised only around 27,000 men, badly armed and commanded. When danger of war appeared imminent in February (1672), William III of Orange began to raise the effective force to 80,000 men.

1672, May–July. Invasion of the Netherlands. Three columns invaded the United Provinces: Turenne, with over 50,000 men, down the left bank of the Rhine; Condé, with an equal force, down the right bank; Luxembourg, with an army consisting primarily of Louis's German allies (Cologne and Münster), advanced from Westphalia toward Overijssel and Groningen. William and a weak field army attempted to hold the Ijssel-Rhine line, but the French rapidly forced passage at **Tolhuis** (June 12). Nijmegen, Gorinchem, and other towns fell. General Count **Henri L. d'A. Rochefort** led a cavalry raid into central the Netherlands, took Amersfoort and Naarden, was checked at Muyden, then captured Utrecht. The French advance threatened Amsterdam. However, the Dutch people saved Amsterdam by cutting the dikes and flooding the countryside. Meanwhile, Luxembourg had been stopped at Groningen.

1672, August. Revolution in the Netherlands. William of Orange was placed at the head of the government (see p. 625).

1672, August–September. Support for the Netherlands. Fearful of Louis's ambitions, several princes formed a coalition against France: Elector Frederick William of Brandenburg, the Emperor, and Charles II of Spain.

1672, August–September. Dispersion of the French Army. Against the professional advice of Turenne and Condé, Louis now parceled his army into small packets, trying to deal with all of his enemies at once. Turenne had urged that the Germans be smashed first by the concen-

trated French Army. Instead, he was sent to Westphalia, Condé to Alsace, other units to the Spanish Netherlands frontier, and the remainder of the Army waited in the Netherlands for the flood waters to freeze.

1672, September–December. Dutch Raid on Charleroi. William hoped to exploit the French dispersion, but was repulsed.

1672, September–1673, January. Turenne on the Middle Rhine. With forces never exceeding 20,000 men, Turenne out-maneuvered the much larger combined imperial and Brandenberg armies under Count **Raimondo Montecuccoli** and Frederick William. The latter was so discouraged that he sought peace (**Treaty of Vasem,** June 6, 1673).

1672–1673. Winter Operations in the Netherlands. Luxembourg, threatening Leyden and The Hague, was forced to withdraw to Utrecht by a sudden thaw. Condé had similar trouble attempting to take Amsterdam.

1673, June 29. Capture of Maastricht. Louis personally commanded an army of 40,000; Vauban's professional skill overcame the Dutch fortress after a brief siege. Louis then invaded Lorraine and conquered the electorate of Trier (Treves).

1673, July–November. Turenne and Montecuccoli. On advice of Louvois, Louis ordered Turenne, with 23,000 men, to prevent Montecuccoli (who had 25,000) from joining the Dutch. At the same time Turenne was to protect Alsace and do nothing to anger neutral states. In vain Turenne protested that these instructions were inconsistent. He did his best, but able Montecuccoli avoided battle and joined William at Bonn. The allies besieged and captured Bonn (November 12). This isolated Louis's allies (Cologne and Münster), who made peace.

1674, January. Growth of the Coalition. Denmark joined the coalition, many German princes joined the Emperor, the Great Elector (Frederick William of Brandenburg) re-entered the war, and England made peace with the allies by the **Treaty of Westminster** (February 19; see p. 611). Louis withdrew from the Netherlands so as to concentrate against the Spanish Netherlands and Franche-Comté, and to protect Alsace from the Germans.

1674. Other Operations. A French expedition to Sicily surprised the Spanish and gained success. In Roussillon a small French force under Marshal Schomburg repulsed Spanish attacks.

1674, May–June. Campaign in Franche-Comté. Louis, with Vauban providing the professional skill, recovered Franche-Comté in 6 weeks. Besançon fell after a siege of only 9 days.

1674, May–August. Campaign in the Spanish Netherlands. Condé held the line of the Meuse with about 45,000 men. William advanced against him with about 65,000, proposing to invade France.

1674, August 11. Battle of Seneffe. Seeing an opportunity to strike the allied army on the march, Condé attacked boldly with only half of his army and without artillery. The more-numerous allies rallied after an initial setback and recovered some lost ground. Both armies withdrew during the night. Condé, being joined by the remainder of his army, decided to renew the battle next day. But the allies had withdrawn completely; he could justly claim tactical as well as strategic victory. The allied plan of invasion was foiled. Allied losses were more than 10,000 killed, 5,000 captured (mostly wounded), and about 15,000 additional wounded. French casualties were nearly 10,000.

Turenne's Rhineland Campaign, 1674–1675

Turenne was again given the mission of protecting Alsace. The Elector of Brandenburg and a number of other German princes had now entered the war against France. His principal opponents were Imperial Generals **Enea Sylvio Caprara,** Prince **Alexandre-Hippolyte of Bournonville,** and Duke Charles Leopold of Lorraine, assembling armies north and south of Heidelberg.

1674, June 14. Turenne Crosses the Rhine. Deciding to strike before Imperial forces could concentrate, he crossed at Philippsburg.

1674, June 16. Battle of Sinsheim. Caprara and Lorraine had moved with 9,000 men (7,000 being cavalry) to block Turenne's advance. Caprara thought his position behind the Elsenz River was inaccessible. Turenne thought otherwise. He crossed the river, drove the imperial outposts out of Sinsheim, then forced a way up rugged heights to a plateau where Caprara's main force was deployed. After a hard struggle, Turenne won a complete victory. The French lost 1,200 men killed, the imperialists 2,000 killed and 600 captured. Under orders from Paris, Turenne soon thereafter retired back across the Rhine.

1674, July–September. Summer Maneuvers. Reinforced to 16,000 men, Turenne again crossed at Philippsburg (July 3). The allies withdrew behind the Main after an engagement near **Heidelberg** (July 7). Under orders from Paris, Turenne devastated the region between the Main and the Neckar. Then he returned across the Rhine to block a threatened invasion along the Moselle. His army was reinforced to 20,000 men. The allied army, now under Bournonville, crossed and recrossed the Rhine near Speyer, then, while Turenne was occupied to the northwest, seized neutral Strasbourg (September 24). Turenne immediately moved to the vicinity, seeking an opportunity to attack his more numerous, but cautious, foes.

1674, October 4. Battle of Enzheim. Turenne, with 22,000 men and 30 guns, deliberately attacked Bournonville's 38,000, with 50 guns in defensive position covered by entrenchments. One English regiment was there under John Churchill, later Duke of Marlborough. Although his army had been marching for two days and two nights, Turenne held the initiative throughout most of the day, but was unable to drive the allies from their position. He withdrew from the inconclusive battle at the end of the day. The allies withdrew simultaneously. French casualties were about 3,500, those of the allies about 3,000.

1674, October–November. Watchful Waiting. Allied forces in Alsace were augmented to 57,000 by the arrival of the Great Elector. They made their winter quarters in all the towns from Belfort to Strasbourg; Turenne camped at Dettweiler. To mislead the enemy he displayed activity by placing the fortresses of middle Alsace in a state of defense, while he was quietly taking his whole field army (28,000 men) to Lorraine.

1674, November 29–December 29. Advance into Alsace. Turenne marched secretly southward behind the Vosges; in the last stages of the movement, he split his forces into many small bodies to further misguide enemy spies. After having marched over snow-covered mountains, the French reunited near Belfort and hastened into Alsace from the south. Bournonville tried unsuccessfully to stop them at **Mulhouse** (December 29). The scattered Imperial forces could only retreat toward Strasbourg. Turenne's advance continued to Colmar, where the Great Elector stood with forces slightly greater than his.

1675, January 5. Battle of Turckheim. In a battle reminiscent of Enzheim, Turenne attacked vigorously, despite exhaustion of his troops. After perfunctory resistance and light casualties the allies retreated, leaving the field to the victorious Turenne. Thus was completed one of the most brilliant campaigns in military annals.

1675. General Operations. The French recaptured some fortresses in the Meuse Valley and took Liege and Limburg. The expeditionary forces in Sicily continued to be successful, and Schomburg invaded Catalonia.

1675, June–July. Operations in Germany. The dejected Elector had withdrawn to Brandenburg and Montecuccoli resumed command of the Imperial armies. In a war of maneuver east of the Rhine between Philippsburg and Strasbourg, Turenne prevented Montecuccoli from retaking Strasbourg.

1675, July 27. Death of Turenne. Forcing Montecuccoli's more numerous army to withdraw, Turenne was typically preparing to attack the Imperial army in defensive position at Nieder-Sasbach, when he was killed by a cannonball (July 27). Thereupon the French were

driven by Montecuccoli across the Rhine almost to the Vosges.

1675, August–October. Operations in Lorraine. French Marshal Crèqui was defeated and captured by Charles of Lorraine at the **Battle of Conzer-Brucke** (August 11) on the Moselle. The allies then recaptured Trier (September 6) and prepared to invade France. Condè left Luxembourg in charge in Flanders and proceeded to take over the command of Turenne's and Crèqui's armies. Condè forced Montecuccoli to retreat across the Rhine. These 2 men, the best generals of the era after Turenne, both retired from their commands at the end of the year.

1676, January–April. Operations in and around Sicily. After Admiral Marquis **Abraham Duquesne** repulsed De Ruyter's Hispano-Dutch naval attack on Messina (January), French Marshal **Louis Victor de R. Vivonne** defeated the Spanish Army in Sicily in the **Battle of Messina** (March 25) and was named viceroy of Sicily. De Ruyter was defeated by Duquesne and mortally wounded in the **Naval Battle of Messina** (April 22).

1676, April–August. Operations in the North. Again Louis and Vauban conducted the campaign. They captured Condè-sur-l'Escaut (April 26), then maneuvered against William III near Valenciennes. William was repulsed from Maastricht by Schomburg (August). Rochefort still held the Meuse Valley.

1676. Operations in the Rhineland. Crèqui, who had been exchanged, held Lorraine, but lost Philippsburg to the Imperialists (September 17). The French now laid waste the land between the Meuse and Moselle to prevent it from supporting an invasion army. At the end of the year, Charles of Lorraine was engaged in a war of maneuver with Luxembourg on the upper Rhine.

1677. Operations in the North. Against the advice of most of his marshals, Louis approved Vauban's bold plan for an assault on besieged Valenciennes, which was completely successful (March 17). The French then besieged St.-Omer. William's relieving army was defeated by Duke **Philippe d'Orlèans** at the **Battle of Mont Cassel** (April 11) and St.-Omer soon surrendered. During the summer William and Luxembourg carried on an indecisive campaign of maneuver, the French having the better of it.

1677. Operations in the Rhineland. Crèqui drove Charles of Lorraine to the Rhine. Another Imperial army, attempting to cross the Rhine at Philippsburg, was isolated on a river island. Lorraine sent a large relieving force, which was smashed by Crèqui in the **Battle of Kochersberg,** near Strasbourg (October 17). The invested army was then forced to surrender. Crèqui followed up his successes by capturing Freiburg (November 14).

1678. French Successes in the North. Louis captured Ghent and Ypres (March). With his armies generally victorious, but threatened with the intervention of England on the side of the coalition, and informed by Colbert that the war was financially disastrous, Louis decided to make peace. Over William's objections the States General entered into negotations.

1678, July 6. Battle of Rheinfelden. Crèqui defeated the Imperial armies.

1678, July 23. Battle of Gengenbach. Crèqui was again victorious, and seized Kehl.

1678, August 10. Treaty of Nijmegen with the Netherlands. The Netherlands pledged its neutrality for the return of its territories.

1678, August 14. Battle of Saint Denis (near Mons). Presumably unaware that the treaty had been signed, William attacked Luxembourg and was defeated after a fierce struggle.

1678, September 17. Treaty of Nijmegen with Spain. France retained Franche-Comtè, Valenciennes, Cambrai, Cambresis, Aire, St.-Omer, Ypres, Condè, Bouchain, Maubeuge, and other frontier fortresses. Spain received back Charleroi, Binche, Oudenarde, Ath, Courtrai, Limburg, Ghent, and others.

1679, February 6. Treaty of Nijmegen with the Emperor. France received Freiburg and gave up the right to garrison Philippsburg. Charles of Lorraine was permitted to regain his duchy, but refused to accept French conditions.

1679, June 29. Treaty of St. Germain with Brandenburg. The Elector surrendered nearly all of his conquests in Pomerania to Sweden (see p. 624).

Louis at the Height of his Power, 1679–1700

1680–1684. Chambers of Reunion. Louis, taking advantage of his superior position and the weakness of the Empire, set up courts of claims (chambers of reunion) to determine what dependencies had belonged to the towns and territories France had received in the peace treaties. Based on the decisions of his tribunals, he annexed many additional towns (such as Strasbourg). This policy of reunion involved an invasion of the Spanish Netherlands and the occupation of Luxembourg and Trier (1684). Lorraine was permanently annexed.

1684. Treaty of Regensburg. Louis, the Emperor, and the Empire concluded a 20-year truce; Louis retained everything he had claimed by reunion up to August 1, 1681.

1685, October 18. Repeal of the Edict of Nantes. This denial of Protestant freedom of worship led to the emigration of more than 50,000 families.

1688–1697. The War of the Grand Alliance (League of Augsburg; see p. 597).

Germany

1576–1612. Reign of Rudolph. Marked by continuing warfare against the Turks in Southeastern Europe and by Catholic-Protestant dissension.

1612–1619. Reign of Matthias. Growing tension between the Protestants and Catholics.

1618–1648. The Thirty Years' War. (See p. 583.)

1619–1637. Reign of Ferdinand II (of Styria). An ardent Catholic, his accession brought problems to his hereditary dominions and precipitated a serious Bohemian crisis.

1658–1705. Reign of Leopold I. He had been destined for the church and was very reluctant to become a temporal ruler. His prime interest was the promotion of the Catholic Church; the interests of the house of Hapsburg and Austria were secondary.

1658, August 16–1667. The Confederation of the Rhine. A defensive alliance of Catholic and Protestant princes to execute the Peace of Westphalia, to prevent foreign wars, and to defend the Rhineland.

1662–1664. War with the Turks. (See p. 636.)

1672–1679. The French Wars, or Dutch War. (See p. 617.)

1682–1699. War against the Turks for the Liberation of Hungary. (See p. 637.)

1688–1697. The War of the Grand Alliance. (See p. 597.)

Scandinavia

Denmark and Norway

1588–1648. Reign of Christian IV.

1611–1613. War of Kalmar. Caused by rivalry with Sweden in the Baltic, and by Swedish efforts to gain control of Finnmark. Christian sent forces to the mouth of the Gota and to Kalmar, which fell to the Danes after a long siege, despite relief attempts of **Charles IX of Sweden.** Charles died on his way home after the summer campaign, during which 16-year-old Prince **Gustavus Adolphus** of Sweden distinguished himself (October 1611). The following campaign was inconclusive; border provinces of both sides were harried. Mediation of James I of England resulted in the **Peace of Knarod** (January 1613). Finnmark was given to Denmark and Norway.

1618–1648. The Thirty Years' War. (See p. 583.)

1648–1670. Reign of Frederick III. A monarchical *coup d'état* (1660) supported by the clergy and burghers transformed the king into a hereditary and absolute ruler.

1656–1660. Danish Participation in the First Northern War. (See p. 622.)

1670–1699. Reign of Christian V.

1675–1679. The Dutch War. (See p. 617.) The Danes, allied to the Dutch, saw an opportunity to regain lost territory from Sweden, France's ally. Though the Danes were successful at sea, this was offset by Swedish land victories at **Lund** (1676) and elsewhere.

Sweden

The Rise of Sweden, 1600–1655

1599–1611. Reign of Charles IX. Charles led the intervention of Sweden in Russia during the Time of Troubles (see p. 631). His attempt to extend Swedish rule from Finnmark up to the Arctic led to war with Denmark.

1611–1613. War of Kalmar. (See 621.)

1611–1632. Reign of Gustavus II (Adolphus). Height of Swedish power.

1613–1617. War with Russia. (See p. 632.)

1617–1629. Wars in Poland. This resulted from a dynastic dispute with **Sigismund of Poland** (see pp. 528, 628).

1630–1648. Swedish Participation in the Thirty Years' War. (See p. 587.)

1644–1654. Reign of Christina. Decline of Swedish Power.

1654–1660. Reign of Charles X Gustavus.

The First Northern War, 1655–1660

To extend Sweden's possessions in the southern Baltic, Charles X declared war against Poland. He was encouraged by Russia's current invasion of Poland and the internal dissension and weakness of Poland. His war plan provided for a double offensive: from Pomerania against western Poland, and from Livonia against Lithuania. His pretext was the failure of **John Casimir,** King of Poland, to recognize his own special status of "Protector of Poland."

1655, Summer. Invasion of Poland. Count **Arfwid von Wittenberg,** with a force of 17,000, occupied western Poland. Charles arrived soon after with reinforcements, increasing the Swedish Army to 32,000 men. He advanced into central Poland.

1655, September 8. Swedish Capture of Warsaw. Cracow fell soon afterward. John Casimir fled to Silesia. Meanwhile, Lithuania, simultaneously invaded by the Russians and the Swedes, had been surrendered by Hetman **Janusz Radziwill** to Sweden.

1655, October–January. Intervention of Brandenburg. Frederick William, taking advantage of Poland's collapse, seized west Prussia, a Polish fief. Charles immediately invaded Brandenburg, besieged Berlin, and forced the Great Elector to sign the **Treaty of Königsberg,** whereby east Prussia became a fief of Poland and the Elector became vassal of Charles as "Protector of Poland."

1655–1656. Revival of Polish National Resistance. Swedish atrocities, desecration of churches, and plunder of public and private property inflamed the Poles against the Swedes. The gentry formed military detachments all over the country; the partisans harassed the Swedes. John Casimir returned to Poland and assumed the leadership of the struggle.

1656, Spring. Charles X Returns to Poland. At the news of John Casimir's return to Poland, Charles rushed back from Prussia with 10,000 men. After some minor successes he was repulsed from the fortress of Zamosc, and near **Sandomierz** was surrounded by superior Polish forces in a triangle formed by the Vistula and the San rivers. In an extraordinary feat of bravery and skill, but with heavy loss, Charles broke out of encirclement and retreated to Prussia harassed by the cavalry of Hetman **Stefan Czarniecki** and ambushed in the forests by merciless peasant partisans. He reached Prussia with only 4,000 men. His remaining forces were dispersed as garrisons in Polish cities and fortresses.

1656, June. John Casimir Retakes Warsaw. He captured its Swedish garrison under Wittenberg. By the end of the same month, however, Charles X, reinforced by the army (18,000) of his new vassal and ally, Frederick William of Brandenburg, invaded Poland.

1656, July. Battle of Warsaw. Casimir and General Stefan Czarniecki, with 50,000 men, were defeated in a 3-day battle in which Brandenburg General **Georg von Derfflinger** distinguished himself. Charles reoccupied Warsaw, but the Elector refused to send his army deeper into seething Poland.

1657, February–July. Transylvanian Intervention. Another Swedish ally, Prince **George Rakoczy** of Transylvania, crossed the Carpathians and invaded Poland with 30,000 men. By summer, however, he was surrounded by Polish forces and capitulated. He left Poland with only 400 horsemen, his army being destroyed during the retreat by the Tartars.

1657, Spring. Russia Enters the War. The Russians invaded Livonia and besieged Riga.

1657, Spring. Support for Poland. The Emperor made an alliance with John Casimir, sending 12,000 troops to help the Poles recapture Cracow. Denmark declared war on Sweden (June 1) and was soon joined by the Elector, who deserted the Swedish cause. The overextended Swedes withdrew from Poland to protect threatened possessions around the Baltic.

1657, July. Swedish Invasion of Mainland Denmark. Charles and 6,000 troops crossed the frontier of Holstein and expelled the Danes from Bremen.

1657, October 24. Battle of Frederiksodde. Swedish Count Karl Gustav Wrangel and 4,000 men stormed the city. Danish Marshal **Bilde** was killed and more than 3,000 of his men surrendered. The Swedes now commanded the mainland of Denmark.

1658, January. Invasion of Insular Denmark. Charles led a daring advance over the ice from Jutland to Fyn and then to Zeeland. Denmark sued for peace.

1658, February 27. Treaty of Roeskilde. Denmark relinquished its possessions in the Swedish peninsula. Both countries agreed to make common cause to keep enemy fleets out of the Sound.

1658, June. Renewal of the Danish War. Danish delays in carrying out the peace terms and Dutch activity in Denmark made Charles fearful that more hostilities would be forthcoming, so he decided to crush Denmark completely.

1658, July. Repulse at Copenhagen. Charles ordered Wrangel to attack Copenhagen, Kronberg (Elsinore), and Christiania. A national patriotic movement enabled Copenhagen to withstand the Swedish assault, and Charles faced a bloody siege.

1658, September. Fall of Kronberg. International interest in the Baltic Straits now became important in frustrating Charles's design to control the Sound.

1658, October 29. Dutch-English Intervention. A fleet of 35 ships under Admiral **Opdam** joined the Danes and temporarily relieved Copenhagen.

1659, February 11. Dutch Intervention. Following renewal of the Swedish blockade, a Dutch fleet arrived to relieve Copenhagen, driving the Swedish fleet away.

1659, November. Battle of Nyborg. Michael de Ruyter transported 9,000 Danish troops from Jutland to Fyn. They defeated **Philip of Sulzbach** and 6,000 Swedish troops.

1660, February 13. Death of Charles X. Sweden, under a regency of nobles, immediately sought peace.

1660, May. Treaty of Oliva. Peace between Sweden and Poland. Both gave up respective monarchical-dynastic claims. Livonia was confirmed to Sweden. Brandenburg received full title to East Prussia.

1660, June. Treaty of Copenhagen. Denmark formally surrendered Skane, the southern portion of the Scandinavian peninsula. She and Sweden agreed to guarantee access of foreign vessels to the Sound.

1661. Treaty of Kardis. This confirmed the *status quo ante bellum* between Sweden, Poland, and Russia.

The Reign of Charles XI, 1660–1697

1672–1679. The Dutch War. **(See p. 617.)** Sweden was allied with Louis XIV of France.

1675, June 28. Battle of Fehrbellin. An army

of 12,000 Swedes invading Brandenburg were defeated by Field Marshal Derfflinger. The Brandenburgers then took the offensive and invaded Swedish Pomerania, taking Stettin, Stralsund, and **Griefswald.**

1676, May 25. Battle of Jasmund. The Swedish Navy was defeated by the Danes under Admiral **Niels Juel.**

1676–1679. Campaigns of Charles XI. The young king took the field to win impressive victories against Danes and Brandenburgers, and retain Sweden's preeminence in northern Europe. He decisively defeated the Danes in the campaigns of 1677 and 1678. Danish Admiral Juel, however, again defeated the Swedes, under **Evert Horn,** near Copenhagen at **Kjöge Bight** June 30, 1677).

1679, June 29. Peace of St. Germain-en-Laye. The Elector returned to Sweden nearly all of the conquests he had made in Pomerania.

1697–1718. Reign of Charles XII. (See p. 704.)

The Netherlands

1609–1621. The Twelve Years' Truce. The desultory, indecisive fighting with Spain ended temporarily and the northern provinces consolidated their independence.

1621, August 9. Renewal of the War with Spain. As soon as the 12 years' truce expired, hostilities broke out. This became part of the Thirty Years' War (see p. 583). Maurice commanded the Dutch; Spinola again commanded the Spanish.

1624, August 28–1625, June 5. Spinola's Siege and Capture of Breda. Maurice was repulsed in attempts to relieve the siege.

1625, April 23. Death of Maurice. He was succeeded as stadholder by his brother **Frederick Henry.**

1626–1629. Dutch Successes. The Dutch captured Oldenzaal (1626), Grol (1627), 's Hertogenbosch, and Wesel (1629). These latter successes interrupted Spanish and Imperial communications along the Rhine.

1631. Naval Battle of the Slaak. A Dutch fleet defeated a Spanish invasion fleet.

1632. Dutch Capture of Maastricht. Peace negotiations were undertaken, but without results.

1635. Dutch-French Alliance.

1637. Dutch Recapture of Breda.

1639, October 21. Battle of the Downs. Maarten Tromp engaged and dealt a blow to a fleet of Spanish warships and transports commanded by **Antônio de Oquendo.** The Dutch now held complete mastery of the seas.

1643. Battle of Rocroi. (See p. 594.) Peace negotiations were begun anew.

1644–1645. Dutch Successes. Capture of Sas van Ghent gave Frederick Henry a foothold on the southern bank of the Scheldt (1644). Next year the Dutch captured Hulst.

1648. Treaty of Münster (Part of the Peace of Westphalia). This ended the long "Eighty Years" war with Spain. The frontiers that had been established were recognized, as was the independence of the United Provinces.

1647–1650. William II as Stadholder. He disapproved of the Treaty of Münster because it left France and Spain at war. He entered into secret negotiations to reenter the war in alliance with France, but he died suddenly of smallpox (November 6, 1650).

1650–1672. Holland Without a Stadholder. William's posthumous son **William III** was now head of the House of Orange. **Jan de Witt** was the strong man who became the Grand Pensionary (1653) and maintained Dutch prestige for the next 20 years.

1652, May–1654, April 5. First Anglo-Dutch War. (See p. 607.)

1657–1660. The First Northern War. Holland intervened on the side of Denmark to prevent the takeover of the entrance of the Baltic by Sweden (see p. 623).

1657–1661. War with Portugal. This was over the expulsion of the Dutch from Brazil (1654; see p. 665). The Dutch were unsuccessful.

1664. Undeclared Hostilities with England. England seized Dutch posts on the West African coast and the New Netherlands Colony, whose capital, New Amsterdam, was renamed New York.

1665–1667. Second Anglo-Dutch War. **(See p. 609.)**

1668, January 13. The Triple Alliance. **(See p. 617.)**

1672–1678. War with France and England. **(See p. 610.)**

1672, August 27. Overthrow and Murder of de Witt. A popular uprising established the young son of William II as stadholder.

1672–1702. William II as Stadholder. Aided by the Emperor, the Elector of Brandenburg, and the withdrawal of the British (1674), William held off the French and emerged from the **Treaty of Nijmegen** (1678) without losses (see p. 620).

1678, March. Anglo-Dutch Defense Alliance.

1686. The League of Augsburg Formed by William. **(See p. 611.)**

1688, November 5. The Glorious Revolution. William, whose wife was Mary, daughter of James II, landed in Torbay, England, in response to an appeal from the opponents of James II (see p. 611). William and Mary became rulers of England.

1689–1697. War of the Grand Alliance **(League of Augsburg; see p. 597.)**

Switzerland

The Swiss Confederation was a very loose kind of union with the cantons divided among themselves on religious questions. Fighting was the main occupation and Swiss mercenaries continued to be employed by foreign states, especially France. The principal events were:

1602. Savoyard Invasion. The invaders, supported by Spain, were repulsed from Geneva.

1618–1648. The Thirty Years' War. The Swiss Confederation was officially neutral. Acceptance of the principle of neutrality was significant. Swiss mercenaries were hired by both sides and much material was sold to the belligerents at a profit.

1620. Spanish Seizure of the Valtelline Passes. This was the most convenient link in communications to the Spanish Netherlands (and also to Hapsburg Austria) from the Spanish Hapsburg possessions around Milan, Italy. A Swiss effort to expel the Spanish was unsuccessful (1621).

1625. Swiss Seizure of the Valtelline. The Swiss were led by the French **Marquis de Coeuvres.**

1626. Treaty of Monzon. As a result of the mediation of Pope **Urban VIII,** France and Spain agreed on rights in the Valtelline. Spain retained control.

1637. Swiss Seizure of the Valtelline. A subsequent treaty with Spain (1639) left the passes open to the use of Spanish troops, but reinstated Grisons' sovereignty.

1648. The Treaty of Westphalia. European recognition of the Swiss Confederation's independence of the German Empire.

1656, January 24. First Villmergen War. The Catholic cantons under **Christopher Pfyffer** defeated the Protestants from Bern and Zurich.

Italy

Italy continued to be divided into numerous political entities, many under foreign rule. There was a general decline in prosperity. The papacy tried to be neutral in the conflicts between the Bourbons and the Hapsburgs. In Savoy the French and Spanish factions met in sporadic conflicts, which brought about a decisive weakening of the ducal power. Naples continued under Spanish rule. Venice maintained independence and became an advocate of peace and

neutrality despite her wars with the Turks. The *status quo* was restored in Italy by the **Peace of the Pyrenees** (1659) as Spain kept her traditional territories and France retained Pinerolo with its control over Savoy.

Iberian Peninsula

Spain

1598–1621. Philip III. He devoted himself to the needs of the church rather than the country. Spain entered a period of decline and decadence.

1609, April 9. Twelve Years' Truce with the Netherlands. This followed 45 years of wasteful warfare (see p. 624).

1609–1614. Expulsion of the Moriscos. (See p. 533.)

1618–1648. The Thirty Years' War. (See p. 583.)

1621–1665. Reign of Philip IV. The military and economic decline of Spain accelerated.

1640. Independence of Portugal. (See below.)

1648. The Treaty of Münster. This ended the Thirty Years' War and the long war with the United Provinces; war with France continued (see p. 597).

1659, November 7. The Peace of the Pyrenees. (See p. 616.) This treaty marked the end of Spanish ascendancy in Europe and the beginning of French ascendancy. For the first time in 40 years, Spain was free from foreign war.

1665–1700. Reign of Charles II. (See p. 617.) A half-mad monarch, the last of the Spanish Hapsburgs.

1667–1668. War of Devolution. (See p. 617.)

1673–1678. The Dutch War, or War of the First Coalition against Louis XIV. (See p. 617.) Disastrous to Spain.

Portugal

1640, November–December. Portuguese Independence. Revolt against Spanish rule. Spain was unsuccessful in attempts to regain control (1640–1668).

1640–1656. Reign of John IV. First king of the house of Braganza. He was recognized by France and Holland, but Spain continued sporadic hostilities.

1641, January. Surrender of Malacca to the Dutch. (See p. 653.)

1644, May 26. Battle of Montijo. A Portuguese force commanded by General **Mathias d'Albuquerque** and backed by England and France successfully invaded Spain. After this victory near Badajoz, Portugal was left in peace for several years.

1657–1661. War with Holland. The Dutch were unable to regain the foothold in Brazil from which they had been driven (1654).

1661–1663. Spanish Invasion. Philip IV of Spain attempted to reconquer his lost kingdom. Don Juan and some 20,000 men crossed the border from Estremadura while a smaller force entered Portugal from the north. The Portuguese, aided by an English auxiliary force under Schomberg, were successful in halting the Spanish. Between 1662 and 1663 Don Juan was able to overrun Alentejo Province.

1662. English Assistance. Charles II of England married **Catherine,** the daughter of John IV, and in return for the dowry provided men and arms for the war with Spain.

1663, June 8. Battle of Ameixal. Sancho de Vita Flor defeated Don Juan.

1663, June 17. Battle of Montes Claras. Antonio de Marialva routed the Spanish.

1664–1665. Portuguese Successes. Desultory warfare.

1665, June. Battle of Villa Viciosa. Marialva and Schomberg defeated Count **Caracina** in a bitter 8-hour hand-to-hand battle. This ended Spain's efforts to reconquer Portugal.

1668, February 13. Peace with Spain. Through the mediation of Charles II of England, Spain finally recognized Portugal's independence.

EASTERN EUROPE

Poland

This was a century of almost continuous wars, offensive in the first half of the century and defensive in the second. These exhausting conflicts contributed to Poland's downfall in the 18th century.

At a time of infantry predominance in western Europe, cavalry remained the principal arm in Poland, and the charges of Polish cavalry armed with lance and heavy sword broke many pike squares. Polish heavy cavalry wore armor (mail shirts), discarded in the West. At the same time, Polish horsemen were highly skilled in warfare against the elusive Tartars. Camps fortified by several rows of chained carts were widely used as field fortresses. The principal events were:

1587–1632. Reign of Sigismund (Zygmunt) III Vasa. (See p. 535.) His refusal to abandon his claim to the Swedish throne led to incessant Polish-Swedish wars.

First Polish-Swedish War for Livonia, 1600–1611

1600. Swedish Invasion of Estonia. Swedish forces under **Charles, Duke of Söderman-land** (uncle of Sigismund; later Charles IX) invaded and occupied Estonia (except for Riga) and most of Livonia (today Latvia).

1601. Polish Counteroffensive. Successfully defending Riga, the Poles reconquered most of Livonia. In subsequent campaigns Hetman **Jan Karo Chodkiewicz** was victorious at **Dorpat, Revel,** and **Weisenstein.**

1604, September 27. Battle of Kircholm. Newly crowned Swedish King Charles IX landed in Estonia with a fresh army of 14,000 men and marched toward Riga. Chodkiewicz with 8,000 men, two-thirds horsemen, routed the Swedish army with an impetuous charge. Charles narrowly escaped captivity. The Swedes lost 9,000 killed.

1604–1611. Intermittent Operations. A truce was agreed to after the death of Charles IX (1611).

1605–1609. Polish Intervention in Russia. (See p. 631.)

1609–1618. Polish-Russian War. (See p. 631.)

Polish-Turkish War, 1614–1621

This was provoked by Polish Cossack raids upon Turkish ports along the western and southern Black Sea coasts, and by Polish support of revolts in Moldavia and Walachia (present Rumania). In retaliation, devastating Turkish and Tartar raids overran the Polish Ukraine, while Poland was primarily occupied in Russia (1614–1618).

1620, September 20. Battle of Jassy. Hetman **Stanislas Zolkiewski** with about 10,000 men decisively defeated a much larger Turkish and Tartar army. As a result the Ottoman Sultan, **Osman II,** led a large army north from Constantinople. Zolkiewski began to retreat.

1620, December. Battle of Cecora. Zolkiewski and his army of 9,000 men were annihilated in Moldavia.

1621, Fall. Battle of Chocim (Khotin, or Hotin). A Polish army of 46,000 under Hetmen Chodkiewicz and **Stanislas Lubomirski** had the better of an inconclusive struggle on the Dniester River against Sultan Osman's

Turkish Army of some 100,000. This was followed by a truce confirming the *status quo*. Nevertheless, Cossack raids upon Turkey and Tartar raids upon Poland continued.

The Second Polish-Swedish War, 1617–1629

Gustavus Adolphus took advantage of Poland's simultaneous involvement in major wars with Turkey and Moscow by reconquering the eastern littoral of the Baltic Sea.

1617. Gustavus Victorious in Livonia. He captured several Baltic ports in Livonia, and compelled Hetman **Krzysztof Radziwill** to conclude an armistice until 1620.

1621. Gustavus Invades Estonia. His 12,000 Swedes were reinforced by 4,000 Estonians. He besieged and captured **Riga,** the political and commercial center of Livonia (September 15).

1622–1625. Armistice. Radziwill was again forced to conclude an armistice.

1625. Gustavus Occupies Livonia. After landing in Riga, he occupied all Livonia and Kurland against minor resistance.

1626. Swedish Invasion of Prussia. Gustavus landed at Pillau (vassal of Poland) with 15,000 men and quickly occupied all northern Prussia, threatening Poland's access to the Baltic. Only Gdansk (Danzig) rejected his demand of surrender. Gustavus left forces to blockade Danzig and returned to Sweden.

1626–1627. Polish Counteroffensive. Under Hetman **Alexander Koniecpolski** the Poles attempted to reopen the Vistula and relieve blockaded Danzig. Koniecpolski captured the fortified port of Puck (a fortress on the Vistula south of Tczew and west of Danzig), but could not cut the Swedish line of communication with Pillau. He intercepted and captured 4,000 Germans recruited in Germany for Gustavus.

1627, May. Gustavus Adolphus Returns from Sweden. He brought reinforcements, giving him 14,000 against Koniecpolski's 9,000. Koniecpolski was repulsed at the **Battle of Tczew** (Dirschau), where Gustavus was wounded. For the first time Swedish cavalry fought Polish cavalry on equal terms. Sigismund III organized a small fleet of privateers; these harassed the Swedish fleet, but Sweden retained control of the sea.

1628. Swedish Advance. With his army increased to 32,000 and recovered from his wounds, Gustavus forced Koniecpolski to retreat south. The Poles fought a war of harassment. By winter Gustavus withdrew to Prussia.

1629. Imperial Support from Germany. The Emperor sent Sigismund III a corps of 7,000 men to prevent Gustavus' proposed march from Prussia to Germany to enter the Thirty Years' War. Koniecpolski immediately started an offensive, surprising Gustavus and a detachment of cavalry on the march.

1629. Battle of Sztum. The Swedes had the worst of an inconclusive cavalry action. Gustavus, wounded in the back, narrowly escaped capture. Because of the 2 wounds he received during this war, Gustavus could never wear armor again. The Swedish hold on the Baltic coast was unshaken.

1629. Truce of Altmark. Poland needed peace and Gustavus wanted to be free to enter the war in Germany. Poland lost Livonia north of the Dvina River. Sweden was permitted to use all Prussian ports—except for Königsberg, Danzig, and Puck—for 6 years. The lower Vistula ports (Marienburg, Sztum, and Glova) were temporarily left in the hands of the Elector of Brandenburg.

1632–1634. Russo-Polish War. **(See p. 632.)**

1632–1648. Reign of Ladislas IV.

1634–1653. "Bloodless War" with Sweden. Taking advantage of Swedish involvement in the Thirty Years' War (see p. 587), Ladislas assembled an army of 24,000 men on the lower Vistula and, while threatening Swedish ports in Prussia, began negotiations with Sweden with regard to the eastern littoral of the Baltic. This led to the **Treaty of Sztumsdorff,** which provided for a 26-year truce and restored all Prussia to Poland; most of Livonia south of the Dvina River was returned to Poland.

1648–1668. Reign of John II Casimir.

Cossack Uprising in the Ukraine, 1648–1654

The rebellious Cossacks were led by **Bogdan Chmielnicki.** There was great ferocity and cruelty on both sides; the Ukraine was devastated and depopulated. Chmielnicki recruited not only Cossacks but also masses of rebellious Ukrainian peasants. He formed an alliance with the Crimean khan and was assisted by a Tartar army.

1648. Cossacks Victories. These were at the **Battles of Zolte Wody** and **Korsun.**

1649. Battle of Pilawce. A Polish force of 36,000 was defeated by the Cossacks.

1648–1649. Poland on the Defensive. The Poles held their strategic fortresses of Lwow (1648), Zamosc (1648), and Zbaraz (1649) against Cossacks attacks.

1649. Treaty of Zborow. A temporary Polish-Cossack peace.

1651. Resumption of Hostilities. At the **Battle of Beresteczko,** 34,000 Poles under John Casimir decisively defeated 200,000 Cossacks and Tartars under Chmielnicki (July 1).

1651. Treaty of Biala Cerkew. The Cossacks made peace. Chmielnicki, however, continued the war with a few followers.

1654. Treaty of Pereiaslavl. The Cossacks placed the Ukraine under the protection of Czar **Alexis,** provoking a war between Poland and Moscow.

1654–1656. Polish-Russian War. **(See p. 632.)**

1655–1660. First Northern War. War with Sweden (see p. 622).

1657. Transylvanian Invasion. **(See p. 636.)**

1658. Treaty of Hadziak. Regent **Wyhowski** of the Ukraine, alarmed by the Russo-Polish alliance in the Northern War, reached an agreement with Poland, which proclaimed equality of the Ukrainian, Polish, and Lithuanian peoples and creation of an autonomous Ukrainian duchy ruled by a Hetman confirmed by the Polish king, and sending senators and representatives to the Polish Diet. This provoked war with Moscow at a time when Poland was suffering the ordeal of repeated Swedish invasions.

1658–1666. Polish-Russian War. **(See p. 633.)**

1668. Abdication of John Casimir. A violent struggle for the throne ensued.

1669–1673. Reign of Michael Wisniowiecki. This was a period of turmoil and struggle between partisans and enemies of the incompetent monarch. A principal leader of the opponents was **John Sobieski.**

Polish-Turkish War, 1671–1677

The Ukraine had been divided along the Dnieper River between Russia and Poland after a long war (1667; see p. 634). The Cossack chieftain **Peter Doroshenko,** in Polish Poland, refused to accept Polish authority and acknowledged Turkish sovereignty (1668). As a result of Polish efforts to suppress the Cossack revolt, as they considered it, Turkey demanded cession of the Ukraine. Though unprepared for war, Poland refused.

1671, December 9. Declaration of War by Sultan Mohammed IV.

1672, Summer. Invasion of Poland. Grand Vizier **Ahmed** led a huge army of more than 200,000 into southeastern Poland. The Turks and their Tartar vassals and Cossack allies besieged and captured the strategic fortress of Kamieniec. Most of the garrison of 1,100 perished under the debris of the castle, which they blew up after a 12-day siege. The Turks then took Lublin against little resistance.

1672, October. Treaty of Buczacz. Michael, unable to organize his disintegrating kingdom, ceded to Turkey the province of Podolia.

Doroshenko was granted independence in the western Ukraine. Poland also agreed to pay an annual tribute. The treaty was never ratified by the Polish Diet.

1672–1673. Sobieski Rallies Poland. In the face of the deadly Turkish menace, Grand Hetman John Sobieski, renowned for earlier victories over Tartars, formed an army of 40,000. He marched against the Turks.

1673, November 11. Second Battle of Chocin (Chotyn). Sobieski annihilated a Turkish army of 30,000 men. He then took the fortress of Chocim. Other Turkish forces withdrew from Poland without fighting. King Michael had died one day before the battle. On learning this, Sobieski suspended further offensive operations, and disposed his forces for the protection of the frontiers. He then hastened to Warsaw, where he was elected king (May 21, 1674).

1674–1696. Reign of John III Sobieski. Internal turmoil and intrigue continued.

1675. Turkish Invasion. Some 60,000 Turks and 100,000 Tartars invaded Podolia and the Ukraine. They recaptured Chocim and threatened Lwow.

1675. Battle of Lwow. Sobieski defeated the Turks. Gradually he drove the invaders back, winning several small battles and liberating all of Poland except Kamieniec. Internal difficulties hampered his efforts to raise a large army to invade Turkey.

1676, September. Turkish Invasion. An army of 200,000 under **Ibrahim Pasha** again invaded southeastern Poland.

1676, September–October. Battle of Zorawno. Sobieski with 16,000 men repulsed the Turks from his strongly fortified camp on the Dniester in an inconclusive 2-week battle.

1676, October 16. Treaty of Zorawno. The Turks agreed to the return of the western Ukraine to Poland. They retained Podolia, including Kamientiec and Chocim.

1676–1681. Continuing War in the Ukraine. Meanwhile, Moscow, also engaged in an unrelated war against Turkey (see p. 634), had frequently violated the truce agreement of Andrussovo (see p. 634) and invaded the Polish Ukraine, devastating it and inciting the Cossacks to continue rebellion against Poland. The continuing Russo-Turkish war, largely waged in the eastern part of the Polish Ukraine, turned this rich land into a desert.

1683, March 31. Alliance with the Empire. Turkey, having waged inconclusive wars with Poland and Moscow, turned against Austria. John Sobieski believed that if Austria was defeated, the next Turkish blow would be directed against Cracow, the heart of Poland. He concluded a defensive-offensive alliance with the Empire and prepared for war.

1683, July–September. Siege of Vienna. (See p. 637.) The high point in Sobieski's career.

1683–1699. Desultory Warfare. The war against the Turks dragged on with varying results. Sobieski, unable to reach any agreement with the Russians and obtaining no assistance from jealous Emperor Leopold, bore the brunt of the war and was hard put to hold the Ukraine. Meanwhile, Poland continued to be wracked by internal intrigue and violence.

1696, June 17. Death of Sobieski.

Russia

The military power of Moscow developed in relative isolation from the West, and reflected the general backwardness of the country. At the beginning of the 17th century, Moscow's army, comprised of relatively ill-armed and poorly trained levies, was often defeated by considerably smaller Swedish and Polish forces. However, in the defense of fortresses the Russians showed tenacity, resourcefulness, and courage. In 1612, Polish and Swedish invaders of Muscovy were forced to retreat by masses of popular militia and not by the army.

By the middle of the century a new system of recruitment was introduced, based on com-

pulsory service of peasants and city dwellers, and permanent infantry and cavalry regiments replaced the old levy. In addition to these semiregular troops, there were nearly 150,000 Cossacks eager for war. By the end of the century, Moscow in emergency was able to mobilize an armed force of over 300,000 men, mostly poorly trained.

Early in the 17th century, Moscow suffered its "Time of Troubles." A combination of violent internal upheavals and Polish and Swedish interventions ruined the country and led to territorial losses. By the middle of the century, however, the czardom had recovered its political and economic strength, and, owing to Poland's mounting difficulties, in the second half of the century Moscow conquered much of the northeastern Ukraine from Poland.

The "Time of Troubles," 1604–1613

This began with the appearance of a false **Dmitri,** a pretender who claimed to be the murdered son of Ivan IV and who was supported by the Poles and Cossacks. After the death of Boris Godunov (1605; see p. 537), the struggle for power among various boyar factions threw the country into a state of extreme confusion and brought Polish and Swedish intervention. The principal events were:

1605. Brief Reign of Theodore (or Fëdor, son of Boris). He was murdered by hostile boyars. The false Dmitri briefly took the throne, but also was soon murdered by the boyars.

1605–1609. Polish Intervention. Several Polish magnates supported the claims of the false Dmitri. As chaos mounted in the Moscow czardom, Polish intervention was increasingly persistent.

1606–1610. Reign of Basil Shuisky. He was bitterly opposed internally and by the Poles.

1608. Battle of Balkhov. A Polish army, reinforced by 45,000 rebellious Cossacks, defeated Basil. Soon after, the Poles and Cossacks defeated Basil again at the **Battle of the Chadyuka River,** bringing a second "false Dmitri" to power. This was followed by an uprising of the Cossacks and peasants in the east and south in support of the pretender. Basil requested Swedish aid at the price of the cession of Karelia to Sweden.

War with Poland, 1609–1618

1609. Sigismund III of Poland Declares War. Claiming the disputed throne of Moscow for himself, he invaded Russia.

1609–1611. The Siege of Smolensk. Michael Shein, commander of Smolensk, stubbornly and skillfully defended the fortress against repeated assaults. The garrison of 12,000 was reinforced by 70,000 civilians.

1610, September. The Battle of Klushino. A Russian army of 30,000 men, including 8,000 Swedes, led by **Dmitri Shuisky** marching to relieve Smolensk, was surprised and annihilated by a small Polish corps of 4,000 (3,800 horsemen and 200 infantry with 2 small cannon) led by Hetman Stanislas Zolkiewski. The Russians left 15,000 killed on the battlefield. Shuisky fled to Moscow. Zolkiewski, reinforced to 23,000, moved on Moscow. Smolensk surrendered early the following year.

1610, October 8. Capture of Moscow. Polish troops entered Moscow and the Kremlin. The boyars deposed Czar Basil Shuisky.

1610–1611. Protracted Negotiations. The boyars were prepared to elect Ladislas (son of Sigismund) to the Moscow throne, but negotiations broke down when Sigismund insisted on having the throne for himself.

1611. Rising of Russia. Rebellion of the populace against the invaders broke out in Moscow. A Polish garrison was besieged in the Kremlin. The uprising spread in the northern and eastern part of the country under the leadership of

Prince **Pazharsky.** The second "false Dmitri" died.

1612. Polish Withdrawal. The Polish army, unable to relieve the Polish garrison of the Kremlin, withdrew from Moscow. Desultory frontier fighting continued. The Poles in the Kremlin surrendered and were massacred.

The Swedish and Polish Wars, 1613–1667

1613–1645. Reign of Michael Romanov. This weak ruler founded Russia's greatest dynasty.

Russo-Swedish War, 1613–1617

1613. Novgorod Expedition. Moscow sent troops against Novgorod, occupied by the Swedes. Swedish troops intercepted and severely defeated the Russian corps.

1614. Invasion of Moscow. Gustavus Adolphus transferred military operations into Moscow territory. Pskov, the strongest Russian frontier fortress, resisted his assault successfully and, following a 7-month siege, Gustavus withdrew to Swedish territory. Since Moscow expected a Polish invasion and Gustavus was preparing an attack on Polish Livonia, both Moscow and Sweden were anxious to conclude peace.

1617. Treaty of Stolbovo. This terminated the Russo-Swedish War. Sweden restored Novgorod and several other towns to Moscow, and the Russians ceded to Sweden their last footholds on the Gulf of Finland. Thus Moscow lost its outlet to the Baltic.

1617. Renewed Polish Invasion. Ladislas marched to Moscow, claiming the Moscow throne as czar-elect. After the rejection of his claim by Michael, Hetman Chodkiewicz tried to capture Moscow by direct attack, but failed. Peace negotiations followed.

1618. Truce of Devlin. Poland was confirmed in possession of all border towns conquered in 1609–1611 (including Smolensk).

1618–1632. Military Reorganization. Michael hired foreign mercenaries in England, Holland, Denmark, and Sweden and formed of them several foreign regiments. Several Russian regiments were also trained by foreigners and according to foreign regulations. Guns, arms, and powder were purchased.

Russo-Polish War, 1632–1634

1632, September. Russian Invasion of Poland. Boris Shein with 30,000 men advanced to besiege Smolensk, which had a garrison of only 3,000.

1632–1633. Siege of Smolensk. After a gallant defense of 11 months, the provisions of the garrison were nearly exhausted.

1633, September. Battle of Smolensk. Ladislas IV with an army of 40,000 men decisively defeated the Russians, then surrounded Shein's battered army, which was besieged for 6 months before it surrendered (February 1634). Shein was permitted to withdraw his troops to Moscow, where he was unjustly accused of treason and executed.

1634. Treaty of Polianovo. This confirmed the Treaty of Deulin. Ladislas renounced his claims to the czardom and recognized Michael as czar.

1637. Capture of Azov. The Cossacks seized the fortified port of Azov from the Crimean Tartars and offered it to the Czar, but Michael, afraid of a conflict with Turkey, refused the offer. Azov therefore was returned to the Tartars.

1645–1676. Reign of Czar Alexis.

Russo-Polish War, 1654–1656

Seeking revenge for past defeats at the hands of Poland, the Russians took advantage of Poland's deep involvement in the struggle with the Cossacks in the Ukraine (see p. 629). The Cossack leader, Bogdan Chmielnicki, offered to surrender the Ukraine to the Czar.

1654, July–October. Operations in Lithuania. Alexis personally led an army of over 100,000 into Lithuania. He captured Smolensk after a 3-month siege (July 2–September 26),

then at the **Battle of Borisov** overwhelmed a small Polish corps. The Russians then occupied defenseless Lithuania as far as the Berezina River until winter stopped the operations.

1654. Operations in the Ukraine. Simultaneously, a smaller Russian force of 40,000 invaded the Ukraine and occupied Kiev. Between the two Russian armies, an allied Cossack force under Hetman **Zolotarenko** utterly devastated the area of the Pripet Marshes and massacred its population.

1655, January. Polish Counteroffensive in the Ukraine. In spite of bitter cold, Hetman **Stanislas Lanckoronski** defeated a much larger joint Russo-Cossack Army at the **Battle of Okhamatov.** The Russians promptly retreated.

1655, May–October. Resumed Russian Offensives. In Lithuania the Russian advance was facilitated by simultaneous Swedish attacks on Poland from Livonia (see pp. 622, 629). Alexis advanced to the Niemen River and proclaimed himself Grand Duke of Lithuania. His troops, however, were harassed by partisans. Simultaneously, Russo-Cossack forces reoccupied most of the Ukraine and even sent raids into central Poland. They were unable to take the fortified cities of Kamieniec and Lwow.

1655, November. Tartar Intervention. Poland's ally, Crimean Khan **Mahmet Girei,** invaded the Ukraine with 150,000 men. He defeated and captured Chmielnicki at **Zalozce,** and forced the Russians to withdraw precipitously toward the north.

1656, November 3. Treaty of Nimieza. After prolonged negotiations the war was terminated by the conclusion of a three-year truce and an anti-Swedish alliance between Russia and Poland.

Russo-Swedish War, 1656–1658

Alarmed by Sweden's expansion in the Baltic area, Alexis, rejecting Swedish offers of alliance against Poland, instead concluded alliances with Poland and Denmark against Sweden. This was part of the First Great Northern War (see p. 622).

1656. Russian Northern Offensive. Advancing toward the Gulf of Finland, the Russians captured the strong fortresses of Schlüsselburg and Nienshanz, near the Neva River's mouth.

1656, July–August. Battle of Riga. Alexis advanced from Polotsk down the Dvina River, captured Dinaburg (whose defenders were massacred), and then took the fortress of Kokenhuzen. Riga, whose small garrison was commanded by **Magnus De La Gardie,** was besieged. After the arrival of considerable reinforcements, De La Gardie made a sortie, defeating the much more numerous entrenched Russians, who lost 8,000 killed and 14,000 wounded and prisoners. Alexis retreated, pursued energetically.

1657. Swedish Counteroffensives. The Swedes devastated Karelia. At the same time Swedish troops advanced overland from Finland to Riga to strengthen its defense.

1658. Renewed Russian Offensive. A small Russian force captured Yamburg and besieged Narva, but soon was ejected from the Baltic and the Gulf of Finland by the Swedes, who recaptured all previously lost towns.

1658. Three-Year Truce. Alexis conceded defeat, and decided to make peace so he could renew the war with Poland. The Swedes kept all the towns along the Baltic coast and the Gulf of Finland.

Russo-Polish War, 1658–1666

The Russo-Polish Truce of Nimieza (see above) expired. Moscow resumed hostilities.

1658–1659. Invasion of Lithuania. Prince **George Dolgoruki** surprised and captured Hetman **Wincenty Gosiewski** at Werki and occupied Wilno, which he devastated with fire and sword. Prince **Chowansky** captured Grodno, Nowogrodek (1659), and besieged the fortress of Lachowicze.

1658–1659. Invasion of the Ukraine. A Russian force of 150,000, under command of Prince **Trubetskoi,** was temporarily successful, but was severely beaten by the Ukrainian Hetman **John Wyhowski** in the **Battle of Konotop,** with the loss of 30,000 killed (1659).

1660. Operations in Lithuania. The Russians took the initiative, but were defeated by increased Polish forces, freed by the peace with Sweden. Hetmen Stefan Czarniecki and **Paul Sapieha** defeated Dolgoruki and Chowansky, and forced them to withdraw to Polotsk and Smolensk. The Poles not only liberated Lithuania but invaded the area of Vitebsk, Polotsk, and Velikie Luki.

1660. Operations in the Ukraine. Russian General **Sheremetiev** led 60,000 well-trained and equipped troops against Lwow; he was defeated and captured at the **Battle of Lubar** (1660) by Hetmen Czarniecki and George Lubomirski, who had 20,000 Poles assisted by 20,000 Tartars. Another army of pro-Moscow Cossacks—numbering 40,000 and led by Chmielnicki—attempting to join Sheremetiev, was defeated by **George Lubomirski** at the **Battle of Slobodyszcze.** Chmielnicki pledged obedience to the Polish king.

1661–1667. Polish Initiative. There followed several years of sporadic frontier fighting.

1664. Cossack Raid into Persia (see p. 642).

1667. Treaty of Andrusovo. The Ukraine was partitioned between Poland and Moscow with the Dnieper River as the dividing line. Kiev, though located on the southern Polish bank, was ceded to Moscow for 2 years (it never returned to Poland). Smolensk was also ceded to Moscow.

Beginnings of the Turkish Wars, 1667–1700

1667–1678. Friction with Turkey. The acquisition of northeastern Ukraine brought Moscow into contact with Turkish possessions, and frontier friction soon began.

1676–1682. Reign of Theodore III (or Fëdor, son of Alexis).

1678–1681. First Russo-Turkish War. Cossack Hetman Doroshenko was dissatisfied with the results of the Treaty of Zorawno (see p. 630), and asked Russian assistance against Poland and Turkey. At the same time, Sultan Mohammed IV claimed the Ukraine. He sent a large army under Vizier **Kara Mustafa** to drive out the Poles and Russians. The area of operations was mostly in the eastern part of the Polish Ukraine, which had been utterly devastated in the Polish war against Turkey (see p. 630). Russo-Cossack forces under the command of Prince **Romodanowsky** withdrew without offering serious opposition. The Turks captured and destroyed a number of Ukrainian fortresses and cities.

1681, January 8. Treaty of Radzin. Turkey renounced her claims to the Ukraine, but under condition that the population of the area between the rivers Bug and Dniester should be evacuated and this area should remain unpopulated. Podolia was returned to Poland. The Cossacks were to have special rights throughout the Ukraine.

1682–1689. Joint Reigns of Peter I and Ivan V. Ivan was the brother of Theodore III; he and his younger half-brother were co-rulers until the death of Ivan (1689).

1689–1725. Reign of Peter I, the Great. He initiated Russia's struggle for access to the sea, beginning with the Black Sea.

1695–1700. Russo-Turkish War for Azov. The first Russian offensive, under the personal command of Peter, reached Azov via the Volga and Don rivers, but was repulsed with heavy losses. Having no navy, the Russians were unable to blockade the water approaches to the fortress.

1695–1696. Peter Builds a Navy. Peter built a fleet near Voronezh and sent it to Azov down the Don River in the spring.

1696, July 28. Capture of Azov. The Russian army, increased to 75,000, advanced partly by land, partly by river. This time the fortress was captured by combined operations of ground and naval forces which repulsed the Turkish

warships and blockaded approach to Azov from the sea.

COMMENT. *The possession of Azov, which was located on the Sea of Azov and was separated from the Black Sea by the Strait of Kerch, solidly blocked by Turkey, could not solve the problem of Russian access to the Black Sea. Its selection as the strategic objective of the war can be explained only by lack of means for an attack on the Crimea. The cost of Azov in heavy Russian losses was disproportionate to its relative importance to Russia.*

1698. Mutiny in Moscow. Peter, who had been traveling incognito in Western Europe (1697–1698), returned to suppress an army mutiny and to reform the Russian government and nation.
1700. Truce with Turkey. The war was terminated by a truce for 30 years.

Hungary

During most of the 17th century, Hungary was the main battleground in the continuing but sporadic struggle between the Hapsburg and Ottoman empires. The Hapsburgs' involvement in the Thirty Years' War and in other conflicts of Central and Western Europe long prevented them from taking advantage of the gradual decline of Turkish power. During much of this period, Transylvania, nominally a fief of the Ottoman Empire, was virtually independent and played the two empires and Poland off against each other. Toward the end of the century, brief Turkish resurgence enabled them to reconquer Transylvania and to overrun practically all of Hapsburg Hungary, culminating in a siege of Vienna. Repulsed from Vienna, thanks to the intervention of Poland's John Sobieski, the Turkish decline accelerated. By the end of the century, practically all of Hungary was controlled by the Hapsburgs. The principal events were:

The Rise and Fall of Transylvania, 1593–1662

1593–1606. The Long War. **(See p. 536.)**
1599–1601. Struggle for Transylvania. The country was briefly dominated by **Michael the Brave,** Voivode of Wallachia and Rumania's national hero. Driven out of Transylvania by a Magyar revolt (1601), Michael regained power briefly by a victory at the **Battle of Goroslau,** won with the assistance of Hapsburg General **George Basta.** Soon afterward, however, Basta procured Michael's murder, and began a reign of terror, which led to the rise of **Stephen Bocskay** and his successful alliance with the Turks (see p. 536).
1606, June 23. Treaty of Vienna. Stephen Bocskay was recognized as sovereign Prince of Transylvania by Emperor **Rudolf.** Rights of Transylvanian (and other) Protestants in Hapsburg Hungary were guaranteed.
1606, November 11. Treaty of Zsitva-Torok. End of the Long War. The territorial status of Hungary was unchanged, but the Emperor was no longer required to pay tribute to the Sultan. Transylvania was still nominally under Ottoman suzerainty.
1606, December 29. Death of Bocskay. He was probably poisoned; a scramble for power followed.
1608–1613. Reign of Gabriel Bathory of Transylvania (Son of Stephen; see p. 535.) Cruel and tyrannical, he was overthrown and murdered.
1613–1629. Reign of Bethlen Gabor of Transylvania. He was a wise prince and able soldier.
1618–1629. Transylvanian Participation in the Thirty Years' War. Bethlen briefly besieged Vienna (1619) and, though driven away from the Austrian capital (see p. 585), overran most of Hapsburg Hungary (1620). The Hapsburgs recognized him as Prince of Transylvania, and ceded much of Hapsburg Hungary to him in the **Treaty of Nikolsburg** (December 21, 1621). Subsequent campaigns were inconclusive.
1630–1648. Reign of George Rakoczy I of

Transylvania. He increased the power, size, and independence of Transylvania.

1645. Renewed War with the Hapsburgs. George defeated the Hapsburgs and (by the **Treaty of Linz,** December 16, 1645) forced renewed grant of religious freedom to Protestants as well as Catholics in Hapsburg Hungary.

1648–1660. Reign of George Rakoczy II of Transylvania. In an undeclared frontier war between Turks and Austrians Rakoczy supported his nominal suzerain, the Sultan of Turkey (1648–1652).

1657. Transylvanian Invasion of Poland. Hoping to take advantage of Poland's early defeats in the First Northern War (see p. 622), Rakoczy invaded southern Poland, hoping to seize the throne. This move, without his permission, enraged the Sultan, who still coveted the Ukraine. The Khan of the Crimean Tartars, a Turkish vassal, was ordered to eject Rakoczy from Poland. Rakoczy briefly occupied Warsaw, but, deserted by the Swedes, was forced to retreat. During the withdrawal his rear guard was overwhelmed by the Tartars at the **Battle of Trembowla,** near Tarnopol (July 31), and its commander, **Janos Kemeny,** was captured. Rakoczy reached Transylvania with only a fraction of his army.

1657–1662. War with Turkey. Mohammed Koprulu, Grand Vizier of Turkey, attempted to depose Rakoczy, but failed. Rakoczy at first defeated Koprulu's invading army at the **Battle of Lippa** (May 1658), but was driven out of Transylvania to his estates in Hapsburg Hungary by the convergence of the Ottoman army and that of their Crimean Tartar vassals. **Akos Barcsay** was proclaimed Prince of Transylvania by Koprulu (November, 1658). Rakoczy drove Barcsay out of the country (1659), but was in turn so hard-pressed by the Turks that he appealed for Hapsburg assistance in return for the cession of some border provinces.

1660. Battle of Fenes. Attempting to halt an invasion by **Ahmed Sidi,** Pasha of Buda, Rakoczy was defeated and mortally wounded. He died in Nagyvarad, where his forces were besieged by the Turks. After a 4-month siege, Nagyvarad finally fell to Turkish assault (August 27), while an Austrian army stood idly nearby.

1661. Janos Kemeny Elected Prince of Transylvania. He had recently returned from imprisonment in the Crimea. Despite some assistance from a small Austrian army under Raimondo Montecuccoli, Kemeny was unable to repel a Turkish invasion.

1662, January 22. Battle of Nagyszollos. Kemeny was defeated and killed by a Turkish army under **Mehmed Kucuk.** Turkish control was restored to Transylvania and **Mihaly Apafi** was proclaimed Prince by the Turks.

Renewal of the Hapsburg-Ottoman Struggle for Hungary, 1662–1683

1663–1664. Turkish Invasion of Hapsburg Hungary. The new Grand Vizier, **Fazil Ahmed Koprulu Pasha** (son of Koprulu), invaded Hapsburg Hungary with the intention of advancing on Vienna. The Turks were halted by the gallant defense of Neuhause, under **Adam Forgach.** When Neuhause finally surrendered (September 1663), Ahmed decided to postpone the advance on Vienna until the following spring. But when he renewed the advance, the Austrians were better prepared, and he was again slowed by resistance of fortresses. Peace negotiations began in late summer at Vasvar.

1664, August 1. Battle of the Raab River (or of St. Gotthard Abbey). Ahmed, attempting to force the Austrians to accept the peace terms, crossed the river to attack Montecuccoli's army. Despite greatly superior numbers, the Turks were repulsed, and retreated to Buda; the Austrians did not pursue.

1664, August 11. Peace of Vasvar. A 20-year peace was agreed. Autonomous Transylvania remained under Turkish suzerainty. The Turks were also allowed to retain the frontier fortresses they had captured.

1664–1673. Unrest in Hapsburg Hungary. Partly because of bitterness at the unfavorable

terms of the Treaty of Vasvar, partly because of religious persecution, Magyar conspiracies against the Hapsburgs in Hungary were widespread, even to the extent of seeking Turkish assistance. The Austrians subdued the unrest and minor uprisings with ease, and repression increased.

1678–1682. Revolt against Austria. Rebels under the leadership of Count **Imre Thokoly** gained control of most of northern and western Hungary. But popular support faded as Leopold made concessions to the Magyars; Thokoly turned to the Turks for aid. A Turkish army, dispatched by the Grand Vizier, Kara Mustafa, helped Thokoly to overrun northeastern Hungary. Thokoly was declared King of Hungary, as a vassal of the Sultan. Unable to gain concessions from Austria, the Turks prepared for an invasion the following year. Leopold hastily made peace with Thokoly, leaving him virtual master of all Hungary, save for Transylvania.

1683, March 31. Austro-Polish Alliance. Austria and Poland, both at war with Turkey, and aware of Kara Mustafa's forces gathering at Adrianople and Belgrade, became allies in mutual defense against invasion.

Vienna Campaign, 1683

1683, March–May. Turkish Advance. Sultan **Mohammed IV** personally led the Turkish Army from Adrianople toward Belgrade (March 31). Continuing north from Belgrade, under the actual leadership of Kara Mustafa, the Turks were joined by a Transylvanian force under Apafi, bringing their total strength to nearly 200,000 men. Meanwhile, a Hungarian army under Thokoly advanced against the Austrians in Slovakia, but was repulsed at Pressburg.

1683, June. Invasion of Austria. Leaving a force to besiege Gyor, the Turkish army, now about 150,000 men, continued up the Danube into Austria. Leopold and his court fled to Passau. Duke Charles of Lorraine, with an Austrian army of about 30,000, retreated from Vienna to Linz. Count **Rudiger von Starhemberg,** governor of Vienna, was left with a garrison of about 15,000 men.

1683, July 14. Turks Reach Vienna. Immediate investment of the city began.

1683, July 17–September 12. Siege of Vienna. The Turks were handicapped by insufficient heavy artillery; only a few big guns had been brought up the river by barge. The defending guns were superior in both quality and quantity. The Turks were also hampered by the vigor of the defenders, who made frequent sorties. Meanwhile, Charles of Lorraine kept contact with the defenders via the river, and blocked Turkish raids up the Danube Valley. However, the energetic Turks opened several breaches in the walls and forced their way into portions of the city, where their advance was stopped by hastily erected fortifications (September 1). The defenders by this time had lost about half of their strength and were running short of ammunition and other supplies.

1683, August–September. Arrival of Sobieski. Faithful to his treaty, and also responding to an appeal from the Pope, John Sobieski marched to the relief of Vienna with 30,000 men. His main body made the march of 220 miles from Warsaw in 15 days, an unusual speed in those times. The arrival of the Poles and their juncture with the Austrians and Germans west of Vienna completely surprised Kara Mustafa. The allied army advanced on the Turkish camp (September 11).

1683, September 12. Battle of Vienna. Sobieski assumed supreme command of the allied army of 76,000 (his Poles and 46,000 Austrians and Germans). The Poles were on the right wing, the Austrians under Charles of Lorraine on the left, and various German corps in the center. The allies advanced slowly because of difficult terrain; Sobieski planned to attack the next day. Noticing, however, that Turkish resistance was weak, at 5 P.M. he ordered a general attack. At the same time the Vienna garrison attacked the siege lines. For an hour an inconclusive infantry struggle raged between the river and the Turkish camp. Sobieski and his Polish cavalry charged toward Kara Mustafa's headquarters. Kara Mustafa and his army

fled in panic; Turkish losses were extremely heavy. Sobieski suspended the pursuit because of fear of ambush in the dark, and the Turkish army escaped destruction. Sobieski sent the captured Imperial Banner of the Prophet to the Pope.

1683, September–December. Sobieski's Pursuit. Leopold, jealous of Sobieski's victory, was cool to his savior, who nevertheless led a pursuit of the Turks and helped liberate Grau (October) and much of northwestern Hungary.

Hapsburg Conquest of Hungary, 1683–1688

1684, March 31. Treaty of Linz. At the instigation of Pope **Innocent XI,** a crusading **Holy League** against Turkey was created. Original members were the Empire, Poland, and Venice. Moscow later joined (April 1686).

1684–1685. Inconclusive Frontier Warfare. The Hapsburgs retained the upper hand.

1686, September 2. Capture of Buda. Charles of Lorraine took the Turkish capital of Hungary after a siege of nearly 2 months.

1687. Battle of Nagyharsany (Harkány). Charles decisively defeated the Turks near the site of the Battle of Mohacs (see p. 542), establishing Hapsburg control over all of southern Hungary and much of Transylvania. The Hungarians were forced to accept the Hapsburgs as hereditary monarchs.

1688, September 6. Capture of Belgrade. The stronghold was taken after a siege, immortalized by the anonymous alliterative poem which begins: "An Austrian army awfully arrayed/Boldly by battery besieged Belgrade." Most of Serbia was taken by the Austrians.

Turkish Efforts to Reconquer Hungary, 1688–1699

1690. Turkish Invasion of Transylvania. Sultan **Suleiman II,** having nominated Thokoly as Prince of Transylvania after the death of Apafi, sent him into Transylvania. He defeated a combined Hapsburg-Transylvanian army at the **Battle of Zernyest** (August). **Louis of Baden** then marched from Belgrade with the main Imperial army, overrunning much of Transylvania, Serbia, and parts of Macedonia.

1690, August–October. Turkish Reconquest of Serbia. The new Turkish Grand Vizier, **Mustafa Koprulu,** took advantage of Louis's expedition to conduct a lightning campaign, recapturing Nish, Smederevo, Vidin, and Belgrade. Thousands of Serbian refugees flocked into southern Hungary.

1691, August 19. Battle of Szalánkemen. Mustafa and Thokoly were decisively defeated by Louis of Baden. Mustafa and 20,000 Turks were killed. Transylvania was now firmly in Hapsburg hands.

1691–1696. Inconclusive Frontier Campaigns.

1697. Battle of Zenta. Prince **Eugene of Savoy** marched to oppose a major Turkish invasion of Hungary from Belgrade under the personal command of Sultan **Mustafa II.** The armies met near the Theiss River; Eugene attacked and practically annihilated the Turkish army. This was the last serious Turkish threat to Hungary.

1699, January 26. Treaty of Karlowitz. Austria received all of Hungary and Transylvania except the Banat. Venice obtained the Peloponnesus and much of Dalmatia. Poland recovered Podolia. Turkey retained Belgrade. Austria was now the predominant power of southeastern Europe, despite considerable internal Hungarian unrest and discontent with the Hapsburg monarchy which had been imposed upon her.

EURASIA AND THE MIDDLE EAST

The Ottoman Empire

The slow decline of the Ottoman Empire continued. Yet at midcentury the empire stretched over three continents; the frontier in Europe was only 80 miles from Vienna; it included all of North Africa except Morocco; the Black Sea and the Red Sea were Turkish lakes, and in the east it stretched to the shores of the Caspian and the Persian Gulf. The heart of the empire included the provinces of Rumelia, Anatolia, and the territories along the coasts of the Aegean and the Mediterranean. The Christian principalities of Moldavia, Wallachia, and Transylvania were autonomous; they were administered locally and were not garrisoned by Turkish forces, but their princes were appointed by the Porte and they had to provide corn and sheep for the Turkish Army and pay tribute. The Khanate of the Crimea, an autonomous Moslem state, had similar status; the Tartar khans paid no tribute but had to participate in Turkish campaigns with some 20,000 to 30,000 horsemen, and were responsible for defending Ottoman territories against Cossack raids. The Barbary States (Tripoli, Tunis, and Algiers) were more or less independent, having their own military and administrative organizations. They pursued their piracy without concern for Ottoman alliances or policies.

The military strength on which the Ottoman Empire depended was deteriorating. The regular army consisted of the Janissaries—originally slaves of the Sultan, but now a privileged social class, recruited from the Moslem population. Lax in their duties and unruly, their popular support precluded disbanding. The spahis and the feudal cavalry were declining both in numbers and in quality. As a result, the Porte was forced to place increasing reliance on Tartar horsemen from the Crimea, on untrained levies, and on undisciplined volunteers.

These factors all contributed to speeding the decline of Turkish power by the end of the century. The principal events were:

1595–1606. War with Austria. So-called Long War (see p. 536).

1602–1612. War with Persia. **(See p. 641.)**

1603–1606. Revolt of Kurds and Druses. Janbulad, Kurdish governor of Klis, and **Fakhr-ad-Din,** Prince of the Druses, joined in revolutionary alliance. Janbulad was defeated by Ottoman forces and fled to Fakhr-ad-Din in Lebanon. The Druse prince, maintaining himself in his mountainous territory, made a temporary truce with the Porte, and paid tribute.

1603–1617. Reign of Ahmed I (14 years old). A period of revolt, turmoil, and discord within the empire.

1606. Treaty of Zsitva-Torok. Peace with Austria, which the Ottomans were forced to recognize as an equal, nontributary power.

1610–1613. Renewed Druse Revolt. Fakhr-ad-Din had plotted with European Christian princes—including the Pope and the leaders of the Empire, Spain, and Tuscany—to help them recover the Holy Land. He seized Baalbek and threatened Damascus. Overthrown by a combined Turkish land and sea invasion, he fled to Italy.

1614–1621. War with Poland. **(See p. 627.)**

1616–1618. War with Persia. **(See p. 642.)** The Turks lost Azerbaijan and Georgia.

1617–1621. Reign of Osman II.

1621–1622. Janissary Revolt. Osman attempted to reform the Janissaries, but they revolted and overthrew him and put his imbecile brother **Mustafa I** on the throne. Mustafa soon abdicated in favor of Ahmed I's fifth son, **Murad IV.**

1623–1640. Reign of Murad IV. Eleven years

old at accession, the first 9 years of his reign were under the regency of his mother, **Kosem Sultan,** while the mutinous Janissaries virtually ruled the country.

1623–1638. War with Persia. (See p. 642.)

1631–1635. Renewed Druse Revolt. Fakhr-ad-Din returned from Italy and began fomenting revolt (1618). During the Persian war he gained control of much of Syria, and defeated a Turkish army attempting to go into winter quarters in Syria between campaigns against Persia (1631). Again the Turks mounted a land and sea invasion (1633), and Fakhr-ad-Din's son was defeated and killed in a decisive battle north of Damascus. Fakhr-ad-Din took refuge in the mountains again, but was captured and beheaded in Constantinople (April 13, 1633).

1638–1640. Military Reforms of Murad. Last of the warrior sultans, he was strong enough to initiate long-needed reforms in the Janissary organization. The reforms ended with his death (1640).

1640–1648. Reign of Ibrahim I. Another son of Ahmed, his reign was dominated by strong-willed Kosem Sultan. Turkey's decline continued.

1645–1670. War with Venice over Crete. This resulted from capture of Ibrahim's wives by Maltese corsairs, based on Venetian ports in Crete. A Turkish expedition of 50,000 men aided by the Greek inhabitants, who hated the Venetians, captured Canea (August 1645) and Retino (1646).

1648–1669. Siege of Candia. The Turks had great difficulty in protecting their supply lines to Crete against the more modern Venetian fleet, which was able to keep Candia supplied and reinforced. Venice also captured Clissa, in Dalmatia, and the islands of Lemnos and Tenedos, blockading the Dardanelles (1648).

1648. Revolt in Constantinople. This was partly stimulated by famine caused by the Venetian blockade. Ibrahim was overthrown and killed. His 7-year-old son **Mohammed IV** was placed on the throne, and Kosem Sultan continued to rule.

1649. First Naval Battle of the Dardanelles. A Turkish fleet, attempting to open the blockade, was defeated by the Venetians.

1651. Death of Kosem Sultan. She was strangled at the instigation of the mother of Mohammed IV, **Turhan Sultan,** who became regent.

1656. Mohammed Koprulu Becomes Grand Vizier. An Albanian pasha, Koprulu was appointed by Turhan Sultan. He halted the decline of the empire by his energy, firmness, and wisdom.

1656. Second Naval Battle of the Dardanelles. Another Venetian victory maintained the blockade. A Venetian fleet briefly threatened Constantinople. This led Koprulu to devote a massive effort to rebuilding the Turkish Navy (1656–1657).

1656–1661. Reorganization of the Ottoman Government. Koprulu succeeded in a major reform of the civil and military sides of the government. He ruthlessly suppressed a revolt and executed all who opposed him. At least 50,000 people were killed, mostly rebels.

1657. Revolt in Transylvania. (See p. 636.)

1657. Third Naval Battle of the Dardanelles. The Turks were victorious, then reconquered Tenedos and Lemnos. They then proceeded to take several other Venetian islands in the Aegean (1657–1658). Regaining control of the Aegean, the Turks sent substantial reinforcements to their hard-pressed army on Crete.

1661. Death of Koprulu. He was succeeded as grand vizier by his son, **Fazil Ahmed** Koprulu.

1662–1664. War with Austria. (See p. 636.) Despite Fazil Ahmed's defeat in the Battle of the Raab, he obtained favorable peace terms.

1664–1669. French Operations against the Barbary Pirates. (See p. 616.) Because of this involvement against Turkish vassals, the Venetians attempted to persuade France to enter an alliance against the Ottoman Empire. Louis XIV did send a fleet and a force of 7,000 men to Candia (1669).

1666–1669. Turkish Efforts Intensified on Crete. Ahmed went to Crete and assumed command of the siege of Candia.

1669, September 6. Fall of Candia. Seeing defeat inevitable, the French contingent withdrew, and Venetian General **Francesco**

Morosini was forced to surrender. In the subsequent treaty, Venice lost all of Crete save for 3 small seaports. Venice also lost most of its Aegean islands and much of Dalmatia to Turkey.

1671–1677. War with Poland over the Ukraine. (See p. 629.)

1678–1681. Revolt of the Cossacks and War with Russia. (See p. 630.)

1678. Kara Mustafa Becomes Grand Vizier.

1682–1699. War with Austria and Poland and the "Holy League." (See pp. 630, 637, 638.) The Turkish defeat at Vienna precipitated a series of disasters which eventually caused Turkey to lose all of Hungary.

1687. Turmoil in Constantinople. Following news of the defeat at the **Battle of Nagyharsany** (see p. 638), there was panic in Constantinople; the Janissaries mutinied. **Mohammed IV** abdicated and was succeeded by his brother.

1687–1691. Reign of Suleiman II.

1685–1688. Venetian Offensives. Under **Francesco Morosini** the Venetians were successful in Dalmatia and southern Greece. He overran the Peloponnesus (1686); advanced through the Isthmus of Corinth; besieged and captured Athens (September 1687). He later was forced to abandon Athens, but held most of the Peloponnesus.

1690. Mustafa Koprulu Becomes Grand Vizier. Temporarily he stopped the disasters and retook the lost fortress of Belgrade (see pp. 599, 638).

1691. Venetian Capture of Chios.

1693. Austrians Repulsed at Belgrade.

1695. Turkish Successes. Chios was recaptured from the Venetians. At the **Battle of Lippa,** Austrian Field Marshal **Friedrich von Veterani** was defeated and killed.

1697, September 11. Battle of Zenta. (See p. 638.) Climactic Austrian victory.

1699. Treaty of Karlowitz. (See p. 638.)

Persia

Under brilliant soldier, statesman, and administrator Shah Abbas, Safawid Persia briefly became the most powerful nation of southern and western Asia. His successors, however, soon lost what he had gained from the Turks and Uzbeks, and by the end of the century the Safawid Dynasty was on the verge of collapse. The principal events were:

1587–1629. Reign of Shah Abbas the Great. (See p. 551.)

1602–1612. War with Turkey. Abbas took advantage of Turkish internal troubles and wars in Europe. Marching rapidly from Isfahan (the new Persian capital), his efficient modern army easily defeated local Turkish forces and besieged Tabriz, which capitulated after a long siege (October 21, 1603).

1603–1604. Reconquest of South Caucasus Region. Abbas captured Erivan (after a 6-month siege), Shirvan, and Kars. In little over a year he had regained the territories surrendered to Turkey a decade earlier.

1605–1606. Consolidation and Preparation. While Abbas consolidated his control over the reconquered territories, the Turks, under young and vigorous Sultan Ahmed, prepared to get them back.

1606. Battle of Sis (or Urmia). Ahmed with an army of 100,000 met Abbas with 62,000 near Lake Urmia. The Turks followed their traditional battle plan against the Persians: a meeting engagement of cavalry, designed to draw the essentially cavalry Persian army within range of the guns of Turkish infantry and artillery. Abbas, however, sent a detachment to carry out a demonstration behind the Turks. This caused much of the Turkish army to face to the rear, thinking this the main Persian threat. Then, with his main force of disciplined cavalry, infantry, and artillery, Abbas made his main effort. The Turks were routed, losing more than 20,000 dead. Following this the Per-

sians occupied all of Azerbaijan, Kurdistan, Baghdad, Mosul, and Diarbekh.

1612. Peace with Turkey. Turkey renounced all claim to the conquests of Sultans Murad and Mohammed III. In a face-saving gesture, Abbas agreed to give the Sultan 200 camel loads of silk annually.

1613–1615. Expedition against Georgia. Georgia acknowledged Abbas' suzerainty. This being an area considered in the Ottoman sphere of interest, and since Abbas had made no payment of silk, Turkey prepared for war.

1616–1618. War with Turkey. A powerful Turkish army laid siege to Erivan, but was repulsed. Forced by winter weather to withdraw, the Turks lost heavily from the cold and from Persian harassment (1616–1617). After a year's lull, the Turks again invaded, advancing rapidly on Tabriz. A portion of their army was ambushed by a Persian force and suffered severely, but the main Turkish army continued to advance, at a reduced rate. Peace negotiations opened; the terms of the treaty of 1612 were reaffirmed, save that the silk tribute from Abbas was reduced to 100 camel loads annually.

1622–1623. War with the Mogul Empire. Abbas led an army that captured Kandahar (see p. 643).

1623–1638. War with Turkey. Turkey again invaded the areas lost to Abbas, this time attempting to recapture Baghdad. After a 6-month siege, Abbas arrived with a relieving army (1625). Fierce fighting was inconclusive, until a mutiny forced the Turks to withdraw (1626). They suffered severe losses in their retreat. For several years there were no campaigns of importance, but incessant border warfare. Renewing active warfare, Sultan Murad IV sent an invasion army through Kurdistan (1630). Capturing Mosul en route, the Turks defeated a Persian army, then besieged and captured Hamadan. They continued on to Baghdad, but were repulsed and retreated to Mosul (1630). Internal unrest in Turkey and a series of mutinies in the Turkish Army provided a respite to the Persians (1631–1634). Murad led an invading army in person to capture Erivan and Tabriz (1635). Murad having returned to Constantinople, **Shah Safi** (see below) besieged Erivan and after a long winter siege captured the town (1636). Following another lull, Murad took the field again and, showing great personal energy and skill, assaulted and captured Baghdad (1638). Peace was now made; the Turks kept Baghdad and the Persians kept Erivan.

1629–1642. Reign of Shah Safi (grandson of Abbas). He was a weak and cruel ruler. He lost Kandahar to the Uzbeks (1630; see p. 646).

1638. War with the Moguls. Shah Jahan's army reconquered Kandahar (see p. 646).

1642–1667. Reign of Shah Abbas II. He halted the decline of the Safawid Dynasty.

1649–1653. War with the Moguls. Abbas personally led the army that recaptured Kandahar (1649). His troops then repulsed Aurangzeb's repeated attempts to reconquer the city (see p. 643).

1659. Revolt in Georgia. Abbas repressed an uprising led by **Tahmurath** Khan.

1664. Cossack Raid into Mazandaran. Instigated by Czar Alexis of Moscow, the Cossacks raided deep into Persia, at the base of the Caspian Sea, but were driven out after causing considerable loss and damage. This was the first Russian aggression against Persia.

1667–1694. Reign of Shah Suleiman. Persia declined rapidly during this drunken reign. The Dutch seized the port of Kishm and the Uzbeks made numerous inroads into Khorasan.

SOUTH ASIA

North India

1605. Death of Akbar. Probably the result of poisoning by his son Salim, who ascended the throne with the title **Jahangir** (1605–1627).

1606. Revolt in the Punjab. Jahangir's example of filial insubordination was followed by his own son **Khusru,** who seized Lahore. Jahangir

promptly marched to the Punjab and at **Jallundur** defeated and captured his errant son, whom he caused to be partially blinded and imprisoned.

1607–1612. Rebellion in Bengal. Smoldering Afghan opposition to the Moguls broke into open warfare in Bengal, but was suppressed by Jahangir.

1610–1629. War with Ahmadnagar. During most of his reign Jahangir was involved in a desultory war in the Deccan with Ahmadnagar. Its prime minister and general, an Abyssinian named **Malik Ambar,** realizing that his small forces could not meet those of Jahangir in a pitched battle, resorted successfully to guerrilla tactics.

1622–1623. War with Persia. The Persian Emperor, Shah Abbas, captured Kandahar (1622; see p. 642). Rebellion of Jahangir's second son, **Khurram,** prevented Mogul retaliation.

1623. Khurram's Rebellion. He was defeated at the **Battle of Balochpur,** and fled (1623).

1625. Revolt. This unsuccessful revolt was led by Jahangir's chief general, **Mahabat Khan.**

1627–1658. Reign of Shah Jahan. He was creator of the Taj Mahal, erected as a tomb for his lovely wife, **Mumtaz Mahal.**

1629–1636. Conquest in the Deccan. Shah Jahan renewed his predecessors' efforts to dominate the Deccan. After the death of Malik Ambar, he conquered and annexed Ahmadnagar (1633–1636). Golconda and Bijapur were defeated and forced to acknowledge Mogul sovereignty (1635–1636).

1631–1632. War with the Portuguese. The Portuguese were meddling in Bengal and had also encouraged piracy against all merchant ships but their own. Shah Jahan sent an army which captured the Portuguese fort at Hooghly, in the Ganges-Brahmaputra Delta; the defenders were all killed or brought to Agra as captive slaves (1632).

1637–1646. Unrest in the Deccan. The conquered territories were pacified by Shah Jahan's young second son, Aurangzeb.

1638. Recapture of Kandahar from the Persians and Uzbeks. (See pp. 642, 646.)

1649–1653. War with Persia over Kandahar. The Persians again seized Kandahar (1649). Three attempts by Aurangzeb to recapture the fortress failed (1650, 1652, 1653).

1653–1658. Revolt in the Deccan. Due to the Maratha Revolt (see below), Jahan sent Aurangzeb back to the Deccan. He reconquered Golconda and Bijapur (1658), but the Maratha leader **Sivaji** was still unconquered.

1657–1659. War of Succession. The illness of Shah Jahan was followed by a fratricidal struggle among his 4 sons. Aurangzeb, prevailing after the **Battles of Samugarh** (May 1658) and **Khajwa** (January 1659), imprisoned his father in Agra Fort (where he remained, within sight of the Taj Mahal, until his death in 1666).

1658–1707. Reign of Aurangzeb. He crowned himself Emperor at Delhi (July 1658). Soon afterward he conquered Assam (1661–1663) and annexed Chittagong (1666).

1664–1707. Persecution of Non-Moslems. Aurangzeb's revival of persecution and discrimination alienated the Hindu masses and encouraged revolts. The consequent unrest resulted in constant turmoil during most of his long reign.

1675–1681. Rajput Revolt. Aurangzeb's persecution of the Sikhs turned that peace-loving religious group into a community of fanatic warriors dedicated to the destruction of Moslem rule. His policies caused the same reaction among the formerly conciliated Rajputs. Under a popular Mewar leader named **Durgadas,** the Rajputs drove out most of the Mogul garrisons (1675–1679).

1681. Revolt of Akbar. Aurangzeb's son Akbar joined the Rajput rebels, but was defeated by his father and forced to flee to Persia.

1681–1707. Continuing Conflict in Rajputana. This resulted in the elimination from the imperial army of the Rajput cavalry, one of its most effective components. This loss was particularly serious at a time when the empire was becoming engaged in a major military effort in the south.

1681–1689. Renewed War in the Deccan. The continuous exploits and victories of Sivaji and the consequent rise of the Marathas (see

below) now caused Aurangzeb to take the field personally with his Grand Army in the Deccan. He overran the Maratha country, captured and executed Sivaji's son **Sambhuji** (1689), and recaptured both Bijapur (1686) and Golconda (1687). The Marathas refused to acknowledge defeat and resorted to protracted guerrilla war, leaving the land unconquered and unconquerable (see below).

1689–1707. The Decline of Aurangzeb. His large empire bankrupt and exhausted, many of his soldiers mutinous, his policy of expansion and conquest unconsolidated, it was only through tremendous personal vitality and will power that Aurangzeb succeeded in holding his realm together until his death.

South India and Ceylon

1610–1629. Revival of Ahmadnagar. Though nominally the prime minister, the virtual ruler of Ahmadnagar for nearly 2 decades was the Abyssinian General Malik Ambar. He defeated the Moguls, then retained the independence of the nation in a protracted series of partisan wars (see p. 643).

1636. Mogul Reconquest of Ahmadnagar. After the death of Malik Ambar the Moguls reconquered the country.

1646–1680. Rise of the Marathas; Reign of Sivaji. The Marathas, a hardy, frugal Hindu people living generally in arid mountains of the west-central Deccan, east and southeast of modern Bombay, were essentially the descendants of the former Yavada Kingdom of Devagiri; their major employment had been as mercenary soldiers in other states. A growing feeling of religious and national consciousness was sparked into a flame by the rise of the young Yavada Prince **Sivaji.** At the age of 19 he rose against the Moslem principality of Bijapur and established an independent Maratha principality in the western Ghat Mountains.

1646–1664. Expansion of the Marathas. Slowly Sivaji increased his strength and power, initially at the expense of Bijapur, and then through incursions and conquests in the Mogul provinces to the north. He created a navy (1659), which enabled him to carry the war to Mogul lands bordering the Arabian Sea. It proved itself very effective as a bulwark against the Portuguese and English fleets and as a mercantile force trading between India and Arabia.

1664. Sack of Surat. Sivaji captured and sacked the principal Mogul port. Subsequently defeated by a Mogul army under the Rajput **Jai Singh,** he made peace, and was sent to Delhi as a nominal ambassador but virtual prisoner. After more than a year in Delhi, Sivaji made a dramatic escape and returned to the Deccan.

1670–1674. Renewed Maratha-Mogul War. Sivaji was successful and established himself as king of an independent Maratha kingdom.

1674–1680. Expansion of the Maratha Kingdom. A first-rate soldier and able adminstrator, Sivaji continued to gain power and prestige until his untimely death (1680). His military success was due to his use of inaccessible hill forts as bases of operations for guerrilla warfare, and to the exceptional efficiency of the regular army he created, compensating his lack of quantity by quality. Since this arid country could not support such an army, he found provender and the wealth he needed for his military budget by constantly raiding Moslem lands, or receiving "protection" tribute from those who wished to escape his depredations. The Marathas, good horsemen, rode light, devoid of luxuries, heavy baggage, equipment, and tents. In the actual conduct of operations Sivaji followed the traditions of Hindu chivalry in his treatment of defeated enemies and of noncombatants.

1683–1689. Renewed Maratha-Mogul War. **(See p. 643.)**

1689–1707. Resurgence of the Marathas. Slowly the Marathas, in desperate guerrilla warfare, wore down the strength of the Mogul Grand Army. They received an assist from nature when most of the Mogul army was wiped out in a flood of the Bhima River (1695). Aurangzeb returned personally to the field in his old age, but died in Ahmadnagar (1707). Following this, the Grand Army withdrew northward, leaving the Marathas again dominant in the Deccan.

The Europeans in India and the Indian Ocean

1601–1603. Arrival of the Dutch. Appearance of Dutch ships on the Gujerat and Coromandel coasts ended Portuguese monopoly of Indian overseas trade.

1602. Portuguese Loss of Bahrein. Arab vassals of Persia recaptured the island.

1608. Arrival of the English. William Hawkins of the British East India Company arrived at Surat on the Gujerat coast and tried to gain a trading-concessions treaty with Jahangir.

1612–1630. English-Portuguese Conflict. Trading rights were obtained at Surat when **Thomas Best** defeated a much superior Portuguese fleet (1612). Hostilities persisted, but Portuguese warships were once again defeated by **Nicholas Dowton** (1614). In following years the Dutch and British East India Companies established trading posts scattered along the coast. The Indians welcomed the newcomers because they envisaged an opportunity to play off the 3 European nations against each other.

1616. England Begins Trade with Persia. The first merchant ship of the East India Company evaded Portuguese warships and arrived at the Persian port of Jask.

1618. English-Portuguese Conflict in the Persian Gulf. A small English squadron, operating from Surat for the purpose of keeping the Persian Gulf open to English trade, defeated a larger Portuguese fleet in two engagements off **Jask.** This gave the English superiority in the Arabian Sea.

1620. Kandyan-Dutch Alliance. **(see p. 557.)** After years of negotiation, Singhalese King Vimala's successor **Senerat** concluded an alliance of Kandy with the Dutch against the Portuguese.

1621. English Recognition by the Moguls. Jahangir granted the English additional trade rights, and established the East India Company as a naval auxiliary of the Mogul Empire.

1621–1622. English Capture of Ormuz. An English fleet, cooperating with a Persian land army, captured the major Portuguese base of Ormuz. After this disaster the Portuguese moved their Persian Gulf base to Muscat.

1624–1630. English-Dutch Cooperation against the Portuguese. A major Portuguese effort to reestablish supremacy in the Indian Ocean caused the English and Dutch to cooperate. After some indecisive actions in the Arabian Sea and Persian Gulf (1624–1625), Portuguese power continued its slow decline. A Portuguese effort to retake Ormuz failed completely (1630).

NOTE: *The ancient alliance between England and Portugal was ignored in their colonial relationships.*

1633. Dutch and Kandyan forces capture Trincomalee.

1640. First Fortified English Post. Fort Saint George (the site of modern Madras) became the company's headquarters on the Coromandel coast.

1641–1663. Dutch Encroachment against the Portuguese. The Dutch attempted to eliminate Portuguese land bases in the Indian Ocean area, capturing Malacca (1641), Colombo (1656), Negapatam (1658), and Cochin (1663). Goa held out against several determined Dutch attacks.

1650. Portuguese Loss of Muscat. The base was captured by the Imam of Oman.

1651. English in Bengal. A post was established at Hooghly. They later decided to fortify in the face of Mogul threats (1681).

1656–1658. Ceylonese Isolation. After the Dutch victory over Portugal, the kingdom of Kandy realized it had merely exchanged one foreign influence for another, and withdrew into the mountainous Ceylonese interior, yielding the coastal areas to the Dutch.

1666. Arrival of the French. The French entered the Indian trade later than their Dutch and English rivals, but they established a number of posts, the most important being Chandernagore (1670) on the Ganges Delta near Hooghly, and Pondichery (1673) on the Coromandel coast near Fort Saint George.

1667. Establishment of Bombay. The British

established a fort and trading post on the island of Bombay.

1686. War in Bengal. Desultory fighting erupted between the British at Hooghly and the Mogul governor of Bengal. This resulted in the building and fortification of Fort William lower down the river (the site of modern Calcutta).

EAST AND CENTRAL ASIA

Inner Asia

At the outset of the 17th century, Inner Asia was inhabited by 3 major groups of largely nomadic peoples: the Turks, the Mongols and Tartars, and the Tibetans. The 2 most important of the Turkic peoples were the Uzbeks of southern and central Turkestan and the Kazakhs of northern Turkestan. The Uzbeks dominated the Turkoman nomads, who inhabited the desert region between the Caspian and Aral seas, and the Tajiks, who lived in the highlands north of the Hindu Kush Mountains. Most important of the many Mongol tribes were the Khalkas, who lived north of the Gobi Desert; the Kalmucks, who inhabited western Mongolia and the Altai region; and the Kirghiz, who lived in the valleys of the Tien Shan Mountains.

During this century began a process which would, in the following century, completely extinguish the traditional independence of these warlike peoples of Inner Asia. This was the steady expansion of Czarist Russia from the west and of Manchu (or Ch'ing) China from the east. That the Mongols and Turks, traditionally conquerors, should themselves now be conquered was not due to any decline in their warlike proclivities, but rather to the fact that the evolution of the art of war had progressed beyond the capacity of essentially nomadic peoples. Their economic resources would not permit the production or purchase of muskets and cannon, and their cavalry could not stand up to modern musketry and artillery.

For our purposes we shall deal with the principal events of Inner Asia in this century under three headings: the Uzbeks, the Mongols, and Russian expansion. Chinese expansion is dealt with under China.

The Uzbeks

1599. Independence of Bokhara. Bokhara, under the Ashtarkanids, threw off the rule of the decaying Shaibanid Dynasty. Bokhara now again became the principal seat of Uzbek power, but its emirs shared control of southern Turkestan with the khans of Khiva (successors of the Shaibanids).

1608–1646. Reign of Iman Kuli of Bokhara. Bokharan Uzbeks raided occasionally into Persian Khorasan and Afghanistan. Sporadic efforts to conquer the Kirghiz were invariably repulsed by the mountain Mongol tribes.

1630–1634. Conquest of Kandahar. Bokhara seized Kandahar from the Persians (see p. 642) but the Uzbeks were soon driven out by Mogul Shah Jahan (1638; see p. 643).

1688. Conquest of Khiva by the Persians. The Khan of Khiva retained autonomy as a vassal of the Persian Shah.

Mongolia

The innumerable wars between the great Mongol tribal groupings, among the tribes within the groupings, and with the neighboring Tibetans, Chinese, Tartars, Turks, and Russians were too

many, and too confused, for simple and concise summarization. During most of this century the Mongols dominated Tibet. The principal event were:

1623–1633. Conquest of Inner Mongolia by the Manchus. **(See p. 648.)** The Ordos Mongols became virtually assimilated by the Chinese.

1636. Migration of the Western Kalmucks. They fought their way through Kirghiz and Kazakh territory to cross the Emba River. They subsequently settled in the Trans-Volga steppe, raiding Russian settlements on both sides of the river. Submitting to Russia (1646), they maintained autonomy under their own khan. They became an excellent source of light cavalry for the Russians, who later used them in their campaigns against the Krim Tartars and in Central Asia.

1672. Raid of the Torgut Mongols. Ayuka Khan of the Torgut Mongols raided through western Siberia, across the Urals and the Volga, as far as Kazan in Russia. He then made peace with the Russians and, supported by this, was able to maintain his lands in relative peace for the remainder of the century.

c. 1680–1688. Expansion of Galdan's Dzungar Empire. Under the leadership of **Galdan** (Kaldan) Khan (also known as Bushtu Khan), the Dzungars—a subdivision of the Kalmucks inhabiting the region around Lake Balkash—conquered most of Kashgar, Yarkand, and Khotan from the Kirghiz, and also expanded into Kazakh territory.

1688–1689. Galdan Attacks the Khalkas. The Khalka Mongols, hard-pressed by the Dzungars, appealed to the Manchus for aid. A Manchu army helped them.

1689. Congress of Dolonor. **(See p. 650.)**

1690–1695. Galdan Harasses the Khalkas and the Chinese.

1696. Battle of Chao-Modo (Urga). **(See p. 650.)**

1697. Death of Galdan. **(See p. 650.)**

Expansion of Russia into Central Asia

The initial movements of the Russians east of the Urals late in the 16th century had been made in the high latitudes, carefully avoiding the still-formidable Kalmucks, who inhabited the region that now comprises central Siberia.

1604. Founding of Tomsk. Russian expansion extended eastward as far as the middle Yenisei River.

1618. Russians Reach the Upper Yenisei. They established the fort of Yaniseisk.

1628. Russians Reach the Middle Lena River.

1630. Founding of Kirensk.

1632. Founding of Yakutsk.

1639. Russians Reach the Sea of Okhotsk. This was their first foothold on the Pacific.

1641–1652. Conquest of the Buryat Mongols. This gave the Russians control of the region around Lake Baikal.

1643–1646. Penetration into the Amur Valley. A Russian expedition from Yakutsk under **Vasily Poyarkov** made the first contact with Chinese civilization.

1644. Russians at the Mouth of the Kolyma River. This brought them to the Arctic Ocean.

1648. Founding of Okhotsk.

1651. Founding of Irkutsk and Khabarovsk.

1651–1653. Occupation of Amur Valley. Yerofey Khabarov established Russian forts in the Amur Valley and in the Daur land to the north.

1653–1685. Clashes with China. The Manchus, relatively uninterested in the Amur Valley, were aroused by Russian persecution of Chinese and Manchu settlers in the region. Occasional Manchu raids made the Russian position precarious.

1660. Manchus Eject the Russians from the Amur Valley. **(See p. 649.)**

1683–1685. War with the Manchus. The Russians were again ejected from the Amur Valley (see pp. 649–650).

1689. Treaty of Nerchinsk. **(See p. 650.)**

China, 1600–1700

1600–1615. Emergence of a Manchu State. Nurhachi erected a 3- or 4-walled fortress in his capital, Liaoyang, and welded the former Ming garrison system (*wei*) into a primitive military and administrative bureaucracy of 4 (later 8) "banners" (1600–1615). Manchu nobles formed an officer corps, usurping the traditional command functions of tribal chieftains. By 1644, the Manchu army included 278 Manchu, 120 Mongol, and 165 Chinese companies, each company (*niru*) consisting of approximately 300 men.

1618. Outbreak of War between Manchus and Mings. Nurhachi's army seized a Ming stronghold at Fushun, then defeated a Ming retaliatory force. The Ming recruited 20,000 Koreans, traditional allies of the Chinese dynasty, to help put down the Manchu revolt.

1621. Capture of Mukden (Shenyang). The Manchus drove the Ming from the Liao Basin and attacked Mukden. The city capitulated after Ming troops, dispatched from the garrison to meet Nurhachi's advance, were trapped when traitors within Mukden destroyed the single bridge spanning the fortress moat.

1623. Manchu Advance Halted. Nurhachi was defeated near the **Great Wall** by a Ming provincial governor, **Yuang Ch'unghuan;** the Ming artillery, provided by European Jesuit missionaries, overpowering the Manchu longbows. The Manchus thereupon turned west and began to expand into Mongolia.

1624–1625. The Dutch Reach Taiwan. They established several posts on Taiwan.

1626. Death of Nurhachi. He was succeeded by his son, **Abahai** (or T'ai Tsung), who immediately augmented the banners.

1627, February. Manchu Invasion of Korea. They crossed the frozen Yalu and subdued the Ming ally prior to invading China.

1628. Manchus Again Repulsed. A renewed effort to invade China was again halted by Yuang with his Ming artillery.

1629–1634. Raids into Northern China. Repeated Manchu raids into northern China through the Jehol Pass were repulsed by the Ming. Manchu forces also raided Shansi Province (1632 and 1634). During this period, Abahai began developing his own highly effective artillery to permit his troops to face the Ming army in open battle.

1633. Manchu Conquest of Inner Mongolia. This was facilitated by Mongol soldiers defecting to escape harsh conditions in the Mongolian army. Subsequently, there was large-scale assimilation of Mongol troops into the Manchu banners.

1635–1644. Decline of the Ming. Widespread rebellions throughout China.

1636–1637. Conquest of Korea. Upon the failure of the Koreans to pay tribute and their reluctance to participate in campaigns against the Ming, Abahai led 100,000 Manchus into Korea and compelled a formal renunciation of the Chinese dynasty.

1636–1644. Consolidation of the Amur Basin. In 4 expeditions, Abahai secured control over the entire Amur region.

1636. Establishment of Ch'ing Dynasty. At Mukden, the Manchus proclaimed an imperial dynasty; Abahai took the title of **Ch'ung Teh.**

1643. Death of Abahai. His 5-year-old son, **Shun Chih,** assumed the imperial title. Actual power passed to Abahai's brother, the regent, Prince **Dorgon.**

1643–1661. Reign of Shun Chih. Ming resistance in the south persisted throughout Shun Chih's reign.

1643–1646. Russian Explorations in the Amur Region.

1644, May 26. Collapse of the Ming Dynasty. A rebel brigand, **Li Tzu-ch'eng,** seized Peking. **Wu San-kuei,** a Ming general (and later viceroy), enlisted Manchu aid to overthrow the rebel regime. In a great battle just south of the

Great Wall the Manchus defeated Li and seized Peking.

1644–1645. Expansion to the Yangtze. Prince **Fu** of the Ming Dynasty set up a new government at Nanking, defying the invaders. Prince Dorgon defeated the Ming army in a 7-day battle in and around **Yangchow.** A bloody and indiscriminate massacre of the defeated army and the inhabitants followed. Nanking soon fell, with little struggle, and Prince Fu fled into oblivion. Several Ming cousins, however, claimed the imperial throne and continued scattered resistance to the invaders.

1645–1647. Conquest of Fukien. Taking advantage of dissension among the Ming claimants, the Manchus swept through Fukien Province (1645–1646). They next seized Canton (1647). Strong resistance continued, however, in Shensi, Shansi, and Szechwan.

1648–1651. Campaigns of Kuei Wang. Prince **Kuei Wang,** last of the Mings, now became the rallying point for Chinese opposition to the invaders. An able soldier, he briefly controlled most of south China. Dorgon quickly consolidated control of the Yangtze Valley, however, then systematically overran most of south China. Kuei Wang fled to the mountainous southwest, where he briefly retained control of Kweichow and Yunnan.

1651–1659. Conquest of the Southwest. Despite desperate resistance and difficulties of terrain, the Manchus established control over most of the southwest, although they were unable to capture Kuei Wang before his death (1662).

1652–1662. War against the Pirates. A family of pirates, whose most renowned member was **Cheng Ch'eng-kung** (known to Europeans as **Koxinga**), conducted incessant warfare on behalf of the Ming against both Manchus and Europeans in China. Koxinga captured Amoy (1653) and Ch'ung-ming Island (1656) and unsuccessfully assaulted Nanking (1657). He attacked Taiwan with 900 vessels and besieged Fort Zelanda (at Anping), compelling the Dutch to capitulate (1661–1662). The Ch'ing Dynasty evacuated 6 coastal provinces and installed their inhabitants behind a guarded barrier some 10 miles from the sea (1661). Pirate power faded, however, after Koxinga's death (1662).

1659–1683. Manchu Consolidation. The conquerors strengthened the garrison at Peking, surrounding it with about 25 smaller posts, and established stout garrisons in 9 provincial capitals and at other strategic sites. "Tartar generals" (*chiang-chun*) and Manchu brigade generals commanded these fortifications on a rotational basis. Local police operations in 14 provinces were conducted by the Chinese Army of the Green Standard under Chinese officers.

1660. Clash with the Russians. Manchu troops forced the Russians to evacuate their posts in the Amur and lower Sungari River regions.

1662–1722. Reign of K'ang-hsi. The height of modern Chinese culture and glory.

1663–1664. Dutch Operations against the Pirates. With Manchu support, a Dutch fleet forced **Cheng Chin,** Koxinga's son, to retire from his Fukien coastal stronghold to Taiwan.

1674–1681. Revolt of the Three Viceroys. K'ang-hsi, wary of the growing power of the governors (or viceroys) of Yunnan, Fukien, and Kiangsi, decreed their removal (1673). Wu San-kuei of Yunnan (the former Ming general) resisted the imperial decree and held Szechuan, Kweichow, Hunan, and Kwangsi (1674–1679). He was joined in revolt by the other 2 governors. Ultimately the uprising was quelled.

1675. Revolt in Chahar. Suppressed by the Manchus.

1683. Taiwan Annexed. Cheng K'e-shuang, the son and successor of Cheng Chin, surrendered Taiwan to the Manchus.

1683–1685. Clash with the Russians. The Russians had reestablished themselves securely in the Amur Valley (1670) while the Manchus were engaged in suppressing the revolt in southern China. A Manchu military commission studied the Russian penetration (1682) and concluded that about 2,000 troops would be required to counter the advance; 1,500 were dispatched to the Zeya River (1683). The following year the Russians were expelled from

the lower Sungari area. A Manchu army then marched on the Russian stronghold at Albasin and forced the garrison to surrender (1685). When the Manchus withdrew, however, later that year, another Russian contingent reconstructed the fortifications. The Manchus began to prepare for a more extensive war.

1689, August. Treaty of Nerchinsk. Distracted by events in Russia and Europe (see pp. 634–635), Peter the Great was anxious to resolve the Albasin dispute by pacific means. Chinese war preparations and the skillful diplomacy of Jean François Gerbillon, a Jesuit member of the Manchu delegation, caused the Russians, led by **Fyodor Golovin,** to compromise their original rigid demands and to abandon Albasin and the area north of the Amur River. The terms of the Treaty of Nerchinsk, supplemented by the primarily commercial **Treaty of Kiakhta** (1727), regulated Russian-Chinese relations for 175 years.

1688–1689. Dzungar Raids into Mongolia. **(See p. 647.)**

1689. Congress of Dolonor. The Mongols formally accepted Manchu suzerainty. Prolonged resistance of elements of the Khalka and Kalmuck tribes continued, but K'ang-hsi's operations in the Gobi finally prevailed (1721).

1696. War in the Ili Valley and Turkestan. After 5 years of desultory raiding by the Dzungars into central Mongolia, K'ang-hsi led 7 columns of 80,000 troops across Mongolia and, with the decisive use of the Manchu artillery, crushed Galdan at **Chao-Modo** (Urga). The Dzungar leader fled and committed suicide (1697). Mongol bands continued to wage sporadic war in the northwest.

Japan, 1600–1700

Within 2 years of the death of Hideyoshi (1598), the joint regency of his most powerful vassals had disintegrated into a struggle for supremacy between Ieyasu and the combined forces of Ishida, Uesugi, Mori, Ukita, Konishi, and Shimazu.

1600, October 21. Battle of Sekigahara (Barrier Field). Ieyasu's 74,000 troops decisively defeated a coalition force of 82,000, torn by internal dissension. About 40,000 confederates were reportedly killed. This victory, and Mori's subsequent surrender of Osaka Castle, enabled Ieyasu to consolidate control over Honshu.

1603. Ieyasu Proclaimed Shogun. The capital was established at Edo (Tokyo). His Tokugawa Shogunate was to rule Japan until the second half of the 19th century.

1606–1614. Tokugawa Exclusion Policy. Fear of the political objectives of missionary activities—and of possible intervention of Spain and Portugal in a violent Franciscan-Jesuit controversy—led to the wide-scale deportation of European priests. Persecution of Christians was intensified under **Iyemitsu** (1623–1651).

1609, June. Sinking of the Madre de Dios. Following a Japanese-Portuguese flare-up at Macao, Ieyasu ordered seizure of a Portuguese merchant ship, the *Madre de Dios,* moored in Nagasaki Harbor. A Japanese fleet, carrying over 1,200 troops, surrounded the vessel. After 3 days of combat, the Portuguese captain, **Pessoa,** blew up his ship, its crew, many of his assailants, and over 1 million crowns' worth of cargo.

1614, December–1615, June. Siege of Osaka Castle. Hideyoshi's son, **Hideyori,** had retired to Osaka Castle after the Battle of Sekigahara. During the first decade of the Tokugawa Shogunate, the castle became the center of potential resistance as some 90,000 alienated warriors (*ronin*) gathered at Osaka. A siege of the castle, conducted by Edo forces between December and January, was terminated by a truce. This respite enabled the besieging force to fill the outer moats and, in the following June, to successfully storm the stronghold.

1616, June 1. Death of Ieyasu. He was

succeeded by his son, **Hidetada** (1616–1623).

1623–1651. Shogunate of Iyemitsu.

1624. Japanese Isolation Policy. Following the voluntary withdrawal of English traders (1623), the Spanish were forcibly driven from Japan. The shogun ordered the destruction of all large Japanese vessels in order to prevent the mass embarkation of any disaffected subjects.

1637–1638, April 12. Shimabara Revolt. Christianized peasants on the Shimabara peninsula and Amakusa Islands rose against the oppressive religious and agrarian practices of the Tokugawa regime. Between 20,000 and 37,000 insurgents gathered at the ancient fortress of Hara; for nearly 3 months they were besieged by 100,000 Edo troops supported by a Dutch man-of-war dispatched from Hirado. Exhaustion of supplies and ammunition compelled the insurgents to capitulate; most were massacred.

1637–1638. Exclusion Edict. Iyemitsu, suspecting that Portuguese traders had encouraged the insurgents, demanded their expulsion from Japan. Only 2 foreign settlements and trade outposts remained in Japan: the Dutch outpost at Hirado and the Chinese at Nagasaki.

1651–1680. Shogunate of Ietsune. Two attempted coups, the last until the 19th century, were readily suppressed at Edo (1651–1652).

1653–1700. Internal Peace in Japan.

Korea

1606. Peace with Japan. Good relations were restored after the Tokugawa shoguns came to power (1600) and lasted without a break until the second half of the 19th century.

1624. Military Uprising. This was caused by renewed factional dispute in Korea. It swept the northern half of the peninsula before it was suppressed.

1627–1637. Wars with the Manchus. The Koreans, as vassals of the Ming, became involved in the wars with the rising Manchu power on the northern frontiers of Korea (see p. 648).

c. 1630. The Hermit Kingdom. A policy of national seclusion was introduced. Although the Yi Dynasty maintained its traditional tributary relationship with Manchu China, Korea become known as the Hermit Kingdom, stagnated.

1650–1700. Internal Factional Strife.

SOUTHEAST ASIA

Burma

1600. Destruction of Pegu. As a result of the incursions of Arakan, Ayuthia, and Toungoo (see p. 561), Burma was broken up into several small states.

1601–1605. Revival of Burma. The **Nyaungyan** Prince, descendant of the old royal family, held Ava. He embarked on a series of campaigns to reestablish authority in Upper Burma and the Shan States.

1602. Arrival of the Portuguese. Philip de Brito established a base at Syriam.

1605–1628. Reign of Anaukpetlun. Son of the Nyaungyan Prince, Anaukpetlun reconquered much of south Burma. He took Prome (1607) and Toungoo (1610).

1613. Conquest of Syriam. Anaukpetlun captured the Portuguese base; de Brito was impaled.

1613–1614. Repulse from Tenasserim. Anaukpetlun was driven out by Siamese and Portuguese forces.

1628. Murder of Anaukpetlun. A brief civil war followed.

1629–1648. Reign of Thalun. He transferred the capital from Pegu to Ava.

1648–1661. Reign of Pindale.

1658–1661. War with China. Prince **Yung Li,** last of the Mings, fled from Yunnan to Burma after defeat by the Manchus (1658). Pindale gave political asylum to the prince in Sagaing,

and for 3 years Yunnan was harassed by repeated raids of Ming supporters in Upper Burma.

1660–1662. War with Siam. (See below.)

1661–1672. Reign of Pye (Brother and Murderer of Pindale). At the outset Pye was confronted by a Manchu army of 20,000 men and was forced to surrender the Ming prince (1662).

Siam

1600, May. Repulse from Toungoo. King **Naresuen** returned to Siam, leaving Burma in a state of chaos (see p. 561).

1603–1618. Expedition to Cambodia. Prince **Srisup'anma,** accompanied by an army of 6,000 men, became King of Cambodia as a vassal of Siam.

1604–1605. Naresuen's Last Campaign. Naresuen went north with a large army to meet the Nyaungyan Prince of Burma, who was attempting to reconquer the Shan States. Naresuen fell ill and died. His successors abandoned the effort, and the Shan States returned to Burmese domination.

1610–1628. Reign of Songt'am the Just. He suppressed an insurrection incited by Japanese traders (1610). He then turned to defeat a simultaneous invasion from Laos.

1612. Portuguese-Siamese Dispute. The Siamese governor of Pegu and Philip de Brito quarreled over their alliance against Toungoo and withdrew their support from each other. As a result de Brito and Syriam fell to Anaukpetlun (see p. 651) and Siam lost most of its Peguan possessions.

1614. Repulse of Burmese. Siamese forces, aided by Portuguese mercenaries, defended Tenasserim against Anaukpetlun's invasion (see p. 651).

1618. Truce between Burma and Siam.

1622. War with Cambodia. Srisup'anma died and his successor proclaimed Cambodia independent. Songt'am invaded Cambodia by land and by sea. The Siamese fleet returned to Siam without seeing any action, but the Siamese army suffered heavy losses in men, horses, and elephants, and withdrew.

1630–1656. Reign of Prasat T'ong. He was a usurper who soon established friendly relations with the Dutch, who were given special trading privileges.

1634–1636. Rebellion of the Patani. This state, in the lower Malay Peninsula, refused to recognize Prasat T'ong. Two Siamese expeditions to Patani were total failures, and Patani became virtually independent.

1657–1688. Reign of Narai.

1660–1662. Campaigns around Chiengmai. King Narai, taking advantage of Burma's preoccupation with the Ming raiders, marched upon Chiengmai. After one repulse (1660), another effort was made, capturing Chiengmai (March 1662).

1662. Repulse of Burmese. The Mons, who were rebelling against the Burmese and fleeing into Siam, called on King Narai to protect them from pursuing Burmese troops. Narai repulsed the pursuers, then undertook a series of punitive raids into Lower Burma (see above).

1687, August. War against the British East India Company. This followed a series of disputes with the British and the Dutch. The French East India Company supported Narai, sending a force of some 600 men to help man coastal forts. The French soon were at odds with the Siamese.

1688–1703. Reign of P'ra P'etraja. He reached understandings with both the English and French. The reign was plagued by serious internal rebellions in the provinces.

Laos

1624–1637. War of Succession. Finally ended when **Souligna-Vongsa** defeated 4 rivals.

1637–1694. Reign of Souligna-Vongsa.

1651–1652. War with Tran Ninn. Souligna, denied the hand of the daughter of the king of Tran Ninn (a small state between Annam and Laos), sent a military force to bring back the princess. After an initial repulse Xieng-Khouang, capital of Tran Ninn, was captured and the princess seized.

1694–1700. Turmoil in Laos. Three-way struggle for the throne.

Vietnam

While the Le Dynasty was recognized as the only legitimate ruling force in Vietnam, rivalry and partition between the Trinh family (north) and the Nguyen family (south) led to seven campaigns. The Trinh had an army and fleet of 100,000 men, 500 elephants, 500 large junks, and cannons. The Nguyen had numerically inferior forces, but as early as 1615 had been producing heavy guns under Portuguese auspices. The shipments of modern weapons from Portugal and the Portuguese military advisers enabled the Nguyen to successfully resist the Trinh offensive. The Nguyen reinforced their natural defenses by constructing 2 huge walls across the main avenues of approach, north of Hué. The Truong-duc wall was 6 miles long, contained a camp for troops, and was an obstacle for passage up the Nhat-Le River. The Dong-hoi wall was 11 miles long and fortified with heavy cannons. In over 50 years of fighting, the Trinh never managed to break through both of these walls. The Nguyen also began constructing arsenals, cannon foundries, rifle ranges, and training grounds for infantry, cavalry, and elephants (1631). The battles generally took place south of Ha-Tinh and north of Hué, or in the wall region of Dong-hoi. The principal encounters were:

1633. Naval Battle of Nhat-Le. The Nguyen defeated the Trinh fleet.

1642–1643. Expeditions of Trinh-Trang. He and his Dutch allies were defeated on land and sea by the Nguyen.

1648. Battle of Truong-duc. The Trinh were repulsed with heavy losses at the wall.

1658–1660. Nguyen Offensives. There followed 2 years of inconclusive attacks and counterattacks.

1673. Peace. After the sixth and seventh campaigns, the Linh River was recognized as the boundary line between the 2 territories.

Cambodia

1603–1618. Reign of Srisup'anma. **(See p. 652.)** He was a puppet of Naresuen of Siam.

1618. Accession of Jai Jett'a (son of Srisup'anma). He proclaimed Cambodia to be independent of Siam.

1622. Siamese Invasion. **(See p. 652.)** This was repulsed.

1679. War of Succession. Sri Jai Jett'a's accession to the throne was disputed by **Nak Norr.** With assistance of Narai of Siam, Sri Jai Jett'a defeated Nak Norr, who fled.

Malaya and Indonesia

1600–1641. Three-Way War. Bickering between the Achenese, the Sultan of Johore, and the Portuguese.

1606–1607. Dutch Repulsed from Portuguese Malacca. Despite this failure, the Dutch did succeed in ousting the Portuguese from the Spice Islands of east Indonesia and strangling their trade in the Straits by cutting off Malacca from the main sea routes.

1607. Portuguese Repulsed from Johore.

1607–1629. Rise and Expansion of Acheh. A new ruler, **Iskandar** Shah (1607–1636) controlled most of Sumatra and several mainland territories.

1613–1615. Achenese Sackings of Johore.

1616. Acheh and Johore Repulsed from Malacca.

1629. Naval Battle of Malacca. The Achenese were defeated by combined fleets of Portugal, Johore, and Patani. Decline of Acheh begins.

1637. Alliance of Johore with the Dutch.

1640–1641. Dutch Capture of Malacca. The Malaccan fortress **A Famosa** had walls 32 feet high, 24 feet thick. It was garrisoned by 260 Portuguese and 2,000 or 3,000 Asiatics. The Dutch, aided by Johore's fleet, blockaded the

port (June 1640). The siege began in August. A Famosa did not surrender until January 1641, after an estimated 7,000 had died in battle or by sickness and famine. The Dutch, establishing a garrison at Malacca, enforced their trade monopoly of the Straits.

1666–1689. War between Johore and Jambi. Johore's power was reduced.

1681. Arrival of the Bugis. The Bugis came from Celebes as a result of their growing maritime strength and the benefits of an alliance with the Dutch. A warlike people, using chain armor, they gained a reputation as sea fighters—invincible on sea and on land. They were primarily river pirates, mercenaries, and homeless adventurers whose presence was disturbing to the Malays.

AFRICA

North Africa

All 4 of the North African nations supported themselves largely by piracy and the slave trade. The Barbary pirates became the terror of European mariners; their galleys and sailing vessels ranged over much of the Mediterranean and the eastern Atlantic Ocean. The Moroccans and Algerians, and to a lesser extent the Tunisians, also sent raiding parties across the Sahara to capture slaves from the Negro nations to the south. During this period Tripoli was more directly controlled by Turkey than were Algeria and Tunis.

Morocco

1608–1628. Reign of Sultan Zidan. The decline of the Sa'ad Dynasty began.

1618. Abandonment of Timbuktu. Expense in man power and other resources in retaining control of the sub-Saharan colony did not bring any real financial return to Morocco. Zidan wisely withdrew his forces; Moroccan colonists remained, however (see p. 655). Slave raiding continued.

c. 1645–1668. Civil War. The Hassani Berber tribes, living on the edge of the desert, rose against the Sa'adis.

1649. Hassani Capture of Fez. Mohammed XIV established the Hassani Dynasty, still ruling in Morocco. It was almost 2 decades before the conquest was completed by the Hassani capture of Marrakech (1668).

1662. Portugal Cedes Tangier to Britain.

1668–1672. Consolidation. This was done by **Rashid II.**

1672–1727. Reign of Sultan Mulay Ismail. Known as "the Bloodthirsty." The relatively stable history of Morocco during this and subsequent reigns was due to his creation of a special Negro bodyguard, the Bukharis, who were, in effect, a small and efficient standing army. Tied to the Sultan by religious oaths and his paternal care, they not only protected the royal person and palace but also were rotated on garrison duty at forts scattered throughout the empire.

1684. British Abandon Tangier to Morocco.

Algeria

Algeria, nominally ruled by the Ottomans, was in fact almost completely independent by the close of the century. The autonomous coastal towns and the central government at Algiers lived mainly on the proceeds of piratical plunder. During the latter part of the century, the ruling deys established a licensing system for all Algerian pirates whereby the dey was paid a percentage of

all loot and ransom money. Toward the end of the century, more or less successful French punitive expeditions against the Barbary pirates forced the deys of Algiers to release their Christian slaves (1684–1688).

Tunis

During the early years of the century, the deys of Tunis were elected by Ottoman Janissaries, who at first were an army of occupation. The beys, originally administrative subordinates of the ruling deys, and responsible for administering the inland tribes, became increasingly powerful in Tunis toward midcentury.

1650. Ali Bey Ruler of Tunis. The deys were supplanted.

1655. Blake's Expedition against Porto Farina. English Admiral Blake bombarded the corsair base, destroying many of the pirate vessels and the coastal fortifications.

West Africa

In the interior savannah region, south of the Sahara and north of the tropical rain-forest belt, there was a more or less continuous struggle between Negro and Arab-Negro nomadic kingdoms and empires—some Moslem, some pagan. Along the narrow coastal ledge, the European colonial powers fought each other for bases and favored positions in the growing and profitable slave trade. In between were the jungle peoples, generally more fragmented and less land-hungry than their nomadic neighbors to the north and northeast, but less easily exploited by European slave traders than were the relatively docile tribes along the narrow coastal lowlands. The principal events were:

1591–1618. Moroccan Conquests. The Moroccan conquerors of the Songhai (see p. 566) gradually spread their control over the central Niger Valley. They also sacked the great university at Timbuktu, which threatened their politico-religious authority. However, the cost of colonization was too great for Moroccan Sultan Zidan, and he withdrew his forces (1618; see p. 654).

1618–c. 1700. Turmoil in the Central Niger Valley. The withdrawal of Moroccan forces left political chaos, which lasted over 80 years. Some Moroccan military adventurers stayed behind as petty princes, but their power waned under pressure from Tuareg nomads, Hausa, and Fulani.

c. 1620–1654. Dutch-Portuguese Wars. The growing maritime power of the Netherlands began to take advantage of the earlier incorporation of Portugal into Spain (see p. 533) to raid and capture Portuguese bases on both sides of the Atlantic. Although the Dutch abandoned the initiative after the independence of Portugal (1640; see p. 626), the Portuguese continued the conflict for several more years until they had recovered a number of their lost bases.

1621. Dutch Seizure of the Portuguese Bases of Arguin and Goree.

c. 1625. Rise of Luba Kingdom. This tribe, lying west-northwest of the Lunda, established a state under the leadership of the warrior-chieftain **Kongolo.** He was deposed by a rival's son, **Ilunga Kalala** (also an able warrior) (c. 1650). The Luba were later absorbed by the Lunda.

1626. Establishment of St. Louis. This was the first French base at the mouth of the Senegal River.

1631. Establishment of Kormantine. This was the first English base on the African coast.

1637–1645. Portuguese-Dutch Conflicts. The Dutch seized Elmina from Portugal. In retaliation the Portuguese reconquered São Thome and Loanda from the Dutch (1640–1648), while the Dutch seized St. Helena (1645).

1641. Soyo Independence. This Kongo province broke away from the kingdom, marking the start of Kongo's decline.

c. 1645–1685. Reign of Wegbaja of Abomey. This monarch, the grandson of founding monarch **Do-Aklin,** built Abomey into a powerful centralized state, and broke free of the Yoruba kingdom of Oyo to the east. Wegbaja began a regular census in 1680 to regulate conscription (of both sexes) for the army. He was succeeded by **Akaba** (1685–1708).

c. 1650. Foundation of Bambara Kingdom of Segu. Traditionally founded by two brothers, **Barama** and **Nia Ngoli,** who began as bandit chieftains but gained control of the market town of Segu.

c. 1652–1682. Reign of Kaladian Kulibali of Segu. This Bambara ruler expanded the kingdom to include Timbuktu, but it fell apart after his death.

1662. British Base at the Mouth of the Gambia River.

1664–1665. Anglo-Dutch War. The British took Cape Coast Castle (10 miles from Elmina) from the Dutch (1664). Next year they took St. Helena from the Dutch, who captured Kormantine from the British (1665).

1665. Battle of Ambuila. Portuguese intervention supporting Kongo against a seceding province was defeated, and Kongo's decline accelerated. The Kongo capital of San Salvador (modern M'Banza Congo, in Angola) was abandoned (between 1678 and 1703).

1670. Defeat of Mandingo and Timbuktu by the Bambaras. The remnants of the old Mali and Moroccan empires became tributary to Segu and Kaarta.

c. 1670–c. 1700. Rise of the Lunda Kingdom. Traditionally founded when Luba Prince **Cibinda Ilunga** married a Lunda chief's daughter (c. 1670). By century's end, the Lunda Kingdom stretched from the Kasai River in the southeast to the Kwango River in the west. The Lunda were politically very adaptable, and tribes brought under Lunda control by bands of warrior-adventurers found Lunda rule beneficial and conciliatory.

1677. French Capture Arguin and Goree from the Dutch. Goree became the main French base on the West African coast.

c. 1670–1700. Rise of the Ashanti. The Ashanti, a tribal confederation in modern southern Ghana, struggled for decades against the suzerainty of the Denkyera state, and only under the leadership of **Osei Tutu** (c. 1675) did they break away after a series of military campaigns. Osei Tutu became *Asantehene* (king), at the new capital of Kumasi. He was enthroned on the *sika 'dwa* (Golden Stool), thereafter the symbol of Ashanti royal authority.

1697. French Begin Expansion up the Senegal River.

East Africa

While Bantu tribes, migrating from the north and west, broke up the old Monomotopa Empire and simultaneously disrupted the neighboring Portuguese coastal possessions, the Portuguese found themselves facing a more lasting threat from the north. During most of this century the Portuguese and the Omanis from Arabia struggled bitterly for control of the entire western coast of the Indian Ocean, its raw-materials resources, and the even more valuable African slave trade with Asia. The principal events were:

1590–1620. Turmoil in the Monomotopa Empire. The Sotho and Ngoni Bantu tribes completely broke up the empire and left it in chaos as they continued their great migration

southward to and across the Limpopo River (see below).

1606–1607. Funj Consolidate Control of Central Sudan. **(See p. 485.)**

1626. First French Settlements on Madagascar.

1633. Expulsion of Portuguese from Ethiopia. Facing civil war because of Catholic missionary efforts to absorb the Ethiopian church, the *negus* (emperor) **Fasilides** closed the country to Catholic missionaries, and established a new capital at Gondar (c. 1640).

1643. The French Settle Réunion Island.

1644–1680. Reign of Badi II Abu Dagn. This Funj monarch brought that kingdom to its greatest power, extending his authority into Kordofan and northward along the Nile to the Egyptian border.

1650–1700. Coastal War of Oman and Portugal. After expelling the Portuguese from Muscat (1650), the Omanis began to attack Portuguese commercial posts in East Africa. They supported rebellions at Pate and Zanzibar (1652), attacked Faza and Mombasa (1660), and narrowly failed to capture Mozambique (1669). Portuguese countermoves (1678–1679) were largely ineffective, and although the Portuguese suppressed a rebellion in Pate (1686), they were unable to prevent the Omani siege and capture of Mombasa (December 1698), and later of Zanzibar (1701).

1686–1706. Reign of Iyasu I of Ethiopia. Iyasu (Jesus), based at Gondar, waged repeated campaigns in the southern Ethiopian highlands to establish control over the pagan Galla, who had invaded and settled there (see p. 564).

1686. French Annexation of Madagascar. Proclaimed by Louis XIV. France did not exercise any effective control over the vast island.

1699. French Embassy to Abyssinia. The French arrived at Gondar via Cairo and the Nile.

South Africa

Southern Africa, inhabited by primitive Khoisan (Hottentot) and San (Bushmen), was the scene of near-simultaneous migrations from both north and south. For centuries, Bantu pastoralists (who also worked iron) had been moving southward and by midcentury had reached what is now Orange Free State and Transkei. By sea, to the southern tip of the continent, came Dutch colonists. The migrating races, unaware of their approaching historic confrontation, did not come into any substantial contact during this century.

1629. Portuguese War with Mwene Matapa Empire. The *mwene matapa*, annoyed by interference from Portuguese traders, tried to expel them. They invaded, deposed the king, and compelled his successor to grant them extensive economic privileges. This marked the start of the empire's decline.

1652, April 6. Arrival of the Dutch. Colonists in 3 ships, under **Jan van Riebeeck,** arrived at the site of modern Cape Town, and established the first European settlement in South Africa.

1652–1700. Dutch Expansion Inland. By the end of the century, Dutch settlers had established themselves more than 250 miles inland.

1658. Arrival of the First Slaves at the Cape.

1684–1695. Reign of Changamire Dobo I of Rozwi. As the Mwene Matapa Empire declined, this *changamire* (ruler) raised his small state (around Fort Victoria and Shabani in modern Zimbabwe) to a position of regional preeminence. In the 1690s **Dobo I** drove the Portuguese from the Zambezi Valley. The nature of relations between the *changamires* and the Mwene Matapa Empire is unclear.

1686. Dutch Coastal Expansion. They reached Mossel Bay. Intermittent conflict began with the Bushmen.

1688. Arrival of Huguenot Refugees at the Cape.

THE AMERICAS

During the early 17th century, the increasingly competitive commercial and colonial activities of European states in North and South America, and their challenge to the native Indians, led to frequent conflicts which, in some localities, were incessant. The very process of colonization and combat between the colonial powers on the American continents often was a reflex or phase of European strife. Thus, **Jean de Ribaut**'s attempt to establish a colony in Florida (1562) had been an element in Admiral Coligny's projected attack on Spain (see p. 521). At times, European forces enlisted Indian support in their campaigns (for example, the French counterattack on Spanish-held St. Augustine, August 22, 1567–June 2, 1568; see p. 570). Expeditions conducted ostensibly for pacific purposes of exploration, colonization, and commerce often employed military means or sought military ends. These had been initiated by Drake's circumnavigation (1577–1580), which constituted a sustained assault upon Spanish shipping (see p. 507), and by Sir Walter Raleigh's expedition of 1584, which served both to explore the mainland and to reconnoiter Spain's Caribbean defenses.

Indian Warfare

The character and duration of warfare between Indians and Europeans varied according to region. At the time of the first European settlements in the Americas, there were some 16 million native inhabitants scattered from Hudson Bay to Cape Horn, comprising a vast array of tribes, cultures, and military attitudes, practices, and values. By far the most civilized, and possessing the most advanced military techniques, had been the Mexican tribes (particularly the Aztecs) and the Incas of Peru. As we have seen, these were smashed by the Spanish in the 16th century (see pp. 566–570). In North America the Iroquois confederacy constituted a remarkably civilized form of politico-military organization. Similarly, Iroquois linear and assault tactics proved relatively sophisticated.

Lack of discipline and cohesiveness, far more than crudity of weapons, put the Indians at great disadvantage in opposing the Europeans, although a long series of successful raids and massacres testify to some degree of adroitness and, perhaps more significantly, colonial unpreparedness. Several tribes proved invaluable allies (for example, Mohawk intervention in the Dutch-Algonquin conflict of 1645) and some became tenacious enemies, as the French discovered after Champlain's folly in firing upon a band of Iroquois in 1609. However, from the first, Indian prospects were doomed; increasingly effective European weapons, the curious reluctance of the Indians to exploit tactical victories, and an inability to cope with the fundamental problem of supply proved fatal.

General Colonial Military Experience

The British home government, like the French, afforded its North American colonies scant military assistance, whether in money, supplies, or men. For example, New York was the only colony to house British troops regularly throughout the period of British suzerainty. Similarly, at no point did the French post large regular forces in Canada (estimates vary from between

2,000 and 5,000); a request for reinforcements during a Seneca uprising (1686) merely brought an admonition from Paris that peace was desirable. The Spanish military establishment, also operating with small numbers in the Americas, attempted to shield the sprawling empire; thus, with Spanish troops already stationed in Cuba, Mexico, and Peru, 2 companies totaling 280 men were dispatched to the stone fort at St. Augustine (1672) to hold Florida. However, as piracy and marauding intensified, the inadequacy of numbers in the face of such extensive geographic demands became apparent (see p. 570).

The initial reluctance of the colonial powers to provide aid is understandable when one considers (1) the potentially enormous economic drain (the colonies expended over £90,000 in King Philip's War, a considerable sum in the 17th century), (2) crucial commitments in Europe, (3) the distraction of domestic discord (for instance, the English Civil War and the French Fronde), and (4) the relative autonomy of the colonizing companies. This philosophy of colonial self-sufficiency was articulated explicitly in a later British declaration (1742), cautioning the colonies that they must bear the responsibility for their own defense.

Confronted with what Burke labeled "salutary neglect," the early settlers developed militia in accordance with familiar European models. In the British colonies, the tradition of the citizen-soldier was transplanted from England as early as 1638; in 1643, Massachusetts instituted a compulsory policy requiring 4 to 6 days of military training for all males (with the exception of doctors, ministers, educators, the Harvard student body, and other peripheral groups). The other British colonies, except Pennsylvania, followed suit, creating forces whose composition was usually one-third pikemen and two-thirds musketeers. As the pike proved itself inapplicable to combat in the wilderness, the pikemen became musketeers. The colonial militia was characterized by the absence of a staff hierarchy. Generally, the governor assumed military command (although in Massachusetts, the sergeant major general performed the function). Lack of intercolonial military coordination was one of the most critical problems facing the English colonies. The failure of effective cooperation was exposed in the Pequot War; an attempt to rectify it by the creation of a New England Confederation proved futile. Furthermore, there was the inherited English distrust of a standing and powerful military establishment as a threat to civil institutions. This fear was expressed as early as 1638 at the formation of the Ancient and Honorable Artillery Company.

The fascinating problem of the adaptability of European concepts of war to American conditions recurs throughout early colonial history. For example, although dense forest growth undermined the utility of cavalry, it remained the most prestigious branch of the New England militia. Between 1607 and 1689, the need to adapt and modify at times served as a catalyst to improvement of weapons. Thus the inadequacies of the matchlock were underscored in the North American setting and the flintlock was adopted extensively before it was in general use by European armies. By 1650, European armor, although effective against Indian projectiles, had been largely abandoned (first in New England, in the course of the Pequot War, and later in Virginia) and replaced by lighter and less cumbersome protective garb of cloth and leather.

By the time of the first major clashes between European forces in North America, much of the wilderness in the British New England, Middle Atlantic, and Southern colonies had been at least partially subdued, and physical conditions more closely approximated those of Europe. After the 1680s, and into the 18th century, only minor military improvements were made as a

result of the colonial experience; the muzzle-loading, smoothbore musket and pistol reigned for nearly a century, colonial units clinging to European traditions.

British America

Virginia and Maryland

1607. The First Colony. A London Company expedition settled at Jamestown.

1622, March 22. Indian Massacre at Jamestown. This led to reprisals by the colonists.

1635–1644. Intermittent Warfare between Virginia and Maryland. William Claiborne, secretary of the Virginia colony, established a trade post on Kent Island, a parcel included in the Maryland tract granted to the first Lord Baltimore. His refusal to acknowledge the legitimacy of the second **Lord Baltimore**'s proprietary claim led to intermittent hostilities, supported in the Council of Virginia, and strained his relations with **Leonard Calvert,** brother of Lord Baltimore and the first governor of the colony. Clashes occurred at sea (1635). Claiborne's unsuccessful appeal to the crown was followed by his seizure of Kent Island (1644).

1644–1646. Religious War in Maryland. A Protestant trader, **Richard Ingle,** captured the predominantly Catholic settlement of St. Mary's. Governor Calvert fled to Virginia; enlisted the aid of Sir **William Berkeley,** governor of Virginia; and recaptured the settlement.

1649–1689. The Civil Wars and Glorious Revolution. Both colonies suffered considerable unrest during this period of strife and turmoil in the mother country.

1675–1676. Indian Depredations. Susquehannock warriors crossed the Potomac into Virginia, conducted a series of raids, and repulsed a joint Maryland and Virginia retaliatory force at Piscataway Creek. The raids were intensified, resulting in the abandonment of frontier homes. Critics of Berkeley attacked his refusal to dispatch a punitive force, alleging a personal interest in the preservation of the fur trade.

1676, May 10–December. Bacon's Rebellion. Nathaniel Bacon, a civilian, disgusted with Berkeley's inaction, led a force to the Roanoke River and destroyed a band of Susquehannocks. He was declared a traitor, arrested, and eventually pardoned by Berkeley. Bacon then marched on Jamestown with a force of 500 men and secured a commission. Again he was declared a traitor. Failing to consolidate military support, Berkeley fled. On September 18, the insurgents ousted Berkeley's troops from Jamestown and burned the settlement. One month later Bacon died of malaria. His sudden death fragmented his following; during November and December, rebel groups were captured or chose to surrender in response to a promise of amnesty. The subsequent execution of 23 insurgents elicited royal censure of Berkeley.

New England

1620. Colony Established at Plymouth.

1633. English and Dutch Claims in the Connecticut Valley. Following exploration of the Connecticut Valley by **Edward Winslow** of Plymouth, the Dutch claimed the region and sent a ship up the Connecticut River. A Dutch fort and trading post were erected at Fort Good Hope (Hartford).

1636, July 30–1637, July 28. Pequot War. The murder of a trader by the Pequots called forth retaliation by the colonists and, in turn, reprisals by the Indians. A Connecticut band destroyed the major Pequot base near Stonington (May 26). On July 28, near New Haven, a force composed of contingents from Plymouth, Massachusetts, and Connecticut annihilated the fleeing survivors of the May attack.

1638. The First American Military Unit. The Ancient and Honorable Artillery Company was created in Boston. Fears were expressed in some quarters regarding the possible ascendancy of military over political leadership.

1643, May 19. The New England Confederation. The Pequot War had revealed the inade-

quacy of military coordination between colonies. This realization, coupled with the threat of Dutch expansion, led to a union of Massachusetts, Plymouth, Connecticut, and New Haven (the United Colonies of New England). Military expenses were to be shared by the colonies in proportion to their male populations. Save for a brief period during King Philip's War (see below), the confederation accomplished little.

1675, June 20–1678, April 12. King Philip's War. Colonial expansion brought conflict with the Wampanoags under **Philip.** Following raids in southern New England, the New England Confederation declared war. At first Indian attacks were frequent and generally successful. However, a severe food shortage later drained Wampanoag strength (spring 1676). Widespread surrender followed a successful campaign waged by a combined Connecticut Valley and Mohegan force (June 1676). Philip was killed (August). Although major operations soon ceased, Indian raids in the north persisted until peace was concluded (April 1678). During the 3-year conflict, over £90,000 was devoted to the war effort, 500 settlers were captured or killed, and between 10 and 20 towns were destroyed or abandoned and many others damaged.

1689. The "Glorious Revolution." Upon news of the flight of James II (see p. 611), the people of Boston revolted and imprisoned unpopular Governor Sir **Edmund Andros.**

The Carolinas

By 1653, settlers from Virginia had established the Albemarle Colony (North Carolina). English expansion in the south was stimulated by the English victory over Spanish forces on Jamaica in 1655 (see p. 664). Stirred by suspicions of a Spanish and Indian conspiracy, Charles Town colonists attacked and defeated the Kusso tribe (1671). The following years were marked by continued English expansion, occasional Indian strife, and intermittent conflict with the Spanish.

French America

1609–1627. French Penetration of the St. Lawrence. With the aid of Montaignais, Algonquins, and Hurons, the French drove the Iroquois from the valley. **Samuel de Champlain** led joint French-Algonquin and French-Huron expeditions in an attempt to push the Five Nations southward and to preserve contact between the allies (1609, 1616).

1613. English Raids. French settlements bordering the Bay of Fundy were destroyed.

1629, July 20. Capture of Quebec. The combined attacking force, under Sir **William Alexander** and Sir **David Kirke,** was unaware of a truce in the Anglo-French War (see p. 601).

1632, March 29. Peace Settlement. England returned Acadia and the St. Lawrence settlements to France.

1654–1670. New England Occupation of Acadia. A New England force under Major **Robert Sedgwick** departed from Boston for the purpose of attacking New Netherlands (the first Anglo-Dutch War; see p. 607). Instead, the colonists struck Acadia (July 1) in an attempt to destroy French competition in the fur trade. The English retained the province until 1670, when it was restored to France in accordance with the Treaty of Breda (see p. 610).

1642–1653. Iroquois War. The Dutch, seeking to attract the Algonquin and Huron fur trade, provided the Iroquois with arms to use against the French and their Indian allies. The Five Nations struck first against the Hurons, ultimately extending their raids as far as Montreal. After a brief truce (July 4, 1645), the Iroquois set fire to Fort Richelieu, drove the Hurons westward, and forced the Jesuits to abandon

missions in Huron country. Attacks along the St. Lawrence continued until the Five Nations concluded a peace treaty with the French (November 5, 1653).

1661–1681. French Expansion in the Caribbean. They established themselves in the Lesser Antilles, a base for piracy against Spain.

1665–1666. Renewed Iroquois War. After allying themselves with the English, the Iroquois resumed hostilities against the French. The flare-up proved brief and the Five Nations were compelled to seek peace in 1666.

1668–1688. Conflict over Hudson Bay. An expedition, supported by an English syndicate and led by French explorer **Pierre-Esprit Radisson,** sailed to Hudson Bay (June 1668). Later Radisson rejected his sponsors and pledged his allegiance to France; he then changed his mind and reaffirmed loyalty to the company (1680). A French force, led by Sieur **Pierre Le Moyne d'Iberville,** captured the company posts at James Bay (1688). The English retained isolated posts at the mouths of the Hayes and Severn rivers.

1684, July. La Salle's Expedition to Texas. During the Franco-Spanish conflict of 1683–1684 (see p. 621), Sieur **Robert Cavelier de La Salle** sailed from France to the Gulf of Mexico to establish a colony at the mouth of the Mississippi, near the center of Spanish colonial power. He missed the Mississippi and landed at Matagorda Bay. The disobedience of **Beaujeu,** naval commander of the expedition, and a series of misfortunes led to insubordination and La Salle's assassination (1687). His colony was destroyed by the Indians (1689).

1684–1689. Renewed Iroquois War. The Indians were incited by **Thomas Dongan,** governor of New York. Raiding parties reached the Mississippi and swept across Lakes Erie and Ontario, disrupting the flow of the French lake trade. An unsuccessful attempt at retaliation provoked Indian reprisals in the St. Lawrence Valley; 200 French were killed and 90 captured.

1689, May 12–1697, September 20. King William's War. (War of the League of Augsburg; see p. 597.) In America the war encompassed conflict in Hudson Bay, in the St. Lawrence Valley and upper Hudson Valley, and in Acadia. The English were aided by the Iroquois, while the French were assisted by most of the other Indian tribes.

1690–1697. Frontenac's Indian Raids. Count **Louis de Buade of Pallau and Frontenac** led a series of combined French and Indian assaults along the entire northwestern frontier of the English colonies. The Abenaki, French allies, raided independently in New York and Massachusetts. Frontenac also conducted a western campaign against the Iroquois (1693–1696).

1690, May 1. Albany Conference. Representatives from Plymouth, Massachusetts, Connecticut, and New York elected to invade Canada with 2 land forces and to send a heterogeneous fleet of 34 vessels up the St. Lawrence (see below).

1690, May 11. Capture of Port Royal. New England (Massachusetts) troops under Sir **William Phips** seized the capital of French Acadia. This was the single effective Anglo-American operation of the war.

1690–1691. Abortive Expeditions against the St. Lawrence. The planned colonial expedition against Quebec and St. Lawrence by the New England and New York colonies failed. The French retook Port Royal, but lost it in the Treaty of Ryswick (see p. 600).

1690–1694. Hudson Bay Operations. Iberville drove the English from their posts at the mouths of the Severn (1690) and the Hayes (1694). However, the English regained the James Bay area (1693).

New Netherlands and New York

1614. Dutch Establish Fort Nassau Near Albany.

1624. Additional Dutch Settlements. They founded their first settlements on Manhattan and at Fort Nassau on the Delaware (Gloucester, N.J.).

1638, March. New Sweden. In defiance of

Dutch protest, a Swedish expedition reached the Delaware (abandoned by the Dutch in 1627) and established Fort Christina (Wilmington).

1641–1645. Algonquin War. The Algonquins, provoked by colonial expansion, raided Staten Island and Manhattan. Reprisals and counter-reprisals resulted in damage to Dutch and nearby English settlements and plantations. The Dutch, aided by the Mohawks, imposed peace (August 9, 1645).

1647–1655. Dutch-Swedish Hostilities. John Bjornsson Printz, governor of New Sweden, constructed a chain of blockhouses on Tinicum Island (1634) and Fort New Krisholm (1647). In response, the Dutch built forts overlooking the approaches to New Sweden by the Delaware and Schuylkill rivers. The Swedes burned Fort Beversrede on the Schuylkill (May and November 1648) and seized Fort Casimir (Newcastle, 1653). The Dutch, under Governor **Peter Stuyvesant,** held Beversrede and retook Casimir. They then captured the Swedish stronghold, Fort Christina (September 1655). This ended Swedish attempts to colonize North America.

1650. Treaty of Hartford. Following encroachments of English settlers on Dutch settlements, a number of incidents led to this boundary settlement between the Dutch and the New England Confederation.

1652–1654. First Anglo-Dutch War. (See p. 607.) There was no formal declaration of war, but the English seized some Dutch frontier posts. Connecticut forces entered Westchester and Long Island, compelling Stuyvesant to acknowledge English dominion over English settlements on Long Island (1653).

1655–1664. Dutch-Indian Wars. There were 3 major episodes, the first extending from Manhattan to Esopus and Long Island (1655). The second was centered near Esopus (1663). The wars ended with the Indian surrender of the Esopus Valley after the third episode (1664).

1664–1667. Second Anglo-Dutch War. (See p. 609.) Even before formal outbreak of war in Europe, James, Duke of York, directed Colonel **Richard Nicolls** to capture New Netherlands. The arrival of 4 English frigates in New Amsterdam Harbor in late August resulted in the surrender of New Amsterdam (September 7). The English took Fort George and replaced the Dutch in their alliance with the Iroquois.

1672, March–1674, October 31. Third Anglo-Dutch War. (See p. 610.) Dutch naval and land forces seized New York (August 1673). Subsequently, Albany, New Jersey, and western Long Island yielded to the Dutch. However, the **Treaty of Westminster** (see p. 611) restored the settlements to England.

1689–1691. Leisler's Rebellion. Reports of the arrest of Sir Edmund Andros in Boston (see p. 661) encouraged anti-Catholic agitation in New York City and on Long Island (May 1689). The militia captured Fort James and turned it over to **Jacob Leisler,** the rebel leader, who declared his allegiance to William and Mary. He refused to give up his authority and was seized by British troops (March 30, 1691). He was executed (May 26).

Spanish America

North America

Spanish Jesuits extended their missionary activities on the Pacific Coast. Settlements around the missions in the Mayo and Yaqui river valleys led to Indian attacks, which were met by punitive expeditions under Captain **Diego Martínez de Hurdiade** (c. 1625).

English expansion and raiding in the south—Florida and the Carolinas—led to Spanish reprisals against English settlements.

Mexico–New Mexico

1680–1692. Pueblo Indian Revolt. Spanish mistreatment stimulated a Pueblo uprising in the northern Rio Grande Valley. The revolt, led by **Popé,** a shaman (or medicine man) who had been imprisoned by the Spanish for witchcraft (1675), caught the Spanish by surprise (August 10, 1680). At least 400 Spanish soldiers and settlers were killed, and most of the 2,000 survivors were beseiged in Santa Fé. After 10 days, they abandoned Santa Fé and retreated south to El Paso, Texas. With the Spanish gone, Popé and his followers restored traditional customs, but internal dissension and a series of poor harvests weakened Popé's popularity. Following Popé's death (1692), Spanish Governor Don Diego de Vargas (1692–1696) decided to reoccupy the colony, in part to protect Spanish holdings from growing French influence in the Mississippi Valley. The Pueblo, harrassed by Apache raids, put up no resistance and never again seriously challenged Spanish control in the area.

COMMENT. *Unlike the nomadic plains Indians to the east, the peaceful Pueblo Indians were no match for even weak Spanish military forces. They lacked military organization, and had no command system; they owed their initial success to surprise. Lacking metals, firearms, and horses, they were outclassed by the Spanish and the Apache.*

Central and South America

During this century Spain assumed a defensive posture to preserve the empire which she had acquired in the preceding century. Encroachments by France, England, and the Netherlands (particularly in the West Indies) both contributed to, and were symptoms of, the decline of Spanish power. Conflict in the Caribbean region and farther south, as in North America, reflected the shifting alliances and antagonisms of Europe. Three prime characteristics marked the period: (1) Indian unrest, particularly among the Araucanians of southern Chile, the Piajos of Peru, and the Chiriguanes, between Las Charcas and Paraguay; (2) the *Corsarios Lutheranos,* or Protestant pirates (often encouraged if not directly subsidized by the European powers, particularly England); and (3) relatedly, an extensive contraband traffic. By the end of the century, Spain had attempted to compensate for her naval inadequacy by heavy fortification of the coastal and Caribbean communities. Typical of this defensive policy was the atrophy of highly vulnerable Santo Domingo and the development of Cartagena with its round fortress, walls of a 40-foot diameter, and an easily blocked channel. The principal events were:

1624–1629. War with the Dutch. The Dutch captured Bahia (1624), but were dispossessed in the following year by a Spanish naval force. However, soon after, as a preliminary to an invasion of Pernambuco, the Dutch recaptured Bahia (1627). Dutch buccaneers, under **Piet Heyn,** seized a Spanish silver shipment off the Cuban coast (1628). Subsequently, Heyn was made an admiral in the Dutch Navy. A Dutch force of 60 vessels captured Pernambuco and Recife (1629).

1629–1660. Punitive Expeditions against Other Colonies. The Spanish drove English settlers from the islands of Nevis and St. Christopher (1629). They returned upon the departure of the Spaniards. English Puritans were forced from the Providence Islands, off Central America (1641). In reprisal, a band organized by the Providence Company and the Earl of Warwick assaulted the Venezuelan coast and briefly seized Jamaica (1643). Some years later the Spanish ousted English and French colonists in the Lesser Antilles (1660).

1654. English Seizure of Jamaica. Cromwell ordered Admiral **William Penn** to capture Santo Domingo; the operation failed and Penn proceeded to take Jamaica.

1668–1671. Morgan's Panama Raids. Led by

Henry Morgan, a force of 2,000 buccaneers plundered Porto Bello and Panama City. Morgan was knighted by Charles II.

1670. Treaty of Madrid. England promised to halt piracy in the Caribbean. Spain recognized English sovereignty over Jamaica.

1679. English Pirates Raid Panama.

Portuguese America

1609–1642. Portuguese Slave Traders Repulsed from Paraguay. Spanish Jesuits armed mission Indians and successfully resisted the penetration of Paraguay by Portuguese slave traders.

1615. French Expelled from Brazil. The Portuguese seized the French colony on Maranhão Island and subsequently settled Belém, ruining French efforts to colonize South America.

c. 1620–1654. Dutch-Portuguese Wars. (See p. 626.) Insurrection of the Portuguese population in Brazil ended in the withdrawal of the Dutch (1654). Holland relinquished all claim to the region (1661).

1680. Conflict over the Rio de la Plata. Portugal established a fort, Colonia del Sacramento, across from Buenos Aires, asserting its claim to the northern and eastern bank of the Rio de la Plata. The Spanish seized the post. English intervention (in Europe) resulted in the return of the fort to Portugal (recognized formally in 1701).

XV

THE MILITARY SUPREMACY OF EUROPE:

1700–1750

MILITARY TRENDS

During this half-century Europe became preeminent in world affairs. Save for the meteorlike passage of Nadir Shah's Persian Empire, only three major non-European powers still existed—Manchu China, Mogul India, and Ottoman Turkey—all declining in strength and incapable of exerting great influence outside of their borders. Tiny Europe, on the other hand, contained five major powers with intercontinental interests, influence, or ambitions—Britain, France, Spain, Russia, and Austria—and two other powers with modest strength in Europe, but great influence elsewhere: Portugal and the Netherlands. And there was in Europe one new power—Prussia—with wholly continental interests and contacts, but whose military prowess was beginning to have worldwide repercussions.

In military and nonmilitary affairs, Europe set the pace; others followed if they could. Europe led the world in part by default and in part because of a growing, and apparently irresistible, superiority in technology.

All of the important military leaders of the period were European—again with the significant exception of **Nadir Shah,** last of the great Asian conquerors. There was one general of great-captain rank: **Frederick the Great** of Prussia. And there were four other generals of truly outstanding ability: Prince **Eugene of Savoy** and of Austria, **John Churchill, Duke of Marlborough** of England, **Charles XII** of Sweden, and **Claude, Duke of Villars** of France. Hardly less competent were **Maurice de Saxe,** the German who fought for France; **James, Duke of Berwick,** the English expatriate who fought for France; **Louis, Duke of Vendôme,** also of France; and **Peter the Great** of Russia (tactically weak but strategically brilliant). Otherwise, even though this was a period of almost incessant—though extremely limited—warfare, leadership was for the most part unimaginative and pedantic.

Naval affairs were dominated by Britain to an extent almost unmatched in prior or (after a century) subsequent history, although imaginative leadership was largely stultified in the Royal

Navy (however for reasons quite different from the pedantry on land). At least two British admirals deserve recognition for achieving imaginative victories despite this stultification: **George, Lord Anson** and **Edward, Baron Hawke.**

Eighteenth-Century Warfare

The example of Gustavus Adolphus was the military basis of 18th-century European warfare. A handful of his imitators had sufficient ability to apply his example with imagination and energy comparable to his. Most, however, were satisfied to adopt the external aspects of Gustavus' military organization with little or no understanding of the fact that his success was due to flexibility in the employment of novel weapons and organization in accordance with old principles. Here is a perfect example of what Toynbee has called "a cycle of invention, triumph, lethargy and [eventually] disaster."*

There were, however, social, political, and economic factors which affected the conduct of 18th-century warfare at least as much as this military cycle.

The economic aspects in themselves were perhaps least important. They reflected relatively little change from previous eras, although they were soon to be completely overturned by the effects of the Industrial Revolution. The economic limitations on war in the 18th century, as earlier, were primarily those of agricultural and industrial production. The vast majority of people were employed in agriculture, producing sufficient food for themselves, with but little left over for the much smaller percentage of the population engaged in handicraft industries, in services, or in the military forces. In time of war it was simply impossible to raise very large armies. The soldiers came mostly from the farms, thus simultaneously reducing the number of producers while increasing the demand for food for nonproducers. In addition, the limited industrial capacities of nations prior to the introduction of mass-production techniques, could not provide sufficient weapons, equipment, and other munitions to equip large armies engaged in active and wasteful warfare.

The colonial expansion of Europe, with its increased trade and growing mercantilism, only served to accentuate these major economic limitations. The manpower demands of colonialism and mercantilism attracted farmers and handicrafters from their old tasks at a time when the expansion of the economy was placing ever-increasing demands upon agricultural and industrial production.

The social conditions existing in 18th-century Europe exerted an influence upon military systems very closely related to the economic considerations. The manpower demands of the economic expansion dictated the recruitment of armies from among the least productive elements of the populations. The officers were from the nobility, a generally unproductive stratum of the society, while the soldiers came from riffraff and the unemployed, who were also unproductive.

Social considerations, in turn, were closely related to the political factors which governed the conduct of wars. For all practical purposes governments were organizational structures used by monarchs in the administration of their domains. Wars were fought for personal or dynastic objectives. While the growing sense of nationalism and the widespread existence of

* Arnold J. Toynbee, *A Study of History,* Somervell Abridgment (Vols. 1–6) (Oxford: N.Y., 1947, p. 336.

patriotic sentiments cannot be dismissed, these were linked to monarchical loyalty, and otherwise were relatively unimportant in the rigidly stratified political and social organizations of society. Rigidity was indeed the dominant characteristic of the era, an economic, social, and cultural rigidity which reinforced and contributed to unimaginative military pedantry.

Take, for instance, discipline. Discipline and precision had been fundamental to the successes of Gustavus; therefore they were considered by his imitators to be goals in themselves. Furthermore, only through harsh, ironbound discipline and the most rigid physical and mental controls could the riffraff of the average European army be controlled and trained. The dregs of society could not be allowed to wander freely among the productive communities; either they would terrorize the civilians through the exercise of their newly learned military skills or, more likely, they would desert. Because of the relatively small segment of a nation's man power available for military service, because there was difficulty in recruiting new soldiers, and because it took time to train men in the precise military drills necessitated by existing weaponry, losses by desertion were as serious as battle losses.

When on campaign armies could not be allowed to forage off the country—not to spare the citizenry, but because the civilian economy could not stand ravaging and looting by hordes of soldiers, and the military economy could not stand the inevitable desertions. Therefore, a campaign could not be initiated until the commanders had assembled large stores of food and equipment in storage depots called magazines; armies could not be allowed to maneuver any great distance—usually four or five days' march at the most—from these magazines.

It was also important to avoid the risk of losing expensively trained soldiers in combat. Consequently, a commander was unwilling to fight a battle unless he calculated his chances of success to be near certainty. His opponent, who was capable of making a roughly comparable estimate of the situation, would naturally seek to avoid battle under such circumstances, and would do so by placing himself more than four or five days' distance from the enemy's nearest magazine. Under such circumstances battles were infrequent, and decisive actions resulted only from the energy of exceptionally good commanders or the foolhardiness of exceptionally stupid ones.

But once battles were joined, they were fought with ferocity and tenacity. Grim testimony to this are the casualty figures for such engagements as Blenheim, Malplaquet, and Fontenoy. But, given the nature of the warfare and the composition of the armies, such losses did not create serious strains on the national economies or societies of the opponents.

It must not be assumed, however, that the era (including the late 17th century) did not have its share of capable military commanders (as noted above, p. 666). But none of these men had the genius—and perhaps also lacked opportunity—to overcome the rigid military system within which they operated and to which, therefore, they adapted themselves and their strategies. Not even Frederick the Great—one of the undoubted geniuses of warfare—was able completely to break the rigid shackles. Frederick's greatest military weakness—his failure to pursue after a decisive victory—probably reflected a fear that his army would melt away in desertion were he to unleash it in pursuit.

It would take the cataclysm of the French Revolution, combined with the impact of the growing Industrial Revolution, harnessed by the ruthless genius of Napoleon, to shatter completely the rigid system of 18th-century warfare.

Weapons Development

As might be expected in this era of conventionality and conservatism, significant developments or innovations in weapons were few. What technological progress there was lay primarily in the refinement of existing weapons.

The basic small-arms weapon was the flintlock musket—typified by Britain's "Brown Bess"—with its offset ring bayonet. The Prussians produced two refinements to improve its utility in combat. They introduced a double-ended iron ramrod (about 1718), much more reliable (and thus faster) than the relatively insubstantial wooden ramrod. The Prussians also developed the funnel-shaped touchhole, making it easier to prime the musket, particularly in the stress of battle. When these innovations were combined with the speedy and precise loading drill demanded by Frederick the Great, Prussian infantry soldiers could fire about twice as fast as those in other armies.

In artillery also there was little real change. The French improved on their earlier standardization efforts, and abolished all mobile pieces larger than 24-pounders. The major effort toward artillery improvement was made in Austria following the War of Austrian Succession (See p. 689). The artillery reforms of Prince **Joseph Wenzel von Lichtenstein** became a model for future artillery development. Lichtenstein not only standardized the Austrian artillery into 3-, 6-, and 12-pounder guns and 7-, and 10-pounder howitzers, he also standardized the design of carriages, wheels, battery forges, and other artillery equipments. Lichtenstein also advanced the science of ballistics by the establishment of an experimental test facility near Budweis in Bohemia.

Tactics of Land Warfare

With warfare primarily governed by convention, there was relatively little new in tactics. As we have seen, most generals preferred to avoid battle, relying solely on ponderous maneuvering. Tactical formations were generally the same as those that had emerged in the previous century, except that they tended to be somewhat more elaborate and somewhat slower. Tactical perfection was considered to consist in the ability to form perfect lines, and to maintain these lines even during the heat of battle. The lines themselves, due to increased rates of fire, were often reduced to four ranks instead of six.

The principal exception to these generalities was to be found in the tactical developments of Frederick the Great, which were beginning to make themselves felt by the close of the War of the Austrian Succession at midcentury. Frederick was just as concerned as other 18th-century generals with discipline and drill, and with precision in tactical infantry maneuver. But with him these were means to an end, rather than conformance or acceptance of convention. In fact his Prussian armies had even more ruthless discipline, had a greater emphasis on drill, and were required to meet higher standards of precision than any other army in Europe. But Frederick added two significant elements: speed and battlefield maneuver. The result was an instrument of war probably unsurpassed in technical military perfection for its time by any army save possibly that of Alexander of Macedon.

Frederick carried one step farther the artillery tactical developments of Gustavus Adolphus. During the Seven Years' War he created the concept of horse artillery (as opposed to conven-

tional horse-*drawn* artillery) in which every cannoneer and ammunition handler was mounted, so that the light guns could keep up with the fast-moving, hard-riding Prussian cavalry. He also exploited the high trajectory of the howitzer by striking at enemy reserves concealed behind trees and hills, and in the process gave to artillerymen their first glimmering of the concept of indirect fire.

The only other significant tactical development of the period was improved organization and employment of light infantry. In Europe this was primarily an Austrian-Hungarian innovation and was to some extent a result of necessity in the War of the Austrian Succession, when Maria Theresa's generals adapted the Croatian *grenzer* (borderer), accustomed to informal skirmishing with the Turks, to operations against the Prussians and French. But there was also a trend toward comparable light-infantry development in the operations in the American colonies, a trend that would become increasingly important by the end of the century.

Military Organization

The armies of the early 18th century were generally small, were highly professional, to a large extent were still mercenary, and the troops had little enthusiastic passion for the dynastic cause for which they fought. In organization and structure there was little change from the new systems which had emerged at the close of the preceding century.

As we have seen, armies were largely composed of vagabonds and nobles. As a consequence there was probably a greater gulf between officers and men than at any other time in history. It is not much of an overstatement to suggest that soldiers fought in battle mainly because they feared their own officers more than they did the foe. This was because armies of this sort could be held together and kept from deserting only by iron, ruthless discipline.

Naval Warfare

Tactics

Up to 1750, naval tactics were as blunt as a sledgehammer. Opposing fleets, each sailing in a single column (line ahead) on parallel courses, attempted to close with one another and engage ship against ship. Individual vessels fought broadside to broadside, sometimes actually side by side, pounding away until one or the other gave in. England dominated the seas, not through new concepts of conflict, but through the momentum gained by her great admirals of an earlier era, by numerical superiority in numbers of fighting ships, and by seamanship.

The French Navy was second, having clearly surpassed the Dutch. Ship for ship, French war vessels were better built than the British, but they were usually fewer in number—and in general English seamanship was the better. The basic distinction between English and French battle tactics was that the French, usually outnumbered, were forced to save their vessels. In fleet actions they followed the principle that "He who fights and runs away will live to fight another day." In consequence French admirals preferred to enter action on the leeward side of their adversaries, which would enable a quick breakoff of conflict if necessary, and their gunnery was directed at the spars and rigging of the enemy to slow him down. Contrariwise, the

English sought the "weather gauge" (position to windward of the adversary), facilitating closing in; their fire was directed at the enemy's hull, seeking to sink or pulverize him.

Broadside firepower dominated the action; seamanship and shiphandling were part and parcel of the art of naval gunnery, for firepower was merely a statistic unless the ship herself was so maneuvered as to bring her almost rigid guns to bear on the target. One might have thought that under such conditions individualism in battle would be a *sine qua non* among the admirals and captains of the Royal Navy. Far from it; the "Fighting Instructions" of the Royal Navy had become frozen into law (1691), and the line (a rigid single file) was gospel. Woe betide the captain who broke from its frozen mediocrity. Since no other navy had a system any better, or even as good, only an exceptional naval commander was able to achieve any major success against a force even approximately the strength of his own. There were few decisive naval actions. Attempts to experiment or innovate were discouraged; frequently they led to court-martial and disgrace. In fact, it would seem that almost every important engagement of the Royal Navy during this period culminated in a court-martial.

The Ships

This was the golden age of the ship of the line with her multitiered broadside batteries. As her name signified, she was large enough and carried sufficient armament to slug it out in the line of battle. She averaged about 200 feet in length, with a maximum tonnage of 2,500. The biggest of these vessels carried a crew of about 1,000 men. By the end of this period warships had become assorted into six "rates." The first three of these classes were ships of the line: a 1st-rate carried 100 or more guns on three decks; a 2nd-rate had about 90 guns on three decks; the 3rd-rate—the workhorse of the battle fleet—carried from 64 to 74 guns on two decks. The 4th-rater was the smallest line-of-battle ship, a 50-gun vessel (two gun decks) usually called a frigate, which could be a razee (a converted 3rd-rate with one gun deck removed) or a purpose-built vessel. Like all compromises in naval construction, she was not powerful enough to play her part in the line, and she was usually too clumsy to act as a cruiser. The real cruisers were the smaller frigates—5th- and 6th-raters—carrying from 24 to 40 guns, all on one gun deck. These vessels, relatively lighter and faster than ships of the line, were built for commerce destruction, scouting, and screening. All the foregoing vessels were, in the true nautical term, ships—square-rigged three-masters.

Below these rates came the sloops of war (the term "sloop" had nothing to do with the rig), carrying from 16 to 24 guns, which were sometimes square-rigged, three-masted ships, but also brigs (two masts, square-rigged) or brigantines (two masts, square-rigged on the fore only). And finally came cutters and other small craft, usually known by the name of their rig (sloop, schooner, or ketch).

Naval Ordnance

The main batteries of ships of the line and frigates had become fairly standardized by this time: 16-, 18-, and 24-pounder cannon. The multitiered vessels usually carried 16s on their upper decks, 24s on the lower. Lighter craft mounted 4-, 6-, and 9-pounders, and the big ships frequently carried some lighter guns in addition to their normal armament.

Naval Developments

Only two innovations appeared during the period, but they were important. The tiller, the great beam projecting inboard from the rudder by which the ship was steered, by 1700 had been rigged by cables to a steering wheel mounted on the quarter-deck, greatly facilitating the conning of the ship. And underwater sheathing of copper was being introduced, protecting the oaken bottoms to a great extent from the ravages of the dreaded teredo (marine worm attacking wood), and barnacles.

Morale

Living conditions on board ship in all navies of the period were abominable. It is hard to imagine, for instance, how 1,000 men could exist in a 2,500-ton vessel, carrying, in addition to ammunition, enough food and water for extended cruises of a year or more without entering port or reprovisioning. The nature of the food, and its condition after months at sea, can be imagined. The principal item of diet was weevil-infested, brick-hard biscuits, with a few sips of brackish water. The addition of some rum to the water—to make "grog"—helped. The physical effects of the diet were apparently severe. Sailors who survived battle usually aged quickly and died young. The English discovered that lime juice inhibited scurvy, and from their use of limes comes the word "Limey," meaning an Englishman.

To these cruel living conditions was added even more cruel discipline. Punishments were atrocious. The gulf between officers and men was at least as great as that in the ground forces, and commanders exercised almost unquestioned life-and-death authority over their men. This, of course, was probably the only way of assuring obedience from men who to a large extent had not volunteered, but who had been impressed into service against their wills.

As a social institution, the principal characteristics of the Royal Navy of this time have been aptly summed up by Winston Churchill: "Rum, buggery, and the lash!"

MAJOR WARS

The Great Northern War, 1700–1721

1698–1699. Alliance against Sweden. Peter I of Russia, **Augustus II** of Poland (also Elector of Saxony), and **Frederick IV** of Denmark entered into a secret alliance against Sweden, hoping to take advantage of the youth of **Charles XII** (age 16) to end Sweden's dominance in the Baltic.

1700, April. Danish Invasion of Schleswig. Conquest from the Duke of Holstein-Gottorp, ally of Sweden.

1700, June. Polish-Saxon Invasion of Livonia. Augustus' Saxon troops besieged Riga.

1700, August. Russian Invasion of Ingria. Peter's army of 40,000 besieged Narva (October 4).

1700, August 4. Charles Invades Zealand (Sjlland). Against the advice of his admiral, the 18-year-old Swedish monarch boldly took his fleet and army across supposedly unnavigable waters, and immediately advanced on Copenhagen. The Danes sued for peace.

1700, August 18. Treaty of Travendal. Denmark returned Schleswig to the Duke of

Holstein-Gottorp; agreed not to engage in further hostilities against Sweden.

1700, October 6. Charles Lands in Livonia. Arriving at Pernau with a few men, he had planned to relieve Riga. While awaiting reinforcements he decided instead to march to the relief of hard-pressed Narva.

1700, November 13–19. Advance on Narva. Charles with 8,000 men scattered Russian forces attempting to block the approaches (November 18). Revealing more perception than courage, Peter fled.

1700, November 20, Battle of Narva. In a 2-hour battle, during a snowstorm, Charles virtually annihilated the Russian army, nearly 5 times as numerous as his own. He lost 2,000 men. During the winter he prepared to march on Livonia.

1701, June 17. Battle of Riga. Charles defeated a Russian-Polish-Saxon army and relieved Riga, besieged for almost a year.

1701, July. Swedish Invasion of Poland. Considering Augustus and Poland to be more formidable foes than Peter and Russia (reasonable under the circumstances but wrong in retrospect), Charles decided to deal with Poland first. He crossed the Dvina, defeated a Saxon-Russian army at the **Battle of Dunamunde** (July 9), occupied and annexed Courland, then moved into Lithuania.

1702, January–May. Advance on Warsaw. Charles occupied the undefended Polish capital (May 14). He then boldly marched westward, seeking battle with Augustus.

1702, January–December. Russian Invasion of Ingria. Peter defeated Swedish General **Schlippenbach** at the **Battle of Errestfer** (January 7). He defeated the Swedes again at the **Battle of Hummselsdorf** (July 18), and seized the Neva Valley (December).

1702, July 2. Battle of Kliszow. Charles routed a much larger Polish-Saxon army. He then marched on through hostile country to seize Cracow.

1702–1703. Consolidation of Poland. Charles systematically eliminated Augustus' control.

1703, April 13. Battle of Pultusk. Charles defeated another much larger Augustan army, then besieged and captured Thorn (May–December).

1703, May 16. Peter Founds St. Petersburg. Russian troops occupied and fortified the mouth of the Neva River, regaining an outlet on the Baltic.

1704. Charles Places Stanislas Leszczynski on Polish Throne. Civil war raged through Poland between the adherents of Augustus and Stanislas.

1704, July 4. Peter Recaptures Dorpat.

1704, August 9. Peter Recaptures Narva. All Swedish inhabitants were massacred.

1705–1706. Charles Pacifies Poland. Defeating the Saxons at the **Battles of Punitz** and **Wszowa** (1705), Charles then hastened to Lithuania to meet a Russian army under Scottish General **Ogilvie** which had occupied Courland (1705). The Russians avoided major battle, but Charles finally chased them out of Lithuania and as far as Pinsk, where he halted (July 1706). Meanwhile, Augustus attempted to retake Poland, but was routed by a much smaller Swedish army under General **Karl G. Rehnskjold** at the **Battle of Franstadt** (February 3, 1706).

1706, August–September. Charles Invades Saxony. The Swedish Army seized Leipzig, practically without opposition. Augustus sued for peace.

1706, September 24. Treaty of Altranstadt. Augustus abdicated the Polish throne, recognized Stanislas as king, and broke his alliance with Russia. Peter sued for peace, but Charles, determined on revenge, refused to negotiate.

1706–1707. Quarrel with the Empire. Charles, poised menacingly in Saxony, demanded restitution for mistreatment of Silesian Protestants under the provisions of the Treaty of Osnabrück (see p. 597). Fearful that Sweden would join France in the War of the Spanish Succession (see p. 676), the allies persuaded the Emperor to accede to Swedish demands (August 1707). Charles at once marched from Saxony into Poland to prepare for an invasion of Russia. Peter concentrated an army at Grodno and Minsk.

1708, January 1. Invasion of Russia. Charles,

waiting until the rivers were frozen, crossed the Vistula with an army of 45,000 men, the largest he ever commanded. He took Grodno, abandoned by Peter (January 26), and continued toward Moscow. He waited near Minsk during the spring thaw (March–June).

1708, June 29. Charles Crosses the Berezina at Borisov.

1708, July 4. Battle of Holowczyn. Assaulting a Russian army defending the line of the Bibitch River, Charles penetrated and scattered the defenders. He then advanced to the Dnieper at Mogilev (July 8).

1708, July–October. Scorched Earth. The Russians retreated slowly, destroying food and crops as they withdrew. They refused battle, though Charles forced one brief engagement at **Dobry** (September 9). The Swedes, short of food and fodder, began to suffer severely. Charles decided not to retreat, but to go into the Ukraine to join **Ivan Mazeppa,** the Cossack leader, who secretly agreed to rise against the Russians with 30,000 men. Charles ordered a small relief army under General **Adam Loewenhaupt** to march in from Livonia, with a tremendous wagon train of supplies, to join him in the Ukraine. This was Charles' worst military decision. He should have concentrated his forces and made adequate logistical arrangements before marching deeper into Russia.

1708, September–October. Repulse at St. Petersburg. Swedish General **Lybecker** was forced to retreat into Finland.

1708, October. Ousting of Mazeppa. Learning of Mazeppa's planned revolt, Peter sent a Russian army into the Ukraine to seize and burn his capital, Baturin. Mazeppa and a small force fled to join Charles at Horki in Severia (November 6).

1708, October 9–10. Battle of Lyesna. Loewenhaupt's army of 11,000 men was attacked and defeated by much larger Russian forces in a 2-day battle just east of the Dnieper. Loewenhaupt, forced to burn all of his supply train, reached Charles with 6,000 exhausted and hungry survivors (October 21).

1708–1709. Winter Struggle for Survival. The Swedes, harassed by the Russians, were forced to fight continuously. This, perhaps the coldest winter ever experienced in Europe, caused severe hardships and losses to the Swedes. Charles did wonders to hold his army together, but by spring he barely had about 20,000 men fit for action. He had only 34 artillery pieces and almost no powder for his guns.

1709, May–July. Siege of Poltava. Charles advanced on Voronezh, but stopped to capture the Russian fortification at Poltava (May 2). Peter immediately marched on Poltava with a relieving army of 80,000 men and more than 100 artillery pieces. The 2 armies maneuvered cautiously, preparing for battle. In preliminary skirmishing Charles was badly wounded in the foot and had to be carried in a litter (June 17).

1709, June 28. Battle of Poltava. Seriously short of ammunition, Charles needed a quick victory. His initial attacks went according to plan; the Swedish left and center were successful. Peter was on the verge of retreat, when he realized that there was little or no coordination among the 3 major elements of the overextended Swedish army. Rallying his army, the Czar awaited the climactic Swedish charge—7,000 strong—with 40,000 fresh troops. Overwhelming strength, more and better weapons, and adequate ammunition soon reversed the tide of battle. The Swedish infantry was practically annihilated, the cavalry scattered. Charles was lifted from his litter and placed on a horse. Accompanied by Mazeppa and about 1,500 horsemen—half Cossacks and half Swedes—he fled to Turkish Moldavia. The 12,000 Swedish cavalry survivors surrendered to the Russians at Perevolchna, on the Dnieper, 2 days after the battle. The Russians lost 1,345 killed and 3,290 wounded. The Swedes lost 9,234 killed and wounded and 18,794 prisoners.

1709, August–December. Russian Occupation of Poland. Peter marched westward to occupy Poland, placing back on the throne his ally Augustus II, who had renounced the Treaty of Altranstadt and returned to Poland when he heard the news of Poltava. By virtue of military occupation, however, Peter was the real ruler

of Poland. Stanislas fled to Swedish Pomerania; his former adherents were ruthlessly persecuted.

1709–1710. The Allies Collect the Spoils. The Danes took Schleswig and the Swedish possessions of Bremen and Verden, which were in turn given to Hanover as an inducement to enter the war. A Danish army overran Skane, in southern Sweden. Another Danish force and a Polish-Saxon army invaded Swedish Pomerania, but were held at bay. Meanwhile, the Russians occupied Carelia, Livonia, Estonia, and the remainder of Ingria.

1710, February. Battle of Helsingborg. Swedish General **Magnus Stenbock** defeated the Danes in southern Sweden and forced them to withdraw across the Sound. Stenbock then proceeded to Germany to protect Swedish possessions there.

1710, October. Turkey Enters the War as Ally of Sweden. Responding to the appeals of Charles XII, still a refugee at Bender in Moldavia, the Sultan declared war on Russia and sent **Baltaji Mehmet,** the grand vizier, to the Russian frontier with an army nearly 200,000 strong.

1711, March–July. Moldavian Campaign. Overconfident after Poltava, Peter invaded Moldavia with about 60,000 men, to be outmaneuvered by the larger Turkish army and driven back against the Pruth River, where his starving army entrenched itself and was surrounded. Instead of investing the Russians, Baltaji opened negotiations. Had he persevered, Peter would have been forced to surrender, with historical consequences unimaginable.

1711, July 21. Treaty of the Pruth. Peter returned Azov to Turkey, dismantled Taganrog and other fortresses, and agreed to withdraw from Poland and to refrain from interfering in Polish internal affairs. (He never carried out the latter two provisions.) Charles, who had been granted free passage to Sweden, was bitterly disappointed at the easy escape of his rival. Refusing to leave Turkey for 3 years, he continued vain efforts to get Turkey to undertake major operations against Russia. He was finally imprisoned by his Turkish allies after a fierce hand-to-hand struggle (February 1, 1713).

1712–1713. Operations in Northern Germany. Stenbock defeated a Danish army at the **Battle of Gadebusch** (1712), but was soon afterward set upon by a much larger allied army and forced to capitulate at **Toningen** (1713). Meanwhile, the Saxons and Russians were being repulsed from Stralsund (1713). Despite disasters, Sweden continued the war, and the Swedish Navy still dominated the Baltic.

1713. Peace of Adrianople. Peace between Russia and Turkey.

1713–1714. Russian Conquest of Finland.

1714. Naval Battle of Gangut (Hanko). Peter's newly created Russian fleet defeated the Swedes to gain control of the Gulf of Finland, facilitating the conquest of Finland. Swedish predominance in the Baltic was ended, although the Russians did not yet feel strong enough to offer a climactic challenge.

1714, November 11. Arrival of Charles at Stralsund. Finally despairing of Turkish action, Charles, fleeing from virtual house arrest in Turkey, made a daring journey across Europe with 1 servant.

1714–1715. Charles Revitalizes Sweden. Unwisely refusing to consider opportunities for peace negotiations, Charles would not compromise his determination to achieve complete victory. After repulsing a series of allied assaults on Stralsund, he returned to Sweden (December 1715), now threatened by another invasion from Denmark and Norway. He raised an army of 20,000 and moved into Skane, causing his enemies to abandon their invasion plans (1716).

1717–1718. Norwegian Campaigns. Charles, taking the initiative, invaded Danish Norway. He hoped that the conquest of Norway would give him a stronger base for further operations, as well as territory which he could trade in eventual peace negotiations.

1718, December 11. Death of Charles. As his army was preparing to assault besieged Fredriksten, Charles, peering over the front-trench parapet, was shot through the head by a Danish bullet.

1719–1720. Russian Raids against Sweden. The Russian fleet now controlled the Baltic. Repeated landings on the Swedish coast near Stockholm were repulsed by the exhausted Swedes with the greatest difficulty; the Swedish Riksdag sued for peace.

1719–1721. Treaties of Stockholm. The *status quo* was restored between Sweden, Saxony, and Poland. Prussia kept Stettin and part of Pomerania, and also paid an indemnity. Denmark gave up her conquests, save for Schleswig, but received an indemnity from Sweden.

1721, August 30. Treaty of Nystad. Russia kept Livonia, Estonia, Ingria, part of Carelia, and many Baltic islands. She returned Finland (except for Vyborg) and paid an indemnity to Sweden. By this treaty Russia supplanted Sweden as the dominant power in the Baltic, and became a major European power.

War of the Spanish Succession, 1701–1714

Charles II, last of the Spanish Hapsburg line, was childless. There were two major contenders for the throne of Spain: (1) **Louis XIV** of France, son of the elder daughter of Philip III of Spain and husband of the elder daughter of Philip IV; (2) **Leopold I,** Hapsburg emperor, son of the younger daughter of Philip III and husband of the younger daughter of Philip IV. Neither of the maritime powers—England and the Netherlands—was willing to see Spain united with either France or Austria, and because of this Louis was claiming the Spanish throne for his second grandson, **Philip of Anjou,** while Leopold's claim was for his second son, the **Archduke Charles.**

1700, March 13. Charles's Will. Philip of Anjou was declared heir to the Spanish throne.

1700, November 1. Death of Charles. Philip of Anjou was proclaimed Philip V, and assumed the throne in Spain.

Operations in Western and Central Europe

1701, March. French Occupy Fortresses of Spanish Netherlands. England and Holland prepared for war. Since Leopold still claimed the Spanish Netherlands, Austria also prepared for war. Prince **Eugene** assembled an Austrian army in the Tyrol. A larger French army under Marshal **Nicolas de Catinat** occupied the defile of Rivoli (May).

1701, May 28. Eugene Arrives in Italy. Traveling little-used roads in a surprise and secret march, the Austrians bypassed Catinat and reached Vicenza. The French withdrew westward to avoid being cut off.

1701, May–August. Maneuvers in Lombardy. Despite the superior size of the French Army, Eugene maneuvered Catinat back to the Oglio. Paris replaced Catinat by aging Marshal Duke **François de Villeroi** (August).

1701, September 1. Battle of Chiari. The French attacked Eugene's fortified position and were repulsed with heavy loss. They withdrew to Cremona and went into winter quarters. Eugene went into winter quarters farther east, blockading the French-Spanish garrison of Mantua.

1701, September 7. Establishment of the Grand Alliance. The enemies of France were England, the Netherlands, Austria, Prussia, most of the other German states, and (later) Portugal. At this time French allies were Savoy, Mantua, Cologne, and (later) Bavaria. (Savoy soon changed sides.)

1702, February 1. Battle of Cremona. Eugene made a surprise raid, captured Villeroi, then withdrew after causing considerable damage. Paris sent Marshal **Louis Josef, Duke of Vendôme** to replace Villeroi.

1702, May 15. England Declares War. John Churchill, Earl of Marlborough was sent to

Holland as captain general of combined English and Dutch forces.

1702, June–July. Marlborough Invades the Spanish Netherlands. With an army of 50,000 (12,000 being British), Marlborough attempted to force French Marshal **Louis, Duke of Boufflers** into battle. To his intense disgust, the Dutch governmental deputies who had veto power over his use of Dutch troops refused on 4 different occasions to permit him to fight.

1702, July. Austrian Threat to Alsace. Prince **Louis, Margrave of Baden,** led an imperial army across the Rhine at Spires. Marshal Catinat was sent to protect Strasbourg.

1702, July 29–September 12. Siege of Landau. Louis of Baden prepared to move into Alsace after capturing the town.

1702, August 15. Battle of Luzzara. Drawn battle between Eugene and Vendôme. No other important operations in Italy, as Eugene skillfully maintained himself despite greatly superior French and Spanish strength.

1702, September–October. Marlborough on the Meuse. The allies opened the lower Rhine and Meuse Rivers. Since there was no risk of battle, and since their security and trade routes were both involved, the Dutch agreed to Marlborough's efforts against the Meuse fortresses; he captured Venloo (September 15), Ruremonde (October 7), and Liége (October 15). As a result he was made Duke of Marlborough.

1702, September. Bavarian Declaration of War. Bavarian troops seized Ulm. Louis of Baden recrossed the Rhine to protect his country. Catinat sent a small army after him under the command of General **Claude L. H. de Villars.**

1702, October 14. Battle of Friedlingen. Villars defeated Louis of Baden. He was promoted to the rank of marshal.

1703. Opposing Plans. Marlborough planned to reopen communications with Austria via the Rhine, and then to penetrate and shatter the French cordon of forts in the Spanish Netherlands and to seize Antwerp. The French planned to send Villars to join the Elector of Bavaria on the Danube, and then march to capture Vienna.

1703, April–May. Villars Marches through the Black Forest. He first seized Kehl, to have a base east of the Rhine. He then plunged into the Black Forest. Arriving at Ulm, he left a small force to contain Louis of Baden, joined the Elector (May 8), and urged an immediate advance on Vienna. But timid Maximilian insisted instead upon a junction with Vendôme in the Tyrol before attempting to take Vienna.

1703, May. Marlborough Takes Bonn. This opened the Rhine Valley, and Marlborough then turned to his second objective, Antwerp.

1703, June–August. Bavarian Tyrol Adventure. Maximilian occupied the Tyrol, while Villars remained in the Danube Valley to hold off Louis of Baden and an Austrian army under Count **Hermann Styrum.** Vendôme was slow in starting from Italy, and the Austrians in the Tyrol, supported by an aroused local population, drove the Bavarians out (August). Vendôme, who had been marching toward the Brenner, remained in Italy.

1703, June–October. Failure in the Netherlands. Marlborough was frustrated in the Netherlands by a combination of superior French forces under Villeroi (who had been exchanged) and by lack of Dutch cooperation.

1703, July–September. Villars in the Danube Valley. Louis of Baden and Styrum advanced separately into the Danube Valley, Villars skillfully concentrating against each in turn. He repulsed Louis's efforts against Augsburg at the **Battle of Munderkingen** (July 31), then, in collaboration with the Elector, defeated Styrum decisively at the **Battle of Hochstadt,** losing only 1,000 men, while the Austrians lost 11,000 out of 20,000. Louis had taken advantage of this brief campaign to seize Augsburg (September 6), but hastily withdrew and went into winter quarters as Villars approached. Villars again urged Maximilian to join him in a dash to Vienna, which was simultaneously being menaced by Hungarian rebels from the east (see p. 702). But the fainthearted Elector refused, and after a violent quarrel Villars gave up his command and returned to France. He was replaced by Marshal **Ferdinand of Marsin.**

1703, August–November. Operations along

the Middle Rhine. To assure better communications with the army in Bavaria, Marshal Count **Camille de Tallard** was given the mission of securing the middle Rhine. An army under the aging Vauban besieged and captured **Alt Breisach,** most important fortification on the right bank of the Rhine south of Kehl (September 6). Tallard cleared the allies from the Bavarian Palatinate by a victory at **Speyer,** and recaptured **Landau** (November 12).

1703, October 25. Savoy Changes Sides. Duke **Victor Amadeus,** distrustful of the French, allied himself with the Emperor.

1703, November–December. Recall of Eugene from Italy. Leopold, alarmed by the situation in southern Germany, and with his southern flank now guarded by Savoy, recalled Eugene from Italy to protect Vienna.

1704. Opposing Plans. The French planned to send Tallard to reinforce Marsin and the elector for a powerful thrust at Vienna. Villeroi, meanwhile, was expected to contain Marlborough along the Netherlands frontiers. Marlborough, as captain general of Anglo-Dutch forces, decided to send the Archduke Charles and an expeditionary force for an invasion of Spain to Lisbon. Admiral Sir **George Rooke** was then to take the fleet, and additional troops, to attack Toulon and to support Huguenot rebels (the Camisards) in southern France. These operations, however, were primarily diversionary. The allied main effort was to be a concentration of forces under Eugene and Marlborough in the Danube Valley to save Vienna, to drive the French out of Germany, and to knock Bavaria out of the war. It is not clear whether this bold concept was Marlborough's or Eugene's; more likely it was the Austrian's, though either general was capable of it.

Blenheim Campaign, 1704

1704, April. French Reinforcements to Bavaria. The strength of Maximilian and Marsin, concentrated around Ulm, was brought to about 55,000 men. Tallard with 30,000 was at Strasbourg, preparing to march east. The Austrians had 30,000 around Vienna, Eugene had about 10,000 men south of Ulm, and Louis of Baden had about 30,000 at Stollhofen, on the Rhine north of Kehl.

1704, May–June. Marlborough's March to the Danube. Leaving about 60,000 men to protect the Netherlands, Marlborough, without informing the Dutch of his intentions, marched toward the Rhine Valley (May 20) with 35,000 men, of whom less than one-third were British and the remainder German forces in British pay. At Mondelsheim he met Eugene and Louis of Baden for a planning conference (June 10–13). Marlborough and Baden continued toward the Danube, while Eugene returned to Stollhofen to prevent Tallard (now at Landau) and Villeroi (now at Strasbourg) from reinforcing Maximilian and Marsin. Distribution of forces was as follows (June 30): Allies: Marlborough and Baden advancing eastward toward Donauwörth, 70,000 men; Eugene at Stollhofen, 30,000. French and Bavarians: Maximilian and Marsin, near Ulm, 60,000; Villeroi at Strasbourg, 60,000; Tallard, advancing east across the Rhine from Landau, 30,000.

1704, July 2. Battle of the Schellenberg. An audacious surprise attack by Marlborough on the fortified Schellenberg Hill overlooking Donauwörth. Despite heavy losses, Marlborough took the hill, and then Donauwörth, without a siege.

1704, July–August. Maneuvers in Southern Germany. Marsin and Maximilian moved to Augsburg to block Marlborough's approach to Munich. Since Maximilian and Marsin refused battle until they received reinforcements, Marlborough and Baden began to devastate western Bavaria. Meanwhile, Tallard had marched to Ulm (July 29), and soon thereafter joined Marsin and Maximilian south of the Danube. Eugene, misleading Villeroi into thinking he was staying near the Rhine, marched hastily eastward with about 20,000 men to join Marlborough. Villeroi, not knowing where Eugene had gone, decided to stay near Strasbourg to protect Alsace. With battle approaching, Marlborough sent Baden (for whom he had low regard) to besiege Ingolstadt, and prepared to march west to join Eugene.

1704, August 10. French and Bavarians Cross the Danube. Knowing Eugene had arrived near Donauwörth, and that Marlborough was still in western Bavaria, Tallard (real commander of Maximilian's Franco-Bavarian army) moved to attack Eugene, or at least force him and Marlborough to retreat northward to protect their lines of communication. Eugene sent a message urging Marlborough to join him.

1704, August 12. Marlborough and Eugene Join Forces. The combined allied force totaled about 56,000 men. The Franco-Bavarians, encamped behind a little stream near Blenheim, just north of the Danube, totaled about 60,000, almost equally divided between the armies of Tallard and of Marsin-Maximilian.

1704, August 12–13. The Allied Advance. Marlborough and Eugene decided to attack. Marlborough's larger army, on the left, was to make the main effort against Tallard, while Eugene was to contain Marsin and Maximilian with an aggressive holding attack. Following carefully prepared plans, the allied armies, deployed in battle order, marched from their camps near Donauwörth at 2 A.M. in 9 columns. Marlborough's 5 columns, going over easy ground, arrived on the heights east of the Nebel stream at 7 A.M., and began skirmishing with French outposts and exchanging long-range fire with the artillery of the surprised and hastily deploying Franco-Bavarians. Eugene's troops, having a longer and more difficult route, did not reach their appointed positions until nearly noon.

1704, August 13. Battle of Blenheim. Marlborough and Eugene attacked simultaneously across the Nebel at 12:30. Marlborough initially attacked the villages of Blenheim (beside the river) and Oberglau (about 2 miles inland) to pin down French reserves. The British lost heavily, but the purpose was accomplished; Tallard poured in his reserves. Learning that Eugene was advancing very slowly in heavy fighting on the right, in accordance with plan, Marlborough at 4:30 launched his cavalry squadrons in an attack which after about an hour of tough fighting broke through Tallard's center. Tallard's army was shattered and he was captured. Many of the fleeing troops drowned in the Danube. Before Marlborough could complete a right turn, in the dusk Marsin and Maximilian were able to extract most of their army from the jaws of Eugene's and Marlborough's double envelopment. Allied losses were 4,500 killed and 7,500 wounded. The French and Bavarians lost a total of 38,600 in killed, wounded, and prisoners.

COMMENT. *There is probably no finer example in history of allied coordination and cooperation than that of Eugene and Marlborough in this campaign and battle. The prestige of France and French armies was shattered; the Elector of Bavaria had to flee his country, which was annexed by Austria.*

1705. Stalemate in the Low Countries. Marlborough, back in the Netherlands, was opposed in a desultory campaign by Villeroi and the Elector of Bavaria. His offensive inclinations were again frustrated by the overcautious Dutch.

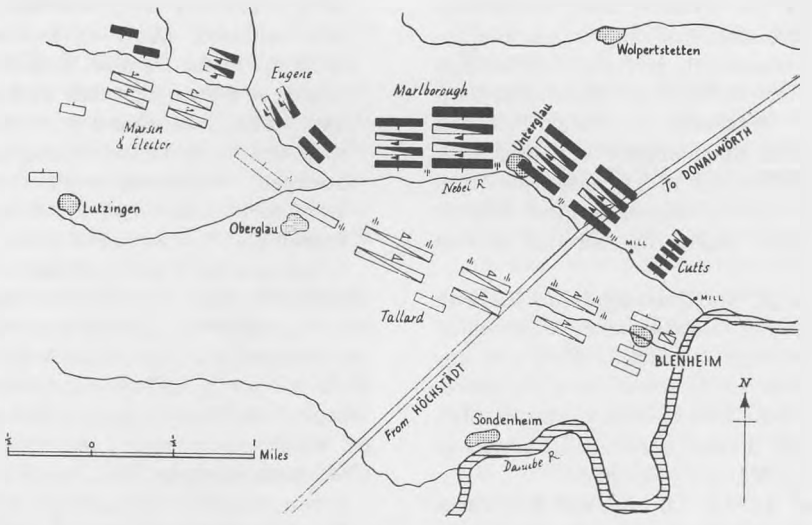
1705. Stalemate on the Rhine. Equally inconclusive were the maneuverings of Villars and Louis of Baden.

1705. Stalemate in Italy. After Vendôme had overrun much of Savoy, Eugene was sent to the aid of Victor Amadeus. No further results were achieved. The only major action was the drawn **Battle of Cassano** (August 16).

The Ramillies Campaign, 1706

1706, April–May. Convergence on Namur. Villeroi, rightly believing that Marlborough intended to seize Namur, moved with about 60,000 men to protect the city. He was intercepted at Ramillies by the allied army in about equal strength.

1706, May 23. Battle of Ramillies. The French drew themselves up on high ground in a defensive position, partially entrenched. Marlborough, in a typical maneuver, feinted against the French left, causing Villeroi to shift his reserves and to draw some units out of his right wing. Marlborough then launched his main attack against the weakened French right. The



Battle of Blenheim

outnumbered French right defended itself gallantly, but was overwhelmed by the strength and power of the allied attack. The entire French line wavered, and Marlborough ordered a general attack, driving the French off the field in great disorder. He pursued vigorously, inflicting heavy losses. French casualties were about 8,000 killed and wounded and 7,000 prisoners. The allies lost 1,066 men killed and 3,633 wounded.

1706, June–October. Marlborough Consolidates the Spanish Netherlands. He captured the following important fortifications, among others: Antwerp (June 6), Dunkirk (July 6), Menin (August 22), Dendermonde (September 5), Ath (October 4). In these operations the allies took about 14,000 additional prisoners.

1706, August. Vendôme to Command in the North. Hurriedly called north from Italy (see below), he replaced the incompetent Villeroi. Louis XIV also made tentative peace overtures.

The Turin Campaign, 1706

1706, April 19. Vendôme Seizes the Initiative. With an army of over 100,000, opposed to about 30,000 Savoyards and less than 40,000 Austrians, he boldly divided his field forces into 2 main groups of about 40,000 each. With one he drove the Austrians, under Count **Reventlau,** from central Lombardy back to the Adige River. The remaining French besieged Turin, capital of Savoy.

1706, April 22. Arrival of Eugene. Eugene, who had been in Vienna, took command and halted the Austrian retreat. He remained on the Adige, maneuvering against Vendôme, for more than a month.

1706, July–August. Eugene's Advance on Turin. Having received reinforcements, which brought his strength about equal to that of the French on the Adige, Eugene responded to appeals from Victor Amadeus by adroitly marching south with 25,000 men, leaving 18,000 on the Adige in front of Vendôme. Swinging around Vendôme's right, he threatened the French line of communications, causing Vendôme to fall back. Vendôme was now called north to retrieve the disaster of Ramillies (see above). He left the young **Duke of Orléans** in command, with Marshal Marsin as his second in command. Suddenly, to the amazement of the French, Eugene marched due west, aban-

doning his line of communications and living off the countryside, something almost unheard of in 18th-century warfare. He seized Parma (August 15), then turned northwestward. Orléans, confused by Eugene's maneuvers, rushed back to Turin, just as Eugene met Victor Amadeus on the upper Po (August 31). The combined allied army was then about 36,000, with another 6,000 Piedmontese east of Turin, and about 15,000 in the besieged city. Orléans had about 60,000 in the lines west of the Po at Turin, with another 20,000 facing the Piedmontese detachment. Another 20,000 or more French were scattered through northwest Italy in garrisons. The French lines of circumvallation around Turin were very strong. Eugene, in a favorable position on the French lines of communication, but with only half the strength of his strongly entrenched enemy, decided to attack.

1706, September 7. Battle of Turin. Selecting a relatively isolated portion of the French lines between the Dura and Stura rivers, tributaries of the Po, Eugene and the Piedmontese attacked vigorously, smashing through the defending lines before Orléans could send adequate reinforcements. As more French troops arrived, however, the allied attack was halted. Eugene reformed, then vigorously resumed his bold attack against the more numerous enemy just as the garrison made a sortie. The French could not cope with these converging attacks. Orléans was wounded, Marsin mortally wounded, and the French army collapsed and fled, abandoning all of its baggage, 100 pieces of artillery, and heavy equipment. French losses were 2,000 killed, 1,200 wounded, and 6,000 prisoners. The allies lost 950 killed and 2,300 wounded. The routed French fled to France, pursued by Austrian and Piedmontese detachments.

1706, September–December. Eugene Sweeps the French from Italy. By the end of the year Eugene had captured all of the remaining French garrisons in north Italy.

COMMENT. *This was probably the most brilliant campaign of the war.*

Inconclusive Operations, 1707

Vendôme held the Flanders frontier, while Marlborough and the Dutch continued their debates. In the most daring operation of the year, Villars, on the Rhine, drove the Austrians from their lines at **Stollhofen** (May 22), then raided into south-central Germany as far as Bavaria, living off the countryside (June–September). In Italy Eugene and Victor Amadeus invaded southern France, but without result (see p. 685).

Oudenarde Campaign, 1708

Deployment of Forces. The French Flanders army, about 100,000 strong, under the nominal command of the young **Duke of Burgundy,** but with Vendôme exercising actual operational command, was located around Mons. The **Duke of Berwick*** and **Maximilian** of Bavaria had another French army of about 50,000 at Strasbourg, while Villars had about 20,000 in the Vosges near Switzerland. On the allied side Marlborough had nearly 70,000 at Brussels, Eugene had 35,000 at Coblenz, and the **Duke of Hanover** had about 50,000 opposite Strasbourg.

1708, April. Allied Planning Conference. Marlborough and Eugene, at The Hague, agreed that Eugene's army would join Marlborough in the Netherlands when another allied army, gathering in central Germany, arrived on the Rhine to replace him. Eugene was under strict Imperial orders not to leave the Rhine until these reinforcements arrived.

1708, May–June. Maneuvers in Flanders. Vendôme aggressively seized the initiative. He gave Marlborough no opportunity to attack, even when he approached allied positions near Louvain (late June).

* Nephew of Marlborough, illegitimate son of James II and Arabella Churchill.

1708, July 1–9. Vendôme Threatens Oudenarde. The French army suddenly moved westward to capture Ghent (July 4) and Bruges (July 5) in a *coup de main.* Vendôme then turned south to threaten the allied garrison of Oudenarde. Knowing that Eugene's army had started westward from Coblenz, he was anxious for battle before the Austrians arrived. Marlborough, realizing he had been outmaneuvered, and with Dutch morale plummeting, also sought battle. He had been reinforced and his field strength was about 80,000, about equal to that of Burgundy and Vendôme, west of the Scheldt. Furthermore, although Eugene's army was still marching from the Rhine, Eugene himself arrived to join the allied army. He also urged battle.

1708, July 10. French Command Troubles. With battle obviously imminent, young Burgundy became nervous and insisted that Vendôme avoid battle. While the prince and the general argued, the French army stood aimlessly in scattered units north of Oudenarde, instead of moving to block the allied passage of the Scheldt.

1708, July 10–11. Marlborough's Advance. The allied army marched 28 miles in 22 hours. Marlborough turned the right wing of his army over to Eugene. They hastily prepared a plan roughly similar to Blenheim.

1708, July 11. Battle of Oudenarde. While the allies swarmed across the river in the morning and early afternoon, Burgundy ordered a retreat. However, Vendôme finally convinced the prince that he would be cut off from France if he did not stand and fight. Reluctantly Burgundy gave his permission for a defensive battle; Vendôme hastily deployed the army on the heights north of Oudenarde. Despite the royal orders, Vendôme ordered an attack just as Marlborough and Eugene were beginning their own attack (about 2 P.M.). There was little plan on either side, and the result was a long, confused, bloody struggle, in which the allies held a slight advantage due to the vigor, determination, and field generalship of their joint commanders; the French had perhaps been discouraged by the obvious vacillation in their command. By dusk Marlborough had achieved an envelopment of the French right and, as Eugene continued to press forward, the allies drove the French from the field in the gathering darkness. French losses were 4,000 killed, 2,000 wounded, 9,000 prisoners, and 3,000 missing (deserters). Allied losses were 2,000 killed and 5,000 wounded.

1708, July 12. Allied Repulse at Ghent. Vendôme, brilliantly rallying his defeated troops, repulsed the pursuing allies at Ghent. As a result, the French retained control of western Flanders, and regained a secure line of communications to France.

COMMENT. *It is interesting to speculate on the result if Vendôme had been initially free to fight this campaign as he wished.*

1708, July 15. Arrival of Eugene's Army. The allies now had a clear-cut superiority of force, totaling about 120,000 men. Vendôme, reinforced by Berwick, had 96,000. Marlborough's plan of invading France was vetoed by the Dutch. Surprising Vendôme, Marlborough moved suddenly south against Lille (August).

1708, August 14–December 11. Siege of Lille. The siege was conducted by Eugene with 40,000 men, while Marlborough covered with 70,000 in strong defensive positions. Boufflers gave up the city due to lack of food, but withdrew into the citadel with his garrison (October 22). At this point Vendôme marched northeastward to threaten Brussels, hoping this would force the allies to raise the siege, but Marlborough moved after him vigorously and Vendôme fell back (November 24). Boufflers was finally forced to surrender (December 11). Because of his skill and gallantry, Marlborough and Eugene let him dictate his own surrender terms.

1708, December–1709, January. French Withdrawal. Marlborough, refusing to go into winter quarters, decided to force the French out of western Flanders. He besieged and captured Ghent (January 2), and then took Bruges. The French withdrew to their own borders, and both sides went into winter quarters.

1708–1709. Fruitless Peace Negotiations. Louis again sought terms, but refused harsh

allied conditions. The French people gave full support to Louis's decision to continue the war.

Malplaquet Campaign, 1709

1709, Spring. Deployments in Flanders. The French army, about 112,000 strong, under Villars, with Boufflers, his senior, voluntarily serving under his command, was entrenched generally north of the border. Villars was instructed from Paris to avoid general battle if possible. The allied army, about 110,000, under Marlborough and Eugene, occupied most of the Spanish Netherlands. Their objective was to try to get past, or through, the French fortified line, or to entice the French to leave that line for battle on conditions favorable to the allies.

1709, June–August. Inconclusive Maneuvering. The most important of many minor incidents was the siege and capture of Tournai by the allies (June 28–July 29). Gradually the allies were able to reach a position to threaten Mons, held by the French.

1709, September 4–October 26. Siege of Mons. Villars now received orders from Paris to fight to hold Mons. He immediately concentrated 90,000 men at Malplaquet, where he entrenched, knowing that this threat to the besieging forces would attract them to attack him. Marlborough and Eugene, leaving about 20,000 men to continue the siege, eagerly advanced with about 90,000 to accept Villars' challenge (September 9–10).

1709, September 11. Approach to Battle. The allies advanced with, as usual, Eugene on the right and Marlborough on the left. Eugene was to make a holding attack on the French left, while part of Marlborough's force was making a secondary holding attack on the French right; the remainder of Marlborough's command would make the main effort near the French center after French reserves had been committed. This simple tactical scheme had been effective at Blenheim and Ramillies, and something similar had won the day at Oudenarde. This, however, was the first time allied generals had been opposed by Villars, a commander of ability comparable to their own.

1709, September 11. Battle of Malplaquet. The vigor of the early allied flank attacks led Villars to weaken his center, mainly to oppose Eugene. In the bitter fighting on the French left and allied right, Eugene was twice wounded, but refused to leave the field; Villars was so badly wounded while leading a counterattack that he had to turn the command over to Boufflers. During the early afternoon Marlborough launched his typical hammer-blow cavalry-infantry attack against the French center, and broke through. Boufflers, following Villars' plan, promptly counterattacked with his last reserves, re-establishing the line. Marlborough and Eugene now committed their remaining reserves and renewed the vigor of their attacks, again penetrating the French center. Boufflers thereupon ordered a general withdrawal, which was carried out in good order. The allies, who had suffered fearful losses, were unable to pursue. French losses were about 4,500 killed and 8,000 wounded. The allies lost about 6,500 killed and more than 14,000 wounded. Both sides had fought superbly, and the leadership was excellent on both sides at all levels. The allied victory was primarily due to the absolute determination of Eugene and Marlborough, who persisted in attacks after most generals would have admitted defeat. The battle had no results other than to permit the allies to continue the siege of Mons, which they eventually captured (October 26). Both armies then went into winter quarters.

1709–1710. The "Ne Plus Ultra" Lines. During the winter the French built a strong line of fortifications along the frontier.

1710–1711. Inconclusive Maneuvering. Marlborough and Eugene captured a few more border fortresses, including Douai (June 10, 1710) and Bethune (August 30). Nothing further of real significance occurred during that year. The following year Eugene was ordered to Frankfurt to protect that city during the coronation of new Emperor **Charles VI**—the former Archduke Charles. Because none of the allies would accept Charles both as Emperor and as

King of Spain, the alliance began to fall apart. In Flanders, Villars and Marlborough treated each other with cautious respect.

1711, December 31. Recall of Marlborough. The new Tory cabinet relieved him of his command, ending his military career.

1712. Peace Negotiations. While negotiators met at Utrecht, Eugene assumed command in the Netherlands. He was no more successful than Marlborough in getting the Dutch to agree to aggressive action, particularly with negotiations under way. Eugene nevertheless crossed the Scheldt with 120,000 men (May) to try to force a battle on Villars, who was entrenched from Cambrai to Arras with 100,000 men. Unknown to Eugene, however, his English contingent, now under **James Butler, Duke of Ormonde,** had been ordered not to fight, and suddenly was withdrawn. The remainder of the allied army was forced to halt, while Eugene attempted to obtain reinforcements.

1712. Battle of Denain. Villars, by prompt and energetic action, overwhelmed a portion of Eugene's army in a bayonet attack. About 8,000 allied soldiers were killed or drowned in the Scheldt; the French lost 500. Eugene, who arrived too late to take part in the action, decided to withdraw across the river.

1712, August–October. Villars on the Offensive. The French now advanced, besieging and recapturing a number of the fortresses they had lost in previous years, including Douai, Quesnoy, and Bouchain. These successes materially aided the French negotiators at Utrecht.

1713, April 11. Treaty of Utrecht. Agreed to by all participants save the Emperor, who continued the war. France recognized the Protestant succession in England, and ceded Newfoundland and parts of Canada to England. Philip V was recognized as King of Spain, but France gave assurances that the crowns of France and Spain would remain permanently separated. Savoy received Sicily and some lands in northern Italy from Spain. Prussia was recognized as a monarchy. Portugal received a favorable correction of colonial boundaries in South America. The Empire was to receive the Spanish Netherlands (meanwhile administered by the Netherlands and all Spanish possessions in Italy, save those given to Savoy.

1713, May–November. Operations on the Rhine. Eugene, given only 60,000 men and poorly supported by Austria, was opposed by Villars with 130,000. Villars besieged and captured Speyer, Landau, and Freiburg.

1713–1714. Peace Negotiations. These were concluded by Eugene and Villars.

1714, March–September. Treaties of Rastatt and Baden. At Rastatt Austrian Emperor Charles VI made peace with France. As Holy Roman Emperor, he made peace at Baden. Generally the terms confirmed Utrecht. The Emperor still refused to recognize Bourbon rule in Spain.

Operations in Spain and the Mediterranean

1702, August–September. Allied Repulse at Cádiz. An Anglo-Dutch force of 50 ships and 15,000 men under Rooke (land force under the Duke of Ormonde) was repulsed in a fiasco of mismanagement.

1702, October 12. Naval Action at Vigo Bay. Rooke's allied force, returning from the failure at Cádiz, discovered in Vigo Bay the Spanish treasure fleet from the River Plate, protected by a Franco-Spanish squadron including 24 French ships of the line. In a combined action, the Duke of Ormonde's troops took the fortifications overlooking the bay while the fleet forced the boom and entered the harbor. Rooke destroyed or captured the entire treasure fleet and its convoy. The booty of 2 million was perhaps the largest ever taken in one action.

1703, May. Portugal Joins the Alliance. The Portuguese agreed to make bases available to the allies for operations against Spain by land and by sea (known as the **Methuen Treaty**).

1704, February. Charles at Lisbon. The Archduke Charles and 2,000 English and Dutch troops were landed at Lisbon by Rooke's English fleet.

1704, March–June. Rooke in the Mediterranean. Rooke passed through the Straits of

Gibraltar, hoping to join the Duke of Savoy in an attack on Toulon, but Victor Amadeus did not cooperate. Arrival of the French Brest fleet, which outsailed the English to reach Toulon unscathed, gave the French numerical superiority in the Mediterranean, and Rooke returned through the Straits to join another Anglo-Dutch fleet under Admiral **Clowdisley Shovell** near Cádiz. The combined allied fleet then returned to the Mediterranean.

1704, July 23–24. Capture of Gibraltar. An English fleet under Vice-Admiral Viscount **George Byng of Torrington** bombarded Gibraltar, which was seized next day by 1,800 English marines, commanded by Prince **George of Hesse-Darmstadt.**

1704, August 13. Naval Battle of Malaga. The allied (English and Dutch) fleet under Rooke defeated the combined French fleet under the **Count of Toulouse.** This secured the British capture of Gibraltar.

1704, August–1705, March. Siege of Gibraltar. A Franco-Spanish force under Marshal Count **R. de Fromlay Tessé** besieged Gibraltar, which Prince George held successfully with only 900 marines. He was reinforced and resupplied (December), and after a supporting French naval force was destroyed (see below), Tessé raised the siege.

1705, March 10. Naval Battle of Marbella. An English naval squadron under Admiral Sir **John Leake** destroyed a French squadron under Admiral **de Pointis** near Gibraltar.

1705, June. Allied Landing in Catalonia. Admiral Shovell and **Charles Mordaunt,** Lord **Peterborough,** as joint commanders, landed in Catalonia, accompanied by Charles. They besieged and captured Barcelona (October 3). Prince George, who had joined at Gibraltar, was killed during the final assault. The main fleet returned to the Atlantic, leaving a squadron under Leake to support the land force.

1705, November–1706, April. Siege of Barcelona. Philip and Tessé marched from Madrid to besiege Barcelona, supported by the French Toulon fleet. Leake, out-maneuvering the French, forced them to return to Toulon, and the French army abandoned the siege (April 30), to return westward to face an invasion of Spain from Portugal under English Lord **Henry Galway** (see below).

1706, May–September. Leake's Coastal Operations. The English fleet captured Cartagena (June 1), Alicante (August 24), and the Balearic islands of Mallorca and Iviza (September).

1706, June 26. Allied Capture of Madrid. Galway's invading force from Portugal seized the capital and proclaimed Charles king.

1706, October. French Recapture Madrid. The Duke of Berwick took command of French and Spanish forces in Spain. Accompanied by Philip, he forced the allies to abandon Madrid. Galway and the Portuguese returned directly to Portugal, but Charles and other allied contingents retreated to Valencia.

1707, April. Allied Advance toward Madrid. Galway, who had returned to the east coast by sea, led an army of 33,000 from Valencia toward Madrid. Berwick, with an equal force, marched to meet him.

1707, April 25. Battle of Almansa. Berwick decisively defeated Galway. French losses were slight; the allies lost 5,000 killed and wounded and 10,000 prisoners. Galway retreated to Valencia, closely pursued by Berwick. With only 16,000 men left, Galway continued his retreat to Catalonia (October). The French now had effective control over practically all of Spain. Both armies went into winter quarters near Barcelona.

1707, July–August. Allied Invasion of France; Blockade of Toulon. The allied fleet under Shovell blockaded Toulon by sea, while Eugene and Victor Amadeus led an Imperial-Savoy army across the Maritime Alps. Marshal Tessé, however, who had just arrived from Spain with veterans of Almanza, repulsed the allied land force, thanks mainly to the Duke of Savoy's refusal to cooperate closely with Eugene (July 26). The French, expecting to lose Toulon, had sunk their 50 ships in the harbor, giving the allies uncontested control of the Mediterranean. The allied army returned to Italy, while the main allied fleet returned to the Atlantic.

1708, August. Allied Capture of Sardinia. Admiral Leake, his marines, and a contingent of Savoy troops captured the island.

1708, September. Capture of Minorca. The English force was commanded by General **James Stanhope.**

1708–1709. Stalemate in Catalonia. Berwick, recalled to the Netherlands after the French disasters at Ramillies and Turin, left the Duke of Orléans in command. Despite French superiority, there was little action. The allies in Catalonia were now commanded by Stanhope.

1710, May–December. Madrid Campaign. Stanhope's force, about 26,000 men, was opposed by about 35,000 under Philip in Catalonia. A Portuguese army of 33,000 was at Elvas. Advancing rapidly, and expecting to meet the Portuguese at Madrid, Stanhope won victories at **Almenar, Lérida,** and **Saragossa,** then marched on Madrid, accompanied by Charles. The Portuguese, however, had withdrawn when opposed by a much smaller Franco-Spanish force. The Spanish people made clear their preference of Philip over Charles. Vendôme arrived in Spain, collected the scattered French forces, and advanced on Saragossa with 27,000 men, cutting Stanhope's line of communications (October). As the French approached Madrid, Stanhope, who had only 16,000, retreated toward Valencia, closely pursued by Vendôme. The French caught up with the allied rear guard, under Stanhope's personal command, defeating and capturing him at the **Battle of Brihuega** (December 10). The remainder of the allied force, under General **Guido von Starhemberg,** retreating to Barcelona, was again defeated en route at the **Battle of Villaviciosa.**

1714, September 11. Fall of Barcelona. Finally captured by the French under Berwick; last major action of the war.

1715, February. Treaty of Madrid. Peace with Portugal, officially ending the war.

War of the Quadruple Alliance, 1718–1720

After the death of Louis XIV of France (1715), his grandson, Philip of Spain, uncle of **Louis XV,** hoped to gain the crown of France himself. These ambitions seem to have been fanned by the designs and intrigues of his powerful and unscrupulous prime minister, Cardinal **Giulio Alberoni.** At the same time other, and equally aggressive, ambitions were being entertained by Philip's second wife, **Elizabeth Farnese** of Parma, who wished her children to inherit the family's possessions in Italy, and perhaps all Italy. The maritime powers—England and the Netherlands—were unalterably opposed to any union of France and Spain. The Emperor Charles VI, aside from his continuing enmity toward Philip as a result of the War of the Spanish Succession, had equally strong dynastic reasons to oppose any return of Spanish power to Italy. The Empire, however, was engaged in a major war against Turkey, hence Charles was unprepared to precipitate another war in Italy or Western Europe.

1717, January 4. The Triple Alliance. England, France, and the Netherlands agreed to oppose the ambitions of Philip and of Spain both in France and in Italy.

1717, November. Spanish Occupation of Sardinia. Taking advantage of Austria's war with Turkey, Philip sent an army to seize Sardinia, formerly a Spanish possession, but granted to Austria by the Treaties of Utrecht and Rastatt (see p. 684).

1718, July. Spanish Occupation of Sicily. This former Spanish colony, awarded to Savoy by the Treaty of Utrecht, provided a second base for further political and military action in Italy. It was seized by an army of 30,000 under the **Marquis of Lede.**

1718, August 2. Formation of the Quadruple Alliance. Austria joined the Triple Alliance. France, Austria, and England (the Netherlands, though in the alliance, was not at this time active

against Spain) demanded Spanish withdrawal from Sicily. Spain refused. An English fleet immediately landed a force of 3,000 Austrian troops near Messina, where they blockaded the Spanish garrison (August).

1718, August 11. Naval Battle of Cape Passaro (off Syracuse). Byng's English fleet of 21 ships of the line completely overwhelmed a somewhat smaller, but much weaker, Spanish fleet under Admiral Castenada. The British sank or captured 16 Spanish ships of the line and 4 frigates; only 2 or 3 Spanish ships escaped.

1718, December. Declarations of War. The Netherlands later joined her allies in the war (August 1719).

1718–1719. Operations in Sicily. Austrian troops, supported by an English fleet, operated against Spanish forces based in Messina. The Austrians captured Messina (October 1719).

1719, March–June. Spanish Expeditions to England and Scotland. Alberoni sent 2 expeditions to aid a planned uprising of English and Scottish Jacobites. A force of 29 ships and 5,000 troops led by Jacobite exile James Butler, Duke of Ormonde, sailed from Cadiz but was wrecked by a storm (March). A smaller force, under Jacobite **George Keith, Earl of Marischal,** left Corunna for Scotland with about 300 Spanish troops and a few Jacobite exiles. Only 1,000 Highlanders under **Rob Roy Macgregor** and other chiefs joined Marischal (April). Marischal made a stand against government troops led by **General Joseph Wightman** at **Glenshiel** (June 10). After a brief bombardment the Highlanders bolted, and the isolated Spanish surrendered.

1719, April. French Invasion of Spain. A French army of 30,000, under Berwick, invaded the Basque provinces of Spain. Berwick ranged through northern Spain almost unopposed before disease and bad weather caused him to return to France (November).

1719, October. English Operations along the Galician Coast. Amphibious forces captured Vigo and Pontevedra.

1719, December. Dismissal of Alberoni. Philip finally recognized that the recent series of disasters to Spanish arms had largely been the result of the intrigues of his prime minister.

1720, February 17. Treaty of The Hague. Philip abandoned his Italian claims in return for Austrian agreement that his son Charles could succeed to the duchies of Parma, Piacenza, and Tuscany upon the impending extinction of the male Farnese line. Sicily was ceded to Austria; Savoy got Sardinia in return. Victor Amadeus of Savoy was recognized as King of Sardinia.

War of the Polish Succession, 1733–1738*

During the Great Northern War (see p. 672), Stanislas Leszczynski was briefly installed as King of Poland by Charles XII, but the eventual defeat of Charles left Augustus II (protégé of Peter the Great of Russia) on the throne. As the death of Augustus II approached, there were 2 major claimants to the throne of Poland: Stanislas Leszczynski, now the father-in-law of Louis XV, and thus supported by France (and also by Spain and Sardinia); and **Augustus III of Saxony,** son of Augustus II, supported by Austria and Russia.

1733, February. Death of Augustus II.

1733, September. Arrival of Stanislas in Warsaw. The former king was popularly re-elected to his former throne.

1733, October. Russian Invasion. An army of 30,000 Russians, later joined by 10,000 Saxons, marched on Warsaw to support the claims of Augustus III. There was no effective Polish Army, and Stanislas fled to Danzig.

1734, January–June. Siege of Danzig. Despite the arrival by sea of a French relief force of 2,200 men, the Russians and Saxons cap-

* Since the Polish monarchy was elective and not hereditary, Polish historians designate this more accurately as the "War for the Polish Throne."

tured the town. Stanislas escaped to Prussia just before the capitulation.

1734, April–September. Operations in the Rhineland. The only important event of this inconclusive campaign was the French capture of Philippsburg, after overrunning Lorraine. Of greater historical interest is the fact that it was the last campaign of 2 great soldiers: Prince Eugene of Savoy, the magnificent Frenchman who had fought all his life for Austria, and the Duke of Berwick, the gifted Englishman who had fought all of his life for France. Berwick was killed during the siege of Phillippsburg (June 12). Also significant was the first appearance of a Russian army in the Rhine Valley after the campaign had come to its languid close and peace negotiations had begun.

1734–1735. Operations in Italy. Following French and Spanish invasions of Lombardy, Naples, and Sicily, the Austrians won the **Battle of Parma** (June 29), the French the **Battle of Luzzara** (September 19), and the Austrians had slightly the better of the final engagements of the war at the **Battle of Bitonto** (May 25, 1735).

1734–1735. Civil War in Poland. Stanislas, more popular among the Poles than his rival Augustus, attempted to revive his fallen fortunes, but received little help from France, whose prime minister, Cardinal **André H. de Fleury,** was anxious to restore peace on terms favorable to France.

1738, November. Treaty of Vienna. Stanislas abdicated the throne of Poland; the coronation of Augustus (which had taken place at Cracow, September 1734) was recognized, but Leszczynski was created Duke of Lorraine (and permitted to retain the title of King of Poland), while possession of Lorraine was to go to the French crown upon his death. **Charles Bourbon** (son of Philip of Spain) was recognized as King of the Two Sicilies, in return for which his 3 duchies were ceded to Austria.

Austro-Russian-Turkish War, 1736–1739

This was an outgrowth of the War of the Polish Succession (see above). France urged Turkey to join her in the war against the Ottoman Empire's traditional enemies: Russia and Austria. Turkey postponed her participation in the European war until she had concluded an ongoing war against Persia. By this time the War of the Polish Succession was over, and so a new and different war resulted: Russia, learning of Turkish intentions, and anxious to gain revenge for the Treaty of the Pruth (see p. 675), declared war (late 1735).

1736. Operations in the Ukraine. Two Russian armies invaded the Turkish-Tartar regions north of the Black Sea. The army under Marshal Count **Peter Lacy** captured Azov after a fierce struggle, but lost so heavily in the campaign that Lacy abandoned the fortress and retreated into the Russian Ukraine. The army under Marshal Count **Burkhardt C. von Munnich** invaded the Crimea and captured the Tartar capital. Losses from disease, exhaustion, and starvation, however, resulted in a mutiny, and Munnich retreated, having lost 30,000 dead out of his army of 58,000.

1736–1737. Tartar Raids in the Ukraine. Retaliating for the invasion of their territory, an army of 100,000 Tartars devastated much of the Russian Ukraine.

1737, January. Austrian Declaration of War. Revealing a secret treaty with Russia, Austria sent invading armies under Marshal Count **Friederich H. von Seckendorf** into Bosnia, Wallachia, and southern Serbia, capturing Nish. A Turkish counter-offensive, however, threw the Austrians out of most of the regions they had conquered. The Austrians and Russians made no attempt to coordinate their operations.

1737. Renewed Russian Offensives. While one Russian army raided into the Ukraine and another reoccupied Azov without serious op-

position, the main army under Munnich overran most of the Turkish Ukraine and captured Ochakov, at the mouth of the Bug River. Again the Russians were stricken with disease, and Munnich was fortunate in being able to withdraw without serious opposition from large Turkish forces waiting passively in Moldavia and Bessarabia.

1738. Operations in the Balkans. The Turks, retaining the initiative, by the end of the campaign had thrown an army across the Danube into the Banat, and were threatening Belgrade. There were no major battles, as Austrian Count **Lothar J. G. Konigsegg-Rothenfels** conducted a typical 18th-century campaign.

1738. Operations in the Ukraine. One Russian force conducted an inconclusive and meaningless raid into the Crimea, while Munnich threatened Moldavia. Repulsed at the **Battle of Bendery,** in an effort to cross the Dniester River, he was once more forced to retreat, leaving half of his army dead (from battle, disease, and starvation) while abandoning almost all of his artillery.

1739. Operations in the Balkans. An Austrian army commanded by General Count **Georg O. von Wallis** was forced to fight a greatly superior Turkish army advancing on Belgrade. Wallis, decisively defeated in the **Battle of Kroszka,** fell back into Belgrade, where he was besieged.

1739. Operations in Moldavia. Munnich's fourth offensive was finally successful. Advancing through Polish Podolia, he invaded Moldavia with an army of 68,000. He defeated 90,000 Turks in the **Battle of Khotin** (or Stavuchany, August 17); captured the fortress of Khotin; seized Jassy, capital of Moldavia; and prepared for an advance on Constantinople.

1739, September. Negotiations at Belgrade. The Austrians, dismayed by the successes of their Russian allies, immediately entered negotiations with the Turks at Belgrade.

1739, September 18. Treaty of Belgrade. Austria abandoned all of the gains of the Treaty of Passarowitz (see p. 703) save for the Banat, giving up northern Serbia, Belgrade, and portions of Bosnia and Wallachia. The victorious Turkish army now moved to strike the right flank of Munnich's armies in Moldavia, eastern Wallachia, and Bessarabia.

1739, October 3. Treaty of Nissa. Abandoned by Austria and threatened by the convergence of two larger Turkish armies, the Russians made peace. They surrendered all of their important conquests save for Azov, where they agreed to demolish the fortifications. They also agreed not to build a navy or merchant marine in the Black Sea. As a result of the war, however, the effective Russian frontier on the Ukrainian steppes was pushed about 50 miles closer to the Black Sea.

War of the Austrian Succession, 1740–1748

Background

1711. Death of Emperor Joseph I. He was succeeded as Emperor and as heir to the Hapsburg dominions by his half-brother, **Charles VI,** who had been one of the two major claimants to the Spanish succession (see pp. 676, 702).

1713, April 19. The Pragmatic Sanction. Having no male children, Charles established the order of succession to be followed after his death, so as to avoid a disputed succession. The main provisions were (1) the lands of the Hapsburg Austrian Empire were to be held intact; (2) if he had no male heirs, the succession should go to his daughters—the eldest being **Maria Theresa**—and their heirs in accordance with the laws of primogeniture; (3) if this line should fail, the succession would go to the daughters of Joseph I and their heirs. This Pragmatic Sanction was accepted by Hungary (1723) and by the major European powers except Bavaria.

1725–1740. Claim of Charles Albert, Elector of Bavaria. As a descendant of the eldest daughter of Ferdinand I, he interpreted Ferdinand's will to assure him the succession in the event of a failure of Ferdinand's male descendants.

1740, October 20. Death of Charles VI. Maria Theresa inherited the Hapsburg Empire, in accordance with the Pragmatic Sanction. Her succession was disputed by the following claimants: Charles Albert of Bavaria, Philip V of Spain on grounds largely arising from his successful claim to the Spanish throne (see p. 684), and Augustus III of Saxony, husband of the eldest daughter of Joseph I.

1740, November. Involvement of Frederick II of Prussia. He recognized Maria Theresa's succession, offered his aid against the other claimants, but announced that in return he would occupy Silesia, pending settlement of an old Brandenburg claim for the province. Maria Theresa refused.

1740, December 16. Frederick Invades Silesia.

First Silesian War, 1740–1742

This war had nothing to do with the Austrian succession. It did, however, precipitate the wider conflict. Maria Theresa appealed to all guarantors of the Pragmatic Sanction to assist her against Frederick. There were no responses.

1741, January–February. Prussian and Austrian Actions. Frederick consolidated control over Silesia, save for a few towns held by Austrian garrisons. Investing Neisse and Glogau, Frederick put the remainder of his army in winter quarters. Meanwhile, Count **Adam A. Neipperg** was quietly collecting an Austrian army in Bohemia.

1741, March 9. Assault on Glogau. Prince **Leopold of Anhalt-Dessau** (son of **Prince Leopold I** [see p. 704] the "Old Dessauer") led the efficient and successful assault.

1741, March–April. Austrian Invasion of Silesia. Unprepared for Neipperg's move while the passes from Bohemia were still covered with snow, Frederick hastily collected his scattered forces. Meanwhile Neipperg overran much of the province. By relieving the beleaguered garrison of Neisse, he cut Frederick off from Prussia.

1741, April 10. Battle of Mollwitz. At the outset of the battle superior Austrian cavalry drove the Prussian right-wing cavalry off the field. Frederick, commanding on that wing, was reluctantly persuaded by Marshal Count **Kurt C. von Schwerin** to flee with his men. Unfortunately for the Austrians, however, the commander of their own left wing cavalry was killed in the charge, throwing the Austrian cavalry into confusion.

Schwerin, with the magnificent Prussian infantry, smashed the Austrian cavalry and then drove the Austrian infantry from the field. This was the first and last time Frederick left a still-disputed battlefield.

1741, May–August. The War Spreads. Charles Albert of Bavaria, gambling to gain the Imperial crown and the Hapsburg lands, sent an army to invade Bohemia. France, allied to Bavaria, sent an army under Marshal **François M. de Broglie** into southern Germany to support the Bavarians. This force was described by the French both as "volunteers" and as "auxiliaries"; most of the officers wore Bavarian insignia. Saxony and Savoy both joined Bavaria in the war against Austria. England and the Netherlands then immediately announced their support for Maria Theresa, and prepared for war. Sweden, influenced by France, supported Prussia and used this as an excuse to attack Russia (which supported the Pragmatic Sanction) in revenge for the Great Northern War (see p. 672).

1741, April–October. Maneuvering in Silesia. Frederick recovered much of the territory he had lost before Mollwitz, reopened his line of communications to Prussia, and cautiously maneuvered against Neipperg.

1741, July–September. Bavarian Invasion of Upper Austria. Charles Albert seized Passau (July) and was soon joined by a French army. They rejected Frederick's suggestion of a converging advance on Vienna.

1741, October 9. Truce of Klein Schnellendorf. This was a secret truce, following several weeks of secret Austrian-Prussian negotiations. In return for Frederick's agreement not to carry out further operations against the Austrians, he was to be allowed to capture Neisse after a mock siege, and was to be left in virtual control of Silesia. Neipperg immediately withdrew his army from Silesia to join the gathering Austrian forces preparing for campaigns in Bohemia and Bavaria.

1741, October. Franco-Bavarian Invasion of Bohemia. The allies marched on Prague, hoping to be joined by Frederick.

1741, November–December. Austrian Mobilization. An army under the Grand Duke **Francis of Lorraine** (Maria Theresa's consort) ineptly opposed the French-Bavarian invasion of Bohemia; additional forces gathered in Vienna. Maria Theresa, as Queen of Hungary, had made a successful appeal to the Hungarian nobles, who contributed substantial forces, mostly light troops, in return for substantial political concessions. Additional forces were gathered from Austria and other Hapsburg dominions. The principal army, under Marshal Count **Ludwig A. von Khevenhüller,** prepared to invade Bavaria. Additional forces, under Marshal Prince **Charles of Lorraine** (younger brother of Francis) prepared to go to Bohemia.

1741, November 26. Fall of Prague. The French and Bavarians quickly consolidated control of western and central Bohemia. Charles Albert was crowned King of Bohemia (December 19).

1741, December. Renewal of War in Silesia. With her forces mobilized, Maria Theresa thought she could recover Silesia from Frederick, as well as defeat the Bavarians and French. She divulged the terms of the secret Truce of Klein Schnellendorf to embarrass Frederick with his allies. Frederick immediately sent Marshal Schwerin to Bohemia, and soon followed himself, intending to operate in conjunction with the Bavarians and French.

1741, December 27. Khevenhüller Invades Bavaria. Pushing aside weak Bavarian forces (their main army was in Bohemia), Khevenhüller invested Linz and marched on to capture Munich (January 24).

1742, January 24. Election of Charles Albert as Emperor. The same day he became Charles VII, the new Emperor's capital (Munich) was being captured by the Austrians (see above).

1742, January–April. Operations in Bohemia. Planned cooperation of the Prussians, Bavarians, and French collapsed when the Bavarians had to rush back to protect what was left of their country from the Austrians. The French, under Broglie, were too weak to leave the vicinity of Prague. Leaving a force to observe the French, Charles of Lorraine, now commanding in Bohemia, moved against Frederick, who was overrunning Moravia and had even sent cavalry raiders to the outskirts of Vienna. But Charles's threats to his line of communications, combined with a Hungarian invasion of Silesia, forced Frederick to return to Silesia. Charles followed closely.

1742, May 17. Battle of Chotusitz. In a hard-fought battle Frederick was victorious, thanks largely to the results of his intensive efforts to improve the combat capability of his cavalry.

1742, May 27. Battle of Sahay. Taking advantage of the absence of Charles, Broglie attacked and defeated the Austrian covering force in an engagement near Budweis.

1742, June 11. Treaty of Breslau. Practical Maria Theresa decided to make peace with Prussia, ceding Silesia to Frederick. She hoped that a later opportunity would permit her to recover the province. This ended the First Silesian War and (temporarily) Frederick's participation in the War of the Austrian Succession.

Operations in Bohemia and South Germany, 1742–1743

1742, June–September. Blockade of Prague. Charles, returning from Silesia, virtually besieged the French in Prague.

1742, August–September. French Invasion of Franconia. Marshal **Jean B. F. D. Maillebois** advanced from the Rhine toward

Amberg. Charles raised the siege of Prague (September 14) and marched to meet the French, calling Khevenhüller to join him.

1742, October–December. Maneuvers in Bavaria and Bohemia. After an abortive demonstration toward Prague, Maillebois timidly fell back to the Danube west of Regensburg. As the Austrians again concentrated against Prague, Broglie was ordered to leave the forces there under the command of Marshal Duke **Charles L. A. F. Belle-Isle** and to take over Maillebois's army. Broglie did so, and quickly overran most of Bavaria. Charles and Khevenhüller fell back to the line between Linz and Passau, to cover the approaches to Vienna, leaving a force under Prince **Johann G. Lobkowitz** to cover Prague. Lobkowitz denuded the countryside, so that the French could obtain no provisions. Belle-Isle therefore withdrew from Bohemia (December 16–26), leaving a garrison in Prague under General **François de Chevert.** (Early the following year, after a gallant defense of the city, Chevert was allowed to evacuate with all honors of war and to rejoin the main French army.) Meanwhile, Charles VII and an Imperial-Bavarian army under General Seckendorf joined Broglie in the Danube Valley in eastern Bavaria.

1743, April–May. Austrian Convergent Invasions of Bavaria. As Prince Charles advanced up the Danube, Khevenhüller marched into southern Bavaria from Salzburg, and Lobkowitz moved from Bohemia down the Naab. Broglie and Seckendorf could not agree on a defensive plan or strategy. After Khevenhüller defeated Seckendorf at the **Battle of Braunau** (May 9), the French and Bavarians withdrew westward from Bavaria.

1743, May–June. Advance of the Pragmatic Army. King **George II** of England, who was also the Elector of Hanover, had collected a multinational army on the lower Rhine. The principal elements were Hanoverian, English, and Dutch, with contingents from other German allies of Austria and guarantors of the Pragmatic Sanction. This army, about 40,000 strong, advanced slowly up the Rhine and into the Main and Neckar valleys. A French army of 30,000, under Marshal Duke **Adrien M. Noailles,** advanced from the middle Rhine to block the Pragmatic advance, and to protect the withdrawal of Broglie's command. The armies of George and Noailles approached each other in the Main Valley, between Hanau and Aschaffenburg. Noailles, far more skillful than George II, soon had the Pragmatic army virtually blockaded in the Main River defiles.

1743, June 27. Battle of Dettingen. In a battle typical both of English sturdiness and Hanoverian royal stubbornness, George extricated himself from the dangerous situation into which he had ineptly brought his army. At the outset a French cavalry charge came close to overwhelming the allied left wing. When his horse bolted and tried to gallop off the field, George dismounted and, sword in hand, led his English and Hanoverian infantry in counterattack. When the day was over, the allies held the field and Noailles was forced to retreat. This was the last time that an English monarch personally commanded and led his troops on the battlefield. England was still not officially at war with France.

1743, July–October. Operations along the Rhine. Threats by both Prince Charles and King George to invade France were both frustrated by inept attempts to cross the Rhine. All armies went into winter quarters.

1743–1744. French Plans to Invade Britain. An army under Marshal **Maurice de Saxe** was assembled at Dunkirk to go to England with Prince **Charles Stuart** (pretender to the English throne). The movement was foiled by weather and the Royal Navy (see p. 697).

1744, April. French Declaration of War. France now officially entered the war. A French army of 90,000, under the personal supervision of Louis XV, prepared to invade the Spanish Netherlands. Saxe and Prince Charles Stuart were still at Dunkirk, but Saxe was soon shifted to take operational command of the main army under Louis. Another army, under Marshal **François Coigny,** collected on the middle Rhine opposite Prince Charles. Still another under Prince **Louis François de Bourbon-**

Conti prepared to join the Spanish against the Austrians in northern Italy (see p. 696).

1744, June–August. Operations along the Rhine. Charles seized the initiative, crossed the Rhine near Philippsburg (July 1), and advanced on Weissenburg, cutting Coigny off from his base in Alsace. Louis XV, who had barely begun his invasion of the Austrian Netherlands, now left Saxe in Flanders and moved southeast with half of his army into Lorraine, while Coigny in a series of confused running fights fought his way through the Austrian Army at Weissenberg and reestablished himself near Strasbourg. At this point, with Charles threatened by the convergence of the 2 French armies, Louis XV became ill and all French activity ceased.

Second Silesian War, 1744–1745

1744, August. Frederick Reenters the War. Concerned by the completeness of the Austrian and allied victories of 1743, and realizing that Maria Theresa still hoped to regain Silesia, Frederick made an alliance with Louis XV.

1744, August–September. Prussian Invasion of Bohemia. Believing Charles to be in danger in northern Alsace, Frederick suddenly advanced with 80,000 men in 3 columns through Saxony, Lusatia, and Silesia into Bohemia, converging on Prague, which he quickly besieged and captured (September 2–6). He at once moved due south on Budweis, from whence he could threaten the Danube Valley and Vienna.

1744, September–November. Austrian Reaction. Inspired by Maria Theresa, new units were raised in Austria and Hungary, and regular garrisons hastily assembled to cover the approaches to Vienna. Marshal **Otto F. von Traun,** in combination with Saxon forces, held Frederick in check, while Prince Charles marched hastily east across the Rhine toward Bohemia. Frederick, finding himself opposed by the entire might of Austria and her allies, while his French allies sat on their hands, began a reluctant retreat into Silesia. Meanwhile, in the west, Louis recovered, secured the Rhine Valley, then returned to Flanders, where his army went into winter quarters.

1744, December 27. Death of Charles VII. He was succeeded as Elector of Bavaria by his son, **Maximilian Joseph,** who decided not to contend for the Imperial election.

1745, January 7. Battle of Amberg. The Austrians, in a surprise invasion of Bavaria, caught the Bavarian army in winter quarters and in a few weeks overran most of the country (January–March).

1745, January 8. The Quadruple Alliance. At Warsaw, Austria, Saxony, England, and the Netherlands united themselves formally against France, Bavaria, and Prussia.

1745, April 22. Treaty of Füssen. Peace between Austria and Bavaria. Maximilian renounced all pretensions to the Austrian crown and promised his vote to Francis Stephen, husband of Maria Theresa, in the coming Imperial elections. In return, Austria restored all of his possessions to the young elector. Frederick was now completely isolated from his only allies, the French, who seemed interested only in operations in Flanders.

Fontenoy Campaign, 1745

1745, May. French Advance in Flanders. Marshal Saxe (illegitimate son of Augustus II of Saxony) led a French army of about 70,000 in an advance on Tournai, which the French invested (May 10). The army was accompanied by Louis XV and the Dauphin. Opposed to Saxe was the Pragmatic Army, about 50,000 strong, commanded by the young **William Augustus, Duke of Cumberland** (son of George II), who moved slowly to relieve Tournai.

1745, May 10. Battle of Fontenoy. Leaving part of his army to continue the siege, Saxe drew up about 52,000 in position at Fontenoy to block the allied advance. Dominating the French line of entrenchments were 3 hastily constructed redoubts. Saxe was so ill with the dropsy that he had himself carried to the field on a litter, but refused to relinquish command.

The allies mounted an unimaginative frontal attack shortly after dawn, but were soon halted by the French defensive line. After some inconclusive skirmishing, Cumberland decided to attempt to smash his way through the center of the French position with a force of about 15,000 infantry, drawn up in 3 lines, the first 2 English (mainly consisting of the Guards Brigade), the third Hanoverian. While skirmishing continued along the line, Cumberland led these troops toward the center of the French line, between one of the redoubts and Fontenoy. As the ponderous mass, an almost square column, approached the French lines, Cumberland halted them to dress ranks and reorganize prior to a final assault. Lt. Col. Lord **Charles Hay,** commanding the 1st Foot Guards (later the Grenadier Guards), walked out between the lines; the French infantry and artillery fire slackened and came to a virtual halt. Facing the French Guards, Hay pulled out a flask, drank a toast, shouted a polite taunt, then saluted, led his troops in 3 hearty cheers, and dashed back to his own lines. (He almost certainly did not invite the French Guards to fire first, as apocryphal legend tells us.) As the amazed French were returning the salute and cheers, a tremendous volley was fired from the English line, which then resumed the advance, smashing through the shattered first French line. Louis XV, urged to flee, refused and stood fast as panicking soldiers ran past him. Saxe roused himself from his litter, mounted his horse, and established a second line which, in an exchange of smashing volleys, brought the English attack to a halt. Prominent among the French units in this new line was the Irish Brigade, refugees and supporters of the Stuarts. Saxe now brought up artillery, and soon a combined artillery-infantry-cavalry assault smashed the great English-Hanoverian square. The survivors withdrew in small groups, stubbornly returning the French fire and repulsing pursuing French cavalry. Cumberland withdrew his army in good order. Allied losses were reported as 7,500 killed and wounded, but the assaulting column alone must have lost that number; French losses were 7,200 killed and wounded.

1745, May–September. French Conquest of Flanders. Following up his victory, Saxe took Tournai, Ghent, Bruges, Oudenarde, Ostend, and Brussels.

Hohenfriedberg Campaign, 1745

1745, April–May. Skirmishing in Silesia. Austrian and Hungarian irregular troops harassed the Prussian army. Frederick concentrated 60,000 men at Frankenstein, between Glatz and Neisse. At the same time Charles marched across the passes from Bohemia with an army of about 80,000. He concentrated at Landshut, in the mountains of western Silesia, threatening Breslau. Frederick at once marched north to Striegau.

1745, June 3. Austrian Advance to Hohenfriedberg. Charles, not realizing that Frederick had left southern Silesia, marched toward Breslau and camped near Hohenfriedberg. After dark Frederick marched quickly and secretly to Hohenfriedberg, and before dawn drew his army up in order of battle.

1745, June 4. Battle of Hohenfriedberg. At dawn the Prussians struck, completely overwhelming the Austrians and Saxons. By 8 A.M. the battle was over. The allies lost more than 9,000 killed and wounded, about 7,000 prisoners, and 66 guns. Frederick's total losses were barely 1,000 men.

1745, June–September. Pursuit into Bohemia. As the Austrian and Saxon refugees fled into Bohemia, Frederick pursued aggressively with about half of his army, leaving the remainder to deal with the Austrian and Hungarian irregulars in the south. In Bohemia, Charles was reinforced, and soon reorganized his shaken troops. He was reluctant to risk another battle with Frederick, however, and the Prussian king did not have enough strength to force the Austrians to fight. After 3 months of inconclusive maneuvers along the upper Elbe in northeastern Bohemia, Frederick, whose army had gradually shrunk to 18,000 men, began to withdraw to Silesia, followed by Charles, who had about 39,000 men. Frederick halted at Sohr (Soor).

1745, September 30. Battle of Sohr. Expecting an Austrian attack, Frederick formed his army for battle, only to find that Charles had outmaneuvered him, and in a surprise night march had seized the heights to the right rear of his army. The Prussian line of retreat was cut. Frederick immediately swung his army in a great right wheel, under heavy Austrian fire. In the middle of this maneuver the Prussian pivot suddenly advanced against the Austrian left wing. The result was an oblique formation which suddenly threw itself on the Austrians, who had no thought that Frederick would be foolhardy enough to attack. Overwhelming Prussian strength smashed the Austrian left. The dazed Austrians retreated to the northwest, leaving the passes to Silesia open. Frederick's losses were 3,876, while the Austrians lost 7,444 killed and wounded, and abandoned 22 guns to the Prussians. Frederick and his army then returned deliberately to Silesia.

1745, October–November. Allied Invasion of Prussia. Collecting reinforcements, Charles marched north into the territory of his Saxon allies, while another Austrian army from the west joined the main Saxon army under Marshal **Rutowski** in western Saxony. The two allied forces then slowly advanced toward Berlin. Frederick immediately marched from Silesia into Saxony toward Dresden, forcing Charles to halt and face eastward.

1745, November 24–25. Battle of Katholisch Hennersdorf and Görlitz. Before the Austrian general could concentrate his scattered marching columns, they were struck 2 sharp blows by Frederick on successive days. Charles retreated back into Bohemia.

1745, November–December. Operations on the Elbe. Meanwhile, another Prussian army under elderly Leopold of Anhalt-Dessau (the "Old Dessauer") marched up the Elbe from Magdeburg to meet Rutowski and his allied army. Rutowski, though considerably superior in numbers, took up a defensive position between Meissen and Dresden.

1745, December 14. Battle of Kesselsdorf. Leopold, marching against the allied defensive position in battle order, surprised and overwhelmed Rutowski. The allies retreated in disorder, after suffering heavy losses.

1745, December 25. Treaty of Dresden. This unbroken series of Prussian victories, following so soon after Saxe's successes in Flanders and the withdrawal of the English army to deal with civil war at home (see p. 699), caused Maria Theresa to seek immediate peace. She again recognized Frederick's conquest of Silesia, while he recognized the election of her husband as Emperor. (This had taken place on September 13.)

Final Campaigns in the Netherlands, 1746–1748

1746. French Successes in the Austrian Netherlands. Saxe continued his deliberate operations against the major fortresses of the Austrian Netherlands, taking Antwerp, then clearing the region between Brussels and the Meuse. Charles of Lorraine, who had been sent to oppose the French, made only one major effort to interfere, and was defeated in the **Battle of Raucoux** (Rocourt), near Liège (October 11). The armies then went into winter quarters, on opposite sides of the Meuse.

1747. French Invasion of Holland. Saxe was now opposed by the Prince of Orange and by the Duke of Cumberland, who had returned from England after suppressing the insurrection of "the '45" (see p. 699). Saxe met and defeated the allied army at the **Battle of Lauffeld,** near Maastricht (July 2). He then sent a corps under General Count **Ulrich F. V. de Lowendahl** to besiege and capture Bergen-op-Zoom (September 18), while with his main body he virtually isolated Maastricht before the armies again went into winter quarters.

1748. Concluding Operations. While a large Russian army marched across Germany to join the allies in the Netherlands, Maastricht fell to Saxe's assault (May 7). There were no further operations of importance while the diplomats concluded peace negotiations.

1748, October 18. Treaty of Aix-la-Chapelle. With a few exceptions, all conquests were

restored on both sides. In Italy, Parma, Piacenza, and Guastella were ceded to Spanish Prince **Don Philip.** Also reaffirmed were Prussian conquest of Silesia, the Pragmatic Sanction in Austria, and the retention of both the electorate of Hanover and the English throne by the House of Hanover.

Operations in Italy, 1741–1748

1741–1743. Desultory Warfare. Spanish and Neapolitan armies, hoping to conquer the Austrian Duchy of Milan, were generally outmaneuvered by Austrian Marshal Traun. The Austrians were joined by Sardinia (Savoy, 1742), while at the same time the Neapolitans were forced to return home to protect their country against British amphibious threats.

1744. Intensification of the War. The tempo of the war speeded up as the French army in Dauphiné under the Prince of Conti attempted to join the main Spanish army on the lower Po River under General Count **John B. D. de Gages.** King **Charles Emmanuel I** of Sardinia, with considerable Austrian assistance, succeeded in holding up the French advance. The French besieged **Cuneo,** where they were joined by a Spanish force. Charles Emmanuel, attempting to relieve Cuneo, suffered a series of defeats at **Villefranche** and **Montalban** (April), **Peyre-Longue** (July 18), and in the major **Battle of Madonna del Olmo** near Cuneo (September 30). Conti, however, was repulsed in his efforts to take Cuneo, and retired into Dauphiné for winter quarters. The Austrians, now under Lobkowitz, had driven the main Spanish army southward out of northern Italy, but were halted and defeated by a combined Spanish-Neapolitan army in the inconclusive **Battle of Velletri** (August 11). Lobkowitz withdrew northward, but the Spanish were too weak to follow him closely. The year ended with the Austrians and Sardinians firmly in control of the Po Valley.

1745, March. Genoa Enters the War. She joined France, Spain, and Naples. De Gages and a French army under Maillebois joined forces south of Piacenza. Outmaneuvering Lobkowitz, the allies decisively defeated the Sardinians at the **Battle of Bassignano** (September 27), then quickly captured Alessandria and other Po fortresses.

1746, April–May. The Pendulum Swings. Reinforcements from Austria, released by the peace with Frederick, again permitted the Austrians, now under Marshal Count **Maximilian U. von Browne,** to regain the initiative.

1746, June 16. Battle of Piacenza. After a series of extremely confused maneuvers, in which Maillebois distinguished himself, the combined French and Spanish army, under Infante Don Philip, engaged the Austrians and Sardinians in an inconclusive battle. Interference from Don Philip prevented Maillebois from winning; as it was, the French and Spanish armies were separated and forced to retreat.

1746, August 12. Battle of Rottofreddo. Maillebois repulsed the pursuing Austrians, and made good his escape to Genoa.

1746, September. Austrian Conquest of Genoa. The arrival of Browne's army caused Maillebois to retreat along the Riviera to France; the Austrians took the city.

1746, December 5–11. Genoese Uprising. The Austrians were driven out. Communications were briefly restored with France, but the city was besieged by an Austrian army early the next year.

1747–1748. French Initiative. The French, now under Marshal Belle-Isle, advanced across the Maritime Alps and relieved besieged Genoa (July 1747). The Austrians withdrew into Lombardy, followed by Belle-Isle. There were no further operations of importance. When the war ended, the Austrians still held most of the Duchy of Milan.

Operations at Sea

1739–1741. War of Jenkins's Ear. **(See p. 723.)** This colonial war in the Caribbean was soon engulfed in the larger war.

1739, November. Vernon Captures Porto Bello. **(See p. 723.)**

1740. Vernon Repulsed at Cartagena. **(See p. 723.)**

1740, September–1744, July. Anson's Cruise. A squadron under Commodore **George Anson** was dispatched to raid the Spanish Pacific coast possessions. Only his flagship, the **Centurion,** succeeded in getting around Cape Horn. In the 2 following years Anson ravaged the west coast of the Americas, then sailed west to intercept and capture the famed Manila Galleon. He then continued westward, circumnavigating the globe.

1742–1744. Blockade of Toulon. Although France and England were not yet officially at war, the British maintained a loose blockade of Toulon, where a combined French and Spanish fleet lay idle. The principal mission of the English blockaders was to prevent the Spanish from reinforcing their land forces in Italy by seaborne convoys.

1744, February 11. Battle of Toulon. The Franco-Spanish fleet sailed south from Toulon under Admirals **de la Bruyère de Court** and **Don José Navarro.** The British fleet, under Admiral **Thomas Matthews,** approximately equal in strength to the French and Spanish, sailed to intercept. Matthews believed that de Court was trying to lure him away from the coast, so that a Spanish troop convoy could take reinforcements to Italy. He ordered an immediate attack without waiting to form his fleet in line ahead, since he feared that otherwise de Court would get away. His orders were not clearly understood; his principal subordinate, Admiral **Richard Lestock** probably deliberately went out of his way not to understand. The result was an inconclusive fight, in which the French and Spanish inflicted somewhat more damage than they received. Matthews was courtmartialed and dismissed from the Royal Navy for having failed to adhere to its rigid and formal "Fighting Instructions." Lestock, who should have been convicted of gross disobedience of orders was acquitted through political influence.

1744, March–April. French Threats in the Channel. A convoy of French troops at Dunkirk was ready to sail for England (see p. 692) and a French fleet of 20 ships of the line on at least 2 occasions sailed from Brest, and then from Cherbourg, to convoy the troops to invade England. Admiral Sir **John Norris,** age 84, stayed at sea in the Channel with 25 British ships, despite wintry gales, and the French did not attempt to fight their way through.

1745. Expedition to Louisburg. **(See p. 723.)**

1746, July 25. Battle of Negapatam. French Admiral **Mahé de la Bourdonnais** outmaneuvered Commodore **Edward Peyton** in an inconclusive action in which the English suffered more damage than the French. Peyton sailed away, permitting the French to capture Madras. (See p. 714.)

1747, May 3. First Battle of Finisterre. Anson with 14 ships intercepted a French convoy escorted by a French squadron of 9 ships under Admiral **de la Jonquière.** In a bold, brilliant action, the English fleet captured every French warship and several of the convoy.

1747, October. Second Battle of Finisterre. Under similar circumstances, Admiral **Edward Hawke** with 15 ships encountered a French convoy heading for the West Indies, escorted by a squadron of 9 commanded by Admiral **de l'Étenduère.** The odds were less than they might seem, because 8 of the French ships were bigger, better, and faster than any of the British. Hawke, fighting a bold battle, largely ignoring the "Fighting Instructions," captured all but 2 of the French warships. The convoy escaped, heading for the West Indies. But Hawke sent a sloop to warn the British West Indies fleet to be on the lookout; most of the convoy was captured in the Leeward Islands.

1748, October. Battle of Havana. Admiral **Charles Knowles** defeated a Spanish fleet under Admiral **Reggio** in a close-fought but relatively inconclusive engagement.

WESTERN EUROPE

Great Britain

In this half-century modern Great Britain emerged as a political entity, and as the predominant world power. Also during this period the last important English dynastic struggle came to a close, and with it the end of serious threats to the internal security of Great Britain. The principal events were:

1699, February. Disbanding Act. Parliament, to limit involvement of William III in European wars, reduced the standing army to a total of 7,000 men.

1701, June 12. Act of Settlement. Succession to the crown (after **Anne,** second daughter of James II) was established by Parliament to **Sophia,** Princess of Hanover (granddaughter of James I) and her issue. All future sovereigns were to be Protestant (thus barring James II and his male, Catholic, issue) and (in rebuke to William) were not to leave the country without Parliament's permission, were not to involve England in war for defense of their foreign possessions, and were not to grant office to foreigners. The act asserted the right of ministers to be responsible for the actions of the sovereign.

1701, September 16. Death of James II in France. He was succeeded as the Stuart Pretender to the English throne by **James Edward,** known to English history as the "Old Pretender." He was recognized as King of England by Louis XIV.

1701–1713. War of the Spanish Succession. **(See p. 676.)**

1702, March 8. Death of William III. Since Mary, his wife, was dead (December 28, 1694), he was succeeded by Mary's younger sister, Anne.

1702–1714. Reign of Anne. Last Stuart sovereign of England.

1707, May 1. Union of England with Scotland. This established the United Kingdom of Great Britain.

1707, October 21. Shovell's Disaster. Six ships of his squadron returning from Toulon (see p. 685) crashed on a Scilly Islands reef. Shovell went down with his flagship and 2 other ships of the line.

1708, March. Landing of James Edward in Scotland. He was disappointed both in the lack of a spontaneous rising in his favor and by the failure of a French expeditionary force to follow him, although part of the French fleet did reach the Firth of Forth before being scattered by a storm. He returned to France.

1710, August. Fall of the Whig Ministry. Tory enemies of Marlborough came to power.

1711, December. Dismissal of Marlborough. The new Tory Parliament acted for political reasons as well as on not completely disproved charges of financial peculation on the part of the Duke while captain general on the Continent. He was replaced by the Duke of Ormonde as commander of British land forces in Europe, but for all practical purposes the new Parliament withdrew the nation from the war (see p. 684).

1713, April 11. Treaty of Utrecht. **(See p. 684.)** Louis XIV renounced the Pretender (who left France) and recognized the Protestant succession in England. He also dismantled (temporarily) Dunkirk's fortifications, and ceded to England French American possessions of Hudson Bay, Acadia, Newfoundland, and St. Kitts. Spain ceded Gibraltar, and also gave Britain limited slave-trading rights in the Spanish-American colonies.

1714, August 1. Death of Anne. She was succeeded by **George,** Elector of Hanover, eldest son of Sophia.

1715, September–1716, February. "The Fifteen." Jacobite rebellion in Scotland, led by

John Erskine, Earl of Mar, who raised an army of 4,000 Scotsmen.

1715, November. Battles of Preston and Sheriffmuir. While Mar fought an inconclusive battle at Sheriffmuir (November 13) with loyal troops under **John Campbell, Duke of Argyll,** other regular troops under General **Wills** recaptured the barricaded town of Preston from a Jacobite force commanded by Tory M.P. **Thomas Forster,** who surrendered after a desultory three-day resistance (November 12–14).

1715, December. Arrival of James Edward. The Pretender landed at Peterhead and started south, but the advance of Argyll caused him to retreat to Montrose and then, as his dispirited Highlanders dispersed, he sailed again for France (February 5, 1716).

1718–1720. War of the Quadruple Alliance. **(See p. 686.)**

1719, March–June. Spanish Expeditions to England and Scotland. **(See p. 686.)**

1727–1760. Reign of George II.

1727–1729. War with Spain. **(See p. 700.)**

1739–1748. War with Spain (War of Jenkins's Ear). For all practical purposes this colonial and naval war became a part of the War of the Austrian Succession (see p. 689.)

1740–1748. War of the Austrian Succession.

"The Forty-five," 1745–1746

Jacobite rebellion in Scotland, inspired against the advice of his followers by young Prince **Charles Edward Stuart** ("Bonnie Prince Charlie" or "the Young Pretender"), son of James Edward.

1745, July 13. Charles Sails from Nantes. He arrived, practically alone, in the Hebrides (August 3).

1745, August–September. Rising of the Clans. With a Highland army of about 2,000, Charles marched on Edinburgh. Tactical command was exercised by able Lord **George Murray.**

1745, September 17. Capture of Edinburgh. Charles occupied the city, and Holyrood Palace, but the English garrison, under General **Joshua Guest** held Edinburgh Castle.

1745, September 20. Battle of Prestonpans. Charles and Murray decisively defeated a British army of about 3,000 under General Sir **John Cope.**

1745, November–December. Invasion of England. Charles and Murray, with about 5,000 men, hoped both for a rising of English Stuart sympathizers, and for direct aid from France. Charles was disappointed on both counts. He did, however, capture Carlisle and Manchester, and reached Derby (December 4). Many of his Highlanders had meanwhile deserted, and 2 strong English armies were advancing against him. Charles retreated north (December 6), closely followed by the Duke of Cumberland, who had returned from France (see p. 695).

1745, December–1746, February. Siege of Stirling. Cumberland having stopped at the border due to bad weather, Charles vainly tried to capture Stirling.

1745, December 18. Battle of Penrith. Jacobite rear-guard victory over an English detachment, while Charles' main army invested Stirling.

1746, January 17. Battle of Falkirk. English General **Henry Hawley,** who had recaptured Edinburgh, advanced to try to raise the siege of Stirling, but was defeated by Charles and Murray.

1746, February–March. Inconclusive Operations in Northern Scotland.

1746, April 8. Cumberland Advances from Aberdeen. With 9,000 regulars Cumberland advanced on Inverness, where Charles had about 5,000 men (practically all Highlanders).

1746, April 16. Battle of Culloden. Charles and Murray, attempting to surprise Cumber-

land, made a night march, but found the English ready for them at dawn. Under heavy artillery fire, the tired Highlanders nonetheless attacked, but were repulsed by the steady English infantry, then cut down and routed by cavalry charges. Charles fled. The Highlanders lost about 1,000 killed and about 1,000 were captured. Most of the prisoners were killed out of hand, or later summarily executed, earning for Cumberland the sobriquet of "Butcher."

1746, April–September. Charles a Fugitive. Although his cause had been smashed forever at Culloden, Charles stayed in Scotland, spurned by most of his formerly ardent supporters, who were now terrorized by Cumberland's ruthless executions of most of the leaders who had taken part in the rebellion. Charles finally returned to France (September 20).

France

1701–1714. War of the Spanish Succession. (See p. 676.)

1715, September 1. Death of Louis XIV.

1715–1774. Reign of Louis XV (5 years old; great-grandson of Louis XIV). The early years of the reign (1715–1723) were under the regency of Duke **Philippe of Orléans,** nephew of Louis XIV, who reversed his uncle's policies and entered alliances with England and Holland.

1718–1720. War of the Quadruple Alliance. (See p. 686.)

1727–1729. War with Spain. (See below.)

1733–1738. War of the Polish Succession. (See p. 687.) France gained Lorraine.

1740–1748. War of the Austrian Succession. (See p. 689.)

The Iberian Peninsula

Spain

1700, November 1. Death of Charles II. Without issue, the king's death precipitated the War of the Spanish Succession.

1700–1724. First Reign of Philip V.

1701–1715. War of the Spanish Succession. (See p. 676.)

1718–1720. War of the Quadruple Alliance. (See p. 686.)

1724. Abdication of Philip. The king abdicated in favor of his son, **Louis I,** apparently to pursue his efforts to gain the French crown.

1724–1746. Second Reign of Philip V. He returned to the Spanish throne when Louis died.

1727–1729. War with England and France. An almost bloodless war resulted from refusal of England and France to permit Charles (son of Philip) to go to Italy to take over the duchies to which he had received succession rights in the Treaty of The Hague (see p. 687). Spanish troops besieged Gibraltar; minor naval engagements took place in the West Indies. Due to the mediation of Cardinal Fleury of France, however, overt hostilities ended almost immediately (May 1727) and peace negotiations soon began (March 1728).

1729, November. Treaty of Seville. France and England again agreed to succession of Prince Charles to the Italian duchies, as in the Treaty of The Hague. Spain recognized British possession of Gibraltar.

1731. Charles Inherits the Farnese Duchies (Parma, Piacenza, and Tuscany).

1733–1738. War of the Polish Succession. (See p. 687.) Philip took advantage of Austrian occupation in Central Europe and the Balkans to expand his family's dominions, and his own interests, in Italy.

1733. Spanish Conquest of Sicily and Naples. Charles was crowned King of the Two Sicilies. By treaty with Austria, he relinquished his 3 duchies in order to obtain recognition of his new crown (1735). Philip and Charles agreed that the crowns of Spain and the Two Sicilies would never be united.

1738, November 13. Treaty of Vienna. (See p. 688.) The Austrian-Spanish agreements on Italy and Sicily were ratified.

1739–1741. The War of Jenkin's Ear. (See p. 723.)

1740–1748. War of the Austrian Succession. (See p. 689.)

1746–1759. Reign of Ferdinand VI (third son of Philip). He brought needed and welcome peace to a country which had been at war during 40 of the 46 years of his father's reign.

Portugal

Save for unsuccessful participation in the War of the Spanish Succession, this was a period of relative peace and great prosperity for Portugal. The prosperity came from a combination of expanding trade with Britain as a result of the Methuen Treaty (see p. 684) and the discovery of great natural wealth in Brazil.

The Netherlands

In the War of the Spanish Succession the Dutch Republic declined from great-power status. The war exhausted the country physically and financially. The principal events were:

1702, March 19. Death of William III. The States General refused to accede to William's will; for nearly 45 years there was no Stadholder (1702–1747).

1702–1713. War of the Spanish Succession. (See p. 676.)

1743–1748. War of the Austrian Succession. The Dutch played a minor role militarily in the early part of the conflict. (See p. 689.)

1747. French Invasion of the Netherlands. (See p. 695.) In desperation, in the face of Saxe's advance, the Dutch people rose in a bloodless revolution against the States General and installed **William IV** of Orange, a distant cousin of William III, as stadholder. Simultaneously the war was drawing to a close with the **Treaty of Aix-la-Chapelle,** which practically ignored the Netherlands (see p. 696).

Italy

As in previous centuries, Italy was again a battleground of the neighboring great powers. The decline of Venice and Genoa continued, while Savoy—which became the Kingdom of Sardinia—began to emerge as the strongest and most aggressive of the many Italian principalities. The principal events were:

1675–1730. Reign of Victor Amadeus II of Savoy and Sardinia. The beginning of the steady rise of the House of Savoy that would lead, more than a century later, to the unification of Italy.

1701–1713. War of the Spanish Succession. (See p. 676.)

1707. Austrian Occupation of Naples. Spanish occupying garrisons were defeated and ejected.

1713. Treaty of Utrecht. (See p. 684.) Savoy received formerly Spanish Sicily; Victor Amadeus was recognized as King of Sicily. Austria received Naples and most other Spanish possessions in Italy.

1718. Treaty of Passarowitz. (See p. 703.) Venice lost the Morea to Turkey, but gained bases in Albania and Dalmatia.

1718–1720. War of the Quadruple Alliance. (See p. 686.) Savoy remained virtually neutral although, despite Spanish seizure of Sicily, Victor Amadeus concluded an alliance with Spain.

1720. Treaty of The Hague. (See p. 687.) Savoy surrendered Sicily to Austria in return for Sardinia; Victor Amadeus changed his title to King of Sardinia.

1730–1773. Reign of Charles Emmanuel of Savoy and Sardinia.

1730–1768. Endemic Revolt in Corsica. Local Corsican chieftains became virtually independent of Genoa, which finally requested and received French assistance in reconquering the island, which Genoa then sold to France (1768).

1733–1738. War of the Polish Succession. (See p. 687.) Austria ceded Naples and Sicily to the Spanish Bourbons (1735; see p. 700).

1742–1748. War of the Austrian Succession. (See p. 689.)

Switzerland

Switzerland played little part in international events of this period. Swiss mercenaries were still an important source of foreign exchange for the country, and fought on both sides in the War of the Spanish Succession. But no longer did the Swiss troops have an influence on the outcome of battles disproportionate to their numbers. Internally, the country was still rent by Protestant-Catholic conflict, which gradually declined by the middle of the century.

Germany

Central Europe was still a mass of small, unimportant, and relatively ineffectual principalities. To a greater extent than previously, however, a coalescence of German interests and rudimentary nationalism had begun. This was to a considerable extent inspired by a common hatred of France and the French, arising largely from the repeated invasions of Germany by the armies of Louis XIV and Louis XV.

Austria (or the Empire)

The House of Hapsburg became increasingly identified with the still-expanding Austrian Empire, which it controlled directly from its capital at Vienna. At the same time the Hapsburgs' nominal responsibilities as emperors of the almost meaningless Holy Roman (or German) Empire became less important. Expansion continued in the Balkans at the expense of the Ottoman Empire. Although the military and political fortunes of the Hapsburgs were mixed elsewhere in Europe, Austrian power and influence reached their zenith during the reign of Maria Theresa. The principal events were:

1658–1705. Reign of Leopold I.

1701–1714. War of the Spanish Succession. **(See p. 676.)**

1703–1711. Revolt in Hungary. Hungarian nationalists, resentful of Austrian control over their country, revolted under the leadership of **Francis II Rakoczy.** The rebels gained control over most of the country, and on several occasions directly threatened Vienna. The Austrians slowly gained the upper hand, however, particularly after Rakoczy was defeated at the **Battle of Trencin** (1708). Guerrilla war continued.

1705–1711. Reign of Joseph I (son of Leopold).

1711–1740. Reign of Charles VI (brother of Joseph). He had been the Hapsburg claimant to the throne of Spain in the War of the Spanish Succession (see p. 676). His accession to the Imperial and Austrian crowns caused virtual withdrawal of England and the Netherlands from the alliance that had been supporting his claims to the Spanish throne (see pp. 683–684).

1711, May. Peace of Szatinar. The Hungarians accepted Charles VI's assurances that Austria would respect Hungary's national rights and liberties. Rakoczy, still coveting the Hungarian throne, fled to Turkey.

1716–1718. War with Turkey. Austria joined Venice, already at war with Turkey (since 1714; see p. 708). With Turkish support, Rakoczy returned to Hungary to lead an insurrection, but failed completely.

1716, August 5. Battle of Peterwardein. Prince Eugene with 60,000 men met and (after a fierce fight) routed a Turkish army of nearly 150,000. The Turks lost 6,000 killed, an unknown number of wounded, and all of their 164 guns. The Austrians lost 3,000 killed and 2,000 wounded.

1716, August—October. Siege and Capture of Temesvár (Timisoara). Eugene captured the last Turkish stronghold in Hungary after a 5-week siege.

1717, July—August. Siege of Belgrade.

Eugene, with about 20,000 men, besieged Belgrade, the strongest Turkish fortification in the Balkans, garrisoned by 30,000 troops. While he was preparing for an assault, a Turkish relieving army of 200,000 approached under Grand Vizier **Khahil Pasha.**

1717, August 16. Battle of Belgrade. While a detachment repulsed an attempted sortie by the garrison, Eugene typically and boldly attacked the main Turkish host. Although wounded (for the 13th and last time), Eugene remained on the field, and his army smashed the Turks, whose casualties were estimated at over 20,000. Austrian losses were 2,000. Belgrade soon surrendered (August 21).

1717–1718. Austrian Successes in the Balkans. Eugene and other Austrian commanders occupied much of Serbia, Wallachia, and the Banat. Eugene was actually contemplating an advance on Constantinople when Turkey sued for peace. Despite Venetian desire to continue the war (which had earlier gone badly for Venice in the Morea), Charles was also anxious for peace in order to respond to Spanish aggression and threats in Sardinia and Italy (See pp. 686–687).

1718, July 21. Treaty of Passarowitz. Austria gained Temesvar (thus completely liberating Hungary), part of Wallachia, and Belgrade. Venice gave up the Morea, but was given new coastal strongholds in Albania and Dalmatia.

1718–1720. War of the Quadruple Alliance. **(See p. 686.)**

1733–1738. War of the Polish Succession. **(See p. 687.)**

1737–1739. War with Turkey. **(See p. 688.)** Most of the gains of Passarowitz were lost.

1740–1780. Reign of Maria Theresa. Hapsburg Queen of Bohemia and of Hungary, and Archduchess of Austria. Her husband later became Emperor (see below), and thus for all practical purposes she was Empress Regnant as well.

1740–1748. War of the Austrian Succession. **(See p. 689.)**

1742–1745. Reign of Charles VII as Emperor. Charles Albert of Bavaria, principal rival of Maria Theresa, reigned briefly after his election. Had he not died during the war, he almost certainly would have been deposed.

1745–1765. Reign of Francis I as Emperor. Francis of Lorraine, husband of Maria Theresa, founded the House of Lorraine-Hapsburg, the line which followed Maria Theresa.

Prussia

By the end of the 17th century, the Electorate of Brandenburg had become the most powerful state of northern Germany, thanks to 2 strong Hohenzollern rulers: **Frederick William** ("the Great Elector") and his son, **Frederick I,** who crowned himself King of Prussia early in the 18th century. Frederick's son, **Frederick William,** the third strong ruler of the line, increased the strength and influence of Prussia. Frederick William contemptuously considered his eldest son a weakling, but as **Frederick II** ("the Great") that son was destined to make Prussia a great power, establishing the base upon which modern Germany is founded. By the middle of the century, Frederick had taught himself to be one of the greatest soldiers of history in 2 small, successful wars. His greatest achievements, and their consolidation, took place in the latter half of the century. The principal events up to 1750 were:

1688–1713. Reign of Frederick I. He started his reign as Elector of Brandenburg.

1701, January 18. Establishment of the Kingdom of Prussia. Frederick proclaimed himself king.

1701–1713. War of the Spanish Succession. **(See p. 676.)** Prussian contingents particularly distinguished themselves in Marlborough's great victories: Blenheim, Ramillies, Oudenarde, and Malplaquet. Prussia's status as a

kingdom was recognized by the Treaty of Utrecht, signed shortly after Frederick's death (see p. 684).

1713–1740. Reign of Frederick William. He built up the strength of the Prussian Army to 80,000 men, largest per capita in Europe, thanks largely to his parsimony. His men were recruited (or shanghaied) from the dregs of society; his officers were rather reluctantly conscripted from the nobility. By iron discipline and brutal tyranny the monarch (assisted by his able training genius, Prince **Louis of Anhalt-Dessau**—the "Old Dessauer") transformed this unlikely material into the best army in Europe.

1713, January 24. Birth of Karl Frederick. The 4th of 14 children, destined to become Frederick the Great.

1730. Frederick Sentenced to Death. Frederick William decreed that his "weakling" son should be strangled for "desertion" when he ran away from home. He was dissuaded only by threats of mutiny among his courtiers, and by the representations of foreign ambassadors.

1740–1786. Reign of Frederick II. His personality, accomplishments, and genius defy ready or simple analysis. He was a sensitive, cultured intellectual, and at the same time a ruthless, coldhearted disciplinarian. A man of great personal honor, as a monarch he was a sly, treacherous, and untrustworthy foe and ally. He was in many respects a typical 18th-century monarch and a typical 18th-century soldier. He accepted the military system as he found it (unlike Gustavus and Napoleon). But he recognized its tactical weaknesses: slowness, ponderousness, lack of imagination, slow rates of fire. So he became a conservative innovator. He injected mobility, speed, and rapidity of fire, thus roughly doubling his infantry effectiveness. He used cavalry vigorously, like Marlborough and Eugene, but he acted much more quickly than either of them did, particularly in the approach to battle and in the early stages. He was always inferior in strength to his enemies; he always attacked first. He created horse artillery to give increased firepower to his fast-moving cavalry. He emphasized the howitzer for two reasons: its lightness made it more mobile than a gun, its higher trajectory enabled it to get at enemy reserves concealed behind hills. He learned that by speed and agility he could concentrate superior power at a critical point before his more ponderous foes could react effectively. He achieved his mobility and speed by reemphasizing the drill and disciplinary methods inherited from his father.

1740—1748. War of the Austrian Succession. (See p. 689.) Precipitated by Frederick, in the **First Silesian War.** After gaining Silesia, Frederick made peace, then re-entered the conflict in the **Second Silesian War** (see p. 693) to prevent Austria from recovering sufficient strength to oust him from Silesia. Both foes and allies had reason to respect both the military prowess and slippery political double-dealing of the young king.

Scandinavia

Sweden

The undisciplined and rash military genius of Charles XII of Sweden was the direct cause of his nation's rapid decline from great-power status. Treacherously attacked by his neighbors in the Great Northern War, Charles defeated all of them decisively in a series of campaigns that are among the most brilliant in military annals. These great victories did not satisfy his thirst for vengeance, or his ambitions for military honor and conquest. By rejecting his foes' peace overtures, Charles assured his own eventual defeat at the hands of emerging Russia. After his death Sweden made peace—with honor but with great loss of territory and prestige. One

subsequent attempt to gain vengeance against Russia led to further losses and decline of influence. The principal events were:

1697–1718. Reign of Charles XII.
1700–1721. The Great Northern War. (See p. 672.)
1718–1720. Reign of Ulrica Eleonora (sister of Charles).
1720–1751. Reign of Frederick I (husband of Ulrica).
1741–1743. War with Russia. (See p. 707.)

Norway and Denmark

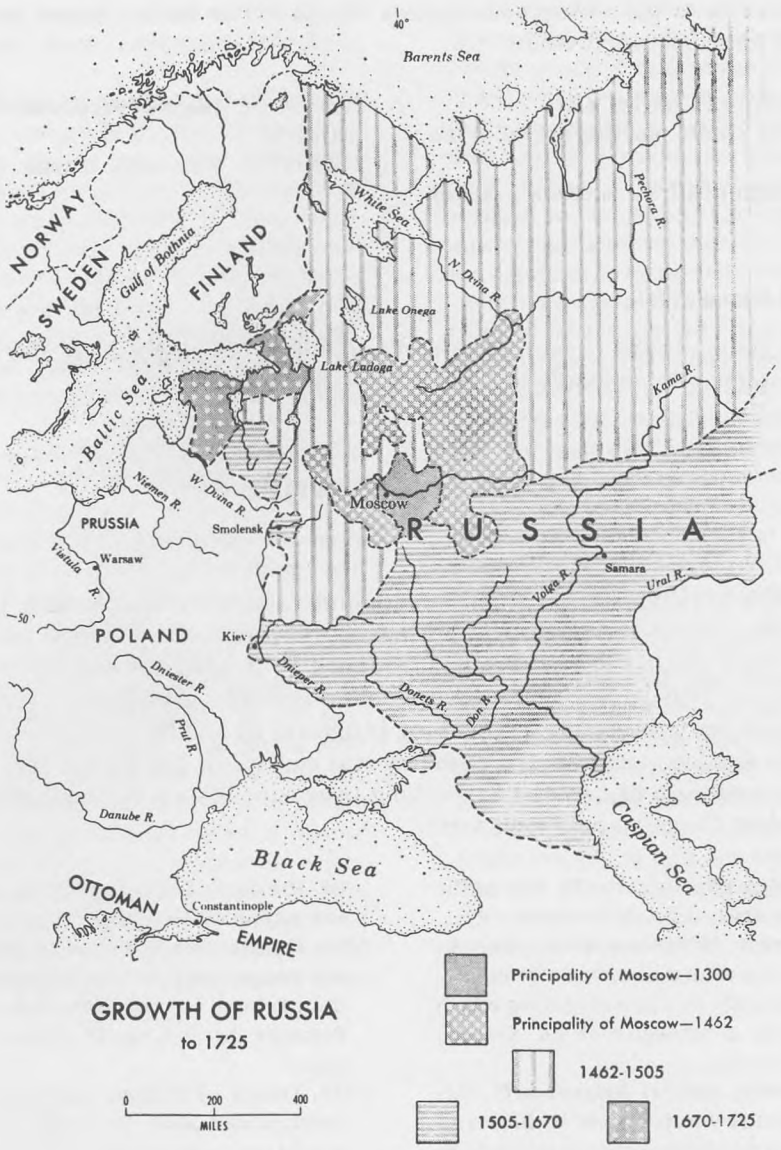
Save for participation in the Great Northern War (1700–1721; see p. 672), this half-century was relatively uneventful militarily in Denmark and Norway.

EASTERN EUROPE

Poland

This was a period of rapid political, military, economic, and moral decline in Poland. Impoverished and exhausted by the wars and uprisings of the 17th century, her population diminished by one-third, Poland found herself surrounded by 3 powerful and wealthy enemies: Austria, Russia, and Prussia. Her central government was weak and ineffective; there were deep distrust and suspicion between the foreign king (Augustus II) and the Poles; there was dissension among the leading magnates; the economy was backward; and the treasury was empty. The imposition by Russia of a second Saxon king (Augustus III) merely made Poland weaker and more divided. The principal events were:

1697–1733. Reign of Augustus II. One of the least attractive figures of world history.
1700–1721. Great Northern War. (See p. 672.) Poland was ruined economically and demoralized politically by this war, during which the nation was a battleground for Saxony, Sweden, and Russia.
1715–1717. Revolt against Augustus II. This rising of the gentry was provoked by huge and arbitrary Saxon requisitions of food and fodder, and by the murder of two Polish officials. Hostilities were terminated by a Russian-supported agreement which was approved without discussion by the "mute" Diet (1717).
1718–1719. Anti-Russian Unrest. Augustus, whose relations with Peter of Russia had deteriorated, concluded an anti-Russian alliance with Austria and England, the so-called **Treaty of Vienna** (1719), providing for enforced evacuation of the Russian troops.
1720. Russian Withdrawal from Poland. Under this pressure the czar withdrew his troops from Poland, but simultaneously concluded in Potsdam the first secret Russo-Prussian alliance.
1721. Treaty of Nystad. (See p. 676.) Without Polish participation, the treaty provided for cession of the eastern coast of the Baltic, including Polish Livonia, to Russia.
1727. Russian Occupation of Polish Courland.
1733–1738. War of the Polish Succession. (See p. 687.)
1734–1763. Reign of Augustus III. Continued decline of Poland under an inept and uninterested foreign king.



RUSSIA

During the first quarter of the 18th century, Russia under Peter the Great rose to be one of the great military and political powers of Europe. Following this came a decline during the reigns of Peter's mediocre successors. The principal events were:

1689–1725. Reign of Peter I. This cruel, ruthless ruler reformed the archaic and Asiatic government, economy, and society of Russia, primarily to assure an adequate civilian base for military conquest. He reformed and modernized the army, and learned the art of war from his archenemy, Charles XII of Sweden. He conquered the eastern coast of the Baltic and relegated Sweden to the position of a second-rate power. He ruined Poland, his other main rival. He built a navy, but failed to gain unrestricted access to the Black Sea. When he died, he left Russia exhausted, her population diminished by 20 percent, but equipped with a regular army of 212,000 veterans hardened in continuous campaigns and reinforced by 110,000 Cossacks, and a strong navy. There was no immediate successor who could use this powerful instrument for further conquests and expansion of the Russian Empire until the reign of Catherine II in the second half of the 18th century.

1700–1721. Great Northern War. **(See p. 672.)**

1722–1723. War with Persia. **(See p. 709.)**

1725–1741. Successors of Peter I the Great. There was a series of short reigns of weak rulers, preventing Russia from conducting a consistent and effective foreign policy. They also neglected the Russian military forces. In only one policy was there Russian consistency: keeping Poland weak.

1725–1736. Guerrilla Rebellion in the Caucasus. Native partisans engaged in constant guerrilla warfare against Russia in the lands recently conquered from Persia. Soon one-quarter of the Russian Army was engaged in the Caucasus-Caspian region (1730).

1732–1736. Restoration of Land to Persia. Russian restored to Persia the Caspian littoral, with the towns of Derbent and Baku, because their defense against native partisans became too heavy a drain on the Russian Army. (See pp. 710, 711.)

1736–1739. War with Turkey. **(See p. 629.)**

1741–1762. Reign of Elizabeth I. One of Russia's strong rulers.

1741–1743. Russo-Swedish War. Under the influence of France, Sweden saw in the War of the Austrian Succession an opportunity to gain revenge on Russia, which had declared its support of Maria Theresa and the Pragmatic Sanction (see p. 689). The timing was bad for Sweden, whose army was only 15,000 men, because after the conclusion of peace with Turkey (1739) the entire Russian Army could be used against Sweden.

1741. The Battle of Wilmanstrand. The Swedes, 6,000 strong, were defeated with great loss by 10,000 Russians. Swedish losses were 3,300 killed and wounded and 1,300 prisoners; Russian losses were 2,400 killed and wounded.

1742. Russian Invasion of Finland. The Russians cut the road of retreat of the main Swedish Army at Helsinki. The Swedes (17,000) surrendered, virtually ending the war.

1743, August 7. Peace with Sweden. Russia obtained some new territory in Finland, where the frontier was fixed on the Kymmene River.

EURASIA AND THE MIDDLE EAST

The Ottoman Empire

The decline of the Ottoman Empire continued, but at a slower pace than in the previous century. In part this was due to the fact that England and France, separately and without coordination, were becoming aware of the possible threat to their Mediterranean interests, and to the European balance of power, if either Russia or Austria were to gain control of the Straits and of the eastern Mediterranean. Thus French and English diplomacy—while not pro-Turkish, and rarely deliberately coordinated—was directed toward maintaining the *status quo* in the Balkans and Anatolia. Another reason for the deceleration of Ottoman decline was the

jealousy of Austria and Russia, each afraid that the other might displace Turkey in control of the Balkans and of the Straits. Perhaps the most important reason for Turkey's continuing, even though weakened, power was the inherent toughness and fighting qualities of the Turkish soldier, displayed on battlefield after battlefield against Austrians, Russians, Venetians, and Persians. The principal events were:

1703. Janissary Revolt. Sultan Mustafa II was forced to abdicate.

1703–1730. Reign of Ahmed II (brother of Mustafa II).

1710–1711. War with Russia. (See p. 679.) Ended by favorable **Treaty of the Pruth.**

War with Venice and Austria, 1714–1718

1714. Revolt in Montenegro. Quelled by the Turks, who believed it had been instigated by Venice.

1714. Turkey Declares War on Venice

1715. Turkish Offensives. Energetic and skillful Grand Vizier **Damad Ali** conquered the Peloponnesus (Morea) in a 100-day campaign of successful sieges without any pitched battles. All Venetian fortresses were taken, their 8,000 defenders captured. The Ottoman fleet, reinforced by ships from Egypt and the Barbary States, drove the Venetians out of the Aegean Islands. The remaining Venetian fortresses on Crete were taken.

1716, January–December. Venetian Gains. The Venetians repulsed a Turkish attack on Corfu and received naval reinforcements from Spain, Portugal, and some other Italian states.

1716, January. Austria Joins Venice. The grand vizier marched north from Belgrade toward Peterwardein (June–July).

1716, August 5. Battle of Peterwardein. (See p. 702.)

1717. Belgrade Campaign. (See pp. 702–703.)

1718, July 21. Treaty of Passarowitz. (See p. 703.) Unfavorable to Turkey.

1722–1727. Expansion in Persia. Both Turkey and Russia took advantage of Persian weakness and involvement with an Afghan invasion to seize and divide between them large portions of northwestern Persia (see p. 709). Division of the spoils was agreed on by the **Treaty of Constantinople** (1724).

1730–1736. War with Persia. (See p. 710.)

1730, September–October. Revolt in Constantinople. News of the disastrous Turkish defeat at Hamadan (see p. 710) led to a popular rising. The grand vizier was killed; the sultan abdicated. The city continued to be plagued by unrest and riots for 2 years.

1730–1754. Reign of Mahmud I.

1733, 1736. Peace of Baghdad. (See pp. 710, 711.) Ended the inconclusive war with Nadir Shah of Persia; Turkey lost some of the land seized earlier.

1736–1739. War with Austria and Russia. (See p. 688.) Ended by the favorable **Treaty of Belgrade.**

1743–1747. War with Persia. (See p. 711.) Turkey's last major war with Persia. Turkey was forced to give up all the lands seized 20 years earlier.

Persia

In this short half-century Persia virtually collapsed, conquered by Afghan invaders and her provinces divided at the conference table between Russia and Turkey. Then briefly and astonishingly Persia revived for one of her most glorious military episodes, before another disastrous collapse. The period was dominated by **Nadir Kuli Beg,** later **Nadir Shah,** one of the greatest soldiers in Persian history and the last great Asian conqueror. He drove out, then conquered, the Afghan invaders, repeatedly defeated the Turks, overawed the Russians, conquered Mogul

India, and conquered the Uzebek khanates of the Oxus region. His empire collapsed at his death. The principal events were:

1694–1722. Reign of Shah Husain. His strong emphasis on Shi'i doctrine aroused resentment among Sunni subjects and neighbors, reopening the wounds of ancient Moslem religious differences.

1709. Afghan Revolt at Kandahar. Under the leadership of **Mir Vais,** leader of the Ghilzai Afghans, a separate Afghan state established its independence. Repeated Persian efforts to reconquer Kandahar were repulsed (1709–1711). The struggle was embittered by the religious dispute.

1711. Siege of Kandahar. A Persian army under **Khusru Khan** defeated Mir Vais and besieged Kandahar. Mir Vais was ready to surrender, but Persian insistence upon unconditional surrender stimulated the defenders to greater efforts. When the besiegers began to suffer from food shortages, Mir Vais sortied and defeated them. Khusru was killed; only 1,000 of the 25,000 Persians escaped. Subsequent Persian reconquest efforts were repulsed.

1715. Death of Mir Vais. He was succeeded by his brother **Abdulla,** and then by his son **Mahmud Khan** (1717).

1717. Afghan Revolt at Herat. Under the leadership of **Asadullah Khan,** the Abdali Afghans revolted. They joined with the Uzbeks to plunder Khorasan.

1719. Battle of Herat. A Persian army of 30,000 under **Safi Kuli Khan** attempted to reconquer Herat. Asadullah met them with 15,000. In a hard-fought battle, Asadullah was saved by confusion in the Persian army, which resulted in the defeat and capture of Safi.

1720. Afghan Raid into Persia. Mahmud Khan (son of Mir Vais) invaded Persia and captured Kerman. The Afghans were routed when capable Persian general **Lutf Ali Khan** surprised their camp and pursued them back to Kandahar. Lutf was preparing for a full-scale invasion when he was dismissed due to the jealousy of the grand vizier, his brother-in-law.

1721. Frontier Raids. The Abdalis raided unchecked in Khorasan, while the Lesgians of Daghestan sacked Shamaka, capital of Shirvan. Mahmud prepared for a major invasion of Persia.

1722, January. Mahmud's Invasion. Advancing with about 20,000 men, he again captured Kerman, but was repulsed from its citadel. Moving on to Yezd, he was again repulsed. He continued on to the walls of the capital, Isfahan. He rejected a handsome ransom to return to Afghanistan; with about 10,000 men he encamped at Gulnabad, 11 miles east of Isfahan, and waited for a higher offer.

1722, March. Battle of Gulnabad. A Persian army of about 30,000 now advanced against Mahmud. The Afghans attacked, defeated the Persians, and, after capturing some outlying fortifications, invested Isfahan.

1722, March—October. Siege of Isfahan. Mahmud repelled, or bribed off, a few half-hearted efforts to relieve the city. The Shah's son **Tahmasp** fought his way out with 600 men, but in the city garrison and people began to starve. The shah surrendered, abdicating in favor of Mahmud.

1722–1725. Reign of Mahmud. The Afghan conqueror controlled only part of the country. His accession was challenged by Tahmasp, who raised resistance in Mazandaran.

1722–1727. Russian and Turkish Aggression. Peter of Russia, nominally supporting Tahmasp, seized Derbent (1722), and then Resht and Baku (1723). In return for promised Russian support, Tahmasp agreed to cede Shirvan, Daghestan, Gilan, Mazandaran, and Astrabad to the Russians. Turkey, anxious to regain the provinces lost to Shah Abbas, and fearful of Russian penetration, also moved into northwest Persia, seizing Tiflis, capital of Georgia (1723). By the **Treaty of Constantinople** (1724), Russia and Turkey agreed to divide northern and western Persia. The Turks then occupied Tabriz, Hamadan, and Kermanshah (1724–1725).

1724–1725. Chaos in Isfahan. Mahmud

became insane and was eventually put to death by his followers.

1725–1730. Reign of Ashraf Shah (cousin of Mahmud). Order was reestablished in central and southern Persia.

1726–1727. Turkish Invasion. Ashraf repulsed the invaders at the **Battle of Isfahan** (1726). He then made peace, allowing the Turks to retain the extensive border provinces they had seized in return for Ottoman recognition of his accession (1727).

1726–1729. Rise of Tahmasp. Supported by **Nadir Kuli Beg,** an obscure Khorasan chieftain, Tahmasp conquered Meshed and Herat (1728). Marching on Isfahan, he and Nadir defeated Ashraf at the **Battle of the Mehmandost,** near Dourghan, and again at the **Battle of Murchakhar,** near Isfahan, and then seized the capital (1729). Ashraf fell back on Shiraz, pursued by Nadir, who decisively defeated the Afghans at the **Battle of Zarghan** (1730). In trying to return to Kandahar, Ashraf was murdered.

1730–1732. Reign of Tahmasp. The shah was a figurehead; the real ruler of Persia was brilliant soldier Nadir Kuli Beg, who was made viceroy of most of northern and eastern Persia by the grateful shah.

1730. Conquest of Meshed. Nadir marched on Meshed, where an independent Afghan chieftain, **Malik Mahmud,** had established himself (1722) and now refused to submit to the new shah. Nadir defeated Malik outside the city, which he then captured through treachery. Malik was captured and later killed.

1730–1736. War with Turkey. The Turks refusing to give up the Persian territories they had seized, Nadir decided to fight to recover the lost provinces. He marched on Hamadan.

1730. Battle of Hamadan. Nadir decisively defeated the Turks. He quickly occupied Iraq and Azerbaijan, and laid siege to Erivan.

1731–1732. Campaign against the Abdalis. With Nadir now occupied in the west, there were outbreaks in Khorasan, largely inspired and exploited by the Abdali Afghans of Herat. Nadir raised the siege of Erivan, marched 1,400 miles east, defeated the Abdalis, invested and captured Herat (1732).

1731. Second Battle of Hamadan. Tahmasp, hoping to complete the reconquest of the western provinces from Turkey during the absence of Nadir, took the field himself and invested Erivan. He withdrew when a Turkish relief army appeared. The Turks pursued and decisively defeated him. Tahmasp, now having lost all the territories conquered by Nadir the previous year, made peace to forestall a Turkish invasion, recognizing the Turkish conquests.

1732. Tahmasp Deposed. Nadir, returning from the east, deposed Tahmasp, installed his 8-month-old son **Abbas** on the throne, repudiated the treaty with the Turks, and renewed the war.

1732. Treaty of Resht. The Russians gave up their claims to Gilan, Mazandaran, and Astrabad (see p. 707).

1732–1736. Reign of Abbas III. Nadir, as regent, was the real ruler in this reign, the last of the Safawids.

1733. Nadir's Invasion of Mesopotamia. Nadir defeated the Turkish governor, **Ahmed Pasha,** near **Baghdad.** He invested the city with a portion of his army, then turned to meet a powerful Turkish relief army under **Topal Osman.** At the **Battle of Karkuk,** near Samarra, the Turks decisively defeated Nadir's smaller Persian army. The garrison of Baghdad then sortied to overwhelm the small Persian detachment Nadir had left in the trenches around the city. Despite these twin disasters, Nadir rallied his troops and held off Topal while awaiting reinforcements. When these arrived he again took the offensive, defeated Topal at the **Battle of Leilan,** near Karkuk, then marched again on Baghdad. News of a revolt in Fars led him to make a favorable peace with Ahmed Pasha (**Treaty of Baghdad**) and he then returned to suppress the revolt in Fars.

1734–1735. Operations in Transcaucasia. Turkish Sultan Mahmud refused to recognize the Treaty of Baghdad. A Turkish army of 80,000 under **Abdulla Koprulu** assembled near Kars. On the approach of Nadir the Turks went into an entrenched camp. Nadir threatened Tiflis, Erivan, and Ganja, but was unable to entice the Turks into battle.

1735. Treaty with Russia. Nadir, knowing

Russia was planning war against Turkey in Europe, sent troops against Baku and Derbent, threatening to join Turkey in war against Russia. The Russians quickly negotiated an alliance with Nadir, returning Baku and Derbent to Persia. (See p. 707.)

1735. Battle of Baghavand. Nadir invaded Turkey. When he sent off a number of detachments from his main army in the plain of Baghavand, near Kars, Koprulu decided to risk battle. By so doing, he fell into a trap set by Nadir, who counterattacked and won a complete victory. Nadir then quickly captured Tiflis, Erivan, and Ganja.

1736. Peace with Turkey. Sultan Mahmud, anxious to make peace so that he could deal with Russia and Austria, recognized the terms of the Treaty of Baghdad; Persia recovered part of the lost provinces. Nadir agreed not to join Russia in the new war.

1736. Death of Abbas. Nadir was elected shah by the Persian chieftains. A devout Sunni, he accepted only on condition that the Shi'i heresy be abandoned. The condition was nominally accepted, but had little practical effect.

1736–1747. Reign of Nadir Shah. He devoted himself to restoring the old frontiers of Persia.

1737–1738. Invasion of Afghanistan. Nadir Shah took Kandahar after a 9-month siege (1738). During the siege Nadir sent smaller forces to occupy and pacify the former Persian provinces of Balkh and Baluchistan. When Kandahar surrendered, he treated the Afghans leniently, and many joined his army.

1738–1739. Invasion of India. To punish the Mogul Emperor, **Mohammed Shah,** for aiding the Afghans, Nadir invaded India. He captured Ghazni and Kabul (September 1738), then turned toward the Punjab. With 50,000 men he bypassed a Mogul army holding the Khyber Pass, instead went over the nearby Tsatsobi Pass (where Alexander had crossed), and then turned to attack the Moguls in the rear at the successful **Battle of the Khyber Pass.** He then advanced rapidly into India, seizing Peshawar and Lahore, crossing the Indus to Attock.

1739, February. Battle of Karnal. Mohammed marched from Delhi to meet the Persians with an army of 80,000 men. Nadir, enticing the Moguls to battle from their entrenched camp, defeated them, then besieged the camp. Mohammed surrendered. Nadir, treating him well, occupied Delhi.

1739, March. Massacre of Delhi. Nadir ruthlessly suppressed a rising of the population. Then, leaving Mohammed on the throne, but taking an indemnity of more than $100 million in precious metals and jewels and annexing all of India west and north of the Indus, he returned to Persia.

1740. Conquest of Bokhara and Khiva. Defeating the Uzbeks at the **Battles of Charjui** and **Khiva,** Nadir annexed the region south of the Aral Sea.

1741. Failure in Daghestan. Nadir attempted to subdue a rising of the Lesgians, but was frustrated when the people took to the mountains in guerrilla war.

1742–1747. Growing Unrest. Nadir's cruelty, his poor administration, and his efforts to force unpopular religious beliefs on his people caused bitterness and hatred to spread through the country.

1743–1747. War with Turkey. Ostensibly for religious reasons, but mainly to exploit the growing unrest in Persia, Turkey again invaded Persia. Nadir, outmaneuvering the more numerous invaders, blocked their advance east of Kars.

1745. Battle of Kars. Nadir once more decisively defeated the Turks, and occupied most of Armenia.

1747. Peace with Turkey. The boundaries were reestablished as they had been at the time of Turkish Sultan Murad (1640).

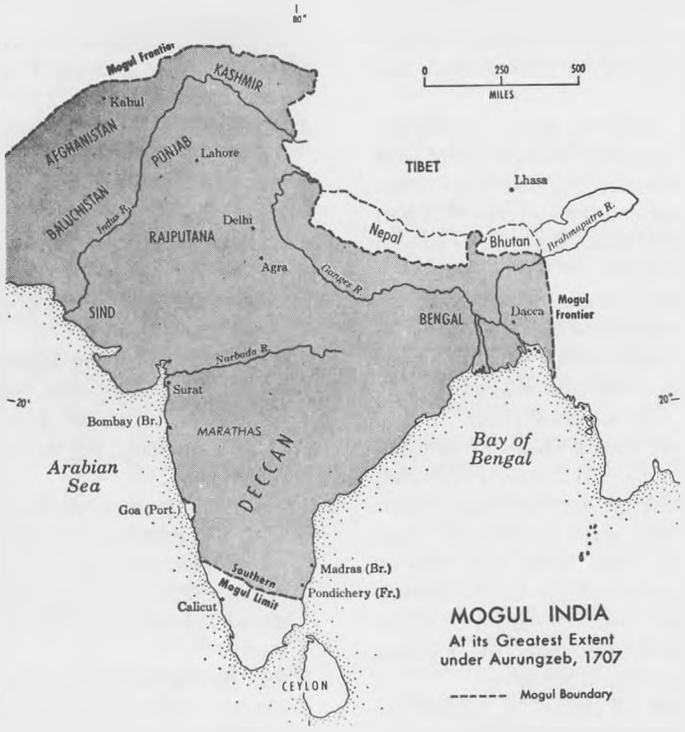
1747. Death of Nadir. He was assassinated by his own bodyguard.

1747–1750. Anarchy in Persia. The empire fell apart in civil war. A new Afghan state was created by **Ahmad Khan Durani,** one of Nadir's leading generals. Georgia declared its independence.

SOUTH ASIA

AFGHANISTAN

During this century, modern Afghanistan emerged from the ruins of the Persian and Mogul empires. For most of the period the history of Afghanistan was inextricably bound up with that of Persia. But upon the death of Nadir Shah, Ahmad Khan Durani, a young Afghan of the Abdali tribe who had joined Nadir Shah after the Persian conquest of Kandahar (1738) and had



become a Persian general, seized control of most of the region now known as Afghanistan. Known as Ahmad Shah Durani (or Abdali), he quickly began to expand his small kingdom at the expense of both Persia and India. Having been with Nadir during the invasion of India, he was well aware of the weakness of the Mogul Empire. He had no sooner seized control of Afghanistan than he made the first of his 10 major invasions of India. This first invasion (1747) was unsuccessful, but in later years he became the strongest ruler in northern India, and annexed much of the remains of the Mogul Empire (see pp. 711, 715).

India

During this half-century the Mogul Empire declined rapidly. The decline was hastened by Nadir Shah's successful invasion, and by the steady advance of Maratha power from the Deccan into northern India. As the period ended there were 4 major powers competing for a dominant place in India to supplant the nearly extinct Mogul Empire. These were the Maratha Confederacy, the Afghan empire of Ahmad Shah, the French, and the English. The principal events were:

c. 1700. Rise of the Sikhs. A militant Hindu sect, they became powerful in Rajputana and the Punjab.

1700–1707. Maratha Struggle for Existence. The Marathas, with difficulty, maintained their independence against the last powerful efforts of aged Mogul Emperor Aurangzeb (see pp. 643–644).

1700. Consolidation of British East India Company Bases in Bengal. Sir **Charles Eyre** became governor.

1701. Expansion of French East India Company. A new base was established at Calicut. French bases were already established at Surat, Pondichery, Masulipatam, Chandernagore, Balasore, and Kasimbazar.

1707. Death of Aurangzeb.

1707–1712. Reign of Bahadur Shah (son of Aurangzeb). He assumed the throne in the absence of his elder brother, **Muazim,** governor of Kabul. He made peace with the Marathas and Rajputs, and repressed the rising ambitions of the Sikhs.

1708. Battle of Agra. Bahadur defeated and killed his brother Muazim, who was returning to claim the throne.

1708–1748. Reign of Sahu, the Maratha. Son of Sivaji, he had been imprisoned by Aurangzeb. He was released by Bahadur and set on the Maratha throne. His allegiance to the Moguls soon became less than nominal.

1710. Campaign against the Sikhs. Bahadur, concerned by the rise of Sikh power, defeated them in an inconclusive campaign.

1712–1719. Mogul Interregnum. After the death of Bahadur the situation in the empire became anarchic; in a series of bloody struggles for the throne, some 5 puppets reigned in Delhi, but the real power was in the hands of the nobles and court officials.

1712. Appointment of the First Maratha Peshwa. Sahu appointed able **Balaji Visvanath Bhat** as his prime minister, with title of Peshwa. From this time until his death (1720) Balaji was the virtual ruler of what had become a confederacy of the Maratha kingdoms of Baroda, Gwalior, Indore, Nagpur, and the Peshwa's dominions. The position of Peshwa became hereditary, and his successors continued to be the real leaders of the Maratha Confederacy.

1712–1720. Spread of Maratha Power. The Marathas gained strength and spread northward into Hindustan, taking advantage of anarchy in the Mogul Empire.

1713. Nizam ul-Mulk Viceroy of the Deccan. During the struggle in Delhi, **Asaf Jah** (also known as Chin Kilich Khan), a Turkoman who had been one of Aurangzeb's best generals, quietly had himself appointed as subahdar, or viceroy, of the Mogul dominions in the Deccan, with the title of **Nizam ul-Mulk.** Not troubling the autonomous Marathas, he reestablished firm Mogul control over the central and eastern Deccan.

1719–1748. Reign of Mohammed Shah as Mogul Emperor. He was supported by Nizam ul-Mulk and the Marathas in gaining the throne. The Nizam became the wazir, or prime minister, but remained subahdar of the Deccan (1720).

1720–1740. Rule of Peshwa Baji Rao Bhat over Marathas. The Maratha Confederacy continued its expansion northward and eastward at the expense of the Mogul Empire.

1721. French Base Established at Mahé.

1724–1748. Reign of Nizam ul-Mulk over Hyderabad. With the Mogul Empire obviously approaching collapse, Nizam ul-Mulk left

Delhi (1722) and established the independent Kingdom of Hyderabad in his Deccan viceroyalty. He appointed **Dost Ali** as nawab, or governor, of the Carnatic.

1737. Battle of Delhi. Baji Rao and the Marathas defeated Mohammed Shah's imperial army outside of Delhi. The emperor made peace, ceding Malwa to the Marathas. In the following years they also seized Gujerat, Orissa, and Bundelkhand.

1739. Nadir Shah's Invasion. (See p. 711.) This accelerated the decline of the Mogul Empire.

1739. Baji Rao Takes Bassein from the Portuguese.

1740. Bengal Independent of the Mogul Empire.

1740–1761. Rule of Peshwa Balaji Baji Rao Bhat over Marathas.

1741. Marquis Joseph Dupleix Appointed French Governor General. He had been governor of Chandernagore; he moved to Pondichery.

1743. Death of Dost Ali. The Nizam appointed **Anwar-ud-din** the new Nawab of the Carnatic, refusing the claim of **Chanda Sahib,** Dost Ali's son-in-law.

First Carnatic War, 1744–1748

This was part of the War of the Austrian Succession (see p. 689). Word of hostilities in Europe having reached India, Dupleix sought neutrality between the French and British East India Companies.

1745. Arrival of a British Fleet. Commodore **Curtis Barnett** swept French shipping off the nearby seas. Dupleix sent an urgent plea for help to Count **Mahé de la Bourdonnais,** an able French admiral, commanding at Mauritius.

1746, June. Arrival of la Bourdonnais. A fleet of 8 ships of the line, carrying 1,200 French troops, arrived at Pondichery.

1746, July 25. Naval Battle of Negapatam. (See p. 697.) Commodore **Edward Peyton** (who had succeeded to command after Barnett's death) was outmaneuvered and driven away by la Bourdonnais. Peyton sailed to Hooghly.

1746, September 2–10. Seizure of Madras. Dupleix invested the main British base, while la Bourdonnais blockaded it by sea. Madras surrendered after brief resistance.

1746, September 21. Battle of Madras. Nawab Anwar-ud-din, who had allied himself with the British, arrived near Madras with a large army. The French sortied from the captured city and easily defeated the Nawab's army.

1746, November 3. Battle of St. Thomé. A French detachment of 230 Europeans and 730 sepoys (native troops) attacked and routed a force of 10,000 of the Nawab's troops near Madras.

1746, November–1748, April. Siege of Fort St. George. The French tried unsuccessfully for 18 months to take the British base near Madras. Dupleix finally had to raise the siege due to the arrival of a new British fleet, under Admiral **Edward Boscawen,** with reinforcements.

1747. Ahmad Shah's First Invasion of India. The Afghans were halted at the inconclusive **Battle of Sirkind** by a mixed Mogul-Rajput force, and forced to retreat to Afghanistan. (See p. 712.)

1748, August—October. Siege of Pondichery. Boscawen unsuccessfully tried to take Pondichery, ably defended by Dupleix. Onset of the monsoon forced the British fleet to withdraw.

1748. Treaty of Aix-la-Chapelle. (See p. 695.) News of the treaty reached India at the end of the year. Madras was returned to Britain, in return for Louisbourg in Nova Scotia.

1749. Ahmad Shah's Second Invasion of India. This was a combined raid and reconnaissance in force, but led him to believe that he could conquer the Punjab and Kashmir.

Second Carnatic War, 1749–1754

Despite formal peace between France and Britain, hostilities between the 2 East India companies continued, through their involvement in Indian conflicts. Following the death of Nizam ul-Mulk (1748), Chanda Sahib began to conspire for the nawabship of the Carnatic, and was supported by Dupleix. At the same time, **Muzaffar Jang,** grandson of Nizam ul-Mulk, had received the blessing of the new and ineffectual Mogul emperor to succeed as the Nizam of Hyderabad, instead of his father **Nasir Jang,** who had automatically succeeded to the throne as Nizam. Dupleix also supported Muzaffar Jang. The British East India Company, under the able leadership of **Thomas Saunders,** supported the incumbents: Nasir Jang, the new Nizam; and Anwar-ud-din, the Nawab of the Carnatic.

1749. Battle of Ambur. The combined forces of Chanda, Muzaffar, and the French under the Marquis **Charles de Bussy** defeated and killed Anwar-ud-din. Chanda was proclaimed Nawab of the Carnatic, with Dupleix the actual ruler. However, **Mohammed Ali,** claiming to be the successor to Anwar-ud-din, retained control of Trichinopoly, where he was recognized and supported by the British.

1749–1750. Nasir Jang in the Carnatic. With English support, Nasir Jang invaded the Carnatic in a partially successful effort to reestablish Hyderabad control.

1750, December. Assassination of Nasir Jang. Following the death of his father (for which he was probably responsible), Muzaffar Jang seized power as the new nizam. He was proclaimed Subahdar of the Deccan by Dupleix. In return he appointed Dupleix governor of all former Mogul lands in the eastern Deccan from the Krishna River to Cape Comorin. Dupleix put his small but efficient army, commanded by de Bussy, at the disposal of the new Nizam. (For operations after 1750, see p. 764.)

EAST AND CENTRAL ASIA

China

The Manchu Dynasty of China reached its height of power, prestige, and influence during this period. During the latter years of his reign, the great Emperor K'ang-hsi consolidated the Manchu conquest of China and Mongolia, and continued the expansion of the empire into Tibet. His grandson, Ch'ien-lung, continued the expansion of China into neighboring areas, and by midcentury had become the most powerful monarch of China since Kublai Khan. The principal events were:

1662–1722. Reign of K'ang-hsi. **(See also p. 649.)**

1700. Chinese Troops to Tibetan Frontier. Chinese troops occupied parts of the border region between Tibet and China because of K'ang-hsi's concern about the growing influence in Tibet of the Eleuth (or Dzungar) Mongols (part of the Oirat Mongols).

1705. Chinese Intervention in Tibet. Chinese troops installed a new Dalai Lama, against the opposition of most Tibetans.

1716–1718. Dzungar Intervention in Tibet. A Dzungar force of 6,000 men, under Galdan's nephew, **Chewanlaputan** (Tsewang Araptan), invaded Tibet to join in the continuing dispute over the succession to the Dalai Lama. They seized Lhasa and imprisoned the incumbent Dalai Lama. A Manchu force, coming to his assistance, was ambushed and destroyed (1718).

1720. Manchu Conquest of Tibet. K'ang-hsi sent 2 armies into Tibet, 1 from Kansu and 1 from Szechwan. They smashed the Dzungars and drove out the survivors. Meanwhile another Chinese army advanced into Dzungaria to capture Urumchi and Turfan. This was the first war in which Mongol forces made extensive use of musketry; they were not very effective, however, against the larger, better-armed, better-equipped Chinese troops. A new and more popular Dalai Lama was installed by K'ang-hsi, and a Manchu garrison was left in Lhasa.

1721. Revolt in Formosa. Rebels, led by **Chu I-kuei,** were quickly overwhelmed by Chinese troops.

1723–1735. Reign of Yung-cheng (son of K'ang-hsi). China was peaceful, but there was considerable conflict along the western frontiers with Central Asian tribes.

1727. Treaty of Kiakhta. A treaty with Russia, delineating frontiers and regulating trade and other relations.

1727–1728. Civil War in Tibet. A Chinese army of 15,000 restored order. The Dalai Lama was exiled for 7 years. The Chinese garrison was increased.

1729–1735. Campaigns against the Dzungars. Continuing Dzungar opposition to Chinese policy in Tibet and frontier depredations in western China resulted in a series of Chinese punitive expeditions. At first, largely due to poor management, the Chinese were not very successful. After reorganization (1732), the Dzungars were soundly defeated.

1736–1795. Reign of Ch'ien Lung (or Kâo Tsung). Height of Manchu power and prestige.

1747–1749. Tibetan Frontier Campaigns. Renewed unrest along the Tibetan frontier was suppressed in hard, inconclusive partisan warfare.

Inner Asia

The Russian and Chinese empires continued their expansions into Inner Asia. Apparently oblivious of what was happening to them, the Mongol and Turkic tribes continued their interminable bitter quarrels with each other, in the process weakening themselves and their neighbors so that they could not offer any truly sustained opposition to the colonial encroachment from east and west. The principal events were:

1714–1717. Russian Expedition against Khiva. Peter the Great sent the expedition, expecting that Khiva would accept a protectorate. Instead, the Khivans ambushed and annihilated the Russian expedition.

1720. Chinese Expedition in Dzungaria. (See above.)

1722. Peace of Astrakhan. A meeting between Peter of Russia and the aged Torgut Khan **Ayuka** confirmed the submission of the Torguts to Russia.

1727. Treaty of Kiakhta. Russia and China (see above).

1729–1735. Chinese Campaigns in Dzungaria. (See above.)

1730–1731. Kazakh Acceptance of Russian

Suzerainty. Russia thereby gained control of tribes inhabiting areas claimed by Khiva and Bokhara.

1738. Conquest of Balkh by Persia. **(See p. 711.)**

1740. Conquest of Khiva and Bokhara by Persia. **(See p. 711.)**

1741. Discovery of Bering Strait. This was by **Vitus Bering,** a Danish navigator in Russian service.

1747. Khiva Regains Independence. This was the result of the collapse of Nadir Shah's empire (see p. 711).

Japan

Under the Tokugawa Shogunate, Japan continued to exclude herself from practically all contact with the outside world, while internal peace reigned within the kingdom.

SOUTHEAST ASIA

Burma

This was a period of weakness and decline in Burma. The country was ravaged by raids from weak and small neighbors (Manipur and Arakan), as well as by unrest and revolt at home. There was no leadership capable of dealing with these problems. The principal events were:

1714–1749. Manipuri Raids. Under Raja **Gharib Newaz** of Manipur, repeated cavalry raids into Upper Burma devastated the country. The Manipuris swept to the very gates of Ava (most notably, 1738), plundering and pillaging at will.

1740–1752. Mon Revolt. The Mons, or Talaings, of Lower Burma, seeing the weakness and ineptitude of the kings of Ava, revolted to set up an independent kingdom. They seized Toungoo, original home of the ruling family, and raided frequently into Upper Burma as far as the walls of Ava. Finally, under the leadership of King **Binnya Dala,** they began a systematic conquest of Upper Burma, ending in the capture of Ava and overthrow of the Toungoo Dynasty (1752; see p. 767).

Siam

Stability marked this period in Siam. There was one major foreign war, there was one major civil war, and there were the usual sort of border bickerings which were practically continuous in Southeast Asia. In relative terms, however, it was a quiet period. The principal events were:

1717. Invasion of Cambodia. **(See p. 718.)** Although 1 of 2 Siamese armies was destroyed, the expedition was eventually successful.

1733–1758. Reign of King Boromokot. This began with a violent struggle between Boromokot, younger brother of previous King **T'ai Sra,** and the son of the dead king. Eventually successful, Boromokot ruthlessly revenged himself by killing all of his principal enemies, then ruled wisely and well.

Laos

Laos was rocked by violence and civil war at the outset of the century. This soon led to the division of the kingdom into the 2 hostile kingdoms of Luang Prabang and Vientiane. Although a condition of war was endemic in the country, there were no outstanding events.

Vietnam

This was a period of internal truce in Vietnam between the Trinh and Nguyen families. The Nguyens took advantage of this internal peace to extend the power and territory of Vietnam to the south and west at the expense of Cambodia and Laos. The major military activity centered around Vietnamese ambitions in Cambodia, resulting in 3 major wars: 1714–1717, 1739, and 1749 (see below).

Cambodia

During the first part of this period Cambodia was the victim of expansionist aims of Vietnam and of Siam. In the process Vietnam annexed a considerable part of Cambodia. Later, as a measure of strength and stability was restored, Cambodia attempted to regain her lost provinces, but was unsuccessful, and in the subsequent prolonged fighting was forced to cede more territory to Vietnam. The principal events were:

1714–1716. Civil War and Vietnamese Intervention. In a struggle for succession, King **Prea Srey Thomea** was driven from his throne by his uncle, **Keo Fa,** who had the support of a Vietnamese army and a small Laotian force. Prea Srey Thomea fled to Siam to request help from King T'ai Sra (1709–1733).

1717. Siamese Invasion. Two large Siamese expeditionary forces entered Cambodia. The southern force was disastrously defeated at the **Battle of Bantea Meas,** mostly because of a panic apparently caused by the destruction of the supporting Siamese naval force in a storm at sea. The northern expedition, however, defeated the Cambodians and their Vietnamese allies in a series of engagements and reached Udong, Keo Fa's capital. Keo Fa thereupon offered his allegiance to Siam. This was accepted, and Prea Srey Thomea's cause was abandoned. Meanwhile, however, the Vietnamese had annexed several small border provinces of Cambodia in the Mekong River region.

1739–1749. War with Vietnam. A Cambodian army attempted to regain the coastal region of Ha-tien, which had been taken by Vietnam during the previous war. The Cambodians were repulsed. In retaliation, Vietnamese forces again invaded Cambodia. Further parcels of Cambodian territory were annexed in the Mekong River area.

Malaya

A period of confused warfare in the Strait of Malacca area, involving the principality of Siak (in Sumatra) and the Malay states of Johore, Kedah, Perak, and Selangor. The Dutch avoided involvement. Taking advantage of internal troubles in Johore, and of warfare between Siak and Johore, the martial Buginese pirates (see p. 654), who had established a pirate maritime state in the Riau Archipelago, soon established their ascendancy over Johore, Kedah, Perak, and Selangor. The principal Bugi leader was **Daing Parani,** who was ably supported by 4 equally

daring and ruthless brothers. By the end of the period, however, the Buginese were facing the possibility of trouble with the Dutch, who found the growing Buginese power and maritime interests a threat to their own position in Indonesia and in the Malacca Strait.

Indonesia

During this period the Dutch established virtually complete control over Java, and also expanded their holdings elsewhere in the islands of the archipelago. The principal events were:

1704–1705. First Javanese War of Succession. Finding their trade, and their position in Batavia, threatened by a dispute within the royal family of Mataram (which still held most of eastern and central Java), the Dutch intervened, deposed an unfriendly monarch, and placed a puppet on the throne. They also extended the area of their dominion in western Java and annexed the eastern half of Madura.

1706–1707. Dutch War with Surapati. This Balinese soldier of fortune had carved out a kingdom for himself in the northeastern portion of Java, near Surabaya, at the expense of Mataram. He had played an important role in the intrigues which had led to the First Javanese War of Succession. His overthrow and death gave virtual control of northeast Java to the Dutch.

1712–1719. Continued Turmoil in Northeast Java. Followers and successors of Surapati tried to eject the Dutch, but were finally wiped out.

1719–1723. Second Javanese War of Succession. Another struggle for the succession to the throne of Mataram caused chaos on Java and again led to Dutch intervention and subsequent territorial expansion.

1740–1743. Chinese War. This was a rebellion, started by Dutch persecution of Chinese merchant residents of Batavia and other Javanese cities, the initial incident being a panicky massacre of Chinese in Batavia. The Chinese survivors fled to the country and, linking up with Javanese dissidents, stirred up a major rebellion. The Dutch finally suppressed this, and annexed the entire north coast of Java and the remainder of Madura.

1743–1744. Rebellion in Madura. Madurans, who had fought beside the Dutch in the Chinese War, expected thereby to gain their independence. When this was not forthcoming, they revolted, but were suppressed after hard fighting.

1749–1757. Third Javanese War of Succession. A conflict was stirred up when Baron **Gustaaf van Imhoff,** Dutch governor general, became unnecessarily involved in an internal dynastic feud in the remnant of Mataram. This was the most bitter of all the Java wars, and was complicated for the Dutch by a simultaneous revolt in western Java. The Dutch were defeated by **Mangku Bumi,** the opposing Mataram ruler, at the **Battle of the Bogowonto River** (1751) and the Dutch commander, **De Clercq,** was killed. Determined fighting and internal discord among the Javanese finally brought Dutch victory.

AFRICA

North Africa

During this period Tripolitania for all practical purposes became independent of Turkey. Tripolitania, Morocco, and Algeria (and Tunisia to a lesser extent) maintained themselves by piracy and by shipborne and overland slave trade. The heyday of Barbary piracy was beginning

to pass, however, due to active and aggressive opposition of the European Mediterranean powers.

Morocco

Morocco was by far the most powerful and most extensive of the North African states at the beginning of the century. Under the strong and able rule of Sultan **Mulay Ismail** ("The Bloodthirsty"), Moroccan influence and territorial claims extended in all directions across the Sahara Desert, reaching as far as the Sudan (1672–1727). After Mulay Ismail's death, however, the country was thrown into turmoil by struggles among the oligarchical military caste which he had created. Moroccan power and influence practically disappeared beyond the Atlas Mountains.

Algeria

This was a period of Algerian decline. Central rule was weak, and European naval activity reduced the activity and profits of the corsairs. Oran was captured from Spain (1708), which was then busily engaged in wars north of the Mediterranean, but was recaptured by Spanish forces a few years later (1732). Algeria was still nominally a Turkish possession.

Tunisia

Tunisia was the first of the Barbary States to turn from piracy to normal maritime trade relations. This trend was begun by **Hussein ben Ali,** the leading soldier of Tunisia, who made himself bey, overthrew the last of the deys, and virtually ended Turkish rule (1705). He entered into trade treaties with the main European Mediterranean powers, but this led to opposition, and his nephew, **Ali Pasha,** rebelled, seized power, and beheaded Hussein. During the subsequent reign of Ali Pasha (1710–1756) relatively peaceful relations with Europe were retained, but with less cordiality than during the brief reign of Hussein.

Tripolitania

Tripolitania became virtually independent from Turkey (1714) under the leadership of **Ahmed Pasha Karamanli.** Nominal tribute to Constantinople continued, paid out of receipts from piracy.

Egypt

Under the Mamelukes, Egypt, like the three North African lands farther west, became virtually independent of Turkey, though continuing nominal allegiance. It was a half-century of intrigue and conflict between the 2 major Mameluke factions, the Kasimites and the Fikarites. By the middle of the century one of the greatest of Egypt's Mameluke rulers, **Ali Bey,** was fighting his way to a position of preeminence in Egypt (1750).

West Africa

The slave trade, which had begun in the previous century, expanded rapidly to meet the requirements for agricultural labor in the Americas. Many coastal states and tribes raided inland for slaves, which they exchanged for European weapons and trade goods. The political situation along the Niger remained largely unchanged, but among major events elsewhere were:

c. 1700. Lunda Domination. The Lunda Kingdom (see p. 656) became the dominant power in southern Zaire and northeastern Angola, supported partly by access to European firearms.

c. 1712–c. 1720. Unrest in Ashanti. Factional strife followed the death of Osei Tutu, and was ended when **Opuku Ware** gained the throne.

c. 1712–1755. Reign of Mamari Kulibali of Segu. Known as "the Commander," this Bambara ruler resuscitated the Bambara Segu Kingdom (see p. 656). He created a professional army and river navy, using them to conquer Timbuktu and Djénné in the northeast, and Bamako in the southwest. He also fought off an attack by the King of Kong (c. 1730).

c. 1720–1750. Reign of Opuku Ware. This able monarch led Ashanti expansion into the northern interior, and defeated the Akim tribe.

1724–1727. Abomey Conquests. King Agaja of Abomey (see p. 656) conquered Allada (1724) and Whydah (1727) on the Guinea coast, to ensure access to European arms. The enlarged kingdom was called Dahomey.

c. 1726–1730. Oyo War with Dahomey. The Oyo Kingdom, grown wealthy from control of trade routes to the interior, used its riches to support a large army, and defeated Dahomey, whose expansion had worried Oyo.

1738–1748. Second Oyo-Dahomey War. The Oyo again defeated Dahomey, and compelled payment of tribute until 1840; peace lasted for several decades.

South Africa

The converging advances of the Boers from the southwest and the Bantus from the north and east continued. By midcentury these 2 dynamic and aggressive peoples were beginning to meet in an arc extending from Orange River Valley in the north and west to the coast more than 550 miles northeast of Capetown. Although the Boers had been engaged in continuing minor military pacifications against Hottentots and bushmen in the interior, there had been no major clash with the Bantus before midcentury.

East Africa

The Sultanate of Oman maintained its hegemony over coastal East Africa, fending off feeble Portuguese efforts to restore their supremacy. The Omanis grew wealthy from the slave trade, which catered to markets in India, Egypt, and the Persian Gulf.

c. 1700. Masai Migration. The Masai, a pastoral warrior tribe of Nilotic stock, began to move south and east into modern Kenya and Tanzania, conquering or displacing existing Bantu inhabitants (and some Galla). This migration continued into the late 19th century.

1727. Pate Alliance with Portugal. The trading city-state of Pate (near modern Lamu) allied with the Portuguese to throw off Omani domination.

1728–29. Portuguese Recapture Mombasa. With the help of Pate, Portuguese forces recap-

tured Mombasa (1728), but were driven out by the Mombasans themselves the next year.

1730–1755. Reign of Iyasu II. This Ethiopian monarch warred with the Funj of Sudan, but his armies suffered a costly defeat at **Sennar.**

1746. 'Ali ibn Uthman al-Mazrui. This Mombasan leader of Omani descent led an uprising that drove the Omanis from Mombasa. Soon after, he seized Pemba and would probably have captured Zanzibar but for his premature death. The Omanis regained control of Mombasa and Pemba soon after.

THE AMERICAS

North America

Queen Anne's War, 1702–1713

This was the American version of the War of the Spanish Succession (see p. 676).

1702, December. Sack of St. Augustine. Hostilities were begun in a destructive raid by a combined force of Carolinians and Indians.

1703–1704. Operations along the Southern Frontier. Carolinian-Indian attacks destroyed Spanish missions in the Apalachee region; however, Choctaw resistance prevented raids on French communities in the Gulf area.

1703–1707. Operations in the Northeast. Abenaki and French bands conducted raids from Maine to the Connecticut Valley. Five hundred New Englanders were dispatched to Acadia in an attempt to disrupt Abenaki supply lines and to capture fisheries (1704). English-colonial forces twice vainly attempted to take the main French base at Port Royal, Nova Scotia (1704, 1707). Farther north, a French and Indian attack destroyed the Newfoundland settlement of Bonavista (August 18–29, 1704); later, the French consolidated control of the area by seizing St. John's (1708).

1710, October 16. Capture of Port Royal. A British force of 4,000, with naval support, seized Port Royal which was renamed Annapolis Royal.

1711. Failure in the St. Lawrence. In planned land and naval attacks, **Francis Nicholson** was to lead a mixed group of colonists and Iroquois against Montreal; simultaneously, an English force, including 7 crack Marlborough regiments, was to strike Quebec by sea. However, the loss of 10 ships on the St. Lawrence rendered the joint campaign stillborn.

1713. Treaty of Utrecht. An uneasy peace in North America was established. (See p. 684.)

1711–1712. Tuscarora War. A Tuscarora uprising in the Carolinas was suppressed after the slaughter of 200 settlers. Tuscarora survivors moved to New York State and became the sixth nation of the Iroquois Confederacy.

1715–1728. Yamassee War. The Yamassees and lower Creeks drove South Carolina settlers from the territory west of Savannah. A concerted Carolinian and Cherokee effort pushed the Yamassee confederation into Florida (1716). The colonists erected fortifications on the Altamaha, Savannah, and Santee rivers to protect the Carolina communities from French and Spanish aggression (1716–1721). The inefficiency of the proprietary regime in prosecuting the Yamassee War (and generally in providing defenses against Indian raids and piracy) led the Board of Trade to substitute royal for proprietary government (Act of Parliament, 1729).

1720–1738. Fortification of the Great Lakes. The French erected Fort Niagara (1720) as a headquarters for the Iroquois campaigns and in order to gain control of the lower Great Lakes. In response, the British built Fort Oswego on Lake Ontario (1725). New England settlers fortified the frontier in anticipation of Abenaki raids.

1733–1739. English Expansion in Georgia. James Oglethorpe, one of 20 trustees of the territory extending from the Savannah to the Altamaha rivers, supervised construction of a series of forts on St. Simon's, St. Andrew's, Cumberland, and Amelia islands. Oglethorpe was also instrumental in establishing peaceful relations with the Creeks and lesser tribes.

1739–1743. War of Jenkins's Ear. Prolonged Anglo-Spanish discord concerning the boundaries of Florida, the commercial provisions of the Treaty of Utrecht and the **Assiento** (a contract providing for an English monopoly of the slave trade with the Spanish colonies), and Spanish abuse of British seamen caused England to declare war (October 19). The immediate cause of war was the claim of a British merchant ship captain, named Jenkins, that his ear had been cut off by Spanish officials. British forces under Admiral **Edward Vernon** seized Porto Bello (1739) and Chagres (1740). An assault on Cartagena was repulsed (1740). Under Oglethorpe, Carolina, Georgia, and Virginia contingents—protected on the west by the Creeks, Cherokees, and Chickasaws—captured 2 forts on the San Juan River (January 1740) and unsuccessfully assaulted St. Augustine (May–July). The following year, an English attack on Cuba failed. In the **Battle of Bloody Swamp** (1742), a Spanish attack on St. Simon's Island was repulsed. Oglethorpe's troops again attempted to seize St. Augustine, but were compelled to withdraw from Florida (1743).

King George's War, 1740–1748

This was the American version of the War of the Austrian Succession (see p. 689).

1744. French Attack on Annapolis. The French were repulsed from Annapolis Royal (formerly Port Royal), Nova Scotia.

1745, April–June. Siege of Louisbourg. A New England expedition under **William Pepperell,** supported by British vessels, engaged in the most notable American operation of the war, a siege of the heavily fortified stronghold at Louisbourg. The fort surrendered (June 16). This marked one of the first uses of field artillery in North America.

1746. French Expedition against Nova Scotia and Cape Breton Island. The assault force was demolished in a storm off the coast of Nova Scotia.

1746–1748. Operations on the Northern Frontier. A New England campaign to penetrate into Canada provoked French and Indian raids on Maine settlements. **William Johnson,** New York commissioner for Indian affairs, and **Conrad Weiser,** who pressed Iroquois land claims at the expense of the Delawares, secured the support of the Six Nations.

1748. Treaty of Aix-la-Chapelle. An uneasy peace settled over northern North America. To the disgust of the colonists, Louisbourg was restored to the French in return for Madras. (See p. 695.)

Latin America

Spanish America

1702–1713. War of the Spanish Succession. (See pp. 676, 722.) In its American phase, the conflict was restricted primarily to the North American continent and to naval operations in the Caribbean and among the Antilles.

1718–1720. French and Spanish War on the Gulf Coast. This was a part of the War of the Quadruple Alliance (see p. 686). Clashes occurred in Florida and Texas.

1720–1722. Spanish Occupation of Texas. This was intended to prevent French expansion from Louisiana.

1721–1725. Rebellion in Paraguay. José de Antiquera, governor of Asunción, disturbed by the increasing dominance of Buenos Aires traders, rebelled. He refused to accept a new governor sent from Lima, ousted the Jesuits,

and defeated a force from Buenos Aires (1724). Although Antiquera was captured (1726), the insurrection persisted for 9 more years until an expedition under Governor **Zabala** of Buenos Aires crushed the rebels.

1723. Araucanian Revolt. The restless and warlike Araucanian Indians (see p. 569) attempted unsuccessfully to oust the Spaniards from southern Chile.

1726. Establishment of Montevideo. This was to prevent Portuguese expansion in the Banda Oriental (Uruguay), a region disputed between Spain and Portugal because of differing interpretations of the Treaty of Tordesillas (see p. 566).

1736–1737. Oruro Revolt. Harsh labor conditions in the mines of central Peru caused the Oruros to revolt. Led by **Juan Santos,** they seriously damaged the city of Oruro before the uprising was quelled.

1739–1748. War of Jenkins's Ear and War of the Austrian Succession. (See pp. 689, 723.) Although combat extended over a wide area, the emphasis remained on North America. Nevertheless, British forces operated in the Caribbean: Porto Bello and Chagres were captured while attacks on Cuba and Cartagena failed (see pp. 696, 723). In addition, there was British raiding along the coast of Venezuela.

1749. Insurrection in Venezuela. Uprisings among the Venezuelan Creoles were suppressed by force.

Portuguese America

1701–1713. War of the Spanish Succession. (See p. 676.) The French made repeated raids and attacks along the Brazilian coast. Colonia was captured and held temporarily (1702), and Rio de Janeiro was captured, sacked, and held for ransom by able French Admiral **René Duguay-Trouin** (1711).

1708–1709. War of the Emboabas. The Portuguese government suppressed and brought under control the adventurous, expansionist, and semi-independent **Paulistas** (Portuguese inhabitants of São Paulo).

1710–1711. War of the Mascates. A small-scale conflict between the inhabitants of Olinda and Recife, in Pernambuco, over the primacy of the 2 towns.

1735–1737. Spanish-Portuguese War. This was a part of the War of the Polish Succession (see p. 687). Spain seized Colonia (1735), but was persuaded by Britain to return the port to Portugal (1737). Colonia, the main Portuguese foothold on the River Plate (since 1680), continued to be a source of friction between Portugal and Spain in their dispute over the Banda Oriental (Uruguay).

XVI

THE DOMINANCE OF MANEUVER ON LAND AND SEA:

1750–1800

MILITARY TRENDS

Maneuver—the tactical manipulation of fire and movement on the battlefield—was the predominant military characteristic of this period on both land and sea. This was due in part to improvements in weaponry, but mainly evolved through the genius of 4 of history's greatest captains.

On land, the period opened with **Frederick II** of Prussia—**Frederick the Great**—in the full flower of his military capacity. **George Washington*** emerged in midperiod, and before the half-century closed **Napoleon Bonaparte's** star was shining over the horizon of war. On the sea, **Horatio Nelson,** exploring down the path previously opened by France's **Pierre André Suffren** and England's **John Jervis** and **George Brydges Rodney,** shattered the old order of naval tactics.

The trend toward maneuver progressed through the 3 major wars of the period: the Seven Years' War, 1756–1763; the American Revolution, 1775–1783; and the French Revolutionary Wars, 1791–1800. These embraced not only Europe and the North American continent but also much of the rest of the world. As a result of these wars and their subsidiary operations, the French colonial empires in both North America and India were destroyed, a worldwide British Empire was firmly established, and the United States of America came into being. Paradoxically, the close of the period saw France the predominant military land power in Europe.

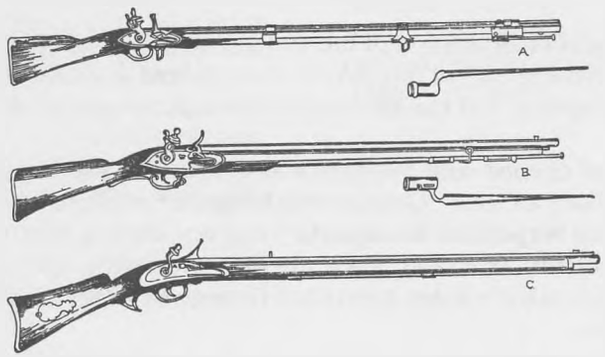
* Military and other historians have tended to underrate Washington's generalship. Those who disagree with the authors' firm conviction that he merits comparison with Frederick, Napoleon, and Nelson are referred to their *Compact History of the Revolutionary War,* New York, 1963, Appendix V, "The Historians and the Generalship of George Washington."

Sea power's importance became firmly established, although it is doubtful whether many people realized it at the time. Certainly **William Pitt** the elder, George Washington, and Horatio Nelson did. Frederick the Great, whose operations were confined to the land, had no reason to understand sea power. Bonaparte never did adequately appreciate it, a blind spot in his genius which would be most costly to him.

Weapons and Tactics on Land

The continued employment of the flintlock musket and its increased rate of fire (see p. 669) caused a still further thinning of Gustavus' 6-man line into one which was at first 4 men deep, then 3, and finally, in the British Army, 2. This created a radical new problem in control. The already rigid discipline of early 18th-century warfare became even more stringent. It was maintained in all European armies. Frederick the Great went further. The individual Prussian soldier, through incessant, brutal, rigid drill discipline, including the cadenced step, became an automaton. Prussian units could change direction or front simultaneously or by small groups in succession; could shift into battle formation from marching column or vice versa, even over broken and irregular terrain. In addition, fire by platoon replaced the more formalized volley fire by larger formations.

The net result was a mobile infantry which could be so shifted and massed at will on the battlefield as to produce the maximum effect of fire and shock action at a chosen spot. This rendered possible Frederick's oblique attack, with Leuthen (see p. 732) as prime example.



Eighteenth-century flintlocks: (a) French regulation musket; (b) British "Brown Bess" musket; (c) American frontier rifle

Another weapon affecting infantry tactics was the rifle, which came slowly into military use toward the end of the period. Originally a sporting weapon, this heavy, cumbersome hand arm, whose grooved barrel imparted a twist to its bullet, achieved amazing accuracy and range as compared to the smoothbore musket. It had crept oversea to North America from its original habitat, the Rhineland, where the huntsman—the *jäger* or "yager"—had used it for nearly 200 years. It skipped New England, but German craftsmen in Pennsylvania began turning out a somewhat lighter and longer-barreled rifle for the woodsman. The rifle had a slower rate of fire

than the musket, since to load it each bullet (wrapped in a greased patch) had to be hammered down into the grooved barrel with a mallet. It was an individual arm, used by individualists along the western fringes of the thirteen colonies. It carried no bayonet. As a result of experience in the American Revolution, the rifle and the rifleman had become an element in European warfare as the period closed. The German and Austrian *jäger* battalions were armed with the rifle.

Out of the French and Indian War also came further mobility. Skirmishers—light troops covering the front of the field of battle—had always been present in one way or another. Previous to 1756, in Europe these units were usually "expendables," irregulars. But as a result of Braddock's defeat (see p. 771), experiments were made in the British Army leading to the establishment in each foot regiment (or battalion) of a "light" company, usually detached from its battalion for covering the advance, or for some other special mission. By the time of the American Revolution it was British practice to separate the light companies from their regiments for action, organizing them into provisional units. In addition, the grenadier companies—also one to each regiment—were separated and gathered into special units in combat. These grenadier companies were composed of the largest men in the regiment—a selection dating from the time of the 3-or-more-pound hand grenade (discarded by this time) best hurled by powerful men. The fault of this British system was that the grenadier (not to be confused with the 1st Foot Guards (later Grenadier Guards) Regiment) and light companies became an elite, thus inducing a feeling of inferiority in the remainder of each regiment—the "line" companies. However, the use of regular troops for skirmishing also led to the establishment of "light" and "rifle" regiments in the British service. At the beginning of the French Revolutionary Wars (1792), the untrained French conscripts hurriedly gathered wholesale by the *levée en masse* were literally herded into battle. Perforce, "line" tactics were abandoned and the French infantry, with bayonets fixed, advanced to the assault in deep, dense formations—somewhat erroneously called "columns"—covered by a cloud of skirmishers. This forced compromise would remain, even though the later well-disciplined armies of Bonaparte would include regiments of *chasseurs à pied* and *voltigeurs* (light infantry), while the elite were organized into grenadier regiments.

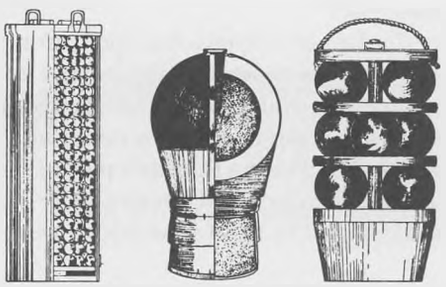
The role of the cavalry was clarified in Western Europe. During the previous century it had become common practice to intermingle masses of cavalry and infantry in the battle line. Save in Sweden and France, where the saber and shock action were often employed, the horsemen, armed with light muskets and pistols, employed fire action while advancing, and when and if they charged it was only at a slow trot. During the early part of the 18th century, shock action was more generally employed, but infantry and cavalry were still intermingled. This hybrid cavalry-infantry formation was last used in 1759 at Minden (see p. 735), where British infantry broke the French cavalry.

Frederick, however, long before Minden, had restored his cavalry to its original functions: shock action on the battlefield and reconnaissance off the battlefield. He prohibited the firearm as a cavalry weapon (excepting always dragoons, who were taught to fight on foot as well as on horseback). Frederick's cavalry, who went into action first in a 3-rank and later a 2-rank formation, charged boot-to-boot at full gallop. They were never interspersed among their own infantry; their principal weapon was the saber.

Field artillery, despite the efficient Frederick's attempts to improve its mobility by lightening

tubes and by introducing horse artillery (see pp. 669–670), was still a cumbersome arm. (In the early stages of the Seven Years' War, Frederick experimented with extremely light guns, which utilized a chambered breech and a reduced powder charge. These proved to have insufficient range and hitting power compared to the well-designed Austrian guns, the fruits of Prince von Lichtenstein's developments at Budweis in the 1750s.) But in 1765 a Frenchman, **Jean Baptiste de Gribeauval,** following service with the Austrian Army during the war, built on Lichtenstein's system and began to revolutionize the arm, which a quarter-century later would really come into its own under Napoleon's direction. Gribeauval standardized the French field artillery into 4-, 8- and 12-pounder guns and 6-inch howitzers, smoothbores cast of iron or bronze. The pieces were lightened, carriages strengthened; horses were harnessed in pairs instead of in tandem; drivers—heretofore usually hired civilians (despite the example of Gustavus) unreliable on the battlefield—became soldiers; caissons and limbers were provided; tangent scales and elevating screws increased ease and accuracy of laying. For nearly a century to come, Gribeauval's 12-pounder gun—the lineal descendent of which, the M1857 gun-howitzer, achieved fame in the American Civil War as the "Napoleon," so known in honor of its designer, Napoleon III—would dominate battlefields the world over.

Toward the end of the period, two inventions—one British, the other American—radically affected future warfare. In 1784, Lieutenant **Henry Shrapnel,** R.A., invented the artillery shell which would bear his name—in essence a spherical shell filled with lead bullets surrounded by a bursting charge. Exploding in air, shrapnel spread its hail over an extended area, lethal to troops in the open. In 1798, **Eli Whitney,** New England inventor of the cotton gin, turned his hand to making small arms. By invention of a jig and the distribution of his labor force, he manufactured muskets whose various parts were interchangeable; here was the initial mass production of weapons. An earlier approach had been made in Britain in 1702–1704 by the Tower of London armories in producing the Brown Bess (or Tower) musket. Two other refinements were the semaphore telegraph of **Claude Chappe** and the military observation balloon, both developed by the French during the Wars of the French Revolution.



Types of artillery ammunition: (a) caseshot, or canister; (b) shell; (c) grapeshot

Logistically, it was Frederick who during the period evolved the basic principles of modern military supply. Breaking away from slavish dependence on depots, 3 days' rations were carried in the Prussian soldier's knapsack, 8 days' bread supply in the regimental trains and a month's supply in the army trains. A fairly well-organized transport system linked Frederick's armies to

such depots as he did organize. His troops, too, were prepared to live off the country when necessary.

Tactics and Weapons at Sea

Brilliant English naval iconoclasts smashed the "Permanent Fighting Instructions" of the Royal Navy, which up to this period had frozen initiative by limiting battle formations to a rigid line ahead (see p. 581). Until a new school of British naval officers dared to try it and succeeded, it was unthinkable that vessels should leave the line of battle and sail in, bow-on, toward enemy ships (which could rake them with entire broadsides), break through the opposing line, and, falling upon separated parts of the hostile formation, destroy them in succession by concentration of superior firepower. But by 1800 this method—the Nelsonian touch—had been added to naval warfare. And this was why, as the period ended, Britannia indeed "ruled the waves."

Naval gunnery of the period was still of two schools (see p. 670). The British so aimed their guns as to hull the enemy; smash in her oaken sides and sink or disable her. The French aimed for the enemy's top hamper, to immobilize her by shooting away masts and rigging. To increase firepower, the British introduced the carronade, a short, squatty piece hurling a 32-pound or larger ball; its smashing power at close range was far superior to that of the long 12-, 16-, and 24-pounder guns comprising the normal armament of ships of the line and frigates. The carronade was cheaper to manufacture than the long gun and, being lighter, easier to handle aboard ship. It had much to do with British victories during the period, but it had one major drawback which would not become critical until the War of 1812: the carronade-armed ship had to be much faster and handier than an opponent armed with long guns, or she would be demolished before her carronades came in range.

British technical ingenuity during the period brought forth several innovations in naval gunnery, contributing to superior firepower. These included a flintlock device, flashing a spark into the touchhole, instead of the loose powder priming and the linstock—the slow match previously used; also improvements in powder bags, and the wetting of the wads between powder and ball to prevent premature firings. Metal springs were added to the rope breechings which held the gun in recoil, and inclined planes of wood were placed under the carriage wheels further to ease recoil. Block-and-tackle purchases enabled the traversing of individual guns to right or left—a tremendous advance, this, in naval gunnery, since one no longer had to steer the entire vessel at a right angle to the target when firing. Another invention was the firing of red-hot cannon shot at wooden ships, a procedure first introduced by the British at Gibraltar in 1782. This incendiary weapon, fired with relative accuracy, was a vast improvement over the employment of drifting fire ships and fire rafts, necessarily chancy and haphazard in results. The crowning development was in tactical control: an improved flag signal code, whereby for the first time in naval history a commander could maintain control and issue orders right up until battle was joined. These improvements appeared gradually during the period; by its end all had proved their efficacy.

The period closed with a massive mutiny in England of the enlisted personnel of the Royal Navy (1797). This, as it turned out, was a blessing in disguise, for public attention was drawn to the injustices and horrors suffered by the sailors and caused immediate remedial action (see p. 672).

MAJOR EUROPEAN WARS*

Seven Years' War, 1756–1763

Land Operations in Europe

The Holy Roman Empire (Austria), France, Russia, Sweden, and Saxony, alarmed by Prussia's growing power and territorial expansion under Frederick, joined in a coalition to cripple or destroy Prussia (May–June 1756). England, already involved in colonial and maritime war with France in the French and Indian War in North America (see p. 770) and in India (see p. 764), supported Prussia. The 7 principal land campaigns of this war—also known as the Third Silesian War—were fought in Europe east of the Rhine, but naval operations spread over the Atlantic and Indian Oceans and the Mediterranean and Caribbean Seas.

1756, August 29. Frederick Strikes First. Learning the intentions of his enemies, Frederick crossed the Saxon frontier with 70,000 men, the remaining 80,000 men of his army guarding the northern and eastern frontiers. He occupied Dresden (September 10), Saxon forces, only 14,000 strong, falling back to the fortified camp of Pirna, on the Elbe, where they were blockaded.

1756, October 1. Battle of Lobositz (Lovocize). Frederick, learning that an Austrian army of 50,000 men under Marshal **Maximilian U. von Browne** was approaching to relieve the Saxons, marched south with equal

* The French and Indian War (an extension of the Seven Years' War) and the American Revolution (which had European and worldwide repercussions) are covered below, pp. 770–791.

strength and defeated the Austrians in the rugged Erzgebirge. Casualties on each side were approximately 3,000. The Saxons at Pirna surrendered. Saxony fell into Frederick's possession, and the Saxon troops were incorporated into his army.

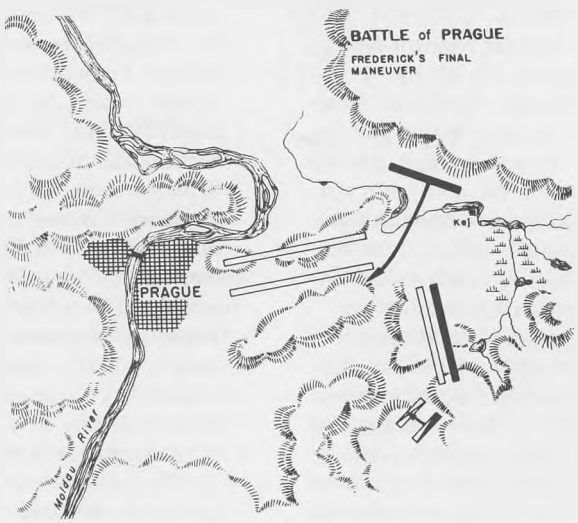
1757, April. Invasion of Bohemia. The coalition had 132,000 Austrian troops in northern Bohemia; none of the other allies were ready. Frederick now had nearly 175,000 men under arms. Almost half of these were scattered along the Bohemian frontier in three groups: the left under Marshal **Kurt C. von Schwerin** and **August Wilhelm, Duke of Brunswick-Bevern,** and the center and right under Frederick's personal command. An additional force of about 40,000 Prussians and 10,000 English under **William Augustus, Duke of Cumberland** stood in Hanover to guard against any French move; another 50,000 guarded the frontiers of Swedish Pomerania and Russia. Frederick sent his left wing south across the mountains east of the Elbe, while with the bulk of his army (about 65,000 men) he pressed from Pirna on Prague, where the Austrians had concentrated about 70,000 troops under Prince Charles of Lorraine.

1757, May 6. Battle of Prague (Praha). The Austrians were defeated in a short, savage battle by Frederick. His initial attack against the Austrian right having been repulsed, he sent his cavalry to envelop the enemy right flank. A gap appeared in the Austrian formation as they tried to meet this envelopment. Penetrating the gap (in the "Prague Maneuver"), Frederick broke the Austrian Army in two, and threw it back into the city, which he invested. Losses on both sides were heavy: 13,400 Austrians killed, wounded, and captured; 14,300 Prussian casualties included Marshal von Schwerin, who was killed while leading the first infantry assault.

1757, May–June. Approach of Austrian Relief Army. Marshal **Leopold J. von Daun** with 60,000 fresh troops moved leisurely to the relief of beleaguered Prague.

1757, June 18. Battle of Kolin. Frederick gathered all the forces he could spare from the siege 32,000 men—and attacked Daun's position. The Prussians were repulsed, losing 13,768 men, while the Austrians had 9,000 casualties. Frederick was forced to raise the siege of Prague and to evacuate Bohemia.

1757, July. Allied Invasions of Prussia and Hanover. A French army of 100,000 men, under Marshal **Louis d'Estrées,** invaded Hanover. Simultaneously another 24,000 French under **Charles, Duke of Soubise** and 60,000



Battle of Prague

Austrians under Prince **Joseph of Saxe-Hildburghausen** were moving northeast from Franconia to join d'Estrées. The main Austrian army, 110,000 strong, under Prince Charles of Lorraine and Marshal Daun, was in Bohemia, advancing toward Prussia. Also a Russian army of 100,000 under Marshal **Stepan Apraksin** was invading East Prussia, and 16,000 Swedes had landed in Pomerania.

1757, July 26. Battle of Hastenbeck. The Duke of Cumberland with 54,000 men was defeated and driven from Hanover by d'Estrées.

1757, July 30. Battle of Gross-Jägersdorf. Prussian General **Hans von Lehwald,** with 30,000 men, was defeated by Apraksin's Russians. The road to Berlin was open. Poor Russian supply arrangements kept them from exploiting promptly.

Rossbach-Leuthen Campaign, 1757

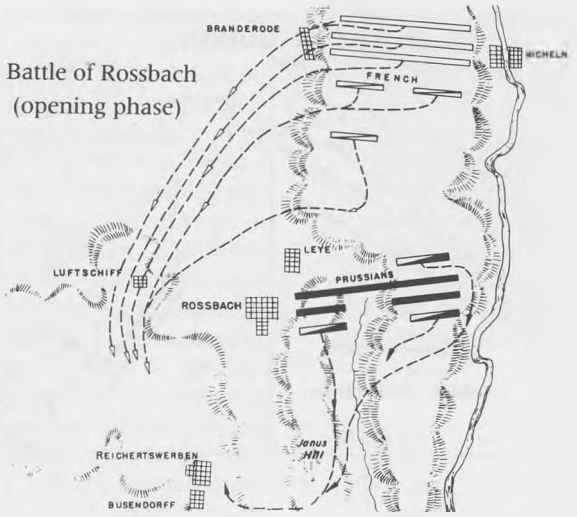
1757, September–October. The Allies Converge on Berlin. Frederick, leaving a small force in Silesia under the Duke of Brunswick-Bevern, moved west by forced marches with only 23,000 men to meet the most pressing threat: the juncture, in Prussian Saxony, of the main French army under the **Duke of Richelieu** (who had replaced d'Estrées) and Hildburghausen's and Soubise's Austro-French army. But Richelieu's army did not move, and Soubise and Hildburghausen—who had taken Magdeburg—declined to give battle and retreated to Eisenach. Frederick then dashed back to Silesia to stop Charles' and Daun's attempted Austrian invasion from Bohemia, and to block the lethargic Russian advance on Berlin. He learned that Austrian raiders had entered and plundered Berlin (October 16).

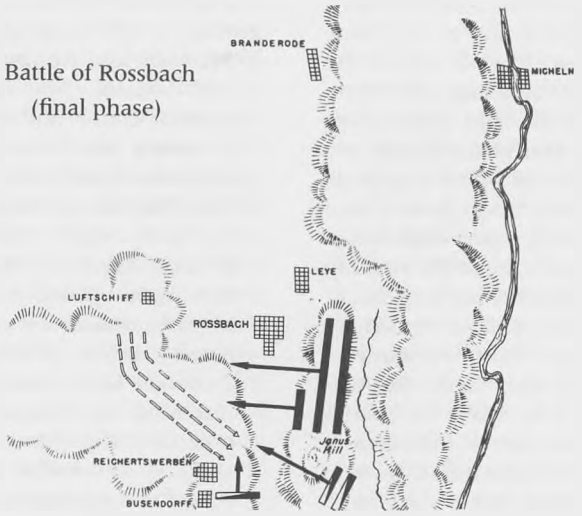
1757, October 18–November 4. Maneuvers in Saxony. While a small force was detached to rescue his capital, Frederick again marched westward, having learned that Soubise and Hildburghausen were again advancing. By the end of the month Frederick was west of the Saale River, again endeavoring to entice his enemies into battle, in the vicinity of the village of Rossbach.

1757, November 5. Battle of Rossbach. Hildburghausen and Soubise had 64,000 men on commanding ground, facing east. The allies decided to envelop Frederick's left flank. The king diagnosed his enemy's intentions. As 3 parallel allied columns marched southward, 41,000 strong, Frederick pretended to withdraw his 21,000 men to the east from Rossbach. His cavalry, 38 squadrons under General **Friederick Wilhelm von Seydlitz,** swung wide to the east, while the infantry, much more mobile than those of the allies, shortly changed direction to the south, screened by hills from the sight of the allies. As a result, when the allied army completed its circling around the original Prussian flank and headed north to deploy, it was met head on by heavy Prussian artillery fire, supported by 7 battalions of infantry. At the same time the Prussian cavalry charged into the allied right flank, throwing the columns into confusion. The Prussian main effort then attacked the enemy mass, in echelon (overlapping succession) from the left. In less than an hour and a half the allied army was completely routed, with loss of about 10,150 men. The fugitives were joined by the 20,000-odd allied troops that had not been engaged. Frederick's casualties totaled 548 including Seydlitz, who was badly wounded.

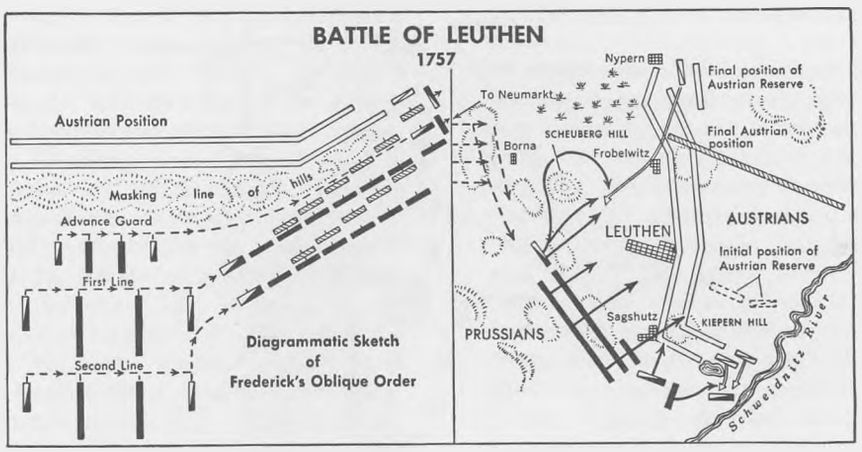
1757, November 6–December 5. Return to Silesia. Frederick immediately hurried back to Silesia, where the Austrians were advancing toward Breslau (Wroclaw). Enroute he learned that Charles of Lorraine and Marshal Daun had defeated and captured August Wilhelm of Brunswick-Bevern at **Breslau** (November 22), and had driven Brunswick-Bevern's troops west of the Oder. With 13,000 men Frederick covered 170 miles in 12 days, to unite with Brunswick-Bevern's survivors near Liegnitz (Legnica). The king, who now had about 33,000 men, at once took the offensive, marching east.

1757, December 6. Battle of Leuthen. Prince Charles' Austrian Army, nearly 65,000 strong, lay in a 5-mile-long line of battle, facing west in





undulating country a few miles from Breslau. Cavalry protected both flanks. The Austrian reserves lay behind the left wing, in anticipation that Frederick would attempt his favorite enveloping maneuver on favorable terrain. The right flank lay on a marsh. Frederick moved toward the Austrian right, in 4 columns, the inner 2 columns made up of infantry, the outer ones composed of cavalry. Under cover of a range of low hills, he changed direction obliquely to the right, leaving his left-hand column of cavalry in his rear, to begin a demonstration against the Austrian right. Still out of sight of the Austrians, the infantry was thus marching past the enemy front in 2 columns, the remainder of the cavalry having taken the lead. Charles, meanwhile, had moved his reserves to bolster his apparently threatened right wing. When Frederick's marching columns, still concealed behind the hills, began to overlap the Austrian left, the king faced his infantry to the left and attacked in 2 lines echeloned



from the right, the pressure increasing as each successive battalion moved in. At the same time, massed Prussian artillery fire shot at the apex of the Austrian left flank, ranged in a vee. The Prussian cavalry on the right flank, under General **Hans J. von Ziethen,** charged into the broken Austrian left and threw it back on the center. Charles attempted to form a new line against this attack, at the same time throwing his right-wing cavalry against the Prussian left flank. But the Austrian horse was caught and scattered by the rear half of Frederick's cavalry, who then charged in on the Austrian right flank. Thus caught off balance, the Austrians never rallied, despite efforts by Charles and Daun. Nightfall alone enabled the escape of the vanquished across the Schwiednitz River to Breslau. Charles's army had been ruined; more than 12,000 were captured, 6,750 killed or wounded, additional thousands scattered to the four winds. Frederick captured 116 guns and 51 colors. Only about half of the original Austrian strength returned to Bohemia and winter quarters. Prussian losses in this desperate fight were 6,150 killed and wounded. Breslau surrendered 5 days later, 17,000 more Austrians being made prisoner, ending the campaign.

COMMENT. *''Masterpiece of maneuver and resolution,'' said Napoleon. Leuthen is generally considered to be the chef-d'oeuvre of the man who was perhaps the ablest tactician of military history.*

1758, January. Renewed Russian Invasion. The Russians, now under the command of General Count **Wilhelm Fermor,** attempted to occupy east Prussia, but were soon immobilized by muddy roads.

1758, May–July. Operations in Moravia. Frederick, certain that he had nothing to fear from the Russians or the Swedes until midsummer, again opened operations by moving into Moravia against the Austrians. An attempt to invest Olmütz (Olomouc) was unsuccessful. Frederick now learned that the Russians, marching into Prussia from the east, were approaching the Oder River. Raising the siege (July 1), by skillful maneuver Frederick deceived the Austrians and marched against the Russians. Meanwhile in the west, Duke **Ferdinand of Brunswick** drove the French back over the Rhine, defeating them at **Crefeld** (June 23).

1758, August 20. Across the Oder River. Frederick arrived at the Oder, across the river from Kustrin (Kostrzyn), which Fermor with 45,000 men was besieging. Feinting a concentration and crossing at that point, Frederick instead moved northward in a rapid, brilliantly conceived night march, crossed the river, and put himself on Fermor's line of communica-

tions in a wide, right turning movement. Fermor, raising the siege, turned and moved to a defensive position at the hamlet of Zorndorf, on high ground. The Russians were arrayed in 3 irregular masses, beyond mutual supporting distances, facing north.

1758, August 25. Battle of Zorndorf. Frederick, who had 36,000 men, attacked again in his oblique formation, passing completely around the Russian front to fall on their right (east) flank. Fermor, forming a new front, repulsed the Prussian attack until Seydlitz with his cavalry crossed marshy ground on the Russian right to charge into their masses, smashing the square. Frederick, shifting his attack to the new Russian right (southwest) flank, was checked until Seydlitz, having reformed his cavalry, again rode into the Russian infantry. An inconclusive butchery followed, ending at nightfall. Almost half of the Russian Army (some 18,500 men) had fallen, while Frederick had lost some 12,797. Next day Fermor retreated to Königsberg (Kaliningrad); the Prussians were too exhausted to pursue. The Russians threat was ended for the time being.

1758, September–October. Meeting the Austrians in Saxony. Frederick, learning that Daun was threatening his brother, Prince **Henry of Prussia,** not far from Dresden, hurried back with part of his army by forced marches, making 22 miles a day. On his arrival the Austrians withdrew (September 12). After a short rest, Frederick with 31,000 men took the offensive again. Overconfident, he was surprised by Daun, who surrounded the Prussian Army with 80,000 men during the night and attacked at dawn.

1758, October 14. Battle of Hochkirch. Frederick's army fought hard against overwhelming force. An escape route was opened and held by General **Hans J. von Ziethen**'s cavalry. Through it the Prussian army retreated, leaving behind 101 guns and some 9,097 men killed, wounded, and prisoners. Daun's army, with losses of about 7,587 was so shaken that no pursuit was made.

1758, October–November. Frederick Regains the Initiative. Daun now laid siege to Dresden, but on learning that Frederick had been reinforced and was moving to attack him, withdrew to the fortified camp at Pirna. The close of the campaign found Frederick in firm possession of Saxony and Silesia, while both the Russians and the small Swedish invading force had evacuated Prussia.

COMMENT. *This had been a costly campaign. Frederick could still keep 150,000 men in the field, but the combat value of the Prussian Army was deteriorating. In 3 years of campaigning he had lost 100,000 of his superbly trained and disciplined troops.*

Minden Campaign, 1759

1759, April. Prussian Failure in West-Central Germany. Duke Ferdinand of Brunswick, reinforced by British troops, advanced with 30,000 men from the line Münster-Paderborn-Cassel, held during the winter, to drive out the French, based on Frankfurt and Wesel. Rebuffed at **Bergen** (near Frankfurt) by sheer weight of numbers, he was forced to retire again, and the French, seizing the bridges across the Weser at Minden, occupied a position too strong for direct attack.

1759, August 1. Battle of Minden. Marquis **Louis de Contades,** commanding both his own troops and those of Duke **Victor de Broglie,** had 60,000 men near Minden. Ferdinand, who now had 45,000, feinted against the French right with a fraction of his command. Contades moved out in force to overwhelm it. As he did, Ferdinand launched a counter-assault, in 8 columns. Bad weather delayed the movement, and the French, reforming, were overwhelming the Prussians when 2 British and 1 Hanoverian infantry brigades attacked the French cavalry, who were drawn up in the center of the line of battle and protected by artillery. The British were met by a cavalry charge; with an amazing discipline and gallantry (of 4,434 men, 1,330 became casualties) they not only drove off the French horse by fire but then advanced with the bayonet against French infantry and pierced the center of Contades' line of battle. Ferdinand, realizing that

victory was in his hand, at once ordered the British cavalry, 5 regiments strong, to charge and complete the rout. Lieutenant General **George, Lord Sackville** thrice refused to move. As a result the French, though disorganized and beaten, and having lost 10,000 prisoners and 115 guns, retired from the field unhindered. Ferdinand, following them almost to the Rhine, checked his advance only when he had to send reinforcements to assist King Frederick (see below).

COMMENT. *Sackville, tried by courtmartial for his disobedience, was cashiered from the British Army. However, 12 years later he returned as a favorite of King George III, to become Lord* **Germain** *and contribute mightily to the ineptness of the British military effort in the American Revolution* (*see p. 779*).

1759, July–August. Russian and Austrian Invasion. The Russians (now under Count **Peter S. Soltikov**) defeated the Prussian covering forces along the Oder line at **Kay** (July 23) and moved on Frankfurt, linking with 35,000 men of Daun's Austrian army under Lieutenant General **Gideon E. von Loudon** Frederick, gathering all available forces, moved to meet the combination.

1759, August 12. Battle of Kunersdorf. The Austro-Russian armies 80,000 strong, lay entrenched in the sand hills 4 miles east of Frankfurt. Frederick, with 50,000 men, crossed the Oder and attempted a double envelopment. But his columns lost their way in the woods and their attacks were delivered piecemeal. Thrown back at all points, Frederick insisted upon continuing the vain attacks. He lost more than 19,100 men, 172 guns, and 28 colors in 6 hours—the greatest calamity ever to befall him. Completely discouraged, he contemplated abdication. Fortunately for the Prussians, their enemies (who had lost 15,700 men) were too sluggish to reap advantage from their victory.

1759, August–November. Frederick Retrieves the Initiative. Frederick, receiving reinforcements from Ferdinand, recovered his determination and reorganized his army in the field. The Russians, having exhausted all the food and forage in the vicinity, later retired to their own frontier, and Frederick turned his attention to Daun, who had occupied Dresden (September 4).

1759, November 21. Battle of Maxen. Frederick sent a detachment of 13,000 men under General **Frederick von Finck** to envelop Daun's army. But the Austrians concentrated 42,000 to overwhelm the detachment; the survivors surrendered. Both sides now spent the winter in relative quiet. This had been Frederick's worst year.

1760. Renewed Allied Convergence on Prussia. The allies planned to move concentrically upon Frederick; Austria's Daun with 100,000 men in Saxony, and Loudon with 50,000 more in Silesia, would work in unison with Russian's Soltikov (50,000 strong) in East Prussia. If Frederick turned on one, the others would converge on Berlin. Frederick with 40,000 faced Daun on the Elbe; Prince Henry with 34,000 was in Silesia, and 15,000 additional Prussians were covering additional Russian and Swedish forces ravaging Pomerania. In the west, Duke Ferdinand's Prussian-British army of 70,000 faced 125,000 French troops in Hanover.

1760, June–October. Ferdinand Maneuvers in the West. Ferdinand, following the instructions and example of his king, played a successful game of march, maneuver, and quick battle against the French armies of the Duke de Broglie and **Claude, Count of St. Germain.** In this campaign the British contingent, commanded by Lieutenant General Sir **John M. Granby** (successor to the incompetent Sackville), played a conspicuous part. Highlight of the British effort was the storming of Warburg (July 31) by Granby's cavalry, who took 1,500 prisoners and 10 guns. Ferdinand outfoxed the French, driving them back to the Rhine, but there he was repulsed at **Kloster-Kamp** (October 16) and withdrew to Lippstadt and Warburg for the winter.

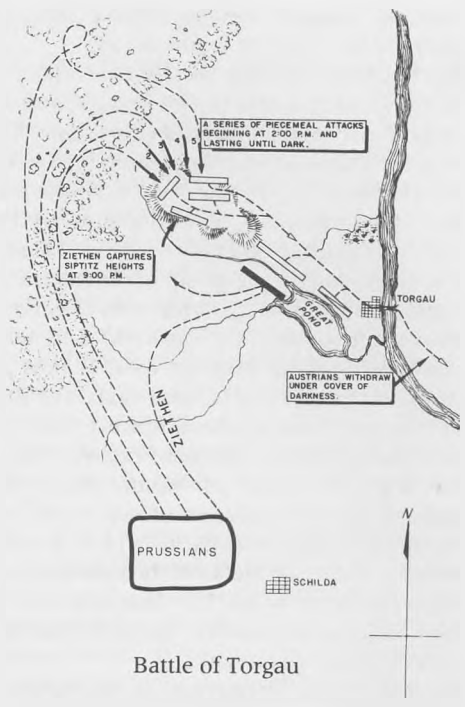
1760, June–August. Frederick Maneuvers in the East. While Prince Henry engaged the Russians in operations sterile for both sides, and Loudon destroyed a Prussian detachment at **Landeshut** (June 23), Frederick with his

main army began shuttling between Loudon—who was besieging Glatz (Klodzko)—and Daun. When Daun marched to help Loudon. Frederick turned back to besiege Dresden (July 12). Daun came hurrying to its relief and almost surrounded Frederick, who slipped away in the nick of time (July 29). That same day Glatz fell to Loudon. Frederick, summoning Prince Henry's army to join him, now plunged into Silesia with 30,000 troops in a remarkable series of forced marches.

1760, August 15. Battle of Liegnitz. Loudon and Daun, with 60,000 men and 30,000 Russians under Czernichev not far behind, closed in on Frederick. The Austrians planned a double-envelopment of the Prussian position. In a brilliant operation Frederick, using the night to conceal his movement, turned on Loudon's column (24,000 men). Loudon attempted to attack in the pre-dawn hours, but was enveloped and crushed by Frederick's counterattack before Daun could arrive. Frederick then cut his way to safety, leaving 8,500 Austrian casualties on the field and capturing 80 guns, the Prussian loss was 3,394. Tricking Czernichev by a false message, which led him to believe the Austrians had been totally defeated, Frederick resumed his maneuvering against Daun, while the Russians hurriedly retreated, no more to appear in this campaign.

1760, October 9. Capture of Berlin. Learning that Austrian and Russian raiders had again seized and partly burned his capital, Frederick turned to its relief. On his approach the allies hurriedly evacuated the city (October 12) and the main Austrian army, 53,000 strong, began concentrating near Torgau. Frederick, gathering 50,000 men, moved against the Austrian entrenched camp.

1760, November 3. Battle of Torgau. The Austrians, under Daun, lay in a formidable position on high ground west of the Elbe. Frederick, advancing from the south, planned to move half of his army entirely around the Austrian right, through dense woods, and attack their rear. Ziethen, with the other half, was to make a simultaneous frontal attack. Through a combination of errors and bad weather, Frederick's wing became disorganized. Surprise was lost and the Austrians regrouped their forces to meet the threat. Meanwhile, Ziethen's advance guard encountered a small force of Austrian light infantry and opened fire. Frederick, hearing the cannonade, assumed Ziethen was assaulting the main Austrian position and threw his own forces in piecemeal. For 2½ hours all his attacks were repulsed. By that time all Frederick's reserves had been committed. It seemed to be another Kunersdorf. But as dusk was falling Ziethen finally reached his appointed position and attacked. Frederick renewed his assaults in darkness. Austrian resistance collapsed; Daun withdrew from the position and across the river. Frederick had squandered 16,670 men, while Austrian losses were more than 8,697 killed and wounded and 7,000 more made prisoner. Both sides having fought themselves to exhaustion, the campaign ended for the year.



Battle of Torgau

1761. Operations in the West. Duke Ferdinand had some success against the French as the

campaign opened, but by October they had pushed him eastward to Brunswick.

1761. Frederick at Bay in the East. He could scrape together barely 100,000 troops, and was facing thrice that number of Austrians and Russians in Silesia. Despite brilliant maneuvering, he was finally cut off from Prussia by the junction of the armies of Loudon and Russian General **Alexander Buturlin,** near Liegnitz. Frederick retired (August 20) to the entrenched camp of Bunzelwitz, 20 miles east of Glatz, in the vicinity of Jauernick (Javornik). Situated in the Eulen Gebirge hills on what is now the northern frontier of Czechoslovakia, the Bunzelwitz camp was a natural fortress, improved by elaborate field fortifications extemporized in 10 days and nights of frantic effort—time granted by the vacillation of the allied commanders. Loudon wanted to attack, Buturlin refused. Then (September 9) the Russians withdrew permanently, and the Austrians soon fell back into winter quarters. Frederick, the pressure relieved, did the same.

1761, December. Frederick on the Brink of Defeat. Although Prince Henry in Saxony had held his own against Daun, Ferdinand's army in the west was dwindling; **George III** of England, succeeding George II in 1760, had begun withdrawing part of the British contingent, and now threatened to cut off all subsidies. Frederick could only muster 60,000 troops. He was at the end of his rope.

1762, January 5. Death of Elizabeth of Russia. Her successor, **Peter III,** an admirer of Frederick, immediately began peace negotiations.

1762, May 15. The Treaty of St. Petersburg. This ended the war between Russia and Prussia, and saved Frederick from almost certain defeat. Peter loaned a Russian army corps to Frederick.

1762, May 22. Treaty of Hamburg. This brought peace between Prussia and Sweden. Frederick could now concentrate against the Austrians while Ferdinand held off the French.

1762, June 24. Battle of Wilhelmstal. Duke Ferdinand's Prusso-British army defeated the French in Westphalia, Granby's British brigades delivering the vital assault.

1762, July 9. Collapse of the Russian Alliance. Peter was deposed. His wife, **Catherine II** of Russia, broke off the alliance with Prussia, but did not renew the war.

1762, July 21. Battle of Burkersdorf. In Silesia, Frederick defeated Daun. The exhausted armies maneuvered inconclusively, but Frederick steadily strengthened his hold on the province.

1762, October 29. Battle of Freiberg. In Saxony, Prince Henry, assisted by Seydlitz, defeated Austrian Marshal **Serbelloni.**

1762, October–November. Ferdinand Drives the French across the Rhine.

1762, November. Armistice. All concerned were exhausted by the years of protracted conflict. France was already making peace with England.

1763, February 16. Treaty of Hubertusburg. Austria agreed to the return of the *status quo* in Europe. Frederick retained Silesia.

Naval Operations, 1755–1763

Pre-War Conflict, 1755–1756

1755. Franco-British Rivalry in North America. This led to the French and Indian War (see p. 770); it also brought about naval warfare nearly a year before formal declaration of hostilities. Shortly after Britain sent General **Edward Braddock** to the American colonies, the French sent a naval squadron and transports with reinforcements and supplies for Canada. A British fleet under Admiral **Edward Boscawen** was sent to intercept the French squadron before it reached the St. Lawrence River.

1755, June 8. Action of the Strait of Belle Isle. Boscawen found the French squadron, but was able to capture only 2 transports; the remainder of the French ships escaped and reached Quebec. The English now began to seize all French ships wherever found. British Admiral Sir **Edward Hawke,** cruising off the coast of France, captured a large number of

ships in a convoy from the French colonies in America. In retaliation, **Louis XV**'s government seemingly prepared for an invasion of the British Isles, but still without declaring war. Britain, alarmed by this threat, paid little attention to a French joint army-navy expeditionary force preparing at Toulon.

1756, April 9. British Squadron to the Mediterranean. Belatedly concerned about the Toulon preparations, the British Admiralty sent Admiral **John Byng** (son of Viscount George Byng of Torrington; see p. 685) with 10 ships of the line to the Mediterranean. He was to protect the British possessions of Gibraltar and Minorca.

1756, April 12. French Expedition to Minorca. Admiral Count **Augustin de la Gallissonnière,** with 12 ships of the line, convoying 150 transports carrying 15,000 troops under Marshal Duke **Louis de Richelieu,** sailed from Toulon for Minorca. One week later (while Byng was still out on the Atlantic Ocean) the French landed and invested Port Mahon, the island's capital, while the fleet blockaded the port. The British garrison of 3,000 men was in peril when Byng finally appeared off the island (May 19).

1756, May 20. Battle of Minorca. Byng, who now had 13 ships, tried to bring his column (in line ahead) into action against the French, ship for ship. But he came in on an angle. One of his center vessels, disabled by French fire, held up the rest. Meanwhile the 5 leading British warships were badly hammered by the entire French squadron. Instead of letting his ships sail on individually to join the van of his squadron, Byng now attempted to carry on in his original formation, which gave the French squadron time to sail away. Byng gathered up his damaged vessels, making no attempt to land the army battalion he had on board, which he felt was insignificant in comparison to the French army. He returned to Gibraltar. A victim of restrictive Admiralty instructions, and later of Whig-Tory politics, he was tried by court-martial, convicted of failure to do his utmost, and was shot. Minorca surrendered (May 28).

Wartime Operations, 1756–1763

1756. May 17. War Formally Declared. The British reinforced squadrons in the Mediterranean and western Atlantic. Britain had 130 ships of the line; France had 63; Spain had 46. The British were superior in equipment and personnel.

1757. Aggressive British Naval Policy. The reins of government were in the hands of the elder **William Pitt** (later Earl of Chatham), who knew sea power's value.

1757–1758. Planning in North America. Admiral Boscawen and General **Jeffrey Amherst** prepared a joint expedition against France's fortress of Louisbourg on Cape Breton Island which would end successfully (see p. 772).

1758, April 29. Battle of the Bay of Bengal. Admiral Sir **George Pocock,** with 7 ships of the line, engaged French Commodore Count **Anne Antoine d'Aché**'s 8 ships in an inconclusive action off Fort St. David. The Frenchman was carrying reinforcements to Pondichery while the British fleet was vainly attempting to relieve the besieged port.

1758, August 3. Battle of Negapatam. In a renewed battle between Pocock and d'Aché near the site of the previous battle, the French squadron was so cut up that d'Aché withdrew, to the detriment of French land forces in India (see p. 765).

1758, September. British Repulsed at St. Cas Bay. This concluded a series of fruitless minor British expeditions against the French coast.

1759. Operations in North America. British army-navy cooperation resulted in the capture of Quebec and the conquest of Canada (see pp. 772–773).

1759–1760. Operations in the West Indies. A British joint task force, repulsed at **Martinique** (January), took **Guadeloupe** in a long campaign (February–April). Another force took **Dominica (1760).**

1759, August 18. Battle of Lagos. Meanwhile a French plan to invade England and Scotland was in the making, its initial success dependent

upon the junction at Brest of 2 French squadrons. Commodore **de la Clue** left Toulon for Brest with 12 ships of the line (August 15) and reached the Straits of Gibraltar on the 17th, unaware that Boscawen, now commanding in the Mediterranean, had taken his squadron into Gibraltar to refit. A patrolling English frigate sighted the French and gave the alarm. Boscawen, with 14 ships of the line, gave chase. De la Clue headed for the open sea, but 5 of the ships broke away and fled to Cádiz. The remainder got away momentarily, thanks to the gallantry of the rear ship, whose captain fought 5 English ships for 5 hours. But de la Clue's case was hopeless, so he ran the remainder of his squadron ashore on the Portuguese coast, near Lagos. Boscawen, with the usual British disdain for neutrality, captured them.

1759, September 10. Naval Battle of Pondichery. D'Aché reappeared off the Coromandel coast with 11 ships to fight a third tactically inconclusive battle with Pocock. The French ships were so badly damaged that d'Aché departed, never to return. With him went the last hope for French forces in India (see p. 765).

1759, November. Operations off the Coast of Brittany. The French squadron in Brest, 21 ships of the line and several frigates, was under Admiral **Hubert de Conflans.** Off the port stood British Admiral Edward Hawke with 25 sail of the line, plus 4 50-gun ships and 9 frigates. A tremendous gale drove Hawke off station and into Torbay for shelter, whereupon Conflans put to sea. Off Quiberon Bay on the Breton coast, he fell in with some British ships on blockade duty, and at the same time Hawke, who had hurried out when the storm subsided, caught up with him. Conflans, outnumbered by at least 2 ships of the line and the 4 50-gun ships, fled for Quiberon Bay, hoping that his opponent would not dare to follow him through the treacherous banks and reefs of the entrance. But Hawke did just that.

1759, November 20. Battle of Quiberon Bay. Engaging his enemy in the crowded bay, on a lee shore, in heavy weather, Hawke destroyed or captured 7 French ships and the remainder were so scattered that they were unable to reassemble. Hawke lost 2 ships, wrecked on a reef; his losses in action were negligible. This battle ended France's naval power for the remainder of the war.

1760–1763. England Supreme at Sea. Although French privateers had taken heavy toll—10 percent—of British merchant vessels, French commerce, with the French Navy swept from the sea, was completely destroyed.

1761. Spanish Intervention. Charles III of Spain chose this unpropitious time to ally himself with France, and broke off diplomatic relations with England. France gave Minorca to Spain, which soon declared war (January 4).

1762, January 4. British West Indies Offensive. Admiral **George B. Rodney** proceeded against Martinique, the last French stronghold in the West Indies. Its surrender (February 12) was followed by seizure of Grenada, St. Lucia, and St. Vincent. While Rodney was securing the West Indies, Pocock, back from the East Indies, promptly sailed from England for Havana with 19 ships of the line and transports bearing 10,000 army troops (March).

1762, June 20–August 10. Operations against Havana. Pocock and Rodney, joining forces, sailed to Havana (June). Morro Castle was taken (July 30) after a 40-day siege by troops under **George Keppel, Earl of Albemarle.** The Spaniards then surrendered the port, with 12 ships of the line and more than $15 million in money and merchandise. It was a body blow to Spain's economy and prestige, since all Spanish-American commerce funneled through Havana.

1762, October 5. Capture of Manila. Another British joint expedition, mounted in India and commanded by Admiral Sir **Samuel Cornish** and Lieutenant General Sir **William Draper,** sailed into Manila Bay and captured the city. A ransom of $4 million was levied (in lieu of the normal practice of looting). The Acapulco Galleon with $3 million on board also fell into the expedition's hands. As an additional jolt, out in the Atlantic an English squadron bagged a treasure ship from Lima carrying $4 million in silver to Spain. King Charles at once joined

France in negotiations for peace; his brief excursion into war had cost Spain much.

1763, February 10. Treaty of Paris. France renounced to England all claims to Canada, Nova Scotia, and the St. Lawrence River islands, the Ohio Valley, and all territory east of the Mississippi except the city of New Orleans. Spain traded Florida (all Spanish possessions east of the Mississippi) to England for the return of Havana. She also returned Minorca to England. Spain had already been compensated for her alliance in the secret **Treaty of San Ildefonso*** (November 3, 1762) by receiving from France New Orleans and all Louisiana west of the Mississippi. In the West Indies, Guadeloupe and Martinique were returned to France. Of the "neutral" islands of the Lesser Antilles all but St. Lucia went to England. In India, the British East India Company had become the supreme power in Bengal. Pondichery was returned to France, but its fortifications were razed, and limits were set on French military strength on the Coromandel coast; French stations in Bengal were to be strictly commercial.

Commentary

On land, the Seven Years' War decided nothing politically. Militarily, it proved that loose-knit, bumbling coalitions, regardless of superiority of numbers, are at a disadvantage when waging war against a determined, disciplined, single-purposed nation under capable military leadership. Frederick the Great, through indomitable courage, tactical genius, and brilliant strategic use of interior lines, preserved the integrity of Prussia against amazing odds. He placed his country in the ranks of the great powers, laying the foundation for a united Germany. His campaigns in the Seven Years' War proved him to be a master tactician, one of the great captains of history. At sea, the Royal Navy firmly established the British Empire and destroyed the colonial pretensions of France and severely shook those of Spain—now Britain's only overseas rival. Sea power had come into its own.

Wars of the French Revolution, 1792–1800

War of the First Coalition, 1792–1798

Background

1791, August 2. Declaration of Pillnitz, Saxony. The growing strength and violence of the French Revolutionary movement, and the parlous situation of **Louis XVI,** led King **Frederick William II** of Prussia and the Emperor **Leopold II** of Austria to declare themselves ready to join with all the other European powers to restore the monarchy to power in France. Russia and Sweden agreed to raise contingents (subsidized by Spain). England declined to join. The French Legislative Assembly, alarmed by this threat, hastily organized armies to protect the eastern frontiers.

1792, February 7. Austro-Prussian Alliance. Partly in response to pleas of French monarchical émigrés, and partly to take military and political advantage of the chaos in France, Austria and Prussia formed an alliance and began to move troops toward the frontiers. The Kingdom of Sardinia (or Piedmont) joined the alliance soon afterward.

Land Operations, 1792–1793

1792, April 20. The French Assembly Declares War against Austria. Fighting began at once along the Flanders frontier. The French Army, though disorganized by the republican movement, still retained some of its previous

* One of three Treaties of San Ildefonso in this century; see pp. 753, 793.

discipline, as well as a few of its professional officers. Patriotic enthusiasm brought flocks of volunteers to the colors. The result was an uneasy mixture of professionals and amateurs (National Guard and volunteers) easily brushed aside by the Austrians in the opening skirmishes near Lille, which the Austrians besieged. Disgusted with the conduct of his troops, Marshal Comte **Jean Baptiste de Rochambeau** resigned command of the Army of the North, and was succeeded by the Marquis **Marie Joseph du M. de Lafayette,** who had been in command of the Army of the Center.

1792, July 11. Assembly of an Allied Army. Karl Wilhelm, Duke of Brunswick had 80,000 men (42,000 Prussians, 30,000 Austrians, and small contingents of Hessians and French émigrés) gathering at Coblenz.

1792, August 10. Storming of the Tuileries. A Paris mob stormed the royal palace, massacring the Swiss Guards. Louis took refuge with the Assembly and was deprived of his few remaining powers. Lafayette, who had briefly thought of marching on Paris to restore order, was relieved of his command, and fled across the frontier to surrender to the Austrians (August 20).

1792, August 19. Allied Invasion of France. Capturing the fortresses of Longwy and Verdun, Brunswick's army moved very slowly through the Argonne Forest, heading toward Paris, weakly opposed by the small French Army of the Center, commanded by General **François C. Kellermann.**

1792, August–September. French Preparations for Defense. General **Charles C. Dumouriez** was appointed by the Assembly to replace Lafayette in command of the Army of the North. With part of this army he hastened to join Kellermann in an attempt to halt the advance of Brunswick's army.

1792, September 20. Battle of Valmy. Dumouriez and Kellermann were able to bring together 59,000 troops, divided almost equally between distrusted prewar regulars and enthusiastic, but poorly trained, volunteers to oppose 35,000 veteran regulars of Brunswick. (The remainder of the allies were spread out along the line of communications.) Fortunately for the French, the main bodies never became engaged, the Prussian infantry being thrown back by accurate fire from 54 French guns—manned by regulars of the old army. Brunswick, who had never been enthusiastic about the invasion, was so discouraged by this cannonade that he withdrew to Germany. Losses had been fewer than 300 for each army.

1792. Other Operations. In the south, French forces invaded Piedmont, overrunning Savoy and capturing Nice. From Alsace, General **Adam Philippe Custine** led a French offensive which captured Mainz and got into Germany as far as Frankfurt. Dumouriez returned north and pushed into Flanders. Meanwhile (September 21), the newly elected National Convention installed itself as the government of France and abolished the monarchy.

1792, November 6. Battle of Jemappes. On Dumouriez's approach the Austrians raised the siege of Lille and went into winter quarters at Jemappes, just across the border in Belgium (the Austrian Netherlands). The French army of 45,000 men and 100 guns followed and defeated the Austrians, who numbered only 13,000. Austrian losses were 1,500 men and 8 guns, the French lost 2,000. This victory stimulated the French republicans; Brussels was captured (November 16) and a French squadron pushed up the Scheldt to besiege Antwerp, arousing fear in England.

1792, December. Allied Successes. Brunswick, with 43,000 men, drove Custine back to the Rhine. Frankfurt was retaken (December 2). Custine retired to Mainz and winter quarters.

1793, January 21. Execution of Louis XVI. The beheading of the French king sparked England to oust the French ambassador, whereupon France, already at war with Austria, Prussia, and Piedmont, declared war on England, the Netherlands, and Spain. National conscription was decreed, Belgium annexed to France, and Dumouriez ordered to invade Holland. But the allies were already on the offensive. **Friedrich Josias, Prince of Saxe-Coburg** with 43,000 Austrians crossed the

Meuse to recover Belgium; Brunswick's 60,000 Prussians besieged Custine in Mainz. Other allied troops took positions along the Rhine and in Luxembourg.

1793, March 18. Battle of Neerwinden. Dumouriez with 41,000 men attacked Saxe-Coburg, attempting to turn his left. The French, advancing in 8 columns, were repulsed in disorder. Austrian losses were 3,000, the French lost 4,000.

1793, April–July. French Defeats and Demoralization. The Austrians recaptured Brussels. Dumouriez, falsely accused of treason, turned against France and fled to the allies; with him went the **Duke of Chartres** (Prince **Louis Philippe**). General **Picot Dampierre** assumed command and tried to stem the advance of Coburg's allied army, but was killed in action near besieged **Condé** (May 8). Custine was now placed in command of the demoralized French Army of the North. A defeat near besieged **Valenciennes** (May 21–23) resulted in the beheading of Custine by order of the Committee of Public Safety, establishing a pattern which would thereafter menace all French republican commanders. Condé was captured by Coburg (July 10) and Valenciennes fell soon afterward (July 29). The Army of the North retreated to Arras under its new commander, **Jean Nicolas Houchard.**

1793, July–August. The Reign of Terror. France was now assailed from within and without, while the Reign of Terror was beginning in Paris under **Maximilien F. de Robespierre** and the Committee of Public Safety.

1793, August. France Approaches Collapse. The Allies recaptured Mainz. In the Vendée a monarchist counterrevolution was in full swing. Lyon and Marseilles declared for the monarchy. Prince **Frederick Augustus, Duke of York,** with a British-Hanoverian army, was investing Dunkirk, while the **Prince of Orange**'s Netherlands forces linked York to the Austrians farther east. A British-Spanish fleet closed in on Toulon, which declared for the monarchy (August 21).

1793, August 23. The Levée en Masse. The Committee of Public Safety decreed conscription of the entire male population of France. Fourteen armies were hastily put into the field in the next few weeks. Symbolic of the revitalization of France was the recovery of Marseille by the Republicans on the day of the decree (August 23).

1793, September 8. Battle of Hondschoote. With 24,000 men Houchard assailed the Duke of York's 16,000 disciplined English and Hanoverian troops just east of Dunkirk. The uncoordinated but desperate charges of the French recruits forced York back by sheer weight of numbers; he extricated himself, although losing his siege artillery. Losses were about 3,000 on each side.

1793, September 13. Battle of Menin. Houchard routed the Prince of Orange, but he failed in efforts to maneuver the Austrians out of eastern France. He was removed and guillotined, General **Jean Baptiste Jourdan** taking his place.

1793, September. Lazare Nicolas Carnot. The war minister of the Committee of Public Safety joined the army, and ordered Jourdan to relieve Maubeuge, besieged by 30,000 Austrians under Saxe-Coburg.

1793, October 15–16. Battle of Wattignies. The French, 45,000 strong, were at first repulsed by the better-disciplined allies. Next day, however, Jourdan enveloped and drove back Saxe-Coburg's left. The Austrians abandoned the siege of Maubeuge and retired eastward. French losses were 5,000, the allies lost about 3,000.

COMMENT. *These 3 battles (Hondschoote, Menin, Wattignies) are remarkable because, beginning with Hondschoote, not only did they demonstrate an amazing will to win on the part of the new French levies, but in addition, at Wattignies, the new army for the first time used maneuver on the battlefield. A peculiar mixture of patriotism and terror was transforming armed mobs into soldiers. What had happened was mainly due to the incessant efforts of one man: Lazare Carnot, a stern, uncompromising soldier of the old regime, who amalgamated the raw conscripts with the remnants of the old professional army (1793–1794), and brought discipline to enthusiastic hordes of Frenchmen filled with the valor of ignorance. Carnot built the*

prototype of the instrument that Bonaparte would use later on. In his 2-year tenure of office, Carnot's efforts in organizing the national defense caused him to become known as the "Organizer of Victory."

1793, October–December. French Revival. Elsewhere the Vendée uprising was finally suppressed, and Lyon was retaken (October 20) by Kellermann. Toulon, besieged by the Republicans, fell (December 19; see below). Along the Rhine and in Alsace an indeterminate campaign ended when General **Louis Lazare Hoche,** after being checked by Brunswick at **Kaiserslautern** (November 28–30), defeated the Prussians at **Fröschwiller** (December 22), then turned on Austrian General **Dagobert Wurmser** in Alsace and defeated him at **Geisberg** (December 26). By the year's end the invaders were back across the Rhine; Alsace and the Palatinate had been cleared and Mainz recaptured. Fighting along the Spanish and Italian frontiers was sporadic and inconclusive.

War at Sea, 1792–1793

1792. Sad State of the French Navy. Its professional officer corps had been purged; its enlisted force, disrupted by a succession of mutinies, was a mob. Merchant marine officers, recruited for the emergency, had no knowledge of naval tactics. Administratively, ships, navy yards, and stores had been completely neglected. Less than half of the 76 ships of the line could be manned.

1792. State of the Allied Navies. Spain had only 56 serviceable capital ships; its personnel were of less than mediocre ability. Holland's 49 ships were good, but light. Portugal had 6 capital ships, Naples 4. The British Navy consisted of 115 ships of the line, in good shape, commanded by professionals, but many were undermanned. The 2 principal British operational forces were the Channel Fleet under Admiral Lord **Richard Howe** and the Mediterranean Fleet under Admiral Sir **Samuel Hood.**

1792. No Naval Operations of Significance.

1793, August—September. Inconclusive Maneuvering. The French fleet, under Admiral **Morad de Galles,** tentatively put to sea off the Atlantic coast of France. He avoided battle with Howe. De Galles was a capable sailor, but was unable to control his unruly crews. By the end of the summer he had given up his command; the fleet remained in port.

1793, August 27–December 19. Siege of Toulon. Hood, with 21 ships of the line, entered the port, which at once declared for the monarchy. The British seized the great naval arsenal together with about 70 vessels, 30 of them ships of the line, nearly half of the French Navy. A Spanish squadron under Admiral **Juan de Langara** accompanied the British. Republican land forces invested the fortress (September 7), but little was done until 2 inept commanders were replaced by General **Jacques E. Dugommier,** who adopted a plan prepared by young Colonel **Napoleon Bonaparte,** commanding an artillery brigade. The forts commanding the anchorage were soon carried by the French troops (December 16). The allied naval forces hastily left (December 19). The British destroyed or carried away part of the French fleet, but 15 ships of the line were left untouched, through Spanish neglect. The Spanish Navy took no further part in the war as an ally of Britain. Colonel Bonaparte was promoted to brigadier general.

Operations on Land, 1794–1795

1794. Opposing Plans in the North. The allied "plan of annihilation" was proposed by Baron **Karl Mack von Leiberich,** Austrian chief of staff. It was matched by Carnot's plan to clear the invaders from French territory.

1794, May 11. Courtrai. The French forces of General **Charles Pichegru**'s Army of the North defeated the Allied English and Austrian Army of Field Marshal **Count Charles von Clerfayt.**

1794, May 18. Battle of Tourcoing. Pichegru's army (temporarily commanded by General **Joseph Souham**) of 70,000 men defeated Saxe-Coburg's badly managed Austro-British-Hanoverian force of 74,000 men. French losses were 3,000 men and 7 guns, the allies lost 5,500 men and 60 guns.

1794, May 23. Battle of Tournai. A fiercely fought drawn battle, between forces almost equal in strength (about 50,000 allies and 45,000 French). Both sides retreated, losses were 3,000 for the allies, the French lost 6,000 men and 7 guns.

1794, June 17. Battle of Hooglede. A fierce French counterattack retrieved victory from defeat. The allies began to withdraw northward.

1794, June. Formation of the Army of the Sambre and Meuse. Jourdan's Army of the Moselle had moved north and invested Charleroi (June 12). He was now placed in command of the combined armies, totaling 75,000–80,000 men.

1794, June 26. Battle of Fleurus. Coburg, with 46,000 men, moved to relieve Charleroi. Unaware the town had fallen (June 25), 5 allied columns struck the 81,000 French grouped in a 20-mile circumference around the town. At first successful all along the line, the allied right was halted by French counterattacks, General **Jean B. Kléber** driving the Prince of Orange from the field. Jourdan led a counterblow in the center. Despite the success of his left against the overextended French right, Saxe-Coburg called off the attack. Next day he retreated. Jourdan pursued at once. Losses were about 5,000 each.

1794, July–August. French Victories in Belgium and on the Rhine. They entered Brussels (July 10), Antwerp was occupied (July 27), and the British contigent sailed home. Belgium was abandoned forever by the Austrians. Jourdan followed Coburg across the Roer and cleared the left bank of the Rhine in desultory operations against the Prussians.

1794, September–December. French Victories Elsewhere. General **Jean Victor Moreau,** who had distinguished himself under Jourdan's command in Belgium, was given command of a newly formed Army of the Rhine and Moselle; in late summer he advanced into the Rhineland and pressed forward despite a setback near **Kaiserslautern;** by October he had forced the allies to cross the upper Rhine and had laid siege to Mainz. An army under Pichegru invaded Holland. In the Alps and along the Mediterranean coast the French had also had minor successes, driving the allies completely out of Savoy, and pressing eastward as far as Savona on the Mediterranean coast. In the southwest French armies had penetrated both flanks of the Pyrenees.

1795, January–March. French Occupation of the Netherlands. Pichegru's advance was facilitated by the frozen rivers, lakes, and estuaries. The Dutch fleet, frozen in the Texel, was captured by French cavalry, an exploit unique in military history. Holland now became the Batavian Republic, a satellite and active military ally of republican France.

1795, April 5–June 22. Treaties of Basel. Prussia, financially exhausted, made peace with France. Saxony, Hanover, and Hesse-Cassel followed suit. So did Spain, ceding Santo Domingo to France.

1795, June 27. Landing on Quiberon. French émigrés and a small contingent of British troops, totaling 17,000 men, landed from British warships, attempted to invade Brittany. They were disastrously defeated by the waiting French Army of the West under Hoche with 13,000 men (July 16–20). The émigré forces lost 8,200 men, mostly captured, while French losses were less than 500. The British troops were safely reembarked (July 20–21).

1795, August 22. The Directory. Republican France rocked internally when a new government—a 5-man group—was established by the Constitution of 1795. After a monarchist outbreak in Paris was put down by General Bonaparte (October 5), the Convention was dissolved. Military operations in the field continued, Carnot remaining in control.

1795. Operations along the Rhine. Jourdan's Army of the Sambre and Meuse, about 100,000 strong, was west of Coblenz. Pichegru's Army of the Rhine and Moselle, about 90,000 men, was in Alsace and blockading Mainz in the Palatinate. Another force captured Luxembourg after a siege of 8 months (June 26). Opposite Jourdan were about 100,000 allies under Austrian Marshal Clerfayt; Wurmser had 85,000 east of the upper Rhine. Jourdan attempted an invasion of Germany (September 3–6), which

Wurmser ignored. Jourdan, advancing toward Frankfurt, was outmaneuvered near **Höchst** by Clerfayt (early October). Clerfayt then defeated Pichegru's forces blockading **Mainz** (October 29) and invaded the Palatinate. Then, unaccountably, he consented to a general armistice (December 21). Jourdan's defeat was attributable to the treachery of Pichegru, who, involved in the royalist plot, had defected to the Austrians, after betraying the invasion plans.

1795. Operations in Italy. The French Army of Italy, under the over all command of General **Barthélemy Schérer,** had progressed slightly eastward and northeastward along the Mediterranean coast. The principal action in this area was at **Loano** (November 23–25), where General **André Masséna** disloged allied forces from their positions in the mountains.

1795–1796. Operations in the Vendée. Revolt blazed briefly again. A British expedition with 2,500 troops approached the Ile d'Yeu off the Poitou coast. Before it could disembark, French troops crushed the uprising and the British withdrew (November 15). By next spring pacification of the Vendée had been brutally completed by Hoche.

War at Sea, 1794–1795

1794, May 29–June 1. Battle of the First of June. In an extraordinary effort to avert famine in France, 130 merchant ships laden with purchased foodstuffs sailed from the United States (April). To protect its safe arrival at Brest, Admiral **Louis T. Villaret de Joyeuse** put to sea with his fleet. Howe intercepted the French fleet in the Atlantic, 400-odd miles off Ushant. When the fight started the opponents had each 26 ships of the line, but before it ended 4 additional French vessels joined Villaret. The 4-day running fight ended when Howe flung his entire fleet into the midst of the French. In an epic melee, 6 French ships were taken and a seventh vessel sunk. The French fleet broke off combat, returning to Brest, to find the food convoy had arrived safely. Tactically a British victory, the French admiral had nevertheless accomplished his mission by drawing the British from the convoy's path. No other actions of major importance occurred in the Atlantic for the rest of the year.

1794. Operations in the West Indies. Admiral Sir **John Jervis** completed the occupation of Martinique, St. Lucia, and Guadeloupe (April). These islands were later recovered by the French governor, **Victor Hugues.** In the flux of naval maneuvering, however, the British Navy retained the upper hand, destroying a great part of the French merchant marine.

1794, August 10. Capture of Corsica. Accomplished by a British joint operation.

1795. Operations in the Atlantic. Only 2 minor actions took place, both in connection with the ill-fated landings in Quiberon Bay (see p. 745). Admiral **William Cornwallis** with 5 blockading ships escaped Villaret's 12 in the Bay of Biscay (June 8–12). Villaret was prevented from attacking the convoy of troop transports only by luck and the boldness of Admiral **John Warren,** the convoy commander. Shortly after this (June 23), Admiral Lord **Alexander Hood of Bridport** (younger brother of Samuel Hood) with 12 ships engaged Villaret off Ile de Groix, capturing three French vessels. For most of the year, both sides engaged in commerce destruction, the British Channel Fleet being held in port, while the French fleet at Brest was in too poor condition to put to sea.

1795. Operations in the Mediterranean. Admiral Lord **William Hotham** twice clashed inconclusively with Admiral **Pierre Martin's** refurbished Toulon fleet. Tactically, the British were favored; strategically, the honors went to France. In November, efficient Sir John Jervis succeeded indolent Hotham.

Operations on Land, 1796–1798

War was waged in two major theaters—Germany and Italy—under the overall direction of the efficient Carnot, who was now in effect both minister of war and chief of staff. The character of

the conflict changed from a defense of national territory to a war of conquest by France. The motivation was partly missionary zeal in spreading the gospel of "Liberty, Equality, Fraternity" throughout Europe, but there was also a definite economic-logistic impulse: France could no longer feed the vast citizen armies she had raised for defense. Carnot's plan was a pincers movement against Austria: the armies of the Sambre and Meuse and of the Rhine and Moselle, driving through Germany, would unite at Vienna with the Army of Italy.

GERMANY; THE NORTHERN FRONT

East of the Rhine a vast war of maneuver took place in the triangle Dusseldorf-Basel-Ratisbon, with the youthful **Archduke Charles** of Austria, utilizing interior lines, pitted against Jourdan and Jean Victor Moreau. Charles had complete liberty of action; the French generals, independent one of the other, were hampered by the orders of the Directory. Jourdan's mission was to attract Charles to the north so as to permit Moreau to invade Bavaria. Jourdan would then join Moreau in an advance into Austria.

1796, June–July. Jourdan's Invasion. With 72,000 men, he crossed the Rhine at Düsseldorf (June 10), penetrated to Wetzlar. Charles repulsed the French advance at **Wetzlar** (June 16). His mission accomplished, Jourdan fell back across the Rhine (July).

1796, June–August. Moreau's Invasion. With 78,000 troops, he crossed at Strasbourg (June 23–27). Charles, leaving General **Alexander H. Wartensleben** with 36,000 men to observe Jourdan, marched with 20,000 against Moreau. According to plan, Jourdan recrossed the Rhine and drove Wartensleben back. After the indecisive **Battle of Malsch** (July 9), Charles fought an inconclusive battle at **Neresheim** (August 11), and was pushed across the Danube by Moreau, between Ulm and Donauwörth (August 12). Jourdan again crossed the Rhine.

1796, August 24. Battles of Amberg and Friedberg. Charles, reinforced, recrossed the Danube, left 30,000 men under General **Latour** to watch Moreau, and hurried north with 27,000 to find Jourdan with 34,000 still pressing Wartensleben near Amberg. Charles struck the French right flank while Wartensleben's 19,000 attacked frontally. Jourdan, suffering losses of 2,000 to the Austrian 500, was decisively defeated and retired. That same day, Moreau attacked and defeated Latour at **Friedberg.** Jourdan, learning this, regrouped near Würzburg on the Main. Charles pressed after him.

1796, September 3. Battle of Würzburg. Charles, with an advantage of 44,000 to 30,000, enveloped both French flanks in a brilliant manuever, the Austrian cavalry distinguishing itself. Jourdan managed to disengage after losing 3,000 men and 7 guns and fell back to the Rhine in a series of running fights. The Austrian loss was 1,500. An armistice was concluded here, and Charles turned his attention to Moreau in Bavaria, who, learning of Jourdan's defeat, broke off his pursuit of Latour and retired. Reaching the Rhine at Hunningen, he crossed to safety (October 26).

1797, April 18. New French Offensive. Hoche, who had superseded Jourdan as commander of the Army of the Sambre and Meuse, moved up the right bank of the Rhine to assist Moreau's Army of the Rhine and Moselle in a planned crossing at Kehl. Charles had been sent to meet Bonaparte's threat in Italy (see p. 751). Latour commanded the Austrians opposite Moreau; under him General **Werneck** held the lower Rhine. Crossing the Rhine between Düsseldorf and Coblenz, Hoche struck Werneck near Neuwied, and defeated him in the **Battle of the Lahn** (April 18). Moreau crossed the river two days later. The Austrians were driven back to Rastatt. Operations ended with the **Peace of Leoben** (see p. 751).

ITALY; THE SOUTHERN FRONT

1796, March 27. Bonaparte Commands the Army of Italy. This army, some 45,000 ill-fed, poorly clothed men, lay along the Riviera from Nice almost to Genoa. British sea power blockaded the coast ports, while beyond the hills to the north on the edge of the Lombardy Plain lay 2 allied armies: Baron **Colli** (Piedmontese) with 25,000 men and **Jean Pierre Beaulieu** (Austrian) with 35,000. Their widely separated dispositions invited attack. Bonaparte concentrated for an offensive just as Beaulieu extended his own left to the sea at Voltri.

1796, April 12. Battle of Montenotte. Striking north between his opponents, Bonaparte with 10,000 men drove in Beaulieu's right flank, defeating an Austrian force of 4,500 at Montenotte. Bonaparte then continued to press on, widening the gap between the allied armies.

1796, April 14–15. Battle of Dego. Pressing his advantage, Bonaparte drove the Austrians out of the town, but a counterattack regained it. Bonaparte in person gathered reserves who threw the Austrians out again. Beaulieu retreated northeast to Acqui. Instead of pursuing, Bonaparte turned west, on Colli's army, which had begun retirement.

1796, April 21. Battle of Mondovi. Colli, with 13,000 men, attempting to stand against Bonaparte's 17,500, held back 1 French assault, but was finally driven out. Bonaparte's rapid pursuit ended when Colli sued for an armistice (April 23), which put Piedmont out of the war (April 28).

1796, April 23–May 6. Advance to the Po. Bonaparte shifted to the northeast. On the north bank of the river, Beaulieu had spread his army out in cordon defense, covering all possible crossing places along a 60-mile front.

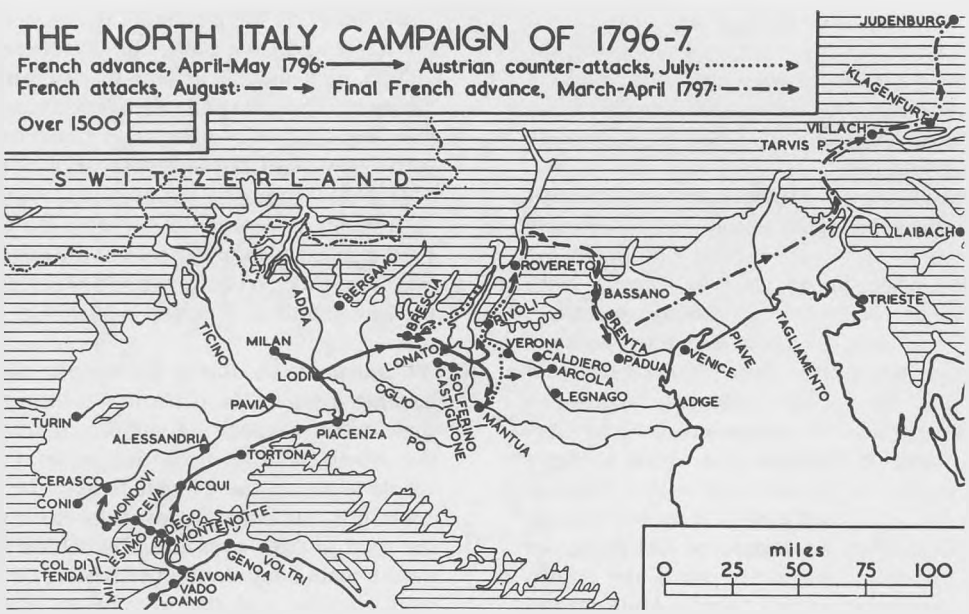
1796, May 7–8. Crossing at Piacenza. Bonaparte, having demonstrated on a wide front along the river line, suddenly surprised Beaulieu by a swift crossing, jeopardizing the Austrian left and its line of communications with Mantua. Beaulieu retreated east in haste, abandoning Pavia and Milan.

1796, May 10. Battle of Lodi. The Austrian rear guard bitterly contested a bridge over the Adda. Putting himself at the head of a massed column of infantry, Bonaparte led a bayonet charge across the bridge, which decided the day and won from his soldiers his soubriquet of "Little Corporal." While Beaulieu continued his retreat toward the Tyrol, Bonaparte entered Milan in triumph (May 15). The Austrian garrison of Milan surrendered the citadel 6 weeks later (June 29). Piedmont made peace with France (May 21); King Victor Amadeus II surrendered Savoy and Nice to France, and granted the French Army the right to garrison fortresses in Piedmont.

COMMENT. *In 17 days Bonaparte had defeated 2 enemies in detail and had conquered Lombardy. After a few days of rest and reorganization, he proceeded after the Austrians.*

1796, May 30. Passage of the Mincio. Beaulieu had reorganized his own forces, holding with 19,000 men the line of the Mincio River from Lake Garda south to Mantua, where he had an additional 11,000. Bonaparte, who had arrived at the Mincio (May 29) with 28,000, concentrated his forces and thrust through this cordon defense at Borghetto. Beaulieu, barely saving himself from destruction, hurriedly retreated across the Adige and into the Tyrol. Except for Mantua, with a garrison of 13,000 men, all north Italy was in Bonaparte's hands. He invested Mantua (June 4); most of the French army was deployed along the Adige to cover the siege operations.

1796, July–August. Arrival of Wurmser. He hurried south from the Tyrol with a new Austrian army. Sending General **Quasdanovich** with 18,000 men down the west side of Lake Garda, toward Brescia, to cut the French communications, the elderly Wurmser himself with 24,000 came down the east side, through the Adige Valley, to relieve Mantua; another detachment of 5,000 came down the Brenta Valley. Abandoning the siege of Mantua and recalling his troops from the Adige, Bonaparte, who had 47,000 men in all, concentrated southwest of Lake Garda against Quasdanovich, leaving Wurmser to move south unopposed to join the 13,000-man garrison of



Mantua. Quasdanovich had split his force in 3 columns; he cut the Milan-Mantua road (July 31). Advancing southeast, he expected to unite with Wurmser, who by this time had come around the south end of the lake, hoping to complete a double envelopment of the French.

1796, August 3. Battle of Lonato. While General **Pierre F. C. Augereau**'s division delayed Wurmser, Bonaparte threw the remainder of his army against Quasdanovich north of Lonato, defeating the 3 columns in detail. One of Quasdanovich's columns surrendered; the shattered remainder retreated north to the head of the lake.

1796, August 5. Battle of Castiglione. Bonaparte's entire army now turned upon Wurmser. Attacked on both flanks and struck in the rear by a turning movement around his left, the Austrian retreated with difficulty across the Mincio and began a general retirement to the Tyrol, having lost 16,000 casualties.

COMMENT. *Again Bonaparte, throwing himself between 2 enemy forces, had concentrated on each in turn and defeated them in detail.*

1796, August 24. Resumption of the Siege of Mantua. The Austrian garrison, reinforced by fugitives from Wurmser's army, was now 17,000 men.

1796, September. French Advance on Trent. Bonaparte moved north with 34,000 men, leaving 8,000 to invest Mantua. At the same time, Wurmser, who had regrouped, also decided to resume the offensive, but again he divided his forces. General **Paul Davidovich** with 20,000 would defend the Tyrol, while Wurmser himself with 26,000 would march down the Brenta Valley on Mantua. Bonaparte, unaware of the Austrian plan, defeated Davidovich at **Caliano** on the upper Adige and drove him back through Trent (September 2–5). Learning of Wurmser's movement down the Brenta, Bonaparte followed, overhauling the Austrians at Bassano after a series of forced marches.

1796, September 8. Battle of Bassano. Augereau and Masséna each attacked an Austrian flank; 1 entire Austrian division was cut off and surrendered, only a few units escaping to the east. Wurmser, however, reached Mantua with the remainder of his army and fought his way

into the city, swelling its garrison to 28,000 (September 13). He attempted to expand the defended area by a sortie, but was driven back into the city by blockading French troops under Masséna and General **Charles Kilmaine** (September 15).

1796, November 1. Third Austrian Attempt to Relieve Mantua. Baron **Josef Alvintzy** sent Davidovich with 16,000 men down the Adige, while he moved on Vicenza with 27,000, east of the Brenta. Alvintzy expected to join Davidovich at Verona, then move south of Mantua. Bonaparte, with 30,000 men (not counting the 9,000 containing Wurmser's 28,000 in Mantua), interposed. Leaving General **Pierre A. Dubois** with 8,000 to delay Davidovich, he hurried east with 18,000 to meet Alvintzy; 4,000 were in reserve at Verona.

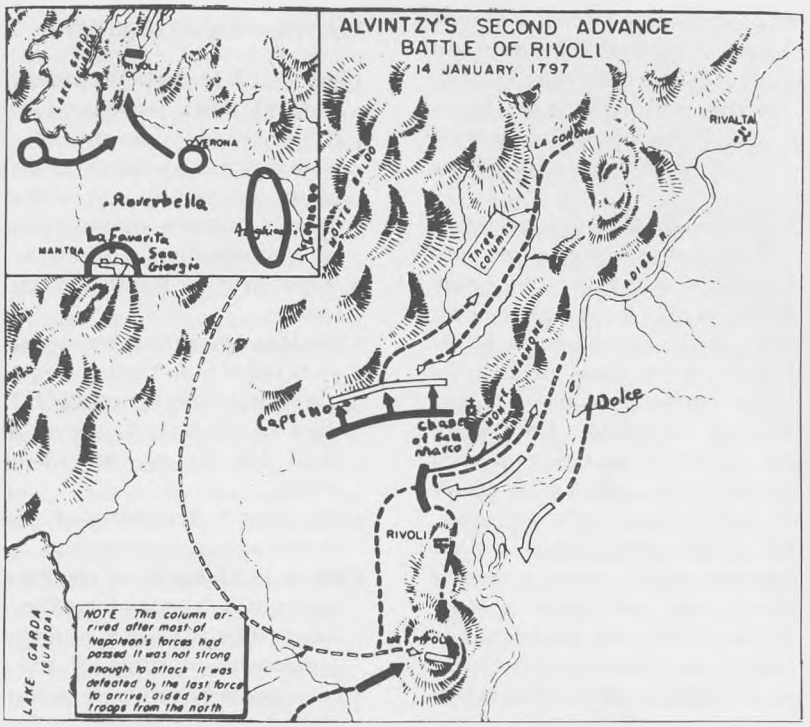
1796, November 12. Battle of Caldiero. Attacking Alvintzy's advance guard, the French were checked by a rapid Austrian build-up and finally withdrew to Verona, having lost 2,000 men. Alvintzy, however, hesitated to advance.

1796, November 15–17. Battle of Arcola. Bonaparte, swinging south around Alvintzy, crossed the Adige, then turned north, moving through a marshy area, to cut the Austrian communications. Despite Napoleon's personal attempt—flag in hand—to storm a bridge over the Alpone at Arcola, continuous French attacks across the causeway were repulsed. But on the third day, Augereau crossed by a trestle bridge below the village, Masséna made another assault on the main bridge, and at the same time a detachment of French cavalry rode to the rear of the Austrian position, blowing bugles. Fearing that they were encircled, Alvintzy's troops broke and retreated. That same day Davidovich drove Dubois back toward Verona, but Bonaparte, shifting from pursuit of Alvintzy, turned on Davidovich and chased him back into Trent (November 19).

1797, January. Fourth Attempt to Relieve Mantua. Once more Alvintzy divided his forces. With 28,000 men, he marched south down the Adige Valley, sending 15,000 more toward Verona and Mantua from the east. Bonaparte ordered the concentration of the bulk of his forces on the plateau of Rivoli, between the Adige and Lake Garda. He was there with 10,000 men under General **Barthélemy C. Joubert,** while Masséna with 6,000 more was hurrying up from Verona, and Generals **Antoine Rey** and **Claude P. Victor,** with 6,000 additional, were also approaching. Augereau with 9,000 at Verona was holding the line of the Adige against the threat from the east. General **Jean M.P. Serurier** with 8,000 continued the investment of Wurmser's 28,000 in Mantua.

1797, January 14. Battle of Rivoli. Alvintzy began a complicated attack in 6 columns; 3 of these were to attack Bonaparte's position on the Rivoli plateau frontally, while 1 each would envelop the French flanks; the sixth column would advance down the east bank of the river to cross over at Rivoli behind Bonaparte's main body. Joubert's division, despite a stout defense and the inspiration of Bonaparte's personal presence, was pressed back by the main Austrian assault, and the eastern Austrian flanking column had reached the plateau to threaten the French right flank when Massena arrived. The penetration on the French right flank was smothered; the right of the Austrian center was assailed, and the western Austrian flanking column surrounded. By late afternoon, Alvintzy had been driven from the field. Bonaparte pursued immediately, sending Rey's division through the mountains to strike the flank and rear of the retreating Austrians. Spearhead of this pursuit was a regiment of infantry under Colonel **Joachim Murat** that had been ferried across Lake Garda, marching across Monte Baldo just in time to smash Alvintzy's efforts to reorganize. Austrian losses were over 12,000, including 8,000 prisoners-of-war and 8 guns, the French loss was about 3,200.

1797, January 14–February 2. Operations around Mantua. Meanwhile, 2 Austrian columns advanced toward Verona and Mantua from the east. One of these, 9,000 strong, under General **Provera,** slipped around Augereau and moved west across the Adige. Reaching the outskirts of Mantua (January 16), Provera at-



tacked the French besiegers, while Wurmser simultaneously attempted a sortie. While Serurier drove Wurmser back into Mantua, Bonaparte hurried up from Rivoli with Massena and, joining Augereau, surrounded Provera's column and forced him to surrender. Wurmser's garrison (now 16,000) in Mantua capitulated (February 2). In this campaign the French captured 39,000 prisoners, nearly 1,600 guns, and 24 colors. During the siege 18,000 Austrians had died, mostly from disease.

1797, March. Arrival of Archduke Charles. He replaced Alvintzy. In the Tyrol he had 14,000 regulars and 10,000 Tyrolese volunteer riflemen, with 27,000 more under his immediate command along the Tagliamento.

1797, March 10. Invasion of Austria. Having been reinforced from France, again Bonaparte interposed himself between two enemy forces. With 41,000 men he moved against Charles on the Tagliamento, leaving Joubert with 12,000 to operate in the Tyrol. Charles retired behind the Isonzo (March 18), but had to fall back again to avoid envelopment after Massena smashed a detachment at **Malborghetto** (March 23). Bonaparte, in pursuit, crossed the snowy passes of the Julian and Carnic Alps in 3 columns. These united at Klagenfurt and advanced to Leoben, 95 miles from Vienna (April 6). At the same time Joubert, having driven in the Austrian forces opposing him in the Tyrol, had reached Lienz on the way to join Bonaparte in front of Vienna. The emperor sent emissaries to discuss peace with the Republican general.

1797, April 18. Preliminary Peace of Leoben. Bonaparte, knowing well that behind him lay a conquered country whose seething inhabitants were threatening his communications, boldly dictated truce terms without any reference to the Directory. They were accepted; Bonaparte then returned to Paris.

1797, October 17. Treaty of Campo Formio. The terms laid down by Bonaparte at Leoben

were formally accepted and the face of Europe changed. Belgium became a part of France, and a northern Italian (Cisalpine) Republic was recognized by Austria, which in return for its losses was given the Republic of Venice. From Basel to Aldernach the left bank of the Rhine was French.

COMMENT. *The French victory in this War of the First Coalition was due to a number of complex factors. The most important of these were (1) the sweeping social and political changes brought about by the French Revolution, which were epitomized by the* levée en masse *of free citizens whose patriotic obligation brought them together in a people's army to defend the state; (2) revolutionary fervor which inspired the rank and file of the French Army to prodigies of valor and energy, which could not be matched by the better-trained, better-disciplined, stolid professionals of 18th-century Europe; (3) the first flowering of the Industrial Revolution, permitting the mobilized state to raise and support a larger proportion of its population than heretofore had been possible in purely agrarian economies; (4) the organizing genius of Carnot in taking advantage of these revolutionary changes; (5) the strategic and tactical genius of young Bonaparte, who applied classical principles of war with skill, ingenuity, and audacity that entirely baffled his 18th-century pedestrian opponents, and whose brilliant campaign culminated in the dictation of peace terms in the heart of Austria.*

1798, January. Continuing War with Britain. Bonaparte was placed in command of an Army of England assembling at Dunkirk for proposed invasion. Convinced that this was a very doubtful project in the light of British command of the sea, Bonaparte suggested to the Directory (February) an expedition to Egypt, which he recognized as being a crossroads of the world. With Egypt under French control, he visualized an outlet to the Orient and a base from which the British could be driven from India.

1798, February. French Occupation of Rome. The pope was captured; a Roman Republic was proclaimed.

1798, April. Occupation of Switzerland. A new Helvetian Republic was established.

Egyptian Campaign, 1798–1800

1798, April 12. Establishment of the Army of the Orient. The French Directory appointed Bonaparte to command. The politicians were glad to have this dynamic, popular leader out of the country. Immediately he began to assemble his new army at Toulon; meanwhile, the concentration at Dunkirk continued as a feint to keep the British fleet out of the Mediterranean.

1798, May 19–July 1. Voyage to Egypt. Bonaparte sailed from Toulon with 40,000 men, escorted by Admiral **François P. Brueys** with 13 ships of the line. Capturing Malta en route (June 12), the expedition landed near Alexandria.

1798, July 2. Storming of Alexandria. The French advanced on Cairo.

1798, July 21. Battle of the Pyramids. Marching up the left bank of the Nile, Bonaparte was harassed by the Egyptian forces, whose main component consisted of the Mamelukes—courageous horsemen unaccustomed to organized modern warfare. The Egyptians, 60,000 strong, concentrated under **Murad** and **Ibrahim** near Embabeh, with their left flank resting on the Pyramids at Gizeh. The French Army of 23,000 attacked to turn the Egyptian left, its divisions formed in squares in checkerboard fashion. A wild charge of the Mameluke horsemen was repulsed, their entrenched camp stormed, and the Egyptians dispersed with great loss.

1798, July–August. Occupation of Egypt. Cairo was seized (July 22). French forces moved in pursuit of Ibrahim, who had retreated toward Syria.

1798, August–December. Allied Reaction. Nelson's annihilation of the French fleet (see p. 754) disrupted Bonaparte's entire plan. The French army in Egypt was completely isolated from the homeland and surrounded by an actively hostile population. A Turkish army under **Achmed Pasha** (the "Butcher") gathered in Syria; another assembled at Rhodes to invade Egypt under escort of an English squadron.

1799, January 31. Bonaparte Takes the Offensive. He marched into Syria with 8,000 men. El Arish (February 14–15) and Jaffa (March 3–7) were taken in turn, and Acre invested (March 17). British Navy Captain Sir **Sidney Smith** took command of the garrison.

1799, April 17. Battle of Mount Tabor. Achmed's army attempted to relieve Acre. Kléber's division, in hollow squares, was surrounded, but Bonaparte enveloped the Turkish force with the remainder of his troops. Under a combined attack the Turks were defeated and driven across the Jordan.

1799, May 20–June 14. Retreat from Acre. After Acre resisted several assaults, and plague broke out in his army, Napoleon retired. After a grueling retreat, continually harassed, the French reached Cairo (June 14). He had lost 2,200 dead, nearly half from disease.

1799, July 25. Battle of Aboukir. Under English escort, the Turkish force from Rhodes, 18,000 strong, landed at Aboukir and entrenched (July 15). Bonaparte at once concentrated all available forces—6,000 men—and moved to the Delta. The Turks lay in 2 concentric positions. The outer position was rapidly brushed away by French attack. An assault on the inner ring was repulsed, but a second assault, led by General **Jean Lannes,** was successful. Murat's cavalry at the same time broke through, and the Turks were annihilated. The citadel of Aboukir surrendered (August 2). Napoleon's losses were 900 killed and wounded.

1799, August 23–October 9. Return to France. Bonaparte, satisfied that he had stabilized the Egyptian situation, realizing that further conquest and glory were unlikely without possibility of reinforcements from France, and alarmed by developments in Europe, turned over the command to Kléber. He returned to France in a fast frigate, eluding British naval forces on the way.

War at Sea, 1796–1800

1796–1798. The War of Commerce Destruction. This was continuous. Frigates of both sides preyed on the commerce of the other, with honors rather evenly divided.

1796. Inconclusive Operations. The British rather ineffectively blockaded the main French naval bases of Brest and Toulon, and at the same time observed both Dutch and Spanish activities. French Admiral **Richery** broke out of Toulon (September 14) with a small squadron, cruised to Newfoundland where he harassed the Canadian fishing industry, captured a number of merchantmen, and returned safely. A more imposing joint force left to invade Ireland from Brest (December 15); 43 warships and transports, under Admiral de Galles, carried some 13,000 troops under Hoche's command. Ill-fitted and badly managed, the flotilla was scattered by bad weather. A portion arrived at Bantry Bay (December 21), but foul weather prevented landing and the project was abandoned. Five ships were lost in storms, 6 more captured by the British; the remainder finally got back. The only significant British naval activity in the Mediterranean was Captain **Horatio Nelson's** singlehanded harassment and commerce destruction along the Franco-Italian coast, which hampered the sea communications of the French Army of Italy.

1796, August 19. Treaty of San Ildefonso. Spain joined France in the war against Britain. The British position in the Mediterranean was gravely threatened, and it was decided to withdraw. Corsica and Elba were evacuated, and the Mediterranean fleet, now under Jervis, moved to Gibraltar (December 1) and transferred its activities to the Atlantic coasts of Spain and Portugal.

1797, February 14. Battle of Cape St. Vincent. Spanish Admiral **José de Córdova,** with 27 ships of the line, sailed from the Mediterranean past Gibraltar en route to Brest and a planned junction with the French fleet, and a proposed invasion of England. Jervis with the former British Mediterranean fleet, 15 ships of the line, cruising off the Portuguese coast to prevent such a move, met the Spanish off Cape St. Vincent. Cordova's ships—in 2 groups of 9 and 18, respectively—were good, but their officers and crews relatively untrained. Jervis

sailed between them in line, then turned on the larger group, which might have escaped had not Nelson, commanding HMS *Captain,* broken away from the British line without orders and after a wide sweep placed his vessel in the path of the Spanish flotilla. He engaged the 7 leading ships until the rest of Jervis' squadron swarmed among them. In the resulting melee 4 Spanish ships were captured—2 by Nelson, who boarded them in quick succession. The shattered Spanish fleet escaped next day to Cadiz. Jervis' victory marked the end of the Spanish threat to England. It was also significant in definitely confirming the tactical superiority of the melee over the more formal line of battle, at least when initiated by a more aggressive force with superior seamanship.

1797, April–August. "The Breeze at Spithead." The Royal Navy in home ports was rocked by mutinies at Spithead (April 16), the Nore (May 12), and other home ports—revolts of the enlisted men against existing brutality, poor food, and poor pay. The mutineers asserted willingness to return to duty if the French fleet put to sea. Suppressed after several weeks of uproar, the mutinies nevertheless resulted in great improvement in the British seaman's status.

1797, October 11. Battle of Camperdown. British Admiral **Adam Duncan,** with 16 capital ships, attacked Admiral **Jan Willem de Winter**'s Dutch fleet of 15 as it emerged from the Texel. Duncan charged the Dutch line in 2 columns, broke it into 3 groups, and in the resulting melee captured 9 vessels, including the flagship. The Dutch put up bitter opposition; the British suffered severe damage and the prizes were so badly battered as to be completely unusable.

1798, May–June. British Return to the Mediterranean. News of Bonaparte's troop movement to Egypt in June caused the Admiralty to send a small British fleet to the Mediterranean under young Admiral Nelson. The French expedition evaded his search; but shortly after its landing in Egypt (see p. 752), Nelson discovered the French fleet of 13 ships of the line anchored in the Bay of Aboukir.

1798, August 1. Battle of the Nile. French Admiral Brueys was entirely unprepared; part of his crews were ashore. Nelson attacked in the late afternoon, a portion of his 13 ships carefully sailing between the French line and the shallow coastal waters, the remainder closing from the outer side, bringing the French between 2 fires. In the dusk and through the night the British fleet cruised slowly down the French line, concentrating on ship after ship in succession. By dawn only 3 French vessels remained; one was run aground and burned by her crew and the other 2 escaped. Brueys was among the killed in this catastrophic defeat.

1798, August 22. Invasion of Ireland. General **Jean J. A. Humbert** landed with 1,200 troops at Killala Bay. The invaders were surrounded and forced to surrender by Lord **Charles Cornwallis** (September 8). A reinforcing squadron under Admiral **J. B. F. Bompard** was overtaken and destroyed by Sir **John Warren** (October 12).

1798–1800. Operations on Malta. A Maltese uprising broke out against the French occupation force (September 1798). Nelson sent ships and men to assist the Maltese guerrillas against French General **C. H. Vaubois,** who was driven into Valetta and besieged. Starvation finally forced the French to surrender (September 5, 1800).

1798–1800. British Domination of the Seas.

War of the Second Coalition, 1798–1800

1798, December 24. Russo-British Alliance. While Napoleon's Egyptian campaign was continuing, Emperor **Paul I** of Russia organized the Second Coalition, England being his principal partner. Austria, Portugal, Naples, the Vatican, and the Ottoman Empire joined (these latter 3 already being at war with France). Preliminary operations had been going on in Italy: French General Joubert overran Piedmont in November and early December, while a Neapolitan army, commanded by Austrian General Karl Mack von Leiberich, had attacked the Roman Republic and captured Rome (November

29), only to be driven out by French General **Jean Etienne Championnet** (December 15). The over-all allied plan contemplated that an Anglo-Russian army under the **Duke of York** would drive the French from the Netherlands, an Austrian army under the Archduke Charles was to oust them from Germany and Switzerland, and a Russo-Austrian army under 70-year-old Marshal **Alexander Suvarov** would expel them from Italy. Available allied forces totaled about 300,000 men, not counting Mack's 60,000 unreliable Neapolitans. French strength was about 200,000, in 5 separate armies: Jourdan with 46,000 was on the upper Rhine; Massena had 30,000 in Switzerland; Scherer with 80,000 was in northern Italy; Championnet had about 30,000 mixed French and Italian troops invading Naples in southern Italy; approximately 24,000 (including the satellite Batavian army) were in Holland under General **Guillaume Brune.** Already France was incorporating vassal legions in her armies: Dutch, Piedmontese, Italian, and Swiss. (In Egypt, Bonaparte had recruited Mameluke, Maltese, and Coptic groups.) Despite the allied preponderance of force, Carnot ordered an early advance on all fronts.

Italy—the Southern Front

1799, January 11. Capitulation at Capua. Mack fled to the French lines to save his life from his mutinous Neapolitan troops. Championnet then stormed Naples (January 24). Establishment of the satellite Parthenopean Republic followed.

1799, March. Action along the Adige. Farther north, Scherer with 41,000 men moved against General **Paul Kray**'s 46,000 Austrians, hoping to win a victory before Suvarov's Russian army and Austrian reinforcements could join Kray. Late in March, French probes around Verona were repulsed. Both armies now moved to attack each other south of Verona.

1799, April 5. Battle of Magnano. Scherer's attack, at first successful, was checked. Kray threw his reserves at the French right flank and broke it in. Scherer retired in considerable disorder. Flamboyant, eccentric Suvarov arrived soon after. Assuming command of the allied army, he advanced westward with 90,000 men, driving the French before him. Leaving Kray with 20,000 men to besiege Mantua and Peschiera, he caught up with the French midway between Brescia and Milan.

1799, April 27. Battle of Cassano. Moreau, who had replaced Scherer, had about 30,000 men to oppose nearly 65,000 allies. After desperate resistance, he was driven off the field. Suvarov entered Milan in triumph (April 28), then seized Turin. Largely because of differences with the Austrian government, Suvarov gave up his pursuit of the French, and allied forces were scattered around northern Italy besieging French garrisons. Meanwhile, General **Jacques E. J. A. Macdonald,** who now commanded the French army in southern Italy, was hastening north with 33,000 men. Moreau, based on Genoa, attempted with some success to distract Suvarov's attention from this reinforcement. Suddenly, in mid-June, the Russian general, who had about 40,000 men scattered around Alessandria, found himself between the 2 French armies.

1799, June 17–19. Battle of the Trebbia. Concentrating 37,000 men unexpectedly against Macdonald, Suvarov defeated him in a hard-fought engagement. French losses were some 11,500; allied casualties 5,500. Macdonald, closely pursued through hostile country by energetic Suvarov, finally joined Moreau near Genoa, losing another 5,000 men en route. Suvarov now pressed into the Apennines to drive the Army of Italy back to the Riviera. Moreau was relieved of his command by the Directory and replaced by Joubert (August 5).

1799, August 15. Battle of Novi. Joubert with 35,000 men attacked Suvarov with 50,000. But Joubert was killed, and his army decisively defeated with the loss of 11,000 men. Suvarov, who had lost 9,000, promptly pursued and drove the French across the Apennines. The pursuit was halted, however, when he discovered that the French Army of the Alps, some 30,000 strong, under Championnet, had entered Italy via the Mt. Cenis Pass. Suvarov

turned northward, but before he could deal with Championnet, he was ordered to march to Switzerland with 20,000 Russians, leaving operations in Italy to Marshal **Michael Melas,** with about 60,000 Austrians.

1799, November 4. Battle of Genoa. Melas defeated Championnet, driving the French back across the Alps.

COMMENT. *By year's end practically all of Bonaparte's gains of 1796–1797 had been erased; the credit goes almost entirely to doughty old Suvarov.*

Germany and the Netherlands

1799, March. Jourdan's Invasion of Germany. The Army of Mayence, 40,000 strong, crossed the Rhine at Kehl and commenced operations against the Archduke Charles, who had about 80,000. Checked at **Ostrach** (March 21), Jourdan boldly determined to attack the archduke at Stockach, with his main effort against the Austrian right. Charles, unaware of Jourdan's intentions, at the same time was leading half of his army forward on a reconnaissance in force.

1799, March 25. Battle of Stockach. Jourdan's initial assault gained some ground, and at first he thought he had won a victory. But Charles held on grimly and sent for the remainder of his army, giving him 46,000 men on the field to Jourdan's 38,000. The Austrian counterattack smashed through the center of Jourdan's loosely linked divisions. Austrian losses were 6,000 against the French 3,600, but Jourdan's offensive had been wrecked. He withdrew his shaken army at nightfall and made good his retreat to the Rhine. There he resigned his post. His army was put under Masséna (see below). There was little further action in Germany for the remainder of the year, the attention of both sides being focused instead on operations south of the upper Rhine in Switzerland, and west of the lower Rhine in the Netherlands.

1799, August. Operations in the Netherlands. A British force, 27,000 strong, under the **Duke of York,** landed on the tip of Holland's peninsula, south of the Texel. The Dutch Republican fleet in the Texel surrendered to a British squadron without fighting (August 30). Reinforced by 2 Russian divisions, the Duke of York took the offensive.

1799, September 16. First Battle of Bergen. The combined Russo-British army, 35,000 strong, was met by Brune with 22,000 Franco-Batavian troops. The Russians and English could not coordinate their operations, and were defeated. Allied losses were 4,000; the French had 3,000 casualties. Two weeks later the allied forces advanced again.

1799, October 2. Second Battle of Bergen. This time the allies drove the republican forces from the field, each side losing about 2,000 men. Pressing his advantage, York continued south.

1799, October 6. Battle of Castricum. The allies were checked in a spirited action along the sand dunes of the North Sea coast, losing 3,500 men to the republicans' 2,500. Lack of Russo-British liaison again contributed to York's defeat. Realizing that he did not have sufficient force to drive the French from Holland, and since his principal mission—destruction of the Dutch fleet—had been accomplished, he withdrew northward.

1799, October 18. The Convention of Alkmaar. This ended hostilities in the Netherlands. The allied army withdrew from Dutch territory; 8,000 French and Dutch prisoners held in England were returned, but the Dutch fleet remained in British hands.

Switzerland and the Alps

1799, March. Operations in Switzerland. Masséna had nearly 30,000 men in central Switzerland. In accordance with Carnot's overall plan, he was to advance through the mountainous Vorarlberg and Grisons regions, covering the right flank of Jourdan's army. Surprising the Austrians by his early advance through the snowy passes, Masséna quickly crossed the upper Rhine near Mayenfeld, and captured most of the 7,000-man force around Chur in the Grisons. The Austrian garrison of Feldkirch, on Masséna's left flank, however, repulsed 2 efforts to capture the town (March 7 and 23). Masséna now held up his advance to await developments north of the Rhine. Mean-

while, he sent a column of 10,000 men under General **Claude Lecourbe,** from the vicinity of the Splugen Pass, raiding down the valley of the upper Inn into the Tyrol. Here Lecourbe was joined by a small French column which had marched north from the Army of Italy, the combined force creating consternation in the western Tyrol.

1799, April. Increasing Austrian Pressure. The defeats of the French armies in Germany and Italy exposed Masséna's northern and southern flanks. Austrian Generals **Heinrich J. J. Bellegarde** and **Friedrich von Hotze** brought overwhelming numbers to bear on Lecourbe's force in the Inn Valley. This was driven back to the upper Rhine.

1799, May. Formation of the Army of the Danube. Masséna took over Jourdan's defeated army as well as his own. He was responsible for defense of the Rhine south of Mainz, as well as of Switzerland. With his main body of 45,000 he withdrew slowly toward Zurich, followed by the Archduke Charles and Hotze, with about 55,000 men. Masséna repulsed an Austrian attack on his entrenchments at **Zurich** (June 4), but the pressure of superior numbers and the doubtful loyalty of the Swiss caused him to withdraw farther westward (June 7). Things remained quiet in Switzerland for the next 2 months, since Charles did not feel his strength permitted further advance.

1799, August. Masséna Resumes the Initiative. He defeated Charles's left wing in the rugged mountains of the upper Rhine and Rhone valleys. He then advanced against **Zurich,** but was repulsed (August 14). Two days later he repulsed an Austrian attack against his left flank at **Dottingen.**

1799, August–September. New Allied Plans. Charles was to march north through western Germany to join the Russo-British force of the Duke of York in driving the French from the Netherlands. Suvarov with his Russians would march north from Italy to Switzerland to drive Masséna back into France. The departure of Charles left less than 40,000 allies in Switzerland under General **Aleksander M. Korsakov,** with Suvarov still advancing from Italy. While Lecourbe with 12,000 men held the St. Gotthard Pass, Masséna with 40,000 struck in central Switzerland.

1799, September 25. Third Battle of Zurich. Masséna with 33,500 swept Korsakov's 20,000 from the field, inflicting 8,000 casualties and loss of 100 guns, French losses were 4,000. Suvarov, arriving at the foot of the St. Gotthard, found himself unexpectedly blocked. He fought his way through the pass, at great cost, only to learn of Korsakov's disaster. He managed to struggle back across the central Alpine spine to Ilanz, on the upper Rhine. Flighty, unstable Czar Paul relieved him of command, a sad ending for the last and most glorious campaign of a great soldier. Meanwhile, the disaster at Zurich, combined with the Russo-British defeat in the Netherlands, forced Charles to abandon his proposed march toward the Low Countries.

COMMENT. *The campaign of 1799 had been disappointing to both sides. The French had been driven from Italy, though they managed to hold their own elsewhere, despite several costly defeats. The allies, on the other hand, had failed miserably to take advantage of their opportunities, which would not come again for many years. Russia in disgust withdrew from the coalition.*

EUROPE

Great Britain

1756–1763. The Seven Years' War. **(See p. 730.)**

1760–1820. Reign of George III.

1775–1783. War of the American Revolution. **(See p. 774.)**

1792–1800. Wars of the French Revolution. **(See p. 741)**

1795–1797. United Irishmen Revolt. These nationalists, inspired by **Wolf Tone, Napper Tandy,** and others, rose in armed rebellion to

secure separation from England. They expected French help, but what little materialized was abortive and weak (see pp. 753, 754). The uprising was savagely repressed (1796–1797) by British General **Gerard Lake.**

1797, April–August. The Naval Mutinies. (See p. 754.)

1798, June 12. Battle of Vinegar Hill. The Irish revolt flared again when an armed mob without competent military direction stormed and burned Enniscorthy, County Wexford, after which they encamped on Vinegar Hill, overlooking the town. Surrounded by Lake's troops, the rebels surrendered after a short struggle. Again violence and brutality marked the suppression of the revolt.

France

1715–1774. Reign of Louis XV.

1756–1763. The Seven Years' War. (See p. 730.)

1774–1792. Reign of Louis XVI.

1778–1783. French Intervention in the American Revolution. (See p. 781.)

1789, July 14. The Storming of the Bastille. Traditional date for the beginning of the French Revolution.

1792–1800. Wars of the French Revolution. (See p. 741.)

Iberian Peninsula

Spain

1759–1788. Reign of Charles III.

1761–1763. Spanish Participation in Seven Years' War. (See p. 740.) Plans were made to invade Portugal, England's ally.

1761–1762. Spain Invades Portugal. Bragança and Almeida were seized. The Portuguese Army, reorganized under command of **William of Lippe** and reinforced by a British contingent under General **John Burgoyne,** repelled the invasion.

1779–1783. American Revolution. (See p. 782.)

1793–1795. War with France. (See p. 742.)

1796–1799. War with England. (See p. 753.)

Portugal

1761–1763. War with Spain. (See above.)

The Netherlands

1780–1784. Dutch-English War. This was an extension of the American Revolution (see p. 784). The Netherlands lost several possessions in both the West and East Indies.

1785–1787. Civil War. Emergence of the Patriot party (pro-French) brought internal conflict between Stadholder **William V** and the States General. William called in Prussian troops (1787) to restore his authority.

1793–1795. War with France. (See p. 742.) The Netherlands was conquered and became the Batavian Republic. William V fled to England.

Scandinavia

Sweden

1751–1771. Reign of Adolphus Frederick.

1771–1792. Reign of Gustavus III. A brilliant, although controversial, ruler and soldier. He was also one of Sweden's greatest authors.

1772, August 19. Royal Coup d'Ėtat. Since the reign of Ulrica Eleonora (1718; see p. 705), Sweden had been a constitutional monarchy, with most power shared by the Riksdag and the Royal Council. Gustavus seized power in a series of well-planned military moves. The remainder of his reign was plagued by continuous internal unrest. The *coup d'état* also aroused fears in Denmark and Russia; they contemplated war, but were deterred by Gustavus' readiness for war.

1788–1790. War with Russia and Denmark. (See p. 761.) Denmark played little part.

1792, March 29. Assassination of Gustavus. This was the culmination of an aristocratic conspiracy.

1792–1809. Reign of Gustavus IV.

Denmark and Norway

This was a period of relatively minor military interest or activity in Denmark. Danish participation as Russia's ally in the war against Sweden (see pp. 758, 761) was nominal.

Germany

Austria and Hungary

The Hapsburgs continued to wear 2 imperial crowns: that of the Holy Roman Empire (or Germany) and that of their hereditary Danubian lands, now commonly known as the Austrian Empire. Austria continued to be involved as a primary participant in all of the major wars of Western and central Europe, and was also still engaged in frequent wars in the Balkans, mostly against Turkey. The principal events were:

1740–1780. Reign of Maria Theresa.

1756–1763. The Seven Years' War. (See p. 730.)

1765–1790. Reign of Joseph II (as Holy Roman Emperor). He was coregent with his mother over Hapsburg lands, but with little influence until her death.

1772. First Partition of Poland. (See p. 760.)

1785. Revolt in Transylvania. The Rumanian peasants rose and massacred many Magyar nobles. The rising was crushed ruthlessly.

War with Turkey, 1787–1791

1787. Austrian Alliance with Russia.

1788. Austrian Failures. Joseph, personally leading his armies, was completely unsuccessful in efforts in Transylvania and Serbia.

1789. Capture of Belgrade. After repulsing a Turkish invasion of Bosnia, the Austrians captured Belgrade.

1790. Peace Negotiations. Threats of Prussian intervention, the weakening of Russian cooperation because of her war with Sweden, revolt in the Austrian Netherlands (see below), and widespread unrest throughout the empire led Joseph and his successor, **Leopold,** to seek peace and to negotiate an armistice with Turkey (July–September).

1789–1790. Brabant Revolt. Imperial infringement of established civil rights in the Austrian Netherlands resulted in armed insurrection, led by **Henry van der Noot.** The rebellion was suppressed, but its objectives were achieved; Joseph restored the former constitution and privileges.

1790–1792. Reign of Leopold II.

1791, August 4. Treaty of Sistova. Austria returned Belgrade to Turkey in return for a strip of northern Bosnia.

1792–1800. Wars of the French Revolution. (See p. 741.) These were disastrous to Austria.

1792–1835. Reign of Francis II.

1793. The Second Partition of Poland. (See p. 760.)

1795. The Third Partition of Poland. (See p. 760.)

Prussia

By virtue of his victories in the War of the Austrian Succession, Frederick the Great made his nation a major power and a rival to Austria in Germany and the Empire.

1756–1763. The Seven Years' War. (See p. 730.) Frederick and Prussia emerged with enhanced power and prestige.

1772. First Partition of Poland. (See below.)

1777–1779. War of the Bavarian Succession. Death of Elector **Maximilian III** caused a crisis when Austria and Prussia selected different candidates for succession. Frederick mobilized and marched into Bohemia (July 1778). An Austrian army marched to oppose him, and for more than a year the 2 armies faced each other without battle. The bloodless conflict (also known as the "Potato War" because of the soldiers' diet) was ended by the **Treaty of Teschen** (May 13, 1779).

1786–1797. Reign of Frederick William II.

1790. Preparations to Intervene in the Austro-Turkish War. Frederick was satisfied when Austria made peace with Turkey (see p. 759).

1792–1800. Wars of the French Revolution. (See p. 741.)

1793. Second Partition of Poland. (See below.)

1795. Third Partition of Poland. (See below.)

1797–1840. Reign of Frederick William III.

Poland

1768–1776. Civil War and Russian Invasion. A group of Polish noblemen ("Confederation of the Bar") organized an armed movement to defend the country against Russian religious and political aggression. Despite the efforts of French General Dumouriez, sent by France to command the dissidents, the movement failed, largely because of Russian armed intervention in support of the pro-Russian government.

1772. First Partition of Poland. Engineered by Frederick the Great to prevent Austria, jealous of Russian successes against Turkey, from going to war. Guerrilla war continued throughout Poland.

1792. Russian Invasion of Poland. This was caused by constitutional changes that would have stabilized the weak Polish monarchy. Prussia at once also invaded to prevent Russian conquest.

1793. Second Partition of Poland. Russia and Prussia made a bargain at Poland's expense.

1794. National Uprising. The Polish nation rose in revolt against Russian and Prussian domination. **Thaddeus Kosciusko,** whose democratic principles had brought him to America to take part in the American Revolution, led a popular uprising.

1794, April 3. Battle of Raclawice. Kosciusko, with 4,000 troops and some 2,000 peasants armed only with scythes and pikes, defeated a force of 5,000 Russian troops. The Russian garrison of Warsaw (Warszawa) was driven out (April 17) after several days of street fighting.

1794, April–August. Russian and Prussian Invasions. The allied forces converged on the unfortunate country and after several desperate encounters Kosciusko's forces were invested in Warsaw by Frederick William of Prussia with 25,000 men and 179 guns, and Russian General **Fersen** with 65,000 men and 74 guns. Another Russian force of 11,000 occupied the right bank of the Vistula (Wisla) across from the capital.

1794, August 26–September 6. Defense of Warsaw. The Poles, 35,000 strong, with 200 guns, resisted 2 successive assaults and the siege was lifted. There was, however, no cohesion between the Polish forces in the field.

1794, October 10. Battle of Maciejowice. Kosciusko, with only 7,000 men, was crushed by Fersen's 16,000 Russians when 1 of his divisions failed to support him. Kosciusko, seriously wounded, was made prisoner. The entire uprising now collapsed.

1795. Third Partition of Poland. The ancient Polish nation disappeared; Russia had a permanent hold in Central Europe.

Russia

1741–1762. Reign of Elizabeth (youngest daughter of Peter the Great).

1756–1763. Seven Years' War. (See p. 730.)

1762. Revolution. Peter III was deposed by his nobles and generals after a 6-month reign.

1762–1796. Reign of Catherine II (the Great). She was the German-born wife of Peter III.

1766–1772. Russian Intervention in Poland. **(See p. 760.)**

1768–1774. First War of Catherine the Great against Turkey. (See below.)

1773–1774. Peasant and Cossack Revolt. Russian efforts against Turkey were hampered by **Emelyan I. Pugachev**'s revolt in southeast Russia. This was put down only with difficulty by Suvarov.

1783. Annexation of the Crimea. England and Austria persuaded Turkey not to go to war.

1787–1792. Second War of Catherine the Great against Turkey. **(See p. 762.)**

WAR WITH SWEDEN, 1788–1790

1788. Swedish Invasion. Gustavus III invaded Russian Finland to offset possible future moves against his country by either Russia or Prussia. Bold assaults on land and sea brought success to the Swedes at first, causing consternation in Catherine's court, already occupied by the Turkish war. Gustavus' efforts on land ended with a Swedish repulse before the fortress of **Svataipol,** and a sudden Danish attack on Sweden further hampered him.

1789, August 24. First Naval Battle of Svensksund. The Swedish fleet, under Count **Karl A. Ehrensvard,** was decisively defeated by the Russian Admiral **Krose,** with loss of 33 ships. However, within a year, the Swedish Navy had been completely restored by the intensive efforts of Gustavus.

1790, July 2–9. Second Battle of Svensksund. The Swedish fleet, under the **Duke of Sudermania,** attacking in single file in a narrow channel, successfully ran the gantlet of the Russian fleet until the explosion of a powder ship threw the line into confusion, and the Swedes withdrew to the protection of the guns of Sveaborg (then a Swedish fortress). On the 9th, the reorganized Swedish fleet again put to sea to meet the Russians, who advanced in a crescent formation. The excellent Swedish gunnery chopped gaps in the Russian line and the Swedes, who had in all 195 ships to the Russians' 151, defeated their enemy piecemeal in the greatest sea fight in Scandinavian history. Russian losses were 53 ships sunk or captured. The stupidity and poor leadership of **Charles H. N. O. Nassau-Siegen,** an international adventurer in the Russian service, contributed to the disaster. British **William Sidney Smith** served brilliantly with the Swedes.

1790, August 15. Treaty of Wereloe. Peace with Sweden followed, restoring the *status quo ante.*

1792–1800. Wars of the French Revolution. **(See p. 741.)**

1793. Second Partition of Poland. **(See p. 760.)**

1795. Third Partition of Poland. **(See p. 760.)**

EURASIA AND THE MIDDLE EAST

TURKEY

First War against Catherine of Russia, 1768–1774

1768, October. Turkey Declares War. Poland pleaded for assistance against Russian intervention (see p. 760), but Turkey merely protested until Russian troops pursued Poles into Turkish territory and destroyed the Turkish town of Balta. The Crimean Tartars at once invaded the Ukraine.

1769. Russian Invasion of the Caucasus. The Turks were defeated in the Kabardia and in Georgia.

1769. Russian Invasion of the Balkans. Russian Count **Peter Rumiantsev** defeated the main Turkish army on the banks of the **Dniester.** He then seized Jassy and overran Moldavia

and Wallachia, including the occupation of Bucharest.

1769–1773. Revolt in Egypt. Ali Bey, governor of Egypt, revolted and declared Egypt independent. He received Russian support.

1770. Russians Incite and Support Rebellion in Greece. Admiral **Aleksei G. Orlov**'s Russian Baltic fleet sailed to the Mediterranean and captured Navarino (April) and several other small places in the Morea. The Turks, however, assembled a large army, mostly Albanian, ruthlessly suppressed the revolt, and drove the Russians away (June).

1770, July 6. Naval Battle of Chesme (Çeşme). Orlov defeated the Turkish fleet near the island of Chios, off the coast of Anatolia. Scottish Admiral **Samuel Greig,** serving under Orlov, was largely responsible for the victory.

1770, August. Battle of Karkal. A Turkish and Tartar army, attempting to drive the Russians from Moldavia, were badly defeated by Rumiantsev. The Turks were forced to retreat behind the Danube. The Russians then systematically captured the Turkish fortresses along the Danube and Pruth Rivers.

1771. Egyptian Invasion of Syria. The Egyptians, under **Abu'l Dhahab,** captured Damascus. Abu'l then negotiated secretly with the Turks, evacuated Syria, and marched back to attack Egypt for Turkey (see below).

1771. Invasion of the Crimea. A Russian army under Prince **Vasily Dolgoruky** stormed the Isthmus of Perekop and conquered the Crimea.

1772–1773. Truce. Peace negotiations were fruitless. The Turks took advantage of the lull to reorganize and revitalize their army.

1772–1773. Confused War in Egypt and Syria. As Abu'l returned to Egypt to reconquer it for Turkey, Ali marched to Syria to reconquer it. Abu'l consolidated Egypt, and Ali consolidated Palestine.

1773, April 19–21. Battle of Salihia. After initial success, Ali was defeated and captured. Egypt returned to Turkish control. Abu'l was governor.

1773. Operations on the Danube. Count Rumiantsev, commanding Russian forces on the Danube, advanced south toward the main Turkish army under the Grand Vizier **Muhsinzade.** The Turks fell back on Shumla (Shumen or Kolarovgrad). Other Russian forces besieged the Turkish fortresses of Varna and Silistria.

1773. Peace Negotiations. The grand vizier began to negotiate for peace with Rumiantsev. The Russians, too, were eager for peace because of a vast Cossack and peasant revolt in southeast Russia (see p. 761).

1774, June. Battle of Kozludzha. Suvarov, subordinate to Rumiantsev, defeated a large portion of the Turkish Army near Shumla.

1774, July 16. Treaty of Kuchuk Kainarji. Russia returned Wallachia, Moldavia, and Bessarabia, but was given the right to protect Christians in the Ottoman Empire, and to intervene in Wallachia and Moldavia in case of Turkish misrule. The Crimea was declared independent, but the sultan remained the religious leader of the Tartars as the Moslem caliph. Russia gained Kabardia in the Caucasus, unlimited sovereignty over the port of Azov, part of the Kuban near Azov, the Kerch peninsula in the Crimea, and the land between the Bug and Dnieper rivers and at the mouth of the Dnieper. Russian merchant vessels were to be allowed passage of the Dardanelles. Russia thus gained 2 outlets to the Black Sea, which was no longer a Turkish lake. Russian troops were withdrawn north of the Danube. Suvarov was sent to deal with the Cossacks.

1783. Russian Annexation of the Crimea. **(See p. 761.)**

1786. Revolt in Egypt. Suppressed by an Ottoman army.

Second War with Catherine of Russia, 1787–1792

1787. Russia Precipitates War. This resulted from encroachments in Georgia and demands that Turkey recognize a Russian protectorate over Georgia. Turkey was also intriguing with the Crimean Tartars to rise against Russia. Austria joined Russia on the basis of a secret

alliance. Prince **Peter** of Montenegro rebelled against Turkey (1788).

1788. Turkish Repulse at Kinburn. Suvarov defeated a Turkish attempt to reconquer the Crimea.

1788. Russian Invasion of Moldavia. Rumiantsev captured the cities of Chocim and Jassy, then advanced to the seacoast. After **John Paul Jones's** naval victories (see below), Prince **Grigori Potemkin** took Ochakov, at the mouth of the Danube, opposite Kinburn. He seems to have ordered the massacre of all Turkish inhabitants of the captured cities, men, women, and children.

1788, June 17 and 27. Naval Battles of the Liman (Lagoons near the Mouth of the Dnieper). John Paul Jones, commanding the Russian Black Sea fleet, defeated **Hasan el Ghasi**'s Turkish flotilla in 2 sharp actions. Nassau-Siegen, who was vying with Jones for command, botched the opening of the first battle, but Jones's leadership retrieved the situation, and the Turkish ships drew off. The second battle brought disaster to the Turks, who lost 15 ships, 3,000 men killed, and more than 1,600 taken prisoner. Russian losses were 1 frigate, 18 men killed, and 67 wounded.

1788. Operations in Serbia and Transylvania. The Turks repulsed the Austrian armies under Joseph II. (See p. 759.)

1789. Operations in Moldavia and Wallachia. The Russians invaded Moldavia from the north, the Austrians from the west. The Austrians and 2 of the Russian armies (under Prince Potemkin and Count Rumiantsev) were generally unsuccessful against a revitalized Turkish army. But a Russo-Austrian army under Suvarov and Saxe-Coburg smashed the Turks at **Focsani** (August 1) and **Rimnik** (September 22). Suvarov's victorious advance then forced the Turks to withdraw to the Danube.

1789. Operations in Serbia. The Austrians, now commanded by General Gideon E. von Laudon, repulsed a Turkish invasion of Bosnia, then besieged and captured Belgrade by assault.

1790, July 27. Truce with Austria. (See p. 759.)

1790. Revolt in Greece. This seriously interfered with Turkish operations for the remainder of the war.

1790, December. Storming of Ismail. After a prolonged siege, Suvarov captured this fortress at the mouth of the Danube.

1791. Treaty of Sistova. (See p. 759.) Peace with Austria.

1791. Peace Negotiations. Russia was anxious for peace because of Prussian activity in Poland.

1792, January 9. Treaty of Jassy. Russia returned Moldavia and Bessarabia to Turkey. She retained all conquered territory east of the Dniester River, including the port of Ochakov.

1798–1800. War with France; Bonaparte's Invasion of Egypt. (See p. 752.)

Persia, 1747–1800

1747–1750. Struggle for the Throne. After the death of **Nadir Shah,** a protracted 3-cornered fight for control of the empire ensued between **Mohammed Husain,** who held the Caspian provinces; **Karim Khan,** strong in the south; and **Azad** in Azerbaijan. Karim Khan was successful and established unquestioned control over Persia.

1750–1779. Reign of Karim Khan. A period of relative peace and prosperity.

1779–1794. Civil War. This was a revolt of **Agha Mohammed,** an able eunuch general, against the successors of Karim Khan.

1794–1797. Reign of Agha Mohammed. A cruel and brutal ruler.

1795–1796. Invasion of Georgia. This nation had fallen away from Persian rule after the death of Nadir Shah. Defeating the Georgian King **Heraclius,** Agha Mohammed brutally reimposed Persian sovereignty over Georgia.

1797. Assassination of Agha Mohammed.

1798. Invasion of Afghanistan. The new Shah, **Fath Ali,** was incited by the British. This began a long-drawn-out series of wars weakening both Asian kingdoms.

SOUTH ASIA

Afghanistan

Ahmad Shah, assuming control of the Afghan provinces of Persia after the death of **Nadir Shah** of Persia (see p. 711), established the Durani Dynasty. His military operations extended over much of Central Asia, including 9 invasions of India. The high point of his Indian incursions was a great victory over a numerically superior Maratha army at the **Battle of Panipat** (see p. 765). On his death the Afghan Empire extended over eastern Persia and all the region south of the Oxus, including Baluchistan, Kashmir, the Punjab, and Sind. His son, **Timur Shah** (1773–1793), weak and ineffectual, permitted loss of Sind and other Indian territory and the slow disintegration of Afghan sovereignty over the entire empire. Timur's son, **Zaman Murza** (1793–1799) in 1799 ceded Lahore to Sikh **Ranjit Singh** (see p. 860). Meanwhile, a protracted war with Persia had begun (1798; see p. 763).

India

When the period opened, 4 European nations were milking India for their own purposes. Waning Dutch exploitation was soon eliminated (1759), and Portugal's influence was frozen in her possessions of Goa, Diu, and Daman. Only England and France continued their battle for supremacy amid the wreckage of the Mogul Empire, while the Marathas were simultaneously rising to power. Both European nations took advantage of native rivalries in an unabashed and almost continual warfare with but one objective—the exploitation of India's riches for the benefit of European investors. Both masked their national rivalry through agencies—for France the **Compagnie des Indes,** for England the **British East India Company** ("John Company"). This latter remarkable organization had the delegated power of a sovereign state, including the making of both war and peace "with any non-Christian nation." It had its own army, composed of European adventurers and native troops, under English commanders. Further English military influence was furnished (1754) by an English regular regiment, the 39th Foot (later the Dorsetshire Regiment), at Madras. This became the backbone of English military operations in India. Many of its officers and men later transferred to the company's service. At midcentury France and her native allies controlled a great part of southern India; **Joseph François Dupleix** (see p. 714) was governor general of all French establishments in India; his subordinate, General **Charles J. P. Bussy-Castelnau,** was operating in Hyderabad in the Deccan.

1751, September–October. Capture and Siege of Arcot. Chanda Sahib, France's puppet Nawab of the Carnatic, was besieging a small English garrison at Trichinopoly (Tiruchirappalli). Young **Robert Clive,** former East India Company clerk turned soldier, with 500 men and 3 guns moved suddenly from Madras and captured Arcot, Chanda Sahib's capital, as a diversion to relieve the siege (September 12). The nawab's son, **Raja** Sahib, with 10,000 men, at once returned to invest Arcot. After a siege of 50 days, in which Clive's troops were reduced to 120 Europeans and 200 sepoys, the Indians assaulted, driving ahead a herd of elephants, their heads armed with iron plates, to batter down the gates. But the ele-

phants stampeded when they came under musket fire. Another assault across the moat was repelled, and then the assailants withdrew after an hour's fight, having lost 400 casualties. Clive's losses were only 5 or 6 men. This exploit greatly enhanced England's prestige, to the disadvantage of the French, whose campaign now broke down. Dupleix, a most capable administrator, whose greatest trouble had been lack of understanding by and support from the home government, was summarily relieved in 1754.

COMMENT. *This was the beginning of Clive's career, which would lead to England's domination of India and his own fame as one of Britain's foremost captains and colonizers.*

1756, June 20. Capture of Calcutta. Suraja Dowla, Nawab of Bengal, after a 4-day siege, seized the town, founded by the British and now the focal point of their activities. Europeans unable to escape were forced into a small subterranean dungeon—the **Black Hole**—in which it has been alleged 123 out of 146 perished overnight. Historians today are still not certain of the numbers actually involved.

1757, January 2. Recapture of Calcutta. This was by a joint expedition from Madras under Clive and Admiral **Charles Watson.**

1757, March 23. Capture of Chandernagore. This French post was seized by Clive after a spirited fight. This permitted Clive to march inland against Suraja without fear for his line of communications with Calcutta.

1757, June 23. Battle of Plassey. Clive, pursuing Suraja, found him entrenched on the far side of the Bhagirathi River near the village of Plassey. The Indian Army was 50,000 strong, with 53 guns. Clive had 1,100 Europeans, 2,100 native troops, and 10 guns. He crossed the river and massed his force in a mango grove. The Nawab's army moved to surround it in a large semicircle, its guns—under French command—massed on the right flank. A sudden rainstorm wet the Nawab's powder. As the firing ceased, a cavalry charge swept up to the British position, but Clive's gunners had covered their ammunition from the rain and repulsed the charge, inflicting great loss. Clive, counting rightly on the disaffection of part of the Indian army, advanced to cannonade the Nawab's entrenchments at short range. An Indian infantry sortie was repulsed and Clive now assaulted the position, in which only the French gunners, under M. **St. Frais,** continued fighting to the last. Plassey decided the fate of Bengal. Suraja was assassinated a few days later and was succeeded by Clive's ally, **Mir Jafar.**

1758. Arrival of French Reinforcements. An expeditionary force under Irish-born Baron **Thomas Lally** arrived at Pondicherry, capital of French interests. He immediately marched to besiege and capture British **Fort St. David,** south of Pondicherry (March–June 2).

1758, December–1759, February. Siege of Madras. Lally failed in efforts to take the city. He was hampered by lack of naval support, while the British garrison was supplied by sea (see p. 739).

1759, January 25. Battle of Masulipatam. A British relieving force, arriving by sea, under **Francis Forde** defeated Lally, forcing him to raise the siege of Madras.

1759. Operations against the Dutch. A Dutch naval expedition was repulsed by the British at the mouth of the Hooghly River, and Forde captured the Dutch port of **Chinsura.**

1760, January 22. Battle of Wandiwash. Lally was defeated by General Sir **Eyre Coote** and forced to retire to Pondicherry. There he was besieged.

1760, August-1761, January 15. Fall of Pondicherry. Lally capitulated to Clive's troops (Clive had returned ill to England) there being no hope for reinforcements from France (see p. 739).

1761, January 14. Battle of Panipat. The Afghan armies of **Ahmad Shah Durani** had been ravaging northern and central India (since 1747). Ahmad reached and captured Delhi (1757). The **Maratha** revolt which had demolished the Mogul Dynasty had swept north into the Punjab (1753), but Ahmad, again invading, slowly drove the Mahrathas back, routing them completely at Panipat. Ahmad's later with-

drawal, caused by a Sikh insurrection, left India in complete chaos, facilitating British consolidation of their position in Bengal.

1763. Treaty of Paris. Pondicherry was restored to France (see p. 741), but the *Compagnie des Indes* was soon dissolved (1769).

1763–1765. Operations in Bengal. Sporadic conflicts between the British East India Company's troops and the native rulers continued. A mutiny in the Company's Bengal Army, near Patna (1763), inspired by the Nawab of Bengal, was summarily quelled at **Buxar** (October 23, 1764), and 24 of the ringleaders blown from gun muzzles by Major **Hector Munro** to avenge the massacre at Patna.

1766–1769. First Mysore War. Haidar Ali, ruler of Mysore, fought British troops to a standstill, then signed a treaty of defensive alliance with the East India Company.

1771. Mysore-Maratha War. Inconclusive.

1774. Rohilla War. Governor General **Warren Hastings** loaned a brigade of East India Company troops to **Shuju-ud-Dowla,** Wazir of Oudh and a British ally, to help conquer the territory of the Rohillas, a fierce Afghan tribe in the Ganges-Jumna river region west of Oudh (April). He offset the threat of growing Maratha strength, but his employment of Company troops in a native war was contrary to British and Company policy.

1779–1782. First Maratha War. Inconclusive despite British success in Gujarat and the capture of the fortress of Gwalior (1780).

Second Mysore War, 1780–1783

1780. Haidar Ali Declares War. He was smarting from failure of the British to support him in his own war with the Marathas. After British troops moved against French holdings in 1778 (see p. 781), he joined France. The British had taken Pondicherry and Mahé from the French. But Haidar Ali, in the Carnatic, attacked and cut to pieces a small British force at **Perambakam** (September 10), and swept up to the gates of Madras.

1781, June 1. Battle of Porto Novo. Coote, with 8,000 men sent by sea from Bengal, attacked and defeated Ali's 60,000, saving the Madras Presidency.

1781, August–September. British Victories. Haidar was defeated at **Pollilur** (August 27) and at **Sholingarh** a month later.

1782, August 30. Capture of Trincomalee. French Admiral **Pierre de Suffren** captured the port from the British and was thus able to send help to Haidar Ali. He retained tenuous control of the Indian Ocean until the signing of peace between England and France in 1783 (see p. 791).

1783. Withdrawal of French Aid Ends the War. Haidar Ali having died, his son **Tippoo Sahib** made peace.

1789–1792. Third Mysore War. Tippoo attacked Travancore. **Lord Cornwallis,** who had succeeded Hastings as Governor General of India, invaded Mysore; stormed the fortress of Bangalore, its capital; and drove Tippoo into Seringapatam, where he was besieged. Tippoo made peace (March 16, 1792) by ceding half his dominions to the British.

1795–1796. British Expedition to Ceylon. The Dutch were easily defeated. The independent King of Kandy soon recognized British sovereignty, and Ceylon became a crown colony (1798).

1799. Fourth Mysore War. Governor General **Richard Wellesley** (then Lord Mornington) as directed by Pitt, moved actively to suppress the last vestiges of French influence in India, lest Bonaparte invade it. French troops in the employ of the Maratha Confederacy were disbanded on Wellesley's demand. Tippoo, however, was carrying on secret correspondence with the French government; on his refusal to cooperate with the British, Wellesley sent 2 armies into Mysore. General **George Harris** drove Tippoo once again into Seringapatam and then took the place by storm. Tippoo was killed while fighting bravely in the breached wall. Wellesley's younger brother, General **Arthur Wellesley** (later Duke of Wellington) distinguished himself in the campaign and was appointed governor of Seringapatam.

SOUTHEAST ASIA

Burma

1740–1752. Mon Revolt. The inhabitants of Lower Burma rose up against the Burman Toungoo Dynasty, drove them out, and overran much of Upper Burma, capturing Ava (1752). The Toungoo Dynasty was completely destroyed. The Mons (or Talaings) reestablished their former capital at Pegu (see p. 717).

1752–1757. Rise of Alaungpaya. This obscure lord of the Shwebo district united the demoralized Burmans. He began to repel the Mons from Upper Burma, and reconquered most of Lower Burma (1754–1755). The Mons were able to hold only the regions around Syriam and Pegu. In these operations Alaungpaya proved himself probably the ablest military leader of Burmese history. His successes, thanks also to strong lieutenants, established a strong dynasty.

1753. British Post at Negrais. This small fortified trading post was unrecognized by the Mons, but Alaungpaya recognized it.

1755, 1758. Alaungpaya's Operations in Manipur. This was a punitive response to Manipuri raids (1715–1749). When the local inhabitants rose up against the garrisons he left there, Alaungpaya returned to devastate Manipur (1758).

1755–1756. Siege of Syriam. It was captured after a long struggle, and despite French assistance to the Mons. Alaungpaya also captured 2 French warships in the narrow river channel near the town. He killed the officers but spared the crews, incorporating them into his own army.

1756–1757. Siege of Pegu. After driving the remaining Mon army into the city, Alaungpaya finally wore down the defenders and captured the town by assault. This, and the ensuing massacre, ended Mon national existence in Burma, though there was an abortive uprising (1758) while Alaungpaya was absent on his punitive expedition to Manipur (see below).

1759. Capture of Negrais. Alaungpaya massacred most of the small English and Mon garrison.

1760. Invasion of Siam. Alaungpaya advanced to besiege Ayuthia, the capital. While directing the fire of his siege batteries, he was seriously wounded by a gun explosion. Because of either this or an epidemic of malaria, the siege was raised and the army retreated to Burma, suffering some losses from Siamese harassment. The king died en route.

1764. Invasion of Manipur. Hsinbyushin (1763–1776), the second son of Alaungpaya, carried off much of the population into slavery.

1764–1767. Invasion of Siam. This culminated in the capture of Ayuthia. The operation was very well conducted, and the victory was due mainly to the able Burmese General **Maha Nawraha,** who died just before the surrender of Ayuthia.

1765–1769. Chinese Invasion. The Chinese, aggravated by Burmese frontier forays, invaded Burma in great force. They seized most of eastern Burma from Bhamo south to Lashio and west almost to the Irrawaddy at Singaung. The Burmese, however, refused to accept defeat. Holding on to a number of strategically located fortified stockades in the jungles, avoiding open battle against the larger Chinese armies, and aggressively and incessantly raiding the Chinese lines of communication, they soon had the Chinese armies cut up into several segments and isolated in north-central Burma. As a result of heavy casualties, of their inability to come to grips with the elusive Burmese in the jungles, and of losses from disease and starvation, the Chinese asked for terms. Burmese General **Maha Thihathura,** realizing that, if the war continued, China had inexhaustible supplies of man power, granted terms to the Chinese, who withdrew.

COMMENT. *This was one of the most glorious episodes of Burmese military history.*

1768–1776. Defeat in Siam. Exhausted by the struggle with the Chinese, and unable to follow an effective and consistent pollicy in Siam, the Burmese were being expelled from Siam by **P'ya Taksin** (see below).

1770. Invasion of Manipur. Maha Thihathura and other Burmese leaders, to divert the king's mind from foolhardy operations against the Siamese or Chinese, and fearful of execution if they tried to reason with him, diverted their armies into operations against a minor foe.

1775–1776. War with Siam. (See below.)

1782–1819. Reign of Bodawpaya (youngest son of Alaungpaya). He gained the throne after a violent struggle with several other rivals.

1784–1785. Conquest of Arakan.

1785–1792. Renewed War with Siam. A Burmese invasion (1785–1786) was generally unsuccessful, probably largely due to the utterly incompetent leadership of the king. Burma did, however, annex the regions of Tavoy and Tenasserim after sporadic border warfare.

Siam

1760. Alaungpaya's Invasion. (See p. 767.)

1764. Burmese Invasion of Southern Siam. General P'ya Taksin finally halted the invasion at **P'etchaburi,** but only after most of the Malay Peninsula provinces of Siam had been overrun.

1764–1767. Burmese Invasion of Central Siam. This resulted in the capture and destruction of Ayuthia (see p. 767). P'ya Taksin, however, had been able to fight his way through the Burmese besieging lines with a few troops, and escaped southward to raise a new army.

1767–1768. Burmese Ejected from Central Siam. P'ya Taksin assumed the throne. The country, however, was in turmoil, with two other claimants to royal power; at the same time the Burmese were planning to invade the country again, and trouble with Vietnam was brewing in Cambodia, an area which had long been under Siamese suzerainty.

1769. Repulse at Chiengmai. P'ya Taksin failed in an effort to win the region back from Burma. He was, however, able to defeat his 2 major rivals and to secure his rule over the nation.

1770–1773. Operations in Cambodia. The fortunes of war fluctuated widely. The Siamese defeated a Vietnamese-supported puppet ruler and regained full control of Cambodia.

1775–1776. Renewed War with Burma. P'ya Taksin reconquered Chiengmai (1775). He then repulsed an attempted Burmese invasion (1776).

1778. Invasion of Laos. The Siamese seized Vientiane, which recognized Siamese suzerainty.

1780–1782. Intervention in Vietnam. This ended with the death of P'ya Taksin (see below).

1782. Death of P'ya Taksin. He had become insane, and was killed in an uprising. General **Chakri** took the throne as King **Rama I** (1782–1809). He founded the modern city of Bangkok as his capital.

1785–1792. Sporadic Warfare with Burma. (See above.)

Vietnam

1755–1760. Expansion in Cambodia. The Khmer, their Siamese allies occupied with a struggle against Burma, were helpless against the Vietnamese aggressors.

1769–1773. War with Siam over Cambodia. After initial success, the Vietnamese were driven out. (See above.)

1773–1801. Civil War. Long and complicated, it resulted in the elimination of the Trinh family and a briefly emergent Tay Son family, with **Nguyen Anh** eventually victorious and assuming the imperial title of **Gia Long** at the capital of Hue (1802). During this struggle, Nguyen Anh received considerable assistance from Siam, with the result that Siamese control over Cambodia was strengthened and Siamese influence became a political issue in Vietnam.

Cambodia

Cambodia, as we have seen, was essentially simply a football to the conflicting ambitions of Siam and Vietnam.

Laos

Laos, divided into the 2 principalities of Luang Prabang and Vientiane, was a pawn in the great struggle between Burma and Siam. Dominated at first by Burma as a result of the victories of Alaungpaya and his successors, toward the end of the century the 2 principalities of Laos were generally under Siamese control, though some southeastern regions were under strong Vietnamese influence.

Malaya and Indonesia

There were no significant military activities in Malaya or Indonesia during this period. The Dutch-English trade rivalry continued, with the Dutch consolidating their hold on most of Indonesia, save for strong British influence in Borneo; at the same time, the English established a foothold in Malaya at Penang (1771) to initiate a challenge to the powerful Dutch position in the peninsula.

The conquest of the Netherlands by France in 1795, during the War of the First Coalition (see p. 745), gave Britain an opportunity to break the Dutch trade monopoly in this area. At the "request" of the Dutch government in exile, England took Cape Colony (the important Dutch base at the top of Africa, controlling the southwest approach to the Indian Ocean), Ceylon (the main intermediate base), all the Dutch posts in India and on the west coast of Sumatra, the Spice Islands, and Malacca. A solemn promise was made to return these to the rightful Dutch government when peace was made.

EAST AND CENTRAL ASIA

China

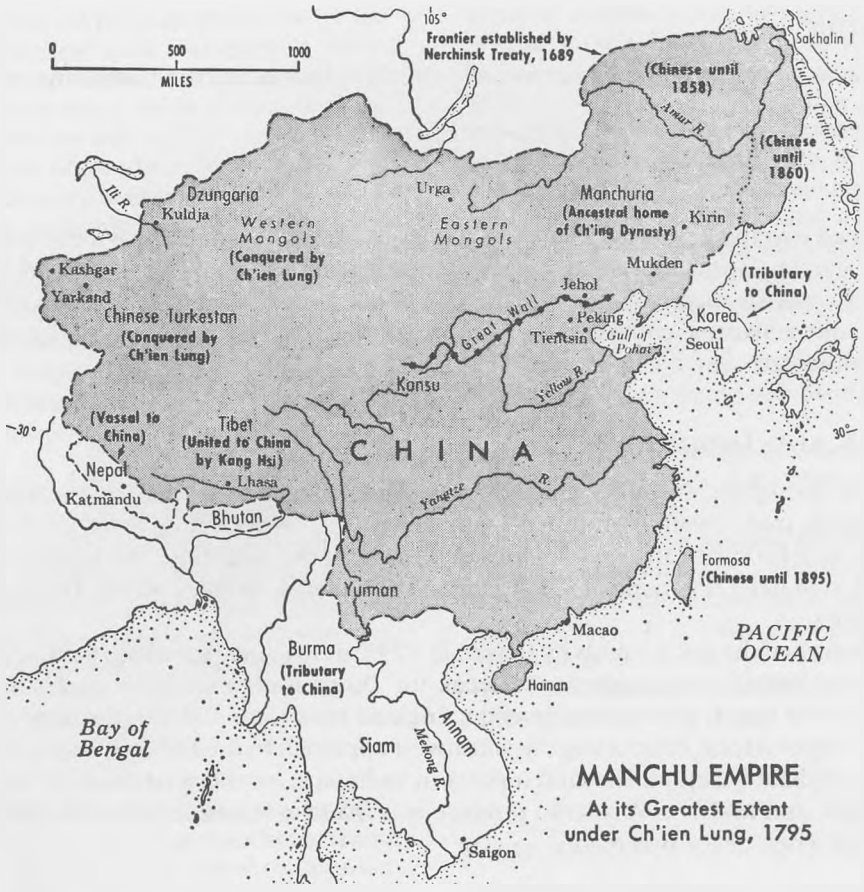
1736–1796. Reign of Ch'ien Lung (or Kao Tsung). Under this able and energetic emperor, the Manchu Empire reached its greatest geographical extent and the zenith of its power. In particular, imperial Chinese control of Central Asia was tightened.

1751. Invasion of Tibet. Tibet, nominally under Chinese control since 1662, had revolted (1750). Ch'ien Lung sent an invasion force, which quickly captured Lhasa and forced the Dalai Lama to submit to even stricter Chinese control.

1755–1757. Mongol Revolt in the Ili Valley. This was promptly suppressed by General **Chao Hui,** who seized this opportunity to strengthen overall Chinese control over western Mongolia.

1758–1759. Conquest of Kashgaria. Chao Hui now turned southwestward to establish Chinese control once more over the Tarim Basin and the surrounding regions. Sinkiang was now organized as a Chinese province.

1774–1797. Minor Rebellions. These plagued the latter years of the reign of Emperor Ch'ien Lung. All were quickly suppressed, but they presaged a general weakening of power of the



Ch'ing Dynasty. These revolts were in Shantung (1774), Kansu (1781 and 1784), Formosa (1786–1787), and Hunan and Kweichow (1795–1797).

Korea and Japan

This was a period of relative peace and prosperity in both of these isolated East Asiatic kingdoms. No military operations of any significance took place.

NORTH AMERICA

French and Indian War, 1754–1763

1754, February–July. Fort Necessity Campaign. Alarmed by increasing French influx from Canada into the Ohio Valley, Lieutenant Governor **Robert Dinwiddie** of Virginia sent Lieutenant Colonel **George Washington** with a detachment of Virginia militia to construct a fort at the confluence of the Allegheny and Monongahela rivers (present Pittsburgh). Finding the French had already erected Fort

Duquesne on this site, Washington built Fort Necessity at Great Meadows (near modern Uniontown, Pa.). Here he was attacked by the French. After vigorous resistance, he was forced to capitulate to superior numbers (July 3). He was allowed to march out with the honors of war.

1755, April 14. Arrival of Major General Edward Braddock in Virginia. The new commander in chief in America brought 2 British regiments. A conference with several provincial governors resulted in a plan to attack the French with 4 separate expeditions. Braddock himself, with 1,400 regulars and 450 colonials, moved to attack Fort Duquesne and to establish British control of the Ohio basin.

1755, June. Arrival of French Reinforcements. A French fleet slipped into the St. Lawrence past the blockade of Admiral **Edward Boscawen.**

1755, June. Bay of Fundy Expedition. From Boston, a provincial force accompanied by a few English regulars, under Colonels **Robert Monckton** and **John Winslow,** sailed into the Bay of Fundy, capturing Forts St. John and Beausejour (June 19). All the Fundy area was soon in British hands (June 30). The French Acadians were cruelly exiled (October).

1755, July 9. Battle of the Monongahela. As his force approached Fort Duquesne, Braddock was surprised and routed by 900 French and Indians. He was killed with more than half of his force. Washington, who accompanied the expedition as a volunteer, helped to lead the remnants back to Virginia. The rigid linear formations of European warfare had succumbed to the elusive individualism of wilderness combat.

1755, August–September. Crown Point Expeditions. A force of 3,500 provincials and 300 Indians advanced from Albany toward Crown Point under **William Johnson,** a civilian with wide influence among the Indian tribes, commissioned a brigadier general. A mixed force of 2,000 French regulars, Canadians, and Indians under Baron **Ludwig A. Dieskau** simultaneously moved up the Richelieu River to defend Crown Point. The 2 forces met at the head of Lake George.

1755, September 8. Battle of Lake George. Dieskau was defeated and captured, but Johnson, plagued by militia discontent, contented himself with building Fort William Henry; he left a small garrison there and the remainder of his force dispersed to their homes. The French entrenched themselves at Ticonderoga.

1755, August–September. Expedition against Fort Niagara. Governor **William Shirley** of Massachusetts, who had replaced Braddock in command, marched with 1,500 men up the Mohawk Valley to Oswego. There Shirley decided the task was too great against French reinforcements, and returned to Albany.

1755–1756. Establishment of the Royal Americans. Spurred by Braddock's defeat, the British War Office took steps to meet the tactical situation imposed by wilderness warfare. A 4-battalion regiment of light infantry was authorized (1755). At Governors Island, N.Y., the Royal Americans (now the King's Royal Riffle Corps)—actually composed of equal parts of German-American settlers and Germans recruited abroad—began light-infantry training (1756). Many of the officers were soldiers of fortune.

1756. Seven Years' War Begins in Europe. **(See p. 730.)**

1756, May 11. Arrival of Marquis Louis Joseph de Montcalm. The new commander of all French forces in Canada brought reinforcements.

1756, July 23. Arrival of General John Campbell (Earl of Loudoun). He was appointed to the command in North America.

1756, August. Montcalm Takes the Offensive. He crossed Lake Ontario and captured Oswego, destroying the settlement. Returning to Montreal, he took station finally at Ticonderoga with a force of 5,000 regulars and militia. Loudoun, who had 10,000 men between Albany and Lake George, made no offensive move.

1756–1757. Winter Quarters. The regulars on both sides withdrew, leaving garrisons at Forts Ticonderoga and William Henry, respectively. The provincial militiamen went home.

1757, June–September. Expedition against

Louisbourg. Loudoun arrived at Halifax to meet a British squadron that would take part in the expedition (June 30) only to learn that Louisbourg had been strongly reinforced and a French fleet was in the harbor. The British blockading squadron, under Admiral **Francis Holborne,** was scattered by a storm and the expedition abandoned (September 24). Loudoun's 12,000 troops returned to New York.

1757, August 9. Massacre at Fort William Henry. Montcalm, taking advantage of the absence of the British troops, had meanwhile moved from Ticonderoga with 4,000 troops and 1,000 Indians to besiege and capture Fort William Henry. The garrison, under Colonel **Monro,** marching out with the honors of war, was treacherously attacked by Montcalm's Indians and many were killed. Content with destroying the fort, Montcalm withdrew, and both sides went into winter quarters.

1757–1758. British Plans. The British government, now headed by **William Pitt,** decided to make a major effort to eliminate France from North America. General **James Abercrombie** arrived to replace ineffective Loudoun (December 30). General **Jeffrey Amherst** soon followed (February 19) with troops to take Louisbourg. Abercrombie was directed also to attack Forts Ticonderoga and Duquesne.

1758, May 30–July 27. Louisbourg Expedition. Amherst with young Brigadier General **James Wolfe** took 9,000 British regulars and 500 colonials from Halifax to Louisbourg, escorted by Admiral Boscawen's squadron. Twelve French sail of the line were shut up in the harbor, while the troops invested the fortress (June 2). It surrendered (July 27) after considerable fighting. Wolfe particularly distinguished himself.

1758, July 8. Battle of Fort Ticonderoga. Abercrombie, with 12,000 men, 6,000 being British regulars, moved from Lake George (late June) to attack Fort Ticonderoga. Montcalm, with but 3,000, defended a ridge in front of the fort. Abercrombie's frontal attack was repulsed with the loss of some 1,600 men killed or wounded. He withdrew. He was later relieved and replaced by Amherst (September 18).

1758, July–November. Fort Duquesne Expedition. Brigadier General **John Forbes,** retracing Braddock's steps, cut a road through the Blue Ridge and after some hard fighting advanced upon Fort Duquesne, which the French blew up and abandoned (November 24). Backbone of Forber's force was a battalion of the Royal Americans, under Major **Henri Bouquet,** Swiss soldier of fortune in British service. The former French post now became Fort Pitt. Forbes's operations were methodical and efficient, Bouquet's new system of light-infantry tactics in extended order and rapid deployment proved its worth, and Colonel George Washington, who commanded a Virginia regiment, assisted in planning the campaign.

1758, August 27. Capture of Fort Frontenac. This fortress (modern Kingston) at the entrance to the St. Lawrence, on Lake Ontario, was captured by a provincial force under Colonel **John Bradstreet** which marched up the Mohawk.

1758–1759. French Situation. The year ended with the French hard-pressed on both flanks of their North American colony, but clinging firmly to Ticonderoga in the center.

1759. Pitt's Plan. He ordered a 3-pronged campaign to drive the French out of Canada: (1) capture of Fort Niagara to cut western Canada off from the St. Lawrence, (2) an offensive through the Champlain Valley to the St. Lawrence, and (3) an amphibious assault against Quebec.

1759, June–July. Fort Niagara Operations. Brigadier General **John Prideaux** with 2,000 British regulars marched up the Mohawk Valley, reoccupied Oswego and, moving by water on Lake Ontario, captured Fort Niagara (July 25). Prideaux was killed during the siege.

1759, June–July. Ticonderoga Campaign. Amherst, commanding 11,000 regulars and provincials, captured Ticonderoga (July 26) and Crown Point (July 31), where he spent the winter.

1759, June–September. Quebec Campaign. Wolfe, young military perfectionist, with some 9,000 men, escorted by Admiral **Charles Saunders'** squadron, departed from Louisbourg to disembark on Orléans Island, just below

Quebec (June 26). Montcalm, with some 14,000 troops and some Indians, defended an almost impregnable fortress, standing high above the St. Lawrence River. For 2 months all Wolfe's efforts to gain a foothold were foiled. Admiral Saunders, fearing that his ships might be caught in winter ice, threatened to leave. Then a footpath winding up the precipitous cliffs just north of the city was discovered. Wolfe sent his 1 battalion of provincial rangers (light infantry), under Colonel **William Howe,** followed by 4 regular battalions, up this path during the night of September 12. They gained the plateau above, and the main body followed. By dawn Wolfe's command—4,800 strong—was in line of battle in front of the city.

1759, September 13. Battle of the Plains of Abraham. Montcalm attacked at once. He had about 4,500 men, but lacked artillery—**Pierre François de Vaudreuil,** the French governor, would not release guns to him. Excellent British musketry threw the French back into the city. Both commanders were mortally wounded. Wolfe died during the battle, Montcalm that night. Quebec capitulated (September 18), and the backbone of French resistance in Canada had been broken. Leaving a garrison in the city, the expedition sailed away.

1760, April. French Attack on Quebec. General **François G. de Lévis** led an expedition from Montreal. He invested Quebec, but the siege was broken by the timely arrival of a British naval squadron.

1760, September. Advance on Montreal. Three columns converged: Amherst, moving down the St. Lawrence from Oswego, Colonel **William Haviland** from Crown Point down the Richelieu, and Brigadier General **James Murray,** with the Quebec command, up the St. Lawrence.

1760, September 8. Surrender of Canada. Governor Vaudreuil capitulated, ending French dominion of Canada.

1762, January–February. British Conquest of Martinique. The island was captured by Admiral George Rodney.

COMMENT. *The effects of the French and Indian War upon British infantry tactics and techniques were enormous. The colonists' successful combination of discipline and loose-knit Indian fighting impressed the English soldiers. The Royal American Regiment under its 2 Swiss-born battalion commanders, Henri Bouquet and* **Frederick Haldimand,** *showed its efficiency during all the campaigns after 1756; Colonel* **Robert Rogers** *of Connecticut, whose battalion of Rangers became a component of the British Army in America, and Howe at Quebec further proved the worth of disciplined light infantry.*

1763, February 10. Treaty of Paris. **(See p. 741.)**

Pre-Revolution, 1763–1774

1763, May 23–November 28. Pontiac's Rebellion. Unhappy over the substitution of British control for French along the northwestern frontier, and fearful of a growing influx of settlers, the Indian tribes became restless, then went on the warpath. **Pontiac,** chief of the Ottawa, after a surprise attack upon Detroit failed, destroyed nearly every other British fort west of the Niagara except Fort Pitt.

1763, August 4–6. Battle of Bushy Run. Colonel Bouquet, moving to Fort Pitt from Carlisle, Pa., with a relief expedition composed of his Royal Americans, the Black Watch (42nd Foot), and other light companies, 500 men, was surprised as Braddock had been in 1755. He formed a circle about his train, where the troops lay all night. Next morning Bouquet enticed the Indians to attack, then cleverly fell on their flank and routed them. Fort Pitt was relieved (August 10). Pontiac, abandoning the siege of Detroit, later submitted to British authority.

1769–1807. Yankee-Pennamite Wars. Connecticut's claim to transcontinental dominion "from sea to sea" led to bitter strife between Connecticut and Pennsylvania settlers in the Wyoming Valley of the Susquehanna River. Drafting of Connecticut settlers for the Revolutionary War so depleted manpower that the settlement fell easy prey in 1778 to a bloody massacre by New York Tories (see p. 782). Sporadic bickering continued until 1807. (See p. 791.)

1770–1774. Growing Violence and Unrest. Colonial resentment of royal rule led to repressive measures by British troops in the so-called **"Battle of Golden Hill"** in New York and the **"Boston Massacre"** (January, March 1770). The "Boston Tea Party" (December 16, 1773), caused Parliament to put Boston under military rule. To unify colonial reaction and protest against this and other "intolerable" acts, the first Continental Congress met at Philadelphia (September 5–October 26, 1774).

1771. Uprising in Western North Carolina. A group of frontier settlers, calling themselves "Regulators," defied royal rule. Governor **William Tryon** sent a force of militia, which suppressed the rebellion at **Alamance Creek** (May 16).

1774. Lord Dunmore's War. Governor **John Murray, Earl of Dunmore,** of Virginia, sent a force of militia under General **Andrew Lewis** to suppress a Shawnee uprising on the Virginia-Kentucky frontier. A contingent from the Watauga Association, from the area where Virginia, North Carolina, and Tennessee now meet, took part in this campaign. The Indians made peace after Lewis won a decisive victory at **Point Pleasant** (mouth of Great Kanahwa; October 10).

War of the American Revolution, 1775–1783

THE WAR ON LAND, 1775–1776

1775, April 19. Lexington and Concord. Long-standing and ever-increasing differences between the thirteen colonies and the motherland flamed into open rebellion when General **Thomas Gage,** governor of Massachusetts, sent 700 men from the British garrison in Boston (April 18) to capture arms and ammunition gathered by the colonists at Concord. Forewarned by the "midnight ride" of **Paul Revere, William Dawes,** and Dr. **Samuel Prescott,** "minute companies" of militia began gathering. The British advance guard under Major **John Pitcairn** met Captain **John Parker**'s company of 70 men assembled on Lexington Common. The "shot heard 'round the world"* (no one knows who fired it) brought British volleys. The Americans scattered, leaving 8 men dead and 10 wounded. Proceeding to Concord, the British found most of the supplies removed, but they destroyed what remained. Harassed all the way back to Boston by swarms of militiamen, British losses were 73 killed, 174 wounded and 26 missing; in all, 93 Americans were killed, wounded, or missing.

1775–1776. Siege of Boston. The Massachusetts Provincial Congress authorized the raising of 13,600 militia. Major General **Artemas Ward** to command. Calls for assistance were answered by Rhode Island, Connecticut, and New Hampshire. Boston and its British garrison were besieged by some 15,000 colonists.

1775, May 10. Capture of Ticonderoga. Colonel **Benedict Arnold** was authorized to attack the fort on Lake Champlain. Colonel **Ethan Allen** of Vermont with his Green Mountain Boys, refusing to accept Arnold's command, captured the post by surprise (May 10). Arnold accompanied the expedition. Crown Point was soon captured (May 12).

1775, June 12. Seizure of the *Margaretta*. At Machias Bay, Me., a party of lumbermen led by **Jeremiah O'Brien** captured the British armed cutter *Margaretta,* the first naval action of the war.

1775, June 15. Washington Commands an Army. The second Continental Congress at Philadelphia (since May 10), accepting the colonial forces besieging Boston as a Continental Army, authorized the raising of 6 companies of riflemen and commissioned Colonel George Washington of Virginia as a general, to command the whole. He started north on June 23.

1775, June 17. Battle of Bunker Hill. Gage had been reinforced (May 25) by British troops from overseas; with them came Generals **John Burgoyne, William Howe,** and **Henry Clinton.** The garrison of 7,000 was sufficient to hold the city but too few to attack the besiegers. The Massachusetts Committee of Safety or-

* Poetically, Emerson attributes this to Concord.

dered Ward (June 15) to fortify Bunker (Bunker's) Hill on Charlestown Heights overlooking Boston Harbor. Next night 1,200 men under Colonel **William Prescott** occupied not Bunker Hill but Breed's Hill, a lower and more vulnerable eminence, and threw up an earthen fort. Gage responded at dawn by a naval bombardment and an amphibious attack. Howe, crossing the bay with a picked force of 2,200 men, was twice repelled. A third assault, with fixed bayonets, was successful when the defenders' ammunition gave out. The affair, badly mismanaged by the Americans, was distinguished by gallantry on both sides. The British lost practically half of their strength; of less than 1,500 colonials actually engaged, 140 were killed, 271 wounded, and 30 captured.

COMMENT. *Tactically a British victory, the result left the local situation unchanged. But psychologically the effect on the colonies was tremendous; Americans had met British regulars in battle and had been defeated only when their ammunition was exhausted. The significance of the earthworks was largely overlooked.*

1775, July 3. Birth of the Continental Army. Washington, on Cambridge Common, assumed command of all Continental forces and began the stupendous job of transforming an armed rabble into an army while maintaining the siege of Boston throughout the remainder of the year.

Northern Campaign; Expeditions Against Canada

1775, August-November. Operations against Montreal. General **Philip Schuyler,** with 1,000 men, invaded Canada from Ticonderoga, laying siege to St. Johns on the Richelieu River (September 6); falling ill, he was replaced (September 13) by General **Richard Montgomery.** St. John's 600 defenders capitulated (November 2). Meanwhile, a harebrained attempt by Ethan Allen to capture Montreal was repulsed and Allen captured. Montgomery pushed on to Montreal, occupying it (November 13) and capturing a British river flotilla. Sir **Guy Carleton,** British governor general of Canada, withdrew to Quebec.

1775, September–December. Arnold's Expedition to Quebec. With Washington's approval, Arnold and 1,100 volunteers left Cambridge (September 12). After an amazing autumn march through the freezing Maine wilderness, the expedition arrived on the St. Lawrence, opposite Quebec (November 8). Only 600 men completed the trek. Crossing the river (November 13), Arnold was joined by Montgomery from Montreal with 300 men (December 3). Montgomery took command.

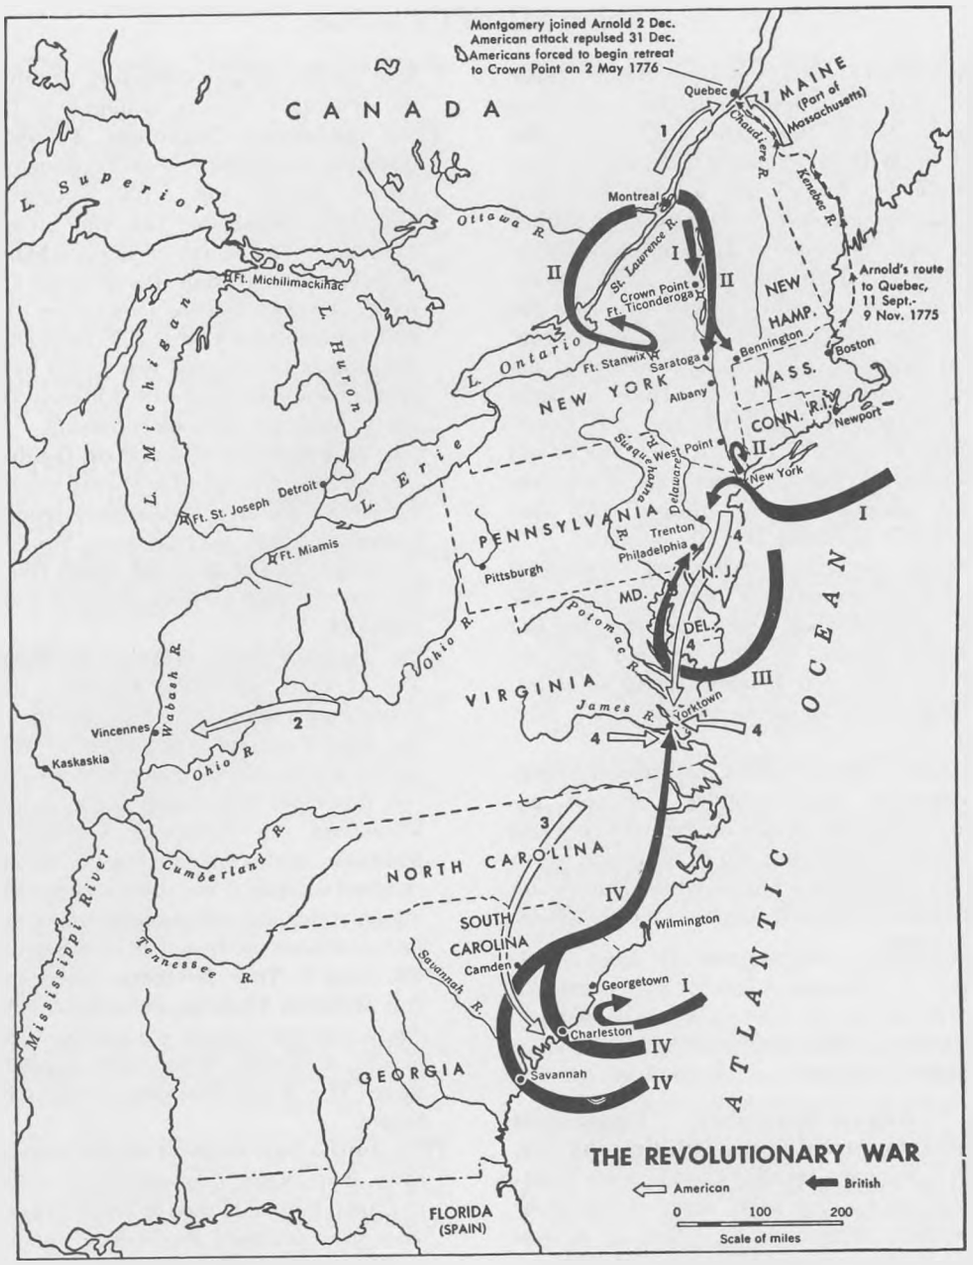
1775, December 31. Assault on Quebec. Attacking under cover of a driving snowstorm, the Americans were disastrously repulsed by Carleton's 1,800-man garrison. Montgomery was killed, Arnold wounded; nearly 100 Americans were killed or wounded and 300 more captured.

1776, January–May. Retreat to Montreal. The survivors, still under Arnold's command, maintained a tenuous hold outside the city for the next 5 months, but retired to Montreal upon the arrival from England (May 6) of General Burgoyne with British and German reinforcements for Carleton. General **John Sullivan,** now commanding the Americans, received additional troops from General Washington and attempted a counterstroke to stabilize conditions on the upper St. Lawrence.

1776, June 8. Trois Rivières. American General **William Thompson,** with 2,000 men, discovered that instead of a supposed garrison of 600, Burgoyne's 8,000 were concentrating there. The Americans were completely dispersed.

1776, June–July. Retreat from Canada. Sullivan, abandoning Montreal, hastily retired first to Crown Point and then to Ticonderoga. Both sides now occupied themselves with extemporizing naval forces to dispute possession of Lake Champlain as Carleton prepared to march into New York.

1776, October 11. Battle of Valcour Island. The makeshift flotilla built and manned by American soldiers through Benedict Arnold's efforts was attacked by Carleton's flotilla—also



American Offensives

(1) 1775—Invasion of Canada by Montgomery and Arnold
(2) 1779—Clark in the West
(3) 1781—Greene in the South
(4) 1781—Yorktown Campaign

British Offensives

(I) 1776—Three-pronged offensive: Lake Champlain, New York, Charleston
(II) 1777—Converging drives on Albany by Burgoyne, St. Leger, Clinton
(III) 1777—Howe's offensive to Philadelphia
(IV) 1780–1781—Invasion of South by Clinton and Cornwallis

makeshift, but manned by sailors drafted from the transports which had carried Burgoyne's troops, and more heavily armed. Most of the American vessels were destroyed or crippled. Arnold slipped away in the night with the remainder, but at Split Rock (October 13) Carleton's ships caught up and destroyed them. The American flotilla had, however, served its purpose, delaying Carleton's advance for so long that after occupying Crown Point briefly he postponed further advance and withdrew into Canada.

Central Campaign; New York and the Jerseys

1776, March 17. Evacuation of Boston. Threatened by the growing strength of Washington's army (20,000 Continentals, 6,000 militia, and heavy ordnance dragged from Ticonderoga), Howe, now commanding at Boston, evacuated the city, sailing to Halifax. Washington shortly began transferring his forces to New York as the most likely place for the next British move.

1776. French and Spanish Assistance. Louis XVI of France authorized the supplying of munitions to the Americans; **Charles III** of Spain followed suit.

1776, April. British Plans. The British government decided to take the offensive and crush the revolution. General Howe was to sail to New York from Halifax with considerable reinforcement from England under escort of a fleet commanded by his brother, Admiral **Richard Howe.**

1776, July 4. Declaration of Independence.

1776, July–August. Concentrations Near New York. After arriving off New York Harbor (July 2), Howe landed his 32,000 men on Staten Island. These included 9,000 Hessian mercenaries. Washington, instructed by the Congress to hold New York, attempted to guard against attack by land or water or both. Earthworks were thrown up across Brooklyn Heights and batteries manned on lower Manhattan and Governors Island. Half of Washington's army of 13,000, under General **Israel Putnam,** was deployed across the Flatbush area of Long Island; the remainder held on Manhattan.

1776, August 27. Battle of Long Island. Howe, landing 20,000 men on Long Island (August 22–25), skillfully turned Putnam's left flank. The Americans were thrown back into Brooklyn Heights with losses of 200 killed and nearly 1,000 captured. British casualties were 400. While Howe slowly approached the Brooklyn Heights line, Washington evacuated Long Island in a brilliant operation (August 29–30).

1776, September 6–7. The "American Turtle." Sergeant **Ezra Lee** in **David Bushnell**'s 1-man submarine attacked the British fleet off Staten Island. Though unsuccessful, he created much alarm. This was the first use of the submarine in war.

1776, September 12. Washington Decides to Abandon New York.

1776, September 15. Action at Kip's Bay. American troops fled as British troops assaulted across the East River from Brooklyn.

1776, September 16. Battle of Harlem Heights. Washington halted Howe's slow pursuit. But the British advance up the East River endangered Washington's communications and he fell back again.

1776, October 28. Battle of White Plains. After obstinate resistance the British regulars drove the Americans off the field.

1776, November 16–20. Forts Washington and Lee. Fort Washington on northern Manhattan, overlooking the Hudson, fell with the capture of 2,800 Americans. Fort Lee on the west bank was evacuated (November 20), with the loss of much badly needed materiel.

1776, November–December. Retreat through New Jersey. Washington with the bulk of his remaining troops retreated southward. General **Charles Lee,** left behind to cover the retreat, allowed himself and many of his 4,000 men to be captured near Morristown. Washington and the remaining 3,000 men of the Continental Army crossed the Delaware River into Pennsylvania. Congress, fleeing from

Philadelphia to Baltimore (December 12), in desperation turned over dictatorial powers to Washington. Confident of a speedy conclusion, Howe went into winter quarters, the bulk of his army at New York with garrisons scattered in several sections of southern New Jersey.

1776, December 26. Battle of Trenton. Washington, whose little army was disintegrating as enlistments expired, took a desperate chance. Crossing the Delaware 9 miles north of Trenton with 2,400 men on Christmas night, during a snowstorm, at dawn he fell on the Hessian garrison at Trenton. His victory was complete. Of 1,400 Hessians, nearly 1,000 were captured and a great amount of booty—small arms, cannon, and other munitions—taken. Thirty Hessians, including their commander, Colonel **Johann Rall,** were killed. American losses were 2 men frozen to death and 5 more wounded. In immediate reaction, 8,000 British troops under Lord Cornwallis moved to box Washington's army between the Delaware River and the Atlantic Ocean.

1777, January 2. Confrontation at Trenton. Cornwallis faced the American position with 5,000 men, while behind him at Princeton, 12 miles away, were 2,500 more under orders to join. Cornwallis ordered an assault for the next day. Washington now had 1,600 regulars and 3,600 unreliable militia. Leaving his campfires burning, he slipped away to the eastward in the night over a disused road, behind Cornwallis.

1777, January 3. Battle of Princeton. Washington met and defeated British reinforcements advancing from Princeton, captured a large quantity of military stores in that town, and hastened away to Morristown before fuming Cornwallis could return from Trenton.

COMMENT. *Washington's outstanding personal leadership had in 10 short days fanned the dying embers of the Revolution into lively flame. Frederick the Great characterized these operations as one of the most brilliant campaigns in military history. With Washington now flanking their communications, all British garrisons in central and western New Jersey were evacuated.*

Southern Campaign; the Carolinas

1775, December. Uprising in Virginia. After a minor engagement at **Great Bridge,** near Norfolk, Governor Dunmore fled to take refuge on a British warship.

1776, February 27. Battle of Moores Creek Bridge. A force of 1,100 North Carolina patriots defeated about 1,800 Tories marching toward Wilmington, where they had hoped to establish a British coastal base.

1776, June 4. Charleston Expedition. General Sir **Henry Clinton** with troops from Boston and reinforcements from England arrived off Charleston, S.C., after abandoning his plan to land at Wilmington as a result of the Battle of Moores Creek Bridge (see above). General Charles Lee had earlier been sent by Congress to organize the defense of the most important American port south of Philadelphia.

1776, June 28. Battle of Sullivan's Island. The palmetto-log fortification on this island was the key to the harbor defenses. Admiral Sir **Peter Parker's** squadron, which had convoyed the British expedition, attacked the fort. But American artillery under Colonel **William Moultrie** did amazing damage to the British ships; the squadron withdrew and shortly afterward Clinton reembarked his troops and left to join Howe at New York. (Rechristened Fort Moultrie, the island post so well defended was destined to further fame in the Civil War.) There would be no further operations by the regular British forces in the Carolinas for 2 years to come.

War at Sea, 1776–1777

1776, February 17. Bahamas Cruise. Commodore **Esek Hopkins** with a squadron of 6 small extemporized warships sailed from Philadelphia for the Bahamas. He attacked New Providence, sending a landing party ashore and capturing a quantity of cannon and powder (March 3–4). Hopkins returned to Providence, R.I., where the squadron remained for the rest of the year.

1776, March 23. Congress Authorizes Privateering. This became a profitable business throughout the war.

1776–1777. The New Navy Is Blockaded. Thirteen frigates authorized by Congress were building. However, the overwhelming strength of the Royal Navy dominated the entire eastern seaboard.

War on Land, 1777–1779

Northern Campaign, 1777

1777. British Plans. They intended to seize the Hudson River Valley, thus splitting the colonies. Burgoyne was to move south from Canada via Lake Champlain, while Howe was to move north from New York, joining Burgoyne at Albany. A third column under Colonel **Barry St. Leger,** moving up the St. Lawrence to Lake Ontario, would land at Oswego and, in conjunction with Iroquois Indians and Tories under Sir **John Johnson,** sweep down the Mohawk Valley to unite with the others at Albany. While perhaps an attractive plan on the map, success was entirely dependent upon close coordination and timing, which would be most difficult to achieve under the circumstances of the time in the trackless forests of North America. Furthermore, the entire affair—originally conceived by Burgoyne—was bungled by Lord **George Germain** (see p. 736), who as secretary of state for the colonies in Lord **North**'s cabinet was in control of operations in America. There was no coordination. Burgoyne had been ordered to meet Howe, but Howe's operations were left to his own discretion. The results were disastrous to England.

1777, April 25. Danbury Raid. A British force under General William Tryon, Governor of New York, destroyed an American supply depot at Danbury, but was severely harassed by local militia gathered and led by General Benedict Arnold.

1777, July 5. Capture of Ticonderoga. Burgoyne, with 7,200 regulars—including 4,000 British and 3,200 Hessian-Brunswicker mercenaries—as well as a small number of Tories and Indians, reached Fort Ticonderoga July 1, emplacing his artillery on a dominating height. American General **Arthur St. Clair** evacuated the post the night of July 5–6, the 2,500 poorly armed and equipped Americans retreating into Vermont over a bridge spanning Lake Champlain; the sick and the baggage went by boat to Skenesboro (now Whitehall). Burgoyne pursued immediately, his main body up the lake, his advance corps over the road.

1777, July 7. Battle of Hubbardton. The American rear guard was overtaken and defeated; the baggage and supplies at Skenesboro captured. However, **Seth Warner**'s delaying action saved St. Clair's army. He fled to Rutland, thence south to join General Schuyler at Fort Edward.

1777, July–August. Burgoyne's Pursuit. He sent his heavy equipage from Ticonderoga via Lake George, but the Americans had completely devastated the rough roads southward, so that it took him 3 weeks to reach Fort Edward. By that time Schuyler had retreated to Stillwater. The American forces had been strengthened to some 3,000 Continentals and 1,600 militia, and Washington had also sent Generals Benedict Arnold and **Benjamin Lincoln** to assist Schuyler as well as Colonel **Daniel Morgan**'s rifle regiment.

1777, August 3. Burgoyne Learns of Howe's Nonparticipation. Howe was bound south, hunting Washington. Burgoyne decided to strike on for Albany anyway, hoping to meet St. Leger there.

1777, July 25–August 25. St. Leger on the Mohawk. Arriving at Oswego, St. Leger, with 875 British, Tory, and Hessian troops and 1,000 Iroquois under **Joseph Brant,** invested Fort Stanwix (also called Fort Schuyler) on the present site of Rome, N.Y., garrisoned by 750 Continentals and militia. General **Nicholas Herkimer** of the county militia hurried to the rescue with 800 men.

1777, August 6. Battle of Oriskany. Herkimer was ambushed by Brant with Indians and Tories 6 miles from the fort. The Americans successfully fought off the attack, but Herkimer was mortally wounded; having lost nearly half

its strength, the relief column retreated. While the action was on, a sortie from the fort ravaged St. Leger's camp. The siege was resumed. At Stillwater, Schuyler, with Burgoyne only 24 miles away, detached 1,000 volunteers under Arnold to relieve the fort.

1777, August 16. Battle of Bennington. Burgoyne, short of supplies, meanwhile had sent 700 Brunswickers under Colonel **Friedrich Baum** to capture military stores at Bennington, and to scour the countryside for horses. Colonel **John Stark,** with 2,000 New Hampshire, Vermont, and Massachusetts militiamen, surrounded Baum and destroyed his force. Reinforcements for Baum, 650 Brunswickers under Colonel **Heinrich von Breymann,** arriving later that day, were defeated by Stark and Seth Warner's 400 Green Mountain Boys, who had made a forced march from Manchester. Breymann escaped with less than two-thirds of his force. British casualties were 207 dead and 700 captured; the Americans lost 30 killed and 40 wounded. Much-needed small arms, cannon, and wagons were captured.

1777, August 23. Relief of Fort Stanwix. St. Leger's Indians were put in panic through a ruse, and he abandoned the siege before Arnold's arrival, leaving behind him tents, cannon, and stores as he retreated precipitately to Oswego.

1777, September 13. Burgoyne Crosses the Hudson Near Saratoga. Having reached the point of no return, he crossed to attack the American forces entrenched on Bemis Heights, with General **Horatio Gates** now in command. Burgoyne also sent an urgent call for help to General Clinton in New York, commanding in Howe's absence.

1777, September 19. Battle of Freeman's Farm. Burgoyne's attack on the American left was repulsed with 600 casualties; American losses were 300. Arnold, who distinguished himself, requested reinforcements to counterattack, but these were refused by Gates.

1777, October 3. Clinton's Gesture. Down in New York, Clinton, with 7,000 remaining British and Germans, took 4,000 men up the Hudson, capturing Forts Clinton and Montgomery in the highlands (October 6). Satisfied that he had created a diversion helpful to Burgoyne, Clinton then returned to New York after his ships had burned Esopus (Kingston, N.Y.).

1777, October 7. Battle of Bemis Heights. Burgoyne, who had entrenched in the hope that Clinton would come to his help, made one last desperate attempt to turn the American left. Arnold, who had been deprived of command by Gates, nevertheless led an American counterattack, which drove the British back against the river with loss of 600 men to the Americans' 150. Morgan's riflemen played a leading part in the victory. Withdrawing toward Saratoga, Burgoyne was soon surrounded by a force thrice his remaining strength of 5,700.

1777, October 17. Burgoyne's Surrender. By the terms of the "Convention of Saratoga," the disarmed British Army was to be marched to Boston and shipped to England on parole. These terms were later shamefully repudiated by the American Congress; the British and German soldiers were not permitted to return home.

COMMENT. *The Saratoga victory was the turning point in the Revolution. To the American people it more than balanced the reverses of the central campaign related below. British forces were redistributed. Ticonderoga and Crown Point were evacuated; Clinton abandoned the Hudson highlands. The British held only New York City, part of Rhode Island, and Philadelphia. Overseas, France recognized the independence of the United States, a forerunner of her active participation in the war.*

CENTRAL CAMPAIGN, 1777–1778

1777. Maneuvers in New Jersey. Spring and early summer were taken up by fruitless maneuvers as Howe attempted to coax Washington into battle.

1777, July 23. Howe Sails from New York. He took some 18,000 men in transports. Washington, puzzled and anxious about Burgoyne's expedition in the north, detached Arnold and Morgan with reinforcements to Schuyler, but held his army north of the Delaware until he received word that Howe's expedition had sailed up Chesapeake Bay and was landing (August 25) at the Head of Elk (Elkton). Washington, with 10,500 men, then barred the way to Philadelphia on the east bank of Brandywine Creek. Howe advanced, brushing aside light American resistance at **Cooch's Bridge** (south of Wilmington; September 2).

1777, September 11. Battle of the Brandywine. Howe skillfully turned the American right, forcing Washington back toward Philadelphia with losses of 1,000 men; the British lost 576.

1777, September 21. Action at Paoli. A surprise British night attack routed the brigade of General **Anthony Wayne.** Philadelphia was evacuated, the Congress fleeing to Lancaster and then to York. Again it left dictatorial powers to Washington.

1777, September 26. Howe Occupies Philadelphia. With the assistance of his brother's fleet, he cleared the Delaware River as a supply route despite the desperate and gallant American defense of **Forts Mifflin** and **Mercer** (October 22–November 20).

1777, September 25–December 23. Conway Cabal. Colonel **Thomas Conway,** Irish soldier of fortune who left the French service to join the Americans, attempted to stir congressional dissatisfaction with the direction of the war into the elevation of Gates over Washington. Unsuccessful, Conway resigned (December 23).

1777, October 4. Battle of Germantown. Washington, reinforced to a strength of 13,000, attempted a complicated movement against Howe's main encampment at Germantown, but through the blunders of his officers was defeated, incurring 700 casualties and losing 400 prisoners.

1777–1778. Ordeal at Valley Forge. The American army spent an agonizing winter, while the British enjoyed the comforts of Philadelphia.

1778, January–June. The Impact of Baron Augustus H. F. von Steuben. This German volunteer instilled discipline and tactical skill in the remnants of the starving little Continental Army at Valley Forge.

1778, February 6. Franco-American Alliance. Two treaties were signed: one of amity and commerce, the other an alliance effective if and when war broke out between France and England.

1778, June 17. Outbreak of War between France and England.

1778, June 18. British Evacuation of Philadelphia. Sir Henry Clinton, succeeding to command from Howe, removed his 13,000 troops over land toward New York, intending to institute a more vigorous campaign. Washington's army, recruited to equal strength and hardened by von Steuben's training, followed by a more northern road, seeking a chance to give battle under favorable circumstances.

1778, June 28. Battle of Monmouth. On Washington's orders General Charles Lee,* heading the American advance guard, moved toward Clinton's rear guard, but at a critical moment fell back, throwing the army into confusion. Clinton turned to give battle. Washing-

* He had been exchanged as a prisoner of war.

ton's personal leadership rallied his army, repulsing repeated British attacks. An all-day fight in intense heat finished with both armies bivouacking on the field, but during the night Clinton hurriedly withdrew. Reported losses were about 350 on each side; they were undoubtedly much greater. The Continental troops had proved themselves equal to the British regulars. Clinton reached New York safely, where he was blockaded by Washington, who took position at White Plains July 30. Lee was cashiered for his shameful conduct.

Northern, Central, and Western Campaigns, 1778–1779

1778–1781. Operations in the North. There were no major operations in the northern or central theaters, though there was hard fighting, both in organized warfare and in guerrilla actions. Tory and Indian atrocities rocked northern Pennsylvania and New York: the **Wyoming Valley** (July 3, 1778) and **Cherry Valley** (November 11, 1778) **Massacres** were monuments to the bloodthirsty **Johnson** family, the **Butlers—John** and **Walter**—and Chief **Joseph (Thayendanegea) Brant**'s Indians. An expedition into northwestern New York, under Generals Sullivan and James Clinton, reduced the Tory-Indian threat (August–September 1779). Simultaneously Colonel. **Daniel Brodhead** led an expedition from Fort Pitt to ravage Indian villages in the Allegheny Valley (August 11–September 14). A Franco-American expedition against **Newport** (August 1778) failed because of bad weather and faulty cooperation between General Sullivan's American land forces and Admiral **Jean Baptiste d'Estaing**'s French fleet. In the lower Hudson Valley the British capture of **Stony Point** (May 31, 1779) was quickly followed by Wayne's brilliant and successful bayonet assault (July 15–16), which recaptured the post and ended a threat to West Point, key American fortress on the Hudson. A similar American attack by Major **Henry "Lighthorse Harry" Lee** on **Paulus Hook** on the New Jersey shore of New York harbor, was also successful (August 19).

1778–1779. Operations of George Rogers Clarke in the West. With a handful of militia, he waged a campaign tactically minor but strategically most important. His final capture of Vincennes, Ind. (February 25, 1779), secured to the United States in the later peace treaty the entire region from the Alleghenies to the Mississippi, a territory larger than the thirteen original colonies.

1779, June 21. Spain Declares War against England. King **Charles III,** however, and his wily Prime Minister, Count **José de Floridablanca,** refused to recognize American independence.

Southern Campaigns, 1778–1779

For nearly 2 years, the southern colonies had writhed in a continuous guerrilla warfare between Tories and patriots, but no major operations took place until Clinton, after the evacuation of Philadelphia, was ordered to the Carolinas.

1778, December 29. Capture of Savannah. Lieutenant Colonel **Archibald Campbell,** with 3,500 men of Clinton's command, crushed 1,000 American militia under General **Robert Howe** and occupied the city.

1779, January–June. War Flames in the South. Tory hopes rose as British General **Augustine Prevost** moved up from Florida, while Campbell seized Augusta, Ga. (January 29). In South Carolina, Moultrie at **Port Royal** repulsed an attack by Prevost (February 3), and **Andrew Picken's** militia defeated a Tory brigade at **Kettle Creek** (February 14). An American attempt to recapture Augusta failed at **Briar Creek** (March 3). General Lincoln, sent by Washington to command the Southern

Department, arrived in the area with a force of Continentals. Prevost failed in an effort to take Charleston. He withdrew and, despite Lincoln's unsuccessful attack at **Stono Ferry** (June 19), safely regained Savannah. In isolated actions, North Carolina and Virginia militia raided Chickamauga Indian villages in Tennessee, while British Admiral Sir **George Collier** sacked and burned Portsmouth and neighboring towns on the Virginia coast (May).

1779, September 3–October 28. Siege of Savannah. D'Estaing's fleet with 4,000 French troops, returning from the West Indies (see below and p. 784), arrived off the port, capturing two British warships and two supply ships. Disembarking his French troops (September 12), d'Estaing invested the place. Lincoln with 600 Continentals and 750 militia joined him (September 16–23). Prevost, commanding the British garrison, had some 3,500 men and his defenses were strong. Discouraged by slow progress of the siege, and anxious lest his fleet meet disaster in seasonal storms, the French admiral after a futile bombardment insisted on an assault (October 8). At dawn next day, five allied columns advanced. Warned by a deserter, the British were waiting for them and the assaults were thrown back after hand-to-hand fighting in the most severe conflict of the war since Bunker Hill. Allied losses were more than 800 killed and wounded, among them Polish count **Casimir Pulaski.** British losses amounted to 150. Refusing to continue the siege, d'Estaing embarked his troops and sailed away. Lincoln returned to Charleston.

COMMENT. *A serious blow had been struck against the cause of independence; Tory spirits soared, while the disheartened patriot's confidence in the French dropped sharply.*

1779, December 26. Clinton Sails South. After withdrawing British troops from Newport, R. I. (October 11), and placing German General **Wilhelm von Knyphausen** in command at New York, Clinton sailed with 8,000 men to attack Charleston. All available British pressure would now be put on the South.

Operations at Sea, 1778–1779

1778, April–May. Exploits of John Paul Jones. In USS *Ranger,* after terrorizing British shipping in the Irish Sea, he landed at Whitehaven in England, spiked the guns of the local fort, then, crossing Solway Firth to St. Mary's Island, seized the residence of the **Earl of Selkirk** (April 23). This was the first purely foreign invasion of England since the Norman Conquest. Jones then cruised over to northern Ireland and, after a 1-hour fight with HMS *Drake* off Carrickfergus, captured her (April 24) and took her into Brest. Jones's activities threw the British into a ferment.

1778, July 11–22. Arrival of the French Fleet. Admiral Count d'Estaing arrived from France off Sandy Hook, blockading New York for a short time. He then sailed for Narragansett Bay, lying offshore and making contact with American General Sullivan for planned operations against Newport (see p. 782).

1778, July 27. Battle of Ushant. British Admiral **Augustus Keppel,** with 30 ships of the line, met and clashed briefly and inconclusively off the coast of Brittany with French Admiral Count **d'Orvilliers'** squadron of equal strength.

1778, August. Maneuvers of Howe and d'Estaing. Howe's fleet, based at New York, tried to come to grips with d'Estaing's fleet off Newport, but a storm dispersed both squadrons before they could come into general contact with each other (August 11). D'Estaing then withdrew from Newport to repair storm damage at Boston; as a consequence, Sullivan, without naval support, had to abandon the Newport operation.

1778, November 4. Departure of d'Estaing. He left Boston, cruising to the West Indies, where local French forces had seized Dominica (September 8), and British Admiral **Samuel Barrington** took St. Lucia (November 13).

1779. Operations in the West Indies. D'Estaing captured St. Vincent (June 16) and Grenada (July 4) while British Admiral **John Byron** was hunting for him.

1779, June 21–1783, February 6. Siege of

Gibraltar. The successful defense of the fortress by General **George Augustus Eliott** with the assistance of the Royal Navy was one of the great combined arms exploits of the British armed forces.

1779, July 6. Battle of Grenada. Off Georgetown Byron's squadron was roughly handled by d'Estaing's superior French force and 4 British ships were dismasted. D'Estaing sailed to Savannah (see p. 783).

1779, July 25–August 14. Penobscot Expedition. An amphibious force under Continental Navy Commodore Dudley Saltonstall and Massachusetts militia Brigadier General Solomon Lovell tried ineptly to seize the British timber base on Penobscot Bay, Maine. A British squadron destroyed the flotilla; the land force dispersed in the Maine wilderness.

1779, September 23, USS *Bonhomme Richard* verses HMS *Serapis*. John Paul Jones in a converted 42-gun Indiaman, off Flamborough Head, defeated the British frigate *Serapis*, 44, in one of history's most remarkable single-ship actions. Jones's flaming ship was sinking, but he refused British Captain **Richard Pearson's** hail to surrender with, "I have not yet begun to fight!" Pearson, his mainmast shot away, his gun deck swept by a powder explosion touched off by an American grenade, at last surrendered. Jones moved his crew to the *Serapis* and brought his prize into Texel, Netherlands (October 3).

Spanish Operations in the South and West 1779–1781

1779, August–September. Expedition up the Lower Mississippi. Don **Bernardo de Galvez,** Spanish governor of Louisiana, recognized the threat to New Orleans of Britain's West Florida posts on the Mississippi above the city. After Spain declared war, with a few troops he quickly took **Manchac** (September 7), **Baton Rouge** (September 20), and **Natchez** (September 30).

1780, February–March. Mobile Campaign. Galvez landed troops from New Orleans and captured Mobile, capital of British West Florida (March 14). Major General **John Campbell,** coming from Pensacola with reinforcements, turned back.

1780–1781. Raid into Michigan. Galvez sent Captain **Eugenio Pourré** up the Mississippi from St. Louis. He surprised and captured the British garrison of **Fort St. Joseph,** on Lake Michigan (January 1781,) and returned to St. Louis.

1781, February–May. Pensacola Campaign. With troops from Havana and Mobile and his naval squadron from New Orleans, Galvez besieged **Fort St. George** near Pensacola (March 10). After a Spanish hit blew up the fort's powder magazine, General Campbell surrendered (May 9).

War on Land, 1779–1783

SOUTHERN CAMPAIGN, 1780–1781

American Disasters, 1780

1780, February 28. Russia's Armed Neutrality. Britain's blockade of French and Spanish supply to the United States suffered when **Catherine II** declared her navy would protect her trade against all belligerents. Denmark (July 9) and Sweden (August 1) accepted her invitation to join; within 2 years the Netherlands, Prussia, Portugal, Austria, and the Kingdom of the Two Sicilies (Naples) joined.

1780, July 10. French Army at Newport. Lieutenant General Count **Jean Baptiste de Rochambeau** with 5,000 men, convoyed by 7 ships of the line under Admiral **De Ternay,** landed at Newport. British ships blockaded the harbor, preventing proposed Franco-American operations against New York.

1780, September 23. Treason of Benedict Arnold. His plans to deliver his command, West Point, guardian of the Hudson Valley, to Clinton were captured with British Major **John André.** Arnold escaped and received a British brigadier general's commission and substantial cash. Thereafter he fought for England. André was hanged as a spy.

1780, December 20. England Declares War on the Netherlands. This was because of clandestine Dutch trade with the American states.

1780–1781. American Mutinies. Continental currency depreciation and supply deficiencies led to six quickly suppressed mutinies, at West Point (January 1, 1780), Morristown (May 25, 1780), Fort Stanwix (June 1780), Morristown (January 1, 1781), Pompton (January 20, 1781), and again Morristown (May 1781).

1780–1781. Blockade of New York. Washington maintained a cordon about the British in New York.

1780, February 11–May 12, Siege of Charleston. Clinton's expedition disembarked near Charleston, bringing the British forces in the area to 14,000. Despite Lincoln's energetic efforts, Clinton slowly completed the investment (April 11) and began siege operations. Admiral **Marriot Arbuthnot's** squadron in the harbor added to the heavy bombardment from the land. Lincoln finally surrendered with 5,400 men, plus cannon, small arms, and ammunition, in the worst American disaster of the war (May 12). Leaving Cornwallis with 8,000 men in South Carolina, Clinton returned to New York.

1780, May–August. Pacification and Reaction. Cornwallis's severe measures, particularly the brutality of Sir **Banastre Tarleton's** Tory cavalry, caused strong guerrilla opposition, led by **Francis Marion, Thomas Sumter,** and **Andrew Pickens.** Tarleton's massacre of a small American force at **Waxhaw Creek** (May 29) aroused the countryside. Washington sent Brigadier General **Johann de Kalb** and 900 Continentals to South Carolina. Congress put Horatio Gates in command of the Southern Department, independent of Washington.

1780, August 16. Battle of Camden. Gates with some 3,000 men, mostly militia, met Cornwallis with 2,400 British and Tory regulars at dawn. The militia broke; Tarleton's cavalry charged from the rear. The Continentals, struggling gallantly, were overwhelmed. Gates fled 160 miles to Hillsboro, N.C., followed by the remnants of his army. Nearly 900, including De Kalb, were killed and 1,000 captured. Two days later Tarleton smashed Sumter's guerrilla force at **Fishing Creek.**

The Turn of the Tide, 1780–1781

1780, October 6. Congress Returns Control to Washington. He at once appointed **Nathanael Greene,** his "right arm," to command in the south.

1780, October 7. Battle of King's Mountain. British Colonel **Patrick Ferguson**'s corps of Tory riflemen, 1,100 strong, was demolished by 1,400 sharpshooting Carolinian "mountain men" and Virginians—all militia—led by Colonels **Isaac Shelby** and **Richard Campbell.** Ferguson was killed.

COMMENT. *The fight was remarkable in that all participants on both sides were Americans, save Ferguson himself. This disaster, combined with widespread disorders in South Carolina, led Cornwallis to abandon a proposed invasion of North Carolina. He retreated to winter quarters at Winnsborough, N.C., and took stern measures against rebellious colonists.*

1780, December 2. Greene Assumes Command. His army at Charlotte had 1,482 men, 949 of them Continentals, all ill-clothed and badly equipped. By mid-December this force had grown to some 3,000–1,400 of whom were Continentals—thanks to reinforcements sent by Washington. Meanwhile, Cornwallis had also been reinforced to a strength of 4,000 well-equipped, well-trained regulars.

1780, December 20. Greene Takes the Offensive. He deliberately (and mistakenly) divided his forces, sending Brigadier General **Daniel Morgan** with 1,000 men on a wide western sweep. Greene moved with the remainder to a camp at Cheraw Hill, S.C., nearer to Charleston than Cornwallis. The American forces were now separated by 140 miles. Cornwallis, instead of concentrating against one of the American forces, unwisely split his own command. He sent Tarleton with 1,100 men against Morgan, while General **Alexander Leslie** with a comparable force was to contain

the Americans at Cheraw Hill. Cornwallis with the main body followed Tarleton.

1781, January 17. Battle of Cowpens. Tarleton, catching up with Morgan, was decisively defeated in a brilliant double envelopment. The British lost 110 killed and 830 captured of their 1,100 strength; Morgan lost 12 killed and 61 wounded.

COMMENT. *This American "Cannae" was one of the most brilliant tactical operations ever fought on American soil.*

1781, January–February. Retreat to the Dan. Greene and Morgan, reuniting, hastily retreated into southern Virginia, closely pursued by Cornwallis. The British general, destroying his baggage in order to increase his mobility, pursued to the unfordable Dan River, then retired to Hillsboro again. Greene turned and followed him, his army having been reinforced to a total of about 4,400 men, of whom more than two-thirds were untrained militia or newly raised Continentals. Crippling arthritis prevented Morgan from remaining in the field.

1781, March 15. Battle of Guilford Courthouse. Cornwallis, with 1,900 effectives, attacked Greene, who had chosen his ground carefully. The outnumbered British with great gallantry gained the upper hand and drove the militia from the field; Greene broke off the action in order to avoid disaster and retreated in good order with the remainder of his army. Cornwallis' victory was costly: 93 killed and 439 wounded, against 78 Americans killed and 183 wounded. The British general marched eastward to Wilmington, N.C., then, deciding he could no longer hold Georgia and the Carolinas, proceeded with 1,500 men into Virginia (see below and p. 787).

Greene's Later Operations, 1781

Left behind in the Carolinas were several isolated British garrisons, against whom Greene now proceeded, his operations aided and supported by the guerrilla activities of Marion, Sumter, and Pickens.

1781, April 19. Battle of Hobkirk's Hill (near Camden). Greene was repulsed by a British force under Colonel **Francis Rawdon.** As Greene prepared to renew his advance, the British withdrew toward Charleston.

1781, May 22–June 19. Siege of Fort Ninety-six. Greene was again unsuccessful when a relieving force rescued the garrison and then withdrew to Charleston. Most of Carolina was now liberated from the British.

1781, September 8. Battle of Eutaw Springs. Approaching Charleston, Greene with 2,400 men attacked Lieutenant Colonel **Alexander Stewart** with some 2,000. The Americans were at first successful, but the British rallied and repulsed the Americans. Greene withdrew. Next day, Stewart, whose losses had been very heavy, fell back on Charleston, which, with Savannah, was 1 of only 2 remaining British footholds south of Virginia.

COMMENT. *Greene's strategical task had been competently accomplished, despite his failure to win a single tactical victory.*

YORKTOWN CAMPAIGN, 1781

Preliminaries in Virginia

1780, December 30-1781, March 26. Arnold's Operations in Virginia. The American traitor, with a force of 1,600 men, arrived at Hampton Roads to carry out Clinton's instructions to destroy military stores, to prevent reinforcements from reaching Greene, and to rally Tories. He seized and devastated Richmond (January 5). He then returned to Portsmouth, maneuvering inconclusively against von Steuben.

1781, March–May. Phipps's Operations in Virginia. British Major General **William Phipps** was sent with reinforcements to command in Virginia over Arnold. After some further destruction of supplies and goods, Phipps and Arnold marched southwest to meet Cornwallis, arriving from North Carolina (see p. 787). Phipps died at Petersburg (May 10).

1781, April 29. Lafayette Reaches Rich-

mond. He had been sent from New York by Washington with reinforcements to take command in Virginia. His total force, including new troops being trained by Steuben, was 3,550 men, of whom 1,200 were veteran Continentals. Washington sent Wayne with his brigade of 1,000 Continentals from Pennsylvania to join Lafayette (June 10). Von Steuben was also sent to Virginia, where he gave a poor performance as a field commander but again demonstrated his superb training talents.

1781, May 20. Arrival of Cornwallis at Petersburg. He took command of British forces in Virginia. Counting the garrison of Portsmouth, these totaled 8,000.

1781, May–July. Maneuvers around Virginia. Cornwallis attempted to bring the Americans to battle, but Lafayette, keeping out of reach, led the British in a chase around eastern Virginia. Cornwallis, ordered by Clinton to sent part of his force back to New York, reluctantly returned to Portsmouth, closely followed by Lafayette. In a well-planned ambush near **Jamestown Ford** (July 6) on the banks of the James River, Cornwallis caught Wayne's brigade by surprise, but the Americans, despite heavy losses, repulsed the British attack, counterattacked, then retreated in good order. Cornwallis continued on to Portsmouth.

1781, August 4. Cornwallis Moves to Yorktown. New orders from Clinton (July 20) permitted Cornwallis to keep all of his troops, and directed him to occupy the tip of the Virginia Peninsula. He moved by water to Yorktown with more than 7,000 troops, planning to keep a link by sea with Clinton in New York. Lafayette, who now had 4,500, cautiously moved to nearby West Point, Va. closely observing the British. He sent a report to Washington.

Washington's Plans and Movements, May–September, 1781

1781, May 21. Washington and Rochambeau Confer near New York. They reached the joint conclusion that British strength now lay in 2 points: New York and Chesapeake Bay. In the West Indies at this time was Admiral **François J. P. de Grasse,** with a powerful French fleet (see p. 790). Were de Grasse to cut the sea communications between these 2 British centers, joint land and sea operations against either would be favored. A French frigate was sent to de Grasse with the word from Washington that sea power was essential to success. At the same time Rochambeau's army moved from Newport to join Washington's outside New York.

1781, August 13. De Grasse Sails North. His fleet headed for Chesapeake Bay, carrying an additional 3,000 French troops. He had earlier sent word to Washington that the fleet would be available until mid-October. Washington received the message (August 14) just after getting Lafayette's report of Cornwallis' move to Yorktown. Washington at once recognized that if de Grasse could keep command of the sea, Cornwallis' army could be destroyed. Rochambeau agreed.

1781, August 21. Washington Marches South. Leaving **William Heath** with 2,000 men to contain Clinton's 17,000 in New York, Washington led the allied armies south by forced marches. They reached Philadelphia before Clinton, deceived by a pretended attack, realized what was happening.

1781, August 30. De Grasse Arrives off Yorktown. He disembarked his troops, who reinforced Lafayette. A British fleet under Admiral **Thomas Graves** rushed from New York, appearing off the entrance of the bay.

1781, September 5–9. Battle of the Capes. (See p. 790.) More French ships arrived from Newport, strengthening victorious de Grasse and bringing siege artillery for the allies. Graves sailed away for New York, leaving command of the sea to the French and sealing Cornwallis' fate.

1781, September 14–26. Arrival of Washington's and Rochambeau's Troops. Most were transported by French ships from Head of Elk, Baltimore, and Annapolis, and put ashore at Williamsburg.

Operations against Yorktown

1781, September 28. Investment of Yorktown. Washington had some 9,500 Americans

and 7,800 splendidly equipped French regulars (Rochambeau had put himself without reservation under Washington's orders) with a variety of artillery—including the Gribeauval field guns of the French, here to receive their baptism of fire. Cornwallis had 8,000 men in all.

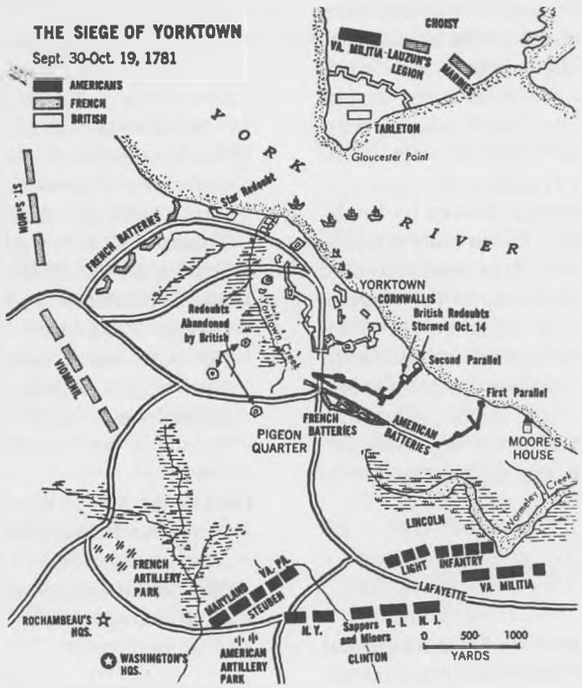
1781, September–October. Siege of Yorktown. Hoping to receive aid soon from Clinton, Cornwallis withdrew to his inner fortifications (September 30), thus enabling the allies to bring their siege artillery within range of his entire position. Bombardment soon began (October 9). Two key redoubts were stormed by Franco-American detachments (October 14) and new batteries established. A British counterattack was sharply repulsed (October 16). Cornwallis' situation was now impossible. A desperate scheme to evacuate part of his troops across the York River was thwarted by storm.

1781, October 17. Cornwallis Opens Negotiations for Capitulation. Washington allowed 2 days for written proposals, but insisted on complete surrender.

1781, October 19. Surrender of Cornwallis. Yorktown's garrison marched out and laid down all their arms. To all intents and purposes the war was over.

1781, October 24. Clinton's Belated Arrival. Graves convoyed him and 7,000 reinforcements to Chesapeake Bay. But, deterred by the presence of de Grasse's fleet and realizing that he was too late, Clinton put back to New York. De Grasse, fearful of hurricanes, declined to participate in Washington's suggestion of an attack on Charleston or the British base at Wilmington, and sailed for the West Indies.

COMMENT. *Sea power, and Washington's brilliant strategic grasp of its importance, combined with superb allied tactics, had won the decisive battle of the war.*



FINAL LAND OPERATIONS, 1781–1783

1781, November. Washington Marches Back to the Investment of New York. He established his headquarters at Newburgh.

1781–1782. French Activities. Rochambeau's army spent the winter in Virginia, returned to Rhode Island (fall, 1782), and embarked from Boston for France (December 24, 1782).

1781–1782. Greene Secures the South. He moved to invest British-held Charleston, while sending detachments to secure Georgia in a few minor engagements.

1782. Britain Sues for Peace. Lord North's ministry collapsed (March 20) and peace negotiations were opened (April 12). Sir Guy Carleton succeeded Clinton in the United States (May 9). All British troops were concentrated in New York. (Wilmington had been evacuated in January; Savannah was cleared July 11 and Charleston December 14.)

1782, August. Canadian and Indian Raid into Kentucky. An irregular force of about 240 men under American turncoat **Simon Girty** raided across the Ohio to attack **Bryan's Station** (August 15). Repulsed, they ambushed a pursing American force at **Blue Licks** (August 19). Colonel **Daniel Boone,** who had warned his companions of a possible ambush, distinguished himself. The victorious raiders withdrew.

1782, November 30. The Treaty of Paris. This treaty recognized the independence of the United States, and concluded the war between the United States and Great Britain; it was to become effective upon conclusion of Britain's war with France and Spain, now being pursued in the West Indies, off the Indian coast, and in the Mediterranean.

1783, April 15. Congress Ratifies the Treaty. Hostilities elsewhere having ended, the war was now officially concluded. Disbandment of the Continental Army (June) set a pattern for hasty demobilization, which would be followed in the United States thereafter.

1783, November 25. British Evacuation of New York. The last English troops embarked; Washington with Governor George Clinton entered the city. The British transports stood out to sea (December 4). That same day Washington took leave of his officers at Fraunces' Tavern.

War at Sea, 1780–1783

Rodney's Operations, 1780

1780, January 16. The "Moonlight Battle." British Admiral **George B. Rodney,** with 22 ships of the line and a large convoy of transports under orders to assist Gibraltar (under siege by the Spaniards on land since July 1779), fell in with Admiral **Langara**'s squadron of 11 Spanish ships off Cape St. Vincent. The Spaniards were defeated in a night action, 1 ship being sunk and 6 captured. After reinforcing Gibraltar, Rodney made for the West Indies, where he was to take command.

1780, March–August. Operations in the West Indies. French Admiral **Lucurbain de Guichen** met Rodney in equal strength in 3 indecisive actions (April). The Frenchman was then reinforced by a Spanish squadron, but through disease and indecision the allied effort aborted. De Guichen sailed for France (August).

1780, September. Rodney Sails North. Leaving half his fleet, he sailed with the remainder for New York, foiling Washington's plan for a joint Franco-American land and sea assault on the city. Returning to the West Indies (December), Rodney seized the Dutch islands of St. Eustatius and St. Martin (February), crippling the contraband trade on which the United States depended. He then sailed for England, leaving Admiral **Samuel Hood** in command.

THE PERIOD OF FRENCH PREDOMINANCE

1781, March 16. First Battle of the Virginia Capes. When Washington sent Lafayette to Virginia to catch Arnold, French Commodore **Sochet Destouches** at Newport sailed for Chesapeake Bay with 8 ships of the line and a detachment of French troops to join Lafayette.

British Admiral Arbuthnot, off New York, gave chase with 8 ships. Destouches had the better of the resultant engagement; 3 British ships were crippled. But Destouches returned to Newport, leaving command of the sea to the British. (Sometimes called Battle of the Chesapeake Capes.)

1781, March 22. De Grasse Leaves Brest. He had 26 ships of the line and a large convoy of troop transports. He headed for the West Indies and, possibly, the United States. Off the Azores, Admiral **Pierre André de Suffren,** with 5 ships, parted company, bound for the East Indies. De Grasse arrived off Martinique (April 28).

1781, April–August. Fencing in the West Indies. De Grasse had somewhat the better of inconclusive operations against Hood. He received Washington's message (see p. 787) off Haiti.

1781, August. The Fleets Move North. Promptly gathering all available French troops (3,500) on Haiti, de Grasse sailed by a roundabout route, arriving at Lynnhaven with 28 ships of the line (August 30). Hood, following de Grasse, had actually reached Chesapeake Bay 2 days before the main French fleet, but finding it empty went on to New York to join Admiral **Thomas Graves,** who as senior officer took command of the combined force, 19 ships of the line. Graves returned to the Chesapeake to find de Grasse already there.

1781, September 5–9. Second Battle of the Capes. De Grasse with 24 ships promptly put to sea to meet Graves. The 8 leading French ships rounded Cape Henry well ahead of the remainder, but Graves failed to seize the opportunity to crush them. Some British ships were roughly handled in an inconclusive action, and one was abandoned. Due to hidebound adherence to outmoded tactics, Graves never closed in. After 5 days of fruitless maneuvering, he returned to New York, leaving command of the sea to the French admiral. At this time the French Newport squadron—8 ships of the line—now under Commodore **de Barras,** arrived at the Capes, convoying transports carrying Rochambeau's siege artillery. (Sometimes called Battle of the Virginia Capes.)

1782, February 5. French-Spanish Conquest of Minorca. An allied force under General **Duke Louis de Crillon** had occupied all of Minorca except Port Mahon (July–August 1781). Port Mahon fell after a six-months' siege.

AMERICAN OPERATIONS, 1780–1781

1780, June 1. *USS Trumbull vs HMP Watt.* The *Trumbull,* 28, fought a bloody, drawn battle with the **34-gun** British privateer.

1781. American Privateering at Its Peak. During this year there was a total of 449 American privateers in action.

1781, May 29. Cruise of the *Alliance.* Sole American regular naval action this year was that of Captain **John Barry** in the *Alliance* frigate, which cruised to France and back, fighting and taking, on the return journey, the British sloops of war *Atlanta* and *Trepassy.* Barry also captured 2 British privateers.

SUFFREN'S OPERATIONS, 1781–1782

1781, April 16. Battle of Porto Praya. Suffren, who was bound for the Cape of Good Hope to preserve that Dutch colony from England, found British Commodore **George Johnstone** with 5 ships and 35 transports at anchor in Porto Praya in the Cape Verde Islands. Johnstone was also on his way to the Cape. Suffren, disregarding neutrality, attacked and so injured Johnstone's flotilla that the British expedition was called off. Suffren made for India (see p. 766).

1782, February–September. Operations off India. The first of 5 violent actions to be fought against British Admiral Sir **Edward Hughes** took place south of **Madras** (February 17). In this, as in the 4 subsequent actions (April 12, near **Trincomalee;** July 6, off **Cuddalore;** September 3, again near **Trincomalee;** and April 20, 1783 again near **Cuddalore**) Suffren had the best of the encounter, although no ships were lost or captured by either side. Suffren received less than full support from several of his subordinates; nonetheless he attacked

with such vigor that the British were invariably forced on the defensive and in each instance broke off the action. As a result Suffren was able to give considerable support to French land forces, thus offsetting the great British superiority in India. The most amazing aspect of Suffren's operations in the Indian Ocean was that he was able to maintain his squadron without the help of a port in which he could refit, and that he at least temporarily checked the rise of British supremacy in India by actually seizing the strategically important anchorage of Trincomalee (August 30, 1782). In these operations, the French admiral proved himself to be the greatest naval man of his nation and one of the outstanding sailors of history.

BRITAIN REGAINS MASTERY OF THE SEAS, 1781–1782

1781, August 5. Battle of Dogger Bank. Sir Hyde Parker with 7 ships of the line, escorting a merchant convoy from the Baltic, encountered Admiral **Johann A. Zoutman**'s Dutch squadron, also 7 ships, convoying a merchant fleet to the Baltic. Parker had the best of the engagement; the Dutch ships returned to port.

1781, December 12. Second Battle of Ushant. Following months of maneuvering by Franco-Spanish fleets against English forces along the Atlantic coast of Europe, British Admiral **Richard Kempenfelt** defeated de Guichen's squadron escorting merchantmen and supply vessels to the West Indies, capturing 20 transports.

1782, April 12. Battle of the Saints. After 2 clashes with Rodney and Hood (January), de Grasse met their combined squadrons between Dominica and Guadeloupe. The British fleet, 34 ships of the line, and the French, 29 ships, each maneuvered in line ahead until Rodney unorthodoxically burst through the middle of the French line. In a short time de Grasse's fleet was broken into 3 detachments and utterly defeated. Seven ships were captured, including the French flagship; 2 more fell to Hood a week later as the scattered French vessels were pursued. But this restoration of British sea command was too late to affect the outcome of the Revolution.

1782, September 13–14. Franco-Spanish Attack on Gibraltar. For 3 years, the fortress garrison of 7,000 men under Sir **George Augustus Eliott** had maintained a grim defense against Spanish blockade and bombardment by land and sea. Twice British squadrons had sent in reinforcements and supplies (see pp. 789–790). Following the capture of Port Mahon and Minorca (see p. 790), the Duke of Crillon launched an attack on Gibraltar. Ten floating batteries, with overhead and side armor of green wood some 6 feet thick, moved close to the walls of the fortress and opened heavy fire. British projectiles failed to pierce the armor until **Eliott's** gunners began, for the first time in history, to use red-hot shot. The balls, heated on grates and handled by tongs, were rammed home against wet wads protecting the powder charges, then fired at once. The device was most successful. In all, 8,300 rounds were fired. Before noon next day all 10 of the armored batteries had either been blown up or burned to the water's edge. The siege continued, but the garrison, close to starvation, was reinforced and supplied for the third time by a fleet under Lord Howe (October).

1783, January 20. Treaty of Versailles. Peace between England and the Franco-Spanish Alliance. England proclaimed cessation of hostilities (February 4).

United States, 1783–1800

Disbanding of the Continental Army following the Revolution left the United States practically without Federal forces as Indian unrest again swept the frontier. An uneasy truce halted bloody Yankee-Pennamite fighting in the Wyoming Valley (see p. 773), finally leading to settlement of the dispute in Pennsylvania's favor (1782). Organization of a tiny Regular Army to supplement militia levies in protection of the frontier was begun (June 3, 1784). A navy did not come into

being until 1794, when construction of warships to protect commerce—particularly against the pirates of the Barbary coast—slowly began. Meanwhile, internal troubles brought hastily organized levies of militia troops into the field during the abortive **Shays' Rebellion** in New England (August 1786–February 1787) and again in the **Whisky Rebellion** in Pennsylvania (July–November, 1794). The principal events were:

1790, October 18–22. Harmar's Defeat. Depredations of the Maumee Indians in the Ohio Valley brought a punitive expedition into the field under Brigadier General **Josiah Harmar.** Of his 1,133 men, only 320 were regulars; the remainder were untrained militia, poorly armed and officered. Leaving Fort Washington (site of Cincinnati, Ohio), the expedition engaged in 3 disastrous clashes in the wilderness, not far from the present site of Fort Wayne, Ind. In each, the militia ran away and the few regulars present were slaughtered. The expedition returned abjectly with losses of 200 men.

1791, November 4. St. Clair's Defeat. General **Arthur St. Clair,** with the entire Regular Army of 600 men—and some 1,500 militia—took the field in October, slowly cutting his way for 100 miles through dense forests north from Fort Washington to the present site of Fort Recovery, Ohio, on the banks of the upper Wabash. Here, after part of his militia had deserted, he was surprised and his force practically destroyed, with great slaughter. The remaining militia decamped, most of the regulars were killed or wounded; more than 900 men and women in all were butchered.

1792, June. New Army; New Leader. Aroused by these reverses, Congress authorized a larger army, which was called the Legion of the United States. President Washington called General Anthony Wayne out of retirement; he began to train this new army near Pittsburgh.

1793–1794. Wayne Prepares. He marched with his command to Greeneville, some 80 miles north of Fort Washington, to establish a new training camp and to continue his rigorous training activities through the following winter.

1794, August. Advance into the Wilderness. Moving north from Greeneville with what was possibly the best-trained command in the history of the United States Army, Wayne set out over St. Clair's ill-fated route.

1794, August 20. Battle of Fallen Timbers. Near present Toledo, Ohio, Wayne's 3,500 troops finally caught up with the main force of the Maumee Indians, gathered in a dense forest slashing. Wayne's infantry now attacked with the bayonet, while his cavalry moved in on both flanks of the Indians in a perfectly executed double envelopment. The result was an overwhelming victory. Wayne lost 33 killed and 100 wounded; the Indian stronghold and nearby villages were destroyed, bringing peace to the frontier for some years. The action took place within view of a British garrison still maintained illegally on American soil.

1798–1800. Quasi War with France. Operations in the West Indies during the Wars of the French Revolution brought strained relations between France and the United States. French interference with American shipping resulted in violence and the threat of war. Washington was called back to command the army, and a navy department was established (May 3). When an American schooner was captured by a French warship off Guadeloupe (November 20), U.S. naval vessels moved into West Indian waters. Captain **Thomas Truxton** in USS *Constellation,* 36 (guns), met and captured the French frigate *Insurgente,* 40, after an hour's engagement off Nevis (February 9, 1799). *Insurgente* served thereafter as a vessel of the U.S. Navy until 1800, when she was lost at sea. A year later (February 1, 1800), Truxton met the French *Vengeance,* 52, off Guadeloupe in a 5-hour night battle. The French ship, much more powerful than the American frigate, was partly dismasted and her guns silenced; she escaped in the night. In all, 85 French vessels, mostly privateers, were taken before peace was made. The last engagement was that of USS *Boston,* 28, with the French privateer *Berceau.*

LATIN AMERICA

Spanish America*

1750. Treaty of Madrid. Portugal agreed to cede Colonia (on the River Plate) to Spain, in return for seven Spanish-Jesuit mission villages (called *reductions*) on the east bank of the Uruguay River. (The treaty also recognized Portuguese sovereignty over the Amazon and Parana river basins, and Spanish sovereignty over the Philippines.) The Guarani Indians, incited by the Jesuits, refused to accept Portuguese control over the seven ceded *reductions* (see below). Portugal therefore held on to Colonia. Charles III of Spain then annulled the treaty (1761).

1754–1763. The Seven Years' War. (See p. 730.) The war came late to the Iberian Peninsula (see p. 758), and thus to Latin America (see below).

1762. Spanish Invade Portuguese Possessions in the Banda Oriental. Colonia and Portuguese holdings on the lower Uruguay River were captured, and part of southern Brazil was occupied.

1762. British Expeditions to Cuba and the Philippines. Havana was captured and Manila was also occupied by the British.

1763. Treaty of Paris. (See p. 789.) Havana was returned to Spain by Britain; Florida was ceded to Britain. To compensate for the loss of Florida, France ceded Louisiana to Spain. Manila was later returned to Spain by Britain.

1771. Falkland Islands Dispute. Conflicting Spanish and British claims almost led to war. Spain backed down when France refused to support her.

1776–1777. Spanish-Portuguese War. Spanish troops captured Colonia and seized other Portuguese territories in the Banda Oriental and in southern Brazil. The **Treaty of San Ildefonso** (see p. 741) awarded Colonia and the Banda Oriental to Spain. Portugal retained the upper Uruguay River and Brazil.

1779–1783. Spanish Participation in the American Revolutionary War. Spanish forces captured Mobile, Pensacola, and the Bahamas. British efforts to gain control of the Mississippi River were blocked by Spanish forces in Louisiana. The **Treaty of Versailles** (see p. 791) gave Florida to Spain; returned the Bahamas to Britain.

1789. Pacific Coast Dispute with Britain. Spanish forces seized Nootka Island (claimed by both nations) and some British ships in Nootka Sound (between Nootka and Vancouver islands). Again Spain backed down from war when French support was not forthcoming.

1793–1795. Spanish Participation in the War of the 1st Coalition. (See p. 679.) By the **Treaty of Basel** (see p. 745), Spain ceded Santo Domingo to France. Soon afterward, Spain ceded Trinidad to Britain (1797).

* Spain administered the Philippines as an element of her American empire.

Portuguese America

1750. Treaty of Madrid. (See above.)

1752–1756. War of the Seven *Reductions*. Portugal finally subdued the Guarani Indians and consolidated control over the seven villages ceded by Spain in the Treaty of Madrid (see above).

1754–1763. The Seven Years' War. (See pp. 730, 758, and above.)

1776–1777. Spanish-Portuguese War. (See above.)

AFRICA

North Africa

The Barbary States

The internal and external affairs of the Barbary States (Morocco, Algeria, Tunisia, and Tripoli) in this half-century retained the same general pattern of the previous period. Morocco was completely independent; the other 3 were nominally vassals of the Ottoman Empire, but were virtually free from Turk interference during this period. Aside from elementary husbandry, the principal occupations of all 4 states remained piracy and the slave trade, although Tunisia was somewhat less dependent upon these lucrative pursuits than the other 3. During most of the period central authority was fairly strong in Morocco under the benevolent rule of **Sidi Mohammed;** the other 3 countries were less strongly ruled. The principal events were:

1757–1790. Reign of Sidi Mohammed (Mohammed XVI) of Morocco. He did much to establish law and order over his unruly subjects, and was successful in introducing a modicum of Western culture.

1765. French Bombardment of Larache and Salé. These attacks somewhat reduced piratical attacks upon French vessels from these rover bases, and gained some respect for France from Sidi Mohammed.

1767. Treaty with France. Morocco recognized special status of French consuls, and undertook to discourage the pirates from attacking French vessels.

1777. Abolition of Christian Slavery in Morocco. French influence had much to do with this decree by Sidi Mohammed.

1791. Spain Abandons Oran. The Spanish still retained a few small coastal towns in Morocco and western Algeria, of which Ceuta and Melilla were the most important.

Egypt

The effectiveness of Ottoman control over Egypt fluctuated greatly. Even when Turkish sovereignty was most firmly enforced, the Mameluke governors had considerable autonomy. The principal events were:

1750–1769. Rise of Ali Bey. This low-born Mameluke gained ascendancy in Egypt by force of arms, and was recognized as governor by Constantinople. Save for a period when forced to flee the country (1766), he ruled with an iron hand.

1769. Ali Bey Declares Egyptian Independence. After Ali had been ordered to raise a force of 12,000 troops for the war against Russia (see p. 762), Constantinople began to entertain doubts about his loyalty, fearing he would use this force to seize Syria. Secret instructions were sent to Egypt to have Ali assassinated. Ali intercepted the message and, with Mameluke support, declared independence.

1769–1770. Conquest of Western Arabia. Ali conquered most of the Red Sea coast and much of the interior of Arabia from nominal Turk rule.

1771–1772. Expedition to Syria. Ali sent a small army under his General **Abu'l Dhahab** into Syria. After arriving at Damascus, Abu'l opened negotiations with the Porte, which commissioned him to overthrow Egypt and replace Ali.

1772, April 8. Flight of Ali. One day before

Abu'l's army reached Cairo, Ali fled, seeking support from the Pasha of Acre. At Acre he received money, supplies, and men (3,000 Albanian soldiers) from Russian naval vessels.

1772–1773. Ali's Return to Egypt. Enroute he recaptured Jaffa and Gaza. He then advanced across the Sinai Desert toward Egypt (February).

1773, April 19–21. Battle of Salihia (Salihiyeh). In a climactic battle with Abu'l, Ali, at first successful, was finally defeated and captured; he died soon afterward.

1785–1786. Revolt in Egypt. This was suppressed by an Ottoman army sent overland and by ship.

1798–1801. Bonaparte's Expedition to Egypt. **(See p. 752.)**

West Africa

Increasing European attention to the West African coast—stimulated by the slave trade—had relatively little impact upon the continuing turbulence of the interior jungle and upland regions. The remnants of the old Mali Empire persisted around the headwaters of the Niger and Senegal rivers. Farther east in the upland regions were the Kaarta, Mossi, Oyo, Hausa, and Bornu states, of which the Oyo was the only one still flourishing by the end of the century. The others, suffering from internal disorders, disputes with neighbors, and particularly plagued by depredations of the Saharan Tuaregs, were in varying stages of decline, decay, or collapse. Of the many tribal groupings in the intermediate jungle region, the Ashanti continued to prosper and expand until, by the end of the century, they had expanded into the open uplands of the middle Volta region and farther west, and had also approached the Ivory and Gold Coasts. Meanwhile, along the coast, the European wars of France and England were reflected in raid and counterraid. The principal events were:

c. 1750–c. 1775. Tuareg Invasions. Possibly because of the "Great Drought" of 1735–56, Tuareg nomads from the north conquered much of the central Niger valley, including Timbuktu.

1752–1781. Reign of Osei Kojo of the Ashanti. This warrior leader greatly expanded the Ashanti dominions in all directions.

1753. Reestablishment of Portuguese Base at Bissan. This was Portuguese Guinea.

c. 1753. Founding of Kaarta. Bambaran exiles founded this city, near the ancient Ghanian capital of Kumbi. This became the leading city of a neighboring group of Bambara states.

1755–1766. Disorder in Segu. The death of King Mamari Kulibali (see p. 721) sparked a succession struggle, which ended only when **Ngolo Diara** seized the throne in 1766. He restored order to the empire, and ruled until the mid-1790s.

1757. British Conquest of French Senegal Posts. The Seven Years' War in Africa.

1763. Treaty of Paris. **(See p. 789.)** Britain returned Goree to France, retaining the remaining posts in the Senegal region.

1764–1777. Reign of Osei Kwadwo of Ashanti. Osei Kwadwo and his successor **Osei Kwame** (r. 1777–c. 1801) established a strong, centralized, and efficient state, with government officials selected by merit.

c. 1770–1789. Reign of Abiodun of Oyo. This *alafin* (king) settled the long-standing internal Oyo dispute, between parties supporting economic growth versus territorial expansion, in favor of the mercantilists, and allowed the army to wither.

c. 1775. Beginning of Decline of Benin. Wracked by succession disputes which often erupted into civil war, Benin's prosperity waned, and its political influence weakened.

1776. Tukulor Confederacy. Moslem Tukulor clerics created a theocratic confederacy in Fouta-Toro (north-central Senegal).

1778–1779. French Reconquest of the Senegal Posts. The African version of the War of the American Revolution (see pp. 774–791).

1783. The Treaty of Paris. (See p. 789.) The Senegal posts were divided between England and France; France retained St. Louis.

c. 1785. British Domination of the Slave Trade.

1787. British Acquisition of Sierre Leone.

1792–1800. Renewed Anglo-French Struggle over Senegal Coast. The Wars of the French Revolution in Africa. Under the command of **F. Blanchot de Verly,** the French recovered, then partially lost, the Senegal posts. Verly repulsed repeated British assaults on St. Louis.

c. 1790. Renewed Dahomey Pressure on Oyo. Dahomey had avoided conflict with Oyo for 40 years after the 1738–1748 war (see p. 721). During the reign of **Agonglo** (r. 1789–1797), Dahomey's well-organized armies, with European weapons, again threatened Oyo, although Agonglo continued tribute payments.

1793. Oyo Attack on Ife. *Alafin* **Awole** of Oyo raided the Yoruba client-state of Ife to collect slaves. Ife resistance was unexpectedly strong, and the ensuing defeat was a serious blow to the Oyo state.

South Africa

About midway in this half-century the 2 great South African migrations met and began a series of violent clashes. The Dutch settlers who had started from the area of Capetown almost 2 centuries earlier had now become a new colonial people known to themselves as **Boers,** or farmers. The spearhead of the movement of the Bantu people was the Xhosa tribe, which met the Boers about 400 miles to the east and northeast of Capetown. The typical self-reliant Boer tendency toward unruly independence was also beginning to manifest itself along the new frontier, directed first against the administration of the Dutch East India Company and later against the British, after their seizure of the colony during the French Revolutionary Wars. The principal events were:

1750. The Bantu Reach the Keiskama River. This was the Xhosa tribe.

1760. The Boers Cross the Orange River. They begin to penetrate the region known as the Great Namaqualand.

1770. The Boers Reach Graaff-Reinet Area. This was 400 miles from Capetown.

c. 1775–1795. Boer Conflict with Khoisa and San. Despite desperate native resistance, particularly in the mountains, the Boers had little trouble in overcoming them. Many were slaughtered; many more were enslaved.

1778. Boer and Bantu Meet. There had been long-range contact for several decades, but now the outpost settlements of both peoples came into close contact.

1779–1781. First Kaffir War. This struggle of white Boer against black Bantu (called Kaffirs by the Boers) was inconclusive. It led the frontier peoples in the Graaff-Reinet and Swellendam regions to appeal to the company for help.

1793–1795. Second Kaffir War. This was also inconclusive.

1795. Independence Declared by Graaff-Reinet and Swellendam. The frontier Boers were disgusted by lack of support from the company and by the Capetown Boers. Without effective government, these frontier regions were in chaotic condition.

1795, September. British Conquest. There was little opposition, since the Boers accepted the British as enemies of the French, who had conquered Holland.

1796. Order Restored on the Frontier. The British established control over the entire colony, including the two "independent" regions.

1799–1801. Renewed Anarchy on the Frontier. Unrest and chaos resulting from Boer refusal to accept centralized control from Capetown were exploited by Xosa raids and by Hottentot uprisings.

East Africa

By the middle of the 18th century, the Portuguese had abandoned efforts to reestablish control over the East African coast. Moslem Arab-Swahili-Bantu coastal principalities, owing nominal allegiance to the Sultan of Oman, flourished north of Mozambique. The Portuguese held all the coast of modern Portuguese East Africa. Inland, the southern migration of the Bantu was slowly ending as the northern-most tribes closed up into a region extending roughly from Lake Nyasa to the Orange River. Farther north, the unending conflict of Christian Abyssinia (or Ethiopia) continued against the various surrounding Moslem tribes and states (to the north, east, and west) and pagan tribes (to the south). The principal events were:

1750–1800. Uganda Annexes the Budda. The well-organized state of Buganda (see p. 564), on the northwestern shore of Lake Victoria, annexed the Budda region to the southwest, its last major territorial acquisition.

1768–1773. James Bruce in Ethiopia. This Scottish traveler wrote a vivid record of contemporary Ethiopia (including the Battle of Sarbakussa, below, in which he took part), which many contemporaries refused to credit.

c. **1768–c. 1780. Ascendancy of Mikael Sehul in Ethiopia.** The leading noble of Tigré province, Mikael was called upon by King Iyasu II, who had allied himself with the Galla nobility, to assist in thwarting Galla efforts to seize power and supplant Christianity with Islam. Mikael occupied Gondar, the capital, and declared himself regent. When Iyasu tried to have him assassinated, Mikael deposed and assassinated the king, then placed **Yohannes II,** and then **Tekle-Haimanot II,** on the throne (1769). Sources are contradictory as to subsequent events. According to Bruce, Mikael was defeated by Galla nobles at the **Battle of Sarbakussa** (May 1771), yet he seems to have retained power until again defeated by a coalition under Galla leadership (1784). He returned to Tigré, as governor, and died soon afterwards. The Galla-Tigré struggle for supremacy in Ethiopia continued after his death, and the power of provincial chiefs and nobles increased at the throne's expense. Ethiopians call this feudal age, lasting about a century, "the time of princes," because the country was dominated by Gallan or Tigrean princes.

1785. Capture of Kilwa. The Al Bu Sa'idi clan of Muscat captured this trading city.

XVII

THE ERA OF NAPOLEON:

1800–1850

MILITARY TRENDS

In this period military history crossed the second of its three great watersheds. Under the direction or stimulus of Napoleon Bonaparte, the weapons of the age of gunpowder were finally assimilated into consistent patterns of military theory and practice. For the first time since gunpowder had appeared on the battlefield, there was a substantial congruence among weapons, tactics, and doctrine. The bayoneted flintlock musket and the smoothbore cannon had each been perfected to a point closely approaching its maximum potential. After centuries of experimentation, the tactical means of employing these weapons in combination with each other and with cavalry had been refined to the point where a skillful commander could exploit the full potential of his weapons and his arms to achieve decisive results with minimum cost. The last time that commanders had been able to exercise comparable discriminating control over the means available to them had been in the 13th century, in the Mongol and English tactical systems.

Yet just as those two tactical systems had approached perfection in the employment of men and weapons at a time when the systems were doomed to early obsolescence because of the emergence of gunpowder weapons, so the principal tactical systems of the early 19th century (French and English on land, and English at sea) would be equally short-lived under the impact of the Industrial Revolution. (Interestingly, the phenomenon would be repeated again in mid-20th century as weapons and tactics of the Industrial Revolution era approached congruence just as the third great military watershed was reached with the dawn of the Nuclear Age.)

The congruence of weapons, tactics, and doctrine was bound to come during this half-century as a logical result of earlier developments. But the achievement was probably hastened, and certainly made more significant, through the genius of one man: **Napoleon Bonaparte.** No man has more indelibly stamped his personality on an era than did Napoleon. In his own time and for more than a century to come, military theory and practice were measured against his standards and related to his concepts of warmaking.

To a lesser degree, the same kinds of generalizations can be made about the influence of

Horatio Nelson upon naval thinking and the exercise of the military art at sea. Yet if Nelson's impact upon his time and upon warfare was unquestionably less significant than that of Napoleon, his is the more unique and unchallengeable position with respect to other practitioners of the naval art. There has only been one Nelson; Napoleon's historical greatness as a soldier must always be compared with predecessors like Alexander, Hannibal, and Genghis Khan.

There were other excellent generals during this period, of whom the most outstanding were the Englishmen, **Arthur Wellesley, Duke of Wellington,** and Sir **John Moore,** the Prussian **Gebhard L. von Blücher, Prince of Wahlstatt,** the Austrian **Archduke Charles,** and the French Marshal **Louis Nicolas Davout.** Among Napoleon's marshals, in addition to Davout, at least two others proved themselves capable generals in their own rights: **Nicolas Jean de D. Soult,** and **André Masséna.** Three Americans warrant consideration with this company: **Andrew Jackson, Winfield Scott,** and **Zachary Taylor.**

For reasons noted below, the Industrial Revolution had little direct effect upon the battlefield and upon generalship in this era; that would come in following decades. But it had already had an impact upon manufacturing and upon agriculture which, in combination with the democratization of war that had occurred during the French Revolution, permitted nations to raise, equip, and supply larger armies than had hitherto been possible. And the Industrial Revolution, combined with the stimulation provided by Napoleon, contributed to the development of military theory and military professionalism in this period (see pp. 808–811).

Weapons

Great strides were taken in ordance development. In 1810 **Friedrich Krupp** started the small Prussian forge which would blossom into a great steel and ordnance empire. In the United States, **Robert P. Parrott, John A. Dahlgren,** and **Thomas J. Rodman;** in England, **William G. A. Strong** and **Joseph Whitworth;** in France, **Henri Joseph Paixhans;** and in Sardinia, **Giovanni Cavalli,** in arsenal and foundry were evolving innovations and improvements in cannon manufacture which would begin a revolution in the science of gunnery.

In small arms, the percussion cap would supplant the flintlock, and make possible the invention in 1835 of the revolver. The Minié bullet, with expanding base, an invention of 1849, would improve the accuracy and range of the muzzle-loading rifle, which would then quickly displace the smoothbore musket as the primary infantry weapon.

In practice, however, few of these innovations reached the fighting man on sea or land in this half-century. There was little change in service arms and ammunition. There was one notable exception: the rocket, which emerged as a lethal weapon from its previous long existence as a pyrotechnic oddity, thanks to the efforts of Sir **William Congreve,** English ordance expert. It found almost immediate favor, both in the United States and in Europe, as an intermediate-range weapon bridging the gap between the still-standard flintlock musket and the 12-pounder field gun. But although its relative economy vis-à-vis conventional ordnance was attractive, its notorious inaccuracy and limited maximum range of about 1,500 yards soon forced its disappearance from the battlefield.

Tactics

Napoleonic Tactical Concepts

By the end of the 18th century, European warfare was characterized by large-scale formal battle waged primarily on the principles of linear tactics, and sieges conducted according to set patterns. There were no revolutionary new weapons and no major changes in the basic linear organization, although there had been steady development in both. Small arms had improved, and infantry was clearly the dominant arm. Rates of fire had been increased as a result of drill and improvement in firing mechanisms. Rifled firearms had been developed, but were used only by special troops. The flintlock with the bayonet was the standard arm of the infantry. The cavalry primarily used the saber, but some were armed with carbines. Artillery provided support to the extent of its ability. The guns were not yet capable of the rate of fire, accuracy, or trajectory required for close support of troops in the attack. Napoleon did not change these tactical methods so much as he revitalized them, while at the same time integrating his tactics into his broader and more revolutionary strategic concepts.

In war Napoleon always sought a general battle as a means of destroying the enemy's armed force after having gained a strategic advantage by maneuver. Tactically, he usually directed his main blow against the enemy's flank while simultaneously attacking his front; or launched his main thrust against the center of the enemy's battle front with the aim of breaking through, at the same time carrying on an enveloping maneuver against a hostile flank. The divisions attacking important objectives were often supported by massed fire from Napoleon's artillery reserve. Divisions with exposed flanks were protected by corps cavalry or even by the cavalry reserve.

Only after tactical destruction of the main armed force of the enemy did Napoleon bother about occupying the principal strategic and political centers of the enemy's country.

Infantry Tactics

Light Infantry

As we have seen, light infantry had been reintroduced into European warfare during the 18th century. It was not a new development; light infantry had been used by all ancient armies and in various forms it had accompanied armies throughout the ages. Almost without exception, however, these had been irregular troops: archers, slingers, javelin men, and various others, who usually opened battles and then moved aside during the main action. With the introduction of gunpowder weapons, similar groups were armed with firearms, but the troops were usually undisciplined and did not form part of a regular army.

The rigid linear tactics of the 18th century had prescribed a fixed and inflexible role for the regular infantry. During the considerable time it took infantry battalions to take up their battle stations, they were vulnerable and needed to be screened from enemy action. In addition, the supply depots and convoys that were needed to support the armies were highly vulnerable to enemy attacks. The regular infantrymen of the enlarged armies, recruited as they were from the rejects of society and subjected to a rigorous discipline, could not be entrusted with detached operations. Consequently, to furnish the necessary support, to carry out operations against the

enemy's lines of communications, to raid, and to take prisoners, while at the same time providing for the security of their own depots and convoys, and to screen the main army against surprises, light troops, mainly infantry, were reintroduced into the European armies about midcentury. Within a short time additional functions, above all, individual or group fire missions in advance or on the flanks of the main line, were added to their tasks.

The first large-scale appearance of light troops in Europe had occurred during the War of the Austrian Succession (1740–1748). In 1740, Maria Theresa found herself attacked by the superior strength of Frederick of Prussia and his French and Bavarian allies. She had to muster all the forces at her disposal and did not hesitate to call upon the Borderers, the "wild Croats and Pandours," who had been part of the Austrian frontier defenses against the Turks, to defend her realm. The effectiveness of these light troops impelled the other powers to introduce or augment similar forces. Prussia hastily increased her light cavalry and raised some irregular "free" battalions to counter the Croats, and in France several light regiments as well as a number of combined infantry-cavalry units—usually called "legions"—were raised.

The British Army had no light troops until the line battalions serving in America during the 1750s raised some light companies on an *ad hoc* basis. These units differed significantly from the irregulars, Borderers, free battalions, and free corps by being trained and disciplined troops, usable in the line as well as on detached operations, such as advance guards, assault parties, and also, occasionally, as raiders. They differed in function, but not in equipment and discipline, from the rest of the army, and more often than not were used as line infantry. The inspiration for the formation of these troops derived in part from the painful experiences of the war in America and in part from the continental European developments. After 1770, a light company as well as a grenadier company became part of the permanent establishment in each line battalion. Both companies rapidly assumed elite status and as "flank companies" were often used for special missions during the American Revolution.

However, light infantry never became a dominant element. In Prussia, Frederick II retained his reliance on the massed volleys of the line and spent most of his resources to speed up the fire. Prussia formed a number of fusilier units, but these were trained and equipped as line infantry. The same development took place in Austria, where the regiments of Borderers were drilled in linear tactics. In the British Army, too, there came a sharp reaction against light infantry and a determined attempt to return to the linear system at the turn of the century.

The only country which did not follow this backward evolution was France. Here, even before the Revolution, there was wide agreement that shock action should be delivered by formations having greater depth than the firing line. The main controversy concerned the extent of fire preceding and supporting the assault and whether this fire should be delivered by line, line and skirmishers, or skirmisher swarms. Circumstances and combat leaders together ultimately fashioned that combination of close-order columns and loose-order skirmishers which constituted the new tactics of the Revolutionary and Napoleonic infantry. Skirmishers would so occupy the enemy that the deeper assault formations (see below) could move up without being unduly exposed to the fire of the enemy line.

In the War of the First Coalition (1792–1798), the habit of skirmishing spread throughout the French infantry, and by 1793 all battalions were acting as light infantry, dissolving into skirmisher swarms as soon as action was joined. These fighting methods, sometimes called "horde tactics," were in turn superseded after 1795 by a tendency to return to properly

controlled, deeper assault formations, preceded by skirmishers to scout the ground and disturb the enemy by individual aimed fire.

The important point about the French skirmishing action during this period was that it was performed not by special light troops but by integral parts of the regular bodies. Infantry became more flexible and to some observers it appeared as if specialized light troops would soon be eliminated by one all-purpose infantry. But special light troops, not only brought up to the standard of the line but in some cases excelling it in performance and capable of winning a decision in battle, remained in French service for another 50 years.

In their political implications, the new light-infantry tactics were revolutionary. Both the French Revolutionary armies and the British system abandoned the brutal and degrading discipline of the 18th-century armies. The light infantryman (or the all-purpose infantryman), fighting often as a relatively autonomous individual in small formations in open order, was much less under the direct supervision of his officers. Brutal treatment and close control gave way to appeals to regimental pride, revolutionary *elan,* and the spirit of nationalism.

The character of light infantry and of warfare were greatly changed by the introduction of the rifle. For fighting individually in dispersed order, an accurate missile weapon was particularly valuable to light infantry. Rifles, however, were expensive and, more serious, slow to load. Therefore only select units and select individuals in line companies were thus equipped until well into the 19th century.

The French Infantry "Column"

The introduction of the so-called attack column as a standard combat formation in the Wars of the French Revolution was in part a result of tactical experimentation begun by Marshal Saxe in the middle of the previous century, and in part a natural formation adopted to make the maximum use of the poorly trained hordes produced by the *levée en masse,* troops that lacked the training and discipline to stand and fight effectively in the then linear system of Frederick.

Nevertheless, this French "column" as developed under Carnot, and perfected by Napoleon, was in no sense a reversion to the phalanx or the Swiss pike column. In its most sophisticated form, the *ordre mixte,* the French column was actually a versatile combination of battalion columns and lines, protected by a strong screen of skirmishers. This deployment allowed for flexible combinations of fire and shock tactics. As the battalions forming the columns in the formation normally deployed no more than 9 ranks deep, the depth was more psychological than physical. The individual units could still operate in a linear formation if desired. It was not until much later in the wars, after attrition had diluted the quality of the French infantry, that Napoleon utilized massed battalion columns as battering rams.

The great tactical value of the column lay in its flexibility and versatility. It permitted the commander to move large numbers of men over the battlefield with better control and far more rapidly than had been possible before. The column could operate in hilly terrain. It could easily change into different formations. The deployment from marching column to attack column, in particular, took far less time than had the development of linear formations from the marching column. Skirmishers could be detached without necessitating major readjustments in the formation. Two- or three-rank firing lines and squares could be formed rapidly. The earlier need

to maintain tight flank connections between units in line became less important; the tactical situation opened up and became more dynamic.

The attack column had two main functions. First, it could be used to bring men in close order rapidly to the enemy. The success of such an action was largely dependent on adequate preparation by artillery and skirmishers, and it was they who inflicted most of the casualties rather than the column itself, which possessed little or no firepower once it started to move. Bayonet charges actually driven home against a steady enemy were rare.

The far more common employment of the attack column was as a sustaining force. The column sent out skirmishers to start the fire fight and served as a replacement pool for the skirmishers and as their immediate tactical reserve. If it encountered firm resistance, the column might deploy into lines to carry on the fight with volleys. Once the enemy wavered, these lines could resume the advance, or they might again reduce their front and move forward in column.

The English Line

The most effective answer to the French system, as well as the most effective form of light infantry, was provided by the British. Their system was largely based on the effects of controlled, aimed musketry, delivered by troops combining as far as possible the mobility of skirmishers with the steadiness of the line. Under Sir John Moore and Sir Arthur Wellesley (later Duke of Wellington), the British began to take advantage of cover, usually crouched behind the crest of a ridge, and then, formed only two deep, arose to deliver a devastating fire against the French columns.

The English light infantry—partially armed with rifles which could deliver rapid fire by the use of subcaliber bullets, or individual aimed fire when using regular-sized bullets—able to operate individually or in close order, represented in essence the all-purpose infantry of the future. The musket of the light infantry was of a special type, a lightweight piece, constructed for this particular purpose. It was somewhat more accurate than the "Brown Bess," with better sights, but shorter in length. The line battalions used the Brown Bess, which was considered superior to muskets used on the Continent. The bayonet was long and triangular, and when fixed made accurate firing difficult. Sergeants did not carry muskets; each had a sword and a pike or a halberd, which served as a signaling instrument and a rallying point.

Despite the early successes of the French system, the British retained the two-deep line—in which every man would employ his weapons—to produce a relatively greater volume of fire than could the column. Wellington's success was due undoubtedly in part to this, but it was due also to his tactics. He decided he could overcome Napoleon's tactics by three means: not to expose his line to artillery until the action opened, to protect it against the skirmishers, and to secure his flanks. The first he achieved by placing his infantry whenever possible on reverse slopes; the second by building up his light troops; the third was accomplished by natural obstacles or by his relatively weak cavalry.

In part because of his chronic shortage of cavalry, Wellington paid considerable attention to defense against French cavalry. The steady line and accurate fire of the British infantrymen were usually able to repulse a cavalry charge. On one occasion in the Peninsula, an infantry line advanced against cavalry and drove it from the field. In a square formation, British infantry was

practically unbreakable; there is recorded the instance of the Light Division, formed into 5 squares, retreating for 2 miles with only 35 casualties, under attack by 4 brigades of cavalry.

Cavalry Tactics

Cavalry remained the shock arm, with lance and saber the principal hand weapons. However, the division between "heavy" cavalry—partly armored men on big horses—and "light"—more agile troopers on smaller mounts, who could harass as well as shock—again became marked during the period.

Napoleon's cavalry, provided with horse artillery and used in great but articulate masses and in surprise operations against the enemy's cavalry and infantry, was very effective. It was usually thrown against the enemy infantry already shaken or shattered by massive artillery fire, or by infantry attacks. It was particularly effective against retreating infantry. It was less successful against fresh infantry which had time to form squares. Under outstanding leaders and by its impetuous charges, French cavalry usually proved superior to the best cavalry of other European nations. By its lightning action in pursuit, French cavalry exploited victory with minimum losses to its own army. Napoleon also used his cavalry very effectively for reconnaissance and for screening.

During the early Napoleonic wars, French cavalry was unexcelled. Later, as casualties and the passage of years took their toll, Napoleon found it difficult to maintain the same high standards of cavalry performance. At the same time, his enemies steadily improved their cavalry, in part by devoting more attention to its organization and training, and in part by copying the French organization, tactics, and methods. In the Peninsula, for instance, cavalry played a minor role in Wellington's campaigns. At Waterloo, however, it was the English cavalry which smashed the initial French infantry assaults and later assisted in repulsing the final attack of Napoleon's Old Guard.

Artillery Tactics and Techniques

The French Revolutionary Army inherited Gribeauval's excellent field-artillery system from the monarchy. The main feature of this artillery was mobility, obtained by reducing the length and weight of the barrel and the weight of the gun carriage; the latter was also provided with iron axletrees and wheels of large diameter. Range and precision were preserved by more precise manufacture of the projectile (balls of true sphericity and correct diameter, which also made possible a reduction in powder charge). Prefabricated cartridges, which replaced the old loose powder and shot, increased the rate of firing. Draft horses were disposed in double files instead of single. Six or 8 horses sufficed to draw the 12-pounder in good conditions, while 4 or 6 were used for smaller guns: 8- and 4-pounders and the 6-inch howitzer. However, Napoleon attempted to increase the mobility of the artillery still further. Like Frederick the Great, he further lightened the piece by shortening the barrel and by employing a chambered breech and smaller powder charge. Like the earlier Prussian system, the French system (known as the System of the Year XI, or 1803) was a failure, lacking range and hitting power. As a stop-gap measure to replace these pieces, large numbers of the excellent Austrian and Prussian 6-pounders, captured in the course of the wars, were used by the French.

Napoleon took full advantage of the maneuverability of the French artillery and made out of

it the most important tool of his warfare. One of his favorite techniques, particularly employed in later years as the quality of his troops declined, was employment of the *grande batterie*, physically massing a preponderance of artillery fire in support of his main effort on the battlefield, literally blasting the enemy line to shreds to permit his infantry to advance.

British artillery equipment also improved. The standard double-block trail carriage construction was replaced by a lighter and more manueverable single-block trail carriage. This simple design change made the heavy British 9-pounder gun as manueverable as the French 4- and 6-pounders, the ideal that Napoleon had sought. The British "Shrapnel" (more properly "spherical case") shell was usable by all the British guns and was detested by the French who had nothing to compare to it. Wellington employed this artillery selectively, in small numbers and individual batteries at carefully chosen sites, to be used at critical moments. They were placed all along the front as support for the infantry and played a minor but important role in his defensive-offensive tactics.

Military Organization

Origin of the Division and the Corps

The infantry division as a large permanent tactical and administrative formation appeared in France in the 18th century. In 1759, the Duc de Broglie introduced in the French Army a divisional organization, permanent mixed bodies of infantry and artillery.

In 1794, Carnot, the Revolutionary minister of war, developed the division embracing all 3 arms, infantry, cavalry, and artillery, and capable of carrying out independent operations. By 1796, the divisional system became universal in the French Army. It was Napoleon Bonaparte, however, who developed all the potentialities of the divisional system and used it in mobile warfare and tactics of fast maneuver. The men were trained in fast marching and the supply system was improved to support them wherever they went. The mobility of the division was also enhanced by artillery which could follow infantry and maneuver on the battlefield.

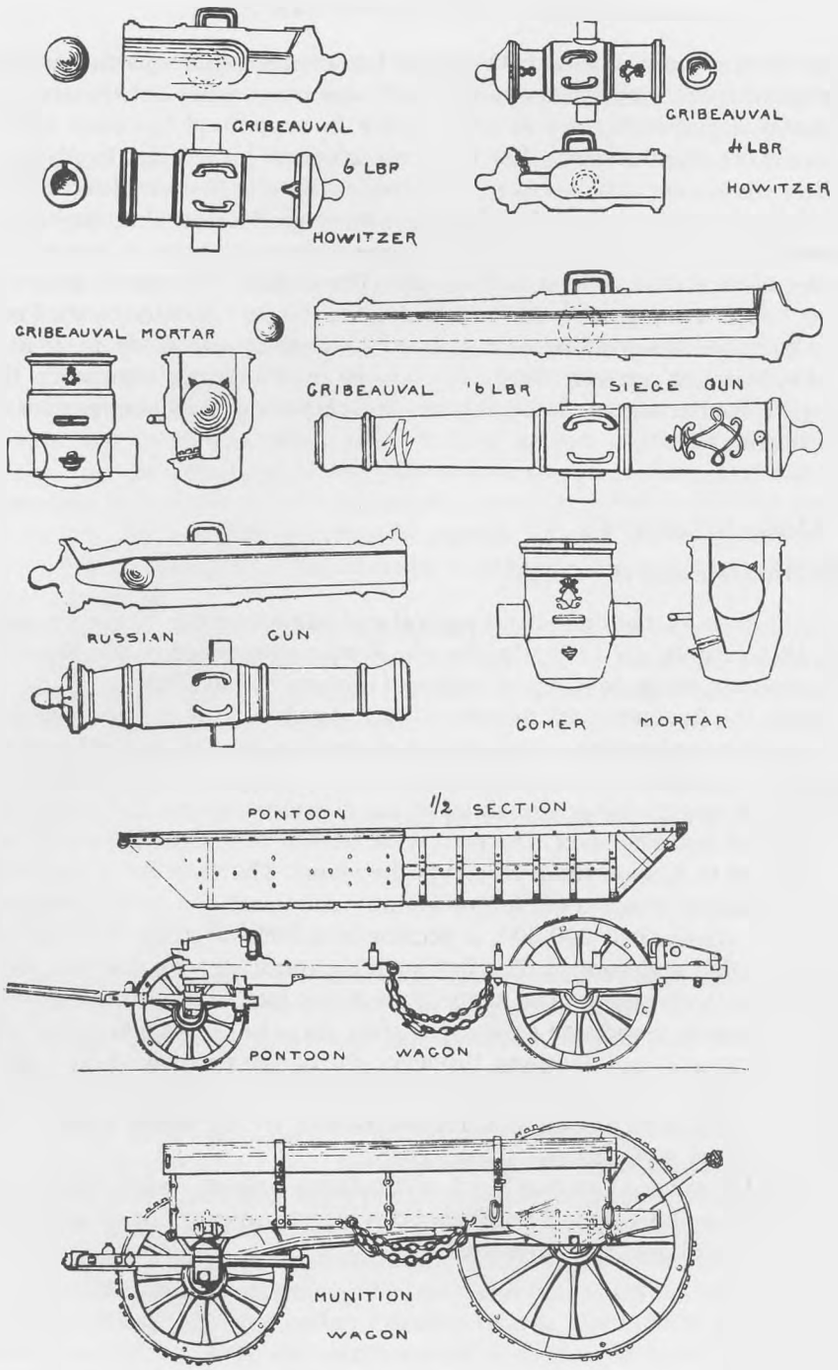
When army sizes approached 200,000, it became necessary to group divisions into army corps for administration and control. The first such organization was made in 1800, when Moreau grouped the 11 divisions of the Army of the Rhine into 4 corps. It was, however, not until 1804 that Napoleon introduced permanent army corps in the French Army, employing them as he had previously used divisions. However, the division remained the major tactical unit, composed of infantry and artillery, and entrusted with a definite mission. The corps included cavalry as well, which conducted reconnaissance for the whole corps. In addition, Napoleon formed cavalry divisions and cavalry corps.

Napoleon's infantry division consisted of 2 or 3 infantry brigades (each comprising 2 to 5 battalions in 1 or more regiments) and 1 artillery brigade, consisting of 1 or more batteries, each with 4 to 6 field guns and usually 2 howitzers.

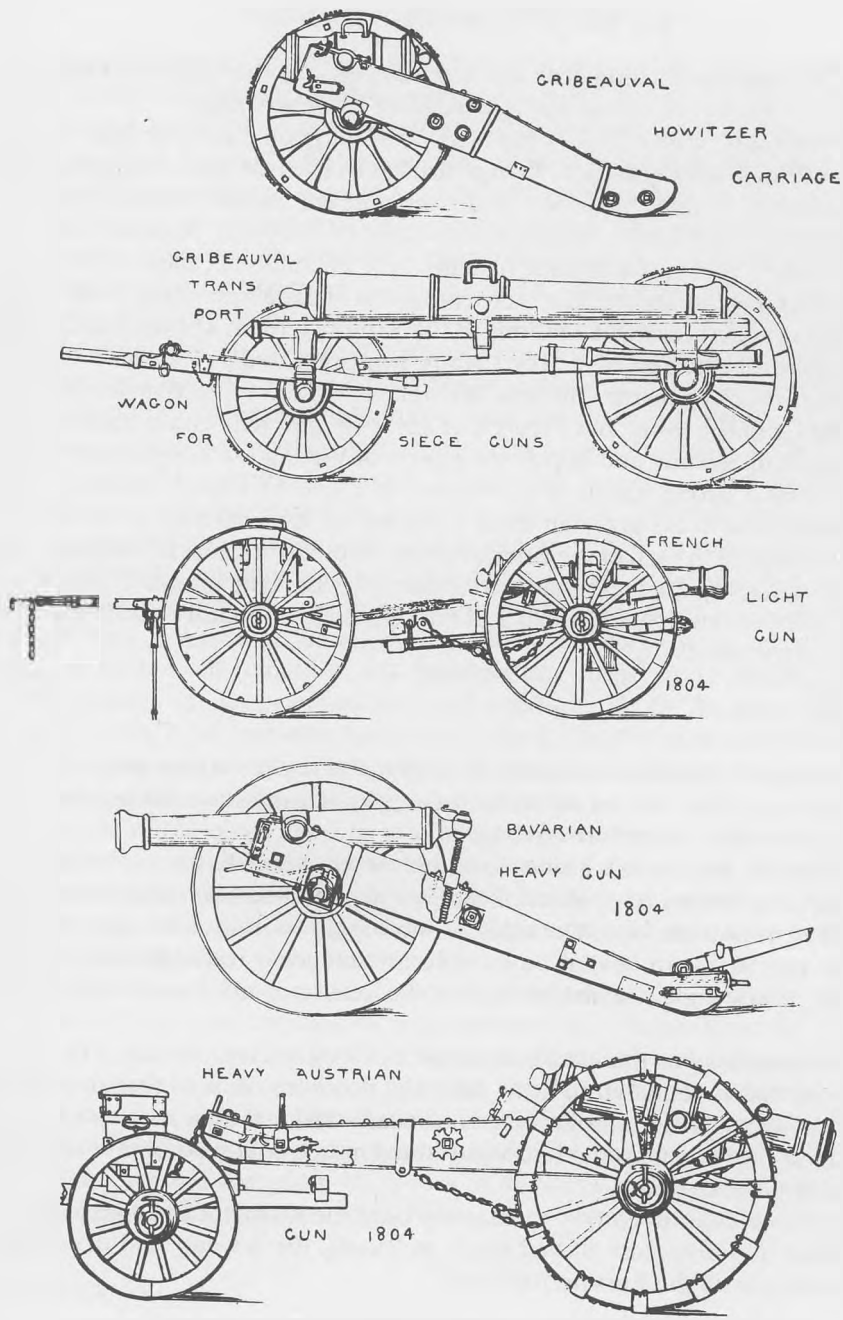
British Organization

The British did not adopt the division until 1807, and Wellington's army in the Peninsula in 1809 was still composed of independent brigades.

The British Army was a volunteer force and necessarily smaller than the French. But it had



Artillery of the Napoleonic era



Artillery of the Napoleonic era

the advantage of more training and drill. The infantry was also the superior of any other in the excellence of its musketry, an advantage enhanced by its 2-rank line.

During the Peninsular campaigns (1809–1814), Wellington's army at first was organized into 8 brigades of 2 or 3 battalions each. Reorganized as its size increased, it consisted finally of 7 divisions, a light division, and the cavalry under separate command. Although the elements of the divisions varied, they were composed ordinarily of 2 British brigades (usually with 3 battalions each) and 1 Portuguese brigade (usually with 5 battalions), about 6,000 each. The 1st Division differed in that 2 of its brigades were composed of battalions of the Foot Guards, while the 3rd brigade was composed of battalions of the King's German Legion (KGL), made up of expatriate Germans in British service. The cavalry was organized as a division with a variable number of brigades and regiments. The light division served as a protective screen for the entire army, operating far to the front, and excelled at advance- and rear-guard operations.

One of the more interesting and important aspects of Wellington's organization grew out of his efforts to secure a strong screen of skirmishers to meet the French *tirailleurs*. Wellington added to every brigade in his army an extra company of light riflemen to reinforce the light company, now standard in each of the British battalions of the brigade. In addition, usually 1 of the Portuguese battalions in the brigade were *cacadores* or light infantry. Further, the light division was composed entirely of British and Portuguese light infantry battalions, as well as 1 or 2 battalions of riflemen.

Logistics

Napoleon was a master of planned and improvised supply. Logistical planning, which provided, in advance, depots and distribution points for the supply of armies, was brought to a higher and more efficient plane than heretofore envisaged.

Insofar as possible, Napoleon's armies lived off the countryside through which they were marching or fighting. Troops were often billeted in towns and villages, where the local population was required to provide food. The soldiers and supply columns following the troops each carried 4 days' provisions, to be consumed only in emergency. In addition, provisions were stored at the main base and intermediate depots, the latter moved forward with the advance of the troops.

Through this forethought, French armies moved with amazing rapidity. The most notable instance was the 500-mile march in 1805 from the northern coast of France across Western Europe to Ulm, Vienna, and Austerlitz. A force of nearly 200,000 men kept up an average of 12 to 15 miles per day for 5 weeks, the fastest sustained march of comparable length by an army since the days of Genghis Khan.

This system of logistics proved very satisfactory until the Russian campaign of 1812, when it completely broke down because of bad roads in Russia, the poverty and devastation of the country, and activities of the Russian partisans.

Military Theory and Strategy

Napoleon

The first coherent new concept of warmaking to manifest itself since Genghis Khan had been demonstrated in the early campaigns of young Napoleon Bonaparte in Italy and Egypt. In his

hands it continued to dominate warfare directly for the first decade and a half of this century. Although his enemies copied the Napoleonic system to the best of their abilities, they never fully understood the concept which underlay Napoleon's tremendous revolution in warmaking. Even at the time they were overwhelming him, in 1814, respectful and awed enemies like Blücher or the Duke of Wellington could say (the statement, attributed to both, was probably Blücher's) that Napoleon's mere presence on the battlefield was worth 40,000 men.

Napoleon never committed his concepts to paper in systematic form. From his writings and remarks have been collected a number (varying, but the most authoritative collection has 115) of maxims which, one way or the other, encompass most of his fundamental ideas on strategy and tactics. These maxims are, however, very uneven; sometimes they are merely aphorisms expressing something which is relatively obvious or unimportant; often they deal with tactical and technical details of significance only to the times and places where Napoleon fought.

But Napoleon's methods of warfare and the concepts underlying those methods were deducible from the record of his accomplishments. Friends and enemies began to tackle the task of analysis even before his downfall, and the relatively superficial early insights which his enemies thus derived unquestionably played some part in that downfall. In subsequent decades three great theorists devoted themselves to more systematic and objective analysis, as noted below.

Napoleon avoided stereotypes and attempted to develop his plans for every campaign and every battle in such a way that his enemies could never know what to expect from him. Nevertheless, as he himself remarked, his theories were based upon simple principles, and certain broad patterns of strategic concepts and methods can be discerned from his many campaigns and battles. (One historian has asserted that he fought more battles than Alexander, Hannibal, and Caesar combined; while this depends upon the definition of a "battle," nonetheless it is indicative of the richness of the Napoleonic record.)

Insofar as possible, Napoleon tried to win a campaign before the first battle was fought. Whenever there was an opportunity, he would combine rapid marching and skillful deception to pass around the enemy's flanks to reach the hostile line of communications, and then turn to make the enemy fight at a disadvantage. Outstanding among the campaigns which were thus won before the fighting began were Marengo, Ulm, and Jena.

To deceive and confuse his enemies, whose combined military strength almost always exceeded his, as well as to permit rapidity of movement and efficient foraging, Napoleon kept his forces spread out until the last possible moment. Then, concentrating rapidly, he would bring superior forces to bear at some critical point. Rivoli, Friedland, and Dresden are typical examples. In a favorite variant, Napoleon would endeavor to place his concentrated army between two hostile armies, defeating them in turn. His first and last campaigns are good examples: Montenotte and Waterloo; his failure in the latter was due to the failure of performance (his and his subordinates') to match his superb strategic concept.

Napoleon's Enemies

After the first defeats inflicted on them by Napoleon, other European military leaders tried to imitate him. They gradually introduced divisions and army corps into their armies, replaced linear tactics by deep combat formations (except for the English), applied concentration of forces on the battlefield in general and in its decisive areas in particular, and formed reserves. But although they learned much and greatly improved their military instruments over the

years, his opponents could never match the great master and never really grasped the secrets of his genius. They finally overwhelmed him through numerical superiority and the attrition of war on France, both traceable to Napoleon's diplomatic failures.

Jomini

Antoine Henri Jomini, a Swiss by birth (1779), served as a junior officer under Napoleon, being a protégé of courageous (if not brilliant) Marshal **Michel Ney.** An injustice at the hands of Napoleon's chief of staff, Marshal **Louis Alexander Berthier,** led Jomini to resign and to transfer his allegiance to Russia in the 1813 campaign; he refused, however, to take part directly or indirectly in any operations against Napoleon. For the next 56 years he served with distinction as a general officer in the Russian Army. During those years he devoted himself to study and to writing, mostly based upon his analysis of Napoleonic operations.

Jomini's writings were voluminous. His first book, *Treatise on Great Military Operations,* written while in the French Army, led Napoleon to remark, in alarm, "It teaches my whole system of war to my enemies!" It presented for the first time in writing the fundamental principles of warfare which today are taken for granted by all military men. His *Summary of the Art of War* is his most complete and comprehensive study, and the work most often quoted.

Clausewitz

Karl von Clausewitz was born in Magdeburg, Prussia (1780). He fought with the Prussian Army in all of the campaigns against Napoleon, from disastrous Jena to victorious Waterloo. From 1818 to 1830, he was administrative director of the Kriegsakademie in Berlin, and devoted as much time as possible to writing. Most of his works were studies of military campaigns. His best-known work, however, is *On War,* which embodies his theories and doctrines. It is a book which has cast an indelible stamp on all subsequent military thought. And, as with Jomini, his principal source of inspiration was the genius of his former enemy, Napoleon.

Although Clausewitz believed that he had discovered the fundamental laws of war, he insisted that in practice these are always subject to an almost infinite number of modifications from external influences, of which psychological and moral influences are the most important. He was firmly opposed to any effort to codify doctrine on the basis of the laws or principles of war. He was afraid that abstract rules would be applied dogmatically on the battlefield, and with disastrous results.

Clausewitz was the greatest philosopher of war. His inspiration has been strong in every army during the century and more after his death. Probably no other military writer is so widely quoted as he. Even his critics—discarding his basic theories mostly because these theories have been so distorted by German military men in the 20th century—still repeat many of his observations.

Dennis Hart Mahan

The fame of **Alfred Thayer Mahan** as a military and naval theorist (see p. 899) has tended to obscure the reputation of his father: **Dennis Hart Mahan.** The elder Mahan graduated at the

top of the class of 1824 at West Point, and was immediately appointed an assistant professor. After 2 years of teaching and 4 years of further study in France, he was appointed Professor of Engineering at West Point (1830). There being no texts available for the courses he taught (there were then no other engineering schools in the United States), he wrote his own, which became the standard American engineering texts for many years.

Nevertheless, it was the art of war which particularly fascinated Mahan. As a scientist, he spent all of his spare time in analyzing military operations of the past, and particularly those of Napoleon. These studies became the basis of a course of lectures on the art of war—the only formal instruction which American officers received in military theory (see below). He wrote several books on the subject, the most important of which was the text for his course at West Point, which was carried and studied by most of the top leaders on both sides in the American Civil War. This book, horrendously entitled *Advanced Guard, Outpost and Detachment Service of Troops, with the Essential Principles of Strategy and Grand Tactics,* was dubbed *"Outpost"* by his students.

Unlike Prussia, the United States had no war college for its officers; their formal education stopped with graduation from West Point. Mahan and his writings became the war college of the American Army.

Military Professionalism

The emergence of military professionalism came hand in hand with the appearance of coherent and scientific military theory. This theory became the basis for systematic military education, at graduate and undergraduate level, an essential element for professionalism in the modern sense. The products of this educational system then became members of a highly specialized group of professionals, the practitioners of the theory.

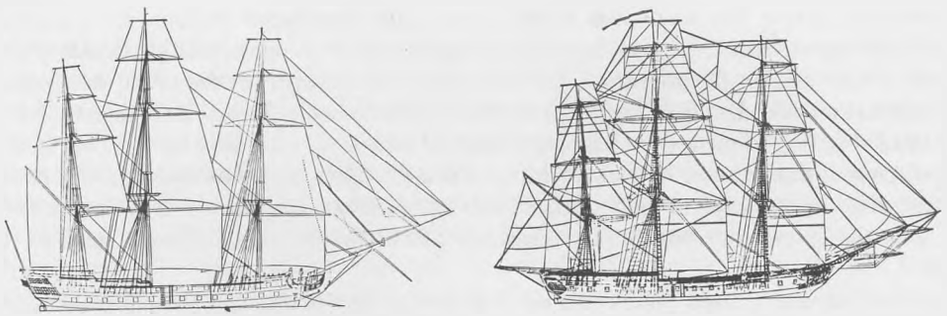
As with the other modern professions, this development was in large part the result of the successive impacts of the Age of Enlightenment and of the Industrial Revolution upon human affairs. It was first manifested by the appearance of military schools for youths preparing themselves for a military life. The British Royal Military College at Sandhurst (1802), the French St. Cyr (1808), and the American West Point (1802) were early examples of this development. Prussia, which had several such cadet schools even earlier, went farther, however, and established a Kriegsakademie, or War Academy (1810). This was to provide the intellectual stimulation for the Prussian General Staff and thus, more than any single factor, to spark Prussian (later German) preeminence in land warfare for more than a century.

War at Sea

Britain continued to dominate the oceans of the world. The trend away from the "formalist" school to the "melee" school was completed by Nelson's dramatically successful adaptation of his means to the circumstances, without regard to custom, tradition, or "Fighting Instructions." His ability to do this was greatly facilitated by a greatly improved signal-flag system developed toward the close of the previous century by Admiral Sir **Home Popham** and officially introduced at the beginning of this period (1800).

Nelson's tactics, combined with Popham's means of control, brought to perfection methods

of warfare at sea with sailing vessels. No significant changes or improvements were possible without radical new developments in science and technology. Yet, in fact, these developments were already at hand. The first steamship was launched in France 18 years before the Battle of Trafalgar.



Ship of the line and frigate at the time of Trafalgar

But professional naval men were most reluctant to accept the new technology. Maritime nations, freed from dependence upon the wind for motive power, found themselves hampered by the limitations in cruising range imposed by steam. The necessity for coaling stations stimulated a scramble for colonies. Dubious eyebrows were raised in the matter of iron hulls versus wood. In a naval era still wedded tactically to the exchange of broadsides, the vulnerability of paddlewheels to gunfire loomed large. **John Ericsson**'s screw propeller, adopted in midperiod, would remove this particular objection, but, except for a few keen-minded and progressive enthusiasts, an overriding fear remained, particularly in England, lest steam propulsion cancel out the advantages of good seamanship as a factor for victory.

The consensus of naval though was best expressed in the words of the British Admiralty in 1828: "Their Lordships find it their bounden duty to discourage to the best of their ability the employment of steam vessels, as they consider the introduction of steam is calculated to strike a fatal blow at the naval supremacy of the Empire."

THE NAPOLEONIC* WARS, 1800–1815

War of the Second Coalition (continued)

On November 9, 1799, **Napoleon Bonaparte** became dictator of France. By *coup d'état* he placed himself in complete control as First Consul. He offered peace to the allies, but his gesture was rebuffed. Though Russia had withdrawn, the war continued. He prepared to wage it aggressively.

* Napoleon Bonaparte's accession to power as First Consul is taken as the dividing point between the Wars of the French Revolution and the Napoleonic Wars.

Operations on Land, 1800–1802

Second Italian Campaign, 1800

The Austrians planned to drive the French from their remaining footholds in Italy. General **Paul Kray von Krajowa,** with 120,000 men, was to hold Germany against any offensive movements by **Moreau,** who had about 120,000 along the upper Rhine in Switzerland and Alsace. Baron **Michael Melas,** with another Austrian army, 100,000 strong, was to overwhelm **Masséna,** who with 40,000 men held the Riviera coast of Italy.

1800, March 8. Bonaparate Raises a New Army. The Army of Reserve assembled at Dijon while he weighed 2 possible courses of action: to combine with Moreau in an offensive through Switzerland into Germany to cut off Kray from his communications with Vienna, or to invade Italy through Switzerland and crush Melas between his army and Masséna's. He decided on the latter plan.

1800, April 6–20. Austrian Victories in Italy. Masséna's army was scattered; he with 12,000 men was driven into Genoa and besieged by General **Karl Ott** with 24,000 men. Melas pursued the remainder of the French, under **Louis Gabriel Suchet,** beyond Nice into the valley of the Var. Bonaparte hastened the concentration of the Army of Reserve at Geneva.

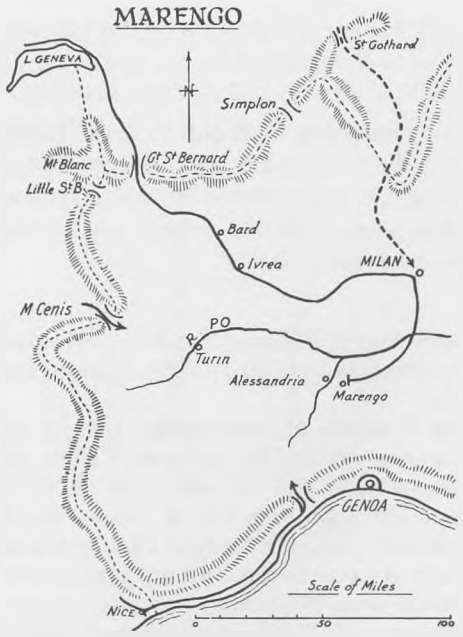
1800, May 14–24. Bonaparte Crosses the Great St. Bernard Pass. He had only 37,000 men. He ordered Moreau to send 15,000 to join him in Lombardy via the Simplon and St. Gotthard passes. To divert Melas' attention, an additional 5,000 men moved through the Mt. Cenis Pass. Bonaparte's advance guard brushed aside Austrian resistance at Fort Bard and Ivrea, and debouched into the Lombardy Plain (May 24). He seized Milan and Pavia and advanced toward Brescia, Cremona, and Piacenza, hoping to relieve Masséna. Melas, hearing of Bonaparte's arrival in Italy, hurried back from Nice.

1800, June 4. Capitulation of Genoa. Masséna, after a protracted and terrible siege, capitulated to Ott, the 7,000 survivors of the French garrison marching out with the honors of war.

1800, June 7. Melas Cut Off from Austria. The Austrian general, at Turin, discovered that Bonaparte was on his line of communication, advancing west against him. Melas moved east, concentrating 31,000 men at Alessandria (June 13).

June 9. Battle of Montebello. General **Jean Lannes,** whose corps numbered 8,000 men, unexpectedly met Ott, who with 18,000 had marched north from Genoa. Lannes attacked furiously; joined by General **Claude Victor**'s corps of 6,000, he drove the Austrians in confusion toward Alessandria.

1800, June 14. Battle of Marengo. Bonaparte, thinking Melas still at Turin, approached carelessly, with his troops widely separated. Unexpectedly he found himself engaged by superior numbers at Marengo, a mile east of Alessandria. He had only 18,000 men—the corps of **Claude Victor** and **Jean Lannes,** and **Joachim Murat**'s cavalry reserve. **Louis C. A. Desaix**'s corps and other units were scattered farther east and south, gathering supplies. Melas enveloped the French right. By 1 o'clock the Austrians had driven the French back 2 miles. Thinking he had won the battle, Melas ordered a march formation, proceeding east leisurely. But Bonaparte, undismayed by apparent defeat, had rallied his troops and had sent for reinforcements—about 10,000, mainly Desaix's corps, only a few miles away. At 5 P.M. he counterattacked; the Austrian advance guard was struck by Desaix from the front, while the French cavalry (under **François E. Kellermann,** son of the hero of Valmy) swept down on the north flank of the Austrian main body, followed by Lannes's corps and the Guard. Melas' forces crumbled; half of his army was scattered, cut down, or made prisoner. The remainder fled back into Allessandria. Austrian



losses were about 11,000 French 8,000. Desaix was among the dead.

1800, June 15. Melas Capitulates. The Second Italian Campaign had virtually ended. Bonaparte returned to Paris, ordering General **Guillaume M. A. Brune** to advance on Mantua to consolidate the victory.

Germany, 1800–1801

1800, May–June. Moreau Drives Kray into Bavaria. He won victories at **Stockach** (May 3), **Möskirch** (May 5), **Ulm** (May 16), and **Hochstadt** (June 19). Kray retired behind the Inn. Moreau slowly advanced toward Munich.

1800, July 15–November 13. Armistice. Kray was replaced by the youthful **Archduke John** when operations renewed.

1800, December 3. Battle of Hohenlinden. The 2 armies, each seriously overextended, clashed in mud, snow, and rain. Moreau had about 90,000 men available for battle; John had about 83,000, but both committed their forces piecemeal, about 55,000 French and 57,000 Austrians and Bavarians were actually engaged. The superior speed and energy of the French, combined with considerable good luck, enabled them to surround large portions of the Austrian Army, which was completely crushed, losing 14,000 to a French loss of 2,500. Moreau marched eastward toward Vienna; another French army under General **Jacques Macdonald** invaded the Tyrol from Switzerland; Brune's army in Italy advanced toward the passes over the Julian Alps.

1800, December 25. Austrians Sue for Peace.

1801, February 9. Treaty of Lunéville. This reaffirmed the terms of Leoben and Campo Formio. In addition Spain ceded Louisiana to France, which in turn soon sold the vast territory to the United States (1803).

Operations in Egypt, 1800–1801

1800, January 21. Convention of El Arish. Kléber, attacked by both the English and the Turks, agreed to evacuate Egypt on guarantee of free passage of his troops to France. England later disavowing the agreement, Kléber attacked and defeated the Turks at **Heliopolis** (March 20) and recovered Cairo. He was assassinated (June 14), the day Bonaparte was winning at Marengo; **Jacques F. de Menou** assumed command.

1801, March 8. Amphibious Landing at Aboukir. A British-Turkish army (18,000 strong) under Sir **Ralph Abercromby** landed in a brilliant operation.

1801, March 20. Battle of Aboukir. The allies defeated Menou; Abercromby was killed.

1801, April–August. Reconquest of Egypt. The allies took Cairo (July), Alexandria (August). British sea power preventing all French attempts to reinforce the Egyptian expedition, Menou capitulated (August 31). His 26,000 troops were given immediate free passage to France (September). British sea power had wrecked Bonaparte's dream of Oriental conquest.

War at Sea, 1800–1802

1800–1801. Routine Operations. Aside from blockade and convoy operations, the major effort of the Royal Navy was in support of operations against the French in Egypt. The principal exploit was the support of Abercromby's landing at Aboukir by the fleet of Sir **William Keith** (see p. 814).

1801, February. Neutral League. Following the Treaty of Luneville, Russia, Prussia, Denmark, and Sweden joined to protect their shipping from British belligerent claims.

1801, March. British Reaction. A squadron of 53 sail—18 of them ships of the line—entered the Baltic under command of Admiral Sir **Hyde Parker,** with Sir **Horatio Nelson** as second in command.

1801, April 2. Battle of Copenhagen. Nelson, with 12 ships of the line, boldly sailed into the harbor of Copenhagen. Ignoring orders from Parker, he engaged Admiral **Fischer's** Danish flotilla consisting of warships, armed hulks and floating batteries at anchor. In a 5-hour fire fight, fierce Danish resistance was smashed. Nelson hoped to induce Parker to continue to Revel (Tallin) to destroy the Russian fleet, but an armistice suspended further operations. Meanwhile, Czar **Paul** had been assassinated (March 24), and his successor, **Alexander I,** signed a convention terminating all necessity for further hostilities (June 17).

1801, July 6 and 12. Naval Battles of Algeciras. Sir **James Saumarez** suffered a setback in an inconclusive action with a small French squadron raiding near Gibraltar (July 6), but retrieved his reputation by a victory against 2-to-1 odds after the French had been reinforced by a much larger Spanish fleet.

Peace of Amiens, 1802–1803

1802, March 27. Treaty of Amiens. Peace between France and England brought general peace to Europe for the first time in a decade.

1802, August 2. Bonaparte Proclaimed Consul for Life.

Franco-British War, 1803–1805

1803, May 16. Resumption of Hostilities. Britain imposed a naval blockade of the Continent. Bonaparte began preparations for an invasion of England.

1803–1805. French Threaten Invasion of England. If Bonaparte really intended to invade, all his efforts were thwarted by British sea power. His invasion flotilla gathered at the Rhine mouths was seriously mauled by **Sidney Smith**'s fire and explosion ships (October 2, 1804). British squadrons also balked French naval domination of the Mediterranean, the East Indies, and the West Indies. As **Alfred Mahan** puts it: "Those far distant, storm-beaten ships, upon which the Grand Army never looked, stood between it and the domination of the world."*

1804, December 2. Bonaparte's Coronation as Napoleon, Emperor of the French. He continued concentrating his Grand Army on the northern coast. Numerous landing craft were constructed; there was much apprehension in England. But British diplomatic maneuverings were bringing results.

War of the Third Coalition, 1805–1807

1805. Britain Gains Allies. Austria, Russia, and Sweden prepared to revenge themselves. The bulk of the French Army was assembled near Boulogne; the only other important French concentration was in north Italy: Masséna, with 50,000 men. The allies planned first to destroy Masséna in Italy, then to move westward with overwhelming forces on the northern side of the Alps toward the Rhine and France.

* Alfred T. Mahan, *Influence of Sea Power upon the French Revolution and Empire* (Boston: Little, Brown, 1893) II, 118.

War on Land, 1805

Ulm Campaign

1805, August 31. The Grand Army Marches Eastward. Napoleon, learning of his enemies' intentions, took the initiative, discarding plans for invading England. The Grand Army, totaling more than 200,000 men, secretly began to march eastward from the Boulogne area.

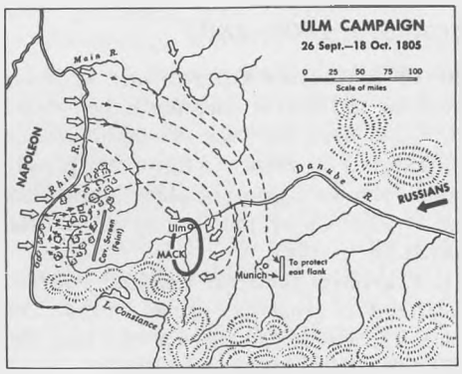
1805, September 2. Austrian Invasion of Bavaria. General **Mack von Leiberich,** knowing nothing of the French movement, marched toward Ulm with 50,000 troops. The **Archduke Charles** with 100,000 men prepared to attack Masséna in Italy. A Russian army of 120,000 began to march westward. An additional contingent was promised by Sweden. When they joined Mack, the second stage of the allied plan would begin.

1805, September 26. French Cross the Rhine. The advance continued on a wide front. Mack, still unaware that Napoleon had left Boulogne, was between Ulm and Munich; the **Archduke John** with 33,000 Austrians was concentrated at Innsbruck; the Archduke Charles was in the Adige Valley, between Trent and Venice. Far behind them, the Russian generals **Mikhail I. Kutuzov** with 55,000 men and **Friedrich Wilhelm Buxhöwden** with 40,000 more were approaching the Carpathians.

1805, October 6. French Reach the Danube. While Murat's cavalry, thrusting through the Black Forest, demonstrated in front of Mack at Ulm, the Grand Army, in 6 great columns, swept north and east of the Austrian general in a wide concentric arc. Too late Mack realized the French were behind him.

1805, October 17. Capitulation of Ulm. After one futile attempt to break through the encirclement at **Elchingen** (October 14), Mack surrendered with nearly 30,000 men, 40 standards and 65 guns.

COMMENT. *This campaign opened the most brilliant year of Napoleon's career. His army had been trained to perfection; his plans were faultless. Sweeping through Western Europe on a wide front, he concentrated the magnificent machine on Mack's line of communications in one of the finest historical examples of a turning movement. Ulm was not a battle; it was a strategic victory so complete and so overwhelming that the issue was never seriously contested in tactical combat.*



The Advance on Vienna

1805, October. Napoleon Advances East. He peeled off several army corps to the south to prevent interference by Austrian movements through the Alps from Italy.

1805, October 30. Battle of Caldiero. Masséna in Italy attacked the Archduke Charles, who retired eastward, hotly pursued by Masséna. Joined by Archduke John, retreating from the Tyrol, Charles withdrew across the Julian Alps.

1805, November 1–14. Invasion of Austria. Napoleon, leaving some 50,000 men to guard his line of communications, drove the Russian Kutuzov before him and occupied the Austrian capital. The Russian fought effective delaying actions at **Dürrenstein** (November 11) and **Hollabrünn** (November 15–16).

Austerlitz Campaign

1805, November 15. Napoleon Advances North. Leaving 20,000 men in Vienna, he began concentrating the major portion of his re-

maining army near Brünn, some 70 miles from Vienna.

1805, November 20–28. The Strategic Situation. Napoleon with 65,000 men, in the midst of his enemies, waited for them to move. **Archduke Ferdinand** with 18,000 men lay at Prague, to the northwest; Emperors Alexander of Russia and **Francis II** of Austria at Olmütz, to the northeast (Kutuzov actually commanded) with 90,000 Russians and Austrians. The Archdukes Charles and John, with 80,000 more, were blocked from crossing the Alps (by about 20,000 men of the corps of **Michel Ney** and **Auguste F. L. Marmont,** who guarded the passes) and harassed by Masséna's 35,000 as they withdrew to Austria through Hungary south of the Alps. Napoleon's problem was to prevent the junction of these numerically

superior allied forces while preserving his line of communications through Vienna to France. His apparently exposed situation was enticing to his enemies. The emperors and Kutuzov planned to move south from Olmütz, circle his right flank, and cut his communications. This was exactly what he anticipated.

1805, November 28. The Allied Army Begins to Move. The French army lay facing east, about 2 miles west of the village of Austerlitz. Deliberately, Napoleon placed his army on low ground and over-extended his right wing—1 division—for 2 miles in plain view of allied scouts, while the bulk of his troops were collected east of Brünn, near the road to Olmütz.

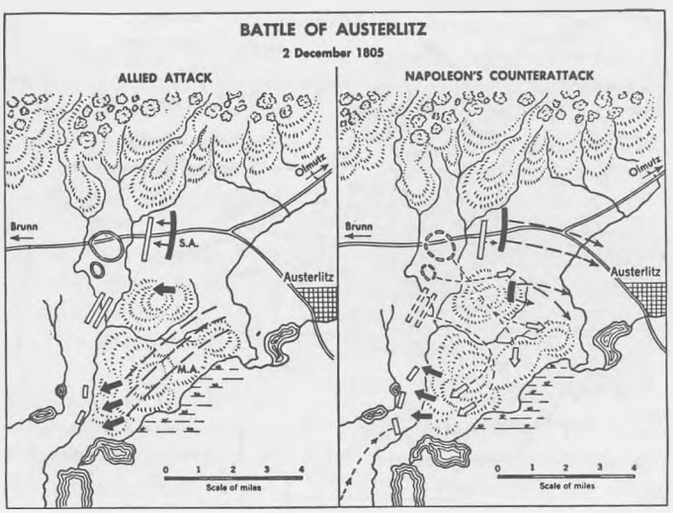
1805, December 1, P.M. The Allies Reach Austerlitz. At once they noted the weakened right flank of the French Army. They planned to crush it and get between Napoleon and Vienna.

1805, December 2. Battle of Austerlitz. At dawn the weight of the allied main effort fell upon the French right. Although reinforced by the arrival of Louis N. Davout with 8,000 additional men, the French right was forced back. By 9 A.M. fully one-third of the allied army was pressing against this wing, with more troops moving laterally across the French front to join in the assault. Napoleon then sprung his trap. **Nicolas J. Soult**'s corps, in the French center, stormed the heights of Pratzen and split the allied front. Soult then encircled the allied left, rolled it up, and, assisted by Davout, drove it in confused retreat. French artillery fire broke ice on frozen ponds, and many Russians were drowned. Meanwhile, the corps of **Jean Baptiste J. Bernadotte** assaulted directly east, through the gap made by Soult, while on the French left Lannes's corps drove full tilt against the allied right, on the Brünn-Olmütz road. The allied right, under Russian Prince **Peter I. Bagration,** resisted fiercely until enveloped by Bernadotte from the south. By nightfall the allied army had ceased to exist. French losses were nearly 10,000 men; the Austro-Russian losses were 36,000 men, 45 standards, and 185 guns; the remnants of the allied army were hopelessly scattered.

COMMENT. *Austerlitz stands as a tactical masterpiece ranking with Arbela, Cannae, and Leuthen.*

1805, December 4. Austrian Capitulation. Emperor Francis agreed to an unconditional surrender. The shattered forces of Czar Alexander retreated to Russia.

1805, December 26. Treaty of Pressburg. Austria withdrew from the war, surrendering



territory in Germany and Italy; France gained virtual domination over western and southern Germany. Napoleon had changed the political face of Europe.

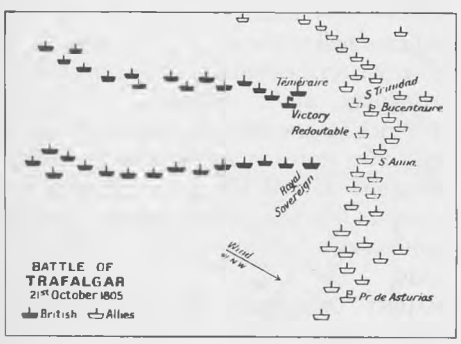
War at Sea, 1805

1805, April–July. Nelson's Pursuit of Villeneuve. Admiral **Pierre Villeneuve,** escaping Nelson's blockade of Toulon, sailed into the Atlantic, was joined by a Spanish force, and sailed for the West Indies with about 20 ships. Nelson, who had 10 ships, pursued. After some maneuvering in the West Indies, Villeneuve fled back across the Atlantic, again pursued by Nelson.

1805, July 22. Action off Cape Finisterre. British Sir **Robert Calder**'s squadron of 18 ships clashed with Villeneuve's combined Franco-Spanish fleet, capturing 2 Spanish ships. Villeneuve sailed to Cádiz, where he was reinforced.

1805, August. Napoleon's Naval Plan. Villeneuve was to take his fleet from Cádiz to the Mediterranean. There he would unite with other French ships at Cartagena and move on southern Italy to support Masséna's campaign. Villeneuve knew that Britain's Nelson, now with 29 ships of the line (actually only 27 were present), lay in the offing, a fact unknown to Napoleon; but Villeneuve, smarting under the threat of removal from command for cowardice, complied with his orders (September 27).

1805, October 21. Battle of Trafalgar. Nelson, off Cape Spartel, learned of the allies' move and sailed to meet them. Off Cape Trafalgar the fleets clashed. The Franco-Spanish force of 33 ships turned back toward Cádiz in a 5-mile-long irregular line. In accordance with a prearranged plan, Nelson, in 2 divisions, each in single column, on a course at right angles to his adversary's, drove directly into the center of the long allied column, cutting it in two. In a 5-hour battle, 18 allied ships were taken; the remainder fled, only 11 reaching Cádiz. No English ship was lost. Nelson was mortally wounded as his flagship *Victory* closed in furious combat with the French *Redoutable.*



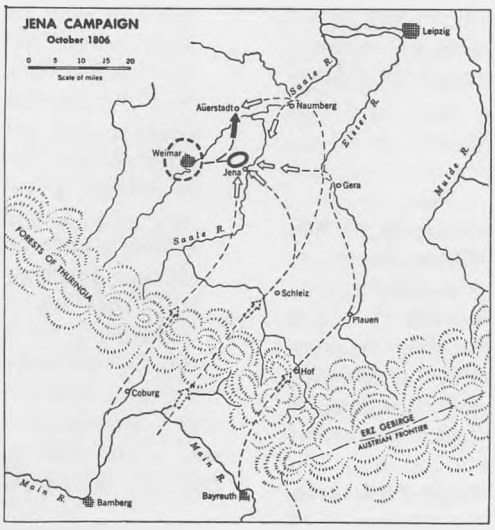
COMMENT. *Nelson had destroyed French naval power and established Britain as the mistress of the seas in the most decisive major naval victory—tactically and strategically—of history.*

Jena Campaign, 1806

1806. Napoleon Controls Central and Western Germany. He established the Confederation of the Rhine. By August, the last vestige of German unity, the Holy Roman Empire, expired; its emperor, **Francis II,** becoming **Francis I,** Emperor of Austria. Prussia, which until the French victory of Austerlitz had contemplated joining the coalition against Napoleon, was now so alarmed by the state of events that, with England's encouragement, she secretly prepared for war. Saxony joined Prussia.

1806, September. Opposing Plans. Napoleon's Grand Army of 200,000 was still mostly in southern Germany. He prepared to invade Prussia. Secretly he concentrated far to the east, in northeastern Bavaria, close to the Austrian border, but without violating Austrian neutrality. The Prussian-Saxon field army comprised about 130,000 men under the overall command of **Karl Wilhelm Ferdinand, Duke of Brunswick.**

1806, October 8. Napoleon Starts North. The rapidity of his strategic concentration and of his advance was remarkable. Preceded by a cavalry screen, the Grand Army moved in 3 parallel columns on a front of about 30 miles at a rate of



15 miles per day. Roughly forming a great square, the army was prepared for tactical concentration in any direction.

1806, October 12. Strategic Turning Movement. The French advance bypassed the Prussian left flank, completely surprising the Prussians. Their first intimation of the situation came when the corps of Marshal Lannes, on the left vertix of the French square, overwhelmed a smaller Prussian force at **Saalfeld** (October 10). Napoleon was now closer to Berlin than they were. Knowing that the bulk of the Prussian Army was to his left, he ordered Davout and Bernadotte to move west from Naumburg to cut the Prussian line of communications. The remainder of his army advanced toward Jena. Davout responded correctly; Bernadotte, misinterpreting his orders, moved southwest instead of west.

1806, October 14. Battle of Jena. Meanwhile the Prussians, alarmed by news of the French advance, changed their own plans. The **Duke of Brunswick,** with 50,000 men, moved northeast toward Auerstadt, 15 miles north of Jena. Prince **Friedrich Ludwig Hohenlohe,** and 64,000 more were scattered on a 15-mile front between Weimar and Jena to protect Brunswick's rear. Napoleon, shortly after dawn, struck Hohenlohe, concentrating 100,000 men at Jena. By noon, he completely swept the Prussians from the field. Prussian losses were 27,000 and 112 guns, the French loss was 6,000.

1806, October 14. Battle of Auerstadt. Davout with 27,000 men engaged Brunswick's 50,000. In an epic defensive battle, Davout, on the Prussian line of communications, withstood repeated assaults for more than 6 hours. Brunswick was mortally wounded and King **Frederick William III** assumed command. Prussian morale was weakened by rumors of the French success at Jena. As the Prussian effort slackened, Davout counterattacked. Bernadotte, near Dornburg—far from both battles—now realized something was wrong and marched to the sound of the guns, but did not arrive on the field in time to enter the battle. Crumbling under Davout's counterattack, Frederick's wavering command gave way, and the entire Prussian Army now disintegrated. They lost 25,000 killed and wounded, and nearly 25,000 more made prisoner. French casualties were approximately 7,000 on both fields.

COMMENT. *Once again Napoleon, by rapidity of movement and skillful combinations, had won*

a strategic victory before tactical operations ever began.

1806, October–November. Pursuit. The Grand Army immediately swept northward after the remnants of the Prussian Army. Murat's cavalry seized Erfurt (October 15), 10,000 men, remnants of Frederick's command, capitulated. Berlin was seized (October 24), and at Prenzlau, Prince Hohenlohe surrendered with another 10,000 (October 28). A further 32,000 surrendered (mostly to small French cavalry detachments) in various fortresses in November. The last element of Prussian resistance, **Gebhard L. von Blücher**'s command, surrendered near Lübeck, nearly 150 miles northwest of Berlin (November 24). Frederick William fled to Russia.

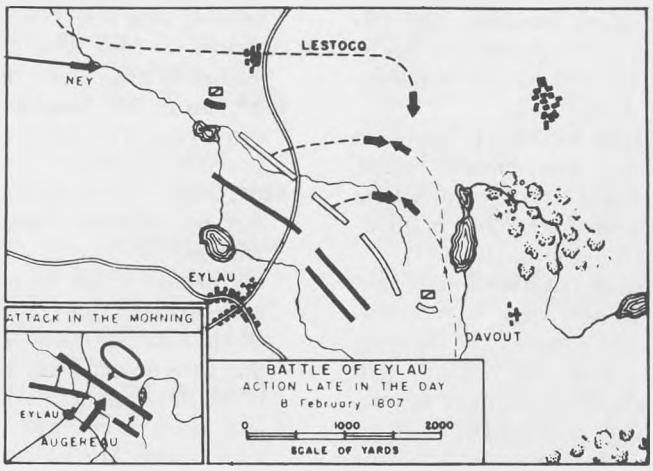
1806, November 30. Advance into Poland. Napoleon moved east with 80,000 men to the line of the Vistula (Wisla) River, occupying Warsaw (Warszawa) to thwart any Russian attempt to sustain Prussia. Count **Lévin A. Bennigsen,** with about 100,000 Russians and some Prussian fragments, lay at Pultusk.

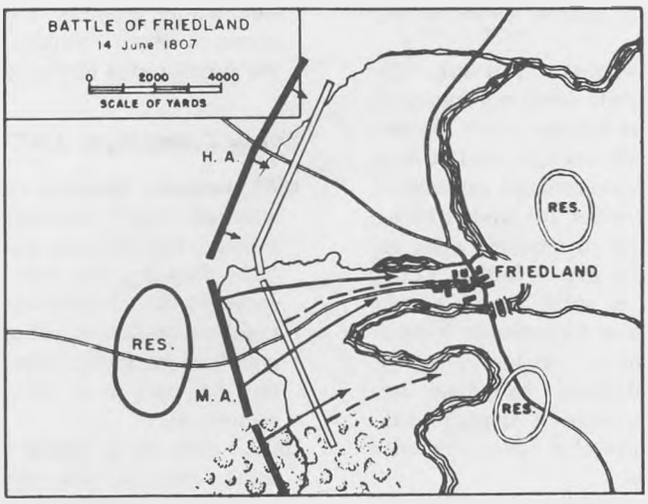
1806, December 30. Winter Quarters. After desperate rear-guard fighting at **Pultusk** (December 26), Bennigsen evaded French attempts to corner him. Napoleon, faced by bitter cold and the exhaustion of his own troops, went into winter quarters. His corps were spread across northern Poland and east Prussia from the Bug River to Ebling (Elblag) on the Baltic.

Eylau Campaign, 1807

1807, January. Russian Offensive. Bennigsen attacked Ney's cantonments south of Königsberg (Kaliningrad) and forced him to withdraw. Pursuing into East Prussia, Bennigsen's communications were menaced by Napoleon's rapid concentration and advance. The Russian withdrew hurriedly. Napoleon caught up with him February 7 at Preussisch-Eylau (Bagrationowski).

1807, February 8. Battle of Eylau. Napoleon hastily attacked, with only part of his army in hand. Russian strength was 74,500 (with a Prussian corps of 8,500 more moving rapidly toward them); Napoleon had less than 50,000 (Ney's and Davout's corps, with an additional 25,000, were expected by noon). In a driving snowstorm, a French assault was checked. Davout arrived and turned the Russian left. But he, in turn, was checked by the arrival of **C. Anton Wilhelm Lestocq**'s Prussian corps. Ney now arrived, but neither side could gain a decisive advantage. That night Bennigsen withdrew. Losses on both sides were enormous.





Russian casualties were 23,000 men killed and wounded, with some 3,000 men and 24 guns captured. The French lost nearly 22,000 men, with 1,000 more captured. Both armies returned to winter quarters; both brought up reinforcements and refitted.

Friedland Campaign

1807, March 15–April 27. Siege of Danzig. The French captured the city, beating off futile Russian and Prussian relief efforts. Napoleon planned a spring offensive to begin June 10.

1807, June 5. Bennigsen Resumes the Offensive. Again he hoped to overwhelm Ney in a surprise assault. Ney withdrew as Napoleon concentrated north of Allenstein.

1807, June 10. Battle of Heilsburg. Napoleon repulsed the Russians, who retreated north. Moving by parallel roads, Napoleon placed the bulk of his army between Bennigsen at Friedland and Lestocq at Künigsberg (June 13).

1807, June 14. Battle of Friedland. Napoleon sent Lannes, with 17,000 men, to pin Bennigsen down while the remainder of the army concentrated to the west. The Russian, with 61,000 men in hand and 20,000 more nearby, crossed the Alle River and attacked Lannes with 46,000, leaving the remainder in reserve east of the river. Lannes's delaying action halted the Russians after a 3-mile advance. Napoleon, taking personal command of the battle as his concentrations progressed, launched his main attack at 5 P.M. with 80,000 men. Within 2 hours the Russians' left flank had disintegrated and they were driven back into Friedland. Their resistance stiffened, but by 8 P.M. Napoleon had driven them across the river in great disorder, leaving 20,000 dead and wounded on the field and 80 guns. French casualties were about 12,000 men.

1807, June 15. Evacuation of Königsberg. Lestocq, who was being pressed by Murat, retreated to Tilsit with 25,000 men when he learned of Bennigsen's defeat.

1807, June 19. Napoleon Occupies Tilsit (Sovetsk). The Russians asked for a truce, which he granted.

1807, July 7–9. Treaties of Tilsit. Napoleon met his enemies—Alexander of Russia and Frederick William III of Prussia—on a raft in the middle of the Niemen (Neman). Prussia gave up to the Grand Duchy of Poland all land taken in the partitions of Poland (see pp. 760). She gave to Napoleon and the Confederation of the Rhine all her territory between the Elbe and Rhine rivers. Her army was reduced to 42,000 men. She was to pay an indemnity of

140 million francs; until paid, French troops would occupy the country. Russia recognized the Grand Duchy of Warsaw and agreed to an alliance with France against Britain.

COMMENT. *Napoleon was the virtual ruler of Western and Central Europe.*

The Peninsular War—Campaigns of 1807–1808

1807, July–October. England Alone in Opposition to Napoleon. Her coastline was guarded by her navy; her offensive operations were concentrated in a stringent naval blockade of the entire European coastline. By economic pressures England hoped that internal stresses on the Continent would eventually lead to a new coalition to challenge French control. Napoleon had imposed a counterblockade on Britain—his **Continental System**—aimed to throttle British trade (November 21, 1806). After Tilsit, neutral Portugal was the only access route (save by smuggling) for British trade with the Continent. Napoleon now turned his attention to the Iberian Peninsula.

1807, November–December. French Invasion of Portugal. With Spain's permission, **Andoche Junot** led an army into Portugal, capturing Lisbon (December 1). The Portuguese royal family fled to Brazil.

1807, December 17. Milan Decree. This reaffirmed the Continental System. British trade was forbidden from all Europe. Actually, smuggling became rampant, particularly through Spanish ports.

1808, March. French Invasion of Spain. Under pretext of guarding the Spanish coast, Murat led a French army of 100,000 into Spain. **Charles IV** and his son **Ferdinand** were forced to renounce the throne; Napoleon's brother **Joseph** (who had been King of Naples) was crowned King of Spain. (Murat succeeded him as King of Naples.)

1808, May. Insurrection Flares in Spain. French garrisons became islands in a sea of guerrilla warfare, accompanied by intense cruelty. Murat temporarily fell back to the Ebro. British arms, equipment, and money poured in to help the Portuguese and Spanish peoples. The British government decided to send an expeditionary force to Portugal, commanded by Sir Arthur Wellesley.

1808, June 15–August 15. First Siege of Saragossa. The Spanish garrison, assisted by the aroused population, resisted French attempts to reopen the main line of communications into central Spain and Portugal. After Murat's withdrawal to the Ebro, the French raised the siege.

1808, July 19. Battle of Baylen. General **Pierre Dupont**'s 20,000 men, surrounded by some 32,000 Spanish regulars and levies, attempted to break out, but failed. Dupont's army was forced to capitulate (July 22). Promise of safe conduct to France was immediately violated; the unarmed French not butchered on the spot were thrown into prison hulks, where most of them perished. The disaster—the first surrender of a Napoleonic army—stimulated Spanish resistance and shocked French morale. Junot's army in Portugal was isolated.

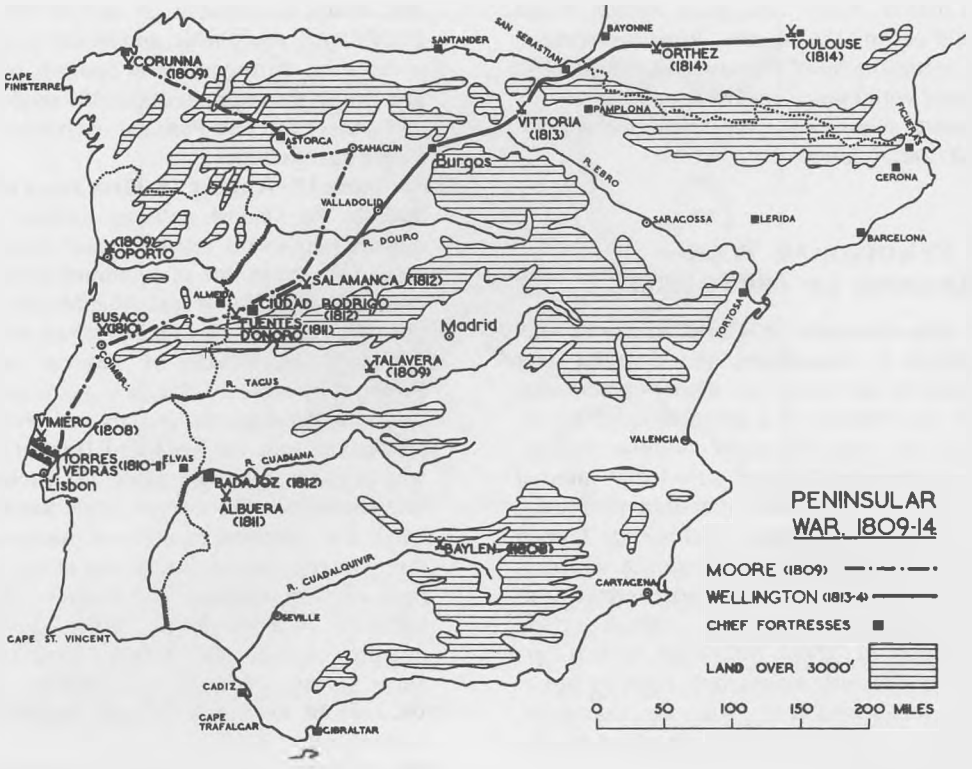
1808, July 20. French Reoccupy Madrid. This partially offset Baylen.

1808, August 1. The Wellesley Expedition. Wellesley landed north of Lisbon.

1808, August 21. Battle of Vimeiro. Wellesley, with 17,000 men, repulsed Junot's attack with 14,000.

1808, August 30. Convention of Cintra. Junot's position had been rendered untenable by Wellesley's victory and by a popular uprising in Lisbon. Following negotiations Junot capitulated to Wellesley's superiors, Generals Hew Dalrymple and Harry Burrard, the terms providing that the French be evacuated to France by sea on British ships. News of these terms sparked a political uproar in Britain; Wellesley, who was not responsible for the terms, was temporarily recalled to London. Sir John Moore, with reinforcements, landed and took command of British forces in Portugal.

1808, September. British Invasion of Spain. Moore's British army of 35,000 advanced to seize Madrid, while 125,000 Spanish regulars, levies, and irregulars drove the French back to



the Ebro River. Napoleon, in Paris, commented that his army in Spain seemed to be commanded by "post-office inspectors." He sent reinforcements to Spain, and prepared to take the field there himself.

1808, November 5. Napoleon Joins His Army in Spain. He advanced immediately with 194,000 men.

1808, December 4. Capture of Madrid. Napoleon then turned northwest to cut off Moore's British forces from Portugal. Moore, resting at Salamanca, received word of Napoleon's intentions from the Spanish, and retreated northwest to a new base established at Corunna on the Biscay coast. The British retreated skillfully in a series of rear-guard actions, but were hampered by a lack of supplies and by a breakdown of discipline brought on by the logistical problems and exacerbated by the harsh Spanish winter.

1808, December 20–1809, February 20. Second Siege of Saragossa. French assaults under Lannes penetrated the defenses (January 27), but desperate resistance continued for 3 weeks. Finally, those defenders who had survived disease, starvation, and bombardment capitulated.

1809, January 1. Napoleon Returns to Paris. Spain appeared to be pacified and under control. Serious developments in Central Europe demanded his immediate attention (see p. 825). He took much of his army with him, leaving the pursuit of Sir John Moore to Soult.

1809, January 16. Battle of Corunna. Moore reached the coast successfully with 15,000 men. He repulsed Soult's 20,000 in a stiff battle, each side suffering about 1,000 casualties. Moore, mortally wounded, died on the field and was buried on the ramparts of Corunna. The British expedition was safely evacuated by sea.

War Against Austria, 1809

1809, January. Austria Prepares for War. Encouraged by events in Spain, Austria decided to gain vengeance and to liberate Germany from the French yoke. Word of Austrian preparations caused Napoleon to leave Spain.

1809, April 9. Austrian Invasion of Bavaria. The Archduke Charles marched on Ratisbon (Regensburg). Another force moved southwestward from Bohemia.

1809, April. Operations in Italy. An Austrian army of 50,000 men under Archduke John crossed the Julian Alps to invade Italy. Prince **Eugène de Beauharnais,** Napoleon's stepson, attacked with 37,000 men at **Sacile,** east of the Tagliamento River, but was repulsed (April 16). Eugène retreated behind the Piave.

1809, April–1810, February. Revolt and Guerrilla War in the Tyrol. A popular uprising against the Bavarian garrison (French allies) freed most of the region. Archduke John sent troops to assist the guerrillas. After the Wagram Campaign (see below), French troops under Eugène slowly reconquered the region.

1809, April 16. Napoleon Arrives at Stuttgart. He had rushed from Spain via Paris. He found his armies in Germany—176,000 men ineptly commanded by his chief of staff, **Louis Alexandre Berthier**—had been split by the Austrian invasion forces. Napoleon took command and seized the initiative, while at the same time correcting Berthier's faulty dispositions.

1809, April 19–20. Battle of Abensberg. Having collected more than half of his army west of Ratisbon, Napoleon crossed the Danube River to penetrate the center of the extended Austrian Army—about 186,000 men. The Austrian right flank was forced back toward Ratisbon, while the left was driven back toward Landeshut.

1809, April 21. Battle of Landeshut. The Austrian left wing, under Baron **Johann Hiller,** pursued by the bulk of Napoleon's army, was in danger of being cut off completely by the arrival of Masséna's corps from the west. Masséna's indecision, however, permitted the Austrians to escape eastward across the Isar River after a brisk fight. Napoleon, despite annoyance at less than complete success, immediately turned northward to join Davout, who with 36,000 men had been maintaining pressure against the remainder of the Austrian Army, about 80,000 under Archduke Charles, south of Ratisbon.

1809, April 22. Battle of Eckmühl Charles attacked the left of Davout's isolated force, planning to cut Napoleon's line of communications. The Austrian attack was lethargic; Davout held firm. Napoleon and the van of his main body arrived on Davout's right early in the afternoon. By midafternoon the Austrian left had been crushed and Charles was retreating, after a loss of 11,000 men. French losses were 3,000. Napoleon was unable to pursue; his troops were utterly exhausted by marching, fighting, and heat.

1809, April 23. Battle of Ratisbon. Charles now devoted every effort to escape northward across the Danube. To cover this retreat, he defended the walled city of Ratisbon. Due to the exhaustion of his troops after a week of hard fighting and marching, Napoleon's pursuit was not energetic. By the time the French fought their way into the town of Ratisbon, most of the Austrian army had escaped. Napoleon was slightly wounded.

COMMENT. *In 7 days of brilliant marching, fighting, and maneuvering, Napoleon had taken a French army from the verge of defeat to brilliant victory. Davout again distinguished himself. Estimated Austrian losses were 30,000 men, including over 11,000 prisoners; the French lost some 15,000.*

1809, May 13. Capture of Vienna. There was no opposition. Archduke John withdrew from north Italy, followed closely by Eugene.

1809, May 21–22. Battle of Aspern-Essling. The Austrians having concentrated on the north bank of the Danube, Napoleon attempted to smash his way across at the island of Lobau against fierce resistance. Part of the French Army (about 66,000) was able to cross the river to face 99,000 Austrians. Plagued by the complete breakdown of the inadequate bridging arrangements, Napoleon, unable to reinforce his troops north of the river, withdrew. This was his first defeat. Austrian losses were 23,000;

French were about 25,000, including Marshal Lannes, who was killed.

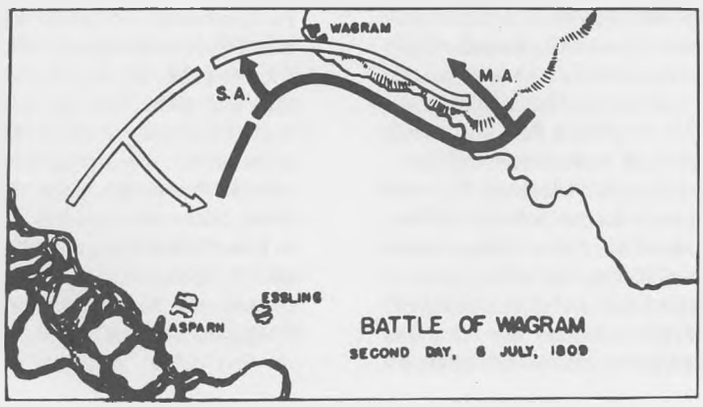
1809, June. Napoleon Makes Detailed Plans. He gathered nearly 200,000 men in the vicinity of Vienna and Lobau, and assembled adequate bridging material. Meanwhile, Eugène pursued Archduke John into Hungary against fierce Austrian rearguard resistance. Eugène defeated John at **Raab** (June 14) and marched north to join Napoleon at Vienna. John continued his retreat to Pressburg (Bratislava).

1809, July 4–5. Night Danube Crossing. The French move surprised Charles, who had 130,000 men. Once more Napoleon had placed himself between 2 adversaries, for the Archduke John was approaching from the east with nearly 15,000 men. Napoleon had approximately 160,000 men north of the river; the remainder held his line of communications. Napoleon decided to attack at once before John could arrive with reinforcements.

1809, July 5–6. Battle of Wagram. To prevent Charles from moving eastward to join John, Napoleon made his main attack against the Austrian eastern or left wing. Charles tried to turn Napoleon's left so as to cut him off from his Danube bridgehead. Results were indecisive the first day. On the second day, Napoleon planned to continue the envelopment of the Austrian left. Charles attempted to turn the French left so as to cut them off from the Danube bridgehead. Starting first, the Austrian attack was initially successful, driving back Bernadotte's Saxon allied corps in considerable confusion. The Austrian attack was finally halted by the indecision of Charles' subordinates and by flanking fire from French batteries on Lobau Island. Meanwhile, Davout's attack on the Austrian left continued to make progress, despite fierce Austrian counterattacks. Finally, Napoleon massed his guns against the Austrian center in the greatest concentration of artillery ever made to that time. He launched a heavy infantry assault in the center, while Davout redoubled his efforts to turn the Austrian left. Charles's center was penetrated, his flank thrown back. He withdrew. Although the retreat was made in moderately good order, the defeat was decisive. The Archduke had lost 26,000 men, 19,000 killed and wounded and 7,000 captured. A further 19,000 were lost to desertion and straggling. French losses were about 37,000.

1809, July 10. Austrians Ask for Armistice. Austrian troops had been driven from the Grand Duchy of Warsaw by Polish troops under Prince **Poniatowski;** Russia had not joined the coalition, as hoped; British landings in Holland and Belgium had been contained and repulsed (see p. 834). It was evident to Emperor Francis that further conflict would be disastrous to Austria.

1809, October 14. Treaty of Schönbrunn. Napoleon's preeminence in Europe was reaffirmed. Austria ceded 32,000 square miles of territory, with 3,500,000 inhabitants, to France and her satellites. She agreed to join the Conti-

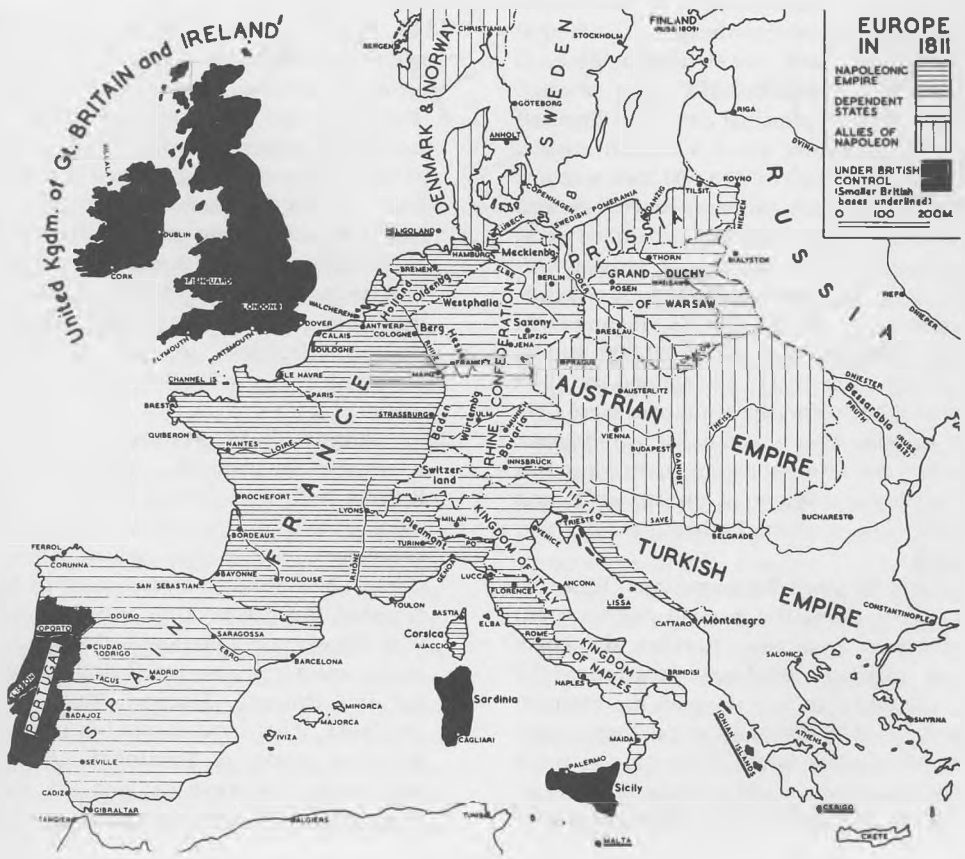


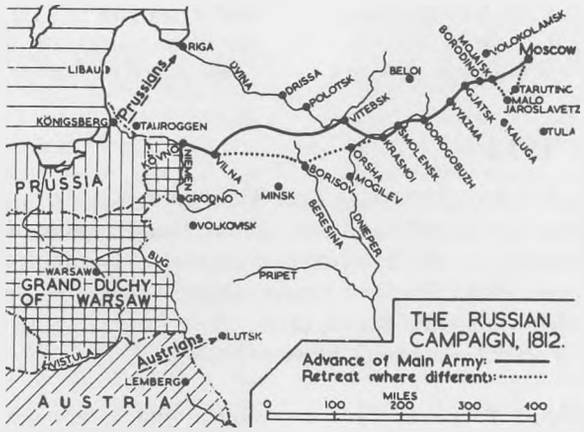
nental System and to break off all connections with England. Except for the fighting still continuing on the Iberian Peninsula (see p. 835) and at sea (see p. 837), and for a few minor rebellions (particularly in the Tyrol), an uneasy peace settled on Europe.

War with Russia, 1812

Franco-Russian relations had frayed steadily. Czar Alexander, Napoleon's only major rival on the Continent, resented the revival of Poland through the establishment of the Grand Duchy of Warsaw. Napoleon's refusal to join him in trying to drive the Turks out of Southern Europe (see p. 850) made matters worse (1811). England, aware of this situation, made overtures to Russia. She made peace with both Sweden and Russia (June 1812), and got both nations to renounce the Continental System, a serious economic blow to France.

1812, May–June. Napoleon Prepares for War. He assembled an army group of 450,000 men in Poland. He planned to invade and crush Russia from a base of communications reaching





from the Pripet Marshes on the south to the Baltic Sea on the north. His right flank was protected by the Austrian army of Prince **Karl Philipp von Schwarzenberg,** nearly 40,000 strong. The left flank was covered by Marshal **Jacques E. J. A. Macdonald**'s army, of equal strength, with its principal element a Prussian corps. In the center stood 3 French armies. Napoleon's left wing of 220,000 men was just west of the Niemen (Neman) River, between Kovno (Kaunas) and Grodno. Echeloned to his right rear, to secure the line of communications, were the armies of **Eugène de Beauharnais** and of Napoleon's incompetent brother **Jérôme,** each about 80,000 strong. This Grand Army of 1812 contained less than 200,000 Frenchmen; the remainder were German, Austrian, Polish, and Italian contingents. Napoleon was now depending upon conscripts and upon the soldiery of uneasy allies and seething nations whom he had ground under his heel.

1812, June. Russian Preparations. In a cordon defense along the Russian northwestern frontier were 2 armies: **Barclay de Tolly** (Prince **Michael Andreas Bogdanovich**) with 127,000 men was north of the Niemen; Bagration had 48,000 between the Niemen and the Pripet Marshes. South of the marshes was a third Russian army, 43,000 strong, under General **A. P. Tormassov,** guarding the southwestern frontier. More than 200,000 additional Russian troops were scattered throughout western and central Russia.

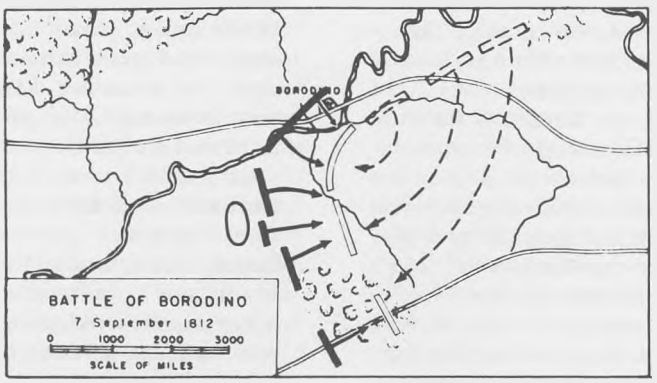
1812, June 24. Napoleon Crosses the Niemen. Penetrating between the 2 main Russian armies, he planned to crush them in succession. But Jérôme failed to carry out instructions, unusual heat sapped French strength, and much of the cavalry was incapacitated by a colic epidemic among the horses. Meanwhile, Napoleon relieved Jérôme and put Davout in his place. Davout blocked Bagration's effort to join Barclay by a victory at **Mogilev** (July 23), but Bagration retreated eastward across the Dnieper (Dneper) to join Barclay near Smolensk (August 3). Barclay assumed command.

1812, August 7–19. Maneuvers near Smolensk. Barclay planned to fight, but inefficient Russian staff work slowed the Russian movement. Ironically, the errors foiled a turning movement by Napoleon which would have crushed both Russian armies, since he had anticipated their plan. They escaped eastward, with Napoleon—who now had about 230,000 men—again trying to turn their flank by crossing the Dnieper (Dneper) River south of Smolensk. After hard-fought but unsuccessful defensive battles at **Smolensk** (August 17) and nearby **Valutino** (August 19), the Russians escaped Napoleon's trap, largely because

of errors by French Marshals Junot and Murat. French casualties were over 10,000; Russian were at least 15,000.

1812, August 29. Kutuzov Commands Russian Armies. He continued to retreat. Reluctantly Napoleon followed. He had planned to spend the winter at Smolensk, but now realized that his supply arrangements were not working as planned. A complete victory in 1812 was essential.

1812, September 7. Battle of Borodino (or of the Moskva). With 122,000 men, Kutuzov made a stand 60 miles west of Moscow. Napoleon concentrated slightly more than 124,000 men and started enveloping the Russian left flank. In the midst of the fighting, he unaccountably gave up personal control of the battle. This was the first of recurrent seizures, never fully explained medically, which hampered a number of subsequent operations. The bitterly contested struggle continued; by nightfall the Russians had been forced back with nearly 50,000 casualties including the death of Bagration. The French lost some 28,000 men.



Kutuzov withdrew to Moscow. There was no energetic pursuit, due to Napoleon's illness.

1812, September 14. Napoleon Enters Moscow. The city, which had been evacuated of its inhabitants, began to burn, set fire by the Russians. Most of the wooden houses were soon in ashes, and the French army had to bivouac in the suburbs. Napoleon had some 95,000 men near Moscow, most of them utterly exhausted. The remainder of his great army was scattered in an elongated triangle with its base on the Niemen River, and extending from Riga through Kovno to Brest Litovsk (Brest). French morale was deteriorating; the allied troops were becoming unreliable. South of Moscow near Kaluga, Kutuzov's army of 110,000 was still intact and full of fight. The entire Russian nation, aroused by needless French cruelty, united in the defense of its homeland. North of Polotsk the French line of communication was threatened by an army under Count **Ludwig Adolf Wittgenstein.** The Russians south of the Pripet Marshes, now under General (or Admiral) **Tshitshagov,** moved west, threatening the French flank at Brest Litovsk. Desperately short of food, and Czar Alexander having ignored peace overtures, Napoleon decided to withdraw to Smolensk (October 19).

1812, October 24. Battle of Maloyaroslavets. Moving southwest from Moscow, Napoleon planned to destroy Kutuzov's army. Following a sharply fought, but indecisive, meeting engagement, Napoleon decided to turn back to the northwest and west, retracing the old route of advance from Smolensk and Borodino. This decision was fatal in that it forced the Grand Army to traverse a countryside ravaged by the French and Russian depradations of the summer. With no forage available, the overstrained logistical system collapsed, leaving the army

starving. Czar Alexander rejected a truce. As winter closed down over central Russia, Napoleon continued to withdraw.

1812, October–December. Retreat from Moscow. Snow, followed by bitter cold, began to impede the march (November 4). Surrounded by swarms of regular and irregular Russian forces, the freezing, starving Grand Army, all of its commissariat broken down, marched through snow to disintegration. Separate French corps fought off repeated attacks. When Smolensk was reached, discipline broke down as the starving troops ransacked the depots, destroying most of the supplies in their frenzy. Napoleon decided to continue the retreat from Smolensk (November 12). Most of the army became a disorganized mob.

1812, November 16–17. Battle of Krasnoi (Krasnoye). West of Smolensk, Kutuzov's advance guard, which had circled west of the French, barred the road. Napoleon collected his few effective elements and, in a brilliant display of leadership, drove the Russians off. Ney's corps, reduced to 9,000 men, sacrificed itself in a desperate all-day rear-guard action to save the rest of the army, losing all but 800 men.

1812, November 26–28. Crossing of the Berezina. Near Borisov on the Berezina, Napoleon was cornered between Tshitshagov and Kutuzov, who had 144,000 men between them, of whom 60,000–64,000 became engaged. French effectives were about 33,000 men. Despite Russian attacks on both sides of the river, pontoon bridges were built across the ice-laden Berezina. By the night of the 27th only Victor's corps remained on the east bank, together with a horde of disorganized stragglers. Oudinot and Ney, on the west bank, were battling desperately against Tshitshagov to keep the bridgehead open. Victor, with 10,000 men, repulsed several attacks of 40,000 Russians with support from French artillery on the west bank. The French disengaged through the night, but thousands of wounded men and stragglers still remained on the far bank when the bridges were blown up at dawn; most of these were massacred by the Cossacks. French losses were over 30,000; Russian at least 10,000.

1812, December 8. Napoleon Leaves for Paris. For all practical purposes the Grand Army was no more; only 10,000 effectives remained. Napoleon rushed home to raise a new army. Murat, left in command, brought the pitiful remnants—as well as Macdonald's troops from Riga—back to Posen (Posnan) in western Poland. The exhausted Russians stopped their pursuit at the Niemen River. French (and allied) casualties in the campaign exceeded 300,000; Russian losses were at least 250,000.

1813, January 1. Revolt of Prussia. The Prussian contingent of **Hans D. H. Yorck von Wartenburg,** which had been with Macdonald at Riga, broke away to join the Russians. The remainder of Prussia rose, the army was hastily expanded with recalled reservists and *Landwehr* (militia), an expansion that was possible mainly due to the efforts of General **Gerhard von Scharnhorst** and his new Prussian General Staff. Leaving French garrisons at Danzig (Gdansk) and Thorn (Torun) on the Vistula, and at Stettin (Szczecin), Kustrin (Kostrzyn), and Frankfurt on the Oder, Eugène, who had replaced Murat in command, withdrew to Magdeburg on the Elbe. Late in January reinforcements sent by Napoleon brought his strength to 68,000 men. Meanwhile Schwarzenberg's Austrians had retreated to Warsaw and then turned into Bohemia, one more defection from Napoleon's army.

Leipzig Campaign, 1813

1813, February–March. New Coalition. Russia, Prussia, Sweden, and Britain united to end the Napoleonic grip on Europe. Almost 100,000 veteran allied troops were spread in the Elbe Valley, between Magdeburg and Dresden.

1813, April. Napoleon Returns to Germany. He had a new army 200,000 strong—gathered with amazing speed, but woefully inexperienced. He hastened from the Rhine to join remnants of the old Grand Army.

1813, April 30. Napoleon Crosses the Saale. He moved on Leipzig in 3 columns, preceded by

a strong advance guard. Typically, he planned to penetrate the allied cordon and to defeat his enemies in detail. Faulty reconnaissance by his inexperienced cavalry left him unaware that Wittgenstein, with 93,000 allied troops, was concentrating on his south flank.

1813, May 2. Battle of Lützen. The French advance guard drove a small allied force into the outskirts of Leipzig. To the southwest, south of Lutzen, Wittgenstein attacked, surprising Ney's corps (the advance guard of the southern column) on the road. Napoleon, hearing the sound of artillery as he stood on the historic battlefield of Lützen (see p. 589), galloped to the scene. He was the Napoleon of old, brilliant and at his best in tactical improvisation on the field. He concentrated his army with a great mass of artillery opposite Wittgenstein's center. Leading an overwhelming counterattack in person, Napoleon split the allied lines. Had his green troops not been exhausted, there might have been a repetition of Austerlitz. Wittgenstein withdrew in fairly good order. Casualties were heavy. French losses were about 22,000, mostly from Ney's corps; the allies were about 12,000. Scharnhorst, serving as Wittgenstein's Chief of Staff, was among the wounded; he died of infection.

1813, May 20–21. Battle of Bautzen. Napoleon captured **Dresden** (May 7–8), then followed the retreating allies east of the Elbe. Sending Ney, with nearly half of his army, on a wide turning movement 50 miles north of Dresden, Napoleon pursued Wittgenstein with the remainder. The Russian stood in a formidable position on the east bank of the Spree. Napoleon attacked across the river with 115,000 men, driving the 97,000 allied troops from their defenses. Ney, coming down from the north with 52,000 men after dark, was in position to fall on the allied flank and rear next morning. The Napoleonic strategic concept was brilliant. Ney stupidly failed to grasp the situation, attacked late, and made no move toward the enemy rear and his communications. Napoleon, waiting to launch his reserve until Ney had sprung the trap, realized too late that Wittgenstein, in rapid retreat, had gotten safely away eastward into Silesia. There were about 25,000 French casualties; the allies lost about 11,000.

1813, May 22–June 1. Increasing Allied Strength. Napoleon, pursuing east of the Elbe, found his enemies growing stronger. Bernadotte, former marshal of France and now Crown Prince of Sweden, was nearing Berlin with a Prusso-Swedish army 120,000 strong. Austria was preparing to enter the war on the allied side. Schwarzenberg, with 240,000 Austrians, was mobilizing in northern Bohemia ominously close to the French line of communications. Blücher, who had taken Wittgenstein's place, was reorganizing that army, checking further French advance.

1813, June 4–August 16. Napoleon Obtains an Armistice. He used this respite to improve training, particularly his cavalry. The allies also used this time to prepare; Austria was able to complete its mobilization; the Prussian Army was strengthened by further levies, and equipment shortages were made good from British stocks; and the Russian Army was reinforced.

1813, August 12. Austria Declares War. The allies, with British subsidies, fielded 3 armies: the Bohemian, 230,000 men under Schwarzenberg; the Silesian, 195,000 under Blücher; and the Northern, 110,000 under Bernadotte. A token British contingent, including a rocket troop, accompanied Bernadotte.

1813, August 16. Opposing Plans. Napoleon had placed Davout's corps at Hamburg, transformed into a fortress, as a permanent threat to allied movements westward through Prussia. Dresden was occupied by **St. Cyr**'s corps as a potential pivot of maneuver. Between these two strong points, the emperor had withdrawn the greater part of his field forces (except **Jean Rapp**'s corps, besieged in Danzig) to positions between the Elbe and the Oder, preparing to operate on interior lines against his enemies. He had now in hand some 300,000 men; the allies totaled more than 450,000. Their strategy was to avoid battle with Napoleon, but to attack his lieutenants wherever possible. Bernadotte drove Oudinot (who had 60,000 troops) south of Berlin in the **Battle of**

Grossbeeren (August 23), and Blücher inflicted a severe defeat on MacDonald at the **Katzbach,** 30,000 of 60,000 French were lost, while Prussian losses were about 4,000 (August 26).

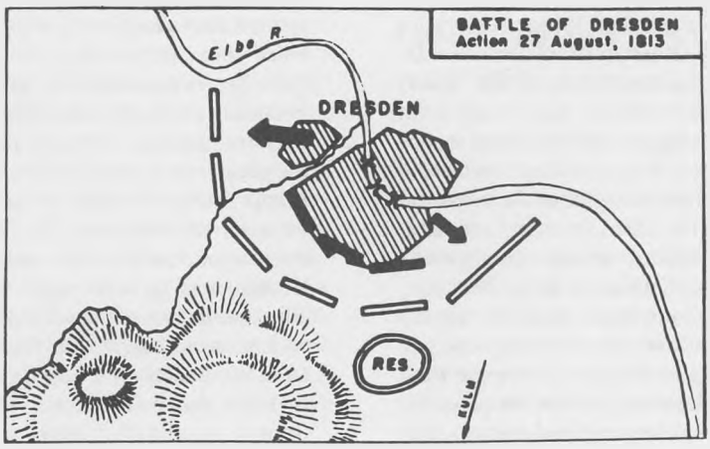
1813, August 26–27. Battle of Dresden. Schwarzenberg's Austrian army (accompanied by the Emperors of Russia and Austria, and the King of Prussia) attacked St. Cyr. Napoleon, arriving rapidly and unexpectedly with reinforcements, repulsed the assault. Next day, although outnumbered 2 to 1, Napoleon attacked, turned the allied left flank, and won a brilliant tactical victory. Then he went into one of his torpors, and left the field. By this time the allies had lost some 38,000 men killed, wounded, and captured and 40 guns. French casualties were about 10,000. Schwarzenberg disengaged hurriedly, narrowly escaping encirclement. Without Napoleon to direct the pursuit, only one of his subordinates, **Dominique René Vandamme,** realized the opportunity. Rapidly crossing the mountains into Bohemia on Schwarzenberg's east flank, he flung his corps across the Austrian line of communications.

1813, August 29–30. Battle of Kulm. No other French corps commander had followed Vandamme. With 37,000 men, he found himself unsupported and pinned between Austrian, Russian, and Prussian forces totaling more than 100,000 men. Vandamme was captured, his corps lost 17,000 men, while the rest were dispersed.

1813, September. Blücher Avoids Battle. Having recovered, Napoleon hastened east again, vainly trying to entice Blücher into battle in Silesia. The Prussian, however, withdrew rapidly (September 4).

1813, September–October. French Disasters. Ney, who had succeeded Oudinot, attempted to take Berlin, but was defeated by Bernadotte at **Dennewitz** (September 6) when his Saxon divisions fled. Bavaria withdrew from the Rhine Confederation to join the alliance (**Treaty of Ried,** October 8).

1813, October 1–15. The Allies Close In. The French army, tired and discouraged, pressed in between Dresden and Leipzig, had been reduced to 200,000 men. Blücher, abandoning his line of communications, crossed the Elbe north of Leipzig to threaten Napoleon's rear. Schwarzenberg, in coordination, marched north to link with Blücher. Bernadotte, several miles north of Blücher, stood indecisive while French units opposite him joined Napoleon's main army at Leipzig. Napoleon, leaving 2 army corps at Dresden, turned to attack Blücher as Schwarzenberg advanced from the south (October 15).



1813, October 16–19. "Battle of the Nations" (Battle of Leipzig). For 3 days the French fought Prussians on the northwest and both Russians and Austrians on the south. Then Bernadotte moved in on the east, nearly surrounding the French Army (October 18). The allies now began massive frontal attacks. Napoleon was driven into Leipzig, though his lines remained intact. The Saxon corps now deserted the French Army, ending all possibility of victory. Having been able to keep his line of communications open, despite Blücher's repeated efforts, Napoleon withdrew after a frenzied conflict outside the city (October 19). The bridge over the Elster River was blown prematurely. Prince **Joseph Anthony Poniatowski** (who had received his marshal's baton just the previous day for his actions on the first 2 days of the battle) and Marshal Macdonald rode their horses into the river to escape; Poniatowski was drowned; Macdonald got safely across. The allies had won a tremendous victory, but should never have allowed Napoleon to escape the net. As it was, the survivors of the Grand Army, having suffered overall losses of 60,000 men, 325 guns, and 500 wagons, withdrew toward the Rhine. Allied losses had been more than 80,000 men.

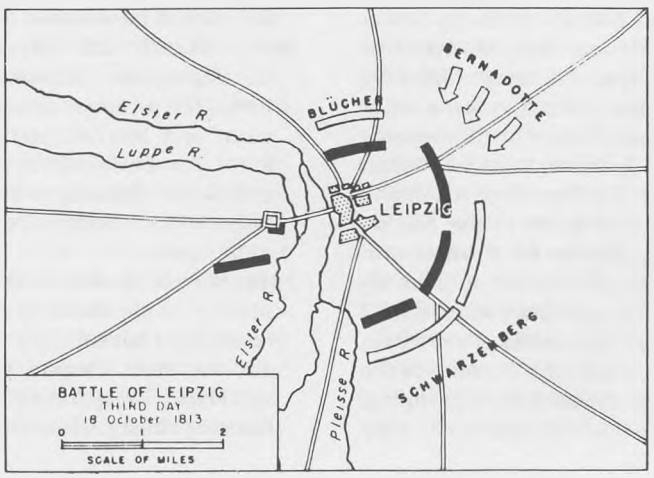
1813, October 30–31. Battle of Hanau. An Austro-Bavarian army, under Prince **Karl Philipp von Wrede,** 40,000 strong, marched to cut off the French retreat. With the allied armies slowly pursuing from the east, Napoleon was apparently trapped. In a flash of his old spirit, Napoleon, brilliantly maneuvering his artillery in support of the attack, routed the Bavarians, whose losses were 10,000 men and several guns; the French lost less than 6,000, although a further 4,000 stragglers were captured by the desultory allied pursuit. The Grand Army continued on to cross the Rhine (November 1–5).

Defense of France, 1814

1813, November 8. Allies Offer Peace. French boundaries would be restricted behind the Alps and the Rhine; Napoleon foolishly rejected this. The allies thereupon decided to invade France (December 1). By this time the Netherlands had revolted and the Rhine Confederation had dissolved (November). The French garrisons of Dresden and Danzig surrendered (November 11, December 30).

1813, December 21. Allies Cross the Rhine at Mannheim and Coblenz.

1814, January 1. French Dispositions and Plans. Some 50,000 men were in German garrisons, most under Davout, at Hamburg. Another 100,000 were in Spain fighting the English and Spaniards. In northeastern Italy, Eugene, with 50,000 men, was facing Austria's



Count **Heinrich J. J. Bellegarde** with equal strength. None of these outlying forces, except Oudinot's corps, which would be withdrawn from Spain, would take part in the coming campaign in France. There Napoleon mustered nearly 118,000 men west of the Rhine, from Antwerp to Lyon. Napoleon, operating on interior lines, proved that his strategic brains were unimpaired, but the tactical quality of his troops was low. Except for a small proportion of veterans, the ranks had been filled by boy conscripts and by untrained national guards.

1814, January 1. Allied Dispositions and Plans. There were 3 allied invading armies: Bernadotte, with 60,000, was moving west through the Low Countries; Blücher, with 75,000, was advancing up the Moselle Valley into Lorraine; Schwarzenberg, with 210,000, was crossing Switzerland and moving through the Belfort Gap. Their combined objective was Paris.

1814, January 29–February 1. Operations around La Rothière. Moving with 36,000 men to crush Blücher before he could join Schwarzenberg, Napoleon won engagements at **Brienne** (January 29) and **La Rothière** (January 30) but barely escaped a vast allied envelopment as Blücher returned to attack La Rothière (February 1). He lost more than 5,000 men, the allies some 8,000. The allies pushed on toward Paris—Blücher down the Marne Valley, Schwarzenberg down the Seine.

1814, February 10–14. The "Five Days." Napoleon turned on Blücher, defeating him at **Champaubert** (February 10), **Montmirail** (February 11), **Château-Thierry** (February 12), and **Vauchamps** (February 14), a series of brilliant maneuvers directed by the emperor in person. The allies lost in all some 9,000 men in these operations, the French about 2,000. The Prussians retreated north of the Marne.

1814, February 18. Battle of Montereau. Marching rapidly south, Napoleon then attacked Schwarzenberg and drove him back 40 miles despite Austrian superiority of more than 2 to 1. French losses were 2,500, those of the allies 6,000. Blücher meanwhile, regrouping, had pushed on to La Fortè (February 27), only 25 miles from Paris. Napoleon turned north to meet this threat, leaving Macdonald on the Aube to contain Schwarzenberg.

1814, March 7. Battle of Craonne. Blücher was driven north, and his rear guard—a Russian corps—was decisively defeated, although each side suffered over 5,000 casualties. Falling back to Laon, Blücher was reinforced by 2 of Bernadotte's army corps. He now had 100,000 to oppose Napoleon's 30,000. Meanwhile, Schwarzenberg was forcing Macdonald back toward Paris after a victory at **Barsur-Aube** (February 27).

1814, March 9–10. Battle of Laon. Despite the inferiority of his force, Napoleon fell on Blücher in a 2-day fight. Sturdily resisting in strong positions, Blücher finally made a night counterattack which drove 1 French corps from the field in panic. The French lost 6,000 men, the allies about 3,000. Napoleon's reckless assaults had failed; he withdrew to Soissons.

1814, March 13. Battle of Rheims. After a brief rest, Napoleon boldly marched across the front of Blücher's army to smash an isolated Prussian corps at Rheims. He recaptured the city, suffering 700 casualties; the Prussians lost 6,000 men. Napoleon now marched south to strike at Schwarzenberg's line of communications, hoping the Austrian would turn back.

1814, March 20–21. Battle of Arcis-surAube. Schwarzenberg repulsed the French strike and continued westward, as did Blücher. Napoleon ordered the corps of Marmont and Mortier to join him as he prepared for another attack.

1814, March 25. Battle of La Fére-Champenoise. Schwarzenberg's army defeated the greatly outnumbered corps of Marmont and Mortier, and drove them toward Paris. The allied advance continued; Blücher and Schwarzenberg united in front of Paris (March 28), leaving Napoleon's main army far to the east.

1814, March 30. Battle of Paris. Marmont and Mortier, with about 22,000 men, vigorously resisted the advance of the allied army—about 110,000 men. Despite commendable efforts, the French were forced back to Montmartre, bringing allied artillery within range of the city.

Marmont agreed to an armistice, surrendering Paris to the allies the next day (March 31). French losses had been 4,000 men, those of the allies 8,000. Napoleon, who had been hurrying to defend his capital, now halted at Fontainebleau.

1814, April 6–11. Abdication of Napoleon. At the urging of his marshals, he abdicated unconditionally (April 11). He was granted the principality of the little island of Elba, where he retired (May 4). The allies installed **Louis XVIII** (brother of Louis XVI) as King of France.

COMMENT. *Though he was crushingly defeated, Napoleon's military luster had never shone more brilliantly than in the 1814 campaign. Despite recurring bouts of illness and the poor quality of his troops, he postponed the inevitable in a series of maneuvers and battles which aroused the grudging admiration of his opponents.*

1814, May 30. First Treaty of Paris. France was reduced to the frontiers of 1792, and recognized the independence of other areas of Napoleon's empire. England restored most of the colonies seized from France and Holland.

The Peninsular War, 1809–1814

The "Spanish Ulcer," as Napoleon termed the war in Spain, was one of the principal factors leading to his downfall. It diverted French military resources badly needed for operations elsewhere. Characterized by appallingly cruel and brutal excesses on both sides, it was a prime example of guerrilla warfare—the almost spontaneous response of a population to invasion and the military problems immediately encountered both by the invaders and the regular foreign forces assisting resistance. The war also emphasized the importance of sea power; for had not England commanded the seas, her troops could neither have landed on the Iberian peninsula nor been maintained to achieve the final victory.

1809, January–February. Guerrilla Warfare in Spain. After the French capture of Saragossa (see p. 824), their position in Spain was reestablished. Guerrilla warfare continued throughout the country, however.

1809, March–May. French Invasion of Portugal. Wellesley, in the Lisbon area, had some 26,000 British and Hanoverian troops, plus 16,000 Portuguese under General **William Beresford.** Soult took and sacked **Oporto** (March 29), but was driven out by Wellesley in the **Battle of Oporto** (May 12).

1809, June. Wellesley Invades Spain. In theory he was supported by some 100,000 Spanish irregulars. Actually, jealousies and political jugglings among the junta controlling patriot Spain prevented unified command; Wellesley found the Spaniards poor allies.

1809, July 28. Battle of Talavera. Attacked by the combined 47,000 troops of Victor and King Joseph Bonaparte, Wellesley with 54,000 allied troops fought a drawn battle. Strategically it was a British victory, since the French later retired on Madrid. Allied losses were 6,500–5,300 of them British—the French lost 7,400. Irritable and jealous, Spanish General **Gregorio García de la Cuesta** now withdrew his contingent and Wellesley, his rear menaced by Soult and other French forces, fell back into Portugal. Soon after this he received the title of Viscount Wellington.

1809, November 19. Battle of Ocana. Spanish General **Areizago,** who replaced Cuesta, led an army of 53,000 Spanish troops against 30,000 French under Joseph and Soult. The Spanish were completely defeated, losing 5,000 killed and wounded and 20,000 prisoners; French losses were only 1,700.

1810, February–1812, August. Siege of Cádiz. The Spanish garrison was reinforced by 8,000 men sent by sea by Wellington. The city became the capital of free Spain.

1810. Wellington on the Defensive. Since England was again abandoned by all her allies,

during the winter he began the construction of the Torres Vedras defensive lines, north of Lisbon. These constituted a massive 3-line system of field fortifications, mounting 600 guns and stretching for some 30 miles from the Tagus River to the sea. In Spain, Massena had been placed in command of the Army of Portugal, 65,000 strong. Soult commanded the Army of Andalusia, of equal strength. As Massena advanced toward the Portuguese frontier, Wellington took a force of 32,000 men (18,000 English, the remainder Portuguese) to confront him. Massena besieged and captured Ciudad Rodrigo (July 10).

1810, July. French Invasion of Portugal. Wellington withdrew slowly. Meantime, in Spain, Soult solidified French control of Andalusia.

1810, September 27. Battle of Bussaco. To secure his retirement into the Torres Vedras lines, Wellington offered battle from a strong position on high ground. Massena's attacks were repulsed, and Wellington continued his retreat. French losses were 4,500, those of the English 1,300.

1810, October 10. Wellington Occupies the Torres Vedras Lines. Massena probed the defenses, but found them impregnable. Running out of food, he retired into Spain with his army in poor condition (November).

1810–1811. Frontier Warfare. During the bitter winter, both sides strove for possession of the main passes on the Spanish Portuguese frontier—through Ciudad Rodrigo and Badajoz. There were also several flurries of activity outside of besieged Cadiz as a result of British amphibious raids or guerrilla attacks.

1811. French Offensives. Massena advanced to relieve Almeida, blockaded by Wellington. At the same time, Soult moved toward Badajoz, besieged by a British force under General Beresford.

1811, May 5. Battle of Fuentes de Oñoro. Massena fought a drawn battle with Wellington, marked by the resistance of British infantry squares to French cavalry, and by the exploit of a British horse artillery battery. Captain **Norman Ramsey,** cut off in the melee, limbered up and charged with his guns through the French horsemen. Allied losses were 1,800 out of 35,000 men engaged; the French lost 2,700 out of 45,000 on the field.

1811, May 16. Battle of Albuera. Soult, with 18,000 men, probing at Badajoz, was defeated by Beresford, with 32,000 men, including 7,000 British. The Spanish contingent on the allied right was driven in, but the British infantry retrieved the day. Allied losses were 7,000, French 8,000.

1811, May–December. Inconclusive Operations. Both French commanders fell back. Massena was relieved in disgrace; Marmont replaced him. A series of indecisive but hard-fought actions followed, the net result being that at the end of the year the French still held the frontier gateways. Meanwhile, in southern Spain, Marshal **Louis Suchet** took **Tarragona** (July 28) and later **Valencia** (January 9, 1812) in a successful antiguerrilla campaign.

1812, January–July. Wellington Takes the Offensive. He stormed **Ciudad Rodrigo** (January 19) and **Badajoz** (April 19). He captured siege and pontoon trains of both Marmont and Soult in his rapid advance.

1812, July 15–21. Marching and Manuevering. Wellington, with about 47,000 men, met and was outmanuevered by Marmont, who had 42,000. A full week was spent in hard marching as the 2 each attempted to get an advantage. The faster-marching French finally forced Wellington to consider retreat. In preparation he ordered his baggage to the rear. Marmont, learning of this, believed that Wellington was already in full retreat and ordered a headlong pursuit.

1812, July 22. Battle of Salamanca. Wellington rapidly assessed the situation, realized that the French were overextended, turned and attacked the French advance guard in front and flank and rolled it back onto the French main body. Marmont was wounded, and his army driven off the field with losses of nearly 13,000 men. The allies lost about 5,200. Joseph evacuated Madrid.

1812, August 12. Wellington Takes Madrid.

He captured 1,700 men, 180 guns, and a quantity of stores.

1812, August–November. Allied Setbacks. After being repulsed at **Burgos** (November), Wellington was forced to fall back as Soult and Marmont concentrated against him. In a bitter retreat to cantonments near Ciudad Rodrigo, the allies lost 7,000 men. But by November, the French, unable to live off the country, were forced to disperse.

1813. Wellington Again Takes the Offensive. He was now in supreme command of allied forces in Spain, with 172,000 men to oppose 200,000 French. In a series of brilliant maneuvers Wellington put the French on the defensive on all fronts. At the same time, in eastern Spain, a British force under Sir **John Murray** forced Suchet back into Tarragona. Joseph abandoned Madrid again (May 17) and fell back to the line of the Ebro. North of that river and south of Vittorio, he occupied an extended position with 60,000 men and 150 guns.

1813, June 21. Battle of Vittorio. Wellington, with 90,000 men and 90 guns, attacked in 4 columns, all within mutual supporting distance. Joseph's center was pierced, both flanks turned. Wellington's left column neared the Bayonne road—the French communication link—and Joseph's army, after a determined defensive stand, broke and fled toward Pampeluna. This was the decisive battle of the Peninsular War. Joseph lost 7,000 men and 143 guns, while his treasury of $5 million and great masses of stores fell into Wellington's hands. Joseph retired across the Pyrenees into France, harried by allied pursuit. Soult took over the French command. Suchet abandoned Tarragona and also slowly fell back into France (March, 1814).

1813, July 26–August 1. Battle of Sorauren. Soult, with 30,000 men, attempting to return to Spain, encountered Wellington with 16,000. After repulsing the initial French attack, Wellington resumed the offensive. Both armies were reinforced, but after 6 days of fighting the French had been driven back across the Pyrenees, having suffered losses of 13,000 men. Wellington had lost 7,000. Soon after this the British captured San Sebastian (August 31). Both sides rested and reorganized.

1813, October–November. Wellington's Invasion of France. Wellington crossed the Bidassoa River (October 7–9) and advanced into France. Soult, his army reduced to less than 50,000 by drafts for Napoleon's main army, could only fight delaying actions. At Nivelle (November 10), Soult attempted to overwhelm a detachment of Wellington's army. Hard fighting and Wellington's quick reaction saved the detachment. Losses were heavy: 5,300 of 45,000 British and allies in action, 4,500 of 18,000 French.

1814, February 27. Battle of Orthez. Wellington, in an amphibious operation, invested Bayonne and attacked Soult, who fell back to Toulouse to avoid encirclement, losing 4,000 men. Wellington's loss was 2,000. The allies advanced to seize Bordeaux (March 17). Wellington then turned toward Toulouse.

1814, April 10. Battle of Toulouse. Wellington assaulted the city, losing 6,700 casualties. Soult, who had lost 4,000 men, was driven out. Two days later, news of Napoleon's abdication was received, and a convention was agreed to between Wellington and Soult.

War at Sea, 1806–1814

Despite Britain's overwhelming naval supremacy, there were a number of French challenges. At the same time the Royal Navy was busy in supporting the anti-Napoleonic effort on the Continent.

1806, January 8. British Capture of Capetown. Dutch and French defenders were defeated in an amphibious assault by General Sir **David Baird.**

1806, February 6. Battle of Santo Domingo. Sir **John Duckworth**'s British squadron destroyed Admiral **Laissaque**'s French West Indian squadron. Soon after this, halfway around the world in the Indian Ocean, Admiral **C. A. L. Durand Linois** surrendered his 2 ships to a British squadron (March 14).

1806–1807. Operations at Buenos Aires and Montevideo. **(See p. 889.)**

1806, June–July. British Amphibious Raid on Calabria. A force of 5,000 troops under General Sir **John Stuart** was put ashore by Admiral **Sidney Smith** to help guerrillas opposing King Joseph Bonaparte. The British defeated a French force of 6,000 under General **E. Reynier** at **Maida** (July 4). The British soon withdrew to Sicily.

1806, October 8. Attack on Boulogne. British Admiral Sidney Smith attacked with rockets.

1807, February–March. British Repulsed at Constantinople. Duckworth's squadron forced a passage through the Dardanelles after a spirited action against the Turkish fleet, Sidney Smith, leading the rear division, taking a prominent part. Duckworth delivered a 24-hour ultimatum to the Porte to make peace with Russia and to dismiss the French ambassador (see p. 850). Sultan **Selim III** decided to resist. Within a day the entire population of Constantinople collected 1,000 guns along the seawall and opened fire on the British fleet. Having suffered considerable damage, Duckworth withdrew to the Mediterranean, receiving further mauling in repassing the Dardanelles.

1807, September 2–7. Second Battle of Copenhagen. Fearful that Denmark and her fleet would join the Franco-Russian alliance after the Treaty of Tilsit, Britain sent a powerful combined force to Zealand under Admiral **James Gambier** and General Lord **William S. Cathcart.** A landing force under Sir Arthur Wellesley invested Copenhagen. When the Danish government refused to negotiate, the British land and naval forces severely bombarded the Danish capital. Congreve rockets were used in great quantities. The Danish fleet surrendered.

1809, June 30. Capture of Martinique and Santo Domingo. French Admiral **Villaret de Joyeuse** surrendered the islands to a Hispano-British expedition after a stout defense. Spain controlled Martinique until 1814, Santo Domingo until 1821.

1809, July–October. Walcheren Expedition. In an effort to divert Napoleon's attention from Central Europe, a British expedition of 35 ships of the line, escorting 200 transports carrying 40,000 men, attempted to take Antwerp. The expedition, commanded by the **Earl of Chatham** (the younger **Pitt**) was a dismal failure, frittered away in the capture of Flushing (August 16), by which time King Louis Bonaparte and Marshal Bernadotte had heavily reinforced Antwerp. Chatham departed, leaving a garrison of 15,000 on Walcheren Island, 7,000 of whom died during an epidemic of malaria. The remnants were later returned to England.

1810–1814, Operations in the West Indies. The British captured **Guadeloupe** and held it until the end of the wars (1816) despite French efforts to recapture (1814).

1810, December. Capture of Mauritius and Réunion. A British naval squadron seized the two French islands, bases for French commerce destroyers operating against British merchant vessels in the Indian Ocean.

Waterloo Campaign—"The Hundred Days," March–June, 1815

1815, March 1. Napoleon's Return from Elba. He landed at Cannes and marched to Paris, where he resumed power (March 20). At the Congress of Vienna, the allies declared him to be an outlaw (March 13). They renewed their mutual pledges and began gathering forces to invade France.

1815, March–June. Napoleon Prepares for War. Displaying once more his amazing efficiency (and at the same time bleeding France white), he extemporized a field force of regulars some 188,000 strong, with another 100,000 in forts and depots. More than 300,000 additional hastily raised levies were in training around the

country. Napoleon's own Army of the North, 124,000 men, concentrated around Paris. Other contingents guarded the rest of the frontier. In Italy, to Napoleon's intense annoyance, Murat, who was still King of Naples, declared his support of Napoleon and marched into central Italy. He was defeated by an Austrian army at **Tolentino** (May 2) and fled to France, where Napoleon refused to see him.

1815, June 1. Allied Concentrations on the French Border. In Belgium were Wellington's Anglo-Dutch army of 95,000 men and Blücher's Prussians, 124,000 strong (not including a corps of 26,000 in Luxembourg under General **Friedrich Emil Kleist**). Schwarzenberg, with 210,000 men, lay along the Rhine from Mannheim to Basle. In northeast Italy, Austrian **Johann M. P. von Frimont** had 75,000. In central Germany, a Russian army of 167,000 under Barclay moved slowly westward.

1815, June 1. Napoleon's Plans. Knowing that his enemies could not exercise their full power before mid-July, he decided to take the offensive and to defeat them in detail. He planned to crush the nearest menace first: the allied armies in Belgium. The plan was vigorous and bold, in full Napoleonic brilliance. His ablest subordinate, Davout, Napoleon mistakenly left in command of the defenses of Paris. Murat, in disgrace, was rebuffed when he requested a field command. Soult, a capable field commander, was miscast as chief of staff. So too were brave but flighty Ney and vacillating Marshal **Emmanuel de Grouchy,** selected to command the army's wings.

1815, June 11. Napoleon Leaves Paris. His army, secretly concentrated near Charleroi (June 14), poised to strike Wellington and Blücher before either dreamed that the French had left their cantonments near Paris.

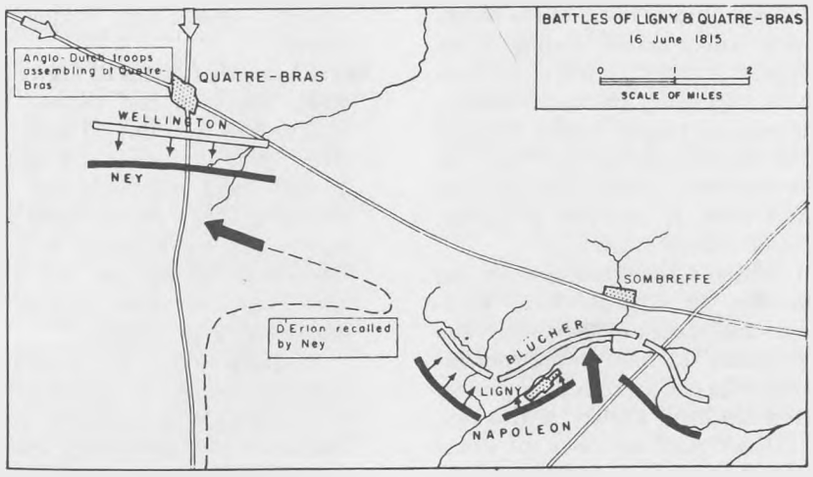
1815, June 15. Seizure of Charleroi. Blücher reacted promptly; by evening 3 of his corps were assembled near Sombreffe, 10 miles northeast of Charleroi. Wellington, more cautious, and fearing for his line of communications, began concentrating 15 miles to the west. The key point was the little crossroads village of Quatre-Bras, linking the two allied armies.

1815, June 16. Battles of Ligny and Quatre-Bras. Napoleon had ordered Ney to seize Quatre-Bras with the left wing of the French Army. With the center and right wing (about 71,000 men) Napoleon fell on Blücher's 84,000 at Ligny. By afternoon of the 16th he had rocked the Prussians back and ordered Ney—who he thought had already seized Quatre-Bras—to strike Blücher's right flank and complete the victory.

At **Quatre-Bras,** Ney, procrastinating, had permitted his 24,000 men to be held off by a gallant brigade of Nassauers (mercenaries in Dutch service) until early afternoon, when British reinforcements began to arrive. By evening Wellington had concentrated 32,000 men; he counterattacked and threw Ney back. Meanwhile Marshal **Jean Baptiste d'Erlon**'s corps of 20,000 men, moving from reserve toward Ney, through a confusion of orders (for which Ney was responsible) spent the afternoon marching to and fro between the 2 French armies, and aiding neither. Ney lost about 4,400; Wellington about 5,400.

At **Ligny,** Napoleon penetrated Blücher's center, and the Prussians began to retreat. Had aid arrived from Ney, Blücher would have been destroyed, and Napoleon could then have fallen on Wellington's left flank and rolled him up. As it was, defeated Blücher (who had been wounded) retreated to Wavre, with the important assistance of his chief of staff, General **August Neidhart von Gneisenau.** In these two battles, allied losses were 21,400; the French lost 16,400.

1815, June 17–18. Delayed French Pursuit. In the morning Napoleon tardily sent Grouchy with the right wing of 33,000 men after the Prussian Army. With the remainder of his forces he turned toward Wellington, who then retired from Quatre-Bras toward Brussels. A torrential rainstorm and an energetic British rearguard hampered the French pursuit. By late evening of the 17th, Wellington had taken up a defensive position south of Waterloo, following assurances by Blücher that the Prussian Army

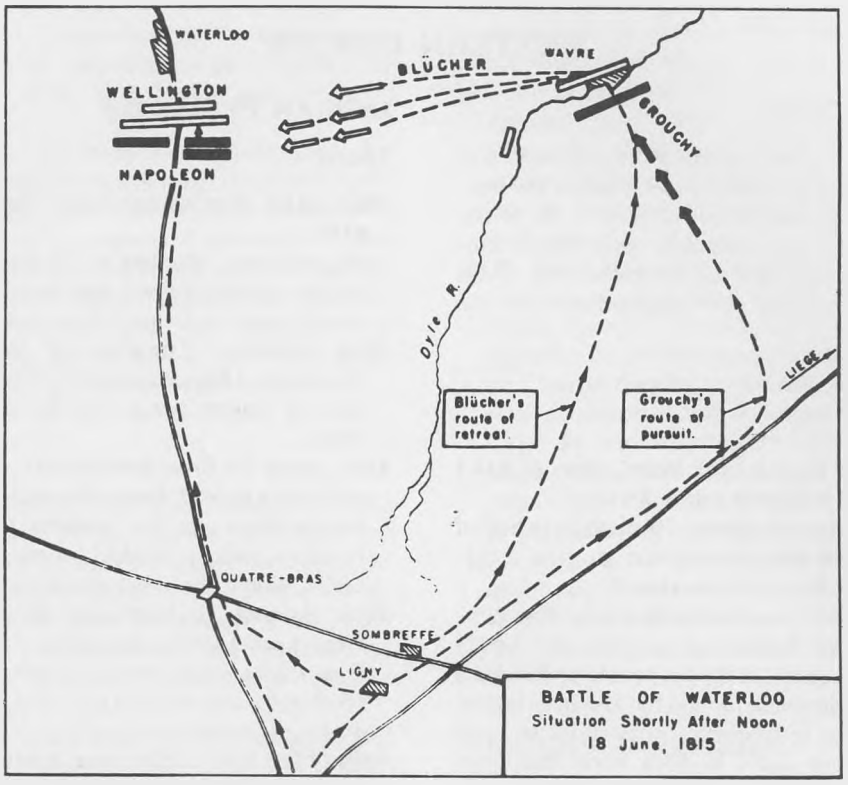


would reinforce him. A French reconnaissance revealed the British positions. Napoleon prepared to attack on the morning of the 18th. In the morning Napoleon delayed for several hours to permit the ground to dry. The delay was fatal, for Grouchy had as yet failed to make contact with the Prussians at Wavre. Blücher, unknown to either French commander, had ably rallied his command from the defeat at Ligny. Overriding the objections of Gneisenau, who feared that the British would not stand, Blücher moved west toward Wellington, less than 9 miles away. A single Prussian corps was left behind to delay Grouchy.

1815, June 18. Battle of Waterloo. Napoleon with 72,000 men attacked Wellington's 67,000 at noon. By 4 P.M., despite obstinate resistance, the Anglo-Dutch army had been pushed back all along the line. The French cavalry, led by Ney in person, charged into the center of the British positions. Had the Imperial Guard infantry supported this cavalry attack, Wellington's center would have been pierced. But Napoleon, worried by the ominous appearance of Prussian elements on his right flank, held the Guards back, and the unsupported horsemen could not break the squares of the magnificent British infantry. Although the Prussian advance guard had appeared as early as 1 P.M., Gneisenau, still worried that the British would disengage, had deliberately delayed the Prussian march. However, by about 4 P.M., Blücher's strength began to be felt. General Georges Lobau's corps, hurriedly shifted to oppose the Prussians, was driven in. Napoleon made one last effort to break Wellington's line. The Imperial Guard—without cavalry support—struck the British center, made some progress, but was then checked by the "thin red line." Blücher's full strength (53,000) was now engaged, overlapping the French right. As the Guard fell back, Wellington counterattacked. The French army collapsed into a mob of refugees, harassed through the night in their flight by the Prussians. Losses were great on both sides: Wellington, 15,000 men; Blücher, 7,000. The French lost 32,000 of whom 7,000 were captured.

1815, June 18. Battle of Wavre. Grouchy, meanwhile, had caught up with Blücher's rear guard (about 20,000). He was content to fight an unimaginative and partially successful battle while the French Empire was tumbling into ruins 8 miles to his west. However, Grouchy's withdrawal from Belgium was skillful. His force of 33,000 men remainded intact. Napoleon, at first refusing to accept reality, planned to use this force as the core of a new army with which to prosecute the war.

1815, June 19–21. Return to Paris. Seeking to



raise a new army as either emperor or simply general, Napoleon was met by an ultimatum from the Chamber of Deputies: abdicate or be deposed. Meanwhile, Davout, with an army composed of Grouchy's force and contingents of raw levies, maneuvered skillfully against the slowly advancing allies, attempting to gain time for the Emperor.

1815, June 22. Napoleon Abdicates. The next day the Deputies elected a Council of Regency for Napoleon's son, the infant King of Italy. The regency lasted until the return of Louis XVIII to Paris (July 8). Davout, after savaging the allied advance guard, received news of the abdication and resigned in disgust. As the allies approached Paris, Napoleon escaped to Rochefort (July 2). He then surrendered himself to the British. HMS *Bellerophon* received him on board (July 15) and he started for his exile on the island of St. Helena, where he would die (May 5, 1821).

1815, November 20. Second Peace of Paris. France lost some more territory, her boundary generally that of 1790. She was forced to pay an indemnity.

1815, November 20. Quadruple Alliance. The victors—England, Austria, Prussia, and Russia—agreed to assure the execution of the Peace of Paris. In effect, they established themselves as the arbiters of Europe.

WESTERN EUROPE

British Isles

Except for the Napoleonic Wars and the War of 1812, whose respective fringes touched the British Isles and their territorial waters, all of the military and naval operations of the British Empire took place away from the British Isles. These are discussed under their appropriate territorial subheads.

France

1800–1815. Napoleonic Wars. **(See p. 812.)**

1814–1824. Reign of Louis XVIII.

1823. Invasion of Spain. This was in behalf of **Ferdinand VII** (see below).

1824–1830. Reign of Charles X.

1830, July 28. Revolution in Paris. The monarchy of the Restoration toppled, and **Louis Philippe,** cousin of the deposed king, headed a new constitutional monarchy. The new regime used troops to suppress insurrections in Lyon (1831), and again in both Paris and Lyon (1834).

1830–1848. Conquest of North Africa. **(See p. 855.)**

1848, February 22–24. Revolution in Paris. A series of uprisings culminated in the abdication of Louis Philippe and establishment of the Second Republic, which tottered in a ferment of social and political unrest.

1848, June 23–26. Insurrection of June. A bloody uprising of well-organized Paris workers was suppressed by General **Louis Eugène Cavaignac,** temporary dictator of a provisional government. He executed rebel leaders without mercy, then resigned his dictatorship.

1848, December 20. Prince Louis Napoleon Bonaparte Elected President. He was the nephew of Napoleon I.

1849, April 24. Intervention in Italy. **(See p. 846.)**

Iberian Peninsula

Spain

1807–1814. Peninsular War. **(See pp. 823, 835.)**

1820, January. Mutiny at Cádiz. The revolt, led by Colonel **Rafael del Riego y Núñez,** spread; King Ferdinand VII was taken prisoner.

1822, October. Congress of Verona. The Quadruple Alliance authorized France to intervene to restore peace and the monarchy in Spain.

1823, April 17. French Invasion. An army under Duke **Louis d'Angoulême** crossed the Bidassoa River on the western flank of the Pyrenees, seized Madrid, then marched to Cádiz, where the rebel government had fled.

1823, August 31. Battle of the Trocadero. Riego's rebel forces, defending 2 forts 8 miles from Cádiz, were routed by the French. The revolution was ended; the king, freed, took drastic measures of reprisal.

1834–1839. The Carlist War. Ferdinand, before his death (September 29, 1833), designated his infant daughter **Isabella** as his successor under the regency of his widow, **Maria Christina,** depriving his brother Don **Carlos** of his Salic law right to the throne. Carlos led a revolution. France, England, and Portugal entered an alliance with the Spanish government to assist in suppressing the revolt (April 22). From England went the so-called Spanish Legion, made up of 9,600 mercenaries recruited under special authority of Parliament and led by Sir **George de Lacy Evans.** France rented her entire Foreign Legion to Spain. Five years of ferocious guerrilla warfare followed; the French Foreign Legion was the backbone of the otherwise ill-handled Spanish loyalist forces. The Legion particularly distinguished itself in the decisive **Battles of Terapegui** (near Pampeluna; April 26, 1836) and **Huesca** (March 24, 1837). When the Legion left Spain after suppression of

the revolt (January 17, 1839), it had lost 50 percent of its initial strength. The war was concluded by the **Convention of Vergara** (August 31, 1839). Don Carlos took refuge in France.

1840–1843. Civil War. General **Baldomero Espartero** led a revolt, seizing dictatorial power and driving Maria Christina and Isabella from the country. He suppressed uprisings (October 1841; November–December 1842). A counteruprising under General **Ramón Narváez** was successful (July–August 1843). Espartero fled, and Isabella was restored to the throne under the guidance of Narváez (1843–1851).

Portugal

1820, August 29. Oporto Revolution. This was sparked by the Spanish revolution (see above). The insurgents expelled the regency established under England's aid during the absence of King **John VI** in Brazil (see p. 894).

1821, July 4. Return of King John. He accepted the insurgents' invitation to return as constitutional monarch.

1823–1824. Civil War. John's second son, **Miguel,** failed in an attempt to restore an absolute monarch.

1826, March 10. Death of John. His son Dom **Pedro** (now Emperor of Brazil; see p. 894) nominally succeeded him as **Peter IV,** but refused to leave Brazil, handing the Portuguese throne to his infant daughter, **Maria de Gloria,** with Miguel as regent. Civil war flared between the followers of Miguel, who seized Lisbon, and the constitutional government, supported by General **João Carlos de Saldanha** at Oporto.

1827, January. British Intervention. An expeditionary force of 5,000 men under Sir **William Clinton** landed in support of Saldanha's constitutional army. Miguel bowed to force, and the British withdrew (April 28, 1828).

1828, July 7. Miguel Seizes the Throne. Queen Maria was taken to Brazil.

1828–1834. Miguelite Wars. Adherents of the queen organized revolt in the Azores, reinforced by volunteers from Brazil, England, and France. The Miguelite fleet was defeated in **Praia Bay** (August 12, 1828) in an attempt to take the Azores. Maria's supporters, obtaining a British loan, purchased a small squadron in England. Dom Pedro, abdicating in Brazil, joined his daughter's forces (April 1831). France, following persecution of French subjects in Portugal, seized the Miguelite fleet in the Tagus (July 1831).

1832, July. Seizure of Oporto. Dom Pedro's "Liberation" expedition from England, 6,500 strong, occupied Oporto, but was besieged by Miguel with 80,000 troops. Britain's Admiral Sir **Charles Napier,** commanding the "Liberation" squadron, defeated a Miguelite flotilla off **Cape St. Vincent** (July 5, 1833), then captured Lisbon (July 24) and held it against the Miguelites. The Quadruple Alliance (see p. 841) solidified anti-Miguel resistance.

1834, May 16. Battle of Santarém. Saldanha's and Dom Pedro's allied liberation forces defeated Dom Miguel, who surrendered 10 days later. His banishment concluded the wars.

The Low Countries

1813, November 30. House of Orange Returns. Prince William of Orange, son of the late stadtholder William V, returned to the Netherlands. The Dutch crowned him as their sovereign, and French troops withdrew to the south.

1815, August 24. Unified Kingdom of the Netherlands. Established by the Quadruple Alliance with **William I** (Prince of Orange) as king. The Netherlands and Belgium were joined.

1830, August 25. Belgian Revolution. A revolt against William I started in Brussels with fighting between civilians and Dutch troops.

1830, October 4. Belgian Declaration of Independence.

1830, October 27. Bombardment of Antwerp. The city was held by the Belgian populace, but the citadel was occupied by a Dutch force under General **David Hendryk Chassé.** His bombardment of the city strengthened anti-Dutch feeling among the Belgians.

1830, November 4. Armistice. Ordered by the great-power **Conference of London.**

1830, December 20. Independence of Belgium. The great powers at London declared the dissolution of the Kingdom of the Netherlands.

1831, June 4. Leopold I (of Saxe-Coburg) Elected King of the Belgians.

1831, August 2. Dutch Invasion of Belgium. William led an army of 50,000 troops and was at first successful against extemporized Belgian forces. A French army of 60,000, under Marshal **Étienne Maurice Gérard,** forced the Dutch to retire. Chassé, still holding the citadel of Antwerp, was besieged by the French.

1832, November–December. The French army, assisted by a Franco-British naval squadron, forced Chassé to surrender. An armistice followed (May 21, 1833).

1839, April 19. Dutch Recognition of Belgian Independence.

Scandinavia

1800–1815. Napoleonic Wars. (See p. 812.) These resulted in several changes of national status in Scandinavia.

1808. War in Finland. After their alliance at the Treaty of Tilsit, Napoleon and Alexander of Russia called on Sweden to forsake the coalition with England. When Sweden refused to declare war on England, a Russian army under **Count F. W. Buxhöwden** invaded Finland (February). After inconclusive warfare, the Swedes evacuated Finland (December). By the **Treaty of Frederikshavn** (September, 1809) Sweden ceded Finland and the Aland Islands to Russia.

1815. Act of Union. Norway was given the status of an independent kingdom, united with Sweden under one ruler.

1848, March–August. Schleswig-Holstein Revolt. This was inspired by Prussia. Prussian troops under General **Friedrich Heinrich von Wrangel** marched in to occupy the provinces. Sweden sent troops to assist Denmark to reestablish its control: England threatened naval action against Prussia. Austria and Russia also gave diplomatic support to Denmark. The **Convention of Malmo** (August 26, 1848) brought about quasi peace. Desultory operations continued until the **Treaty of Berlin** (1850) restored full Danish rights in the disputed provinces.

Austria-Hungary

1800–1815. Napoleonic Wars. (See p. 812.)

1806, August 6. Dissolution of the Holy Roman Empire. The Austrian Empire took its place (see p. 000). The new empire, a mélange of German, Slav, Magyar, Bohemian, and Latin elements, was dominated by its foreign minister (virtually prime minister) Prince **Klemens W. N. L. von Metternich.** Internal discord boiled in the Italian, Bohemian, and Hungarian provinces, and to some extent in Austria itself.

1810–1850. Austrian Involvement in Italy and the Balkans. (See pp. 846, 848.)

1848, March 13. Revolt in Vienna. Metternich resigned. Emperor **Ferdinand I** promised constitutional reforms and relaxation of suppressive efforts throughout the empire.

1848, March 18–22. Revolt in Milan. (See p. 846.)

1848–1849. Austro-Sardinian War. (See p. 846.)

1848, April 10. Hungarian Independence. Under the leadership of **Lajos Kossuth,** Hungary became virtually independent.

1848, June 17. Bombardment of Prague. A Czech uprising was quelled by an Austrian force under Marshal **Alfred zu Windischgrätz.** This was followed by martial control over all Bohemia.

1848, September 17. Austrian Invasion of Hungary. Croatian forces under Count **Josef Jellachich** invaded Hungary to suppress the independence movement.

1848, October 3. Hungarian Invasion of Austria. After repulsing Jellachich, the Hungarians advanced toward Vienna.

1848, October 6. Revolt in Vienna. In sympathy with the Hungarians, the populace of the

Austrian capital again rose in revolt, but this was promptly suppressed by Windischgrätz (October 31), who then repelled the Hungarians and pursued them. Soon after this Ferdinand abdicated and was succeeded by his nephew, **Franz Josef** (December 2).

1849, January 5. Occupation of Budapest. Windischgrätz captured the Hungarian capital, and drove Hungarian General **Arthur von Görgei** into the mountains north of Budapest. Görgei having broken with Kossuth, Polish General **Henry Dembiński,** was placed in command of Hungarian forces.

1849, February 26–27. Battle of Kápolna. Dembiński was defeated by Windischgrätz.

1849, April 13. Hungarian Republic Established. Kossuth was elected president.

1849, April–May. Hungarian Victories. Görgei, recalled to command, defeated Windischgrätz in a series of smart actions, forcing the Austrians to evacuate Hungary.

1849, June 17. Russian Intervention. Russian troops, led by General **Ivan Paskievich,** assisting Austria, invaded Hungary from the north. At the same time Austrian General **Julius von Haynau,** replacing Windischgrätz, invaded from the west.

1849, June–July. Hungarian Defeats. Görgei was driven southeast, toward Transylvania, where General **Jozef Bem,** a Pole in Hungarian patriot service, had been operating successfully.

1849, July 31. Battle of Segesvar. Bem was badly defeated by Haynau's and Paskievich's converging armies. With the remnants of his troops, Bem joined Görgei for a last stand.

1849, August 9. Battle of Temesvár (Timisoara). Haynau overwhelmed the Hungarians. Görgei managed to withdraw in good order, but recognizing inevitable defeat, surrendered to the Russians (August 11) with 22,000 men. Haynau then ferociously stamped out the last embers of Hungarian rebellion.

Germany

Following the dissolution of the Holy Roman Empire, the German states began, with much internal friction, a coalescence around Prussia as a nucleus. The sole external conflict was Prussia's quasi war with Denmark over Schleswig and Holstein (see p. 844).

1805–1807, 1812–1815. Napoleonic Wars. (See p. 812.)

1807–1814. Reorganization of the Prussian Army. Driving spirit in extensive reforms was General Gerhard von Scharnhorst. Principal among his reformer subordinates were August Neidhart von Gneisenau, **Hermann von Boyen, Karl von Grolman,** and Karl von Clausewitz.

1809, March 1. Establishment of Prussian General Staff. Scharnhorst, first Chief of the General Staff, was virtually Minister of Defense in a new War Department.

1821, January 11. General Staff Reorganized. Under General **Karl von Müffling** it took the general form it retained for 120 years.

1847–1848 Unrest in Germany. It was part of the revolutionary ferment in Europe.

1848, March 15–31. March Days in Berlin. A popular uprising, with bloodshed, forced concessions from King **Frederick William IV,** but was suppressed when General von Wrangel occupied Berlin (November 10).

1848, April–August. Intervention in Schleswig-Holstein. (See p. 844.)

1849, March 27. Frankfurt Constitution. A federal German state was to be established under a hereditary "Emperor of the Germans." However, Frederick William IV of Prussia rejected the crown.

1850, November 29. Treaty of Olmütz. Prussia abandoned a plan for a new German Confederation excluding Austria; Austrian primacy in Germany was reaffirmed.

ITALY

Revolutionary Ferment, 1814–1847

Following the collapse of the Napoleonic structure, the Italian states—dominated by overt Austrian influence—were reconstituted under their former near-medieval autocratic status. This recrudescence of autocracy was opposed by the popular urge for independence and constitutional government fermenting throughout Europe, and particularly stimulated in the Italian peninsula by Napoleon's enlightened reorganization and government.

1820, July 2. Neapolitan Revolution. General **Guglielmo Pepe** led an army revolt, which was crushed at **Rieti** by an Austrian army coming to the aid of King **Ferdinand IV** (March 7, 1821).

1821, March 10. Sardinian Revolution. This was crushed at **Novara** (April 8) by a combined Austro-Sardinian royalist force.

1831, February–March. Revolts in Modena, Parma, and the Papal States. These were inspired largely by **Giuseppe Mazzini,** and were put down with Austrian military assistance.

1832–1834. Renewed Revolts. Austrian troops occupied Romagna (January 1832). French troops took Ancona (March). In another Mazzini uprising in Piedmont and Savoy, a young Sardinian sailor, **Giuseppe Garibaldi,** fled when the uprising failed (1834). Matters in Italy went from bad to worse, as abortive revolts flared for several years.

1847, July 17. Austrian Occupation of Ferrara. This united the Italians in growing hatred of Austrian overlordship.

Italian War of Independence, 1848–1849

1848, March 18–22. Milan Revolt. The "Five Days" revolt ended when Austrian Marshal **Josef Radetzky,** 82 years old, withdrew from the city. He concentrated his army of occupation into the fortress "Quadrilateral": Mantua, Verona, Peschiera, and Legnago. He went on the defensive as a coalition of Italian forces gathered in north Italy.

1848, March 22. Sardinian Declaration of War on Austria. King **Charles Albert** of Sardinia took command of the allied Italian forces. Radetzky, with some 70,000 men, fought a brilliant offensive-defensive campaign on interior lines against enemies double his strength, but lacking his skill.

1848–1849. Spread of Italian Independence Movement. Inspired by the Milan Revolt and the Sardinian declaration of war, Italian patriots in Venice, under **Daniele Manin,** declared an independent republic (March 26, 1848). The unrest spread to the Papal States, where Giuseppe Mazzini eventually ousted the Pope and declared the independence of a Roman Republic (February 9, 1849).

1848, July 24–25. Battle of Custozza. Massing superior forces against a portion of the Sardinian army, Radetzky overwhelmed it and drove Charles Albert out of Lombardy. He reoccupied Milan and besieged Venice. Garibaldi, who had formed a volunteer army fighting in the Alps, fled to Switzerland. Following a brief armistice, hostilities were resumed.

1849, March 23. Battle of Novara. Duplicating Napoleon's maneuver at Marengo, Radetzky with 70,000 men completely defeated Charles Albert and his Polish chief of staff, General **Albert Chrzanowski,** who could put only part of their 100,000 men on the field. Charles Albert abdicated in favor of his son, **Victor Emmanuel II.**

1849, April 24. French Intervention. An expeditionary force, 8,000 strong, under General **Nicolas Oudinot** (son of Napoleon's marshal), landing at Civitavecchia, moved on Rome.

1849, April–June. Siege of Rome. The 20,000

garrison included 5,000 of Garibaldi's red-shirted "Legion." After an initial repulse (April 29), Oudinot persisted, and forced a capitulation (June 29). Garibaldi and his legion retreated toward Venice, hoping to join its defenders, but hot pursuit by French, Austrian, and Italian loyalist forces scattered it. Garibaldi himself fled to America.

1849, May–August. Siege of Venice. Radetzky's army had seized all of Venice's mainland territory after Novara. After terrible suffering from bombardment, starvation, and disease, Manin capitulated (August 24).

1849, August 9. Sardinia Makes Peace. The revolution was quelled; Italy writhed under the cruelty of its conquerors—particularly the Austrian Baron **Julius von Haynau.**

EASTERN EUROPE

Russia

1800–1815. Napoleonic Wars. (See p. 812.)
1804–1813. War with Persia. (See p. 852.)
1806–1812. War with Turkey. (See p. 850.)
1808. Conquest of Finland. (See p. 844.)
1825–1828. War with Persia. (See p. 853.)

War with Turkey, 1828–1829

1828, April 26. Declaration of War. Russia came to the support of the Greeks in their war for independence (see p. 849). This also was an opportunity for further Russian expansion at Turkey's expense.

1828, May–December. Operations in the Balkans. A 3-pronged offensive under the general direction of Czar **Nicholas I** crossed the Danube, to be checked temporarily by the Turkish fortresses. Silistra was invested. Varna (Stalin) was captured after a siege of 3 months (October 12).

1828, May–December. Operations in the Caucasus. An army under General **Ivan Fedorovich Paskievich** advanced from Tiflis, captured Kars, then moved north to defeat the Turks at **Akhalzic** (Akhaltzikke, August 27), while the Black Sea fleet captured Poti. Fierce Kurdish resistance along the upper Euphrates then checked further Russian advance.

1829. Advance on Adrianople. General **Hans K. F. A. von Diebitsch-Zabalkansky** took over command of the Balkan offensive. He moved south against Turkish Grand Vizier **Mustafa Reshid Pasha,** leaving a force to continue the siege of Silistra (which fell June 30), and defeated Reshid at **Kulevcha** (June 11). Diebitsch then boldly penetrated the passes of the Balkan (Haemus) Mountains, completely outmaneuvering the Turks by the rapidity of his advance. He took Adrianople (August 20). With Constantinople threatened, Turkey sued for peace.

1829, September 16. Treaty of Adrianople. Russian gained the mouth of the Danube River and the eastern coast of the Black Sea.

1830–1832. Polish Insurrection. (See p. 848.)
1833. Russian Intervention in Turkey. (See p. 851.)

1839–1847. Khivan Conquest. To extend Russian boundaries southward into Turkestan and to open up trade, an army under General **Basil A. Perovsky** moved from Orenburg into the Khanate of Khiva, in what are now the Kazakh, Uzbek, and Turkoman S.S.R.s. The expedition ended in disaster (1839). The Russians returned to more gradual efforts. A Russian fort was established on the northeastern edge of the Aral Sea, at the Jaxartes (Syr Darya) River mouth (1847). Other Russian spearheads slowly pushed southeastward toward Tashkent.

1849. Intervention in Hungary. (See p. 845.)

Poland

1815, June 9. New Partition of Poland. The Congress of Vienna divided the Grand Duchy of

Warsaw between Prussia, Russia, and Austria, once more dissolving Poland. A tiny fragment—the Cracow (Krakow) area—for a time remained a republic. Russian Poland became the so-called Congress Kingdom, with the czar as its king. There was recurrent friction between the Poles and Russians.

1830, November 29. Polish Insurrection. This began in Warsaw. Polish patriots, among them numbers of veterans of the Napoleonic armies, gathered forces totaling 80,000 men and 158 guns. Russian generals Diebitsch and Paskievich, whose troops totaled 114,000, brought fire and sword throughout the region, while Polish factions fought with one another for supremacy.

1831, February 20. Battle of Grochow. Diebitsch was halted on the outskirts of Warsaw in a sanguinary battle by a Polish army under Prince **Michael Radziwill.** Diebitsch withdrew eastward.

1831, May 26. Battle of Ostrolenka (Ostroleka). Polish General **Jan Zigmunt Skrzneki** fought a long, bloody, but indecisive battle with Diebitsch on the Narew River. The Polish artillery was well handled by General Bem, but the Poles were forced to retreat. Skrzneki gradually fell back on Warsaw, where he was relieved by General Dembiński.

1831, September 6–8. Battle of Warsaw. The capture of the gallantly defended Polish capital by Paskievich's troops was accompanied by great bloodshed. The insurrection was stamped out violently.

1846, February. Cracow Insurrection. A local armed movement against Austria—intended as another general Polish uprising—was speedily suppressed by Austrian troops; the state of Cracow was absorbed by Austria.

The Balkans

During this half-century the Balkan Peninsula was in a constant turmoil of war and internal disorder. The Ottoman Empire's decay gave hope of freedom to the oppressed peoples of the peninsula, who as a consequence were ceaselessly engaged in plotting or waging revolutions. And even while fighting or intriguing against the Turks, they were fighting and intriguing among themselves.

Encouraging this internal unrest, and attempting to profit from it both politically and territorially, were the neighboring empires of Russia and Austria, both hoping to inherit all of the Balkan Peninsula and the strategic straits of the Dardanelles and the Bosporus when, as they expected, the Turkish Empire reached an early collapse. The aspirations of both the Hapsburg and Romanoff empires were viewed with alarm and suspicion by both Britain and France. During the Napoleonic Wars, Russia and Austria were somewhat reluctant allies in the Balkans, while Napoleon directly or indirectly supported or encouraged the Porte. For the same reason, Britain—also reluctantly—was frequently allied with Russia and Austria against Turkey, but nonetheless endeavored to direct the main efforts of the alliance against Napoleon. After Napoleon's defeat, Britain continued this policy of maintaining the balance of power in the Balkans, even though, on a few occasions, other policy considerations (such as supporting the independence of Greece) required her to participate in limited military operations against Turkey. The principal events were:

1799. Independence of Montenegro. Achieved by King **Peter I** through his alliance with Russia against Turkey (see p. 763) and support of both Russians and British against French efforts in Dalmatia.

1804–1813. Serbian Insurrection. The Serbs

were led by **George Petrovich** (known as **Kara George,** and founder of the Karageorgevich family). Under his leadership Turkish troops were driven from Belgrade and Serb independence proclaimed (December, 1806). Apparently successful, the independent state collapsed when Russia made peace with Turkey (1812) and Turkish armies reoccupied the country; Kara George fled to the mountains.

1812. Bessarabia to Russia. This was a provision of the **Treaty of Bucharest** (see p. 851). The remainder of Moldavia remained under Turkish suzerainty.

1815–1817. Serbian Insurrection. The principal leader was **Milosh Obrenovich,** an opponent of Kara George. The murder of Kara George by Obrenovich adherents resulted in a blood feud between the families, which lasted more than a century. The Turks suppressed the revolt, but recognized Obrenovich as hereditary prince of Serbia when he agreed to Turkish suzerainty.

Greek War of Independence, 1821–1832

1821, October 5. Massacre of Tripolitsa. The beginning of revolt in Morea resulted in the massacre of the 10,000-man Turkish garrison. Immediate, savage Turkish reprisals followed, and all Greece flamed.

1822, January 13. Independence Proclaimed at Epidauros.

1822, April–June. Occupation of Chios (Scio). A Turkish squadron under **Kara Ali** took the island, massacring or enslaving its entire population.

1822, June 18–19. Battle of Chios. Greek sailor-patriot **Constantine Kanaris,** with 2 fire ships, sailed into the midst of the Turkish squadron and blew up the Turkish flagship with all on board.

1822, July–1823, January. First Siege of Missolonghi. A Turkish army, invading the peninsula north of the Gulf of Corinth, was stopped before the Greek fort. **Mustai Pasha** hurried with reinforcements for the besiegers.

1822, August 21. Battle of Karpenizi. With 300 men, **Marco Bozzaris** surprised Mustai's advance guard in a night attack. Bozzaris was killed, but the 4,000 Turks were routed, losing most of their leaders.

1823, January. Turkish Withdrawal. Mustai gave up the siege of Missolonghi and retired.

1823–1825. Greek Dissension. Instead of pressing their advantage, the Greeks began quarreling among themselves.

1825, February 24. Egyptian Involvement. Answering Sultan **Mahmud II**'s call for help, **Mohammed Ali** (see p. 852) sent a fleet and an army. **Ibrahim,** son of Mohammed, landed in the Morea, with some 5,000 well-disciplined troops, and quickly overran the peninsula. Meanwhile, a new Turkish army, under Reshid Pasha, penetrated from the north and again invested Missolonghi.

1825, May–1826, April 23. Second Siege of Missolonghi. The starving garrison was destroyed in a final desperate sortie.

1825, May–June. Siege of the Acropolis. Reshid moved on Athens and besieged the Acropolis. European interest by now focused on assisting Greek independence; Lord **Byron** had already arrived (1822). He died soon after (1824) but was followed by a number of volunteer adventurers and idealists, the most prominent of whom were Admiral Lord **Cochrane** and General Sir **George Church.** Cochrane was placed in command of the Greek Navy, Church of the Army, but both were paralyzed by Greek internecine intrigue.

1825, June 5. Capitulation of the Acropolis. Greek inefficiency negated the plans of both Cochrane and Church, who fled to the safety of warships in the bay. Reshid accorded the honors of war to the garrison. Continental Greece was again under Turkish control.

1827, July 6. Treaty of London. Forced by pro-Hellenic public opinion, the governments of England, France, and Russia demanded that the Egyptians withdraw and that the Turks agree to an armistice. Both refused. A large Egyptian squadron landed reinforcements at Navarino (September 8), where a Turkish squadron also lay. The 3 allied governments

sent naval forces to Greece; they rendezvoused off the harbor of Navarino.

1827, October 20. Battle of Navarino. Learning that Egyptian Ibrahim was carrying out depredations ashore, British Admiral Sir **Edward Codrington,** the senior allied commander, sailed into the harbor where the Egyptian-Turkish fleet was at anchor. Following Codrington's 3 ships of the line and 4 frigates were French Admiral **Henri G. de Rigny**'s 4 ships of the line and 1 frigate. In a second line came Russian Admiral Count **Heiden**'s 4 ships of the line and 4 frigates. **Tahir Pasha**'s 3 ships of the line, 15 frigates, and some 50-odd smaller craft lay in a long horseshoe formation; the flanks were protected by shore batteries. The allied fleet dropped anchor in their midst. A Turkish ship fired on a British dispatch boat, killing an officer and several men. Codrington at once opened fire and his allies joined in. The Turko-Egyptian fleet, heavily outgunned, was destroyed, three-fourths of its vessels either sunk or fired by their own crews. Allied losses were 696 killed and wounded. The Turko-Egyptian loss, never officially reported, must have been great.

COMMENT. *Navarino, which really decided Greek independence, was a gun duel, pure and simple, between floating batteries.*

1828, April 26. Russia Declares War. (See p. 847.)

1828, August 9. Egyptian Evacuation of Greece. This was supervised by a French expeditionary force. The evacuation was completed early next year (1829). This virtually ended the war.

1832, May 7. Treaty of London. This created the independent Kingdom of Greece.

1829. Autonomy of Serbia, Wallachia, and Moldavia. This was a result of the Treaty of Adrianople (see p. 847).

1829–1834. Russian Occupation of Wallachia and Moldavia.

1843, September 14. Revolt in Greece. King **Otto I** was forced to grant constitutional government.

1848. Revolt in Wallachia. This was related to continent-wide political unrest. Russia, with Turkish approval, invaded the principality and subdued the insurrection.

EURASIA AND THE MIDDLE EAST

The Ottoman Empire

The Ottoman Empire, football of France, Russia, and England during the Napoleonic Wars, began to disintegrate.

War with Russia, 1806–1812

A smoldering dispute with Russia over the status of the principalities of Wallachia, Moldavia, and Bessarabia was fanned into flame by the French ambassador to the Porte.

1806, November 6. Turkey Declares War. Russian troops invaded Wallachia and Moldavia.

1807, February–March. British Naval Attack on Constantinople Repulsed. (See p. 838.)

1807, June 30. Battle of Lemnos. A Russian fleet under Admiral **Dmitri Seniavin** defeated a slightly larger Turkish fleet.

1807, August. Armistice. This was largely due to mediation by Napoleon at Tilsit. Russian forces withdrew from Wallachia and

Moldavia; the Turkish Army retired to Adrianople.

1809–1812. Desultory Warfare. Russia was generally more successful than Turkey.

1812, May 28. Treaty of Bucharest. This resulted from British mediation. Bessarabia went to Russia, but Moldavia and Wallachia remained under Turkish control.

1808–1809. Internal Unrest and Mutinies. Sultan **Selim** was dethroned (1807) and killed (1808) when adherents attempted to reinstate him. His successor **Mustafa IV** was quickly dethroned in turn (1808) and succeeded by **Mahmud II.**

1821–1832. Greek War of Independence. **(See p. 849.)**

1821–1823. War with Persia. **(See p. 853.)**

1826, June 15–16. Massacre of the Janissaries. Sultan Mahmud, enraged by the inefficiency of his troops, attempted to displace the Janissaries, who rose in revolt. Loyal troops bombarded their barracks in Constantinople, and Turkish mobs ended the job by a wholesale massacre; more than 6,000 were killed.

First Turko-Egyptian War, 1832–1833

Mohammed Ali demanded control of Syria as reward for his assistance against Greece. This was rejected by the sultan.

1832. Egyptian Invasion of Syria. Ibrahim captured Acre (May 27), Damascus (June 15), and Aleppo (July 16).

1832, December 21. Battle of Koniah (Konya). Invading Anatolia, Ibrahim met and defeated Reshid's main Turkish army, capturing Reshid. Turkey in desperation called on Russia for aid.

1833, February. Defensive Alliance with Russia. A Russian squadron from the Black Sea arrived at Constantinople (February 20, 1833).

1833, May 14. Convention of Kutahya. England and France, alarmed by Russian influence in Turkey, persuaded the sultan to give Syria and Adana to Egypt.

1833–1839. Internal and External Confusion. The great powers then began to squabble among themselves, France siding with Egypt. Turkey, meanwhile, rebuilt its army with Prussian assistance. Captain **Helmuth von Moltke** was one of the advisors (1835–1839).

Second Turko-Egyptian War, 1839–1841

1839. Turkish Invasion of Syria. Hafiz Pasha, accompanied by von Moltke, was in command.

1839, June 24. Battle of Nezib. The Turks were defeated by Ibrahim, partly because Hafiz ignored Moltke's advice. The Turkish fleet went to Alexandria to surrender to Egypt (July 1). With the Ottoman Empire apparently about to disintegrate, the powers—except France—decided to shore it up.

1840, September–November. British and Austrian Intervention. A combined naval force cut Ibrahim's sea communications with Egypt. This was followed by British bombardment and occupation of **Beirut** (October 10) and **Acre** (November 3).

1840, November 27. Convention of Alexandria. British Admiral **Charles Napier** reached an agreement with the Egyptians whereby they abandoned claims to Syria and returned the Turkish fleet.

1841, February. Ibrahim Evacuates Syria. He returned to Egypt.

1841, July 13. Straits Convention. The great powers agreed that the Bosporus and Dardanelles should be closed to all foreign warships in time of peace.

1848, September. Revolt in Wallachia. **(See p. 850.)**

Egypt and the Sudan

1805. Rise of Mohammed Ali. The governor of Egypt for the Ottoman Empire, by intrigue and

violence he established himself as an independent potentate. Violence continuing, the British decided to intervene in favor of one of his opponents.

1807, March 17. British Expedition. A force of some 5,000 men under General **A. Mackenzie Fraser** occupied Alexandria without resistance, but found their protégé had died. In attempting to take Rosetta and Rahmanieh to secure supplies, a British detachment was badly cut up, retreating to Aboukir and Alexandria with loss of 185 killed and 218 wounded. Another attempt on Rosetta (April 20) failed, with losses of some 900 men out of 2,500 engaged. Many British soldiers were massacred. Alexandria was then evacuated (September 14).

1811, March 1. Massacre of the Mamelukes. Mohammed Ali by treachery wiped out most of the Mameluke chieftains, and then their troops. He consolidated his position; made peace with the Porte, whose suzerainty he recognized; and reorganized the country, building up a powerful army (composed largely of Albanian mercenaries) and a fleet with the assistance of European military advisors. At Turkish command he now instituted a religious war in Arabia.

1811–1818. War with the Wahhabis. This Moslem sect had occupied Mecca, Medina, and Jidda, and threatened Syria. During 7 years of serious combat the Moslem holy places were recovered and the eastern Red Sea coast placed under Egyptian rule.

1815. Mutiny in Cairo. Mainly by Albanian units, which resented Mohammed Ali's modernization program.

1820–1839. Conquest of the Sudan. Egyptian forces under **Hussein** (son of Mohammed) moved into the eastern Sudan and extended Mohammed's control over a great part of the western Red Sea coast. Egyptian troops pushed up the Nile as far as Gondokoro (modern Equatoria, Sudan).

1823–1827. Operations in Greece. Egyptian warships and troops assisted in checking the Greek struggle for liberty from Turkish rule (see p. 849). As a result, Egypt gained control of Crete.

1832–1833. First Turko-Egyptian War. (See p. 851.) This resulted in Egyptian control of Syria and Adana, and extension of Egyptian influence eastward to the Persian Gulf.

1839–1841. Second Turko-Egyptian War. (See p. 851.) Although losing both Crete and Syria, Mohammed Ali secured hereditary rule over Egypt.

1848. Death of Ibrahim.

1849. Death of Mohammed Ali.

Persia (Iran)

Russia's policy of expansion to the east and southeast, and the clash of Franco-British interests, as well as internal rebellions, kept Persia in turmoil throughout the period—a striking exemplification of the impact of power politics on underdeveloped regions at the height of European colonial expansion. The unfortunate country was tugged hither and yon by French, British, and Russian interests. The influence of Britain (and the East India Company) was generally predominant. A number of British officers served from time to time in the Persian forces. The principal events were:

War with Russia, 1804–1813

This resulted from Russian annexation of Georgia (1800), which had been nominally under the suzerainty of Persia. Persian assistance to Georgian factions resisting the annexation aroused Russian ire.

1804. Russian Invasion of Persia. The Russian Army was under General **Sisianoff.**

1804. Battle of Echmiadzin. An inconclusive 3-day battle. Persian forces were under able Persian prince **Abbas Mirza.**

1804. Siege of Erivan. Shah **Fath Ali** brought up Persian reinforcements, and Abbas Mirza later during the same year relieved the city, forcing the Russians to retire.

1805–1813. Sporadic Warfare. This dragged on throughout the Caucasus and along the Caspian coast.

1812, October 31. Battle of Aslanduz. The Russians surprised and routed Abbas Mirza on the Aras River.

1813, October 12. Treaty of Gulistan. Persia agreed to the cession of Georgia and other trans-Caucasian provinces to Russia.

1816. Persian Invasion of Afghanistan. **(See p. 864.)**

1821–1823. War with Turkey. The conflict was prompted by Russian intrigue and by Turkish protection of rebellious tribes fleeing from Azerbaijan. Abbas Mirza moved west into Turkey (1821) to the Lake Van region. In retaliation, Turkish forces under the Pasha of Baghdad struck east into Persia, but were repelled. The Persian invasion in the north culminated in the **Battle of Erzerum,** where Abbas Mirza with 30,000 men defeated a Turkish army estimated at 52,000 (1821). Peace was finally established by the **Treaty of Erzerum;** both sides agreed to maintain the *status quo* (1823).

1825–1828. War with Russia. Following a boundary dispute, Persian forces were successful along the Caspian littoral, reaching the gates of Tiflis (Tbilisi). Russian General Ivan Fedorovich Paskievich then initiated a brilliant counteroffensive campaign.

1826, September 26. Battle of Ganja (or Kirovabad). Abbas Mirza with 30,000 men met Paskievich with 15,000. After initial Persian success, they were routed by the Russians.

1827. Russian Victories. Several indecisive actions were followed by the storming of Erivan by Paskievich and the surrender of Tabriz.

1828, February 22. Treaty of Turkomanchi. This ended the war. It also ended Persia's role as a major power.

1836–1838. War with Afghanistan. Again through Russian intrigue, prompted by British penetration into Afghanistan, Mohammed Shah of Persia undertook to invade that region. Mobilizing his army at Shahrud, he moved slowly through Khorasan (Khurasan) via Meshed into Herat Province, wasting nearly a year in bickerings with the Turkoman tribesmen on his northern flank. Captain **Eldred Potter** of the East India Company's Bombay Army turned up in Herat City, in disguise, as Mohammed's troops began investment of the city (November 23). He offered his services to the Afghan commander, and so organized the defenses that a Persian assault—delivered simultaneously in 5 places—was driven off. After a siege of nearly 10 months, Mohammed withdrew (September 28, 1838).

1849–1854. Russian Conquest of the Syr Darya Valley. This ended nominal Persian suzerainty over this region of Central Asia, and brought Russian power to the northern border of Persian Khorasan.

AFRICA

North Africa

The 4 Barbary States—Algiers, Tripoli and Tunis (semi-independent satellites of the Ottoman Empire), and the independent Kingdom of Morocco—continued to afflict the Mediterranean and its Atlantic approaches by their piratical activities. War-torn Europe had found it practical to pay tribute to them for the protection of its commerce. The new United States had followed suit, but undertook punitive action after extreme provocation.

1801–1805. Tripolitan-American War. The Pasha of Tripoli raised his protection ante. He declared war against the United States (May 14) because his demands were not satisfied. President **Thomas Jefferson** sent a punitive expedition to the Mediterranean (July). For the next 2 years a small American naval force blockaded Tripoli, but only lackadaisically and ineffectually (1801–1803).

1803, August. Arrival of Commodore Edward Preble. A more vigorous policy was followed; American warships hunted down Tripolitan corsairs.

1803, October 31. Capture of USS *Philadelphia*. This frigate, commanded by Captain **William Bainbridge,** pursuing a Tripolitan frigate, ran aground off the harbor. At once surrounded by a score of Tripolitan vessels, Bainbridge was forced to surrender his helpless ship. Later the *Philadelphia* was floated and brought into Tripoli in triumph.

1804, February 16. *Philadelphia* Destroyed. Lieutenant **Stephen Decatur** with 73 officers and men, all volunteers, boldly sailed a small captured Tripolitan vessel into the harbor, boarded, and burned the *Philadelphia* as she lay anchored under the guns of the castle, then escaped. Preble's squadron then systematically bombarded the port, but could not enter through the tortuous, rock-strewn channel.

1804–1805. Eaton's Expedition. U.S. naval agent William Eaton started from Alexandria with 8 Marines, a navy midshipman, and about 100 mercenaries to restore **Hamet Karamanli,** the rightful but dispossessed ruler of Tripoli, to his throne (November 14). After a 600-mile march across the Libyan desert, he reached and, aided by a naval bombardment, stormed the city of Derna (April 26, 1805). For another 6 weeks Eaton held the city against Tripolitan counterattacks. But Commodore **Samuel Barron,** who had succeeded Preble in command of the Mediterranean squadron, had meanwhile made peace with the reigning Pasha of Tripoli—the usurper **Yusuf Karamanli.** In return for $60,000 cash bounty, the *Philadelphia*'s crew were released from prison and all further ransom payments ceased. Eaton's expedition—America's first overseas land operation—was withdrawn.

1805, August 1. American Peace with Tunis. Commodore **John Rodgers,** in the USS *Constitution,* sailed into Tunis and forced its bey to make peace. Algiers alone still received American tribute. Trouble, then war, with England delayed American action.

1815, March 3–June 30. American War with Algiers. All U.S. warships having withdrawn from the Mediterranean during the War of 1812, the Dey of Algiers preyed on U.S. commerce. He threw out the U.S. consul, enslaved U.S. nationals, and finally declared war, on the grounds that he was not being paid sufficient tribute. Commodore Stephen Decatur, with a squadron of 10 vessels, entered the Mediterranean, captured 2 Algerian warships, and sailed into Algiers harbor. At cannon mouth he demanded and received cancellation of all tribute and release of all U.S. prisoners without ransom. Cessation of piracy was guaranteed by the dey. Decatur then forced similar guarantees from Tunis and Tripoli, with compensation for U.S. vessels seized by Britain in those waters during the War of 1812. Decatur's forceful action ended U.S. participation in the Barbary Wars.

1816, August 26. Allied Bombardment of Algiers. Following a succession of outrages against British shipping and subjects, a squadron under Admiral **Edward Pellew, Lord Exmouth** destroyed the port fortifications and the Algerian fleet in a 9-hour engagement. A Dutch squadron under Admiral **Theodore F. van der Capellen** assisted. The Algerians surrendered some 3,000 European prisoners.

1819. British Demonstration on the Barbary Coast. This was to discourage recurrent piracy.

1824. Bombardment of Algiers. This was by a British squadron under Admiral Sir **Harry Neal.** Algerian piracy was still not completely suppressed, however.

1826. Independence of Constantine. The city and surrounding region successfully defied the Dey of Algiers.

1827–1829. French Blockade of Algiers. Increasing friction between France and the Al-

gerian pirates culminated when the Dey of Algiers slapped the French consul's face (April 30, 1827). During the subsequent blockade, a French ship bearing negotiators and flying a flag of truce was fired upon by the Algerians (August 3, 1829).

French Conquest of Algeria, 1830–1847

1830, June–July. French Invasion. France sent an army of 37,000 men and 83 guns to Algeria under Marshal **Louis A. V. de Bourmont.**

1830, July 5. Capture of Algiers. The dey was expelled; important ports and key inland towns were occupied.

1832–1837. Wars against Abd el Kader, Emir of Mascara. He emerged as leader of Islam against the Christian invaders. A succession of French generals failed to curb the skillful Algerian warrior.

1837, June 1. Treaty of Tafna. Peace was restored, with France controlling only a few of the major coastal ports. Limited French military operations continued, however.

1837, October. Storming of Constantine. Marshal **C. M. D. Damremont,** leading a final assault on the walled city, which for a year had resisted all French attacks, was killed as his troops won victory. Abd el Kader, claiming a violation of the peace treaty, took the field (December) with a well-trained force of 8,000 infantry and 2,000 cavalry, supplemented by some 50,000 gouma (irregular horse). Indecisive but bitter fighting continued.

1840, December. Arrival of Marshal Thomas R. Bugeaud. He brought large reinforcements. The French Army in Africa now amounted to 59,000 men, later to be augmented to 160,000. Bugeaud was the first major French African colonial organizer. His forceful leadership combined great military and administrative qualities. He reorganized the African army, adding indigenous elements, and established a tactical square combat assault formation, which he called the "boar's head." The colorful names and uniforms of Bugeaud's troops—zouaves, voltigeurs, chasseurs d'Afrique, spahis, and the famous Foreign Legion—intrigued and influenced American amateur military organizations and stimulated romantic writers the world over. The French strategic pacification policy initiated by Bugeaud and carried on successfully in North Africa for almost 100 years more consisted of a few fixed bases from which flying columns issued. These mobile elements were as fluid and fast-moving as the Berbers who opposed them.

1843, May 10. Battle of Smala. Duke **Henri d'Aumale,** commanding a flying column of less than 2,000 men, surprised and attacked, headlong, Abd el Kader's army of 40,000, dispersing it.

1843–1844. French Successes. Systematically and progressively Kader was driven west into Morocco. A French squadron dampened Moorish sympathy by bombardment of Tangier and Mogadir, while Bugeaud, with 6,000 infantry, 1,500 cavalry, and some artillery, crossed the border in pursuit.

1844, August 14. Battle of Isly. Adb el Kader, with 45,000 men, was camped on the Isly River. Bugeaud crossed the river and attacked. His "boar's head" square repulsed Kader's counterattacks. Finally the French cavalry, the "boar's tusks," charged in 2 columns, overrunning Kader's camp. After a stubborn struggle Kader's forces gave way. Isly was the decisive battle of the war, although some sharp encounters occurred later.

1844, September 10. Treaty of Tangier. The French withdrew from Morocco.

1847, December 23. Surrender of Abd el Kader.

COMMENT. *Abd el Kader deserves a place in history not only as a chivalrous soldier of great ability but also as one of the great champions of men of letters of the 19th-century Islamic world. Imprisoned by the French for several years, he was later released and returned to the Near East.*

1835–1836. Ottoman Control Reestablished in Tripolitania. An Ottoman fleet and army took control.

West Africa

The related Moslem Fulani and Tukulor peoples became predominant in the western Sudan highlands between the upper Senegal River and Lake Chad. To the south the warlike Ashanti and Dahomey tribes expanded their areas of control in the jungled regions west and east of the Volta River. Meanwhile, along the coast, Britain and France extended their seaport colonial control at the expense of the Portuguese and Danes, as well as the coastal tribes. The principal events were:

1804–1810. The Fulani Jihad. Usman dan Fodio, a Moslem divine who had quarreled with the King of Gobir, preached a *jihad* (Holy war) to renew Islam. Supported by many Hausa as well as Fulani, his armies overran northern Nigeria, northern Cameroon, southeastern Niger, and northeastern Benin, conquering the Hausa city-states (1804–1808). He divided the realm between his son **Muhammad Bello** (at Sokoto) with the northwest, and his brother **Abdullahi dan Fodio** (at nearby Gwandu) with the southern and western emirates (1809).

c. 1805–c. 1835. End of Oyo. Oyo was pressured by Dahomey to the east, and weakened by the effects of Abiodun's anti-army policies (see p. 795). The northern half of the kingdom was overrun by a Fulani army (c. 1817), which also created the emirate of Ilorin. A rump Oyo kingdom survived in the south, around Oyo, which became the new capital (c. 1835); some Oyo refugees settled near Ife.

1806–1807. Ashanti Conquest of the Gold Coast. Under their King **Osei Bonsu** (r. c. 1801–1824), the Ashanti extended their dominions to the coast.

1808–1811. Fulani Attack on Bornu. Forces of **Usman dan Fodio**'s Fulani *jihad* invaded Kanem-Bornu and defeated its army (1808). *Mai* **Ahmad** was driven from his capital and appealed to a local scholar, cleric, and warrior, **Muhammad al-Kanami.** Al-Kanami led a spirited resistance, and by 1811 had defeated the Fulani.

1809. British Capture St. Louis (Senegal) from the French.

1810. Revolution in Macina. Shehu **Ahmadu Lobbo,** a Fulani cleric, overthrew the ruling Fulani Dynasty of Macina, and created a new state with its capital at Hamdallahi.

1811. Britain Abolishes the Slave Trade. Similar action was taken by Holland (1814), France (1815), and most other European nations.

1816. Britain Returns the Senegal Posts to France.

1817. The Sokoto Caliphate. After the death of **Usman dan Fodio,** his son **Muhammad Bello** succeeded him as *sarkin musulmi* ("commander of the faithful") and caliph, making his seat at Sokoto, and becoming the spiritual and political leader of the Fulani.

1818. Macina Jihad. At Macina, **Ahmadu ibn Hammadi,** a disciple of **Usman dan Fodio,** began preaching a *jihad.* One of the first conquests was the kingdom of Segu, ruled by **Da Kaba,** grandson of Ngolo Diara (see p. 795). The forces of this *jihad* also conquered Djénné and Timbuktu, but Hammadi's puritanical brand of Islam alienated many of the local tribes.

1818–1858. Reign of Gezo of Dahomey. After deposing King Adandozan (r. 1797–1818), this ruler led Dahomey to its greatest power. The Dahomeyan army, like its government, contained male officials and regiments in the countryside, matched by female counterparts at court. The female royal guard (called "Amazons" by Europeans) were the elite shock troops of the army. Nearly all the female troops, and many male units, were equipped with modern firearms. The end of the slave trade after 1840 hurt Dahomey, which had grown rich selling slaves taken in its campaigns to Europeans; a slave-plantation system to produce palm oil was less lucrative.

1822–1847. Establishment of Liberia. Freed slaves from America established a colony, despite constant conflict with neighboring tribes.

1824–1831. First Ashanti War. Sir Charles M'Carthy, governor of British posts on the Gold Coast, attempted to protect the coastal tribes from the Ashanti, but was defeated and killed. The British sent reinforcements and finally defeated the Ashanti (1827). Peace was established, with the Ashanti surrendering their suzerainty over the coastal region (1831).

1826. Muhammad al-Kanami in Bornu. By this time, al-Kanami had cemented his control of the kingdom and made it into a vigorous Islamic state, although he did not displace the ruling Sef Dynasty.

1842–1843. French Occupation of Ivory Coast Ports.

1846. Civil Unrest in Bornu. The puppet *mai* rebelled against **Muhammad al-Kanami's** son and successor **'Umar,** but he was defeated and killed, leaving the kingdom in 'Umar's capable hands.

1847, July 26. Independence of Liberia. The capital, Monrovia, had been founded by freed slaves from the United States (1822).

1848–1850. Rise of al-Hajj Umar. Umar had made the pilgrimage to Mecca (hence the honorific "al-Hajj"), joined the moderate Tijaniyah *tariqa* (religious brotherhood), and lived for a time in Sokoto. He established a refuge and religious community at Dinguiraye in northern Guinea for his followers among the Tukulor people (close cousins to the Fulani). There he raised an army equipped with European weapons, and laid the basis of a theocratic state (see p. 936).

South Africa

1800–1814. British Annexation of Cape Colony. The Dutch settlement, occupied by the British (1796), was returned to Dutch control (1803), but renewal of the Napoleonic Wars led to its reoccupation (January, 1805). The **Treaty of Paris** (1814) granted the colony to Britain.

c. 1807–1818. The Mtetwa Empire. The Mtetwa were a large clan, dwelling near the coast of modern Zululand and northern Natal. Their chieftain **Dingiswayo,** who took the throne about 1807, undertook a program of expansion. He brought neighboring tribes under his control (more often through diplomacy than force), but allowed them to retain some autonomy. The Mtetwa army embodied the *amabutho,* an age-graded regimental system also characteristic of the later Zulu army (see below and pp. 931–932). Drafts from subject clans were incorporated into the army. Dingiswayo was killed in a war with **Zwide,** chieftain of the powerful Ndwandwe clan (1818). A half-brother succeeded him, but failed to maintain Mtetwa power.

c. 1811. Zulus Brought under Mtetwa Control. The Zulus were a small upcountry clan, and their chieftain **Senzangakona** submitted to Dingiswayo after the more powerful nearby Butelezi clan was defeated.

1811–1819. Frontier Warfare. The British and Boers drove the Xosa Bantu people beyond the Fish and Keiskama rivers.

1814–1835. Growing Boer-British Friction in the Cape Colony. This was exacerbated by abolition of slavery in the British Empire (1833); the Boers felt they were not adequately compensated for the slaves they freed. Also they felt that British territorial policy was preventing them from occupying frontier lands.

1816–1819. Rise of Shaka of the Zulus. He was Senzangakona's illegitimate son; after an unsettled childhood **Shaka** lived among the Mtetwa, and joined the iziCwe regiment of the Mtetwa army (c. 1810). After distinguished service, Dingiswayo appointed him chief of the Zulus after Senzangakona died (1816). Shaka reformed the Zulu army (which numbered less than 400 when he arrived), forging it into a disciplined and efficient fighting force. Within 2 years he had forcibly absorbed several neighboring clans and led an army of 2,000 warriors.

1818–1819. Zulu-Ndwandwe War. About a year after Dingiswayo's death, Zwide of the Ndwandwe attacked the smaller Zulu clan, but Shaka defeated him at the **Battle of Gqokli**

Hill (late 1818). Zwide tried again but, hampered by lack of supplies, the exhausted Ndwandwe army was destroyed in a climactic 2-day battle as it tried to withdraw (May 1819). Shaka sent a force to destroy Zwide's kraal, but Zwide escaped and fled north, where he died (c. 1821).

1819–1828. Shaka Creates the Zulu Empire. Shaka used his army, which had grown to over 30,000 by the late 1820s, to conquer neighboring clans. The vanquished were forcibly absorbed by the victors and became Zulus. His rule was autocratic and often cruel; after the death of his mother Nandi (October 1827), he became capricious and irrational. After some months of plotting, Shaka's half-brothers **Dingane** and **Mhlangana** assassinated him (September 22, 1828). After a quarrel, Mhlangana fled and Dingane took the throne.

c. 1820–1835. The Mfecane. During his war with Shaka, Zwide attacked the neighboring emaNgwaneni clan and drove them from their land. They eventually fled over the Drakensberg to the interior plateau. With both coastal and interior Bantu clans so closely packed there was no room to spare. These events unleashed a chain reaction of attack, marauding, and dispossession, which virtually depopulated the interior plateau. Necessarily crude estimates put the death toll between 1 and 2 million. The effect on the coastal clans was significant, but nowhere near as devastating. These events were christened *Mfecane,* or "the Crushing," an apt description of its effect on Bantu society. Some effects of the *Mfecane* reached as far north as Tanzania.

1834. Boer Frontier War with Bantu. The Bantu tribes (mainly Xosa), enraged by Boer encroachment, invaded the frontier regions and were repulsed with difficulty.

1835–1837. Great Trek of the Boers. Some 12,000 Boers, chafing under British control, decided to make a mass migration northward to establish their own independent states. Some, under **A. H. Potgieter,** headed north toward the Vaal River; the others, under **Piet Retief,** went northeastward toward Natal and Zululand. Potgieter and his people, after a fierce struggle, defeated the Matabele Bantu tribe in the Vaal region, and settled down (1837).

1838, February. Durban Massacre. Retief and other Boer leaders were massacred by Dingane, who then attacked and killed many of the settlers.

1838, December 16. Battle of Blood River. A Boer force under **Andreas Pretorius** decisively defeated Dingane. The Zulus, beset by internal discord, did not seriously interfere with Boer colonization.

1840, January. Battle of Magango. Boers, allied with **Mpande,** brother of Dingane, defeated the Zulu ruler, who fled to Swaziland; Mpande took his place and made peace with the Boers, granting them all of southern Natal.

1839. Pretorius Proclaims Boer Republic of Natal.

1842–1843. British-Boer Conflict in Natal. The British barely repulsed a Boer attack on their post at Durban. They then occupied Natal and annexed it (1843). Friction continued.

1846–1847. War of the Ax. Conflict broke out between the British and Kaffirs in the region between the Keiskama and Great Kei rivers. The natives were protesting against both British and Boer colonist encroachment. The British were successful in a 21-month campaign.

1846–1850. British-Boer Friction. There was considerable unrest and some fighting along the frontier near the Great Kei River and in the region between the Orange and Vaal rivers.

1848, August 29. Battle of Boomplaats. Strained relations between Boers in the Orange River colony and the British resulted in an armed clash. A force of British under Sir **Harry Smith** defeated the Boers under Pretorius. The disgruntled Boers retreated across the Vaal River.

East Africa

The great native migrations continued within the interior of central East Africa. Along the coast the Arabs retained and strengthened their control, while in the highlands of Ethiopia internal chaos continued. The principal events were:

c. 1810. Battle of Shela. Pate and Mombasa were defeated by Lamu; as a result, Pate's power in the area was destroyed and Mombasa's influence in the area ended.

1822. Sayyid Sa'id Captures Pemba. This British ally and ruler of Muscat began an expansion program in East Africa. That same year, under British pressure, he agreed to end slave exports to "Christian" countries, although slaves continued to be taken for Zanzibar and the Persian Gulf markets. He placed a garrison in Pate (1824). He established a major base at Zoazibar (1828).

1824–1826. British in Mombasa. The Mombasans, desperate to avoid Sa'id's rule, invited a British protectorate. This was withdrawn to prevent British conflict with their ally.

1829–1833. Mombasa Defies Muscat. Sayyid Sa'id twice assaulted Mombasa but was repulsed both times (1829, 1833).

1837. Sayyid Sa'id Gains Mombasa. A succession crisis (1835–1836) enabled Sa'id to gain control of the city and place a garrison there. Sa'id moved his capital to Zanzibar in 1840.

1839. British in Aden. As part of a policy to secure ports along the route to India, the British occupied the port of Aden in Yemen.

1841–1850. Rise of Lij Kassa of Gojjam of Ethiopia. An able and ambitious minor chieftain, he parlayed his well-organized brigand band into an army and so gained political power in the region west of Lake Tana. By 1847 (at the age of 29) he had married the daughter of Ras Ali, lord of Gojjam and Amhara provinces.

Madagascar

The island became a shuttlecock in the Franco-English conflict of the Napoleonic era and later, a situation complicated by the hostility of the natives to both nations. A French force reestablished French control at Tamatave (1803), but in 1810 the British seized all French stations on the island. A French effort to regain power (1818–1819) was finally repulsed by the Hovas, the principal tribe (1825); a French squadron bombarded Tamatave (1829) without much effect. In 1846 Franco-British squadrons—now in conjunction—futilely bombarded Tamatave in retaliation for native hostility to all foreigners.

SOUTH ASIA

India

The British conquest of the country progressed under joint crown and East India Company auspices as the British flag followed British trade, and England's leaders parried Bonaparte's thrusts to Egypt and India. Differences with the native rulers were heightened by French intrigue, particularly with the powerful Marathas, whose leaders—**Doulut Rao Sindhia** and **Jaswant Rao Holkar**—had large armies of well-equipped and French-trained soldiers.

1799–1802. Rise of Ranjit Singh. In 3 years of warfare, at the age of 23 he united the Sikhs to control most of the Punjab.

1802. Civil War among the Marathas. Baji Rao II, the Peshwa, hereditary ruler of the Marathas, was defeated and overthrown by Holkar of Indore at the **Battle of Poona.** The British demanded that their ally, the Peshwa, be restored to his throne. Holkar refused.

1802–1803. British Attack on Kandy. Although the British had conquered coastal Ceylon from the Dutch in 1796 (see p. 766), the interior remained unsubdued. A British expedition captured Kandy in late 1802, but was driven out the following year.

Second Maratha War, 1803–1805

Simultaneous British offensives into the Deccan and Hindustan were led respectively by Sir Arthur Wellesley (later Duke of Wellington, and not to be confused with his brother, Marquis **Richard C. Wellesley,** then governor general in India) and General **Gerard Lake.**

Deccan Campaign, 1803

1803, March 20. Capture of Poona. Wellesley restored the Peshwa to power without opposition. Meanwhile, Sindhia's main army had moved south. When he refused to withdraw, Wellesley's army, some 9,000 regulars and 5,000 additional native contingents, penetrated farther into the Maratha homeland (August 6).

1803, August 11. Capture of Ahmadnagar. Following this, Wellesley continued to the junction of the Jua and Kelna rivers, where he unexpectedly found the army of Sindhia and the Raja of Berar—30,000 horse, 10,000 French-trained infantry, and 200 guns (September 12). Wellesley had with him 4,500 regulars, 2,200 of them cavalry; the remainder of his expedition was beyond supporting distance.

1803, September 23. Battle of Assaye. Wellesley found an unprotected ford over the swollen Kelna. He promptly crossed and attacked Sindhia's army, which faced to its flank to meet him. Wellesley's disciplined infantry—English and Indian—pierced the center of Sindhia's line, only to be attacked on both flanks by the horde of Maratha cavalry. These were repulsed in turn by Wellesley's cavalry, and despite a determined counterattack Sindhia's masses finally broke and ran, leaving 1,200 dead and 98 guns on the field. Wellesley's losses were extremely heavy, more than 2,000 killed and wounded. Wellesley resumed his offensive.

1803, November 28. Battle of Argaon. Sindhia made another stand, but his disheartened troops were easily defeated. The storming of Gawilarh (December 15) ended the campaign.

COMMENT. *This campaign was the first step in Wellington's march to military fame.*

Hindustan Campaign, 1803

Farther north, Lake had commenced operations with the so-called Grand Army, 10,500 strong, mostly East India Company native troops with a small English contingent. He was opposed by a Maratha army of 43,000 men, with 464 guns, under the command of **Pierre Cuillier Perron,** French adventurer, successor to Count **Benoît de Boigne,** who had established European military training. A number of other French adventurers with previous military experience were also in the Maratha forces.

1803, September 4. Capture of Aligarh. The walled city was stormed by the British at a cost of 260 killed and wounded. Maratha losses, while heavy, are unknown. While Lake was

proceeding toward Delhi, Perron and some of his French officers rode into Lake's lines and surrendered. **Louis Bourquien** now became the chief foreign officer with the Marathas.

1803, September 16. Battle of Delhi. Lake attacked the Marathas and drove them off the field, capturing 63 guns and much treasure. British losses were 477; again Maratha losses were unknown but heavy. After occupying Delhi, Lake moved south to capture Agra. Anxious to settle the campaign, he pushed rapidly with his cavalry after the retreating Marathas.

1803, November 1. Battle of Laswari. The Maratha army was drawn up behind a line of cannon, linked together by chains. Lake's cavalry charged over the line, but the Maratha infantry rallied. Lake's infantry, which had covered 65 miles in 48 hours, arrived in time to effect the complete destruction of the Maratha army. British losses were 834; Maratha losses again were unknown. This victory, coupled with Wellesley's success in the Deccan, brought Sindhia to submission (December 20).

Holkar's Offensive, 1804

1804, August 24–29. Intervention by Holkar. His troops ambushed a small British detachment under Colonel **William Monson** and wiped it out (August 24–29). Holkar then threatened Delhi (September).

1804, October 1. Relief of Delhi. Lake, who had pulled his army out of summer-monsoon quarters, advanced toward Delhi. Holkar retreated.

1804, November 17. Battle of Farrukhabad. Lake, after a 350-mile cavalry pursuit, dispersed the Maratha cavalry. Holkar fled to the Punjab. Lake continued into Indore to capture Dig (December 25), then turned on Bhurtpore, whose rajah had sided with Holkar.

1805, January–April. Siege of Bhurtpore. Investing the city (January 1), Lake made 4 successive assaults, all of which were repulsed with heavy losses: 103 officers and 3,100 men. The rajah, however, later made peace (April 17). Lake was superseded as commander in chief by Lord **Cornwallis** (July), but returned to command after Cornwallis' death (October).

1805, October–December. Pursuit of Holkar. Lake pursued into the Punjab, and Holkar surrendered at Amritsar (December). An uneasy peace settled over India.

1806. Sepoy Mutiny at Vellore. Religious pressures led to the outbreak—foreshadowing the Great Mutiny (see p. 939). It was quickly suppressed.

1809, April 15. Treaty of Amritsar. Growing friction between the British and Ranjit Singh was settled by agreement on the Sutlej River as the boundary between the Sikh territories and territory the British had seized from the Marathas.

1810–1820. Sikh Conquest of the Punjab. Ranjit Singh conquered all of the Punjab from the Afghans and local princes, consolidating his lands and, with help of French and Italian officers, developing the most powerful and efficient native army in India. He overran Kashmir (1819; see p. 864).

1814–1816. Gurkha War. Expeditionary forces from the British Indian Army were sent into Nepal (November 14) to stop Gurkha raids into northern India. The ferocity of the Gurkhas repelled initial attempts, but General **David Ochterlony** campaigned systematically through the southern portion of the rugged hill country, taking mountain forts one by one (1815). He penetrated the Katmandu Valley and forced peace on the warlike Gurkhas (1816). Since that time the Gurkhas have furnished the British Army with one of its most famous corps.

1815–1818. British Consolidation on Ceylon. British forces captured Kandy in 1815, and finally subdued the island after suppressing a Sinhalese revolt (1818).

Third Maratha (and Pindari) War, 1817–1818

A vast horde of Pindaris (outlaws and freebooters of all castes and tribes, mostly former Maratha soldiers) had begun widespread organized depredations in central and southern India. The

Maratha chieftains, though giving lip service to Britain, supported the Pindari raids. Two British forces—the Army of the Deccan, under Sir **Thomas Hyslop,** and the Grand Army, under the British commander in chief, Lord General **Francis Rawdon-Hastings of Hastings and Moira,** nearly 20,000 in all—prepared to take the field against the Pindaris, while keeping a watchful eye on the Marathas, who could muster nearly 200,000 men and 500 guns. Meanwhile, several outbreaks against British garrisons occurred, the most notable at Nagpur and Kirkee (a suburb of Poona). Though badly outnumbered, the local garrisons held out, even after Holkar and the Peshwa took the field (November, 1817).

1817, December 21. Battle of Mahidput. Hyslop with 5,500 men crushed Holkar's army of 30,000 horse, 5,000 infantry, and 100 guns.

1818, January–June. Hastings' Campaign. His Grand Army hunted down the Pindaris and remaining Marathas. The campaign ended with the surrender of the Peshwa of the Marathas (June 2, 1818). It marked the end of Maratha political power and the real beginning of the East India Company's paramountcy.

1825–1826. British Intervention in Bhurtpore. Lord **Combermere,** with 1 cavalry and 2 infantry divisions, plus a large artillery train, invested Bhurtpore to settle a disputed succession. Heretofore considered impregnable, the city's strong defenses were successfully assaulted by the British after a desperate conflict (January 18, 1826). The British lost nearly 1,000 killed and wounded; Indian losses were an estimated 8,000.

1839–1842. First Afghan War. **(See p. 864.)**

Conquest of Sind, 1843

There had been increasing friction between the Baluch rulers of Sind and the British during the First Afghan War.

1843, February 15. Attack on the Residency at Hyderabad. Resentful of humiliating terms demanded by British Governor Generals **Auckland** and **Ellenborough,** and outraged by British military threats, 8,000 Baluchis attacked the British residency. The residency was defended by a handful of men under a young British officer, **James Outram.** General Sir **Charles James Napier** immediately initiated a whirlwind campaign to come to the relief of Outram and his gallant garrison.

1843, February 17. Battle of Miani. Napier, with 2,800 men, attacked and defeated 30,000 Baluchis in savage hand-to-hand combat; the 61-year-old general, musket in hand, personally led his troops.

1843, February–March. Advance to Hyderabad. Leaving his transport behind, Napier made a forced march through the desert country in intense heat, with his British infantry mounted 2 men each on camels.

1843, March. Battle of Hyderabad. Napier dispersed the Baluchis at the gates of the city and relieved the British residency.

1843, March–May. Conquest of Sind. Napier, who never had more than 5,000 men, marched 600 miles and fought numerous minor actions and 2 battles to defeat a total of 60,000 enemies. At the conclusion of the campaign he sent his famous message to the governor general: "Peccavi" ("I have sinned").

1843, June–August. Consolidation. Napier marched another 280 miles and dispersed a force of 12,000. Total Baluchi casualties during the campaign are estimated at 12,000. This campaign stabilized India's western frontier, securing the Indus waterway. Napier also constructed the port of Karachi, which replaced Hyderabad as the capital of Sind.

First Sikh War, 1845–1846

Since the death of Ranjit Singh (1839), friction between the British and the Sikhs of the Punjab increased, as did internal disorder in the Punjab.

1845, December 11. Sikh Invasion. An army of 20,000 crossed the Sutlej into British Indian territory. Sir **Hugh Gough** marched to meet them with 10,000 men.

1845, December 18. Battle of Mudki. The Sikhs attacked the British in late afternoon, but were repulsed with heavy losses.

1845, December 21–22. Battle of Ferozeshah. This battle was unique because the British governor general, Sir **Henry Hardinge,** volunteered to serve as second in command under Gough. It was not clear who was giving orders to whom. This was another late-afternoon battle, delayed due to disagreement between the generals. The British finally attacked the well-entrenched army of **Lal Singh,** 50,000 strong, and, after several repulses, finally took the position in one of the most bitterly contested battles ever fought in India. Early next morning Sikh reinforcements under **Tej Singh** attacked halfheartedly and were repulsed. The Sikhs then withdrew across the Sutlej. British losses were 2,400; Sikh casualties were at least 10,000.

1846, January 28. Battle of Aliwal. A raiding Sikh army under **Runjoor Singh** had a brief brush with a British force under Sir **Harry Smith** at **Ludhiana** (January 21). Smith, reinforced, attacked and decisively defeated the Sikhs in another vicious battle.

1846, February 10. Battle of Sobraon. Gough, having crossed the Sutlej with about 20,000 men, attacked the Sikhs, about 50,000 strong, entrenched in a bend of the river. In another sanguinary engagement the British smashed the Sikhs, who lost 10,000 men and 67 guns. Gough had 2,300 casualties. This ended the war. Gough marched to Lahore.

1846, March 11. Treaty of Lahore. The Punjab became a British protectorate.

Second Sikh War, 1848–1849

Knowing they had come closer to victory over the British than had any other Indian forces, the Sikhs wanted revenge. The opportunity came in an incident at Multan (April 20, 1848), in which 2 British officers were killed. The Punjab rose in revolt. At first the Sikh government in Lahore attempted to suppress the revolt, with British assistance, then turned against the British (August).

1848, November–1849, January. Siege of Multan. This was carried out by part of the British Army under General **William S. Whish.**

1848, November 9. Invasion of the Punjab. Gough's main army, about 15,000 men, crossed the Sutlej. The Sikhs under **Shere Singh** moved to meet the British with about 30,000.

1848, November 22. Battle of Ramnagar. Gough's cavalry was repulsed in an effort to cross the Chenab River. After this inconclusive skirmish, Gough decided to wait for Whish to take Multan and join him. When the siege dragged on, he renewed his advance.

1849, January 13. Battle of Chilianwala. Both sides attacked simultaneously. The British had slightly the best of an all-day fight, but lost 2,800 men. The Sikhs lost about 8,000. When the British retired, the Sikhs retook their captured guns. When news of the battle and its losses reached England, Gough was relieved and was to be replaced by Napier.

1849, February 21. Battle of Gujrat. Before his

orders arrived, Gough, reinforced by Whish, now had 24,000 men and artillery superiority. He crushed the Sikhs, about 50,000 strong, who were assisted by **Dost Muhammad** of Afghanistan (see below and p. 865). Preceded by a 2½-hour artillery bombardment, a general British advance overwhelmed the town and camp, capturing all the Sikh guns. Cavalry charges on both flanks completed the victory. British losses were only 96 killed and 700 wounded. Sikh losses were estimated at more than 2,000. Their leaders soon surrendered, and the Punjab was annexed (March 12).

Afghanistan

Harrassed by its western neighbor, Persia, and by Sikh invasions from the Punjab on the east, Afghanistan was also torn by internal revolts and violent usurpations of power. The principal antagonists during this period were **Mahmud Shah,** his brother **Shah Shuja,** and Dost Muhammad. In addition, Russian and British intriguers were also working to control the country.

1799–1803. Reign of Mahmud Shah (brother of Zaman Shah). He overthrew and blinded his brother.

1803–1810. Reign of Shah Shuja (younger brother of Mahmud Shah). He overthrew and imprisoned his brother.

1810–1829. Second Reign of Mahmud Shah. Escaping from prison, he defeated Shuja, who fled. Mahmud was greatly assisted by his faithful vizier and general, **Fath Ali.**

1816. Persian Invasion. They captured Herat, but were soon thereafter driven off by local Afghans (see p. 853).

1818. Revolt and Chaos. This was caused by Mahmud's dismissal of Fath Ali.

1819. Sikh Conquest of Kashmir. This province of Afghanistan was conquered by Ranjit Singh, Sikh ruler of the Punjab (see p. 861).

1826. Rise of Dost Muhammad (brother of Fath Ali). He captured Kabul, then gradually extended his rule over the rest of the country.

1835–1839. Reign of Dost Muhammad. He became friendly with the Russians, arousing British fears.

1836–1838. Persian Invasion. Their objective was to annex the Herat region (see p. 853).

1838, July 29. Tripartite Treaty. The British East India Company, anxious to block Persian and Russian encroachments, reached an agreement with Ranjit Singh and with Shah Shuja. Shah Shuja was to be restored to the throne of Afghanistan.

First Afghan War, 1839–1842

1839. Opening Campaign. Sir **John Keane** led the Army of the Indus, 21,000 strong, into Afghanistan. He occupied Kandahar (April), stormed Ghazni (July 21), and captured Kabul (August 7). Dost Muhammad was captured and sent to India; Shah Shuja replaced him. Keane returned to India, leaving a garrison at Kabul, to support 2 British civilian envoys: Sir **William Macnaghten** and Sir **Alexander Burnes.**

1841, November. Rising against the British in Kabul. This was led by **Akbar Khan,** son of Dost Muhammad, and resulted in the murder of both British agents. The British garrison, under elderly Major General **William G. K. Elphinstone,** was surrounded.

1842, January 6. British Capitulation at Kabul. Elphinstone's force of 4,500 men and 12,000 refugees was permitted to return to India under safe conduct.

1842, January 13. Gandamak Massacre. Elphinstone's demoralized command was surrounded by Akbar's troops in a defile on the Khyber Pass road. After ineffectual resistance, most of the British and Indian soldiers and non-

combatants were massacred; a few were taken prisoner, but only a handful survived in captivity. The small British garrison at Ghazni had also been forced to surrender. Other British detachments at Kandahar and Jalabad held out.

1842, April. Shuja Assassinated.

1842, April–September. British Invasion. Sir **George Pollock,** with a punitive force from India, stormed the Khyber Pass and relieved Jalalabad (April 16). After reorganizing, he pushed on to Kabul, where he rescued 95 prisoners (September 15). Stern reprisal for the massacre followed. The citadel and central bazaar of Kabul were destroyed. The East India Company decided, however, that continued occupation of Afghanistan would be both unprofitable and dangerous, so the country was shortly evacuated (December), and Dost Muhammad was permitted to resume the throne.

1842–1863. Second Reign of Dost Muhammad.

1848–1849. Second Sikh War. Dost Muhammad allied himself with the Sikhs (see p. 863). His cavalry contingent was routed at the **Battle of Gujrat** (February 1949). The British annexed the Peshawar territories, but peace was not officially signed until 6 years later (1855).

SOUTHEAST ASIA

Burma

Militant Burma continued its expansion north, west, and south, encroaching frequently on India and continuing intermittent warfare with Siam.

1811–1815. Arakan Uprising. Arakanese rebels, based in British territory near Chittagong, tried to drive out the Burmese, who protested British failure to stop use of their territory as a rebel base.

1819. Burmese Conquest of Assam. Assamese refugees fled into Manipur, under British protectorate, and again British territory was used as a base for attacks on territory occupied by the Burmese (1820–1822). Burmese complaints got no satisfaction from the British East India Company.

1822. Burmese Invasion of Manipur and Cachar. This punitive expedition was engaged inconclusively by British forces sent to help the native rulers.

First War with Britain, 1823–1826

1823. Burmese Invasion of India. Infuriated by British action, **Maha Bandula,** Burma's great general, and governor of Assam, planned a 2-pronged attack on Bengal from Assam and Arakan. Burmese troops were soon threatening Chittagong.

1824, March 5. British Declare War on Burma. There were operations in Arakan, Assam, Manipur, and Cachar. The decisive operations were in Burma itself.

1824, April. British Preparations. An expeditionary force of 5,000 British and Indian regular troops, under Major General Sir **Archibald Campbell,** was mobilized in the Andaman Islands.

1824, May 10. Occupation of Rangoon. The city was seized without opposition. The British, soon ravaged by disease, then found themselves ringed by a determined enemy.

1824, May–December. Investment of Rangoon. Savage fighting continued (June–July). Maha Bandula's army arrived from Arakan after a forced march across monsoon-flooded country (August). British reinforcements arrived, including a rocket battery (October–November).

1824, December 1. Burmese Assault. Bandula was decisively repulsed.

1824, December 15. British Assault. They broke Bandula's cordon investment. The Burmese, no match for the British discipline, retreated.

1825, February 13. Advance up the Irrawaddy. Campbell's column of 2,500 men was supported by a flotilla of 60 boats, manned by British sailors, and carrying 1,500 additional troops.

1825, April 2. Battle of Danubyu. Checked by Bandula, Campbell's rockets broke up a Burmese attack; a British counterattack swept the Burmese from the field. Bandula was killed.

1825, April 25. Occupation of Prome. Campbell went into quarters for the monsoon season, behind entrenchments, while the Burmese army—now under **Maha Nemyo**—again surrounded his position with field fortifications.

1825, November 30–December 2. Battle of Prome. Following repulse of a Burmese attack (November 10), Campbell launched an attack in 2 columns, supported by the flotilla. The Burmese investing lines were ruptured and rolled up; Nemyo was killed and the Burmese army disintegrated after 3 days of intense fighting. The British advance continued upriver to the vicinity of Yandabo (some 70 miles from Ava), the capital, where Burmese envoys, under a flag of truce, sought peace (January).

1826, February 24. Treaty of Yandabo. Burma surrendered Assam, Arakan, and the Tenasserim coast, and paid a large indemnity. Campbell's expedition then withdrew.

COMMENT. *This war ended Burmese military predominance in Southeast Asia.*

1838. Mon Rebellion. This was crushed by King **Tharawaddy.**

1844–1845. Civil War. Misrule by insane Tharawaddy led to revolt, which was suppressed by Tharawaddy's son, **Pagan Min,** who became king.

1845–1850. Deterioration in Anglo-Burmese Relations.

Siam

Siam continued to be nominally at war with Burma (1785–1826), but this was confined mostly to frontier raids in the Tenasserim area and occasional clashes of expeditionary forces in northern Malaya and on the Kra Isthmus, since Burma was more seriously occupied to the west. Keeping a wary eye on her most dangerous rival, Siam turned her attention mainly to the south, where she coveted Malaya; to the east, where she periodically clashed with Vietnam over control of Cambodia; and to the northeast, where she strengthened her control over most of Laos. The principal events were:

1812. Intervention in Cambodia. **(See p. 867.)**

1821. Invasion of Kedah. Siamese conquest of this Malayan sultanate alarmed the British.

1826, June 20. Treaty with Britain. This established trade relations, and Siam agreed to halt its effort to penetrate farther into Malaya.

1826–1829. War with Vientiane. This ended with Siam virtually sovereign over most of Laos (see below).

1831–1834. Invasion of Cambodia. A Siamese army under able general **P'ya Bodin** was initially successful. The Khmer were defeated at the **Battle of Kompong Chhang.** Cambodian King **Ang Chan** fled to Vietnam. Guerrilla resistance arose in eastern Laos. Intervention of a Vietnamese army of 15,000, combined with a general uprising throughout the country, forced the Siamese to withdraw, leaving Vietnam in virtual control of Cambodia.

1841–1845. War with Vietnam over Cambodia. The Cambodians, revolting against Vietnamese rule, asked Siam for help. Aging P'ya Bodin led another army into Cambodia. The Siamese had somewhat the best of 4 years of fierce warfare. A compromise peace was agreed, with both Siam and Vietnam nominally sharing a protectorate over Cambodia, but with Siam predominant.

Laos

Able King **Chao Anou** of Vientiane was determined to free himself from Siamese vassalage. He built up a strong army, but maintained friendly relations until Siam's troubles with the British seemed to provide an opportunity to revolt. The principal events were:

1819. Revolt. Chao Anou suppressed this, increasing his own power.

1826. Invasion of Siam. Chao Anou led his army in 3 columns into the heart of Siam, approaching within 30 miles of Bangkok before the surprised Siamese, under P'ya Bodin, halted and repulsed the invaders.

1826–1827. Siamese Invasion. P'ya Bodin led the Siamese army.

1827. Battle of Nong-Bona-Lamp'on. In a fierce 7-day struggle the Siamese forced their way across the Mekong River. The Laotian army was destroyed; Chao Anou fled to Vietnam. The Siamese destroyed the capital and devastated the country, deporting entire populations to regions of Siam which had been depopulated in the wars with Burma. They annexed Vientiane (1828).

1829. Return of Chao Anou. The former king and his Vietnamese troops were defeated and scattered by the Siamese. Chao Anou was captured.

1832. Vietnam Conquest of Xieng-Khouang. The Vietnamese annexed this east Laotian kingdom.

Cambodia

This weak nation continued to be a football for Siam and Vietnam. The principal events were:

1802–1812. Joint Siamese-Vietnamese Protectorate. King Ang Chan sought to bring peace to his country by paying tribute to both neighbors.

1812. Rebellion and Invasion. Ang Snguon, brother of Ang Chan, revolted, seeking Siamese help. **Rama II** of Siam sent in an army which quickly overran the country. Ang Chan fled to Vietnam. Emperor **Gia Long** of Vietnam immediately sent a large army to restore Ang Chan. The Siamese withdrew without battle. Vietnam became predominant in Cambodia.

1831–1834. Siamese Invasion and Siamese-Vietnamese War. **(See p. 866.)**

1841–1845. Siamese-Vietnamese War over Cambodia. **(See p. 866.)**

Vietnam

Prolonged civil war finally came to an end early in the century, with successful **Nguyen Anh** ascending the throne in Huế as Emperor **Gia-Long** (1802). During the remainder of the period the Vietnamese were occupied with affairs in Cambodia to the west, and with increasing French intervention along the seacoast to the east. The principal events were:

1812. Intervention in Cambodia. **(See p. 866.)**

1824–1847. French Interventions. Persecution of Christians by Emperor **Minh-Mang** prompted several interventions by French naval commanders, with some armed clashes on land and sea. These culminated with an incident at **Tourane,** where 2 French warships destroyed a swarm of attacking Vietnamese vessels (1847).

1831–1845. Involvement in Cambodia. **(See p. 866.)**

Malaya

1802–1824. Malacca Changes Hands. It was returned by England to the Dutch by the **Treaty of Amiens** (1802), and was repossessed (1811) and used by England as a base for an expedition against Java (see below). Malacca, Java, and Sumatra were restored to the Dutch (1814–1818) by the **Treaty of Vienna.** Malacca again came under English rule—traded by the Dutch (March 17, 1824) in exchange for Benkgulen, on Sumatra.

1819. Founding of Singapore by Sir Stamford Raffles. It soon outstripped the port of Malacca, to become the strategic and commercial center of the area, and Britain's bastion of naval power in the East.

1821–1826. British-Siamese-Burmese Rivalry in Malaya. **(See pp. 865–866.)**

1826, June 20. British Treaty with Siam. **(See p. 866.)**

1826. Establishment of Straits Settlement. Centralization of British colonial holdings in Malaya.

1837–1860. Operations against Pirates. **(See below.)**

Indonesia

Despite British interference during the Napoleonic Wars, the Dutch were able to consolidate their position in Java and the Spice Islands, and to expand their control over most of the archipelago. The principal events were:

1808. Pacification of Bantam. This brought all of western Java under Dutch sovereignty.

1810–1811. Colonial War with Britain. A large British expedition under Lord **Gilbert Elliot of Minto,** governor general of India, sailed against Java. Batavia was seized (August 1811). A month later (September 17) the Dutch signed the **Capitulation of Semarang,** in which they ceded Java, Palembang, Timor, and Macassar to the British.

1812. Capture of Palembang. The British seized the town after the local sultan refused to accept the terms of the Capitulation of Semarang.

1816. Britain Returns Indonesian Possessions to the Dutch. This was in accordance with the treaties settling the Napoleonic Wars.

1825–1830. Great Java War. The last native prince, **Dipo Negara,** revolted against Dutch rule. The insurrection was suppressed after 5 years of continuous guerrilla warfare, in which 15,000 Dutch soldiers and an unknown number of Javanese were killed.

1837–1860. Operations against the Pirates. Piratical depredations throughout Indonesia and neighboring waters spurred the Dutch, the British, and the Spanish to action and occasional cooperation.

1841. The White Rajah of Sarawak. Sir **James Brooke,** leading British efforts against the pirates, was granted territory along the west coast of Borneo—and the title of rajah—by the grateful Sultan of Brunei for suppressing a revolt.

1849. Revolt in Java. Suppressed by the Dutch, who increased their control.

1839–1849. Dutch Pacification of Bali.

The Philippines

The Philippines had been economically linked with the Spanish colonies in the Americas. Loss of these colonies resulted in stagnation and decadence in the Philippines. There was little of military significance save for operations against the pirates (see above). A French naval expedition, anxious to establish a base for operations against Vietnam, attempted to seize Basilan, in the Sulu Islands, but was ignominiously repulsed (1845). France did not repeat the attempt due to Spanish protests.

EAST AND CENTRAL ASIA

China

Sporadic rebellions and army mutiny, and increasing piratical depredations along the south coast of China, indicated a weakening of central control and a decline of the Manchu Dynasty. The principal events were:

1796–1804. Revolt in Western China. Uprising of the White Lotus Society in Hupei, Szechuan, and Shensi was suppressed with difficulty.

1825–1831. Moslem Invasion of Kashgaria. Inroads from western Turkestan into Kashgaria in western Sinkiang threatened for a time the Chinese hold on that area (captured in 1758). The invaders were finally ejected.

First Opium War, 1839–1842

Disagreements between Chinese officials and British merchants trading at Canton—particularly concerning the importation of opium into China—led to Chinese action against the European community (November 1839).

1840. British Expedition to China. A force of some 4,000 men—partly English regulars, partly East India Company native troops—under Sir **Hugh Gough** arrived in Chinese waters escorted by a British naval squadron. They occupied the island of Chusan, at the entrance of Hangchow Bay. Moving south, the squadron blockaded Hong Kong and Canton.

1841, February 26. Capture of the Bogue Forts. A British amphibious operation captured the Pearl River fortifications, key to Canton. The flotilla then moved up the Pearl River.

1841, May 24. Capture of Canton. An amphibious assault was followed by the storming of the forts surrounding the city. Temporary peace followed.

1841, August–October. British Coastal Operations. The expeditionary force moved up the China coast. Amoy was bombarded and captured (August 26); Ningpo (Ninghsien) fell (October 13).

1841–1842. British Administrative Mismanagement. Operations halted for the winter, during which the British troops suffered heavily from improper administration and supply. Although British naval and military combat operations were efficient, other arrangements were shockingly poor. At times as many as 50 percent of the troops were disease-ridden. Many transports were unseaworthy; several foundered in typhoons, with much loss of life. Food and medical attention were unsatisfactory. But China was far away; the stockholders of the British East India Company were profiting; the British War Office and Admiralty paid little heed.

1842. Yangtze River Operations. The capture of Shanghai (June 19) was followed by a move upriver. The fall of Ching-kiang (July 21) menaced Nanking, and China sued for peace.

1842, August 29. Treaty of Nanking. China was required (1) to cede Hong Kong; (2) to open treaty ports—Canton, Amoy, Foochow (Minhow), Ningpo, and Shang-hai—to British trade; and (3) to pay an indemnity of $20 million.

1847. Renewed Moslem Invasion of Kashgaria. Incursions from western Turkestan were combined with uprisings among the local Mohammedan population. Severe Chinese reprisals were followed by a mass exodus of Moslems.

Japan and Korea

Self-isolated Japan continued her efforts to bar foreign contacts, despite several efforts to break down the barrier. Russia's **Nicolai Petrovich de Rezanov** of the Russian-American Company (analogous to Britain's East India Company) reached Nagasaki (1804), but after 6 months of effort failed to obtain a treaty. Raids on Sakhalin and the Kuriles by expeditions of the Russian company were repulsed (1806–1807). Japanese gunfire greeted an American ship attempting to land a party of missionaries and merchants at **Naha** in the Ryukyu Islands (1837). An American naval mission was rebuffed in 1846.

In Korea, no events of military importance transpired during the period.

NORTH AMERICA

The United States, 1800–1812

1801–1805. Tripolitan War. **(See p. 854.)**

1803. Louisiana Purchase.

1810, October 27. Annexation of West Florida. This was proclaimed by President Madison after American frontiersmen seized the Spanish fort at Baton Rouge and neighboring regions and proclaimed the independent State of West Florida. The dispute over whether West Florida was included in the Louisiana Purchase was settled when Spain renounced sovereignty (1819).

1811. Indian Trouble in the Northwest. Tecumseh, chief of the Shawnees, attempted to organize a confederation of tribes to oust the white settlers encroaching on their land. He was supported by British-Canadian fur interests. As friction increased, Brigadier General **William Henry Harrison,** governor of Indiana Territory, moved with 1,000 troops against the Indian capital, "Prophetstown," 150 miles north of Vincennes.

1811, November 7. Battle of Tippecanoe. Harrison's force, bivouacked on Tippecanoe Creek, was attacked at dawn by the Indians, some 700 strong. The assault was repulsed. Harrison's well-trained troops counterattacked and routed the Indians, then destroyed Prophetstown, shattering Tecumseh's power temporarily. American losses were 37 killed and 150-odd wounded. The Indians left 36 dead on the field, with an unknown number of dead and wounded carried off.

1811–1812. Friction with Britain. The Tippecanoe campaign brought to boiling point an ever-increasing anti-British sentiment in the United States, engendered in part by Canadian support of the Indians, in part by American expansionists determined to annex Canada. The tension had been increased by a succession of encroachments on American neutrality by England and France in the continuing Napoleonic Wars. Both nations preyed on American commerce in their mutual blockading efforts. British warships continuously impressed seamen from American merchantmen. (More than 6,200 American citizens were thus handled.) The British frigate HMS *Leopard* opened fire on USS *Chesapeake* (June 22, 1807) off Norfolk Roads, killed and wounded several men, and then took off 4 alleged deserters. The incident aroused national indignation. Four years later the American frigate USS *President,* searching for a British frigate which had impressed more American sailors, overhauled the British sloop of war HMS *Little Belt,* disabling her with gunfire and killing or wounding 32 men (May 16, 1811). This retaliation for the *Leopard-Chesapeake* affair was widely acclaimed. Expansionism was in the air; the "War Hawks" urged conquest of Canada while England was busy at war with France.

The War of 1812 (1812–1815)

1812, June 19. Declaration of War. This was ostensibly to defend the doctrine of "freedom of the seas."

Land Operations, 1812

1812, June. American Plans. A poorly planned 3-pronged invasion of Canada speedily aborted as other events caused Americans to go on the defensive.

1812, July 17. British Capture of Fort Mackinac.

1812, August 15. British Capture of Fort Dearborn (present site of Chicago). The garrison, a company of infantry, was massacred by the Indians after surrendering.

1812, August 16. Surrender of Detroit. Brigadier General **William Hull** had moved from Dayton, Ohio, to Detroit with some 2,500 men. There he abjectly surrendered, without firing a shot, to British General Sir **Isaac Brock,** who had but 730 Canadians and 600 Indians (under Tecumseh).

1812, October 13. Battle of Queenston. A force of some 2,270 militia and 900 regulars, under New York militia Major General **Stephen Van Rensselaer,** attempted to invade across the Niagara River at Queenston. Part got across, mostly regulars. But Brock, who had hurried from Detroit to command the defense, brought up reinforcements and pinned them down. The militia contingent still on the American side, refusing to leave the territorial limits of the U.S., stood idly by while Brock's 600

British regulars and 400 Canadian militia overwhelmed their comrades. American losses were 250 killed and wounded and 700 made prisoner. The British lost 14 killed (including Brock) and 96 wounded.

1812, November. Lake Champlain Expedition. The American main effort, 5,000 men under Major General **Henry Dearborn,** moved down the lake from Plattsburg to Rouses Point. The militia contingent now stood on their constitutional rights and refused to cross into Canada (November 19). Dearborn returned to winter quarters.

Naval Actions, 1812

In bright contrast to the dismal army performance, the small but efficient U.S. Navy (14 seaworthy vessels) took to the high seas against overwhelming British sea power (1,048 war vessels) and engaged in a number of brilliant single-ship actions.

1812, August 19. USS *Constitution* vs. HMS. *Guerrière.* Captain **Isaac Hull** in the frigate *Constitution,* 44, after eluding the blockade and escaping from the clutch of a British squadron in a remarkable stern chase, demolished the British frigate *Guerrière,* 38, in a half-hour action off the Nova Scotia coast. Hull arrived at Boston with news of the victory the same day that word was received of his uncle's ignominious surrender at Detroit (see p. 871).

1812, October 18. USS *Wasp* vs. HMS *Frolic.* These 18-gun sloops of war clashed off the Virginia coast in a 43-minute broadside-to-broadside hammering. When it was over the *Frolic* was a helpless wreck. But the *Wasp*'s rigging was so shot up that when HMS *Poictiers,* 74, came over the horizon, the American vessel, unable to make sail, was forced to strike her colors.

1812, October 25. USS *United States* vs. HMS *Macedonian.* Captain **Stephen Decatur**'s frigate *United States,* 44, off Madeira, systematically smashed the British frigate by long-range gunfire in 90 minutes. Partly dismasted, the *Macedonian,* 38, was brought back to Newport, refitted, commissioned in U.S. service, and took further part in the war against her former flag.

1812, December 29. USS *Constitution* vs. HMS *Java.* Now under the command of Captain **William Bainbridge,** "*Old Ironsides*" encountered the British frigate off Bahia, Brazil. After a 2-hour contest of maneuver and gunfire, the *Java,* 38, was a total wreck and surrendered.

COMMENT. *Ship for ship and crew for crew the superiority of American design, seamanship, and gunnery was proven. But the strangulating pressure of British sea power was closing in on the Atlantic coastline of the United States. In all, nearly 100 vessels were now engaged in this blockade duty: 11 ships of the line, 34 frigates, and the remainder sloops of war or smaller.*

Land Operations, 1813

Action in the West

1813, January–August. Preliminaries. British General **Henry A. Proctor** with a force of British regulars, Canadian militia, and Indians under Tecumseh (commissioned a British brigadier general) held the initiative. Major General Harrison had received a directive to retake Detroit, but his means were scanty. While he was gathering and training troops, his outposts were attacked by Proctor, who took **Frenchtown** on the Raisin River (January 22). American losses were 197 killed and wounded; another 737 were captured. Many of the wounded were murdered by the Indians. The British also besieged Fort Meigs on the Maumee River, and Fort Stephenson on the Sandusky without success.

1813, September. Advance on Detroit. Har-

rison was now ready with 7,000 well-trained men. But American control of Lake Erie was essential to his plans against Detroit. Soon (September 10) he received a message from Commodore **Oliver Hazard Perry** reporting American victory in the Battle of Lake Erie (see p. 875). Harrison at once started north, sending his cavalry 100 miles overland around the lake, and moving his infantry and artillery in Perry's ships from Fort Stephenson across to Amherstburg. Both forces converged on Detroit, accompanied by Perry's squadron. Proctor withdrew into Canada.

1813, September 29. Recapture of Detroit. Harrison pushed up the Thames River in pursuit of the British, accompanied by 3 of Perry's lightest ships. When the water shoaled, the commodore came ashore, accompanying Harrison as a volunteer aide.

1813, October 5. Battle of the Thames. Proctor with 800 regulars and 1,000 Indians was brought to bay at Chatham. Harrison, with 3,500 men, attacked methodically. While his infantry assaulted frontally, his cavalry charged the British right. Proctor's command collapsed, losing 12 killed, 22 wounded, and 477 taken prisoner. Tecumseh's Indians held firm until their chief was killed, then they fled, leaving 35 dead. American losses were 29 killed and wounded.

COMMENT. *Highlights of this campaign were the close military-naval cooperation and the prowess of the American cavalry—a regiment of Kentucky mounted riflemen. The victory brought about the collapse of the Indian confederacy, England's allies. It would later bring "Old Tippecanoe" to the White House, but at the moment its fruits were dissipated. The War Department ordered Harrison's militia disbanded and sent home; his regulars were to join the American concentration in the Niagara area. Harrison, enraged, resigned his commission and returned to civil life.*

Operations on the Northern Front

On the Niagara front, General **John Armstrong,** Secretary of War, planned an ambitious 2-pronged invasion of Upper Canada. As a preliminary, an amphibious operation on Lake Ontario was mounted by Major General **Henry Dearborn** and Commodore **Isaac Chauncey.**

1813, April–May. Burning of York. A force of 1,600 troops under Brigadier General **Zebulon M. Pike,** embarking in Chauncey's flotilla at Sackets Harbor, captured York (now Toronto), capital of Upper Canada (April 27). The explosion of a powder magazine resulted in killing or wounding 320 of the invaders, Pike being among those killed. Despite Dearborn's orders, the public buildings of York were burned. The expedition returned (May 8), having accomplished nothing except to harden Canadian resentment.

1813, May 27. Capture of Fort George. During the illness of the ineffectual Dearborn, Colonel **Winfield Scott,** his adjutant general, in cooperation with Perry (then on Lake Ontario under Chauncey), mounted an amphibious operation against Fort George at the mouth of the Niagara River. Some 4,000 men were landed in the rear of the British post, taking it by assault. As a result of the move, the British garrison of Fort Erie (opposite Buffalo) withdrew, liberating American vessels bottled up in the Black Rock navy yard. Scott's operation was nullified when British General **John Vincent,** retreating from Fort George with 700 men, turned on an American pursuing force 3 times his size at **Stony Creek** (June 6) and threw it back. Generals **William H. Winder** and **John Chandler,** political appointees, were bagged in the disaster. The British reoccupied Fort Erie.

1813, May 28–29. Battle of Sackets Harbor. Amphibious assault by Sir **John Prevost,** governor general of Upper Canada, was repulsed by the small garrison of Brigadier General **Jacob J. Brown.**

1813, September–November. Planned Operation against Montreal. Brigadier General

James Wilkinson, replacing Dearborn, was to move down the St. Lawrence from Sackets Harbor. Brigadier General **Wade Hampton** would push north from Lake Champlain. Uniting, they were to take Montreal, defended by some 15,000 British troops.

1813, October 25. Battle of the Chateaugay. Hampton, entering Canada with 4,000 men, moved west to the Chateaugay River and established himself about 15 miles from its mouth (October 22). Attacking a much smaller British force, he entangled himself in a swamp. The British commander caused several bugles to be blown, simulating an envelopment, whereupon Hampton, abandoning any attempt to join Wilkinson—for whom he had a heartily reciprocated antipathy—retreated to Plattsburg and went into winter quarters.

1813, November 11. Battle of Chrysler's Farm. Wilkinson, with 8,000 men, moved down the St. Lawrence by bateaux, with flank guards marching on both banks. A British force of some 800 regulars and Indians under Colonel **J. W. Morrison** menaced his rear about 90 miles from Montreal. Attempting a bungling, piecemeal attack, Wilkinson was routed, losing 102 killed, 237 wounded, and more than 100 others captured. Wilkinson now withdrew to winter quarters at French Mills, on the Salmon River, where his troops suffered great privation.

1813, December 18. British Capture of Fort Niagara. The Indian allies ravaged the countryside. The fort would remain in British hands for the rest of the war.

1813, December 29–30. Burning of Buffalo. A column of 1,500 men under General **Gordon Drummond** moved south down the Niagara River, burning the city of Buffalo and the Black Rock navy yard, inflicting much damage.

Naval Actions, 1813

At Sea

The inferiority of American naval strength reduced the U.S. Navy to a policy of commerce destruction, individual ships eluding the British blockade to cruise the oceans. A great number of privateers assisted in the operations.

1813, February 24. USS *Hornet* vs. HMS *Peacock.* The sloops of war clashed off the Brazilian coast, the British ship being sunk after 11 minutes of combat.

1813, June 1. HMS *Shannon* vs. USS *Chesapeake.* American Captain **James Lawrence,** unwisely accepting the challenge of Captain Sir **Philip Broke,** took his untried frigate, 38, and newly raised crew out from Boston to meet a vessel reputed to be the most efficient in the Royal Navy. In a few minutes the British frigate, 38, had so raked the *Chesapeake*'s decks that nearly one-third of her crew were killed or wounded. Lawrence, mortally wounded, cried, "Don't give up the ship!" but the Americans surrendered after Broke brought his ship alongside and boarded. In all, 146 Americans, including most of the officers, were casualties; 83 Britishers fell. The *Chesapeake,* brought into Halifax as a prize, would remain on the Royal Navy list for many years to come.

1813, August 14. HMS *Pelican* vs. USS *Argus.* The sloop of war *Argus,* 18, after a successful cruise in the English Channel, in which she captured and destroyed 20 prizes, was sunk by the British sloop of war, 20.

1813, September 3. USS *Enterprise* vs. HMS *Boxer.* The American sloop met and captured the *Boxer,* 14, off the New England coast.

Operations on the Lakes

When the war broke out, England possessed several warships on lakes Erie and Ontario, while the U.S. had none. American Commodore Chauncey had begun the construction of vessels at

Sacketts Harbor on Lake Ontario, and at Erie and Black Rock on Lake Erie. In a remarkably short time, experienced ship carpenters constructed an inland navy, which was manned by seamen sent up from the Atlantic Coast. Chauncey retained command of operations on Ontario, but delegated command on Lake Erie to Captain Oliver H. Perry. By early August, Perry had in commission 2 brigs, 6 schooners, and a sloop ready for action in Put in Bay, near Erie. The British flotilla on Lake Erie, under Captain **Robert Barclay,** consisted of 2 ships, 2 brigs, 1 schooner, and a sloop.

1813, September 10. Battle of Lake Erie. The British squadron approached the American anchorage about noon, and Perry went out to meet it. His flagship, the brig *Lawrence,* 20, met the British fire before the rest of his squadron could close, and was put out of action. Perry, in a rowboat, transferred under fire to the brig *Niagara.* In Nelsonian fashion the *Niagara* broke the British line; the remainder of the American squadron closed in. The *Niagara* engaged and put out of action 3 of the British craft, including Barclay's flagship. A detachment of General Harrison's sharpshooting soldiers acted as marines. By 3 P.M. Barclay's entire squadron had struck. British losses were 41 killed and 91 wounded. The Americans lost 27 killed and 93 wounded, most of these (22 killed and 61 wounded) on board the battered *Lawrence.*

COMMENT. *Perry's victory was the turning point in the war in the northwest. His message (beginning "We have met the enemy and they are ours . . .") triggered Harrison's operations leading to the recapture of Detroit* (*see p. 873*).

Land Operations, 1814–1815

Niagara Front

1814, February–March. Wilkinson Renews the Offensive. He advanced from Plattsburg and Sacketts Harbor with 4,000 men.

1814, March 30. Repulse at La Colle Mill. Wilkinson's assault on a small border fort was repulsed by its garrison of 600 men. Wilkinson, who before starting had announced his determination "to return victorious or not at all," at once fell back on Plattsburg. He was summarily relieved of his command (April 12).

1814, April–July. New American Command Team. Jacob Brown, the new commander, at once started reorganizing and training his troops. The task was efficiently performed by Scott, now a brigadier general. Brown's troops were well equipped and newly uniformed—Scott's own brigade was dressed in gray since the contractors could not supply blue cloth.

1814, July 2–3. Invasion of Canada. Brown, with 3,500 troops, crossed the Niagara River, seizing Fort Erie. He then started north.

1814, July 5. Battle of Chippewa. General **Phineas Riall** with 1,700 British regulars and a small number of Canadian militia and Indians, held a defensive position on the north bank of the unfordable Chippewa River, 16 miles north of Fort Erie. Brown bivouacked on the south bank of Street's Creek, a mile south of the river (July 4). A flat plain lay between the two forces. Riall crossed the Chippewa next day, driving in a militia and Indian force of Brown's left, only to meet headlong Scott's brigade, 1,300 strong. Riall, noting the gray uniforms of the Americans, believed them to be militia. But when, under fire, they formed line with parade-ground precision and moved to meet him with fixed bayonets, he is said to have exclaimed: "These are regulars, by God!" Scott led a charge that drove the British back in complete defeat across the river and into their entrenchments. British losses were 236 killed, 322 wounded, and 46 captured. Scott's losses were 61 killed, 255 wounded, and 19 captured.

COMMENT. *This was the first time that regular forces of both sides met in close combat on even terms. The gray full-dress uniform of the U.S. Military Academy at West Point commemorates this victory.*

1814, July 25. Battle of Lundy's Lane. Brown moved north to Queenston, Riall falling back before him. But Commodore Chauncey failed

to cooperate on the lake with Brown's movement. British reinforcements from Europe having reached Canada, Sir Gordon Drummond took over Riall's command, bringing with him additional troops. Near Niagara Falls the opponents clashed: Brown with 2,600, Drummond with 3,000. A 5-hour sanguinary contest ended in a draw. American losses were 171 killed, 572 wounded, and 110 missing. The British lost 84 killed, 559 wounded, and 235 prisoners and missing. Brown, Scott, and Drummond were wounded; Riall was taken prisoner. Brown fell back on Fort Erie, which Drummond besieged.

1814, September 17. Battle of Fort Erie. An American sortie from Fort Erie broke the deadlock. British losses were 609 in all; American, 511. Fort Erie was later abandoned and with it all further effort to invade Canada (November 5). No further actions of importance occurred on the Niagara front.

Lake Champlain Front

1814, August 31. British Invasion. Prevost, with 14,000 of Wellington's veterans just arrived from Europe, advanced on Lake Champlain from Montreal. The only ground force available to oppose him consisted of 1,500 green regulars and about 3,000 raw militia, under General **Alexander Macomb,** manning field fortifications at Plattsburg. Once they had been dispersed, the road would be open all the way to New York, to complete successfully the invasion of the Hudson Valley bungled by Burgoyne 37 years earlier. Prevost planned to assault the fortifications at Plattsburg frontally, while a naval force took care of an American flotilla protecting the lake flank of the American position.

1814, September 11. Battle of Plattsburg. Prevost made his combined ground and naval assault on Plattsburg. The British naval squadron, however, was completely defeated by the American flotilla and was forced to surrender (see p. 879). Prevost thereupon hastily broke off the land action, even though one of his assault columns had made good progress. Believing, with good reason, that his proposed invasion would fail without command of the lake, he retired in some disorder, abandoning a quantity of stores. There was no further action on this front during the war.

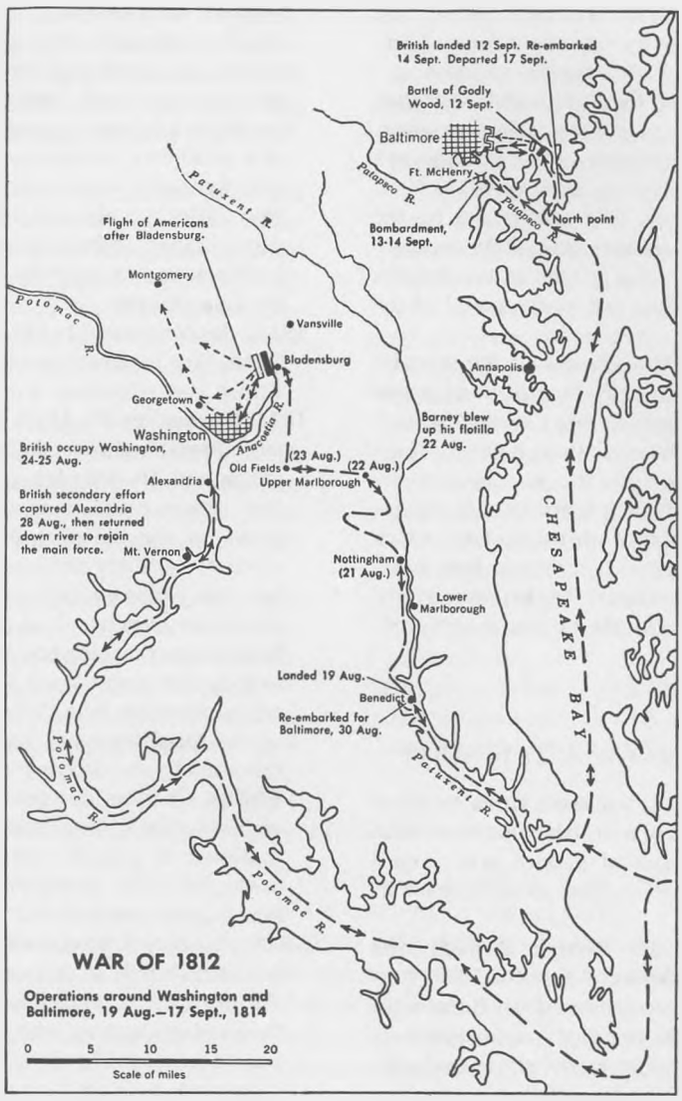
Chesapeake Bay Area

1814, July–August. British Threat to Washington. On the east coast of the United States, Admiral Sir **John Cockburn**'s British squadron, which had been harassing the seacoast (see pp. 878–879), was joined by a force of 5,400 British veteran troops released by the conclusion of the Peninsular War. Under Major General **Robert Ross,** they were landed on the Patuxent and advanced on the American capital, 40 miles away (August 19).

1814, August 24. Battle of Bladensburg. The British advance was opposed by 6,500 untrained militia levies and a minuscule force of 400 sailors and marines, all under incompetent political Major General **William H. Winder.** Ross's advance guard, 1,500 strong, routed them in disgraceful panic. Only the naval contingent, of gunners under Commodore **Joshua Barney** and a handful of regular army troops contested the attack. American losses were 100 killed and wounded and 100 captured. The British had 294 casualties.

1814, August 24–25. British Occupation of Washington. The American government had fled. The British burned the Capitol, the White House, and several other public and private buildings—retaliation for the burning at York. The invaders then marched back to their ships. National indignation resulted in the ousting of War Secretary, General **John Armstrong,** who was replaced by **James Monroe.**

1814, September 12–14. Attack on Baltimore. The British expedition then sailed north, and penetrated the Patapsco River. Ross landed his troops 16 miles from Baltimore, while the naval force attacked Fort McHenry. Local militia forces, from behind entrenchments, repulsed the land attack. Ross was mortally wounded. Fort McHenry successfully



withstood the bombardment, inspiring **Francis Scott Key** to write "The Star-Spangled Banner." The expedition departed October 14.

Southern Front

1813–1814. The Creek War. The Creek Indians in Alabama allied themselves with England (July, 1813). The militia garrison of Fort Mims, 35 miles above Mobile, was surprised and more than half of the 550 soldiers and refugees massacred (August 30, 1813). **Andrew Jackson,** then a major general of militia, organized volunteer forces and at **Tallasahatchee** (November 3), and again at **Talladega** (November 9), inflicted severe punishment on the Indians. His force was then disbanded, however, and the Indians again became a serious menace.

1814, February. Jackson Again Takes the Offensive. He had a reorganized force of volunteers and a small increment of regulars.

1814, March 27. Battle of Horseshoe Bend. The main Creek force of 900 warriors was overwhelmed on the Tallapoosa River by Jackson's 2,000. Some 700 Indians were killed. Jackson lost 201. The Creek War was ended by the **Treaty of Fort Jackson** (August 9). Jackson, commissioned a major general in the Regular Army (May 22), was put in command of the Gulf Coast area.

1814, November 7. Seizure of Pensacola. Pensacola, in Spanish East Florida, had become a British base, supplying the Creeks. The U.S. Administration, fearing that neutral Spain might be brought into the war against the United States, forbade any movement against it. However, when a British-Indian attack mounted from Pensacola struck at Fort Bowyer, Jackson took matters into his own hands. Invading Spanish Florida, he seized and occupied Pensacola.

New Orleans Campaign, 1814–1815

1814, November 22. Jackson Goes to New Orleans. Rumors of a British concentration in the Caribbean—Gulf of Mexico area caused him to go to New Orleans to investigate its defenses.

1814, November 26. British Expeditions against New Orleans. A force of 7,500 Peninsular War veterans, under Major General Sir **Edward Pakenham,** sailed from Jamaica, its objective the seizure of New Orleans and control of the Mississippi River Valley.

1814, December 1. Jackson Arrives at New Orleans. Confirmation of the British preparations at Jamaica led him to prepare a defensive position at Baton Rouge in case he was unable to hold New Orleans.

1814, December 13. British Arrival. They landed in the Lake Borgne area. Jackson concentrated his energies on the defense of New Orleans, where he declared martial law to control the largely anti-American Creole population. Pakenham's advance guard penetrated to within 7 miles of the city. Jackson swiftly organized a defensive line along the Rodriguez Canal, an abandoned waterway south of the city. His right flank rested on the Mississippi, his left on a cypress swamp. His forces consisted of a small core of regulars, his own Tennessee and Kentucky veteran volunteers, and some New Orleans volunteer militia, 3,100 in all. Some 2,000 additional untrained, ill-armed militia were also gathered, but he kept these in the background.

1814, December 23–24. American Night Raid. This reconnaissance in force rocked the British concentration, but was soon repulsed.

1814, December 25–1815, January 7. Opposing Preparations. Jackson continued to strengthen his defenses, piling earth, timbers, and cotton bales along the canal. A British probe of the defenses was hurled back by American artillery and small-arms fire (December 28). Effectiveness and staunchness of American response to a tremendous artillery bombardment (January 1) led Pakenham to wait further action until all of his troops were ready. Attempts by a British naval force to sail up the Mississippi and flank the position were thwarted by the successful defense of **Fort St. Philip,** 65 miles downstream. Finally, all his troops available, overconfident Pakenham determined to assault Jackson's position, unaware, of course, that the **Peace of Ghent** had been signed (December 24).

1815, January 8. Battle of New Orleans. The British infantry, in serried ranks, twice dared the aimed fire of Jackson's riflemen behind their entrenchments, only to be completely repulsed. Some 2,100 of the attackers were killed or wounded; an additional 500 were captured. Pakenham and his 2 senior subordinates were killed leading their men. The survivors withdrew, Jackson wisely making no attempt at counterattack with his motley command. He lost 7 killed and 6 more wounded. One week later the British force retreated to its boats.

Naval Actions, 1814–1815

1814. British Blockade. The effective restrictions on trade and manufacture brought the

U.S. Treasury close to bankruptcy. Depredations of British landing parties brought havoc along the coast. British general orders (July 18) were "to destroy and lay waste such towns and districts upon the coast as you may find assailable."

1814. American Guerre de Course. Although constrained by the blockade, a few U.S. warships and many privateers dared it successfully to prey on British commerce over the world. By midsummer more than 800 British merchantmen had been captured and most traffic about the English and Irish coasts moved only under naval convoy.

1814, April 29. USS *Peacock* vs. HMS *Epervier*. The American sloop, 18, named to commemorate the British vessel sunk by the *Hornet* (see p. 874) fell in with the *Epervier*, 18, off the coast of Florida. The British vessel struck after a 45-minute gun battle.

1814, March 21. Capture of the USS *Essex*. Captain **David Porter,** in the frigate USS *Essex*, 38, had left the Delaware River October 28, 1812, rounding Cape Horn on a fantastic 17-month cruise that terrorized British commerce up and down the Pacific, capturing or destroying more than 40 merchantmen and whalers. Shortly after entering Valparaiso, Chile (February 3), in company with *Essex Junior*, a prize converted into a man of war, Porter was blockaded by a British frigate, HMS *Phoebe*, 36, and *Cherub*, 18, a sloop of war. Porter, leaving his consort, put to sea in a heavy wind, hoping to draw off the slower British vessels. His main topmast snapped in a gust, and Porter returned to the sanctuary of the neutral port. The British ships, standing off his anchorage out of range of *Essex*'s carronades, with their long guns battered the helpless American frigate to a bloody, burning hulk. Porter struck after more than 3 hours, having lost 58 killed, 31 drowned, and some 70 wounded of the ship's 255-man complement. British losses were 5 killed and 10 wounded.

1814, June 28. USS *Wasp* vs. HMS *Reindeer*. The *Wasp*, 18, cruising in the English Channel, met and virtually destroyed the *Reindeer*, 18, in a half-hour fight. Continuing her cruise, the *Wasp* (second vessel of the name) captured 13 merchantmen.

1814, September 1. USS *Wasp* vs. HMS *Avon*. The British sloop, 18, was sunk by the American vessel in a night battle.

Battle of Lake Champlain, September 11, 1814

Paralleling the advance of Prevost's army on Plattsburg (see p. 876) was Captain **George Downie**'s hastily built British squadron of 4 ships and 12 armed galleys. Protecting the lake front of the American position at Plattsburg was the flotilla of Lieutenant **Thomas Macdonough,** who also had 4 ships and 12 galleys, as hastily constructed as their British opponents. The American vessels were anchored close to shore. In weight of metal the 2 squadrons were practically equal, but the Americans had a preponderance in long guns. Prevost's assault on the land side started as the British squadron rounded Cumberland Head and stood in to engage the Americans, ship to ship, taking a galling fire from Macdonough's long guns as they did. A closely contested 2-hour battle when Macdonough, whose frigate *Saratoga*, 26, was being badly battered by Downie's flagship, the frigate *Confiance*, 37, cleverly swung his ship by means of a stern anchor and presented a fresh broadside to his enemy. Downie was killed, some 180 of his crew dead or wounded, when the splintered *Confiance* struck her flag. The remainder of the British squadron then surrendered. American losses are estimated at 200, British casualties 300. A British veteran who had been at Trafalgar said it was "child's play" compared to Lake Champlain.

COMMENT. *This battle, ending all danger of British invasion from the north, was undoubtedly the decisive action of the war, saving America from possible conquest or dismemberment. Its influence was strongly felt at the Ghent Peace Conference when the news arrived there (October 21).*

1814, September 26–27. Stand of the *General Armstrong*. This 9-gun privateer brig for 2 days fought off successive boarding parties from a British squadron which attacked her in neutral Fayal, Azores. Captain **Samuel C. Reid** then put his crew ashore and blew up his brig. Portuguese authorities prevented a land assault by the British, who then sailed away.

1814, October. End of the USS *Wasp*. The *Wasp* was last seen by a Swedish vessel (October 9), then disappeared forever, one of the mysteries of the sea.

1815, January 15. Capture of USS *President*. Like the following actions, this took place after the peace had been signed. The American frigate, 44, commanded by Decatur, attempted to run the British blockade of New York. Several British vessels chased her. For some hours HMS *Endymion*, 50, and the *President* fought side by side until the Britisher was disabled. By that time 2 more British ships had caught up, and 2 more were in sight. Decatur, his ship crippled and 75 men killed or wounded, surrendered. The *President* became a unit of the **Royal** Navy.

1815, February 20. USS *Constitution* vs. HMS *Cyane* and *Levant*. Off Madeira, Captain **James Stewart** in "Old Ironsides," 44, met the British corvette, 34, and sloop of war, 21. By skillful maneuver, he fought them separately, capturing both.

1815, March 23. USS *Hornet* vs. HMS *Penguin*. The American sloop, 18, captured the British sloop, 18, off Tristan da Cunha Island in the war's last naval action.

End of the War

1814, December 24. Treaty of Ghent. Ignoring the war's basic issues, it provided for release of prisoners, restoration of territory, and arbitration of boundary disputes. The news reached New York February 11. The treaty was ratified February 15.

COMMENT. *The war decided nothing, and, until the final battle at New Orleans, the British had had somewhat the best of it. They never repeated their highhanded conduct at sea; the Americans never again tried to conquer Canada.*

The United States, 1815–1846

1815. Decatur's Mediterranean Expedition. This concluded U.S. troubles with the Barbary States (see p. 854).

1818. First Seminole War. The Seminoles had sided with the British during the War of 1812. After its end, they continued their depredations. Their so-called Negro Fort (largely manned by escaped slaves) on the Apalachicola River was destroyed by U.S. regular troops (November–December 1817). The Indians in Spanish Florida raided, massacred, and pillaged in U.S. territory. General Jackson moved overland from Nashville with 1,800 regulars and 6,000 volunteers and relieved the besieged garrison of Fort Scott on the Georgia-Florida border (March 9).

1818, April–May. Invasion of Florida. Jackson, with some 1,200 men, occupied the Spanish post of St. Marks (April 7) and the Spanish capital, Pensacola (May 24). The governor fled to Fort Barrancas, where Jackson promptly shelled him out and captured the post. Meanwhile, other American columns had been destroying Indian villages, breaking up Seminole power. Two British subjects, traders, found assisting the Indians at St. Marks, were summarily court-martialed, convicted, and executed. The net result was American occupation of Spanish Florida—without authority—and a near war with England. But Seminole depredations had been ended. Jackson's highhanded action was upheld by the government. The posts were returned to Spain, but negotiations were begun to obtain all Florida from Spain.

1819, February 22. Adams-Onís Treaty. Spain surrendered all claims to West Florida, and ceded east Florida to the United States. All Spanish claims to the Pacific Northwest were also canceled. In the southwest, the treaty defined the boundary line of Spanish Mexico from the mouth of the Sabine River in the Gulf of Mexico, northwest to the Pacific Ocean.

1823, December 2. Monroe Doctrine. The declaration of U.S. intention to protect America, for the Americans, and against foreign aggression, was announced.

1825–1832. American Expansion Westward. This steadily encroached on land the Indians considered their own. The Army, in its role of exploration and protection of the settlements, began expansion of its string of frontier posts. Previous treaties with various tribes were nullified, both legally and illegally, and the long process of moving the red man from areas coveted by the white began. This led to a continuous succession of small wars, which would last for three-quarters of a century more.

1832, April–August. Black Hawk War. The Sac and Fox tribes, along the Mississippi in Illinois and Wisconsin, led by Chief **Black Hawk,** tried to regain their lands. Colonel **Zachary Taylor,** operating under Brigadier General **Henry Atkinson,** led 400 regulars and 900 militia through swampland to defeat the Indians at the **Battle of the Bad Ax** (August 2).

Second Seminole War, 1835–1843

The Seminoles and Creeks of Georgia, Alabama, and Florida resisted removal to the west. Under **Osceola** they ravaged frontier settlements in Florida. Army garrisons were too small to quell the outbreak.

1835, December 28. Dade Massacre. A detachment of 150 regulars under Major **Francis L. Dade** was ambushed in the Wahoo Swamp of the Withlacoochie River. Only 3 men escaped.

1836, February–April. Scott's Campaign against the Seminoles. Major General Winfield Scott, commanding the Eastern Department, sent to suppress the uprising, rescued his rival, Major General **Edmund P. Gaines,** commanding the Western Department, from a Seminole ambush on the **Withlacoochie River,** where he had come without authority (February 27–March 6). Scott then swept twice through Seminole country with regulars and volunteers until malaria halted operations. He reported that victory would require a large regular force.

1836, June–July. Scott's Campaign against the Creeks. The War Department (in May) ordered Scott to arrange for suppression of the uprising of the Creek Indians of western Georgia and Alabama. Helped by Brigadier General **Thomas S. Jesup,** Scott suppressed it quickly with little loss of life.

1836–1837. Court of Inquiry on Scott and Gaines. Because of a misunderstanding regarding Scott's conduct of these operations and charges brought by Gaines, President Andrew Jackson ordered a court of inquiry, headed by Commanding General **Alexander Macomb.** It commended Scott's performance highly but strongly criticized Gaines (March 14, 1837).

1837, December 25. Battle of Lake Okeechobee. Meanwhile, Brigadier General Zachary Taylor was placed in command in Florida. Finding the Seminole stronghold in the Everglades, he attacked with about 1,000 men—half regulars, half volunteers—through swampland in 2 lines, the volunteers leading. When the volunteers broke as expected, the regulars held and won the day. Taylor lost 26 killed and 112 wounded. Organized Seminole resistance collapsed, but costly, bloody guerrilla actions continued for 4 years.

1837, December 29. *Caroline* Incident. Canadian militia invaded U.S. territory and seized the steamer *Caroline* on the Niagara River. Troops were concentrated on the border. General Scott's tactful diplomacy averted hostilities with Britain (see Mackenzie's Rebellion, pp. 888–889).

1838, February 12. Aroostock "War." Bickering between Maine and New Brunswick over lumbering on U.S. land again roused fears of war. Again Scott's diplomacy brought a settle-

ment. Border disputes were resolved by the **Webster-Ashburton Treaty** (1842).

1844, February 28. The *Princeton* Disaster. On one of the first voyages of USS *Princeton*, first warship driven by a screw propeller, a gun designed by Commodore **Robert F. Stockton,** commander and co-designer of the ship, exploded, killing the Secretary of State, the Secretary of the Navy, and several congressmen, injuring a number of others. President **John Tyler,** aboard, was uninjured.

1846. June 15. Oregon Treaty. The longstanding Anglo–U.S. argument over Oregon Territory boundaries, which had led to the expansionist slogan, "Fifty-four forty, or fight!" was settled.

War of Texan Independence, 1835–1836

1835, June 30. Armed Insurrection. American settlers in Texas revolted against the Mexican government.

1836, February 23–March 6. Siege of the Alamo. General **Antonio López de Santa Anna,** President of Mexico, with a force of 3,000 Mexican regulars, laid siege to 188 Texans in the Alamo, San Antonio. After several repulses, the Mexican troops finally assaulted the place, massacring all within. The Mexicans lost more than 1,500 men. Santa Anna marched eastward, where an insurgent force was gathering.

1836, March 2. Texan Declaration of Independence. Texas was proclaimed a republic; an army was raised under **Sam Houston.**

1836. Massacre at Goliad. Some 300 Texans defending the place were killed.

1836, April 21. Battle of the San Jacinto. Sam Houston with 740 men surprised and routed Santa Anna's army of 1,600. Santa Anna was captured and recognized the Texan Republic. (This was repudiated by the Mexican government.) Houston was elected president of Texas. U.S. recognition of Texas (July 4, 1836) aroused Mexican resentment.

U.S.–Mexican War, 1846–1848

After long discussion and negotiations, Texas—which had asked for it—was formally annexed to the United States (March 1, 1845), despite Mexico's threat that this would mean war. Expansionist sentiment in the United States crystallized under the slogan of "Manifest Destiny," referring to the American "right . . . to spread over this whole continent." Mexico contended that her territory extended north to the Nueces River; the United States claimed down to the Rio Grande.

Northern Campaign

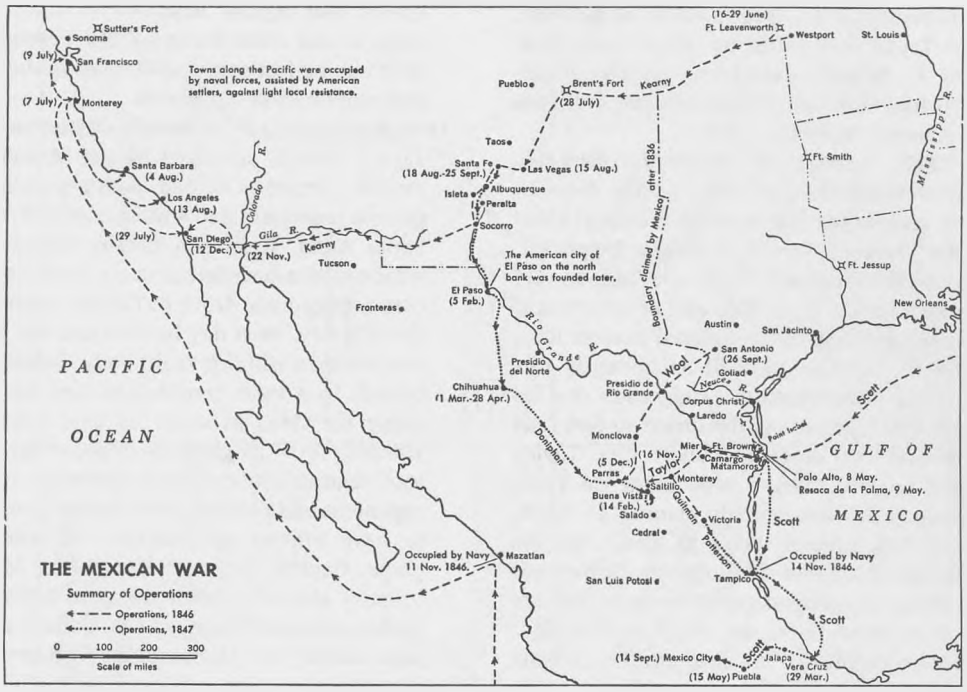
1846, March 24. American Advance to the Rio Grande. General Zachary Taylor, with 3,500 men (two-thirds of the Regular Army), advanced and established Camp Texas opposite Matamoros, where some 5,700 Mexican troops were concentrated.

1846, April 25. Cavalry Encounter. Mexican cavalry, 1,600 strong, sweeping north of the river near Matamoros, overwhelmed an American reconnaissance force of 63 dragoons. Taylor announced next day that hostilities had commenced and called for volunteers from the governors of Texas and Louisiana. He marched to protect his supply base at the mouth of the Rio Grande from the Mexican cavalry (May 1), leaving his camp opposite Matamoros under command of Major **Jacob Brown.**

1846, May 1. Mexican Crossing of the Rio Grande. Mexican General **Mariano Arista** led 6,000 troops and advanced on Camp Texas.

1846, May 3–8. Siege of Camp Texas. Major Brown was killed in the successful defense—the site became Brownsville.

1846, May 8. Battle of Palo Alto. Taylor, hav-



ing fortified his base at Point Isabel, rushed back to relieve Camp Texas. He had 2,200 men. Arista, with about 4,500, moved to meet him on flat, open ground. As the 2 lines faced each other, American artillery caused severe casualties among the Mexicans. A Mexican cavalry charge was repulsed and the shaken Mexicans fled as the American infantry line advanced.

1846, May 9. Battle of Resaca de la Palma. Taylor boldly attacked a strong Mexican defensive position, broke through after a brief but intense fight, and routed Arista's army completely. The Mexicans fled back across the Rio Grande. Mexican losses in the 2 days' battles were about 1,100; American casualties were 170 killed and wounded.

1846, May 13. Declaration of War. The United States declared war on Mexico.

1846, May 18. Taylor Crosses into Mexico.

1846, May–July. Delay in Matamoros. Taylor had to wait 3 months for transportation, which had been promised him by the United States government. Meanwhile, he trained volunteer reinforcements hurriedly raised by Congress.

1846, August. Taylor Moves South. He took 6,000 men—half regulars, half volunteers. The remainder of his force—about 6,000 volunteers—he left behind for additional training.

1846, September 20–24. Battle of Monterrey. Mexican General **Pedro de Ampudia,** with 7,000 regulars and 3,000 militia, stood on the defensive, holding the fortified city. In a 3-day battle the Americans, storming position after position, penned Ampudia in the central area of the city. Ampudia capitulated, marching out with the honors of war, but Taylor acceded to a Mexican request for an 8-week armistice. Mexican casualties were 367; American losses were greater: 120 killed, 368 wounded. The armistice was later disapproved by President **James K. Polk.** Taylor thereupon informed the Mexicans, and again advanced south.

1846, November 16. Occupation of Saltillo. There Taylor was joined by Brigadier General **John E. Wool**'s expedition, 3,000 strong, which had marched 600 miles overland from San Antonio (December 21).

1846–1847. American Strategic Debate. General Winfield Scott, commanding the U.S. Army, had planned an invasion of central Mexico via Veracruz. President Polk, a Democrat, was not anxious that Scott, a Whig, should become the war hero. This and other political bickering in Washington delayed matters until Taylor, at Saltillo, declined as militarily unsound the administration's suggestion that he march 300 miles across the desert to San Luis Potosí and then move on Mexico City. Taylor instead recommended a movement via Veracruz along the lines already planned by Scott. Finally Polk ordered Scott to undertake the campaign. Scott left Washington (November 24, 1846). Stopping to gather some of Taylor's troops at Point Isabel, he sailed to Tampico, where he established his headquarters (February 18).

1847, January–March. Scott's Plans and Preparations. The amphibious expedition, mounted in the Tampico area, was 10,000 strong. It included a large proportion of Taylor's veteran troops, leaving the latter with but 5,000 men, of whom only a handful were regulars. Taylor's role was to be defensive, while Scott's mass of maneuver executed a bold turning movement into central Mexico.

1847, January–February. Santa Anna's Plans. The Mexican president, learning of Scott's plans through a captured message, decided to crush Taylor before Scott could land. He moved with 20,000 men across the desert from San Luis Potosí—the very march which Taylor had rightly hesitated to take. Santa Anna's army arrived near Saltillo (February 19) after having lost some 4,000 men in the grueling midwinter desert march.

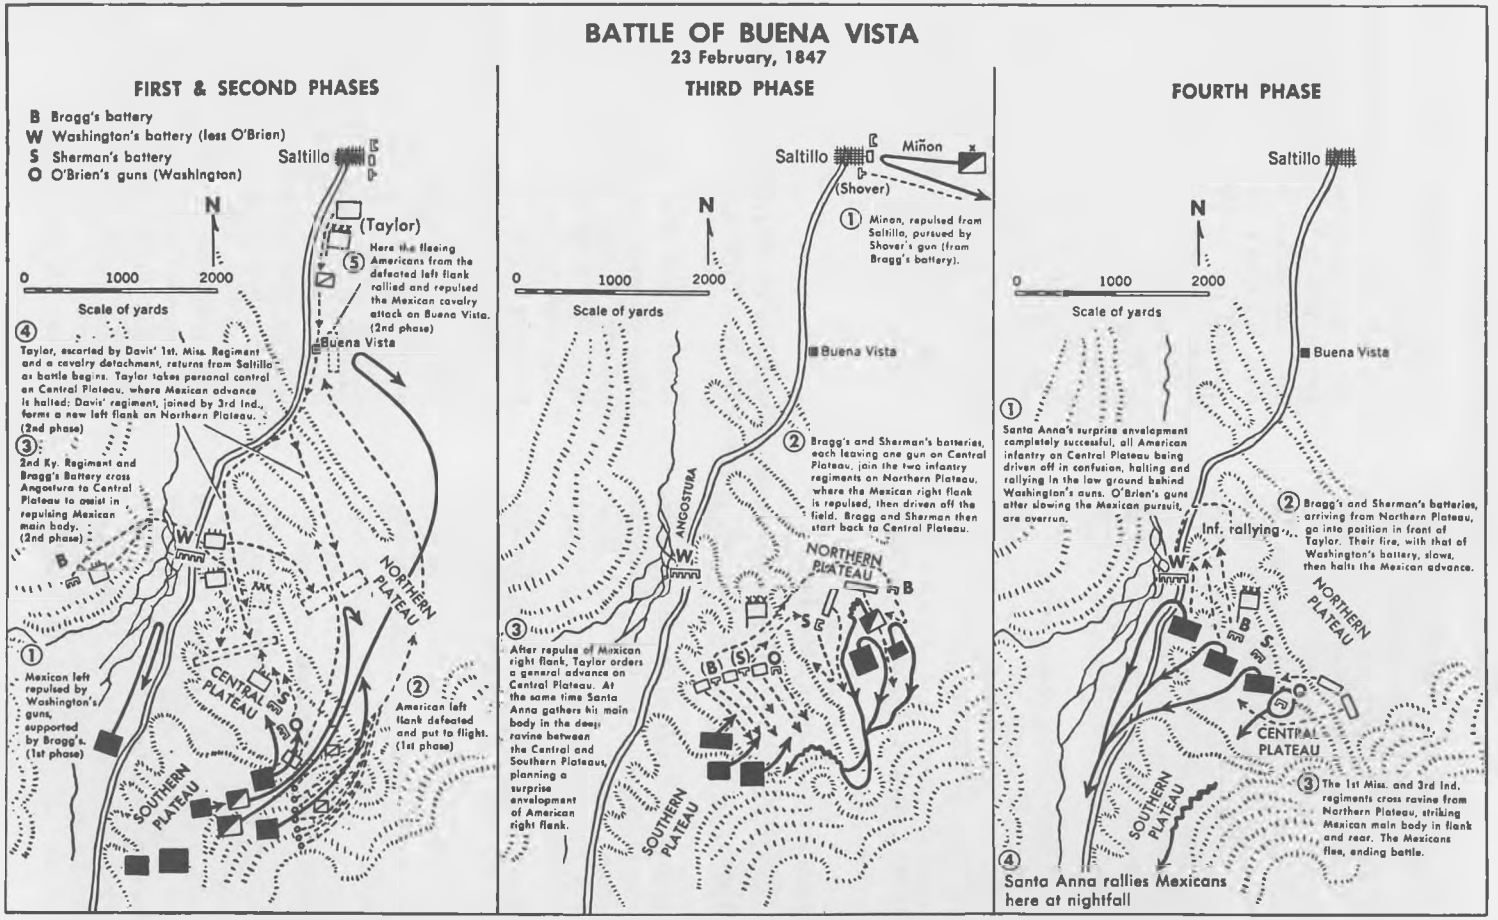
1847, February 22–23. Battle of Buena Vista. Taylor, though surprised by the Mexican approach, elected to defend, taking position in a narrow mountain gap 8 miles south of Saltillo. Santa Anna, sending a cavalry brigade on a wide northeastern detour to cut Taylor's line of communications, drove in Taylor's outposts on the first day. Next day he attacked the American position with his main body. Initially successful, in a most complicated and disjointed battle, the Mexican attack captured 2 guns, but was held up by magnificent efforts of the American regular artillery after volunteer infantry regiments had recoiled. Here Taylor is supposed to have uttered his historic: "A little more grape, Captain Bragg!"* The gallant Mexican infantry almost reached the guns before they broke under the American fire. Colonel **Jefferson Davis'** 1st Mississippi Volunteers, supported by regular artillery, meanwhile had checked an attack driving in Taylor's left flank. A vigorous counterattack then drove the Mexicans from the field. Meanwhile, the Mexican cavalry envelopment of Taylor's rear collapsed after a short conflict with the American rear guard at Saltillo. Santa Anna withdrew to the south, ending the northern campaign of the war. American losses were 267 killed, 456 wounded, 23 missing, together with the 2 guns captured Estimated Mexican losses were 500 dead and 1,000 wounded.

* Almost certainly apocryphal; he probably said: "Double shot your guns and give 'em hell!"

Operations in the West

Kearny's Expedition

California had been disturbed since U.S. Commodore **Thomas ap C. Jones** had landed a naval force at Monterey (1842). This act had been repudiated by the American government. Upon the outbreak of war, revolts of American settlers were fomented (June) by army Captain **John C. Frémont,** heading a surveying expedition in the west.



BATTLE OF BUENA VISTA

2 Bragg's and Sherman's batteries, arriving from Northern Plateau, go into position in front of Taylor. Their fire, with that of Washington's battery, slows, then halts the Mexican advance.
3 The 1st Miss. and 3rd Ind. regiments cross ravine from Northern Plateau, striking Mexican main body in flank and rear. The Mexicans flee, ending battle.
4 Santa Anna rallies Mexicans here at nightfall
NORTHERN PLATEAU
CENTRAL PLATEAU
SOUTHERN PLATEAU

1846, June–December. Kearny's March. Brigadier General **Stephen Watts Kearny** was ordered to occupy New Mexico and California. Marching overland from Fort Leavenworth with 1,700 men, he established control over New Mexico. He received a message that California had been pacified, and so decided to leave most of his troops to hold New Mexico. Leaving Santa Fe (September 25) with 120 dragoons, Kearny reached southeastern California to learn of the revolts and to find the road to San Diego blocked by about 500 Mexican cavalry.

1846, July 7. Occupation of Monterey. Commodore **John D. Sloat** sent a naval force ashore. His successor, Commodore Robert F. Stockton, expanded the occupation and Frémont was named governor of California. Soon after this the Mexican-California populace rose against the Americans and controlled most of the province.

1846, December 6. Battle of San Pascual. This was a violent, inconclusive action in which Kearny held the field, but found his path to San Diego still blocked. However, he made contact with Stockton's sailors and marines, who marched out to meet him (December 10). Kearny's wagon train (the first to cross the Rockies) and a battalion of infantry, under Major **Philip St. George Cooke,** taking another trail, joined him later (January 29, 1847).

1847, January 8. Battle of San Gabriel. Kearny's combined army-navy command defeated the main Mexican force outside of Los Angeles.

1847, January 9. Battle of the Mesa. Kearny won a climactic victory, breaking the back of Mexican-Californian resistance. He at once occupied Los Angeles.

Doniphan's Expedition, 1846–1847

An offshoot of Kearny's operations was Colonel **Alexander W. Doniphan's** march with 850 Missouri mounted riflemen from Santa Fe (December 12) to Chihuahua.

1847, February 28. Battle of the Sacramento River. Near Chihuahua, Doniphan defeated a much larger Mexican force. Mexican losses were 600; American, 7 killed and wounded. Doniphan then continued south.

1847, May 21. Doniphan Arrives at Saltillo. This overland march, like that of Kearny, had been an amazing feat. Each of them marched more than 2,000 miles over desert territory, never previously traversed by organized military forces.

Central Mexican Campaign

1847, March 9. Scott Arrives Near Veracruz. The transports, carrying 10,000 troops, escorted by Commodore **David Connor's** squadron, began an unopposed landing which completely invested the fortress city.

1847, March 27. Capture of Veracruz. A 5-day bombardment by land and sea brought the surrender of the 5,000-man garrison. Losses on both sides were light: 82 Americans killed and wounded; 180 Mexicans, of whom 100 were civilians. Scott at once moved westward with 8,500 men toward Jalapa to get away from the low coastal area, where yellow fever was feared.

1847, April 18. Battle of Cerro Gordo. Santa Anna, with more than 12,000 men, held the fortified defile, whose flanks were seemingly impregnable. Scott's engineers (who included Captains **Robert E. Lee, George B. McClellan,** and **Joseph E. Johnston,** and Lieutenant **Pierre G. T. Beauregard**) discovered a flanking mountain trail over which Scott hurried his main body, enveloping most of the Mexican force. After a sharp fight the Mexicans were completely routed, losing 1,000 killed and wounded and 3,000 prisoners. Forty-odd guns and 4,000 small arms were captured. American losses were 64 killed and 353 wounded.

1847, May 15. Occupation of Puebla. Here

Scott halted, 75 miles from Mexico City. By this time he had but 5,820 men, having had to send home 4,000 others whose enlistments had expired.

1847, May–August. Wait at Puebla. Scott's strength was rebuilt by new troops, hurriedly raised in the United States, to almost 11,000 effectives and an additional 3,000 sick.

1847, August 7. Advance on Mexico City. Leaving his invalids and a small garrison at Puebla, Scott deliberately cut all communications with the outside world. Wellington's comment, when he learned of this, exemplified foreign military opinion: "Scott is lost. He has been carried away by successes. He cannot capture the city and he cannot fall back on his base." Santa Anna defended the capital with some 30,000 men. Scott, finding the direct route through Ayutla to be impracticable (August 12), circled to the south, where he discovered strong Mexican concentrations near Contreras and Churubusco, commanding the roads into the city. Scott, with only 4 days' rations left, decided to attack both positions (August 19), his decision guided by the effective reconnaissances of his engineers, who once again had found unmapped trails leading into the Mexican positions.

1847, August 20. Battle of Contreras. The hill position was stormed in a surprise dawn attack and its defenders routed. The 2 guns lost at Buena Vista were recaptured here.

1847, August 20. Battle of Churubusco. Almost simultaneously another American column burst through, storming a fortified convent. Losses were heavy in these 2 battles: 137 Americans killed, 877 wounded and 38 missing; while the Mexicans lost an estimated 4,297 killed and wounded, 2,637 prisoners, and some 3,000 missing. Scott had lost one-seventh of his effectives, Santa Anna one-third of his. The Mexicans retired within the city walls, except for strong detachments in and near the fortress of Chapultepec.

1847, August 25–September 6. Armistice. Discussion of peace proposals ended in disagreement; Scott immediately resumed his offensive.

1847, September 8. Battle of Molino del Rey. Some 12,000 Mexicans garrisoning a gun foundry and an old fort near Chapultepec were finally defeated after a day-long attack in which the Americans lost 116 killed and 665 wounded. Mexican losses were about 2,000 killed and wounded and 700 captured. Scott now had less than 7,500 effectives.

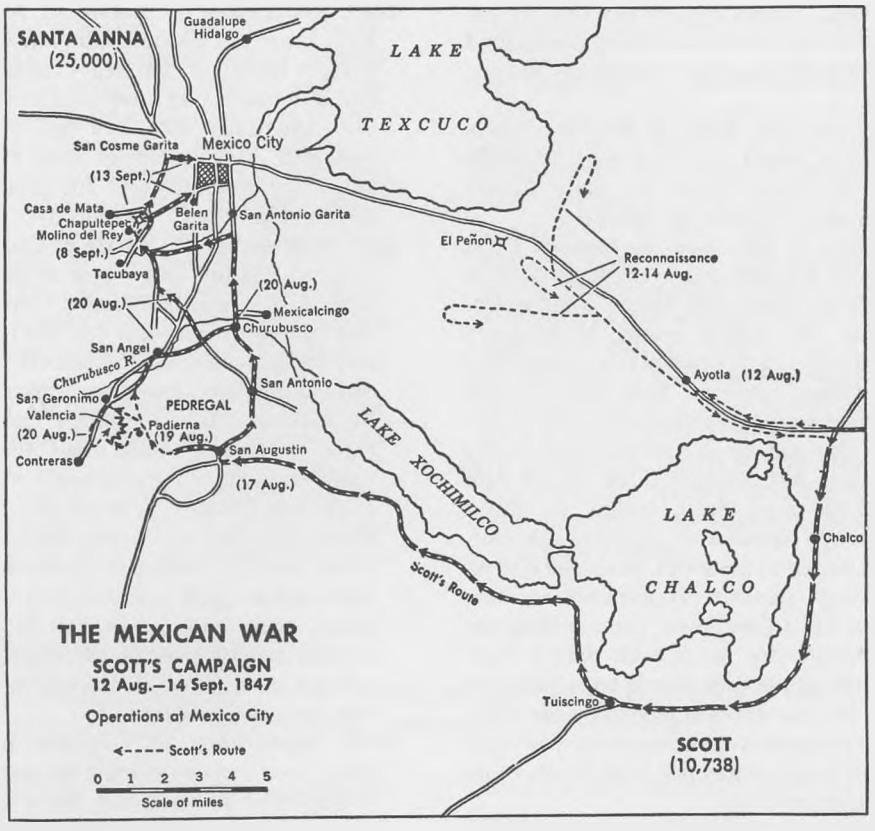
1847, September 13. Battle of Chapultepec. The fortified hill, last major obstacle outside Mexico City, was bombarded (September 12) and taken by storm next day, the rocky slopes and walls being scaled by ladders. Heroic features of the defense was the resistance of some 51 Mexican Military College cadets on the crest. At the same time other American columns drove along the causeways below the hill to the San Cosmé and Belén gates of the city, under heavy fire. American casualties were 130 killed and 703 wounded. Mexican losses are estimated at 1,800 in and around Chapultepec alone; their total losses are undetermined. Among many Americans distinguishing themselves, Lieutenants **U. S. Grant** and **T. J. Jackson** were outstanding.

1847, September 14. Capture of Mexico City. Scott's troops worked through the night, preparing for a final assault. Santa Anna's main force, however, had withdrawn after dark. At dawn, as bombardment was about to begin, the remaining garrison surrendered. Scott immediately occupied the city.

1847, September 14-October 12. Siege of Puebla. A Mexican force besieged the American garrison, but was driven off by troops from Veracruz.

1847, September-1848, February. Peace Negotiations. While these dragged on at Guadalupe Hidalgo, political chicanery in Washington intervened, Scott being summarily removed from command and ordered home to stand trumped-up charges, which were later withdrawn. He was received as a hero by the nation, and Congress bestowed a gold medal on him for his successful invasion. Ironically, Polk had to present the medal.

1848, February 2. Treaty of Guadalupe Hidalgo. This confirmed the southern bound-



ary of Texas and transferred to the United States the regions now comprising California, Nevada, Utah, most of Arizona and New Mexico, and parts of Colorado and Wyoming. The U.S. paid Mexico $15 million. U.S. forces evacuated Mexico City (June 12) and Veracruz (August 2). Meanwhile the treaty was ratified (July 4).

Canada

1812–1815. War of 1812. **(See p. 871.)**

1837, November. Papineau's Rebellion. French-Canadian leader **Louis Joseph Papineau,** believing that the grievances of French Canadians were being ignored by the British crown, led a brief uprising in Lower Canada (modern Quebec Province), which was suppressed by British forces in a clash at **St. Denis** (November 22). Papineau fled to the United States, and then to France, returning to Canada after a general amnesty (1847).

1837, December. Mackenzie's Rebellion. Advocate of a republican government for Upper Canada (modern Ontario Province) or all of Canada, **William Mackenzie** had been in correspondence with Papineau, although there was evidently no collusion between their entirely separate rebellions. His call for an uprising and establishment of a provisional government was foiled at **Toronto** by Sir **John Colborne** (December 6), and he fled to the United States. In Buffalo he collected a group of Canadian malcontents, and seized Navy Island, in the Niagara River. His followers made a few

raids into Canada, but all fled when Canadian forces approached. He returned to Canada after the Amnesty Act of 1849.

1838. Aroostook "War." **(See p. 881.)**

1840. Act of Union. Upper and Lower Canada were united as a single, partially self-governing colony.

LATIN AMERICA

When the period opened, the greater portion of the Americas roughly south of the Missouri River and 42° latitude belonged to Spain and Portugal. The young United States had as western boundary the line of the Mississippi down to the Floridas. England, the Netherlands, France, and Denmark each claimed some of the West Indies islands. England, too, had a tiny toehold—Belize—on the Caribbean coast just south of Yucatan, and was casting envious eyes on Guiana, where France and Holland held coastal slices. Portugal's share of this rich Latin immensity was Brazil, whose boundaries stand today generally as they were then. The rest was Spain's.

When the period closed, all that remained of these 2 Latin colonial empires were Cuba and Puerto Rico, both Spanish. A group of new nations, self-carved by armed revolution against European overlords and by their own internecine wars, were protected by the Monroe Doctrine (see p. 881) against further overseas encroachments.

The independence movements, ignited by the American Revolution, were further stimulated by the French Revolution, by Napoleon's incursions into Spain and Portugal, and by later revolution in Spain. Turmoil and dissidence, beginning in 1790, smoldered uncertainly until British operations against Spanish South America, in the Napoleonic Wars, kindled the flame.

Wars of Independence, 1800–1825

Spanish South America

1806, June 17. British Occupation of Buenos Aires. Admiral Sir **Home Popham**'s squadron landed some 500-odd troops under General William Beresford. **Jacques de Liniers** rallied the colonial militia, who forced the capitulation of the invaders (August 12). Popham, who had acted without specific orders, was later courtmartialed.

1807, July. British Occupation of Montevideo. An expedition of 8,000 men under General **John Whitelocke** occupied the city, then seized Buenos Aires. Again Liniers led a popular uprising, forcing capitulation of the invaders, after serious street fighting.

1807–1810. Insurrections throughout South America. These were triggered by the 2 successes against foreign soldiery in Buenos Aires. Spanish troops suppressed all except in the River Plate viceroyalty (Argentina), which became practically independent (1810).

1810–1814. Unsuccessful Rebellion in Chile. After a brief struggle Chile won independence under the leadership of **José Miguel Carrera** (1811). Because of incompetence he was replaced by his rival, **Bernardo O'Higgins.** Spanish forces from Peru defeated O'Higgins at **Rancagua** (October 7, 1814) due largely to Carrera's noncooperation. O'Higgins fled to Argentina, and the Spanish reestablished control of Chile.

1811, August 14. Independence of Paraguay. This little inland subdivision of the River Plate viceroyalty declared its independence, following a popular uprising, breaking its ties both with Spain and with the revolutionary movement in Buenos Aires. Paraguay was soon under the iron rule of **José Rodríguez de Francia,** who assumed perpetual dictatorship with a policy of armed isolation (1816).

Independence movements in Latin America

1811–1821. Banda Oriental (Uruguay). The area between the River Plate and the Brazilian border—claimed by Portugal but actually under Spanish control—was liberated by Argentine and local revolutionaries, led by **José Artigas** (1811). He was ousted, in turn, by Brazil (1816–1820), which annexed the Banda.

1811–1825. Bolívar and San Martín. Simón Bolívar in Venezuela and **José de San Martín** in Argentina were 2 strong men who initiated separate and amazing campaigns of liberation from Spanish rule. Bolívar's area of operations in the north was mainly New Granada (Venezuela, Colombia, and Ecuador). San Martín's operations in the south included the River Plate (Argentina), Chile, and Peru. When these leaders met at the equator at Guayaquil (1822), Spain's domination of South America was doomed. Both men were able to enlist foreign soldiery—English, Irish, German, and North American—in their forces. The foreign adventurers included a remarkable British sailor, **Thomas Cochrane,** 10th Earl of Dundonald, perhaps the stormiest petrel the Royal Navy ever produced.

Bolivar's Campaigns

Simón Bolívar (1783–1830), born in Caracas, spent most of his early life in Europe. He returned to Venezuela (1809) and became involved in the revolutionary movement (1811).

1811, July 5. Venezuelan Independence Declared. Bolívar was put in command of Puerto Cabello, but was driven from it by Spanish General **Juan Domingo Monteverde,** who momentarily crushed the entire revolt, capturing **Francisco Miranda,** its leader. Bolívar fled to Curaçao.

1813, May. Bolívar's Return. He took the field again (May 1813), defeating Monteverde at **Lastaguanes,** and then capturing Caracas (August 6, 1813). He won another victory over the royalists at **Araure** (December 5, 1813). At **La Victoria** (February 1814) and **San Mateo** (March 1814), Bolívar defeated General **José Tomás Boves.** He won another victory at **Carabobo** (May 1814), but was defeated by Boves at **La Puerta** (July 1814). With Venezuela again under Spanish control, Bolívar fled to New Granada (Colombia), where he was given another revolutionary command.

1815. Bolívar Defeated. After some preliminary successes, he was defeated by General **Pablo Morillo** at **Santa Mara.** Spanish troops, released by the conclusion of the Napoleonic Wars, now reconquered most of the rebellious provinces. Bolívar fled to Jamaica and Haiti. He led two unsuccessful raids against the coast of Venezuela.

1816, December. Bolívar Returns to Venezuela. He led a new movement against Morillo, winning an important victory near **Barcelona** (February 16, 1817). Now recognized as commander in chief of the patriot forces, Bolívar attempted to raise the country against the Spanish.

1818, March 15. Battle of La Puerta. On the site of an earlier defeat, Bolívar's army was routed by Morillo. Without losing heart, Bolívar continued the insurrection. He decided to try to drive the Spanish from New Granada.

1819, June 11. Crossing of the Andes. Leaving Angostura (Ciudad Bolívar) with 2,500 men, well armed but practically in rags, Bolívar marched across Venezuela, over 7 rivers, and then through the frigid passes of the Andes, debouching in the valley of Sagamose (July 6).

1819, August 7. Battle of Boyaca. Spanish Colonel **Barreiro,** with 2,000 infantry and 400 horse, defended the approaches to Bogotá. Bolívar outmaneuvered him, placing his troops between Barreiro and the capital. While his right drove against the Spanish left flank, Bolívar's British Legion, all veterans, moved in frontal assault, repulsing the Spanish cavalry. Barreiro's troops were completely routed, losing 100 killed, 1,600 prisoners, and all their

heavy equipment. This was the decisive battle of the revolution in northern South America. Bolívar entered Bogotá in triumph (August 10), establishing the Republic of Colombia, with himself as its president.

1820–1821. Operations in Northwest Venezuela. Bolívar and other patriot leaders campaigned indecisively against royalist forces. An armistice was effected (November 25, 1820–April 28, 1821) at Trujillo. Upon the conclusion of this truce, Bolívar with 6,000 men once more moved through the Cordillera, this time southeastward.

1821, June 25. Battle of Carabobo. Spanish General **Miguel de La Torre,** with 5,000 men, held the valley of the Carabobo, at the southern foot of the pass. Bolívar, brushing aside Spanish outposts in the pass, found another route through the mountains and sent his cavalry and the British Legion through the detour to fall on the Spanish right flank. La Torre assaulted this force as it debouched with a detachment of his own, but the British Legion held firm and the cavalry broke up the attack. La Torre's error in dividing his force led to defeat in detail. The Spaniards were driven from the field in a 20-mile-long rout. Bolívar entered Caracas. Spanish strength unraveled. **Cartagena** capitulated (October 1) after a 21-month siege, and other garrisons began to fall.

1822. Operations in Quito Province. Bolívar moved south to join his lieutenant, General **Antonio de Sucre,** who, with 2,000 men, had cornered **Melchior Aymerich,** Spanish governor general of Quito, in the mountains near the city. At **Bomboná,** a royalist force of some 2,500 so bitterly contested Bolívar's advance through the mountains that he was forced to halt (April 7).

1822, May 24. Battle of Pichincha. Aymerich turned on Sucre, attempting to storm the slopes of the volcano of Pichincha, where Sucre's forces lay. Although at first successful, the Spanish force was defeated by a flank attack and driven down the mountain, retreating into Quito, where Aymerich surrendered next day. His losses had been 400 killed, 190 wounded, and 14 guns; Sucre's losses were 200 killed and 140 wounded.

San Martin's Campaigns

San Martín (1778–1850), of Spanish descent, had served in Spain's army during the Peninsular War. He returned to Buenos Aires (1810).

1814–1816. San Martín Commands the Revolutionary Army. For 3 years he organized and trained the Army of the Andes—partly Argentine, partly Chilean—at Mendoza, in preparation for an invasion of the west coast. Meanwhile, Argentina declared its independence (July 9, 1816).

1817, January 24. March over the Andes. San Martín led an army of 3,000 infantry, 700 cavalry, and 21 guns across the snowy passes of the Gran Cordillera—a feat never before attempted—debouching into the plain between the coastal range and main Andean chain (February 8). O'Higgins commanded a Chilean contingent.

1817, February 12–13. Battle of Chacabuco. Spanish Colonel **Maroto,** with 1,500 infantry, 500 cavalry, and 7 guns, disputed the advance. San Martín attacked in 2 columns. O'Higgins, moving in the moonlight of early morning, contained the Spanish force while San Martín turned its left, completely routing it. Spanish losses were 500 killed, 600 prisoners, and all their artillery. San Martín lost 12 killed and 120 wounded. Santiago was then occupied (February 15), and Chilean independence became fact (proclaimed a year later, February 12, 1818). Indecisive fighting continued through the remainder of the year, while Spanish General **Mariano Osorio** with 9,000 men moved down from Peru.

1818, March 16. Battle of Cancha-Rayada.

San Martín with 6,000 men was defeated by Osorio, losing 120 killed and 22 of his guns. Spanish losses were 200 killed and wounded, and they were much shaken by the encounter.

1818, April 5. Battle of the Maipo. San Martín, regrouping after his defeat, attacked the Spaniards on the bank of the Maipo River. Hurling his main effort against the Spanish left, San Martín turned it and the royalist army collapsed, losing 1,000 killed, 12 guns, and 2,300 prisoners. San Martín's losses were about 100 killed and wounded. Osorio, giving up further contest, retreated into Peru, and San Martín prepared to follow. But further revolutionary invasion was impossible unless Spanish command of the sea were broken. **Manuel Blanco Encalada,** a Chilean and a former Spanish naval officer, had gathered a squadron of sorts, including a Spanish frigate, cleverly captured.

1818, November 28. Arrival of Cochrane at Valparaiso. After he had resigned from the British Navy under a cloud, the Chilean revolutionary government invited him to command its navy.

1819, January–February. Cochrane Takes to Sea. With 4 ships, he attempted to draw the Spanish squadron based on Callao and Valdivia into action. Unsuccessful in this, he cruised the coast.

1820, June 18. Capture of Valdivia. Cochrane sailed his flagship *O'Higgins,* 50, former Spanish heavy frigate, into the harbor. He bombarded the forts and landed a party to capture the defenses. This broke the last tenuous Spanish hold on the Chilean coast. San Martín now felt able to carry out his proposed invasion of Peru.

1820, September 8. Invasion of Peru. Cochrane's little squadron escorted north 16 transports carrying San Martín's forces. They were landed at Pisco; then Cochrane blockaded Callao, where the Spanish squadron lay.

1820, November 5. Capture of the *Esmeralda*. In a daring cutting-out expedition Cochrane in person took 250 sailors and marines in small boats into the harbor and captured the frigate *Esmeralda*. Had his plans been carried out, all the other Spanish ships would then have been taken in turn, but a subordinate cut the frigate's cable and Cochrane had to be content with his one prize.

1821, July. San Martín Takes Lima. After this, Callao capitulated (September 21) and Peruvian independence was established. San Martín turned his eyes northward again, toward Quito. He apparently decided then to coordinate with Bolívar, who had simultaneously been advancing from the north.

Concluding Campaigns Against Spain

1822, July 26–27. Meeting at Guayaquil. Bolívar and San Martín officially linked their forces. The nature of the conference has always been a mystery, but San Martín turned over control to Bolívar and retired from all further revolutionary activities. The 2 men were completely incompatible: Bolívar with dictatorial ambitions, San Martín a soldier-patriot of high military genius. Bolívar, organizing the Republic of Peru, continued the drive to expel Spanish domination, despite mutinies and vigorous Spanish reaction.

1824, August 6. Battle of Junin. Bolívar and Sucre, with about 9,000 men, met a Spanish army of equal size under General **José Canterac** about 100 miles northeast of Lima. In a purely cavalry battle, about 2,000 men on each side being engaged, and not a shot fired, the revolutionaries were victorious. The Spanish army retreated into the highlands southeast of Lima. Sucre pursued, while Bolívar organized a government at Lima.

1824, December 9. Battle of Ayacucho. Spanish General **José de La Serna** with 10,000 men and 10 guns attacked Sucre with 7,000 and 2 guns. Sucre's left and center contained La Serna's attack, while his right, mostly cavalry, turned the Spanish left. Sucre now threw in a reserve division and the Spanish army collapsed. La Serna, who had received 6 wounds, was captured. Next day General Canterac, La Serna's successor, capitulated. Spanish losses were 1,400 killed and 700 wounded; the republicans lost 300 killed and 600 wounded.

Known as the "Battle of the Generals" (14 Spanish generals were captured), Ayacucho ended Spain's grip on South America. All Spanish forces remaining in Peru were withdrawn by the terms of the capitulation. Sucre then moved eastward into the Presidency of Charcas, bordering on Brazil, and established the Republic of Bolivia (August 6, 1825).

Brazil

1807–1821. Brazil Becomes the Seat of Portuguese Government. The Portuguese royal family fled there from the Napoleonic invasion (1807–1808; see p. 843). The example of revolt in neighboring Spanish America caused an urge for liberty to permeate Brazil. After much dissension, John VI of Portugal returned to his country (1821), leaving his son Dom Pedro as prince regent.

1808. Brazil Occupies French Guiana. This was returned by the Treaty of Paris (1814).

1816–1821. Occupation of Uruguay. (See p. 891.)

1822, September 7. Independence of Brazil. This culminated growing tension between Brazil and Portugal and between John and Dom Pedro, who led the independence movement. He was soon crowned emperor (December 1).

1823, March 21. Cochrane Assumes Command of the Brazilian Navy. This was a small squadron of warships obtained by purchase and capture. Portuguese naval strength lay at Bahia, which Cochrane blockaded.

1823, July 2. Portuguese Evacuation of Bahia. Portuguese forces left the port in a convoy of some 60-odd transports escorted by 13 warships—a force far too strong for Cochrane to attack with only 2 frigates. The convoy headed north along the coast for Maranhão (São Luiz).

1823, July. Cochrane Wins the War. In his flagship, the heavy frigate *Pedro Primiero,* 50, the admiral—by superior seamanship—avoided conflict with poorly handled Portuguese war vessels while cutting out a number of transports. Then, surmising its destination, he sailed right to Maranhão ahead of the convoy and captured the port, permitting the garrison to embark for Portugal. The main convoy now had no place to go but Portugal. The combined Portuguese convoys were harassed all the way across the Atlantic by several of Cochrane's ships.

1825. Portugal Recognizes Brazilian Independence.

Mexico

1810. Peasant Revolt. The first real revolution in New Spain began with the revolt of **Miguel Hidalgo y Costilla,** a priest interested in social reform. With a horde of 80,000 *paisanos,* he swept through the southern provinces and threatened Mexico City, but his untrained masses were repulsed (November 6) by Spanish General **Félix Calleja.**

1811, January 17. Battle of the Bridge of Calderón. Near Guadalajara, Calleja, with 6,000 men, crushed Hidalgo, who was captured and executed. Hidalgo's lieutenant, **José María Morelos,** also a priest, revived the insurrection, but after 3 years of increasingly hopeless fighting was captured and executed by General **Agustín de Iturbide,** a Mexican-born Spaniard.

1821, January–February. Renewed Rebellion. This time the leader was General Iturbide, who rebelled after the revolution of 1820 in Spain.

1821, February 24. Declaration of Independence. Iturbide occupied Mexico City and was crowned **Agustín I,** Emperor of Mexico (July 21, 1822).

1823, March 19. Republican Revolution. Iturbide was forced from the throne. One of the republican leaders was **Antonio López de Santa Anna.** A federal republic was established (October 4, 1824).

Central America

1821–1823. Mexican Domination. The Spanish captain-generalcy of Guatemala crumbled

in a series of revolutions gradually growing in intensity (1811–1821). The uprisings were generally stimulated by the independence movements to the north and south. Following Mexico's independence, the area fell under Mexican domination.

1823, July 1. The United Provinces. After the overthrow of Agustín, a constitutional assembly called by Mexican General **Vicente Filosola** in Guatemala City declared the confederation of Guatemala, El Salvador, Nicaragua, Honduras, and Costa Rica as the United Provinces of Central America.

Haiti and Santo Domingo

1791–1801. Chaos in Haiti. The island of Haiti (Santo Domingo or Hispaniola) was the center of brutal war, revolution, and rapine following a slave rebellion. **Pierre Dominique Toussaint L'Ouverture,** a Negro of military genius, finally restored order (1800), but his efforts aroused the suspicion of Bonaparte, who resolved to restore complete French control over the island and to reinstitute slavery.

1801–1803. French Domination Overthrown. French General **Victor Emmanuel Leclerc,** with 25,000 men, debarked and despite Toussaint's resistance occupied the seaports. He could not, however, compete with the savage resistance of the Negro troops in inland guerrilla warfare. His army wasted by disease, Leclerc offered amnesty, and Toussaint laid down his arms in order to negotiate (June 1802). He was treacherously seized and taken to France, where he died in prison (1803). Under **Jean Jacques Dessalines,** the Negroes resumed fighting. Leclerc died of yellow fever, and the demoralized French Army finally evacuated the island (November 1803).

1804–1806. Supremacy of Dessalines. He crowned himself Emperor Alexandre I (October 8) and instituted a general massacre of all remaining whites.

1806–1820. Struggle for Power. Following the assassination of Dessalines, the island was divided between **Henri Christophe** in the north and **Alexandre Sabes Pétion** in the south, who warred with one another until Pétion's death (1818). Christophe, a man of undoubted genius, was assassinated (1820). **Jean Pierre Boyer** became President of Haiti.

1808–1809. Revolt of Santo Domingo. With British help, the Spanish eastern portion of the island threw off the control of the French-speaking blacks of the west.

1814. Spanish Control Restored in Santo Domingo.

1822. Haitian Reconquest of Santo Domingo. Boyer drove out the Spaniards to reunite the island under one government.

Aftermath of Independence, 1825–1850

Wars and revolutions raged throughout Latin America as the new republics struggled within and among themselves. Dictators rose and fell.

1825–1828. Brazil-Argentine War. Argentina, assisting a revolt in the Banda Oriental (Uruguay) against Brazil, went to war to acquire the province. At the **Battle of Ituzaingo** (February 20, 1827), Brazilian forces were defeated by an Argentine-Uruguayan combination. Blockade of Buenos Aires by a Brazilian naval squadron brought friction with Europe. British mediation brought peace and the establishment of independent Uruguay.

1827–1829. Peruvian Aggressions. José Lamar, President of Peru, launched his nation on a policy of expansionism. A Peruvian invasion of Bolivia (1827) forced the withdrawal of Sucre, who had become president after the departure of Bolívar. Lamar then invaded Ecuador. A Peruvian naval squadron captured Guayaquil (January 1829). But Sucre, who had taken refuge in Ecuador, and Ecuadorian General **Juan José Flores** led an army which

defeated the invading Peruvians at the **Battle of Tarqui** (February 27, 1829). Guayaquil was recaptured the next day. Lamar's plans for expansion to the north now crumbled.

1829. Spanish Invasion of Mexico. An expedition from Cuba seized Tampico (August 18). Santa Anna promptly led a force against the invaders, who were soon forced to surrender (September 11).

1830. Independence of Ecuador. Flores led this withdrawal from Gran Colombia, and became first president of Ecuador.

1836–1839. War of the Peruvian-Bolivian Confederation. Bolivian dictator **Andreas Santa Cruz,** with the agreement of Peruvian President **Luis Orbegosa,** established a combination of the two countries (1835). Chile and Argentina opposed the confederation, and Chile declared war (November 11, 1836). A Chilean army, commanded by General **Manuel Bulnes,** decisively defeated Santa Cruz at the **Battle of Yungay** (January 20, 1839), breaking up the confederation.

1838–1839. French Expedition to Mexico. To obtain satisfaction for claims of its citizens, France sent an expedition to Mexico. The French fleet blockaded the Atlantic coast of Mexico and seized Veracruz (April 16, 1838). When the claims were satisfied, the French withdrew (March 9, 1839).

1839–1840. Disintegration of Central American Confederation. Continual internal strife finally caused the dissolution of the confederation into its components. Later attempts at confederation failed.

1841. Peruvian Invasion of Bolivia. President **Agustín Gamarra** of Peru, attempting to annex part of Bolivia, was defeated and killed by the Bolivians under President **José Ballivián** at the **Battle of Ingavi** (November 20).

1844. Independence of Santo Domingo. The predominantly Spanish-speaking inhabitants of the eastern portion of the island of Hispaniola, or Haiti, revolted successfully against the French-speaking rulers of the Republic of Haiti.

1843–1852. Argentine Intervention in Uruguay. A confusing struggle broke out involving internal strife in Argentina and Uruguay, and the intervention of Brazil, France, and England. Argentine dictator **Juan Manuel de Rosas** attempted to take advantage of a civil war in Uruguay to annex that country. He supported **Manuel Oribe** of Uruguay, who for 8 years maintained an ineffective siege of **Fructuoso Rivera** in Montevideo (1843–1851). Giuseppe Garibaldi was among the defenders of besieged Montevideo. To check Rosas, France and England sent forces to occupy parts of Uruguay and to blockade the River Plate (1845–1849). Meanwhile, Argentine **Justo José de Urquiza** revolted against Rosas. Brazil, fearful of Argentine annexation of Uruguay, supported Urquiza, who was also encouraged by France and England. At the **Battle of Monte Caseros** (February 3, 1852), Urquiza with a force of Argentines, Brazilians, and Uruguayans defeated Rosas, who fled to England.

1846–1848. U.S.-Mexican War. This war, discussed elsewhere (see p. 882), sharpened the line of political demarcation and distrust between Anglo-Saxon North America and the Latin nations in both the northern and southern divisions of the hemisphere.

AUSTRALASIA

AUSTRALIA

1804. Irish Convict Rebellion. New South Wales had been established (1788) as a penal colony ruled by a military governor—usually an officer of the Royal Navy—and policed by the New South Wales Corps, a military body recruited in England. This "Praetorian Guard" waxed fat on land grants, monopoly of cargoes arriving in the colony, and the rum trade. A considerable proportion of the convicts were Irishmen, political prisoners deported after the

suppression of the revolution of 1798. This group rose against the local government, but the mutiny was suppressed with great severity.

1806. Renewed Mutiny. After this was suppressed, Captain **William Bligh,** R.N., of *Bounty* mutiny fame, was appointed governor, the home government expecting that his stern discipline would bring both the N.S.W. Corps and the convicts into line. His drastic methods soon resulted in another mutiny.

1808, January 26. The Rum Rebellion. A group of N.S.W. Corps officers, led by Major **George Johnston,** a regular, arrested Bligh as unfit for office and held him prisoner pending the arrival of a new governor. The home government, while condemning the action, accepted it. Colonel **Lachlin Macquarie,** an able administrator, arrived (1809) and Bligh was sent home (to become a rear admiral). Macquarie broke up the N.S.W. Corps.

New Zealand

1843–1848. First Maori War. Native resentment of land expropriation broke into conflicts between British settlers and the native Maoris in a guerrilla war that raged for 5 years.

XVIII

THE EMERGENCE OF THE PROFESSIONAL:

1850–1900

MILITARY TRENDS

A multiplicity of technological developments forced sometimes reluctant military professionals to broaden their horizons and to create new standards. Epitome of this new professionalism was Prussian **Helmuth von Moltke.** He was a competent, sometimes brilliant, soldier who guided rather than led, and his reputation has paled somewhat in the face of growing modern opinion that during the latter half of the 19th century two men alone displayed military genius ranking them among the great captains of the world: **Ulysses S. Grant** and **Robert E. Lee.**

Though neither was completely successful in the effort, these two surpassed their contemporaries in coping in their very different ways with the unprecedented changes in warfare brought about by the Industrial Revolution. The new technological means for waging and supporting warfare meant that for the first time the French Revolutionary concept of the "nation in arms" had been eclipsed by a new concept: the "nation at war." With the national economies on both sides fully integrated into their respective war efforts, the American Civil War was truly the first modern war, and the first "total" war in the modern sense.

It was a period of colonial expansion and conflict of interest among the great powers. War raged practically all over the world, except in the British Isles and in the Scandinavian Peninsula. But the expert juggling of British diplomacy, self-interested in the maintenance of the balance of power, went far to prevent the numerous minor conflicts from spreading into international conflagrations, such as those of the periods immediately preceding and following. Queen Victoria's reign would go down in history as that of the "Pax Britannica."

Military Theory

The example of Napoleon Bonaparte still dominated military theory on both sides of the Atlantic Ocean. In the United States, **Dennis Hart Mahan** was still the apostle of Napoleonic

concepts; more than any other single factor, Mahan's teaching influenced the strategical and tactical thinking of the leading generals on both sides of the American Civil War.

In Europe the seed of the famous—and much misunderstood—Prussian Army General Staff had been planted by Frederick the Great, and its early growth had been nurtured by both Scharnhorst and Clausewitz. But the quiet organizing genius of Moltke brought that staff of its full flower in the second half of the 19th century. The combination in the Prussian General Staff of scholarly research, meticulously detailed planning, and thorough indoctrination in a logical concept of war was the major factor in stunning victories over Austria and France, causing Prussia to be acknowledged as the leading land military power of the world. That Prussia and Germany still held this position at the end of the century was due mainly to Moltke's great successor, **Alfred von Schlieffen.** Military historian Schlieffen's studies of ancient and modern campaigns corroborated the theories of Napoleon and of Clausewitz. He developed a simple, flexible strategic concept for a two-front war against France and Russia. In the hands of a less able successor, this so-called Schlieffen Plan ironically was to become the very epitome of rigidity.

Among the significant military writings of this period, the works of the French officer **Charles J. J. J. Ardant du Picq** were a major contribution to the development of modern combat theory. Killed in battle at the age of 49 in 1870, Colonel Ardant du Picq was chiefly concerned with the behavorial element in warfare. His masterpiece, *Battle Studies* (published posthumously), had immense influence on the generation of officers who led France in World War I, particularly Marshal **Ferdinand Foch.**

By the end of the century an American sailor was beginning to be acknowledged throughout the world as the leading military theorist of the age. **Alfred Thayer Mahan** had become the Jomini and Clausewitz of naval theory through lucid, logical analyses of the fundamentals of sea power. His theories, which related naval strength to national policy and strategy, were as respected by soldiers, politicians, and emperors as they were by naval colleagues of all nations. Interestingly, his writings were appreciated and respected in Europe before they were thoroughly understood by his own countrymen.

The Impact of Technology

Steam power became a critical consideration in national strategic planning. This impact of steam power on nautical affairs stimulated Mahan's writings and caused them to be influential in maritime nations.

For such countries the location of a coaling station not only became a limiting factor but also could directly determine the direction and extent of colonial expansion. Two examples were provided in the Spanish-American War. Lacking coaling stations, Admiral **George Dewey** could move his squadron from Hong Kong to Manila only by the outright purchase of British colliers and their cargoes. The long cruise of the U.S.S. *Oregon* from San Francisco around Cape Horn to join the fleet in Cuban waters (nearly 13,000 nautical miles) sparked the later American acquisition of the Panama Canal Zone and the construction of the canal itself.

The railroad became a logistical weapon for both sides during the American Civil War, an example used later to good advantage by the Prussian General Staff in its preparations for the Franco-Prussian War.

Another far-reaching development was the electric telegraph and cable, affecting both strategy and tactics. Beginning with the Crimean War, this was a two-edged sword so far as the overall direction of war was concerned. Cable and telegraph ensured rapid communication between field commander and government; they also permitted political armchair strategists to hinder field operations. Almost instantaneous transmission of war correspondents' dispatches, immediately appearing in the daily press, brought a new threat to security by revelation of operational plans and moves. This was most pernicious in the American Civil War. But news dispatches also promoted the common soldier from a digit to the status of an individual by emblazoning his hardships for all to see. The result was improvement of the soldier's welfare and of his morale.

Tactically, the field telegraph augmented other improved means of signal communication: the semaphore "wigwag" flags and the heliograph, which already ensured contact between field headquarters and lower commands, and spanned hostile-held terrain to link with isolated elements and reconnaissance detachments. Long before the end of the Civil War the telegraph was in common use in the Union armies and less extensively in Confederate forces. Telegraph wires linked aerial observers in balloons with the ground. The wires also created a communications web, including—as Grant wrote—"each division, each corps, each army and . . . my headquarters."

In addition to the direct effect of new and improved instruments of warfare, industrialization had other significant consequences in the conduct of war. The change from an essentially agricultural economy released a greater percentage of national man power to both the armed forces and to the developing war industries. Larger armies could be raised and supported than had been true in the past, while the development of steam transportation and the electric telegraph facilitated the movement and control of these larger forces.

But it was in the refinement and proliferation of weapons that the new technology had its greatest effect.

Weapons and Tactics on Land

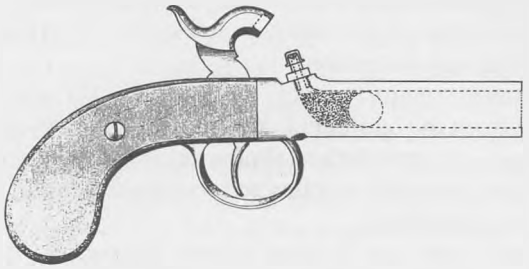
The transition from muzzle-loading to breechloading artillery pieces was complete by the end of the period. So, too, was the refinement of armor-piercing and lighter-walled antipersonnel projectiles. Solid shot became a thing of the past; elongated, streamlined shells, with explosive charges, detonated by improved fuses—both time and impact—were the rule. The smoothbore cannon—which was the predominant artillery type both ashore and afloat as the period opened—had been replaced by the rifled gun, a change made more reluctantly, perhaps, in the world's navies than in their armies. The problem of cannon recoil had been solved, first by ingeniously controlled springs, and later by more sophisticated hydropneumatic apparatus.

For coastal defense the disappearing gun had come into being, its principal proponent the United States. It rose by means of counterweights to fire from above its parapet and then sank by force of recoil, controlled by pneumatic brakes.

In small arms, the single-shot muzzle-loader was replaced by the repeating magazine rifle, and the Minié ball gave way to the elongated conical bullet. The range, accuracy, and volume of fire of individual weapons were greatly increased. Though its potentialities were still scarcely realized, the machine gun had become an important weapon in the arsenals of all nations.

Smokeless powder had become the generally accepted propellant for small arms as well as artillery by the end of the century, facilitating concealment in broken country.

Field mines and booby traps were used in the American Civil War by the Confederates as early as 1862, at the opening of the Peninsula Campaign. Though the ideas were not entirely new, modern prototypes of trench mortars and hand grenades were used by both sides of that conflict in the extended trench warfare of 1863–1865.



Percussion cap pistol

Firing assembly of a percussion cap rifle, with a percussion capper and eight percussion caps (lower left), and a powder flask above a syringe-like powder measure on a chain

The overall effect of the new weapons was to introduce an entirely different order of firepower on the battlefield, where improved weapons combined with more numerous armies to sweep the front lines with unprecedented hails of iron, steel, and lead missiles. This in turn produced a far-reaching tactical revolution, which was most dramatically and most clearly manifested in the American Civil War.

Neither infantry nor cavalry could attack frontally in the face of the combined firepower of artillery and small arms. There were four immediate effects. First was dispersal; battlefield

formations became progressively more spread out and more flexible. Next, maneuver became the order of the day as men sought for decision without suicidal frontal assaults.

Trench warfare was perhaps the most obvious manifestation of this tactical revolution. Field fortifications—heretofore reserved almost exclusively for siege operations—became an integral aspect of infantry tactics. Troops under fire immediately dug in. Foxholes and rifle pits were soon expanded into trench systems, which became the bases for maneuver by both sides. It was in the utilization of improvised field fortifications that Lee surpassed all of his contemporaries; most of his victories were the result of his ability to use hasty entrenchments as a base for the aggressive employment of fire and movement.

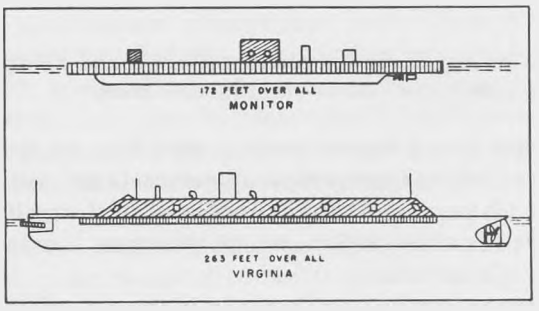
Another manifestation was in cavalry combat. By the end of the period cavalry shock action had practically disappeared from the battlefield. With frontal charges against infantry unthinkable, mounted cavalry operations were limited almost entirely to screening and reconnaissance missions. The horse, however, provided mobility to mounted riflemen, whose normal mode of combat was as dismounted skirmishers.

The lessons of 1861–1865 were not learned readily elsewhere. It took their own bitter experiences for Europeans to realize the significance of the American example. A decade passed before the old order fell in a welter of broken men and horses during the Franco-Prussian War. The last gasps of the old order came in British colonial wars in Africa. By participating in the climactic cavalry charge at Omdurman, young Winston Churchill experienced the glory of the premodern era. A few years later, as the century was closing, he recognized that the era had ended, when massed British infantry were slaughtered by mobile Boer sharpshooters.

Weapons and Tactics Afloat

At Sinope the Russian Navy first showed the devastating potentialities of improved naval ordnance by smashing a Turkish fleet with shell projectiles. Armored floating batteries were also employed in the Crimean War. A logical evolution led to the creation of the French armor-plated *Gloire*—causing a panic in Britain, which forced the reluctant Admiralty to rush construction of its own first armored warship, HMS *Warrior*.

But it was the armor-plated Confederate *Merrimack* (CSS *Virginia*) which tolled the bell for wooden warships; one day later the USS *Monitor* bowed in the age of turret ships. Naval



USS *Monitor* and CSS *Virginia*

architects here and abroad soon solved the problem of wedding Ericson's revolving battery—introduced on the *Monitor*—to a seaworthy armored hull. By the end of the period the battleship was queen of the seas.

Confederate ingenuity also evolved the submarine, though not until the turn of the century would the gasoline engine and electrical storage battery solve the problem of propulsion. The ram, Civil War rebirth of an old device, enjoyed a fleeting popularity, but soon proved of dubious tactical value, though its vestigial influence lingered long in naval design.

Submarine mines (originally called "torpedoes") came into common use in the Civil War, and were used effectively by the Confederates to protect their ports and coastal defenses from Union warships. The South and North both used such mines offensively by attaching them to the ends of spars or booms attached to submarines or other small craft. By the end of the century, these spar torpedoes had been transformed by compressed-air self-propulsion into a much more lethal threat as prototypes of the modern torpedo. With this development there came into being in the world's navies the fast but fragile torpedo boat, and close on its heels the larger, faster torpedo-boat destroyer.

In combat the line ahead (ships in single file) was still the normal tactical formation and broadside fire was optimum. But the tacticians were toying with "crossing the T," a new version of raking and of Nelsonian massing of forces, in which (by superior speed) a fleet in single file could concentrate its fire upon the lead ships of the slower line. And an important function of the speedy torpedo boat and the destroyer was the disruption of the hostile line by sinking individual ships.

Naval ordnance, striding from the muzzle-loader to the recoil-controlled breech-loader, dallied for a brief moment with the dynamite gun—hurling its charge by compressed air. By 1898, one vessel of the U.S. Navy—the *Vesuvius*—was armed with this novel piece. However, advances in explosives—TNT and similar substances which could be propelled by conventional gunpowder—put the relatively shortranged dynamite gun in the discard (although on land in the Spanish-American War one such piece was briefly used). All naval ordnance specialists were simultaneously developing the armor-piercing projectile as the answer to armored warships.

MAJOR EUROPEAN WARS

Crimean War, 1853–1856

1853. Prelude. A monkish squabble over jurisdiction within the Holy Places of Turkish-ruled Jerusalem brought France (protector of the Catholics) and Russia (protector of the Orthodox clergy) into diplomatic controversy, with Turkey squeezed between. Czar **Nicholas I** saw an opportunity to dominate Turkey and secure entrance into the Mediterranean through the Turkish Straits. A Russian army began occupation of Turkey's Rumanian principalities (July). France had no intention of letting her rival wax more powerful in the Near East, while England opposed any change in the balance of power. Accordingly, British and French fleets arrived at Constantinople to encourage the Turks.

1853, October 4. Turkey Declares War. A Turkish army under **Omar** Pasha (Croatian-born **Michael Lattas,** a good soldier) crossed the Danube.

1853, November 4. Battle of Oltenitza. Omar defeated the Russians in southern Rumania, near the Danube.

1853, November 30. Destruction of Turkish Flotilla at Sinope (Sinop). Russian Admiral **Paul S. Nakhimov,** with 6 ships of the line, 3 frigates, and several smaller craft, attacked Turkish Admiral **Hussein** Pasha's 7 frigates, 3 corvettes, and 2 small steamers lying in the harbor. The Turkish flotilla was destroyed in a 6-hour engagement, the outnumbered and outgunned Turks fighting to the end. Significant aspect of the encounter was the enormous damage done by the Russian shell guns—a new type of naval ordnance making its first bow in warfare.

1854, January 3. Franco-British Fleet in the Black Sea. Both nations, forgetting momentarily their mutual jealousies and suspicions, then allied themselves with Turkey to protect the Turkish coast and shipping (March 12).

1854, March 20. Russians Cross the Danube. A strong Russian army under Marshal **Ivan Paskievich** invaded Bulgaria.

1854, March 28. British and French Declaration of War. They then concluded a mutual alliance (April 10). A Franco-British expeditionary force moved to Varna (Stalin) to assist in repelling the Russian invasion, which had now reached and was besieging Silistria (Silistra). The British frigate *Furious* having been fired on while trying to enter Odessa under a flag of truce (April 16), a Franco-British squadron bombarded the shore batteries, inflicting serious damage.

1854, April 20. Threatened Austrian Intervention. Austria massed an army of 50,000 men in Galicia and Transylvania, after entering into a defensive alliance with Prussia against Russia. With Turkish permission, Austria moved into Turkey's Danube principalities. In face of this threat, Russia abandoned the siege of Silistria (June 9) and later withdrew her forces from the area (August 2), but rejected the joint peace conditions set by England, France, Prussia, and Austria (Vienna Four Points, August 8) that Russia must keep hands off the Ottoman Empire.

Crimea and the Siege of Sevastopol

1854, September. Planned Invasion of the Crimea. The Russian evacuation of the Balkans achieved the principal objective of the allied expeditionary force at Varna, which was now rotting with cholera. But London and Paris decided that Russian power in the Black Sea must be broken by crippling the great naval base at Sevastopol. The expedition was decided upon without any consideration of the magnitude of the task, and without any adequate prior reconnaissance. British Major General **Fitzroy James Henry Somerset, Lord Raglan,** 66, and French Marshal **Armand J. L. de Saint-Arnaud,** 53 (who was already seriously stricken by cholera), commanded jointly.

1854, September 7. Departure from Varna. The allied force was transported to the Crimean Peninsula in a great convoy of 150 warships and transports. Typical of the haphazard conduct of campaign was the fact that not until the convoy lay offshore was any decision made as to the point of debarkation. Equally typical was the fact that no attempt was made by Prince **Alexander Sergeievich Menshikov,** Russian commander in the Crimea, to oppose the landing.

1854, September 13–18. Landing at Old Fort. This was on an open beach with no harbor, some 30 miles north of Sevastopol. Bad weather and the weakened condition of the troops combined to delay the debarkation.

1854, September 19. Advance toward Sevastopol. The expeditionary force—51,000 British, French, and Turkish infantry, 1,000 British cavalry, and 128 guns—moved south, the British on the landward flank. The fleet kept pace along the seacoast.

1854, September 20. Battle of the Alma. Menshikov, with 36,400 men, elected to defend on the bank of the Alma River, his left flank refused out of range of the allied fleet, his right anchored on a hill ridge. The allied attack crossed the river without much difficulty, but the British then found themselves faced by a steep slope, which was carried only after a hard fight. Menshikov then withdrew without mo-

lestation. Allied losses (mostly British) were about 3,000 men; Russian, 5,709.

1854, September 25–26. Movements around Sevastopol. The allies were in sight of Sevastopol, whose harbor channel had been blocked by sunken ships, rendering naval cooperation in an assault from the north impossible. Without a base, siege was impractical. The only solution was a flank march around the fortress to the south side, and establishment of bases at the ports of Kamiesch and Balaklava. As the allies, abandoning their line of retreat, made the 15-mile circuit with their flank unmolested, Menshikov left a garrison within the works and wisely marched the remainder of his army north to Bakhchisarai to join Russian reinforcements now moving in. Actually, the opponents marched across one another's front without knowing it. The allied army safely made the circuit and regained contact with the fleet, the British based on Balaklava and the French on Kamiesch.

1854, October 8–16. Siege of Sevastopol Opens. The southern defenses of Sevastopol had not yet been fully completed. An immediate assault might have been successful. Instead, while the British contingent and one French army corps covered the operation from attack by the Russian field army, a siege corps was extemporized and investment began. St. Arnaud died of cholera (September 29) and General **François Certain Canrobert** succeeded to command. By October 17, when the first bombardment opened, Colonel **Frants E. I. Todleben,** the Russian chief engineer, had done an amazing job of fortification. The bombardment and counterbattery fire caused serious losses on both sides, but no permanent damage to the works. The port was blockaded by the fleet of Admiral Sir **Edmund Lyons.**

1854, October 25. Battle of Balaklava. Menshikov's field army attempted to drive between the besieging lines and the British base at Balaklava. A penetration was made and some Turkish guns taken. Russian cavalry attempting to exploit the breakthrough were repelled by the British Heavy Cavalry Brigade and the stand of the 93rd Highlanders in "the thin red line." The Light Cavalry Brigade, through circumstances never satisfactorily explained, now charged the Russian field batteries to their front, riding up a narrow, mile-long valley, exposed at the same time to fire from the captured Turkish guns on their right flank and other Russian guns on their left. They reached the guns, rode through them, clashed with Russian cavalry beyond, and then the survivors rode back through the cross fire of the "Valley of Death" made famous by Tennyson's poem. The charge will stand forever as a monument to gallant soldiers doomed to death by the arrant stupidity of Brigadier General **James Thomas Brudenell, Lord Cardigan,** commanding the brigade, and Major General **G. C. Bingham, Lord Lucan,** commanding the Cavalry Division. The return of the survivors was assisted by the equally gallant charge of the 4th French **Chasseurs d'Afrique,** who rode down part of the flanking Russian artillery. Of 673 mounted officers and men entering the 20-minute-long Light Brigade charge, 247 men and 497 horses were lost. Fitting epitaph was the remark of French General **Pierre F. J. Bosquet,** witnessing the charge: "It is magnificent, but it is not war." The Russians retained possession of the Vorontosov ridge, commanding the Balaklava-Sevastopol road. The allies retained Balaklava.

1854, November 5. Battle of Inkerman. Menshikov again tried to break through between the besieging troops and their field support. The brunt of the action fell on the British, in an all-day struggle during which all coordinate control was lost on both sides. The arrival of Bosquet's French division finally tipped the balance, and Menshikov withdrew, with loss of 12,000 men. The allied loss—mostly British—was 3,300 men.

1854, November–1855, March. Dismal Winter. Theoretically, the allies, with sea communications unhindered, should have had little difficulty in their siege operations, whereas the Russians, although their northern line of communications was open, had a long, tenuous overland supply problem. Actually, the allies were totally unprepared for a winter campaign, while a heavy storm (November 14), which

wrecked some 30 transports lying at Balaklava, destroyed most of the existing stores of rations, forage, and clothing. To make matters worse, the Russian field army still sat astride the only paved road from Balaklava to the siege lines. Wagon haulage over the muddy plain was almost impossible. The British troops, without shelter or adequate winter clothing, were also actually semistarved. Cholera raged; men died like flies in shockingly inadequate medical facilities. By February, British effectives were down to 12,000. Canrobert, whose administration was much better handled, had 78,000 men in hand, and took over part of the British sector. But the cable and telegraph were pouring out the grim story as seen by **William Howard Russell,** war correspondent for the London *Times.* An outraged British public forced the fall of **George H. Gordon, Lord Aberdeen**'s government, with immediate remedial results, one of the most important being the establishment of proper medical and hospital facilities under **Florence Nightingale.** Meanwhile, despite serious casualties to the working parties from the allied bombardments, Todleben's incessant activity and engineering genius countered the damage done by the allied guns, and the defensive works grew in strength.

1855, January 26. Arrival of a Sardinian Contingent. These 10,000 troops were commanded by General **Alfonso Ferrero di La Marmora.**

1855, January–February. Improved British Logistical Support. A new road and a railroad over the mud plain linked the Balaklava base to the siege corps.

1855, February 17. Battle of Eupatoria (Yevpatoriya). The Russian field army, now commanded by Prince **Michael Gorchakov** (replacing Menshikov), made a halfhearted attempt to interfere. This was repulsed by the Turks. The siege lines drew closer.

1855, April 8–18. Easter Bombardment. A major part of the Russian defenses was destroyed. Russian troops drawn up to meet an expected assault lost more than 6,000 men. But the attack never came. Allied field commanders and home governments were wrangling via telegraph over conduct of the operations. Canrobert, enraged by the interference, resigned his command. His successor, General **Aimable Jean Jacques Pélissier,** a veteran of the Algerian wars like his predecessor, brought new vigor to the allied operations.

1855, May 24. Capture of Kerch. A well-handled joint expedition cleared the Sea of Azov (Azovskoe More) and severed Russian communications with the interior.

1855, June 7. Allied Assault. Part of the Russian outer defenses were seized; there were 8,500 Russian casualties and about 6,900 allied.

1855, June 17–18. Renewed Allied Assault. The objectives were 2 principal Russian strong points, the **Malakoff** and the **Redan.** Lack of coordination brought utter failure. The French attack on the Malakoff dwindled into an indecisive fire fight, while the British assault on the Redan was caught in the crossfire of 100 heavy guns and thrown back with great loss. The allies lost 4,000 men in this effort, the Russians 5,400. Raglan, heartbroken, died 10 days later, General Sir **James Simpson** succeeding him.

1855, July–August. Attrition. Russian losses through bombardment were draining Sevastopol's strength—some 350 a day during July. The Russian field army decided to make one final effort to break through the allied curtain between Balaklava and the fortress.

1855, August 16. Battle of the Traktir Ridge. Two corps of Gorchakov's army were thrown against some 37,000 French and Sardinian troops on the height above the Chernaya River. A 5-hour combat ended in Russian defeat, ending the last hope for relieving Sevastopol, despite the dogged determination of the Russian infantry. Russian losses were 3,229 dead and some 5,000 wounded. The allies lost about 1,700 killed and wounded.

1855, September 8. Storming of the Malakoff. The one perfectly planned and executed operation of the war. After an intense bombardment (September 5–8) softened the defenses, the French launched a long-prepared mass assault by Bosquet's entire corps. Meticulous attention to detail included a last-minute check by staff officers to ensure that each of the 3 assaulting columns would have easy egress

from the trenches, now only 30 yards from the Russian strong point. To preserve secrecy, no signal was given for the assault. Synchronization of watches—for the first time, perhaps, in military history—governed the move. On the stroke of noon the corps surged forward, each column led by its commanding general, while Bosquet established his command post on the outermost French trench. The assault gained the outer wall and swept into the inner defenses, where the Russians disputed every casemate and traverse in hand-to-hand combat. By nightfall the Malakoff was safely in French hands. A simultaneous British assault on the Redan was thrown back, but from the Malakoff the French now turned their fire on the Russians in the Redan and drove them out with heavy loss. That night Gorchakov evacuated Sevastopol, after blowing up the remainder of the fortifications. Next day the allies occupied the city. In all, the allies lost more than 10,000 casualties in this final assault, the Russians 13,000.

1855, October 16. First Appearance of Ironclad Warships. Bombardment of Kinburn, at the mouth of the Bug River, was anticlimactic, but 3 French steam floating batteries made history, demolishing heavy masonry works while Russian round shot and shell spent themselves harmlessly on their iron plates at ranges of 1,000 yards or less.

The Caucasus Front, 1854–1855

Severe but indecisive fighting between Turks and Russians took place in the Caucasus and Transcaucasus. The principal operation of note was the **Siege of Kars** by Russian General **Michael Muraviev.** The Turkish garrison, commanded by Sir **William Fenwick Williams** (Williams Pasha), British commissioner and a lieutenant general in the Turkish Army, repelled a savage Russian assault (September 29, 1855). Omar Pasha, after the fall of Sevastopol, took a force of 15,000 men to the relief of Kars, but the fortress succumbed to starvation and disease before his arrival, Williams surrendering (November 26, 1855).

Naval Operations in the Baltic

1854, August 7–16. Landing on the Alands. A French squadron landed 10,000 men under General **Achille Baraguay d'Hilliers** at Bomarsund, Aland Islands. After an 8-day siege, during which naval gunfire from Sir Charles Napier's allied fleet took joint part, the 2,400-man garrison surrendered and the fortress was destroyed.

1855, August 7–11. Bombardment of Sveaborg. A Franco-British fleet, after demonstrating before the fortress of Kronstadt (Kronshtadt) bombarded Sveaborg (fortress in Helsinki harbor) without success.

1856, February 1. Preliminary Peace Conditions. Agreed to at Vienna. Final ratification took place at the Congress of Paris (February 28–March 30).

COMMENT. *The outstanding aspect of the war was its abysmal mismanagement on both sides, featuring indifference in governments and senility and incompetence on the part of field commanders. Russia, fighting England, France, Turkey, and Sardinia, lost—from all causes—some 256,000 men. The allies lost about 252,600. Actual Russian battle deaths were an estimated 128,700; those of the allies, 70,000. Disease—mainly cholera—accounted for the rest. The combatants themselves displayed raw courage under great handicaps. Revolutionary was the awakening of national interest in the welfare of the troops, particularly so in Great Britain, where war correspondents' accounts spread the news of shocking conditions on the fighting front.*

War of Austria with France and Piedmont, 1859

1859, March 9. Piedmont (Kingdom of Sardinia) Mobilizes. King **Victor Emmanuel II** and his prime minister, Count **Camillo Benso di Cavour,** saw an opportunity to renew the

struggle for Italian independence (see p. 846). They had been assured, by a secret treaty, of French support in a war to expel Austria from north Italy. Austria also mobilized (April 9).

1859, April 23. Austrian Ultimatum. Immediate Piedmontese demobilization was demanded. This provided France an excuse to intervene, and Piedmont rejected the ultimatum.

1859, April 29. Austrian Invasion of Piedmont. The half-hearted movements of General Count **Franz Gyulai** gave time for French troops to arrive.

1859, May 30. Battle of Palestro. This was a Piedmontese victory. The allied forces, under personal command of **Napoleon III,** then invaded Lombardy.

1859, June 4. Battle of Magenta. In a series of blundering meeting engagements, the inept commanders on both sides managed to engage portions of their respective commands: 54,000 French against 58,000 Austrians. The *élan* of the French troops, despite the stupidity of command, brought them victory. French losses were 4,000 killed and wounded and 600 missing. The Austrians lost 5,700 killed and wounded and 4,500 missing. Gyulai retired toward the protection of the famous Quadrilateral: the fortified cities of Mantua, Peschiera, Verona, and Legnago. Napoleon and King **Victor Emmanuel** entered Milan in triumph (June 8).

1859, June 24. Battle of Solferino. Austrian Emperor **Franz Josef,** dismissing Gyulai, assumed personal command and moved to meet the Franco-Piedmontese armies. Both sides were approximately equal in number—about 160,000 strong. Again both blundered into a series of meeting engagements along the Mincio River in which the respective high commands lost all control of their forces. Again the spirit of the French soldiery and the vigor of individual corps commanders—French generals **Marie E. P. M. de MacMahon,** François C. Canrobert, **Adolphe Niel,** and Achille Baraguay d'Hilliers—decided the issue after a sanguinary all-day battle. The Austrian Army was saved from total rout by the dogged rear-guard action of General **Ludwig A. von Benedek.** Allied losses totaled 17,191 (5,521 Piedmontese); Austrian, 22,000.

1859, July 11. Conference of Villafranca. Napoleon and Franz Josef agreed that most of Lombardy (save for the fortress cities of Mantua and Peschiera) should go to Piedmont. Austria was to keep Venetia, protected by the Quadrilateral. This was ratified by the **Treaty of Zurich** (November 10). Most Italians, who wanted Venetia under Italian control, were enraged. The entire Italian peninsula continued in revolution, which gradually coalesced about Piedmont (see p. 920).

Austro-Prussian (Seven Weeks') War, 1866

1866, June 14. Austrian Denunciation of Prussian Power Politics. At the Frankfurt Diet, Austria condemned Prussia's occupation of Holstein (see p. 919) and Chancellor **Otto von Bismarck**'s secret treaty with France. Most German states—including Bavaria, Saxony, and Hanover—concurred. Bismarck, who had concluded (April 8) an offensive-defensive treaty with Italy, dissolved the Germanic Confederation and mobilized for immediate war against Austria and her south German supporting states. Italy declared war on Austria (see p. 921 for operations).

1866, June 16. Von Moltke Strikes. Utilizing the railway net to fullest capacity, Moltke caught his opponents off balance. General **Vogel von Falkenstein** with some 50,000 men entered Hanover on the west, while Prussian Crown Prince **Friedrich Wilhelm**'s Second Army (near Landeshut), Prince **Friedrich Karl**'s First Army (near Görlitz) and General **Karl E. Herwarth von Bittenfeld**'s Army of the Elbe (near Torgau) moved south through Silesia and Saxony. Moltke's scheme was to advance on the widest of fronts and concentrate on the battlefield, subordinates being given the greatest latitude in initiative, provided it be offensive. The strategy effected surprise, but had the drawback of a succession of

meeting engagements where reinforcements built up piecemeal, moving to the sound of the guns.

1866, June 27–29. Battle of Langensalza. In western Germany, General **Alexander von Arentschildt**'s Hanoverian army, repelling an attack by one of Falkenstein's widespread corps, found itself surrounded by Prussian battlefield concentration and was forced to surrender. Meanwhile, to the southeast, the vital contest of the war was about to take place.

1866, June–July. Converging in Bohemia. Moltke's intelligence reports indicated Austrian intention to concentrate northwest of Olmütz (Olomouc). His eastern armies, nominally under the over all command of King **Wilhelm I,** converged on Gitschin (Jičin). The Army of the Elbe occupied Dresden (June 19), then advanced to unite with the First Army in the Bohemian mountain passes. The 2 armies then brushed back advance Austrian elements and retreating Saxons first at **Münchengrätz** (June 27) then at **Gitschin** (June 29). The Second Army engaged in 2 sharp encounters at **Trautenau** (Trutnov) and **Nachod** (both June 27) and halted just east of Gitschin (June 30). General von Benedek, commanding the Austrians, and endeavoring to concentrate along the upper Elbe, north of Königgrätz (Hradec Králové), was more concerned with

subsistence than with combat. Moltke, who was in telegraphic touch with all his armies, sought for a Cannae (see p. 72). The Army of the Elbe was ordered to circle to the south and then attack north. The First Army would attack due east, while the Second Army, driving south down the Elbe Valley, would seal the rest of the circle. It did not work out quite that way. The converging Prussian armies totaled about 220,000 men; Benedek's army included 190,000 Austrians and 25,000 Saxons.

Battle of Königgrätz (or Sadowa), July 3, 1866

In a driving rain, the Elbe and First Armies attacked at dawn, but through a telegraphic failure the Second Army had not received Moltke's first attack order and did not move. Overeager, the Elbe Army did not extend its front sufficiently, and its advance crossed the path of the First Army. The confused Prussians were met by a savage Austrian counterattack and massed artillery fire. By 11 A.M. the Prussian advance had been checked and their reserves drawn into what had now become a densely packed frontal attack. Had the Austrians pressed home a cavalry charge at this time, the Prussians might have been driven from the field. But Benedek held his cavalry immobile.

Meanwhile, after a courier had galloped 20 miles to deliver the king's (really Moltke's) peremptory order to the crown prince, the Second Army moved up. At 2:30 P.M. its attack hit the Austrian northern sector, and at the same time the Prussian Guard reserve artillery, pushed forward brilliantly by Prince **Kraft zu Hohenlohe-Ingelfingen,** opened a devastating fire into the Austrian center. The superiority of the Prussian breech-loading needle rifle over the Austrian muzzle-loading rifle musket gave Moltke's infantry a decisive fire superiority. The entire situation changed. Benedek began a dogged withdrawal, covered by his artillery. The Austrians were decisively defeated, but not routed. Prussian losses were nearly 10,000 men; the Austrians lost 45,000, including 20,000 prisoners. Despite the Prussian victory, Königgrätz stands as an example of the dangers to be expected in a battlefield concentration, where success is dependent upon delicate coordination and timing.

1866, June–July. Operations in Italy. **(See p. 921).**

1866, July 5. French Mediation. Napoleon III, who had expected both contestants to wear themselves out in a long-drawn-out campaign, now offered mediation, which Bismarck accepted—on his own terms.

1866, August 23. Treaty of Prague. Austria was excluded from other German affairs; the German states north of the Main River would form a North German Confederation under Prussian leadership, the South German states, remaining independent, could form a separate confederation.

Franco-Prussian War, 1870–1871

Bismarck's diplomatic rally of the north German states into the anti-French North German Confederation was unexpected by Napoleon III. A Prussian effort to place a Hohenzollern prince on the Spanish throne in mid-1870 threatened France with the possibility of a 2-front war. Napoleon, thinking the French Army invincible, decided to precipitate a war he believed inevitable.

1870, July 15. French Declare War. Immediate mobilization followed in both countries. German mobilization and troop concentrations followed a well-directed plan, using the railway net to the full. French mobilization was haphazard and incomplete.

1870, July 16–17. South German States Join Coalition against France. Bavaria, Baden, and Württemberg began mobilization.

1870, July 31. Prussian Concentration and Plan. Three well-equipped German armies—380,000 men—were concentrated on the frontier west of the Rhine: the First, 60,000, under General **Karl F. von Steinmetz,** between Trier and Saarbrücken; the Second, 175,000, under Prince Friedrich Karl, between Bingen and Mannheim; the Third, 145,000, under Crown Prince Friedrich Wilhelm, between Landau and Germersheim. Nominally commanded by King Wilhelm I, the actual direction was that of General Moltke and his efficient general staff. Prussian intelligence had determined the complete French order of battle. The objective was the destruction of the French armies in the field, to be followed by capture of Paris. An additional 95,000 troops were held back until it was certain that Austria would not intervene.

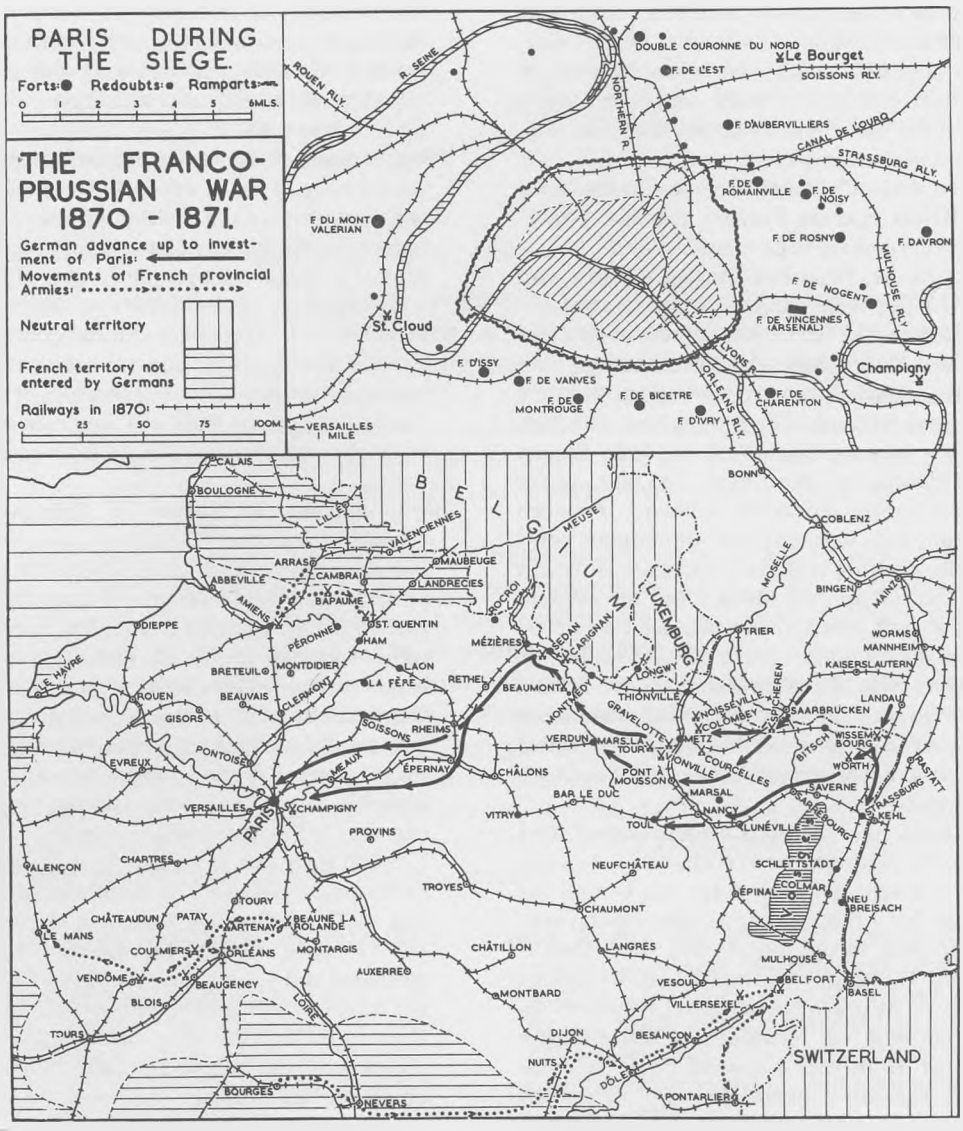
1870, July 31. French Concentration and Plan. By contrast, the French, some 224,000 men in 8 separate army corps, lay behind the frontier from Thionville to Strasbourg and echeloned back to the fortress line Metz-Nancy-Belfort. Transport was improvised, munitions scanty, units below war strength. Napoleon III, at Metz with his incompetent War Minister Marshal **Edmond Leboeuf,** was in command. The only plan was the cry of the French populace: "On to Berlin!" French intelligence was nonexistent. Napoleon ordered a general advance.

1870, August 2. Battle of Saarbrücken. This skirmish between units of the German First Army and French II Corps alerted the French only to the fact that the enemy was near. Napoleon belatedly directed the grouping of his troops in 2 armies: the Army of Alsace (consisting of the 3 southernmost corps under Marshal MacMahon) and the Army of Lorraine (the remaining 5 corps under Marshal **Achille F. Bazaine**). No army staffs existed; the 2 commanders had to function with their own individual corps staffs.

1870, August 4. Battle of Weissenburg. The crown prince's army, advancing in 4 columns, surprised the leading division of MacMahon's corps in early morning on the Lauter River. The other 2 corps had not yet joined him, although 1 division came up during the day. After a sharp action in which the badly outnumbered French lost 1,600 men killed and wounded and 700 prisoners, against German casualties of 1,550. MacMahon pulled back and concentrated defensively on a wooded plateau fronting on the Lauter.

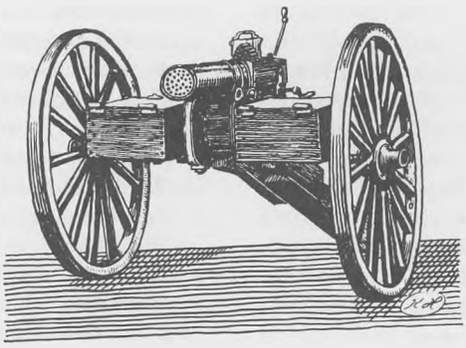
1870, August 6. Battle of Fröschwiller (Wörth). A German reconnaissance in force was repulsed by MacMahon's right. The crown prince built up his strength, overlapping both French flanks, with the main effort against the right, supported by the fire of 150 guns. MacMahon sacrificed his cavalry in gallant, suicidal charges, but was unable to halt the envelopment. He fell back on Fröschwiller, covered by his reserve artillery. There he clung until nightfall, then retreated without interference to Châlons-sur-Marne (August 7–14). Of 125,000 men and 312 guns engaged, German losses amounted to 8,200 killed and wounded and 1,373 missing. The French, of 46,500 men and 119 guns engaged, lost 10,760 killed and wounded and 6,200 prisoners. The Vosges barrier had been pierced, the road to Paris opened. The crown prince's army marched methodically toward the Meuse. The pattern of tactical operation had been set; the French chassepot rifle was superior to the needle gun in accuracy and volume of fire, but the French artillery, thanks to a mistaken reliance on machine guns (mitrailleuses) in place of cannon (about one-fifth of French artillery pieces were mitrailleuses), was far inferior to the German.

1870, August 6. Battle of Spichern. The German First and Second Armies moved into Lorraine, where Bazaine's army was spread in 3 areas, out of mutual supporting distance.



Attacked by Steinmetz and a corps of Friedrich Karl's army, General **Charles Auguste Frossard**'s II Corps held the heights of Spichern, southeast of Saarbrücken, for an entire day until threatened by envelopment on both flanks as the German piecemeal attack gradually built up. Bazaine made no attempt to reinforce him. French losses, of 29,980 men engaged, were 1,982 killed and wounded and 1,096 missing. The Germans, who had put 45,000 men into action, lost 4,491 killed and wounded and 372 missing. There was no pursuit by the exhausted Germans.

1870, August 6–15. German Pursuit. Moltke, sending the Third Army after MacMahon, followed hard on Bazaine's trail with the First and



Mitrailleuse

Second Armies, on the widest of fronts. The rapidity of the German advance detachments and the boldness of their operations gave the French no respite. The Prussian sweep was a strategic penetration between the 2 French armies, threatening Bazaine's line of communications.

1870, August 12. Napoleon Relinquishes Command. Shaken by these defeats, he surrendered all initiative and betook himself to Verdun. Leboeuf was relieved, General **Charles G. M. Cousin-Montauban,** Count of Palikao, replacing him. Bazaine, put in full command of a reorganized Army of the Rhine, fell back on the fortress of Metz, while MacMahon regrouped at Châlons.

1870, August 15. Battle of Borny. The Prussian First Army forced Bazaine to retire across the Moselle. He hoped to gain Verdun and a juncture with MacMahon. But the German Second Army, crossing at Pont-à-Mousson, cut him off. Still hoping to break out, Bazaine concentrated between the Orne and the Moselle, facing south with his left resting on Metz.

1870, August 16. Battles of Mars-la-Tour, Vionville, and Rezonville. Friedrich Karl, moving north at dawn across the Verdun-Metz highway, collided with the French. His leading corps at once attacked, while the remainder of the army hurried to the sound of the guns. A French cavalry charge was repulsed with much loss. The German offensive built up in the usual German pattern of concentration on the battlefield, and a piecemeal engagement developed into a full-blown battle. Successive cavalry charges on both sides ended in a cavalry duel in the afternoon; great masses of horsemen mingled in an almost aimless melee for nearly an hour until both sides broke off in exhaustion. Friedrich Karl finally assaulted along his entire front, pushing into Rezonville. Actually, the combat—or series of combats—was a drawn battle, for both sides bivouacked on the field after the hardest-fought engagement of the entire war. German losses were some 17,000; the French lost more than 16,000. Next day Bazaine, giving up hope for a breakout, retired unmolested on Metz, pivoting about his left flank, and his army of 115,000 men took up a new position, some 6 miles long, facing west on a ridge between the Moselle and the Orne. The bulk of the German armies—some 200,000 men, now between Bazaine and Paris—began movement into this area, only a reinforced corps remaining in observation east of Metz.

1870, August 18. Battle of Gravelotte-St. Privat. Moltke, who had taken personal charge of operations, attacked Bazaine, making his main effort on his own left with the Second Army. The walled village of **St. Privat la Montaigne** became the key point of combat. Friedrich Karl squandered the Prussian Guard in a series of charges against the hamlet, which was defended by Marshal Canrobert's VI Corps. From early morning until dusk, Canrobert's 23,000 men held out against 100,000 assail-

ants, while Bazaine ignored his requests for reinforcement. Then a Saxon corps reached Roncourt, to the north, outflanking the French and threatening their rear. After a house-to-house combat through the village, Canrobert pulled the remnants of his troops back into Metz. Meanwhile, on the German right, an almost independent combat was fought. Two German corps battered their way east of Gravelotte, then became entangled in a ravine beyond. Attempts at disengagement turned into panic, and hordes of refugees poured west through Gravelotte. A brilliant French counterattack was checked only by Hohenlohe-Ingelfingen's artillery and the personal efforts of Moltke, who led reinforcements and averted disaster. Not until midnight, when news of the success at St. Privat reached Moltke, were the Germans sure of victory. Had Bazaine made a general counterattack with the forces still at his disposal, he might have broken free. Instead, he remained passive, relinquishing all control to his corps commanders. Moltke, after waiting for a counterattack which never came, proceeded to seal him within his perimeter.

1870, August 21–28. Advance of MacMahon. MacMahon, meanwhile, responding to the frantic appeal of the government, moved out of Châlons with 120,000 men and 393 guns to the relief of Bazaine, his strength and movements widely advertised in the press. Napoleon III accompanied him. MacMahon's stupid choice of a northerly route invited a turning movement. Moltke accepted. While the German First Army and part of the Second—all under Friedrich Karl—invested Metz, the remainder of the Second Army—called the Army of the Meuse, under Crown Prince **Albert** of Saxony—struck west to cooperate with Friedrich Wilhelm, whose Third Army was driving rapidly through the Argonne Forest to bar MacMahon's advance.

1870, August 29–31. Engagements on the Meuse. MacMahon threw part of his army across the Meuse at Douzy. The Prussian Army of the Meuse, advancing on both sides of the river, forced him northward toward Sedan after sharp clashes at **Nouart** (August 29) and **Beaumont** (August 30). Another clash at **Bazeilles** (August 31), where MacMahon was wounded, forced the French into a bend of the river at Sedan itself. Again the Prussians lay between a French army and Paris. The crown prince, arriving from the southeast through Wadlincourt and Donchery on the left bank of the Meuse, crossed the river on ponton bridges and moved into the plain north of Sedan, completing the envelopment of the French army. Meanwhile, Bazaine's halfhearted attempt to break out of Metz was repulsed by Friedrich Karl (August 31).

1870, September 1. Battle of Sedan. General **Auguste Ducrot,** replacing MacMahon in command, found himself with his back to the Belgian frontier, while nearly 200,000 German troops under Moltke pressed in on the south, west, and north. In a desperate attempt to break out, the French cavalry was shattered by German infantry fire, while 426 German guns, ranged in a semicircle on the heights above Sedan, raked the French positions in a day-long bombardment. German cavalry charges were repelled in turn by the French machine guns (mitrailleuses). Thwarted in his northwesterly drive, Ducrot in the afternoon attempted a southerly assault. This was repulsed. By 5 P.M. the day was lost; the French army crowded into the fortress and town, which was pummeled by devastating artillery fire. General **Emmanuel F. de Wimpffen,** who had succeeded to command, urged the emperor to place himself at the head of his troops and make one last charge. Napoleon, refusing to have any more of his men sacrificed, now drove out under a white flag and surrendered as an individual to the King of Prussia. Wimpffen then surrendered the army: 83,000 men and 449 guns. French losses were 17,000; German, 9,000.

1870, September. German Advance on Paris. The war, it seemed, was over. Half of France's regular organized field forces had been captured, the other half immured in Metz. All that remained were the other fortresses studded along the eastern frontier—Strasbourg, Verdun, and Belfort being the most important. While German reinforcements methodically

went about reducing these, and the First and Second Armies tightened their iron ring about Bazaine in Metz, the Third Army and the Army of the Meuse rolled on toward Paris. But as they marched, all France flamed in an amazing demonstration of patriotic resiliency.

1870, September 4. The Third Republic. In Paris the empire toppled in popular uprising. A provisional government rose, with **Léon Gambetta** its torchbearer and General **Louis Jules Trochu** its president. Trochu, as military governor of the city, manned its forts with 120,000 hastily recruited soldiers (including many veterans, reservists, and 20,000 regular marine infantry), 80,000 *gardes mobiles* (untrained recruits under 30) and 300,000 highly volatile and anarchistic-minded *gardes nationales* (recruits between 30 and 50).

1870, September 19. Siege of Paris Begins. Moltke had no intention of squandering his troops in assaults upon the deep-sited and massive system of fortifications ringing the city in 2 belts. Elaborate siege works sealed Paris, King Wilhelm established his headquarters at Versailles, and Moltke waited for starvation to bring the great metropolis into his hands. Much to his astonishment, he found his line of communications harassed by *francs-tireurs* (guerrillas) and a new French army gathering in the Loire Valley. Gambetta, escaping from Paris by balloon—the sole link with the outside world—organized nationwide resistance from Tours (October 11), where the provisional government functioned. Moltke now found himself concurrently engaged in 2 major sieges, a field campaign, and a constant guerrilla warfare along a long line of communications—severely straining the efficient German war machine.

1870, October 27. Fall of Metz. Bazaine's army of 173,000 men surrendered after a 54-day siege; it lost more through the vacillation of its commander and by starvation than by force of arms. After the war Bazaine was court-martialed, convicted of treason, and imprisoned.

1870, October–December. French Initiative. Moltke at once utilized the besieging veterans in what had now become a large-scale operation in the Loire and Sarthe valleys as the inexperienced French Army of the Loire made several gallant but unsuccessful attempts to move to the relief of Paris. Fighting continued through the winter, marked also by harsh treatment of the guerrillas on the German line of communications.

1870, October–December. Operations around Paris. Despite famine, Trochu's forces harassed the besiegers. The task was complicated by the mutinous behavior of the *gardes nationales,* whose revolt (October 31) seriously compromised the defense. Two major sorties (November 29–30, December 21) were repulsed after some initial success.

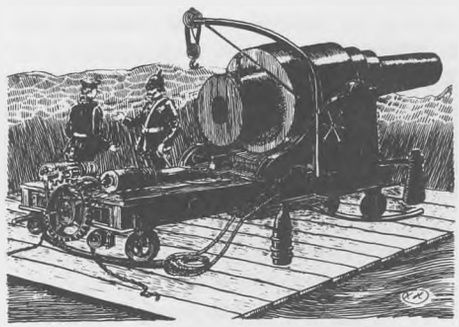
1870, November 9. Battle of Coulmiers. A French victory over a Bavarian corps caused German withdrawal from Orléans, but the French advance was then checked by Prussian reinforcements.

1870, December 2–4. Battle of Orléans. Two days of heavy fighting between General **Louis J. B. d'Aurelle de Paladines'** French army of the Loire and the army of Friedrich Karl ended with the unwise division of the French forces and reoccupation of Orléans by the Germans. While General **Charles D. S. Bourbaki** hurried to the east to assist the garrison of Belfort, which was under German investment, General **Antoine E. A. Chanzy** with the remainder of the Army of the Loire kept up a constant struggle against much superior force.

1871, January 5. Commencement of Bombardment of Paris. The German shelling caused more resentment than damage, while the war in the provinces continued unabated.

1871, January. Campaign in the North. General **Louis L. C. Faidherbe,** with mixed success, had opposed German efforts to pacify northern France in the **Battle of the Hallue** (December 23). He fought another drawn battle with General **August Karl von Goeben** at **Bapaume** (January 2–3). At the **Battle of St.-Quentin,** however, he was severely defeated by Goeben (January 19). Faidherbe withdrew in good order and repulsed German pursuit. He immediately prepared to renew his

offensive, adding to the alarm of the Germans, now seriously overextended by the unexpectedly effective French resistance in all of the outlying provinces.



Krupp gun

1871, January 10–12. Battle of Le Mans. In the Loire Valley, the Germans repulsed a desperate offensive effort by Chanzy. The untrustworthiness of his troops forced Chanzy to retreat to the west, but he still threatened the German hold on the Loire.

1871, January 15–17. Battle of Belfort. In the east, Belfort was the only important French frontier fortress still resisting. Bourbaki with a woefully inexperienced army of 150,000 men threw General **Karl Wilhelm F. A. L. Werder,** with 60,000 German besiegers, onto the defensive. Bourbaki attacked Werder's positions on the Lisaine River, within cannon shot of the fortress. Thanks to his own ineptness and that of **Giuseppe Garibaldi** (a volunteer fighting for France), Bourbaki was defeated after 3 days of furious fighting. German losses were nearly 1,900, French more than 6,000. Bourbaki failed in attempted suicide and was succeeded by General **Justin Clinchant.** With the arrival of a German reinforcing army under General **Edwin von Manteuffel,** Clinchant found himself pinned between the 2 German armies, with the Swiss frontier at his back. With 83,000 men he moved into Switzerland and hospitable interment at Pontarlier (February 1).

1871, January 26. Armistice at Paris. A third and final sortie of the Paris garrison had been decisively thrown back when the *gardes nationales* treacherously fired at their comrades (January 19). With all hope lost and the population on the verge of starvation, Trochu obtained an armistice.

1871, January 28. Convention of Versailles; Capitulation of Paris. All French regular troops of the garrison, and the *gardes mobiles,* became prisoners of war; the forts around the city were occupied by the Germans. At French request—unwisely, as it turned out—the terms did not include disarmament of the *gardes nationales,* who were supposed to become a police force to control the restive population of Paris. The victors marched triumphantly into the city (March 1).

1871, January–February. Belfort the Invincible. Colonel **Pierre M. P. A. Denfert-Rochereau,** commanding the fortress, had resisted siege since November 3, 1870. An engineer officer who had been in command of the ancient fortress for 6 years, he utilized the existing works, extended an outer line of resistance, and with a garrison of some 17,600 men, mainly *gardes mobiles* and *gardes nationales,* carried on an elastic defense. Not until late January were the Germans established within cannon range of the inner fortress. Even then, their progress was slow. Only upon an imperative order from the French General Assembly at Bordeaux (February 15) did Denfert-Rochereau capitulate. The garrison marched out with the honors of war—under arms, colors flying—with all their baggage and mobile equipment. In a siege of 105 days, French losses were some 4,800, while 336 of the townsfolk had been killed by bombardment. German losses were about 2,000. The defense of Belfort was an epic of the French Army.

1871, May 10. Treaty of Frankfurt. France agreed to cede Alsace and northwestern Lorraine to Germany, and to pay an indemnity of 5 billion francs ($1 billion); a German army of occupation was to remain in France until the indemnity was paid.

WESTERN AND CENTRAL EUROPE

British Isles

Great Britain's wars during the period took place overseas; they are noted in the regions directly concerned. Except for the Crimean War (see p. 903) and the Boer War (see p. 933), both of which demanded British man power and logistical support for their successful prosecution, the economy of the British Isles was hardly disturbed. However, British diplomacy and British objectives to maintain an equilibrium in the balance of power were directly concerned in almost every conflict which occurred.

The Low Countries

Neither Belgium nor the Netherlands was directly involved in warfare. Both nations successfully maintained their neutrality.

France

1851, December 2–4. Coup d'État. President (Prince) Napoleon Bonaparte seized control of Paris with army support. A brief republican uprising was suppressed in the "massacre of the boulevards." Napoleon seized dictatorial powers.

1852, December 2. Accession of Napoleon III. Establishment of the Second Empire brought a resurgence of Napoleonic militaristic spirit.

1854. Crimean War. (See p. 903.)

1859. War of France and Piedmont against Austria. (See p. 907.)

1861–1867. Mexican Expedition. (See p. 996.)

1870–1871. Franco-Prussian War. (See p. 910.)

The Paris Commune, 1871

1871, March 18–May 28. Reign of Terror in Paris. The *gardes nationales* overthrew municipal government and proclaimed the city a free town. Pillage and murder were widespread. The National Assembly fled to Versailles with the disarmed regular troops, and the metropolis was given up to the ravages of the mob. Not until the armies of Sedan and Metz—captured in the Franco-Prussian War (see pp. 914, 915)—returned to Versailles and had been rearmed was remedial action possisible. Under Marshal MacMahon, the Versailles troops went into action (April 2) from Fort Valerian on the left bank of the Seine. The Communards were swept progressively from the forts they held. The German army of occupation observed without interference.

1871, May 21–28. The Bloody Week. Entering Paris itself, the government troops fought the rebels from street to street, from barricade to barricade. Ruthlessly, as the troops advanced, the Communards murdered hostages they had held, among them the Archbishop of Paris. They burned the Hôtel de Ville and other prominent buildings and attempted to blow up the cathedral of Notre Dame and the Pantheon. The government troops were equally ruthless in suppressing the revolt. An estimated 20,000 Parisians were killed in the grim but not unexpected reprisals.

1873, September 16. German Evacuation. Payment of the war indemnity ended German occupation.

1873–1895. Indochina Expansion. For extension of the French colonial empire in the Far East, see p. 941.

1881. Occupation of Tunis. This was the most significant step of continuing French expansion in Africa.

1886–1889. The Boulanger Crisis. The threatened overthrow of the government by General **Georges Boulanger** never materialized, but widened the existing social fissures in France and in her army.

1894–1906. The Dreyfus Affair. Captain **Alfred Dreyfus,** a Jew, was accused and convicted of treason for espionage actually done by a fellow member of the general staff, Major Count **Charles Walsin-Esterhazy.** When the true facts were discovered, they were suppressed by the aristocratic faction in the army. Finally, thanks largely to the eloquence of **Émile Zola,** the true facts resulted in Dreyfus' exoneration and release from Devil's Island. The French Army was almost torn apart in the violent and bitter controversy.

Spain

Internal Disorders

1854, July. Revolution. Generals **Leopoldo O'Donnell** and **Baldomero Espartero** over threw the government of Queen-Mother **Christina,** who was forced to leave Spain. There followed 14 insurrection-wracked years.

1868, September 18. Revolution. The scandalous and despotic reign of Queen **Isabella II** prompted another uprising, led by Admiral **Juan B. Topete.** The rebel army, commanded by General **Francisco Serrano,** defeated loyal troops at **Alcolea** (near Cordova). The queen, fleeing, was formally deposed. The nation seethed in semianarchy, while a military junta headed by Generals Serrano and **Juan Prim** attempted to keep order.

1869, February. Meeting of a Constituent Cortes. The delegates voted for continuation of a monarchy. The throne was offered to a number of European royalty, who declined. Germany's efforts to place Prince **Leopold of Hohenzollern-Sigmaringen** on the Spanish throne helped to spark the Franco-Prussian War (see p. 910).

1871–1873. Amedeo I. The Duke of Aosta accepted the crown, but abdicated when the Spanish people refused to acknowledge his rule.

1873–1876. Renewed Carlist War. (See p. 842.) The nation was again torn by civil war, fought with extreme brutality.

1873–1874. Republican Proclamation. The **First Spanish Republic** was proclaimed by the radicals, only to collapse. Serrano returned to power. The Carlist disorders continued.

1874, November 24. Accession of Alfonso XII. The son of Isabella was placed on the throne through a military coup, and a constitutional monarchy was established.

1876, February. Flight of Don Carlos. Spain slowly returned to peace.

External Troubles

1859–1860. War with Morocco. Incidents along the frontiers of Spain's Ceuta enclave caused Spain to declare war on Morocco (October 1859). A Spanish army occupied Tetuan (February 1860). Under British pressure peace was restored (April), with Spain expanding its Ceuta enclave, receiving an indemnity, and gaining vague rights on Morocco's Atlantic coast which eventually became the Ifni enclave.

1861–1862. Intervention in Mexico. (See p. 996.)

1861–1864. Unsuccessful Annexation of Santo Domingo. (See p. 1002.)

1864–1865. War with Peru. (See p. 999.)

1865–1866. War with Chile. (See p. 999.)

1895–1898. Cuban Revolution. This culmination of decades of unrest led directly to the **Spanish-American War** (see p. 994) and Spain's loss of Cuba, Puerto Rico, and the Philippine Islands.

Prussia and Germany

1850–1871. Unification of Germany. Powerful economic, political, and cultural forces within fractionated Germany had long been

working toward unification. Realization of this dream of most Germans had been greatly hampered by the polarization of the many petty, jealous German states around the rival powers of Austria-Hungary, Prussia, and neighboring France. The accomplishment of unification, and the resultant emergence of the German Empire, were finally brought about primarily by the joint efforts of 2 Prussian aristocrats: politician Count Otto von Bismarck, chancellor of Prussia, and General Helmuth C. B. von Moltke, chief of the Prussian general staff. Bismarck's careful but bold machinations brought about 3 wars, which were efficiently implemented through the military genius of Moltke. Together, with Bismarck calling the tune, they exemplified Clausewitz' dictum that war is the extension of diplomacy.

Schleswig-Holstein War, 1864

Prussia, with Austria as a somewhat reluctant ally, settled by force the question of Schleswig-Holstein, which had long vexed the great powers (see p. 844).

1864, February 1. Invasion of Denmark. Prussian troops under Prince Friedrich Karl, with some Austrian assistance, swept northward through Schleswig-Holstein. The only major Austrian participation in the war was by the small naval squadron of Admiral **Wilhelm von Tegetthoff,** which broke a Danish blockade of the Elbe and Weser rivers.

1864, March 15–April 17. Siege of Dybböl. Friedrich Karl invested the Danish fortress, finally capturing it by assault. Danish losses were 1,800 killed and wounded and 3,400 prisoners. German losses were negligible. An amphibious assault then captured the island of Als.

1864, April 25–June 25. Truce. British efforts to bring about peace were foiled by Bismarck.

1864, June 26. Renewed Invasion of Denmark.

1864, August 1. Denmark Sues for Peace. She renounced her right to the disputed provinces to Prussia and Austria.

1864, October 30. Treaty of Vienna. This ratified the August agreement.

1865–1866. Friction between Austria and Prussia. Bismarck next moved to gain complete control of the captured provinces and to cement Prussian ascendancy in north Germany. He created a *casus belli* by pressures to oust his former Austrian partner from joint occupation of Schleswig-Holstein. The instrument lay in hand: the Prussian Army, revamped through the efforts of Moltke and Generals **Albrecht T. M. von Roon** (Minister of War) and Manteuffel. It was equipped with breech-loading artillery and small arms (the needle gun), and the brief Danish War had provided its baptism of fire.

1866. Austro-Prussian War. The second of Bismarck's steps toward his dream of a German empire.

1886–1870. Friction between France and Prussia. France was the major obstacle remaining between Bismarck and his dream. The wily chancellor secretly gained the support of the smaller German states, and jockeyed Napoleon III into premature action.

1870–1871. Franco-Prussian War. (See p. 910.)

1871, January 18. Foundation of the German Empire. The efforts of Bismarck achieved their goal when King Wilhelm of Prussia was proclaimed emperor of a united Germany (not including Austria) in the Palace of Versailles while the Siege of Paris was still in progress.

1879, October 7. Austro-German Alliance. Bismarck brought about a reconciliation of the 2 major Germanic powers in order to establish a powerful military bloc in Central Europe.

1881, June 18. Alliance of the Three Emperors. This loose alliance of the German, Russian, and Austro-Hungarian empires was anti-British and ostensibly pro-Turkish. The conclusion of the agreements was delayed by

the assassination of Czar **Alexander II** (March 13, 1881); Russian association in the alliance was halfhearted.

1882, May 20. Triple Alliance. This treaty, between Germany, Austria, and Italy, was primarily anti-French; it was, however, also anti-Russian and (save for the Italians) anti-British.

1890, March 16. Dismissal of Bismarck. Bismarck's alliance systems were the capstone of his career as empire builder. He was dropped from the Germanic helm by Kaiser **Wilhelm II.** The militarist young kaiser then extended German colonial hold in China, Africa, and—through military and economic assistance to Turkey—the Near East.

1895, June. Completion of the Kiel Canal. This gave Germany a strategic bypass between the North and Baltic seas and enabled her to avoid the Scandinavian straits.

Austro-Hungarian Empire

1850–1900. Austrian Involvement in the Balkans. Austria expanded her influence and power in the Balkans, generally at the expense of Turkey and, to a lesser extent, of Russia. Austrian influence was great in all of the Balkan nations that became independent during this period (see pp. 922–924).

1859. War with France and Piedmont. (See p. 907.)

1866. Seven Weeks' War. (See pp. 908, 921.)

Italy

1850–1870. Unification of Italy. The pressures for unification of Italy were similar to those which were working simultaneously in Germany. A complication—and also a stimulus to cohesion among volatile and suspicious Italian patriots—was the continued occupation of most of north Italy by the Austro-Hungarian Empire, and the consequent political, economic, and military predominance of Austria over the entire Italian peninsula. Piedmont (Kingdom of Sardinia), most stable of the Italian states, became the nucleus of efforts to end Austrian predominance. The premier of Piedmont, Count **Camillo Benso di Cavour,** whose interests initially were solely for increasing the power and prestige of his small country, became the architect of a new state. In this effort he was soon overshadowed in the public mind by his principal instrument, the Italian patriot and soldier of fortune, Giuseppe Garibaldi.

1858, July 20. Alliance of France and Piedmont. Having gained British and French good will by joining with them in the Crimean War (see p. 906), Cavour brought about a secret formal treaty with Napoleon III, whereby France would join Piedmont in driving Austria from Italy if this could be done without opening France to the charge of aggression. Following expulsion of Austria, the Italian states were to be amalgamated into a federation of 4 under the pope's presidency. France, as a *quid pro quo,* would gain Savoy and Nice.

1859, April–July. War of Austria with France and Piedmont. (See p. 907.)

1860, April 4. Uprisings in Naples. Revolts in the Kingdom of Naples were severely suppressed, arousing widespread revulsion in Italy and abroad.

1860, May 11. Garibaldi's Invasion of Sicily. With covert support from Cavour and King Victor Emmanuel II of Piedmont, Garibaldi and his "Thousand Redshirts" landed at Marsala in Sicily, having sailed from Genoa (May 5). He marched inland, rallying the inhabitants to revolt against the Kingdom of Naples. He defeated Neapolitan forces at **Calatafimi** (May 15) and took Palermo (May 27). Marching eastward, he defeated the Neapolitans again at **Milazzo** (near Messina; July 20).

1860, August 22. Passage of the Strait of Messina. With British assistance, Garibaldi crossed to the Italian mainland and marched on Naples.

1860, September 7. Capture of Naples. Seizure of Naples was accomplished against negligible opposition. Garibaldi prepared to march on Rome and Venetia.

1860, September 10. Piedmontese Invasion of the Papal States. Unrest in the Papal States

provided an excuse for Cavour to send troops across the border. Papal forces were decisively defeated at **Castelfidardo** (September 18); the Piedmontese marched south to link up with Garibaldi in Neapolitan territory. Meanwhile, French troops occupied Rome, and a French fleet took station along the Neapolitan coast, to preclude any Italian attack against the immediate papal domains.

1860, October 26. Battle of the Volturno. After one repulse (October 1), Garibaldi gained another victory over the demoralized Neapolitan forces and advanced on Gaeta.

1860, November 3–1861, February 13. Siege of Gaeta. King **Francis II of Naples,** with 12,000 men, made his last stand against the united Italian forces. The withdrawal of the French fleet (January 19) made it possible for Piedmontese warships to bombard Gaeta from the sea, forcing Neapolitan surrender.

1861, March 17. The Kingdom of Italy. An all-Italian parliament (not including representation from the papal territories around Rome) proclaimed a united Kingdom of Italy, with Victor Emmanuel as its first constitutional monarch. Less than 3 months after the realization of his dream, Cavour died. The hopes of Garibaldi to include all of the Papal States in the kingdom were foiled by continued French occupation of Rome.

1862, March–October. Garibaldi's Operations against Rome. Sporadic and ineffectual attempts to seize Rome were made by Italian patriots—with the covert support of Victor Emmanuel. Garibaldi, rallying volunteers to his standard, marched from the Strait of Messina toward Rome (August 24). The Italian government, unable to countenance an overt act of war against French forces in Rome, ordered its forces to intercept Garibaldi in the toe of Italy.

1862, August 29. Battle of Aspromonte. Regular Italian troops defeated Garibaldi and his volunteers. Garibaldi was wounded and captured. He and his men were soon released.

1866, May 12. Italian-Prussian Alliance. This was concluded with the approval of Napoleon III.

War with Austria, 1866

1866, June 20. Italy Declares War. This followed the outbreak of the Austro-Prussian War (see p. 908).

1866, June 24. Second Battle of Custozza. An Austrian army, 80,000 strong, under Archduke **Albert,** met the Italian army, under Victor Emmanuel, 120,000 strong. The Italians, poorly led, were defeated piecemeal. The outstanding feature of the battle was the spirited shock action of 2 improvised Austrian cavalry brigades that broke up repeated Italian assaults. The Italians retreated across the Mincio in disorder, having lost 3,800 killed and wounded and 4,300 missing. Austrian losses were 4,600 killed and wounded and 1,000 missing. The Austrian army was shortly withdrawn for the defense of Vienna against the Prussians.

1866, July. Garibaldi's Alpine Campaign. Leading a small volunteer army, Garibaldi won several minor successes at **Lodrone** (July 3), **Monte Asello** (July 10), **Condino** (July 16), **Ampola** (July 19), and **Bezzecca** (July 21). He was ordered to withdraw when Bismarck made clear to Italy that he would not consent to Italian occupation of the Trentine Tyrol.

1866, July 20. Naval Battle of Lissa. An Italian squadron of 10 ironclads and 22 wooden vessels, under Admiral **Carlo T. di Persano,** was attacked off the island of Lissa (Vis) in the Gulf of Venice by the Austrian squadron of Admiral Count **Wilhelm von Tegetthoff,** 7 smaller ironclads and 14 wooden vessels. The Italians were in a long line-ahead formation. The Austrian commander struck the line in a wedge-shaped formation, ignoring Italian fire until within point-blank range. Breaking through the Italian line, Tegetthoff sank 3 ironclads, with a loss of 1,000 men. The remainder of the Italian squadron broke off action and steamed away.

1866, October 12. Treaty of Vienna. The conclusion of the war resulted in ratification of Italian annexation of Venetia, brought about earlier by the good offices of Napoleon III (July 3).

1866, December. French Troops Withdraw

from Rome. Garibaldi seized the opportunity to lead a futile volunteer invasion of the Papal States (January–September 1867). This, as well as attempts—both overt and covert—by the Italian government to overthrow the papal dominion, led Napoleon III to send French forces back less than a year later.

1867, October 26. French Expedition to Rome. Some 2,000 men under Major General **Charles A. de Failly,** having landed at Civitavecchia, arrived in Rome. Meanwhile Garibaldi, renewing his own invasion, had reached **Monte Rotondo,** where he had defeated a small papal force (October 24).

1867, November 3. Battle of Mentana. Garibaldi's bands, some 4,000 strong, met a combined force of 3,000 papal troops and de Failly's 2,000 French regulars, who were armed with the new **chassepot** rifle. The redshirts were mowed down with heavy losses, and streamed back over the Italian border, leaving 800 prisoners. They were all arrested by the Italian authorities.

1870, September 20. Occupation of Rome. French forces having been withdrawn because of the Franco-Prussian War (see p. 910), an Italian army of 60,000 men under General **Raffaele Cadorna** invested it. After a short bombardment, a breach was effected. The invaders began to stream in and Pope **Pius IX** ordered his troops to cease fire.

1870, October 2. Formal Annexation of Rome by Italy. Following a plebiscite, the city was declared the capital of the nation.

1887–1896. Operations against Ethiopia. **(See p. 929.)**

EAST EUROPE

Russia

1853–1856. Crimean War. **(See p. 903.)**

1861, February 2. Warsaw Massacre. Unrest in Russian Poland culminated in a mass demonstration in the Polish capital. Russian troops fired on the mob, killing many. Sporadic uprisings flared through the area.

1863–1864. Second Polish Revolution. Polish guerrilla bands took the field, and the revolt quickly spread into Lithuania and White Russia (January 1863). Despite protracted resistance, harsh repressive measures finally quelled the uprising (May 1864).

1864–1876. Conquest of Kokand, Bokhara, and Khiva. Russian colonial expansion followed steady military advances in Central Asia. Subjugation of Kirghiz and Turkoman tribes eventually resulted in the annexation of the entire Transcaspian region (1881).

1877–1878. Russo-Turkish War. **(See p. 924.)**

1884–1885. Conquest of Merv. The last independent Moslem principality of Central Asia was finally absorbed by Russia, establishing a common frontier with Afghanistan. The result was an increase in British-Russian colonial rivalry and tension.

1885. Frontier Incidents with Afghanistan. Fighting between Russian and Afghan troops came close to full-scale war, and was settled peacefully only after Britain made clear her determination to intervene on the side of Afghanistan (see p. 938).

1891–1894. Franco-Russian Alliance. This was a foil to the Triple Alliance of Germany, Austria, and Italy (see p. 920).

The Balkans

Greece

1850, January–March. British Blockade. The purpose was to force Greece to pay interest on an international loan and to pay compensation due some British citizens. A compromise was reached and Britain lifted the blockade.

1854, January–February. Greek Invasion of Thessaly and Epirus. Greece took advantage of Turkish participation in the Crimean War.

1854, April–1857, February. British and

French Occupation of the Piraeus. The allies prevented Greece from joining Russia in the Crimean War.

1862, February 13–October 23. Revolution. Otto was deposed. He was replaced, after a long delay, by **George I,** a Danish prince selected by the great powers.

1878, February 2. Greece Declares War on Turkey. Again she was prevented from taking advantage of a Russo-Turkish War (see p. 924) by intervention of the other powers.

1886, May–June. British and Allied Blockade. Again the powers prevented Greece from taking advantage of Turkish troubles.

1896–1897. War with Turkey. (See p. 926.)

Serbia

All internal and external affairs of Serbia were affected by the continuing bitter feud between the Obrenovich and Karageorgevich families (see p. 849). The principal events were:

1862. Turk Bombardment of Belgrade. This was an outgrowth of troubles between Serbians and the Turkish garrisons.

1867, April. Withdrawal of the Turkish Garrisons. This was forced by the great powers.

1876, July. War with Turkey. (See p. 924.) Serbia was quickly overwhelmed. This was one cause of the Russo-Turkish War (see p. 924).

1877, December 14. Renewed War with Turkey. Serbia took advantage of Turk setbacks in the war with Russia.

1878, March 3. Treaty of San Stefano. Turkey recognized Serbian independence and ceded substantial territory (see p. 926).

1878, July 13. Treaty of Berlin. (See p. 924.) Serbian independence was reaffirmed, but territorial cuts caused much bitterness in Serbia, particularly against Austria, which virtually annexed Bosnia and Herzegovina, largely populated by Serbs.

1883, November. Revolt. King **Milan** savagely suppressed it. Unrest continued.

1885–1886. Serbo-Bulgarian War.

1885, November 13. Serbia Declares War. King Milan demanded territory to compensate for Bulgaria's growth after union with Eastern Rumelia. Bulgaria refused, so Milan invaded, hoping war would unify troubled Serbia.

1885, November 17–19. Battle of Slivnitza. Milan's army was defeated by Bulgarian Prince **Alexander's** hurriedly concentrated forces. The Bulgars then invaded Serbia.

1885, November 26–27. Battle of Pirot. Prince Alexander's outstanding leadership brought another victory after 48 hours of serious conflict between armies each about 40,000 strong. Austrian intervention saved the Serbs (January 1886).

1886, March 3. Treaty of Bucharest. The *status quo* was restored.

Montenegro

1852–1853. War with Turkey. A Turkish army under Omar Pasha invaded Montenegro. Defeated by Prince **Danilo II,** near **Ostrag,** the Turks withdrew in the face of Austrian threats. Border friction erupted in open warfare (1853), and invading Turks were defeated at **Grahovo** by **Mirko Petrovitch,** brother of Danilo; again the Turks withdrew. Montenegro's independence was not recognized abroad.

1861–1862. Renewed War with Turkey. Montenegro supported a revolt in Herzegovina (1860–1861); again Omar Pasha invaded. Despite Mirko's heroic defense of Ostrag, Montenegro was quickly overrun and forced to acknowledge Turkish suzerainty at the **Convention of Scutari** (August 31).

1876–1878. War with Turkey. Montenegro and Serbia shared defeat, triumph, and then disappointment, but gained recognition of independence by the Treaty of Berlin (see above). However, hostilities on the Albanian frontier continued until 1880.

Bulgaria, 1875–1900

1875, September. Bulgarian Revolt. Suppressed by Turkey.

1876, April–August. Bulgarian Revolt. Again suppressed by Turkey. This, however, helped precipitate the Russo-Turkish War, in which Bulgaria was a major battleground (see below).

1878, March 3. Treaty of San Stefano. Bulgarian independence was recognized.

1878, July 13. Treaty of Berlin. Because the other powers feared that Bulgaria would dominate the Balkans and be under Russian influence, the principality was reduced to less than half of the territory recognized in the Treaty of San Stefano. Parts of Macedonia were given to Serbia (in return for lands taken by Austria); most of Macedonia remained Turkish, and much of Thrace was formed into the autonomous Turkish province of Eastern Rumelia. The Bulgarians were bitter against the powers. The treaty also led to friction with Serbia.

1885, November 13. Annexation of Eastern Rumelia. A popular uprising was followed by absorption of the neighboring province. Serbia demanded compensation to offset this increase in Bulgarian power; Bulgaria refused.

1885–1886. Serbo-Bulgarian War. (See p. 923.)

Rumania

1853, July. Russian Occupation. This precipitated the Crimean War (see p. 903).

1854, August–1857, March. Austrian Occupation. Russia withdrew under Austrian pressure; the Austrian occupation continued during the Crimean War (see p. 904).

1877–1878. Russo-Turkish War. (See below.) This was precipitated by Russian invasion of Rumania (April 24, 1877).

1877, May 21. Rumanian Declaration of Independence. Rumania immediately entered the war against Turkey, and gave the Russians some assistance at the siege of Plevna (see p. 925).

1878, July 13. Treaty of Berlin. This reaffirmed the terms of the Treaty of San Stefano, so far as Rumania was concerned. She reluctantly surrendered southern Bessarabia to Russia, but received northern Dobruja, to assure an outlet to the sea.

EURASIA AND THE MIDDLE EAST

The Ottoman Empire

1852–1853. War with Montenegro.

1853–1856. The Crimean War. (See p. 903.)

1861–1862. Second Montenegrin War. (See p. 923.)

1866–1868. Cretan Insurrection. This uprising, instigated by Greeks, was quelled after furious fighting.

1876. War with Serbia and Montenegro. Cruel Turkish suppression of Christian insurrections in Herzegovina and Bosnia (1875) led to Serbian and Montenegran declarations of war. Serb forces (including Russian volunteers) under Russian leadership were defeated by **Suleiman** Pasha at **Alexinatz** (September 1) and **Djunis** (October 29). Russia, champion of the pan-Slav movement in the Balkans, began to mobilize along her southern frontier.

Russo-Turkish War, 1877–1878

1877, April 24. Russia Declares War. She immediately invaded Rumania, while mobilizing 275,000 men of all arms, plus 850 fieldpieces and 400 siege guns. Another 70,000 invaded Turkey's Caucasian provinces. The Russians expected easy victory over the ill-assorted and scattered Turkish forces of some 135,000 men and 450 guns in Europe and about the same number in Asia. The Grand Duke **Nicholas**

(brother of Czar Alexander II) commanded the Russian armies in Europe, **Abdul Kerim** the Turks. The Russian plan was to advance across the Danube, cross the Balkans, and move on Adrianople (Edirne). A flank corps entering the Dobruja would protect the Russian left, while detachments were to mask the Turkish fortress quadrilateral of Ruschuk (Ruse), Silistria (Silistra), Shumla (Kolarovgrad), and Varna (Stalin). Due to Rumania's declaration of independence from Turkey (see p. 924), the Russian advance was made from friendly territory (though Russia delayed recognition of Rumania's independence). From the outset, the operations of the high command on both sides were remarkable for indecision and ineptitude.

1877, June. Clearing the Danube. In a series of combined army-navy operations, Russia quickly seized control of the Danube; bridges were built for the crossing.

1877, June–July. Invasion of Bulgaria. The Russian advance guard of General **Ossip V. Gourko,** with 31 squadrons of cavalry, 10 battalions of infantry, and 32 guns, plunged across the Danube (June 23), followed by the main army. Gourko, learning that the Turks had garrisoned the key Shipka Pass in the Balkans, led his force through the smaller and undefended Khainkoi Pass to the east and forced the immediate retreat (July 18–19) of the Shipka defenders. Meanwhile, his patrols raided to within 90 miles of Adrianople, destroying railway and telegraph lines. He had, in fact, penetrated the Turkish cordon defense of the Balkans; a Russian advance in force would probably have resulted in overwhelming victory. Meanwhile, the fortresses of **Svistov** and **Nikopol** were seized by the main army.

1877, July 19–December 10. Siege of Plevna. **Osman** Pasha, commanding the fortress of Vidin, well west of the Russian advance, hurried to Plevna (Pleven), whence he threatened the Russian right flank and indirectly threatened the Danube bridges. Instead of merely containing him, the Russians halted to take Plevna, which Osman and his engineer officer, **Tewfik** Pasha, were massively fortifying. Thrice the Russians assaulted (July 20, July 30, and September 11) and were repulsed with total losses of 30,000 men. Young Russian General **Mikhail D. Skobelev** distinguished himself in the last of these attacks, but was not properly supported by his colleagues, while Osman took advantage of the poor Russian coordination. The Russian investment was then put under the command of Todleben (hero of Sevastopol; see p. 905) and systematic siege operations began. Short of provisions, Osman attempted a final sortie (December 9), but was wounded and the effort collapsed. Plevna capitulated (December 10). The Russian advance had been held up for 5 months, completely negating the potentialities of Gourko's brilliant seizure of the Shipka Pass.

1877, July–December. Operations in Central Bulgaria. Meanwhile, Abdul Kerim had been replaced as Turkish commander in chief by **Mohammed Ali;** the army of Suleiman Pasha had been recalled from Montenegro by sea and was opposing Gourko south of the Shipka. The Russians, fearful of overextension while Plevna was still resisting, called Gourko back north of the mountains, but the Shipka Pass was fortified. The Turks established a fortified camp 2 miles to the south, at Senova, under **Vessil** Pasha. The efforts of Mohammed Ali to drive the Russians back to the Danube, and to relieve Plevna, were futile and poorly coordinated; Russian countermoves were no more effective. Gourko, however, assured Russian retention of the initiative by capturing Sofia at the end of the year.

1877, August–1878, January. Operations in the Caucasus. The opposing armies in the east, each about 70,000 men, under Grand Duke **Michael** and **Mukhtar** Pasha, undertook no major operations until the Russians received sufficient reinforcements to permit an advance. The Russians gained a victory at **Aladja Dagh** (October 15), forcing the Turkish army to fall back on its 2 main fortresses of Kars and Erzerum. The Russians immediately invested **Kars,** which they took by assault a month later in a gallant, well-planned operation (November 18). Despite the bitter cold of

winter in the mountains, the Russians continued their advance, and by the end of the year were heavily engaged against the Turkish defenses of **Erzerum.** They were seriously threatening the fortress when operations ceased as a result of an armistice (January 31).

1878, January. Final Campaign in Europe. Deciding upon a winter campaign in the Balkans, the Russians turned on Suleiman Pasha, who now commanded the main Turkish Army south of the Shipka. Advancing on a wide front, Russian generals **Fedor Radetsky,** Skobelev, Gourko, and Prince **Imeretinsky** outmaneuvered the badly extended Turks.

1878, January 8–9. Battle of Senova. Concentrating his columns against Vessil Pasha, south of the Shipka Pass, Skobelev defeated and encircled the entire Turkish force, capturing 36,000 men. The Russians pressed on to Plovdiv and Adrianople (January 17 and 19), cutting off Suleiman, who, with 50,000 men, was still farther west. After some minor engagements, the Turkish general retreated across the mountains to the Aegean at Enos (January 28). His forces went by sea to Constantinople. The Russians had advanced to the Chatalja lines, just outside the Turkish capital (January 30). An armistice immediately followed (January 31).

1878, March 3. Treaty of San Stefano. Turkey paid a large indemnity and conceded independence of Montenegro, Serbia, and Rumania. Bulgaria became an autonomous state under internal Russian control. Russia gained Ardahan, Kars, Batum, Bayazid.

1882. Germany Military Mission Arrives. After the death of the original mission chief, Colonel **Kolmar von der Goltz** headed the mission (1883–1895); his influence on Turkey was significant for the next 33 years.

1896, February. Insurrection in Crete. Local Greeks rose against Turkish rule. Greece intervened, precipitating war.

1897, April 17–September 18. Greco-Turkish War. Greek forces, led by Crown Prince **Constantine,** were consistently defeated by **Edhem** Pasha in parallel campaigns in Thessaly and Epirus. The ineptness of both high commands was remarkable. Through the mediation of the Russian Czar, an armistice was arranged (May 19) and a peace treaty effected (September 18).

Persia

1850–1854. Russian Conquests in the Syr Darya Valley. Muscovite influence reached Persia's Central Asian frontier.

1855. Invasion of Afghanistan. After complicated negotiations between Shah **Nasr ed-Din** and local Afghan provincial rulers, and despite British warning, Persian troops occupied Herat, Afghanistan (1856).

1856, November–1857, April. War with Britain. Britain then declared war on Persia (November 1). Britain seized the port of Bushire on the Persian Gulf (January). Sir **James Outram** with 2 Indian Army divisions invaded Persia, which soon sued for peace and evacuated Afghanistan (Treaty of Paris).

1878. Russian Military Influence. A Russian training mission helped establish a Cossack brigade, tangible indication of growing Russian influence in Persia during the conquest of Central Asia (see p. 922).

AFRICA

The powers of Europe were engaged in a bargain-counter rush, each trying to carve out a colonial parcel of the Dark Continent for its own selfish purposes. France and Great Britain were in keen competition not only with one another but also with the newcomers, Germany and Italy. Spain and Portugal, with toeholds long established, strove to maintain those positions. The slowly decaying Ottoman Empire was also clinging—ineffectually—to its posses-

sions in North Africa. Military actions were necessary for these colonial powers to maintain and increase their holdings. A host of little wars flickered around the African periphery throughout the period.

Egypt and the Sudan

1863–1879. Reign of Khedive Ismail. Nominally a vassal of the Sultan of Turkey, Ismail attempted to modernize Egypt, but in so doing saddled his country with an enormous debt. As a result, Britain and France exerted a dual control, particularly after the British government purchased from Ismail all his interest in the Suez Canal (completed 1869). Ismail, with the aid of British and American army officers in his service, attempted—with mixed success—the conquest of the Red Sea coast (1865–1875) and of the Sudan (1871–1875).

1874–1879. The Upper Nile. Egyptian military control was established as far as Unyoro on Lake Albert Nyanza by a succession of minor expeditions against Arab slave traders and the indigenous tribal kingdoms of the region.

1875–1879. War with Abyssinia. Egyptian expansion eastward, beginning with the occupation of **Suakim** and **Massawa** (1865) by direction of the Ottoman Empire, threatened to cut off Abyssinia from the sea. When the Egyptians militarily occupied **Harar** and adjacent seacoast ports (1872–1875), King **John** of Abyssinia declared war. His troops moved against Ismail's forces, who were almost annihilated at **Gundet** (November 13, 1875). A second Egyptian expedition met defeat at **Gura** (March 25, 1876).

1879, June 25. Deposition of Ismail. The sultan appointed Tewfik, Ismail's son, as his successor.

1881, February 1. Rebellion of Ahmet Arabi. This revolt against Turkish and foreign control spread into an anti-Christian conflict.

1882, May–June. Disorder in Alexandria. French and British naval squadrons converged on Alexandria (May) and were present when some 50-odd Europeans were massacred by a native mob (June 11).

1882, July 11. British Bombardment of Alexandria. The French refused to cooperate with Admiral Sir **Frederick B. P. Seymour**'s reprisal. Britain now landed 25,000 troops at Ismailia under Sir **Garnet Wolseley.**

1882, September 13. Battle of Tell el-Kebir. Arabi's forces—38,000 men and 60 guns—were intrenched along the railway and sweetwater canal. After some preliminary skirmishing, the British launched a surprise night attack, driving the Egyptians off in disorder with losses of 2,000 killed and 500 wounded. British casualties were 58 killed, 379 wounded, and 22 missing. An immediate pursuit resulted in complete collapse and surrender of Arabi's forces. Britain dominated the Egyptian government. All but 10,000 of the British force were now sent home.

1883. Mahdist Uprising. Mahdi **Mohammed Ahmed of Dongola,** announcing himself to be a prophet, led a dervish uprising to set the Sudan in flames. About 10,000 Egyptian troops under General **William Hicks,** a former Indian Army officer, were completely wiped out at **El Obeid** (November 3), while **Osman Digna,** the Mahdi's lieutenant, moved successfully against Egypt's Red Sea ports, wiping out another Anglo-Egyptian force at **El Teb** (near Suakim; February 4, 1884). Britain ordered Egypt to evacuate the Sudan.

1884, January 18. Gordon to Khartoum. General **Charles ("Chinese") Gordon** (see p. 946) was sent by the British government to Khartoum, at the confluence of the White and Blue Nile rivers, to supervise the evacuation of the Sudan by Egyptian forces. Mahdist forces invested the city (February).

1884–1885. Siege of Khartoum. For nearly a year, Gordon and a small garrison were besieged, while public opinion in England mounted against the British government's indecision in rescuing them. Finally a relief expedition under General Wolseley struck south from Wadi Halfa (October 1884), too late.

1885, January 26. Fall of Khartoum. The Mahdi's forces swept over the last defenses of Khartoum, massacring the entire garrison. Wolseley's force, after several engagements, reached the city 2 days later, but was ordered to withdraw.

1885, June 21. Death of the Mahdi. His wild dervish followers under his successor, the Kalifa **Abdullah,** soon completed control of the entire Sudan.

1896–1898. Reconquest of the Sudan. Concerned by increasing French and Italian colonial interest in the Nile Valley, Britain decided to reoccupy the Sudan. Major General Sir **Horatio Kitchener,** sirdar of the Egyptian Army, commenced a methodical reconquest with a mixed force of British and Egyptian troops. Moving up the Nile, escorted by a river gunboat flotilla, he constructed a railway as he went along to ensure his logistical support. Highlights of the step-by-step advance, against fanatical opposition, were the capture of **Dongola** (September 21) and **Abu Hamed** (August 7, 1897) and defeat of Mahdist forces at the **Battle of the Atbara River** (April 8, 1898). Abdullah and Osman Digna concentrated their strength about the strong fortress position of Omdurman on the Nile, just north of Khartoum.

1898, September 2. Battle of Omdurman. Kitchener's army, some 26,000 men—about half British regulars and half well-trained Egyptian troops—were attacked in their fortified encampment at Egeiga, 4 miles from Omdurman, by Abdullah's 40,000 men. The savage bravery of the tribesmen was unavailing against machine guns and modern small arms, and they were repulsed with great slaughter. Kitchener then counterattacked toward Omdurman. The dervishes, rallying, fell on the British right and rear, Sir **Hector A. MacDonald**'s Sudanese brigade repelling 2 successive charges. At almost the same time, a dervish force of some 2,000 men leaped from concealment on Kitchener's right flank. In an old-fashioned cavalry charge, the 21st Lancers swept them away, though losing some 25 percent of its strength. This ended the battle, the Kalifa's forces streaming from the field. While British and Egyptian cavalry took up pursuit, Kitchener's main body marched into Omdurman. Mahdist losses were more than 10,000 killed, an estimated equal number of wounded, and 5,000 prisoners. Kitchener's casualties amounted to approximately 500 in all.

COMMENT. *Omdurman's importance was twofold: it reestablished Anglo-Egyptian influence and control over the vast Nile watershed region, and it was the first real demonstration of the firepower latent in the machine gun (Kitchener's artillery included 20 of them). Kitchener became a British national hero.*

1898, September–November. Fashoda Incident. A small French military and exploratory expedition under Major **Jean B. Marchand** had reached the Nile River at Fashoda in the southern Sudan (July 1898), apparently assuring France of a foothold on the left bank of the Nile. Kitchener moved up the Nile to Fashoda, while Britain threatened war with France if the expedition did not withdraw. Under orders from Paris, Marchand evacuated Fashoda (November 3).

Ethiopia (Abyssinia) and the Red Sea

1854–1855. Lij Kassa Becomes Emperor Theodore. Lij Kassa (see p. 000) defeated the allied forces of Ras **Ali** and Ras **Ubie** at **Gorgora** on Lake Tana (1854) and so gained effective control over all northern and central Ethiopia. The next year he deposed Emperor **John III** and conquered Shewa (Shoa) province, and had himself crowned Emperor as Tewodoros (Theodore) II.

1855–1868. Reign of Theodore II. He made energetic efforts to modernize the country and reform the government, moving the capital from Gondar to Magdala (1856). The death of his wife and of 2 trusted British advisers contributed to a conditional of mental instability, and his later reign was marked by excessive and erratic actions.

1867–1868. British Abyssinian Expedition. As a result of the imprisonment and murder of

consular officials, some 32,000 well-equipped troops under Sir **Robert Napier** landed at Mulkutto (Zula) on the Red Sea and moved inland. Theodore's troops were defeated at the **Battle of Arogee;** Theodore committed suicide (April 10, 1868). **Magdala,** his capital, was stormed and destroyed (April 13). The expedition, having accomplished its purpose, left the country (May).

1869–1872. Civil War. After prolonged conflict, **Kassai** of Tigré defeated several rivals and reunified the country as **John IV.**

1875–1879. War with Egypt. **(See p. 927.)**

1878. Conquest of Shoa.

1882. War between John and Menelek of Shoa. John, victorious, designated Menelek as his successor.

1882. Italian Colony at Assab, Eritrea. They expanded to Massawa (1885).

1884. War with the Mahdi. John's troops helped the British withdraw from Gallabat and Kassal.

1884. British and French Protectorates on Somali Coast.

1887. War with Italy. Italian penetration from the Red Sea littoral led to war. An Italian force of 500 men was surrounded and most of them killed by John's forces at **Dogali** (January 26). The matter was temporarily composed after an Italian expeditionary force arrived next year. Italy now permanently garrisoned her holdings in Eritrea.

1885–1889. Mahdist Incursions. This resulted in sporadic frontier warfare.

1889, March 12. Battle of Metemma (Gallabat). In response to a Mahdist invasion, Emperor John with a huge force stormed and took Gallabat, defended by 60,000 dervishes under Amir **Zeki Kumal.** The emperor having been killed in the fighting, the Abyssinian army then withdrew.

1889–1909. Reign of Menelek. During the first 10 years of this reign there was sporadic civil war with Ras **Mangasha,** illegitimate son of John, who claimed the throne. At the outset of his reign Menelek negotiated the **Treaty of Uccialli** with Italy; the Italians considered that this gave them a protectorate over Abyssinia. Meanwhile, Menelek steadily expanded the empire, and defeated Ras **Mangasha** (1899).

1895–1896. War with Italy. This resulted from disagreement over the Treaty of Uccialli, followed by renewed Italian encroachment.

1896, March 1. Battle of Aduwa (Adowa). An Italian force of 20,000 men—Italians and natives—under General **Oreste Baratieri** rashly attacked Emperor Menelek's 90,000 warriors in mountainous country. The leading Italian brigade pushed too far ahead of the main body, was surrounded and destroyed, and the other three brigades then were overwhelmed in detail. Despite the odds and poor leadership, Baratieri's troops fought well. Some 6,500 (4,500 Italian) were killed and wounded; 2,500 prisoners (1,600 Italian) were captured. Despite propaganda of Abyssinian atrocities, Menelek apparently treated his captives humanely.

1896, October 26. Treaty of Addis Ababa. Italy recognized Abyssinian independence.

1899–1905. The Mad Mullah. Mohammed ben Abdullah, claiming supernatural powers, began harassing British and Italian Somaliland, and part of Abyssinia, from his base at Burao, 50 miles south and east of Berbera. Despite all efforts of organized soldiery, mostly British (with considerable Abyssinian assistance), to quell his depredations, Mohammed and his followers kept up a successful guerrilla warfare until he was granted a semi-independent territorial area in Italian Somaliland.

North Africa

1859–1860. Spanish-Moroccan War. **(See p. 918.)**

1865–1880. Franco-Italian Rivalry in Tunisia. France, continuing the pacification of the Algerian hinterland, found Italy her rival in exploitation of Tunisia. Matters came to a head when Tunisian tribesmen began raiding across the Algerian frontier.

1881, April. Seizure of Bizerte. A French naval force occupied Bizerte while French land forces moved across the Tunisian border. The Bey of

Tunis was forced to accept a French protectorate (**Treaty of Bardo,** Kasr es-Said, May 19).

1881, June–July. Insurrections in Southern Tunisia and Algeria. These were finally composed by French arms.

1893. Spanish Operations in the Riff. For most of the year incursions of Berber tribesmen from the Riff mountains menaced Spanish Morocco's coastal areas. The Riffians gathered in force around Melilla, then Spain's most important North African port, besieging it on the land side. An expeditionary force of 25,000 Spanish troops finally drove the tribesmen back into the hills.

South Africa

British vs. Boers vs. Blacks, 1850–1880

Three-way Struggle

1850–1878. Kaffir Wars. Britain's development of the Cape Colony was accompanied by a continuation of the tribal outbreaks which had been going on for three-quarters of a century. Most of the operations were those of volunteer units recruited from among the Boer and English settlers. The most serious of these was the **8th Kaffir War** (1850–1853), provoked when the Cape governor, Sir **Harry Smith,** reduced the power of the native chiefs in the eastern regions of the Cape Colony. Shortly after this (1856–1857), the desperate Kaffirs (mainly the Xosa tribes), believing that their actions would call back their ancestral heroes to help drive out the white men, slaughtered their cattle and destroyed their crops. The result was virtual self-destruction of the Kaffirs, about two-thirds of them dying of starvation. Despite this, when their strength had been built up again, after a generation, the Kaffirs rose in the last and **9th Kaffir War** (1877–1878), which was suppressed, and Britain annexed all of Kaffraria.

1852–1856. Emergence of the Boer Republics. Britain renounced sovereignty over the Transvaal region (1852), which later became the South African Republic, with **Marthinus Pretorius** as the first president (December 16, 1856). The Orange Free State was established, and Britain recognized its independence (February 17, 1854).

1854–1877. Zulu-Boer Border Disputes. The Zulus resisted Boer efforts to expand eastward to the sea. There was no overt warfare, but frequent frontier clashes.

1856. Civil War in Zululand. This was the result of a dispute over the succession between **Cetewayo** and **Mbulazi,** sons of **Mpande.** Cetewayo defeated and killed his brother in the decisive **Battle of the Tugela River** (December).

1858–1868. Basuto Wars of the Orange Free State. Under their king, **Mosheshu,** the Basutos resisted and repelled Boer encroachment (1858). A few years later the war was renewed; this time the Boers were successful, and annexed large parts of Basutoland (1864–1866). Friction continued, however, and the Orange Free State annexed more territory after another war (1867–1868). Britain finally annexed Basutoland to prevent further Boer expansion (1868–1871).

1862–1864. Civil War in the Transvaal. The obstreperous Boers, it seemed, could not only not get along with their neighbors, they could not get along with each other. Pretorius and his principal aide, **S. J. Paul Kruger,** finally suppressed the insurgency.

1867. Discovery of Diamonds along the Orange River. This led to British reannexation of the Hopetown region (1871), despite protests of the Orange Free State.

1872. Accession of Cetewayo as Zulu Ruler. The new king immediately began to rebuild Zulu military strength, which had declined somewhat since the death of his uncle, Shaka (see p. 858).

1877, April 12. British Annex Transvaal. This was done in an effort to bring about federation of all of South Africa. The Boers protested vigorously, and began to plan rebellion.

The Zulu War, 1879

After annexation of the South African Republic, the British inherited the Boer border disputes with the Zulus. Cetewayo, rightly convinced that his position was legally and morally sound, was as adamant with the British as he had been with the Boers. At the same time, he continued to develop his nation's fighting power.

1878, December 11. British Ultimatum. Britain demanded a virtual protectorate over Zulu land. Cetewayo ignored the British demands.

1879, January 11. British Invasion of Zululand. To force Zulu compliance, General **F. A. Thesiger, Viscount Chelmsford,** led a force of about 5,000 British and 8,200 native troops into Zululand in 3 widely dispersed columns. Cetewayo had a force of 40,000 trained, fanatically brave professional warriors, organized in impis (regiments) and highly disciplined. While some had firearms, the principal Zulu weapon was the assagai, or spear, of which there were 2 types—throwing and stabbing. The normal Zulu battle formation was a crescent; while the center engaged the enemy, the horns swung in for a double envelopment. All movements were made on foot, at a lope that enabled the warrior to cover ground as fast as a mounted man. Reminiscent of the tactics of the Roman legion, the Zulu attack was carried home with the stabbing assagai, under a shower of throwing assagais.

1879, January 22. Battle of Isandhlwana. Chelmsford's center column—1,800 Europeans and 1,000 natives—established a camp at Isandhlwana. While Chelmsford and about half the Europeans were away, trying to intercept a Zulu force, the camp was hit early in the morning in a surprise attack by 10,000 Zulus. All but 55 Europeans and about 300 natives were killed. Returning next day, Chelmsford discovered the ruined camp and bodies. He fell back through Rorke's Drift to defensive positions. Cetewayo's forces pressed hard against them.

1879, January 22–23. Defense of Rorke's Drift. About half of the Zulu victors of Isandhlwana struck this British base camp, which had a garrison of about 85 able-bodied soldiers, late in the afternoon. In one of the British Army's great epics, the defenders drove off 6 full-scale Zulu attacks that lasted through the night. Early next day the Zulus withdrew, leaving about 400 dead. The British lost 17 killed and 10 seriously wounded.

1879, January 28–April 4. Siege of Eshowe. Chelmsford's right flank (coastal) column, under Colonel **C. K. Pearson,** was besieged at Eshowe. After a hard fight at **Gingindhlovu** (April 3), Chelmsford's relief column reached Eshowe and relieved it (April 4).

1879, March 28. Battle of Hlobane. A mounted force from Colonel **Sir Henry Evelyn Wood's** northern column, led by Colonel (later General) **Redvers H. Buller,** was attacked near Hlobane mountain by a large Zulu force; the column of 400 Europeans and 300-odd native auxiliaries suffered over 100 casualties in a confused running fight.

1879, March 29. Battle of Kambula. Some 20,000 warriors attacked Sir Evelyn Wood's column in a desperate 4-hour attack, but were finally beaten off. Wood lost 84 out of 1,800 Europeans and 900 natives engaged; Zulu losses were an estimated 1,000.

1879, April–May. Arrival of Reinforcements. These were hurried out from England. By the end of May, Chelmsford prepared to take the offensive again.

1879, June 1. Death of the Prince Imperial. Young **Louis J. J. Bonaparte,** son of Napoleon III, serving with the British as a volunteer, was killed during a Zulu ambush while out on reconnaissance. His death focused international attention on what up to that time had been just one more of England's innumerable little wars.

1879, July 4. Battle of Ulundi. Chelmsford, with 4,200 Europeans and 1,000 natives,

reached the vicinity of Cetewayo's capital. Attacked by more than 10,000 Zulus, the force formed a hollow square, with its 600 cavalry (although only 290-odd were regular British cavalry) inside. The Zulu charges were broken up by British musketry and bayonets, and the small English cavalry detachment then charged into the disorganized mass. Victory was complete. Cetewayo fled. British casualties were about 100, while the tribesmen lost some 1,500 killed. This action to all intents and purposes ended Zulu power. Cetewayo became a fugitive, but was captured (August 28).

British vs. Boers, 1880–1899

Transvaal Revolt (or First Boer War), 1880–1881

Diamonds, gold, and greed were the principal factors affecting the fortunes of Boer settlements lying between the Orange and Limpopo rivers in South Africa.

1880, December 30. Boer Republic Proclaimed. The Boers were led by Kruger, **Petrus Jacobus Joubert,** and Pretorius. Several small bodies of British troops were cut up.

1881, January 28. Battle of Laing's Nek. Some 2,000 Boers under Joubert invaded Natal. General Sir **George Colley,** who completely underestimated his opponents, met them at Laing's Nek in the Drakensberg mountains with 1,400 British regulars and was defeated.

1881, February 27. Battle of Majuba Hill. The hill overlooked the principal pass through the mountains. Occupying the hill with part of his force—550 men—Colley was overwhelmed by the Boer riflemen. He and 91 others were killed; 134 more were wounded and 59 captured. Boer casualties were negligible.

1881, April 5. Treaty of Pretoria. This granted independence to the South African Republic, under British suzerainty. Paul Kruger, grim protagonist of Boer independence, became its president (April 16, 1883).

Rising Stakes of Colonial Economics, 1880–1899

1880–1881. The Gun War. The Basutos revolted when ordered to give up their arms. The revolt was suppressed.

1883–1884. Zulu Civil War. Bickering between rival rulers flared into civil war when Cetewayo was restored (January 29, 1883). After almost a year of fighting, he was overthrown by **Zibelu** (December 1883), who soon afterward was overthrown by **Dinuzulu,** son of Cetewayo.

1884. Establishment of German Colony of Southwest Africa.

1886. Discovery of Gold in the Witwatersrand. This was followed by British diplomatic maneuvers, resulting in annexation of Zululand. The Boers were in fact being cut off from all communication with the sea. While **Afrikanders** and **Uitlanders** (foreigners settled in the area) battled with one another for control of the Transvaal government, **Cecil Rhodes,** then prime minister of the Cape Colony and architect of a plan for British domination of what had now become one of the richest areas in the world, schemed to throttle the Afrikanders. They, on the other hand, were stubbornly resolved to check any foreign aggrandizement.

1887. Zulu Rebellion. After the British annexed Zululand, Dinizulu revolted (June–August), but was defeated.

1893, July–November. Matabele-Mashona War. Lobengula, king of the Matabeles, tried to conquer the Mashonas. The British intervened and defeated the Matabeles near their capital at **Bulawayo** (October 23).

1895–1896. Jameson Raid. Dr. **L. Starr Jameson,** close friend of Rhodes, and 500 adventurers undertook a fantastic dash into the

Transvaal to spark an Uitlander uprising in Johannesburg. With 500 men, Jameson rode into Boer territory from Mafeking, 140 miles away (December 29); an *opera-bouffe* performance, completely lacking in military acumen. Three days later, at Krugersdorp, hard-riding, hard-shooting Boer commandos rounded them up like so many cattle, while the proposed revolt at Johannesburg failed to materialize. Jameson and his men were handed over to the British government, tried and convicted under the Foreign Enlistment Act, and given a slap on the wrist. Conditions worsened in the Transvaal; Boer-British relations grew more strained.

1896, March–October. Matabele Uprising. Suppressed by the British.

1899, October 9. Kruger Ultimatum. Realizing that a British expeditionary force was in the making in Natal, Kruger gave the British government 48 hours to disband all military preparations. The ultimatum was refused. The Orange Free State announced its alliance with the South African Republic.

Boer War, 1899–1902

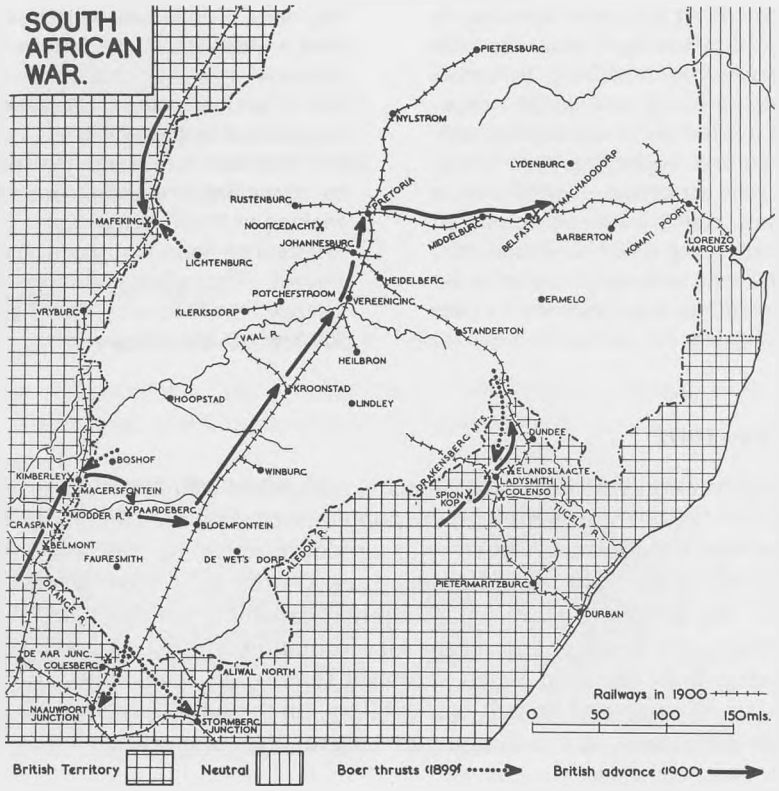
Boer military organization was extremely sketchy, a localized militia system grouped into so-called commandos varying in strength with the population from which they were recruited. But every individual was a marksman, armed with a modern repeating rifle, and every man was mounted. The riders of the veldt were hunters, trained from childhood to take advantage of cover and terrain. The result was an irregular firepower capability which could pulverize—from concealed positions—the ranks of any close-order formation. These irregulars were also capable of disappearing from the field when seriously threatened. The Boers also had a small quantity of modern German and French field artillery, on the whole well served. On the other hand, these Boer individuals lacked disciplinary control and most of their leaders had no real concept of tactics and strategy.

1899, October. The Boer Offensive. Fast-moving Boer columns advanced, both east and west. Transvaal General **Piet A. Cronjé** invested **Mafeking** (October 13), valiantly defended by Colonel **Robert S. S. Baden-Powell.** Free State forces besieged **Kimberley** (October 15). The Boer main effort, 15,000 strong, under Transvaal General Joubert, pushed through the Natal Defense Force, equal in number, under General Sir **George White,** at **Laing's Nek** (October 12), and after brushes at **Talana Hill** (October 20), **Elandslaagte** (October 21), and **Nicholson's Nek** (October 30), bottled up White's troops in **Ladysmith** (November 2). British relieving forces were unwisely divided up by General Sir **Redvers Buller,** who tried to check the Boers everywhere at once.

1899, November 28. Battle of the Modder River. General Lord **Paul Methuen**'s column, nearly 10,000 men with 16 guns, moved to the relief of Kimberley. Transvaal and Free State Boer commandos, about 7,000 strong, under Transvaal Generals Cronjé and **Jacobus H. De La Rey,** contested the advance in a series of delaying actions. Methuen finally won through to the Modder River, after losing 72 men killed and 396 wounded, but his troops were so exhausted that he paused to await reinforcements. Boer casualties were negligible.

1899, December 10, Battle of Stormberg. A British force under General Sir **William Gatacre** got lost in a night move against a Boer spearhead 70 miles from Queenstown and was ambushed, losing heavily.

1899, December 10–11. Battle of Magersfontein. The Boers under Cronjé near the Modder River, now about 8,000 strong, occupied an entrenched hill. Methuen attacked frontally, in mass formation, at dawn in the rain. He was



defeated with loss of 210 men killed (including one general officer), 675 wounded, and 63 missing. Again, Boer casualties were negligible.

1899, December 15. Battle of Colenso. Buller himself led 21,000 men of all arms to relieve Ladysmith. Crossing the Tugela River, he attempted to turn the left flank of Free State General **Louis Botha,** entrenched with 6,000 men. The British flank attack, entangled in difficult terrain, was decimated by small-arms fire. British batteries unlimbering to support the frontal attack found themselves at the mercy of a concealed force of Boers. The British were driven back with losses of 143 killed, 756 wounded, and 220 men and 11 guns captured. Boer losses are estimated at not more than 50 men. At the end of Britain's "Black Week," Buller was so badly beaten that he advocated the surrender of Ladysmith. He was at once relieved of the supreme command and replaced by Field Marshal **Frederick Sleigh, Viscount Roberts,** with General Kitchener as his chief of staff.

1900, January 10. Robert's Reorganization. Realizing at once that mobility was the keynote for success against the Boers, Roberts and Kitchener began revamping British field forces. To meet the Boer fluidity of fire and movement, a progressive build-up of mounted infantry began around the existing yeomanry militia units, a long and arduous task against conservative British military opinion. Brigadier General **John D. P. French,** with 2 small brigades of cavalry, kept up a spirited campaign against De La Rey and Free State General **Christiaan R. De Wet,** who were proving themselves to be natural leaders of light cavalry.

1900, January–February. Buller Repulsed

at the Tugela. He failed in 2 successive attempts, **Spion Kop** (January 23) and **Vaal Kranz** (February 5). British losses inflicted by small Boer forces of marksmen were 408 killed, 1,390 wounded, and 311 missing. The Boers lost some 40 killed and 50 wounded.

1900, February 15. Relief of Kimberley. French reached Kimberley, bringing the Boer siege to an end.

1900, February 15. Roberts Bypasses Cronjé. Roberts had set out toward Kimberley (late January) with 30,000 men. While French was driving directly on Kimberley, the main British force marched past Cronjé's left flank at Magersfontein, threatening his communications. The Boer leader began a slow withdrawal (February 16).

1900, February 18. Battle of Paardeberg Drift. Cronjé's retreat across the Modder River was blocked by French, rushing back from Kimberley. As the main British army approached, Roberts, temporarily sick, turned his command over to Kitchener, who made a tempestuous frontal piecemeal attack on the Boers' fortified laager (wagon train). The British were repulsed with losses of 320 killed and 942 men wounded.

1900, February 19–27. Siege of Paardeberg. Roberts, recovering, took command again and began a systematic encirclement and bombardment of the Boer laager. Cronjé, who might have broken out with his 4,000 mounted men, stubbornly refused to abandon his wounded and his train. He was starved into surrender (February 27).

1900, February 28. Relief of Ladysmith. Buller, on the Tugela, made a third attack (February 17–18) and succeeded. As he advanced toward Ladysmith, the besiegers withdrew and the relieving force made contact with the garrison. The tide had turned.

1900, March–September. Roberts' Cleanup in the Orange Free State. The British, now heavily reinforced, advanced on all fronts. Roberts took **Bloemfontein,** capital of the Orange Free State (March 13) and reached **Kroonstad** (May 12). Buller in Natal swept Boer resistance away at **Glencoe** and **Dundee** (May 15). The Orange Free State was annexed by Britain (May 24).

1900, May 17–18. Relief of Mafeking. A flying column of cavalry and mounted infantry under Major General **Bryan T. Mahon** relieved the garrison after a siege of more than 7 months.

1900, May–June. Invasion of the Transvaal. Johannesburg fell (May 31), then Pretoria (June 5). Roberts and Buller joined forces at Vlakfontein (July 4), ending all formal resistance. Kruger fled to Portuguese and Dutch protection. Annexation of the Transvaal was announced (September 3). Roberts went home (December), Kitchener being left in command. But the war was far from being over.

1900, November–1902, May. Guerrilla Warfare. De Wet, De La Rey, Botha, and some minor leaders, rallying to their respective commands the disbanded burgher forces, for 18 months played hob with British communications and defied all attempts to corner them. Erection of a line of blockhouses to protect the rail and other communication lines was the first British remedial action. But the raiders seemed to plunge at will through this cordon defense. Kitchener then copied Spanish procedure in Cuba. The country was swept by flying columns of mounted infantry; the farms on which the Boer raiders depended for sustenance were burned and some 120,000 Boer women and children were herded into concentration camps, in which an estimated 20,000 of them died of disease and neglect. Under these harsh measures, all resistance collapsed. The guerrilla leaders capitulated.

1902, May 31. Treaty of Vereeniging. The Boers accepted British sovereignty. As part of the very lenient terms, Britain granted them 3 million compensation for the destroyed farms. Total British casualties were 5,774 killed and 22,829 wounded. The Boers lost an estimated 4,000 killed; there is no accurate toll of the wounded. About 40,000 Boer soldiers had been captured.

COMMENT. *It took the British Empire 2 years and 8 months to subdue a foe whose man-power potential was 83,000 males of fighting age, and which never had in the field at one time more than approximately*

40,000 men. British forces engaged in the beginning totaled not more than 25,000, but before it was ended some 500,000 men were in South Africa—drawn from empire resources around the world. What happened was that the British Army, for the first time since the War of 1812, met hostile mounted riflemen and aimed small-arms fire. The experience of some 85 years of formal and little wars in Europe and around the world went into the discard, and an entire new system of tactics and techniques had to be evolved on the battlefield.

East Africa

1862. Increasing British Influence in Zanzibar.

1869. Buganda Intervenes in Bunyoro. This intervention in a Bunyoro succession crisis had no long-term results.

1870–1890. Bunyoro Recovery. Bunyoro began a recovery, largely based on its new and more efficient *abarasura* military formations. During the same era, **Buganda** built a fleet of war canoes on Lake Victoria.

1885. German Protectorate Established over Coast of Tanganyika. Protests of the Sultan of Zanzibar were overcome by German naval demonstrations.

1885–1898. British Wars with Arab Slave Traders in Nyasaland. This was the first, and longest-lasting, of intermittent wars of the various colonial powers with the Arab slave traders in East, West, and Central Africa.

1885–1889. Religious Wars in Uganda. Initially these were mainly between Moslems and the Catholic Christians under King **Mwanga.** The eventual victory of Mwanga over the Moslems (1889) was followed by continuing unrest resulting from Protestant-Catholic disputes.

1887. British Establish Control of Kenya Coast. A 50-year lease was negotiated with the Sultan of Zanzibar, largely to prevent further German expansion along the coast.

1888–1890. Uprising of Coastal Arabs in German East Africa. This was suppressed by the Germans with some naval assistance from Britain.

1890. British Protectorate Established over Zanzibar. This was recognized by Germany and France in return for Britain's cession of Helgoland to Germany and recognition of French claims in Madagascar.

1891–1893. Wahehe War in German East Africa. The rebellion was suppressed by the Germans.

1893. British Protectorate over Uganda.

1896. Uprising in Zanzibar. Suppressed by a British naval bombardment.

1897–1901. Mutiny in Uganda. Continued sporadic unrest in the British protectorate, fomented by rival French interests and religious conflicts, was complicated by the mutiny of British Sudanese troops. King Mwanga was defeated and captured (1899). Not until Indian troops were brought into the area was the outbreak controlled (1900–1901).

West Africa

c. 1850–c. 1880. Lunda Power Wanes. Pressured by Arab slavers from East Africa, and by invading tribes from the southeast, the Lunda paramountcy weakened (see p. 721).

1850–1864. Al-Hajj Umar's Jihad. Umar led his forces from their base in Guinea (see p. 857) in the conquest of nearby Bambara chiefdoms (1852). Umar overran the gold fields of the upper Sénégal, and conquered the Bambara Kingdom of Kaarta (1854). Umar's efforts to conquer his homeland around Fouta Toro led to war with the French (1856–1859), and his forces were repulsed by **Colonel Louis L. C. Faidherbe** in Senegal. Turning east, Umar's armies overran Segu, Macina (1861), base for the earlier *jihad* of Ahmadu ibn Hammadi (see p. 856), and then Timbuktu (1863). Al-Hajj-Umar was killed suppressing a revolt in Macina (1864).

1860. German Posts Established on the Cameroon Coast.

1864–1890. End of the Tukulor Empire. Hampered by relatives and former officers competing for control, the son of al-Hajj Umar, **Ahmadu Seku** was unable to establish firm

control of the widespread empire. He began to disband the army in the 1880s to reduce disorder, so the French were able to infiltrate and construct forts without serious opposition (1885–1890). They overran most of the Tukulor Empire in 1890–1892; Seku was captured in 1893 and died in 1898.

1873–1874. Second Ashanti War. After years of dispute over the coastal districts (1863–1872), war broke out when Ashanti troops invaded the coastal areas. The invaders withdrew after a British expedition, under **General Sir Garnet Wolseley,** landed and marched inland to the Ashanti capital of Kumasi, which was razed (February 1874). Although not seriously hurt, the Ashanti state was shocked by its defeat, and some of its subject tribes broke away.

1877–1885. Belgian Explorations in the Congo. Initially these explorations were supported internationally, but the Belgians dominated the region, which was declared an independent state (1885), over which King **Leopold of Belgium** assumed personal sovereignty. The French stepped up their colonial activity to the west and north of the Congo to limit the Belgian-controlled region.

1883–1890. French Expansion. This activity was centered mainly along the frontiers of Dahomey and in the upper Niger, where the Tukulors and other tribes were conquered.

1883–1893. Rise of Rabih az-Zubayr. This half-Arab, half-Negro adventurer, who had fought for and against the British and Egyptians in the Sudan, conquered the ancient Sultanate of Bornu. He then began to expand into nearby regions, and clashed with the French.

1884. German Protectorates Established. They took control of the Togoland and Cameroon coasts.

1885. Spanish and British Protectorates. The Spanish took control of Rio de Oro and Spanish Guinea. The British proclaimed control of the lower Niger River region, to forestall further French expansion.

1885–1886. First Mandingo-French War. The French defeated **Samori,** warlike ruler of the Ivory Coast tribes. They established a protectorate (1889).

1889–1892. French Conquest of Dahomey. After **Behanzin** succeeded Glele as king (1889), a brief war broke out (1889–1890). The French later launched a major expedition (1892), when Colonel **Alfred-Amédée Dodds**'s troops defeated the Dahomeyan army and set up a protectorate. Behanzin was exiled to the West Indies and died there (1894). Scattered unrest and insurrection in Dahomey plagued the French (1893–1899).

1892–1893. Rising of Arab Slave Traders on the Upper Congo. The sporadic conflicts taking place farther east spread as the Arabs became disturbed by European interference with their trade. Belgian troops finally quelled the disturbances.

1893. French Operations against the Tuaregs on the Niger. The French occupied Jenne and Timbuktu.

1893–1894. Third Ashanti War. Depredations of Ashantis under their new ruler, **Prempeh,** were repulsed, and the Ashantis forced to accept a British protectorate.

1894–1895. Second Mandingo-French War. Samori threw off French control and defeated French efforts to reestablish the protectorate.

1895–1896. Fourth Ashanti War. Under heavy pressure, King **Prempeh** submitted to a British ultimatum, which limited Ashanti autonomy (1896), yet the British did not fully occupy the area until after suppression of a major revolt (see p. 1100).

1897–1899. British Conquest of Northern Nigeria. Granted the authority to raise troops, company forces under **Sir Frederick Lugard** overran Bida and the Fulani emirate of Ilorin.

1897–1898. Anglo-French Dispute over Nigeria. The 2 countries came close to war, but finally resolved their differences, with the British retaining the area of modern Nigeria (see also **Fashoda Incident,** p. 928).

1897–1900. Batetela War on the Upper Congo. This warlike tribe was finally pacified by Belgian troops.

1898. Third Mandingo-French War. The French defeated and captured Samori, and completely broke Mandingo power (September 29).

1899–1900. French Conquest of Chad Region. Forces from the Congo and from Algeria converged to defeat Rabah Zobeir (April 22, 1900) after bitter warfare.

Madagascar

1859. French Protectorate over Coastal Areas.

1863. Revolt in Madagascar. The pro-European king, **Radama II,** was overthrown and killed.

1882. French Claim a Protectorate. This was rejected by the Hova government (see p. 859).

1883–1885. War with France. Majunga and Tamatave were bombarded by a French squadron and troops landed (June 13, 1885). After desultory fighting, the French protectorate was accepted. Unrest persisted, however, and Hova troops were trained by and to some extent officered by Englishmen.

1894, June 16. Extended French Claims Rejected. In consequence, Tamatave was again bombarded (December 12). A French expeditionary force of 15,000 men under General **Jacques C. R. A. Duchesne** embarked for Madagascar.

1895, February. French Conquest. Duchesne began landing at Majunga. The French force moved inland slowly, constructing a viable line of communications. **Tananarive,** the capital, was bombarded and at once surrendered (September 30). A violent insurrection then broke out in the interior.

1896, August 6. Madagascar Proclaimed a French Colony. General **Joseph S. Galiéni** set up a military government, deposed Queen **Ranavalona II,** and, actively campaigning, stamped out all revolt. Complete pacification was accomplished by 1905.

SOUTH ASIA

Afghanistan

1850–1855. Recovery of Dissident Regions. Dost Muhammad consolidated control of outlying areas, principal among them Balkh (1850) and Kandahar (1855).

1855. Treaty of Peshawar. This officially concluded Afghan participation in the 2nd Sikh War (see p. 864), confirmed British annexation of the Peshawar territories, and assured British support of Afghanistan against Persian designs on Herat (see p. 926). Persian withdrawal from Herat (1857) having left the region under independent local rule, Dost Muhammad immediately moved to gain control. During the Indian Mutiny (see p. 939), he remained faithful to his alliance with Britain.

1863, May 26. Capture of Herat. After a long-drawn-out local conflict and siege, Herat was brought under central control. Dost Muhammad died shortly afterward (June 9), being succeeded by his son **Sher Ali** Khan.

1863–1879. Internal Disorders. Serious dynastic struggles shook the country as Sher Ali was repeatedly defeated by his warrior cousin **Abdur Rahman** Khan. Sher Ali, courting Russian favor, became increasingly hostile to the British.

Second Afghan War, 1878–1880

1878, November. British Invasion. When Sher Ali ignored British warnings against his pro-Russian stand, British troops, in 3 columns, under Sir **Frederick** (later Lord) **Roberts,** advanced from India and seized the frontier passes, defeating Sher Ali's troops at **Peiwar Kotal** (December 2). Sher Ali fled; his son **Yakub** Khan, replacing him, signed a treaty with Britain (May 1879). Sir **Louis Cavagnari** was installed as British resident at Kabul.

1879, September 5. Assassination of Cavagnari. In reprisal, a field force under Roberts

marched on Kabul from Kurram and Kandahar.

1879, October 6. Battle of Charasia. Roberts' force, 7,500 men and 22 guns, defeated an Afghan army of 8,000, then occupied Kabul (October 12). Yakub Khan, abdicating, fled to British protection.

1879, December 23. Battle of Sherpur. Afghan levies amounting to 100,000 men rallied to the call for a holy war against the infidel British. Roberts' cantonments were surrounded. The British broke out and then Roberts, falling on the Afghan flank, completely dispersed them. Pacification continued, without major opposition, under the over all command of Sir **Donald Stewart.**

1880, June. Ayub Khan's Offensive. Ayub Khan, brother of Yakub, had seized control of Herat early in the war (January 1879). Now claiming the throne, he marched on Kandahar with 25,000 men. Lieutenant General **James Primrose,** commanding at Kandahar, sent an Anglo-Indian brigade, 2,500 strong, under Brigadier General **G. R. S. Burroughs,** to **Maiwand,** about 50 miles northwest, to oppose the Afghan advance.

1880, July 27. Battle of Maiwand. Burroughs attacked the Afghan position, but the British artillery expended all its ammunition and a flanking movement by Ayub then shattered the Indian troops, who fled. The one British infantry battalion present was surrounded and practically annihilated; about half the remainder of the command escaped. Ayub now advanced to besiege Kandahar.

1880, August 9. Roberts' March. Roberts moved out of Kabul to intercept Ayub. With him were 10,000 men and a transport corps specifically organized on his own plan. He reached Kandahar in 22 days, covering 313 miles over mountainous country.

1880, September 1. Battle of Kandahar. Roberts at once attacked, completely routing the Afghan Army and capturing all its guns and equipage. Ayub fled back to Herat. This action ended the campaign. A pro-British government was established under Abdur Rahman (see p. 938). The British evacuated the country in 1881.

1881. Ayub Khan's Second Bid for Power. With British troops out of the way, Ayub led his followers again on Kandahar, defeating an army sent by Abdur Rahman, and capturing the city (July 27). Abdur Rahman, taking the field in person, crushed the rebels (September 22). Ayub fled to Persia. Abdur Rahman now established a firm, centralized government.

1885, March 30. The Penjdeh Incident. Following the occupation of Merv (1884), Russian troops crossed the disputed Afghan frontier and clashed with Abdur's forces, inflicting heavy losses. The incident brought Britain and Russia close to war (see p. 922).

India

The Great Mutiny, 1857–1858

British military power in India at this time consisted of two elements: the native armies of the East India Company and a comparatively few regular British Army units. This armed force was controlled by the governor general, an official of the company, appointed with crown approval. In 1857 the 3 company armies—Bengal, Bombay, and Madras—consisted of 233,000 Asians (sepoys) and 36,000 Britishers, commanded by a British officer corps, commissioned by the company. Due largely to poor administration and command, considerable unrest existed among the native contingents. The introduction of the Minié rifle cartridge about this time provided the spark that changed unrest to violence. The paper cartridge, which had to be bitten for loading, was greased. Disaffected elements in the armies claimed—with some truth, as later investigation showed—that the grease used included the fat of cows (sacred to Hindus) and of pigs (unclean to Moslems).

1857, May 10. Outbreak at Meerut. The climax came in the Bengal army garrison at Meerut, some 25 miles from Delhi, after 85 cavalry sepoys who had refused the new cartridge had been disgraced and imprisoned. While the British units were at church, the Indian regiment released the imprisoned soldiers, then killed as many of their European officers and other European men, women, and children as they could find. Before the British troops could take action, the mutineers had fled to Delhi. There was no effective pursuit.

1857, May 11. Massacre at Delhi. Upon arrival at Delhi, the Meerut mutineers were joined by the native garrison, who, with the city rabble, began to butcher all Europeans they could find. All who could escape joined the British garrison, holding cantonments outside of town. In the city a few British officers and men held the arsenal as long as possible, then blew up themselves and the ammunition magazine, causing great damage to the attacking native soldiers and mob. The rebels declared **Bahadur** Shah, last of the decadent moguls, as their ruler. The surviving Europeans fled to Meerut and Umballa, a large military post in the Punjab, 120 miles northwest of Delhi. Word of the uprising spread throughout India, causing the entire Bengal army, from Delhi to Calcutta, to revolt against the British.

1857, May–July. British Reaction. Delayed by the scattering of British units to hill stations for the summer, General **George Anson,** British commander in chief, was unable for several days to get a force together at Umballa to march on Delhi. Shortly after starting the march (May 17), Anson died of cholera (May 27). The British advance ceased briefly. Sir **John Lawrence,** efficient chief commissioner in the Punjab, now assumed control of operations in the north. He immediately rushed a force of 3,000 British troops to besiege Delhi, and promptly gathered more British and loyal Punjabi troops to follow them. At Lucknow, in the center of the dissident area, his elder brother, Sir **Henry Lawr nce,** organized the defense of the residency against an ever-increasing rebel force. Sir Henry had 1,720 fighting men, including 712 faithful native troops, plus 1,280 additional noncombatants. At Calcutta, the governor general, Sir **Charles John Canning,** after some temporizing, undertook action to gather British reinforcements.

1857, June 27. Cawnpore Massacre. Dandu Panth (Nana Sahib), Rajah of Bitpur, led the rebellious native troops of the garrison in a 3-week siege of the British contingent (June 6–26). He persuaded Sir **Hugh Wheeler,** the British commander, to surrender his handful of British troops and more than 200 noncombatants, mostly English women and children, under promise of safe conduct to Allahabad. As the disarmed British were embarking on river boats, Nana's men murdered the men and imprisoned the women and children.

1857, July 7–16. Havelock Marches toward Lucknow. Sir **Henry Havelock,** with 2,500 men, mostly British, moved from Allahabad to the relief of Lucknow. Marching 126 miles in 9 days, during the hottest season of the year, Havelock met Nana Sahib's forces, defeating them at **Fatehpur** (July 12), **Aong** (July 15), and **Cawnpore** itself (July 16), where Nana's troops were completely shattered. On entering Cawnpore, the British discovered the bodies of the English women and children prisoners, hacked to death and thrown into a well by Nana's orders the day previous. Nana succeeded in escaping the berserk Britishers, although most of his followers were not so fortunate. (Nana's fate is obscure; he fled to Nepal, where he is reported to have died in 1859.) Havelock was now compelled to await reinforcements and supplies before continuing his advance on Lucknow (September 20).

1857, September 14–20. Storming of Delhi. The initial besieging force had taken the Badli-ki-Serai ridge dominating the city (June 8), but not until early August had its strength been sufficient for offensive action. After a 3-day artillery preparation, the assault force, 4,000 strong, moved against the walls in 4 columns, gaining a foothold inside after taking severe losses, including its commander, Brigadier General **John Nicholson,** who was killed. Six days of bitter street fighting followed before the

city was finally subdued. Bahadur Shah was captured, and his sons shot out of hand after they had surrendered, in revenge for the murdered women and children of Cawnpore. The British took casualties totaling 1,574 men killed and wounded during the action. The capture of Delhi ended for all time the dream of a revival of the Mogul Empire.

1857, September 25. First Relief of Lucknow. Sir Henry Lawrence had been killed by artillery fire (July 4) and had been succeeded by Brigadier General **John Inglis.** Havelock's relief force, after an arduous campaign up from Cawnpore and bitter street fighting in Lucknow itself, broke through the 60,000 rebels besieging the residency, losing 535 officers and men out of a 2,500 strength. The rebels closed in again. Sir **James Outram,** who had joined the relief force as a volunteer (August 15), took command of the besieged garrison, since he was senior to Havelock. For 6 weeks more the obstinate defense of the residency continued.

1857, November 16. Second Relief of Lucknow. Another relief column, 4,500 strong, under Sir **Colin Campbell,** advanced from Cawnpore (November 12). On the 14th, the defenders heard Scottish bagpipes playing "The Campbells Are Coming." Two days later, the relief column crashed through. The residency was safely evacuated to Cawnpore (November 22), but Havelock was killed during the operation. Campbell decisively defeated a large rebel force outside of **Cawnpore** (December 6).

1858, January–March. Commencement of Central Indian Campaign. Sir **Hugh Rose,** with 2 brigades (about 3,000 men) from the loyal Bombay Army, in a whirlwind campaign relieved **Saugor** (February 3), forced the pass of **Madanpur** (March 3), and invested **Jhansi,** the rebel stronghold (March 21).

1858, March 16. Recapture of Lucknow. Having been reinforced, Campbell again marched on rebel-held Lucknow. He was joined by **Bang Bahadur,** prime minister of Nepal, with 10,000 Gurkhas. After a week of bitter fighting, the city was finally cleared of the rebels.

1858, April–June. Rose in Central India. While Rose was investing Jhansi, 20,000 rebels under **Tantia Topi,** a lieutenant of Nana Sahib and the most capable military leader of the rebels, arrived on the scene. Rose boldly diverted half of his command to defeat Tantia Topi (April 1), then carried Jhansi itself by assault (April 3). Following this, he defeated rebel forces at **Kunch** (May 1) and **Kalpi** (May 22). In 5 months he had defeated the rebels in 13 actions. Tantia Topi, escaping, rallied another force and with the amazon **Rani of Jhansi** subverted (June 9) the troops of **Sindhia,** who had faithfully kept his treaty with England.

1858, June 19. Battle of Gwalior. Rose overwhelmed Tantia Topi and the Rani, who was killed. Topi escaped to the jungle, where he was later captured and executed (April 18, 1859).

COMMENT. *The victory at Gwalior ended the Mutiny, although mopping-up operations continued. British repressive measures were harsh.*

1858, September 1. End of the Company. The government of India was transferred to the British Crown, ending the century-long rule of the East India Company.

1865. Bhutan War. Long-standing frontier disorders forced the British to send a small force to Bhutan (January). The Bhutanese surprised and drove out the British garrison of **Dewangiri.** Sir **Henry Tombs** pressed a punitive action, resulting in Bhutanese suit for peace (November 11).

1878–1881. Second Afghan War. **(See p. 938.)**

1885. Third Burmese War. **(See p. 942.)**

1895, March 4–April 20. Siege and Relief of Chitral. A small force of about 350 Indian Army troops, under Captain (later General) Charles V. F. Townshend were besieged in a tiny mud fort at Chitral on the North-West frontier by local tribesmen under **Sher Afzal.** A relief expedition under Major General, Sir **Robert Low** assembled at Peshawar and then marched for Chitral (early April), fighting several battles along the way. The beleaguered fort was relieved after a 6-week siege (April 20).

1895, August–1898, March. Pathan Uprising. As part of a general uprising on the North-West frontier, Pathan tribesmen captured the

Khyber Pass (August 27). The British retook it (March 1898). In the course of restoring order in the area, the British mounted several expeditions, including the Malakand Field Force and the Tirah Expedition (see below). During this period, British forces suffered some 1,300 casualties.

1896, October–December. Tirah Expedition. Lieutenant General Sir **William S. A. Lockhart** led a force of 44,000 Indian and British troops to restore order in Tirah, a region south and west of the Khyber (October). Following 2 sharp battles with the Pathans for the **Dargai Heights** (October 18, 20) and several smaller actions, the Pathans accepted British terms (December 13).

1896–1897. Malakand Campaign. A British expedition to the Swat Valley suppressed violence resulting from civil war in Chitral.

SOUTHEAST ASIA

Burma

1852–1853. Second Burmese War. Following continued friction between British interests and the Burmese government, an amphibious expedition of 8,100 men under General Sir **H. T. Godwin** seized Rangoon (April 12). The Burmese army retired northward. Godwin seized Martaban at the mouth of the Salween River and Bassein in the Irrawaddy delta (May). After a halt until the monsoon ceased (October), Godwin occupied Pegu after a sharp engagement at the **Shwe-maw-daw Pagoda,** then seized Prome (October 9).

1852, December 20. Annexation of South Burma. Britain (the East India Company, actually) announced the annexation of Pegu Province. Meanwhile, a revolution at Amarapura (Burmese capital, near modern Mandalay) had overthrown King **Pagan Min,** who was replaced by his half-brother, **Mindon Min,** who tacitly acquiesced in the cession of Pegu, though no formal peace treaty was signed.

1878. Accession of Thibaw. One of Mindon's many sons, **Thibaw Min,** ascended the throne on his father's death. Internal order in Burma began to break down under Thibaw's inept rule, while a border dispute with the British flared on the Manipur frontier. Thibaw then tried to offset British influence in Burma by entering into trade and diplomatic negotiations with the French. Burmese interference with the British teak trade became an immediate cause of conflict (1885).

1885. Third Burmese War. A British amphibious force of 9,000 troops and 2,800 native followers, under General **H. N. D. Prendergast,** moved up the Irrawaddy from Thayetmo in 55 river steamers and barges manned by the Royal Navy (November 14). As the expedition rapidly approached his capital, Ava, Thibaw surrendered (November 27). Britain annexed Burma (January 1, 1886).

1885–1895. Guerrilla Warfare. Burma was eventually pacified, although banditry was endemic in the outlying regions.

Siam

1850–1863. Frontier Incidents in Malaya. Northern Malayan princes attempted to play off Siam and Britain (see p. 944). Firm British military and diplomatic action in the frontier regions blocked Siam's efforts to expand southward.

1863–1867. Siam Ejected from Cambodia. French military intervention in that country forced Siam to choose between war and peace; King **Rama V** reluctantly withdrew his forces from Cambodia.

1871–1872. Expedition to Eastern Laos. Siamese military intervention limited Chinese Black Flag bandit depredations in Luang Prabang, but failed to eject the Chinese from the eastern section (see p. 944).

1883–1887. Renewed Expeditions to Eastern Laos. Concerned by French expansion in Vietnam, Siam sent a second expedition to pacify eastern Laos, so as to eliminate any excuse for French intervention. This force was defeated by the Chinese (1883). A larger army was sent (1885), which eventually pacified much of eastern Laos (1887).

1893. The French Threat. Continued French expansion (see p. 944) led to strained relations and serious incidents in disputed territories in Laos between French and Siamese forces (1892–1893). French warships entered the Menam River, fought their way past the Paknam fort, and anchored off Bangkok (July). This created a serious crisis between Britain and France. Britain, however, unwilling to risk war with France, advised Siam to accept French terms, which included recognition of a French protectorate over Laos and Siamese abandonment of her eastern provinces, which had formerly belonged to Cambodia. Siam agreed (October).

INDOCHINA

Vietnam

1851–1857. Clashes with the French. Under King **Tu Duc** a series of repressive measures against Christians, and sporadic murders of French missionaries, inspired French protests and occasional bombardment of Vietnamese ports by French warships.

1858–1862. French Invasion of Cochin China. Murder of the Spanish Bishop of Tongking caused a Franco-Spanish naval task force to bombard and to occupy Tourane (August–September 1858). Shortages of food caused the allied force to move to Saigon (February 1859). Sporadic operations continued, the French being primarily engaged in a war with China (see p. 944). A Franco-Spanish garrison of 1,000 held Saigon against a large besieging force for almost a year (March 1860–February 1861). A French relief force, under Admiral **Leonard V.J. Charner,** defeated the besiegers at the **Battle of Chi-hoa** (February 25, 1861). The French now steadily expanded their control of Cochin China. Tu Duc sued for peace, and ceded the three eastern provinces of Cochin China to France.

1862–1873. Unrest and Guerrilla War. Tu Duc was plagued by a series of rebellions. French intervention and pacification led to annexation of the 3 southwestern provinces of Cochin China. Internal disorders continued, but French control was strengthened.

1873–1874. Hanoi Incident. Without authority the French governor of Cochin sent a small force to intervene in civil war in Tongking. The French seized Hanoi, but evacuated it after forcing Tu Duc to grant numerous trade and diplomatic concessions. The relative interests of France, Vietnam, and Cochin China in Tongking resulted in continuing tension.

1882–1883. Renewed Vietnamese War with France. French expeditions seized Hanoi and the forts at Huế. Vietnam sued for peace, recognizing a French protectorate, and ceded additional areas to France. China's objections to this soon led to hostilities.

1884. Undeclared War between France and China. (See p. 946)

1885–1895. Widespread Revolts. The Vietnamese population supported Prince **Si Vattha** in an uprising against the French. Order was soon restored in most areas of Vietnam (1886), but the last embers of revolt were not extinguished until Si Vattha surrendered (1892). At the same time, guerrilla warfare engaged the French for several years in Cochin China and Tongking. Relative peace was restored, however, as the result of strenuous French efforts (1895).

1887. Administrative Consolidation of French Indochina. This affirmed the establishment of a permanent French colony.

Cambodia

1861–1862. Dynastic Disorders. King **Norodom** was forced to flee to Siam by a revolt of his brother, **Si Votha.** With Siamese assistance Norodom regained his throne.

1863. Limited French Protectorate. This was established despite the objections of Siam, supported by Britain (see p. 942). France agreed to Siam's retention of some nominal claims to suzerainty over Cambodia (1864).

1866–1867. Revolt of Po Kombo. After some initial success, this pretender was defeated, then chased down by French and Cambodian forces.

1887. Cambodia Part of Indochina. (See p. 943.)

1893. French Annexation of Western Cambodia from Siam. (See p. 943.)

Laos

1871–1872. Invasion by Chinese Refugees. Bandit refugees from China's internal wars (see p. 946) overran eastern Laos (under Siamese suzerainty) and threatened Luang Prabang. Depredations were limited by Siamese forces, but the Chinese retained their hold on eastern Laos and western Vietnam (roughly the region between Xieng-Khouang and the Black River Valley of Tongking).

1883–1887. Siamese Expedition to Eastern Laos. (See p. 943.)

1887–1889. French Influence in Eastern Laos. The French took advantage of disorders in Laos to intervene, and to annex the region between Xieng-Khouang and the Black River Valley, despite Siamese protests (see p. 943).

1893. French Annexation of Laos. After a number of frontier incidents in Laos, probably engineered by local French officials, hostilities broke out between France and Siam (see p. 943). As part of the terms of settlement of the crisis, Siam recognized a French protectorate over Laos, which was then incorporated into Indochina.

Malaya and Indonesia

Both British (in Malaya and parts of Borneo) and Dutch (in Indonesia) were engaged in numerous military activities in their respective colonies, dealing with piracy, native dynastic disputes, and occasional armed revolts. Of these the most serious was a bitter continuing war of the Dutch against the Sultan of Atjeh (1873–1908).

EAST ASIA

China

1850–1860. Taiping Rebellion (First Phase). Accession to the throne of the **HsienFeng** emperor was followed by tyranny. Anti-Manchu revolts organized by **Hung Hsiu-ch'uan** broke out in Kwangsi, Hupei, and Hunan provinces. Hung's military leader, **Yang Hsiu-ch'ing,** led rebel armies that swept the Yangtze Valley, capturing **Wuch'ang** and **Nanking.** At the latter city the revolutionary capital was established and a new dynasty—**Taiping T'ien-kuo**—announced with Hung as its ruler. Agrarian unrest aggravated revolt; Shanghai was captured by rebel supporters (September 7, 1853). China was virtually split in two.

1853–1881. Regional Insurrections. Collapse of central authority encouraged widespread insurrections. A bandit regime called **Nien Fei** terrorized Anhwei, northern Kiangsu, and Shantung (1853–1868) before its suppression by a rejuvenated central government. A Moslem (Panthay) regime established (1855) at Tali in Yunnan was finally suppressed (1873). A revolt of the Miao tribe in Kweichow (1855) lasted even longer (1881).

Second Opium War, 1856–1860

1856–1858. Anglo-Chinese Hostilities. Chinese seizure of the British ship **Arrow** at Canton (October 1856) brought armed reprisal: bombardment of Chinese ports. Later, an Anglo-French force under Admiral Sir **Mi-**

chael Seymour occupied Canton (December 1857), then cruised north to capture briefly the Taku forts near Tientsin (May 1858).

1858, June 26–29. Treaties of Tientsin. Negotiations between China and England, France, the United States, and Russia theoretically brought peace, China agreeing to open more treaty ports, to receive legations at Peking and missionaries in the interior, to legalize opium importation, and to establish a foreign-inspected maritime customs service. The **Treaty of Aigun (May 1858)** had already ceded the left bank of the Amur River to Russia. But China soon abrogated the Franco-British treaties.

1859, June 25. Attack on the Taku Forts. Refusal to admit foreign diplomats to Peking was followed by British Admiral Sir **James Hope's** bombardment of the forts guarding the mouth of the Peiho (Hai) River, below Tientsin. The squadron was severely mauled and British landing parties repulsed by a surprisingly efficient Chinese garrison. Commodore **Josiah Tattnall,** commanding the U.S. Asiatic Squadron, declaring "blood is thicker than water," assisted the British to withdraw. England and France agreed on joint action against China.

1860. Renewed Hostilities. Anglo-French forces gathered at Hong Kong (May 13). A joint amphibious expedition moved north to the Gulf of Chihli (Po Hai), 11,000 British under Lieutenant General Sir **James Hope Grant** and 7,000 French under Lieutenant General **Cousin-Montauban.** Landings, uncontested, were made at Pei-Tang (August 1) and the Taku forts taken by assault (August 21) with the assistance of the naval flotilla. Moving upriver to Tientsin, the expedition started for Peking—the British on the right bank of the Peiho, the French on the left. Chinese pleas for an armistice and parley resulted in the sending of a delegation headed by Sir **Harry Smith Parkes** into their lines. The party was seized (September 18), imprisoned, and—as learned later—horribly tortured. About half of its number died. Meanwhile, the expedition pushed ahead, brushing some 30,000 Chinese aside in 2 sharp actions and arriving before the walls of Peking (September 26). Preparations for assault commenced, and the old Summer Palace (Yuan Ming Yuan) was occupied and looted (October 6).

1860, October 18. Treaty of Peking. Another Chinese bid for peace was accepted; the price was return of the survivors of the Parkes party, surrender of Kowloon on the mainland opposite Hong Kong, and an indemnity of 8 million taels. General Grant then burned the Yuan Ming Yuan Palace (October 24) in reprisal for the mistreatment of the Parkes party. (Completely destroyed, the palace was never rebuilt; the new Summer Palace was later built nearby by Dowager Empress **Tzu Hsi;** see p. 1103.) Leaving a garrison at Tientsin, the expedition withdrew from China.

1860–1861. Russian Expansion. Russia now took advantage of China's prostration to extort from her the Maritime Provinces, where the port of Vladivostok was founded (1860–1861).

Taiping Rebellion (Final Phase), 1860–1864

Following the close of the war with the foreign powers, patriotic Chinese—including particularly **Tseng Kuo-fan** (who became viceroy) and **Li Hung-chang**—led a revitalized government and the Chinese people to organize against the dictatorial Taiping rebel regime in the south.

1860. Appearance of Ward. In the Shanghai area, Chinese merchants financed an army of liberation under **Frederick Townsend Ward,** American merchant marine officer and soldier of fortune from Salem, Mass. Ward won a series of victories, which earned for his force the title of "Ever Victorious Army" and for him a commission as brigadier general in the Imperial Chinese forces (1861).

1862, August 20. Battle of Tzeki. Having

cleared a 30-mile zone about Shanghai, winning 11 victories in a 4-month period (with the assistance of British and French forces returned from the Peking expedition), Ward attacked the walled city of Tzeki. Here he was mortally wounded while directing the assault.

1863. "Chinese" Gordon. Captain Charles G. Gordon, R.E., was detailed by the British government—at Chinese request—to succeed Ward in command of the Ever Victorious Army. Gordon moved north, along the line of the Grand Canal, taking Soochow (Wuhsien, December 4) and bottling up the Taiping forces in Nanking. Gordon, disgusted by the treacherous murder by Chinese government forces of rebel prisoners who had surrendered to him, threw up the command of his army, which was soon disbanded.

1864, July 10. Fall of Nanking. Chinese forces under Viceroy Tseng ended the Taiping Rebellion, although its last embers were not stamped out until the following year.

COMMENT. *This was perhaps the most destructive war of the entire 19th century. It has been estimated that 20 million people died directly or indirectly due to the war between 1850 and 1864.*

1865–1881. Suppression of Regional Revolts. Tseng supervised the operations of Chinese forces to suppress the revolts of Nien Fei and the Miaos (see p. 944).

1883–1885. Undeclared War with France. This was the result of French expansion in Tongking. Chinese troops, sent to Tongking from Yunnan, were driven out of **Pallen** and **Son-Tay** (1883), following which the French established themselves securely in the lower Black River Valley. Peace negotiations at Peking failed (May 1884). Chinese troops defeated a French force at **Bac-le** (June 23, 1884). A French naval squadron then entered the harbor of Foochow, destroying a Chinese naval squadron there, as well as the land fortifications and naval arsenal (August 23, 1884). The French then steamed to Formosa, bombarding **Chi-lung** (October 23, 1884). The forts there held out against repeated French attacks, but surrendered (March 1885), following which the French occupied the port briefly. They demonstrated at Tamsui, captured the Pescadores, and maintained a semi-blockade of the island for 7 months. Meanwhile, in Tongking, a major French offensive, after hard fighting, culminated in the capture of **Langson** (February 13, 1885). Six weeks later, however, the French suffered a severe defeat outside Langson and precipitously evacuated the region, abandoning most of their equipment. When news of this reached Paris, the government fell, and its successor instituted peace negotiations. The **Treaty of Tientsin** (June 9, 1885) brought peace, restoring the *status quo;* France restored to China the areas occupied in Formosa and the Pescadores.

Sino-Japanese War, 1894–1895

Chinese and Japanese rivalry over predominance in Korea (semi-independent vassal of the Chinese Empire) had grown intense (see p. 949).

1894, June. Japanese-Fomented Riots in Seoul. China sent troops by sea to Asan (about 40 miles southwest of Seoul) to restore order at the request of the Korean government. Japan responded by rushing troops directly to Seoul through Chemulpo (Inchon). Meanwhile, the Korean government suppressed the disorders, but neither China nor Japan would withdraw troops until the other did.

1894, July 20. Japan Seizes Control of the Korean Government.

1894, July 25–29. Preliminary Clashes. Near **Phung-Tao,** on the west coast of Korea, Japanese Admiral **Tsuboi** attacked a Chinese troop convoy bringing reinforcements to Asan, sinking one transport and severely damaging Chinese naval escorts (July 25). At the same time, Major General **Oshima,** commanding Japa-

nese troops in Seoul, advanced on Asan, defeating the Chinese at **Sŏnghwan** (July 29).

1894, August 1. Declaration of War. Both sides declared war and rushed reinforcements to Korea by sea, the Chinese to the Yalu River and northern ports, the Japanese through Pusan and Chemulpo. Neither navy attempted to interfere with the other's convoys.

1894, September 15. Battle of Pyongyang. General **Michitsura Nozu,** with an army in excess of 20,000 men (partly landed by sea, partly overland from Seoul), attacked and defeated a Chinese force of 14,000 defending Pyongyang. The remnants of Chinese forces withdrew to the Yalu River, where the main Chinese fleet, under Admiral **Ting Ju-ch'ang,** had just escorted a troop convoy with reinforcements.

1894, September 17. Naval Battle of the Yalu (Haiyang). Admiral **Yuko Ito,** with the main Japanese fleet, having convoyed troops to take part in the Pyongyang battle, then headed north to seek Ting's squadron. The two fleets met between the mouth of the Yalu and Haiyang Island. The Chinese squadron consisted of 2 ironclad battleships, 4 light cruisers, and 6 torpedo boats. The Japanese force comprised 4 heavy cruisers, 4 fast light cruisers, and 2 other old armored cruisers. The Japanese had a great preponderance of heavy (over 5″ caliber) quick-firing guns. Japanese gunnery and ship handling were far superior to the Chinese. Five Chinese ships were sunk; the remainder limped into Port Arthur, all severely damaged. The Japanese sustained considerable damage, but lost no ships. Ito, respectful of the 2 powerful Chinese battleships, had failed to close decisively with his defeated enemy, or to pursue aggressively; otherwise the Chinese squadron—out of ammunition at the close of the battle—would have been annihilated.

1894, October 24–25. Passage of the Yalu. After Pyongyang, Nozu's force—advancing to the Yalu—was augmented and reorganized as the First Army, under Marshal **Aritomo Yamagata.** With over 20,000 men, the Japanese crossed the Yalu without opposition.

1894, October 24–November 19. Operations against Port Arthur. The Japanese Second Army (26,000 troops and 13,000 auxiliaries), under Marshal **Iwao Oyama,** was convoyed to the Liaotung Peninsula, landing north of Port Arthur at Pitzuwu (October 24). Opposition to the advance down the peninsula to Port Arthur was negligible. Unaccountably, the Japanese Navy permitted Admiral Ting and his squadron to escape across the Strait of Pohai to Weihaiwei. Oyama's successful dawn attack on the fortifications of Port Arthur (November 19) was led by General **Maresuke Nogi;** the 10,000 defenders made only feeble resistance.

1894, October–1895, January. Operations in Manchuria. After winning some minor actions (of which **Tsao-ho-ku,** November 30, was particularly hard-fought), Yamagata's advance from the Yalu into Manchuria was stopped by a combination of supply problems and cold weather. The Japanese were forced to fight hard to defend their advanced base at **Haicheng** against Chinese General **Sung Ch'ing** (December–January).

1895, January. Weihaiwei Campaign. The Japanese decided to eliminate any possibility of further Chinese naval interference. The Third Army—comprising a number of units from the Second Army, and commanded by Oyama—was convoyed to Jungcheng, on the eastern tip of the Shantung Peninsula, about 20 miles east of the Chinese naval base at Weihaiwei (January 19). After an unopposed landing, Oyama promptly marched west and, while the Japanese fleet engaged the fortifications from the sea, captured Weihaiwei and its fortifications in 2 days of bitterly cold winter fighting (January 30–31).

1895, February 2–12. Naval Battle of Weihaiwei. The Chinese squadron (2 battleships, 4 cruisers, 6 gunboats, and 15 small torpedo boats) was now caught between Ito's blockading Japanese fleet and the Japanese Third Army, manning the Weihaiwei forts. Ito commenced a series of night torpedo-boat attacks against the Chinese fleet, while the captured land batteries hammered them by day. Admiral Ting and his men put up the stoutest

Chinese resistance of the war, but the situation was hopeless. Torpedo-boat attacks destroyed one of the battleships (February 5). Ting sent his torpedo boats on a dash for freedom, but only 2 escaped (February 7). With most of the fleet destroyed, Ting committed suicide; his remaining men and battered vessels surrendered (February 12).

1895, February–March. Advance into Manchuria. Meanwhile, the Japanese First Army (now under Nozu's command) had made contact with the Second Army in the Liaotung Peninsula, while continuing to beat off repeated Chinese attacks on Hai-cheng. Despite bitter cold, Nozu now advanced, defeating Sung at **Tapingshan** (February 21–23). Chinese forces now began to crumble, and the last effective resistance in Manchuria was eliminated by the Japanese near **Yingkow** (March 9). The Japanese paused for good weather before marching on Peking. Chinese Viceroy Li Hung-chang was sent to Japan to negotiate peace.

1895, April 17. Treaty of Shimonoseki. China recognized Korean independence, agreed to pay a 300-million-tael indemnity, and ceded Formosa, the Pescadores, and the Liaotung Peninsula to Japan. Japan had proven herself a major military power.

1895–1900. Grab for Concessions in China. Russia, France, Germany, and Britain now began a scramble for concessions from supine China and to keep Japan in check. The 3 first-named edged Japan from Port Arthur and the Liaotung Peninsula, which Russia then gobbled up, together with rights for the Chinese Eastern Railway, which would link Port Arthur with the trans-Siberian line. Germany occupied Kiaochow (November 14), while Britain secured a 99-year lease of the Kowloon territory on the mainland opposite Hong Kong, and a lease on Weihaiwei—to run so long as Russia occupied Port Arthur.

1899, September 6. The "Open Door" Policy. The United States alone stood firm on its policy of equal commercial opportunity in, and the territorial and administrative integrity of, China, as stated in a note to the other powers from American Secretary of State **John Hay.**

COMMENT. *European imperialist diplomacy sowed the seeds of future war.*

Japan

1853–1854. Perry Opens Japan. A U.S. squadron of 4 vessels arrived in Tokyo Bay to negotiate a treaty to end Japan's voluntary isolation from the rest of the world. The Japanese respected Commodore **Matthew C. Perry**'s firmness and conciliation. In the **Treaty of Kanagawa** (March 31, 1854) they agreed to open trade relations with the U.S. and to protect shipwrecked American sailors. Similar treaties were later negotiated by England, Russia, and Holland.

1863, June. Shimonoseki Incidents. Forts of the Choshu clan fired on American, and later on French and Dutch, vessels, bringing immediate American and French reprisal bombardments.

1863, August 15–16. British Bombardment of Kagoshima. Unable to obtain satisfaction from the Satsuma clan for the murder of a British subject (September 1862), a British squadron bombarded the Satsuma capital.

1863–1868. Internal Strife. The western clans (Choshu and Satsuma) tried to influence the Tokugawa shogun to expel foreigners, and to obtain the emperor's support against the Tokugawas. Repeated demonstrations of Occidental military might caused the western clans to cease their antiforeign efforts (1864), but not their attempts to break the power of the Tokugawa shogunate. The struggle combined intrigue, murder, and civil war, which included clashes at **Kyoto** (September 1863; August 1864) and an unsuccessful Tokugawa expedition into Choshu territory, a conflict referred to by the Japanese as the "Four-Corners War" (July–October, 1866). The death of **Iemochi,** the old shogun (September 1866), was followed soon after by that of the emperor (February 1867). The new shogun, **Keiki,** resigned (November 1867), but the continuing turmoil erupted into the *Boshin* (or Restoration) War (January 1868). This conflict pitted supporters

of the emperor, especially the samurai of the Choshu and Satsuma fiefs, against the conservative backers of the shogunal regime. The war lasted for 7 months, ending with the conservatives' defeat at the **Battle of Veno** near Tokyo (July 4). The fall of Tokyo ended the power of the Tokugawa, leaving the western clans predominant.

1864, September 5–8. Bombardment of Shimonoseki. An allied naval expedition—Dutch, French, British, and American—silenced the forts in reprisal for continued hostility by the Choshu clan. This demonstration of military superiority ended the antiforeign movement in western Japan.

1869, January 3. Restoration of Imperial Power. Emperor **Mutshuhito** (Meiji emperor) assumed control of the government, supported primarily by the western clans. This was the start of Japan's emergence from feudalism.

1874, April–October. Expedition to Formosa. Japan, claiming sovereignty over the Ryukyu Islands, sent an expedition to Formosa to punish natives there for the murder of Ryukyu sailors.

1875–1885. Japanese Interventions in Korea. (See below.)

1877, July–September. Satsuma Rebellion. The samurai (feudal warrior class), protesting against modern innovations and particularly against the raising of a national conscript army, rose against the government (but not against the emperor). The most serious threat was the march of 40,000 Satsuma warriors on Tokyo. They were stopped, then defeated, by the new national army at **Kumamoto.**

1879. Annexation of the Ryukyus. Despite Chinese protests, Japan began its overseas expansion.

1894–1895. Sino-Japanese War. (See p. 946.)

Korea

1866. French Expedition. To punish Korea for the murder of French missionaries, a French naval force occupied **Kanghwa** at the mouth of the Han River. The Korean government refused to negotiate and the French, after inconclusive skirmishes, withdrew.

1871, May. American Expedition. To investigate the imprisonment and murder of some American sailors in earlier years, an American naval force captured the **Kanghwa** forts in a small-scale amphibious assault. After vain efforts to negotiate, the Americans withdrew.

1875–1876. Japanese Intervention. A Japanese vessel having been fired on in Korean waters, a Japanese naval expedition forced Korea to sign a treaty (February 25, 1876) establishing trade relations and opening several ports to Japanese vessels. Significantly, this treaty recognized Korean sovereignty, ignoring nominal Chinese suzerainty. Similar treaties were later concluded (but through Chinese mediation) by the U.S. and other western powers.

1882–1885. Intervention of China and Japan. Several internal disorders culminated in an attack on the Japanese legation. A Japanese military force entered Seoul, obtained reparations, and remained as a powerful legation guard. China then sent troops to reestablish her suzerain position in Korea; **Yuan Shih-k'ai** became the Chinese resident (1883). Renewed disorders led to the dispatch of additional Chinese troops to restore order. At the same time, Japanese troops arrived to protect Japan's interests. War between China and Japan was avoided only by the **Convention of Tientsin** (April 18, 1885) between Chinese Viceroy Li Hung-chang and Japanese Count Ito. Both nations agreed to withdraw troops and to notify each other if further intervention should become necessary.

1894. Tong-hak Rising. An antiforeign society, the Tong-haks, rebelled (March) and for 3 months successfully defied Korean government efforts at suppression. At the request of Korea, Chinese troops entered the country to help restore order. Japan, claiming a violation of the Tientsin Convention, sent a strong force to seize Chemulpo (Inchon) and Seoul. War inevitably resulted.

1894–1895. Sino-Japanese War. (See p. 946.)

1895–1900. Unrest in Korea. Continuing

disorders provided Japan and Russia with opportunities to improve their respective positions in Korea. The Russians to some extent supplanted Japanese influence in Seoul; tension between the 2 nations was increasing at the close of the century.

The Philippines

1896, August. Insurrection against Spain. The rebellion, led by **Emilio Aguinaldo,** was settled peacefully when Spain promised substantial government and social reforms. Aguinaldo was exiled.

1898, May 1. Dewey's Victory at Manila Bay. **(See p. 994.)** Aguinaldo, brought to Luzon by Dewey, began to raise a Filipino patriot army to assist the U.S. against Spain.

1898, December 10. Treaty of Paris. The Philippines were sold by Spain to the U.S.

1899, January 20. Aguinaldo Proclaims Filipino Independence. Believing he had been betrayed by U.S. failure to grant independence to the Philippines, Aguinaldo refused to recognize the Treaty of Paris. He called on his compatriots to establish an independent government, under his leadership. His army undertook a virtual siege of Manila, held by U.S. troops at the close of the Spanish-American War.

1899, February 4. Commencement of Philippine Insurrection. Hostilities against the U.S. started when Filipino insurgents fired on an American patrol in the outskirts of Manila. U.S. troops immediately drove the Filipino forces away from the city. The campaign spread through Luzon. Under the field command of Major General **Arthur MacArthur,** punitive columns swept both Luzon and the Visayas as the U.S. poured men and supplies into the islands. The rebellion was still active as the century ended (see p. 1106).

NORTH AMERICA

The United States, 1850–1861

1850–1865. Indian Wars. During this period there were at least 30 separate "wars" or major disturbances involving conflict with the Indians. During the decade before the Civil War nine-tenths of the U.S. Army strength of 16,000–17,000 troops were spread out over an area of more than 1 million square miles west of the Mississippi, engaged in almost constant patrolling or combat operations against the Indians. Small detachments were also active in Florida, where there were recurrent troubles with the Seminoles. In these operations the Army was engaged at one time or another against Apache, Sioux, Cheyenne, Navajo, Mojave, Arapaho, Kiowa, Comanche, the various tribes of the Pacific Northwest, and others. In the year 1857 alone official records report 37 expeditions or operations involving combat, and many more without fighting. Although the tempo of these small wars subsided somewhat during the Civil War, because the nation's attention was diverted from the West, frontier hostilities continued. There were atrocities on both sides, although the disciplined troops of the Regular Army were rarely guilty of dishonorable treatment of the Indians. The most serious incident involving unquestionable white treachery was the so-called **Sand Creek Massacre,** in Colorado, where militiamen attacked a village of Cheyenne and Arapaho Indians while their leaders were negotiating a treaty, killing 300 Indians, mostly women and children (November 29, 1864). This disgraceful affair was probably the principal cause of the increasing ferocity of the Plains Indians in the 2 following decades.

1856, May 21–September 15. Civil War in Kansas. Sacking of **Lawrence** by a proslavery mob (May 21) was followed by abolitionist fanatic **John Brown**'s murderous raid on **Pottawatomie** (May 24–25). **Franklin** was seized (August 13) by Free Staters. Brown and his followers were driven out of **Osawatomie** and the settlement sacked by proslavery guerrillas (August 30). In all, some 20

persons were killed and an estimated $2 million worth of property destroyed before the arrival of Federal troops restored temporary calm in Kansas (September 16).

1857–1858. Mormon Expedition. The Mormons had established a practically independent state in Utah, ignoring government authority, and inciting the Indians against other settlers. A force of less than 1,000 men under Brevet Brigadier General **Albert Sidney Johnston** moved into Utah (October 1857). Despite provocations by the hostile Mormons, the disciplined troops reestablished U.S. government authority in Salt Lake City and the surrounding countryside without bloodshed (June 1858).

1859, October 16–18. John Brown's Raid. With 18 followers, Brown seized the Federal arsenal and armory at Harpers Ferry, and captured local citizens as hostages. The slave insurrection he hoped to spark failed to materialize. A detachment of U.S. Marines, commanded by Army Colonel **R. E. Lee,** captured Brown and his men. He and 6 of his men were convicted of treason and criminal conspiracy and hanged (December 2–March 16).

Civil War, 1861–1865

Election of Republican **Abraham Lincoln** to the presidency (November 6, 1860) precipitated Southern secession as the only way in which to preserve the southern agricultural economy, based on slave labor. South Carolina seceded (December 20).

1861, January–April. Confederate States of America. In quick succession Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas followed South Carolina's lead. A convention held at Montgomery, Ala., framed a constitution and set up a provisional government (February 8). **Jefferson Davis** was elected Confederate President (February 9). Outgoing U.S. President **James Buchanan** made no attempt to forestall the subsequent general seizure of U.S. military installations throughout the South by seceding state militias, but 4 U.S. Regular Army officers, each acting promptly on his own volition, saved 4 key points on the southern seacoasts—Forts Sumter, Charleston, S.C.; Pickens, Pensacola, Fla.; Taylor, Key West, Fla.; and Jefferson, Dry Tortugas, Fla. Two days after Lincoln's inauguration, Davis, with Confederate congressional authorization, called for 100,000 volunteers for 1 year's military service (March 6). By mid-April the Confederacy had 35,000 men under arms—a force twice as large as the then-existing U.S. Army.

1861, April 12–14. Bombardment of Fort Sumter. South Carolinian forces under Major General **Pierre G. T. Beauregard** opened fire on Fort Sumter in Charleston Harbor, commanded by Major **Robert Anderson.** After 34 hours of bloodless bombardment, Anderson, his supplies exhausted, capitulated. He and his garrison, 7 officers and 76 enlisted men, marched out with the honors of war, and were shipped up North.

1861, April 15. Lincoln Calls for Volunteers. He called for 75,000 volunteers for 3 months' service to suppress insurrection.

1861, April 17. Virginia Secedes. She claimed the President's call for volunteers was an act of war against the seceded states. Virginia's secession was followed by Arkansas, Tennessee, and North Carolina. Eleven states were not in armed, open rebellion (May 20). Kentucky declared "neutrality" (May 24).

1861, April–May. Scott's "Anaconda Plan." As a nation *de facto,* the Confederacy had now only to maintain its sovereignty within its own borders. To restore the *status quo ante bellum,* the remainder of the U.S. must invade and destroy all armed resistance. Lieutenant General **Winfield Scott,** General in Chief of the U.S. Army (and a native of Virginia) had foreseen the difficulties and had earlier (October 1860) advocated adequate reinforcement of all

Federal garrisons in the South. Infirm Scott, 74 years old, but still possessing a sound and brilliant mind, now urged immediate blockade of Southern ports and the raising of an army of 25,000 Regulars and 60,000 3-year volunteers. Once this force was equipped and trained, Scott argued, it should invade the South down the Mississippi Valley to the Gulf of Mexico, thus isolating the Confederacy. This long-range concept of squeezing the South into submission was unpalatable to politicians who wanted quick, cheap victory, and derisively dubbed it the "Anaconda Plan." Although initially rejected, it was this plan, with a manifold increase in manpower, that eventually because the general strategy employed by the Union.

1861, April 19. Lincoln Proclaims a Blockade. This was the only part of Scott's plan that was adopted.

The Line-up

The 22 Northern states (including 3 border states with divided loyalties) had a population of some 22 million; the 11 seceding states had 5.5 million whites and 3.5 million Negro slaves. Actually, the available man power—since the Negro slaves performed labor which in the North had to be done by white men—favored the North by a 5:2 ratio. The North was an industrial-agricultural entity, potentially capable of supporting a protracted war. The South was agricultural, its crops of tobacco, cotton, and sugar mainly selling abroad; its manufacture was small. To succeed, it must market its produce overseas, and import war materiel.

The U.S. Army strength in 1861 was 16,367 officers and men, scattered along the western frontier and in seacoast forts. Concentration in force was impossible; recourse was had to militia and volunteers, poorly trained and originally of short enlistment terms. The 313 U.S. Regular Army officers who resigned and went South were wisely used as leaven for its officer corps. The 785 Regular officers who remained loyal were for the most part kept in their units during the early months of the war, depriving the mobilizing Union armies of the men best qualified to lead, command, and train them. Exacerbating this was the fact that, in the early days of the war, an officer holding a Regular commission was required to resign in order to be able to accept a higher commision in the Volunteers. Most Regulars were loathe to do this, as there was considerable doubt that they would be able to regain Regular status after the war. Thus, political appointees and elected officers, usually without military experience, filled most of the officer ranks.

The Confederacy had no naval vessels, but it had 322 of the 1,300 U.S. Navy officer corps and a vigorous Secretary of the Navy—**Stephen R. Mallory** of Florida, who left no stone unturned to build a fighting naval force. The U.S. Navy had some 90 wooden ships—sail and steam—42 of them in commission, and only 4 in Northern waters when the war broke out. **Gideon Welles** of Connecticut, competent U.S. Secretary of the Navy, set about extemporizing an enormous force, backed by the vast maritime resources of the North—resources which did not exist in the South. His assistant, **Gustavus Vasa Fox,** a former U.S. Navy officer, was of tremendous assistance in the task.

Confederate President Jefferson Davis was a West Pointer, a Mexican War hero, and had been Secretary of War; he had also been chairman of the Senate's Military Affairs Committee. He was well qualified for his position as Commander in Chief. U.S. President Abraham Lincoln had had no real military experience. Under political pressure he had rejected the recommenda-

tions of his senior military adviser. On the president fell the onus of producing and maintaining in the North the will to win, without which Southern victory would be inevitable. Yet he had no concerted plan of campaign. Lincoln's call for volunteers and his arbitrary immediate strengthening of the Regular Army were countered by Davis' authorization of Confederate privateering. Operations began on both sides of the Appalachians, at first piecemeal, later in force.

War in the East, 1861

1861, April 20. Loss of Norfolk Navy Yard. Virginia militia, seizing this important station, secured for the Confederacy the fine steam frigate *Merrimack,* and a great quantity of naval stores and armament, including 52 modern 9-inch guns.

1861, May 24. Washington Menaced. Virginia militia occupied the Alexandria area and hastily installed Confederate batteries controlled the Potomac approaches.

1861, June. Operations in West Virginia and Virginia. Major General **George B. McClellan** with Ohio volunteers cleared western Virginia of local Confederate forces at **Philippi** (June 3) and **Rich Mountain-Carrick's Ford** (July 11–14). In eastern Virginia, there was a skirmish at **Big Bethel,** near Union-held Fortress Monroe (June 10).

1861, June–July. Focus on Washington and Richmond. The main bodies of both Union and Confederacy gathered between the opposing capitals. Brevet Major General **Irvin McDowell,** with 38,000 Union troops—less than 2,000 professional soldiers among them—moved from Washington (July 19) to attack a Confederate force of 20,000, under Beauregard, near Centreville, Va.

1861, July 21. First Battle of Bull Run. McDowell found his enemy lying along Bull Run. Unaware that General **Joseph E. Johnston** had already arrived with most of his 12,000 men from the lower Shenandoah Valley to reinforce Beauregard, McDowell, who had 28,500 in the field, attempted to turn the Confederate left by a movement too complicated for his untrained troops and staff. After some progress, his attack was checked by the stand of Brigadier General **Thomas J. Jackson**'s Virginia brigade, Jackson winning his sobriquet of **"Stonewall."** Johnston's skillful shift of troops from the original battle front culminated in success with the arrival of his last brigade by rail from Winchester. The Union enveloping force was itself enveloped and most of McDowell's army fled the field in panic, covered only by the dogged rear-guard action of Major **George Sykes**'s infantry battalion and Major **Innis N. Palmer**'s cavalry squadron—both regular units. Union losses were 2,706; Confederate, 1,981. Confederate President Jefferson Davis' refusal to authorize pursuit has been much criticized.

1861, July 22. New Northern Field Commander. McClellan was hurriedly called to Washington to command in place of McDowell.

1861, July–December. McClellan Trains an Army. He began organization and training of what would become the **Army of the Potomac,** while in Virginia across the river the Confederate forces under Johnston remained in the Manassas area.

1861, September 12–13. Battle of Cheat Mountain. Confederate General Robert E. Lee, attempting to recover western Virginia, was repulsed by Union troops.

1861, October 21. Battle of Ball's Bluff. A Union reconnaissance across the Potomac near Leesburg, Va., resulted in disaster when Colonel **Edward D. Baker,** U.S. senator transformed into soldier, foolishly engaged his troops piecemeal against superior Confederate forces led by Colonel **Nathan G. (Shanks) Evans.** Baker was killed. His troops, pinned on a precipitous river bank, were crushed, losing 237 killed and wounded and 714 captured or missing. Confederate losses were 149. Though the battle was minor in tactical importance, political repercussions in Washington were violent. A Joint Congressional Committee on the

Conduct of War, headed by abolitionist Senator **Benjamin F. Wade** of Massachusetts, caused Brigadier General **Charles P. Stone,** originator of the reconnaissance, to be imprisoned for 8 months without charges or trial. For the rest of the war, the committee became an incubus on the Union military.

1861, November 1. New Northern General in Chief. McClellan, promoted on the retirement of old General Scott, made no further movement, and the North began to grumble at delay.

War in the West, 1861

1861, June 1. Battle of Booneville. Brigadier General **Nathaniel F. Lyon,** after quelling a Southern threat at St. Louis (May 10), on his own initiative moved on Jefferson City and drove Governor **Claiborne Jackson**'s pro-Southern militia down toward Arkansas. Missouri militia under Brigadier General **Sterling Price** was reinforced by Arkansas militia under Brigadier General **Ben McCullough,** and then attempted to retake Missouri for the Confederates.

1861, August 10. Battle of Wilson's Creek. Lyon, with 4,500 men, attacked McCullough and Price, who now had 11,600. Lyon almost succeeded with an ambitious but overcomplex plan to attack the Confederates in front and rear, but was forced on the defensive when the column under Colonel Franz Sigel, attacking the Confederate rear, was routed. In a desperate attempt to rally his forces, Lyon was killed and the Northerners retreated in confusion. The disorganized Confederates were unable to pursue. Confederate losses were 2,084; Union, 1,235.

COMMENT. *Although this was a tactical victory for the South, Lyon's aggressive operations had saved Missouri for the Union. "Neutral" Kentucky now became the target for both sides.*

1861, August–December. Grant and Johnston in Kentucky. Union Brigadier General **Ulysses S. Grant,** learning that General Albert Sidney Johnston, commanding Confederate forces in the West, was sending Major General **Leonidas Polk** to seize key points in Kentucky, forestalled him by occupying Paducah (August 6), thus safeguarding Cairo, the most strategically important spot in the U.S. at that moment. Johnston then established a line across Kentucky to block river movements southward down the Mississippi and up the Tennessee and Cumberland rivers. Western anchor of the line was on the Mississippi at Columbus, Ky., with an outpost at Belmont, Mo., on the west bank of the river.

1861, November 7. Battle of Belmont. Grant, with some 3,000 men, made a successful hit-and-run attack on Belmont to relieve growing Confederate pressure in western Missouri. Federal losses were 498; the Confederates, who had more than 5,000 men on the field, lost some 900.

1861, November 18. Halleck Commands in the West. Major General **Henry W. Halleck** came West to supplant vacillating Major General **John C. Frémont,** but Union command was still divided, with Major General **Don Carlos Buell** commanding in central and eastern Kentucky. As the year ended, Johnston's Confederate cordon from the Mississippi to the Cumberland Gap held firm.

Naval Operations, 1861

1861, May. Appearance of Confederate Privateers. A few hastily converted merchant ships, mounting a few guns, began to prowl the Atlantic coast line.

1861, May. Blockade Begins. An improvised and growing U.S. Navy—converted merchant vessels for the most part—took up the task of blockade from the Potomac River to the Gulf of Mexico.

1861, August 27. Action at Hatteras Inlet. A Union flotilla, under Flag Officer **Silas H. Stringham,** reduced Southern fortifications protecting this back door to the Confederacy, landed 800 troops from Fortress Monroe under Major General **Benjamin F. Butler,** and established a blockade base.

1861, November 7. Action at Port Royal. Flag Officer **Samuel F. du Pont** led a joint expedition to Port Royal Sound, important inland waterway connecting Savannah and Charleston. His 9 warships overwhelmed the defensive forts, and 17,000 troops under Brigadier General **Thomas W. Sherman** were landed. Port Royal became an important naval base for the Union blockading squadrons.

1861, November 8. The *Trent* Affair. Captain **Charles Wilkes** in USS *San Jacinto* arbitrarily overhauled the British packet *Trent* in the Bahamas, forcibly removing Confederate commissioners **James M. Mason** and **John Slidell,** on their way to England to represent President Davis. The high-handed action almost precipitated war with England, but was composed through diplomacy; Wilkes's action was disavowed by the U.S., and the commissioners were turned over to a British warship to continue their voyage.

War in the East, 1862

1862, January–March. McClellan's Plans. Disturbed by the new General in Chief's lack of aggressiveness, Lincoln finally goaded him to action by an imperative order (March 8). McClellan had about 180,000 men in and near Washington. Misled by reports that J. E. Johnston had over 100,000 men in the Manassas area (actually he had only about 50,000), McClellan decided to turn Johnston's positions by shipping his army down the Chesapeake Bay to Urbana, 45 miles from Richmond. Johnston, informed of the plan, at once countered by retiring behind the Rappahannock. McClellan then decided to move by water to Fortress Monroe, thence overland up the Peninsula—between the York and James rivers—toward Richmond. Lincoln, who doubted the estimates of Johnston's strength, reluctantly approved. Presence of the Confederate ironclad ram *Virginia* (erstwhile steam frigate USS *Merrimack,* seized at Norfolk Navy Yard and hurriedly armorplated) threatened this proposed water movement.

1862, February–April. North Carolina Coastal Operations. Union troops under Major General **Ambrose E. Burnside,** convoyed by Flag Officer **Louis Goldsborough,** landed on **Roanoke Island** (February 7). After defeating the Confederate garrison (February 8), Burnside captured **New Bern** (March 14) and **Beaufort** (April 26).

1862, March 8. The Battle of Hampton Roads (First Day). The *Virginia,* debouching from Norfolk, attacked the Union blockading squadron—all wooden vessels—awaiting her. The heavily armed, cumbrous ironclad, impervious to Union cannonballs, rammed and sank the USS *Cumberland* (24), then attacked and sank USS *Congress* (50). USS *Minnesota* (50), trying to join the battle, ran aground. The *Virginia* returned to Norfolk before dark to repair superficial damage, as her crew prepared to return next day to finish off 3 remaining Union vessels. That evening USS *Monitor,* a small, revolutionary armored warship invented by **John Ericsson,** arrived from New York and took station near the helpless *Minnesota.*

1862, March 9. *Monitor* vs. *Virginia* (*Merrimack*). The Confederate ironclad reappeared and the *Monitor* moved to meet her. The *Virginia*'s hull was covered by a heavy iron and oak carapace; she carried 10 large guns, 7- and 9-inch. The *Monitor,* a low-lying, metal "cheesebox on a raft," mounted two 11-inch guns in a heavily armored revolving turret. For 4 hours the ironclads hammered each other unsuccessfully, then the *Virginia* returned to Norfolk. The *Monitor* retained control of Hampton Roads.

COMMENT. *This inconclusive battle revolutionized naval construction by rendering wooden ships obsolete.*

1862, March 10. McClellan Prepares for Action. Satisfied that the *Virginia* was no longer a menace to his transports, McClellan began immediate preparations to move his army to fortress Monroe.

1862, March 11. Lincoln Assumes Direction of the War. To ensure McClellan's undivided attention to the Richmond theater, Lincoln temporarily relieved him as General in Chief

and personally assumed overall military command. Lincoln's reasoning was sound; the results were disastrous, since neither he nor his Secretary of War, **Edwin M. Stanton,** had the professional experience required.

1862, March 22. McClellan Moves to the Peninsula. McClellan assured Lincoln that after the departure of the Army of the Potomac—130,000 strong—the security of Washington would be maintained by 75,000 men, including 23,000 under General **N. P. Banks,** who was responsible for stopping any threat to Washington through the Shenandoah Valley.

1862, March 23. Battle of Kernstown. Opposed to Banks in the lower Shenandoah Valley was Major General Stonewall Jackson, who had retired south of Strasburg with his 4,300 men. Banks, satisfied that Jackson posed no threat to Washington, left 9,000 men around Winchester under Brigadier General **James Shields** and moved east toward Manassas to cooperate with McClellan's operations in the Peninsula. Jackson, unaware of Shields's strength, attacked him at Kernstown, and was repulsed. So vigorous was the Confederate attack, however, that Shields reported that Jackson must have been reinforced.

1862, March 24. Lincoln Orders Banks Back to the Valley. He also discovered that McClellan had left only 50,000 men to cover Washington, not 75,000. To McClellan's disgust, therefore, Lincoln detained McDowell's corps of 30,000 at Washington as it was about to embark for Fortress Monroe. Lincoln ordered McDowell to join 10,000 Union troops already near Fredericksburg; he assured McClellan that McDowell would be permitted to march overland to join him near Richmond as soon as any possible threat to Washington disappeared. Few minor engagements have had as much significance as the Battle of Kernstown.

1862, April. Lee's Strategic Plan. General Robert E. Lee, military adviser to President Davis, realized that Johnston had only 60,000 men available to protect Richmond against McClellan's 100,000 assembling at Fortress Monroe and McDowell's 40,000 at Fredericksburg. He also knew of Lincoln's sensitivity about Washington. Lee recommended that Jackson—reinforced to nearly 18,000 men—make a demonstration in the Valley so as to divert the largest possible Union forces from McClellan. Johnston agreed, and Davis approved.

The Valley Campaign

1862, May 1. Jackson's Situation. He was at Swift Run Gap, menaced by 2 threats: Banks coming up the Valley and Frémont with about 15,000 approaching from West Virginia. Leaving Brigadier General **Richard S. Ewell** and 8,000 men to contain Banks, Jackson moved westward into the Alleghenies.

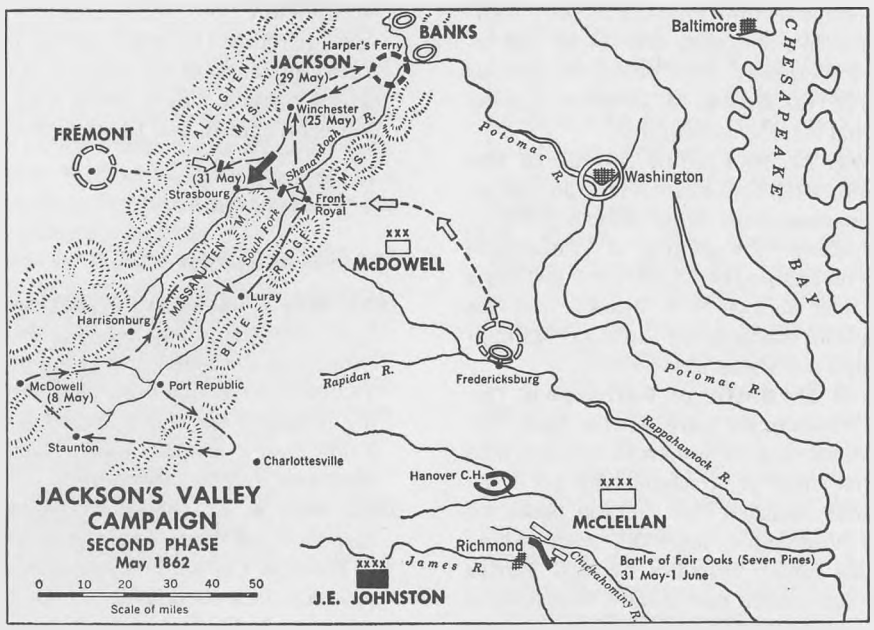
1862, May 8. Battle of McDowell. Jackson surprised and threw back the leading elements of Frémont's army. Frémont halted all further advance. Jackson returned to the valley.

1862, May 9–30. Jackson's Advance. He hurried north, down the Valley. Utilizing the Massanutten Mountain—a 50-mile-long spine bisecting the Shenandoah Valley—as a screen, the turned east through its one pass, then swung northward again.

1862, May 23. Battle of Front Royal. Jackson threw a Federal garrison out of Front Royal and threatened Banks's rear.

1862, May 25. First Battle of Winchester. Jackson pursued Banks to Winchester, defeated him there again, and chased him back across the Potomac. At Harpers Ferry, Banks lost some 3,000 prisoners, 10,000 stands of small arms, some cannon, and a vast quantity of stores. Union casualties were about 1,500; Confederate, 400.

1862, May 26. Lincoln's Reaction. The President diverted McDowell at Fredericksburg from his planned junction with McClellan, and hurried him toward the Valley. Frémont, too, was spurred to resume his offensive. Jackson, now on the Potomac, thus found himself in a trap. Frémont's 15,000 men were only 25 miles southwest of Winchester, advancing east; Shields, with 10,000 men of McDowell's command, had captured Front Royal and was



advancing west with 10,000 more Federals behind him; Banks, across the Potomac, was regrouping and preparing to move south again.

1862, May 30–June 7. Jackson's Withdrawal. With 15,000 men, 2,000 prisoners, and a double column of wagons containing booty, he withdrew rapidly, sending his cavalry ahead to hold Frémont. Clearing Winchester (May 31), he reached Strasburg before the jaws of the trap could close. While Frémont pursued west of the Massanutten and Shields up the east side, Jackson reached Harrisonburg (June 5). Leaving Ewell at Cross Keys to hold Frémont, Jackson turned on Shields with the rest of his command.

1862, June 8. Battle of Cross Keys. Ewell repulsed Frémont's halfhearted attack and burned the 1 bridge over which the Union general could advance.

1862, June 9. Battle of Port Republic. Jackson fell on Shields at Port Republic. A 5-hour battle ended when Ewell arrived to reinforce Jackson. Shields's force was pushed back some 20 miles. By midnight, Jackson sat safely at Brown's Gap in the Blue Ridge while his wagon train and its booty were rolling on to Richmond. Frémont had retired to Harrisonburg, Shields was rallying at Luray, and McDowell, definitively divorced from McClellan, was occupying Front Royal with orders to remain in the Valley.

COMMENT. *With less than 18,000 men, Jackson—between April 30 and June 9—had stymied 70,000 Federal troops and had changed the complexion of the entire Federal plan of campaign.*

The Peninsula Campaign

1862, April 4–May 4. Siege of Yorktown. McClellan, moving toward Richmond with 90,000 men, was faced by a 10-mile entrenched line, extending across the Peninsula southwest from Yorktown, manned by 15,000 Confederates under Brigadier General **John B. Magruder.** McClellan, deceived by many dummy guns and feigned activity, began a formal investment and ordered siege artillery from Washington. Johnston, arriving from the Rappahannock, brought Confederate strength to 60,000, but retired toward Richmond 2 days

before McClellan proposed to open a massive bombardment. McClellan pursued slowly.

1862, May 5. Battle of Williamsburg. The Army of the Potomac was held up by Johnston's rear guard, under Major General **James Longstreet,** in a delaying action. The slow Union advance continued.

1862, May 25. McClellan in Sight of Richmond. McClellan deployed 3 corps north of the Chickahominy River to facilitate the expected junction with McDowell, keeping 3 south of the swollen river, facing Confederate entrenchments in front of Richmond.

1862, May 31–June 1. Battle of Seven Pines (Fair Oaks). Johnston, taking advantage of the division of the Union army, fell on McClellan's isolated left. Poor Confederate staff work turned a planned double envelopment into piecemeal frontal attacks, which were repulsed after Federal reinforcements crossed the river. Johnston was seriously wounded, Major General **Gustavus W. Smith** taking his place. Next day the attacks were again repulsed. Union losses were about 5,000; Confederate, 6,100. McClellan, although he had now learned that McDowell would never join him, only rectified his line in part. Major General **Fitzjohn Porter**'s corps was left on the north side of the Chickahominy.

1862, June 1. Birth of the Army of Northern Virginia. President Davis appointed Lee to replace Johnston.

1862, June 12–15. Stuart's Raid. Brigadier General **J. E. B. Stuart**'s cavalry division circled the entire Federal Army, destroying large quantities of stores near McClellan's headquarters at White House, and brought Lee invaluable information on Union dispositions.

THE SEVEN DAYS' BATTLES, JUNE 25–JULY 1, 1862

Lee ordered Jackson to join him and prepared to attack Porter's 30,000 men; the remainder of the Union Army would be contained in front of Richmond by Magruder. Both armies totaled about 90,000.

1862, June 25. Confederate Concentration. Three-fourths of Lee's army concentrated west of Mechanicsville. Jackson reached Ashland Station.

1862, June 26. Battle of Mechanicsville. Inexperience and faulty staff work marred the Confederate assault. Jackson, probably suffering from exhaustion stemming from the arduous Valley Campaign, moved lethargically and never arrived on the field. Porter threw back piecemeal assaults. Then, learning of Jackson's approach, he retired that night to Gaines's Mill.

1862, June 27. Battle of Gaines's Mill. Lee with 65,000 men again attacked, but Jackson was late and failed to get behind Porter's right flank. Porter, utilizing the terrain and hasty earthworks to improve his right, unexpectedly found that his left (believed to be the strongest part of his line) was unexpectedly penetrated by a Confederate assault. With Jackson's tardy approach on the right threatening a double-envelopment, Porter was forced to withdraw. Reinforcements sent on the initiative of the other Union corps commanders enabled Porter to fall back in good order. That night, on McClellan's orders he withdrew to the south bank of the Chickahominy. McClellan, convinced the Southern main effort was coming on his left and center, ordered a general withdrawal to the James River (and protection of the Union fleet) despite the objections of Brigadier Generals **Phil Kearny** and **Joseph E. Hooker,** who assured him the thin crust of Magruder's demonstration could be pierced, and that Richmond was his for the taking.

1862, June 29–30. Battles of Peach Orchard, Savage Station, White Oak Swamp, Glendale-Frayser's Farm. Lee, discovering McClellan's withdrawal, pursued. His sharp attacks were rebuffed by the individual Union corps commanders in a series of delaying

actions while the Union trains successfully crossed White Oak Swamp. An envelopment of the Union right by Jackson was again unsuccessful, as Jackson continued to display an uncharacteristic lethargy. McClellan personally went on ahead to inspect his new base on the James.

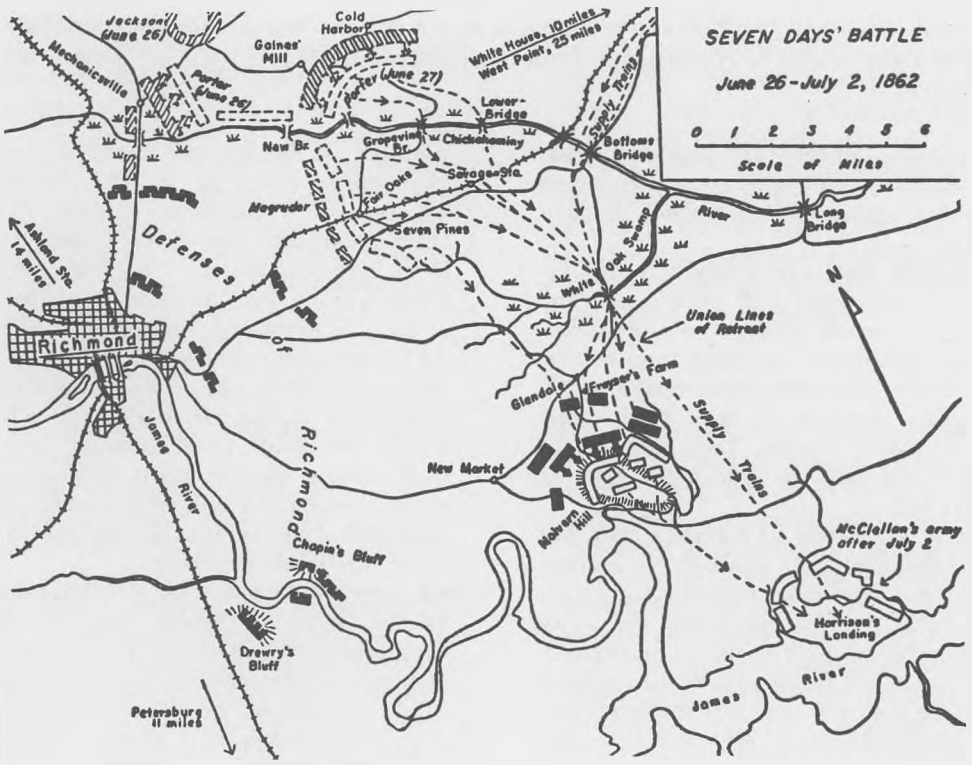
1862, July 1. Battle of Malvern Hill. In McClellan's absence, Porter carried out a brilliant defensive action from excellent positions with good fields of fire. Lee's assaults broke down into uncoordinated attacks, which were beaten back with heavy loss—more than 5,000 men in about 2 hours. Malvern Hill was a clear-cut Union success, but McClellan ordered immediate retreat to Harrison's Landing and to the protection of Union gunboats.

COMMENT. *Union losses in the Seven Days were 1,734 killed, 8,062 wounded, and 6,053 missing (mostly prisoners). Southern losses were 3,478 killed, 16,261 wounded, and 875 missing. All Confederate attacks (except at Gaines's Mill) were repulsed. Yet when it was over, the Union Army had been expelled from Richmond's outskirts and huddled in defeat on the banks of the James.*

Second Bull Run (Manassas) Campaign

1862, June 26. The Army of Virginia. President Lincoln called Major General **John Pope** from the West to command the new Army of Virginia, comprising the commands of McDowell, Frémont, and Banks.

1862, July 11–August 3. Union Reorganization and Regrouping. Realizing the need for professional generalship, Lincoln brought Halleck from the West to become General in Chief



(July 11). The Army of the Potomac was ordered back to Washington (August 3).

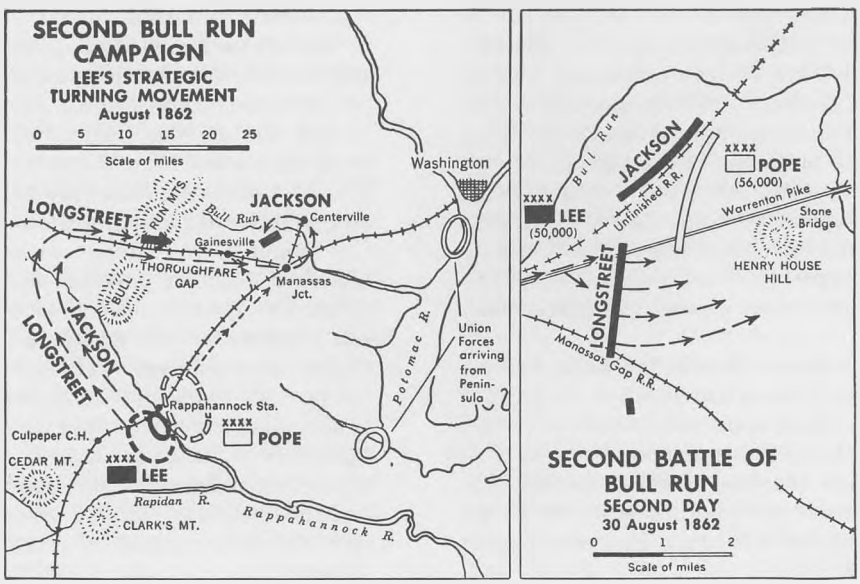
1862, July–August. Confederate Reaction. Lee, concerned by these shifts, sent Jackson with 12,000 men to observe Pope in central Virginia. Lee followed slowly, leaving 20,000 to garrison Richmond.

1862, August 9. Battle of Cedar Mountain. Jackson, attempting to halt Pope's movement across the Rappahannock, was impetuously attacked by Banks, commanding the leading Union corps, with some 10,000 men. Jackson's personal efforts saved his troops from defeat; by nightfall he had driven Banks back on Culpeper. Jackson then withdrew across the Rapidan (August 11).

1862, August 24. Lee's Plan. Lee learned that McClellan's army was coming back from the Peninsula to join Pope. The combined Union armies would total 150,000 men against his 55,000. In a daring plan, he determined to crush Pope before such a junction could occur. Jackson was ordered to march north, then east, to get behind Pope's army; Lee, with Longstreet's corps, would follow, to join Jackson and to strike Pope somewhere near Manassas.

1862, August 25–26. Jackson Moves North. He marched 54 miles in 2 midsummer days, falling on Pope's supply depot at Manassas, which was looted and burned (August 27). Jackson then took up a hidden defensive position just west of the old Bull Run battlefield.

1862, August 29–30. Second Battle of Bull Run. Pope, enraged at the raid on his depot, hastened north to hunt the invaders. Finally discovering Jackson's position (when Jackson deliberately attacked a Union division near **Groveton**—August 28—to attract attention from Longstreet's advance), Pope concentrated to destroy him (August 29). Jackson's line, protected by the ready-made entrenchment provided by the embankment of an unfinished railroad, held against Pope's poorly coordinated attacks. Meanwhile Lee, with Longstreet's wing, was advancing via Thoroughfare Gap, arriving near Jackson's right, between Gainesville and Groveton by early afternoon. Pope, refusing to believe reports of Longstreet's arrival, resumed the attack, concentrating on Jackson's right (August 30). The final Union attack foundered under the flanking fire of



Longstreet's massed artillery, whereupon Longstreet's wing was unleashed in a devastating flank attack, rolling up the Union Army and throwing it back against Bull Run. The Union withdrawal across Bull Run, however, was in good order, covered by Sykes's Regular Army division of Porter's corps.

1862, September 1. Battle of Chantilly. Jackson, following retreating Union forces toward Washington by a parallel road, collided with Pope's rear guard near Chantilly. In a sharp twilight battle, fought partially in a violent thunderstorm and over rainswept fields and woods, Jackson's progress was checked. Union generals Phil Kearny and Isaac I. Stevens were killed in the confusion of the fight. Lee made no further attempt to press closer to heavily defended Washington. Confederate losses in the campaign were 9,197. Pope's losses were more than 16,000.

Antietam (Sharpsburg) Campaign

1862, September 4–9. Lee's First Invasion of the North. Reinforced to 55,000 men. Lee crossed the Potomac near Leesburg. His objective, approved by President Davis, was to carry the war to the North, and by a successful invasion to encourage Britain and France to recognize—and possibly assist—the Confederacy. Screened by Stuart's cavalry, he concentrated at Frederick, Md. (September 7). He decided to move northward into Pennsylvania behind the protection of the Catoctin Mountains. He issued orders (September 9) for Longstreet's corps to advance toward Hagerstown while Jackson returned across the Potomac to capture Harpers Ferry, and to secure a new line of communications through the Shenandoah Valley.

1862, September 7. McClellan Follows Lee. Meanwhile, Lincoln had dissolved the Army of Virginia, whose units were absorbed in McClellan's Army of the Potomac, now back in Washington. (Pope was sent to an administrative command in the northwest.) With 97,000 men, McClellan moved out from Washington on Lee's trail.

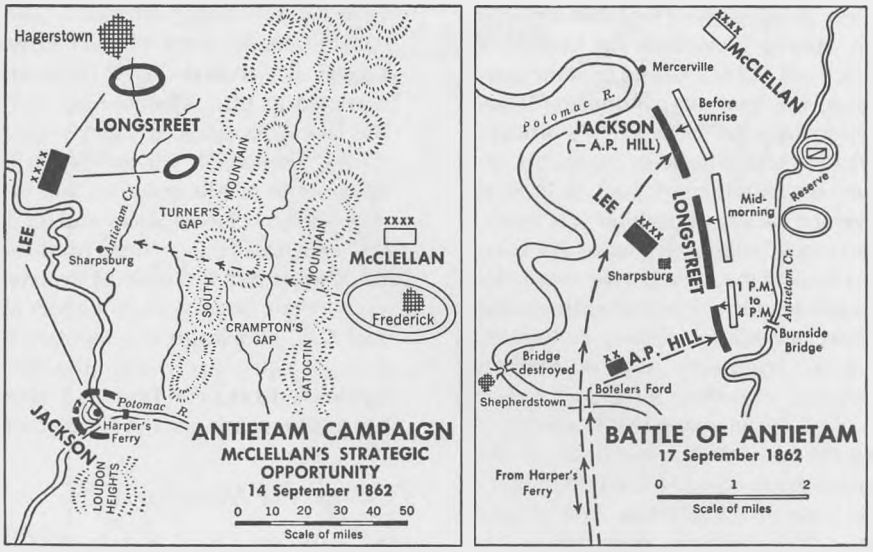
1862, September 12. The Lost Order. McClellan's advance guard reached Frederick, where a copy of Lee's order of June 9, detailing Confederate dispositions and movements, fell into McClellan's hands.

COMMENT. *Lee's army, spread out over 25 miles and split by an unfordable river, was at McClellan's mercy. Yet it took McClellan 2 days to advance 10 miles from Frederick to the passes over South Mountain.*

1862, September 14. Battle of South Mountain. Learning that his order was in Union hands, Lee hurriedly prepared to concentrate the army at Sharpsburg. Covering forces at Turner's, Fox's, and Crampton's Gaps delayed McClellan's ponderous advance in a series of small but intense engagements.

1862, September 14–15. Battle of Harpers Ferry. After a half-hearted fight, the Union garrison withdrew into the town's defenses. Confederate control of the high ground surrounding the town placed the garrison in an untenable position. Colonel **Dixon S. Miles,** the Union garrison commander, refused to attempt a breakout (that breakout was possible was evidenced by the escape of 1,500 Union cavalry under Colonel **Benjamin F. Davis** on the night of September 14) and opened negotiations for surrender (September 15). Miles was mortally wounded when he went forward to conduct the negotiations. Leaving the division of General **A. P. Hill** to secure the 15,000 prisoners and captured stores, Jackson hurried to join Lee at Sharpsburg. McClellan, who could have struck Lee's 20,000 with more than 50,000 on the 15th, incredibly still did not attack on the 16th, permitting the Southerners—now about 45,000 strong—to prepare well-organized defensive positions along Antietam Creek, with the Potomac to their backs.

1862, September 17. Battle of Antietam Creek (Sharpsburg). McClellan planned to roll up Lee's left with 3 corps, while another drove across the creek to pin the Confederate right. Two more corps were in reserve. The Union 3-corps hammer blow degenerated into separate, disjointed attacks against Jackson, with the most sanguinary action along the "Bloody Lane," a sunken road. By midday all



Lee's reserves were expended, but the Federal attacks had ground to a halt. The action now shifted to Longstreet's sector. Major General **Ambrose E. Burnside**'s Union corps made three desperate attacks to carry a bridge over the fordable creek. It then took him 2 hours more to reorganize his troops and move to the assault of Sharpsburg. All the while, McClellan had held more than 20,000 men unemployed in reserve. Burnside's final effort had reached the crest of the defense when A. P. Hill's division of Jackson's corps arrived from Harpers Ferry and charged into Burnside's left flank, driving the Federals back across the creek and ending the bloodiest 1-day battle of the entire war.

COMMENT. *With less than 50,000 effectives, Lee had stopped McClellan's 90,000—of whom only 70,000 took part in the battle. Federal losses were 12,400; the Confederates lost 13,700. Lee calmly faced his opponent through that night and through the next day. Then, unmolested, he withdrew across the Potomac (September 19). Tactically, Antietam was a Confederate victory; strategically, since Lee's invasion was stopped, it was a Union victory, which Lincoln used as a springboard for his Preliminary Emancipation Proclamation (September 23).*

Fredericksburg Campaign

1862, November 7. Relief of McClellan. The Union general did not follow Lee across the Potomac until peremptorily ordered to do so by Lincoln (October 5). He then advanced cautiously to Warrenton, where he was between Longstreet at Culpeper and Jackson in the Valley. When, despite urging, McClellan failed to move further, Lincoln relieved him, placing Burnside in command of the Army of the Potomac.

1862, November–December. Burnside's Plan. He planned another drive upon Richmond. Advancing toward Fredericksburg on the fordable Rappahannock, he waited on the northeast bank for bridging equipment. Lee calmly concentrated on the other side, entrenching his army along the arc of hills overlooking Fredericksburg (from which civilians had been evacuated), Longstreet above the town, Jackson, on the right, farther south.

1862, December 13. Battle of Fredericksburg. Burnside launched a 2-pronged offensive, crossing the river opposite Fredericksburg and south of the town. The assaulting columns of the Union left initially enjoyed

some success, the division of Brigadier General **George G. Meade** drove back the brigade of Brigadier General **Maxcy Gregg** in some confusion (Gregg was mortally wounded). However, a galling flank fire from Stuart's artillery and a violent counterattack by Jackson's reserves threw the Union attack back to its start line. By evening Jackson's position was intact, the Union troops holding defensive positions on the west bank of the river. On the north, the Federal assault debouched from the ruins of the town to meet devastating artillery and small-arms fire from Longstreet's corps on Marye's Heights beyond. Fourteen successive Union charges melted away under the Confederate fire. Along the entire line, more than 12,500 Union soldiers lay in windrows, 6,000 of them in front of Longstreet's position. Confederate losses were 5,309. Burnside, dissuaded by his corps commanders from making another suicidal attack next day, withdrew across the river (December 15). Burnside blamed his subordinates for the debacle.

1863, January 26. Relief of Burnside. He was removed from command after having made another abortive attempt to cross the Rappahannock above Fredericksburg (January 20), despite Lincoln's order to halt. This "Mud March" bogged down in torrential rains.

War in the West, 1862

West of the Mississippi

1862, March 7–8. Battle of Pea Ridge. Confederate Major General **Earl Van Dorn** with 16,000 men tried to encircle the right flank of Union Major General **Samuel R. Curtis,** whose 12,000 men held a defensive position 30 miles northeast of Fayetteville, Ark. Curtis, discovering the movement, spoiled the offensive, and Van Dorn withdrew after 2 days of stubborn fighting. Federal losses were about 1,300; Confederate, upward of 800.

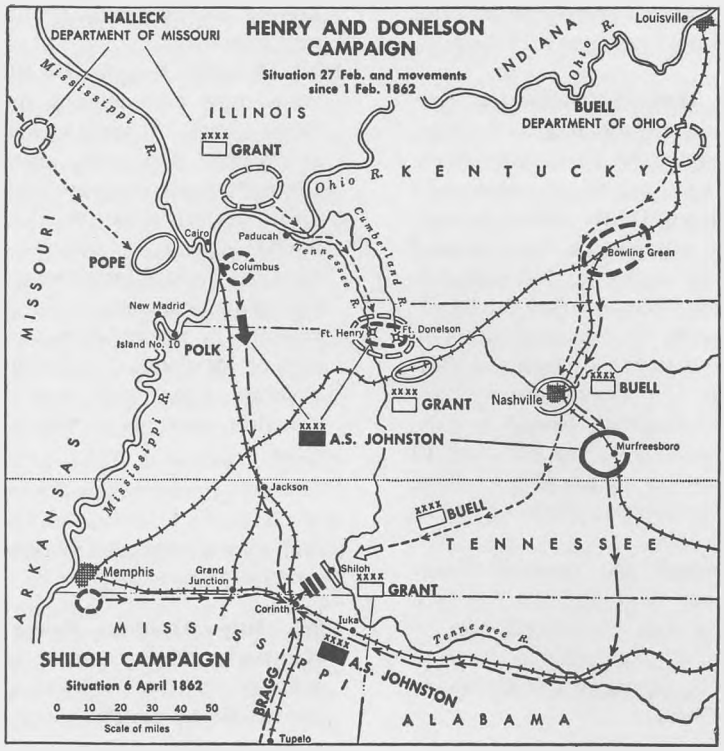
1862, April 15. Battle of Peralta. Confederate Brigadier General **Henry Hopkins Sibley,** moving up the Rio Grande from Fort Bliss, Tex., with some 4,000 Texan volunteers to invade California, had defeated a Union force of equal strength under Colonel **Edward R. S. Canby** at **Valverde,** N.M. (February 21), and occupied in turn Albuquerque and Santa Fe. But lack of food forced Sibley's retirement and Canby, reinforced, fell on him at Peralta, 20 miles south of Albuquerque, and in a series of running fights forced Sibley and his disintegrating force back to Fort Bliss (April–May).

1862, December 7. Battle of Prairie Grove. A Confederate force of 10,000 under Major General **T. C. Hindman** was repulsed by a Union force of equal size under Brigadier Generals **James G. Blunt** and **Francis J. Herron,** leaving northern Arkansas in Union hands.

East of the Mississippi

1862, January 19–20. Battle of Mill Springs. In eastern Kentucky a Confederate thrust of 4,000 men from Cumberland Gap, under Generals **Felix Zollicoffer** and **George Crittenden,** was repulsed decisively by an equal number of Union troops under Brigadier General **George H. Thomas,** part of the Army of the Ohio, commanded by Major General **Don Carlos Buell.** The Confederates lost all their artillery, most of their equipment, and many men in retreating across the Cumberland River. Zollicoffer was killed in the battle.

1862, February. Henry-Donelson Campaign. Grant led an amphibious operation from Cairo, Ill., to split A. S. Johnston's cordon defense. Moving up the Tennessee River, Flag Officer **Andrew Foote**'s escorting squadron of ironclad river gunboats' fire overwhelmed low-lying Fort Henry (February 6). Grant then moved overland to Fort Donelson on the Cumberland River while the gunboats retraced their route and advanced up the Cumberland to support him. Donelson was held by 15,000 men commanded by Major General **John B. Floyd,** assisted by Major Generals **Gideon Pillow** and **Simon Bolivar Buckner.** A Union gunboat attack was repulsed (February 14). Next day the Confederates attacked, almost breaking through the Union encirclement, but Grant's counterattack swept



them back into the fort. Floyd and Pillow escaped by water; Buckner's request for an armistice was answered by Grant's famous ultimatum: "No terms except an unconditional and immediate surrender can be accepted." Buckner surrendered (February 16). Union losses were 2,832; Confederate—including prisoners—16,623.

1862, February–March. Collapse of the Confederate Cordon. Attempting to form a new line in Tennessee, Johnston gave up the project when Grant and Buell seized Nashville (February 25). Johnston then concentrated in the vicinity of Corinth, Miss., with 40,000 men. Grant's planned move on Corinth was halted on the Tennessee River at Savannah, Tenn., by Halleck's order, requiring him to wait until Buell should arrive from Nashville.

1862, April 6–7. Battle of Shiloh. Johnston made a surprise attack on Grant's inadequately outposted bivouacs, in the vicinity of Pittsburg Landing–Shiloh Church, driving in the badly shaken Union forces. Grant's vigorous personal efforts to retrieve the day were finally successful at dusk. The Confederates, all their reserves expended, were first halted by Grant's artillery, then driven back as 2 Union gunboats added their flank fire to the defense. Johnston was killed while leading a last-ditch charge; Beauregard succeeded to command. That night, Buell's army arrived on the east bank of the river and part of it was ferried across. Shortly after dawn next day, Grant counterattacked. By noon Beauregard gave up the struggle and retreated to Corinth. Confederate losses, of some 40,000 men in action, were 10,600. Grant, out of 62,700 engaged, lost 13,000. Criticism of Grant in the North was loud and to a great

extent baseless. Lincoln's answer to demands for Grant's relief was: "I can't spare this man. He fights."

1862, May—June. Halleck's Advance. Taking personal command of the combined armies, Halleck moved very slowly to Corinth. Beauregard, falling back in front of him, evacuated it (May 29), retreating to Tupelo, where he reorganized his army. Confederate evacuation of Fort Pillow followed (June 5). Ponderous Halleck now divided his forces. Sending Buell eastward into Tennessee, he restricted Grant to defensive operations in the Mississippi Valley. Meanwhile (June 17), Beauregard was replaced by General **Braxton Bragg** in command of the Confederacy's western theater. To stop Buell's threat to Chattanooga, Bragg shifted most of his forces rapidly to southeastern Tennessee.

1862, July 11. Halleck to Supreme Command. Halleck, appointed General in Chief, left for Washington (July 17), turning over his western command to Grant and to Buell, in separate commands (Army of the Tennessee and Army of the Ohio).

GRANT'S OPERATIONS, JULY–NOVEMBER, 1862

1862, July–September. Grant on the Defensive. His slender forces (45,000 men) widespread on a long line of communications to Cairo, Ill., Grant, at Corinth with about 25,000 men, was menaced by Price (17,000 men) and Van Dorn (15,000 men), who attempted to unite against him.

1862, September 19–20. Battle of Iuka. Grant planned a double envelopment of Price's advancing forces, but was foiled by a number of circumstances. Not least was the error of a subordinate, Brigadier **General William S. Rosecrans,** who marched by the wrong route and became embroiled in a confused meeting engagement, failing to cut the Confederate line of retreat. Curiously, Grant, with the remainder of the army a few miles away, heard nothing of Rosecrans' fight due to a quirk of acoustics caused by the weather. Price and Van Dorn, uniting, moved against Corinth under the latter's command.

1862, October 3–4. Battle of Corinth. Rosecrans, now commanding the field forces of Grant's army, occupied an entrenched position at Corinth. Van Dorn, after pushing in the Union outposts, attempted to envelop the position. The Confederate attacks degenerated into a series of piecemeal assaults, all of which were repulsed. Federal losses were 2,520 (of 23,000 engaged); Confederate, 4,233 (of 22,000 engaged). The net result was firm federal retention of Memphis and Corinth, both strategic outposts. Grant now moved toward Grand Junction, planning an advance against Vicksburg.

BUELL AND ROSECRANS VS. BRAGG, JULY—DECEMBER, 1862

1862, July–October. Bragg's Invasion of Kentucky. Bragg moved north from Chattanooga while his subordinate, General **Edmund Kirby Smith,** advanced from Knoxville, overwhelming a small Union force at **Richmond** (August 30). The combined Confederate force totaled about 50,000 men. Buell—with about the same number—finding his communications with Nashville menaced, recoiled to the banks of the Ohio River. Bragg now occupied most of Kentucky. Buell, substantially reinforced, and threatened by Washington with replacement, finally advanced from Louisville.

1862, October 8. Battle of Perryville. Buell's advance resulted in a confused encounter near Perryville. Part of Bragg's army (some 16,000 men) under Generals Leonidas Polk and **William J. Hardee** met one of Buell's corps when elements of both armies attempted to secure a source of water. Although both sides claimed success, the result tactically was a draw. Strategically, it was a Union victory as Bragg, having concentrated his, army, now inexplicably turned and marched back through Cumberland Gap into Tennessee. Buell, equally negligent, failed to pursue him.

1862, October 23. Relief of Buell. Disgusted with Buell's lack of aggressiveness, Lincoln replaced him with Rosecrans, who occupied Nashville (November 6).

1862, November–December. Stalemate. For several weeks Bragg and Rosecrans confronted each other without action between Nashville and Murfreesboro, while both Washington and Richmond berated their procrastinating generals. Meanwhile, Confederate cavalry leaders **Nathan Bedford Forrest** and **John H. Morgan** bedeviled both Rosecrans and Grant by raids. Finally, Rosecrans began his advance, forcing Bragg to retreat to a position near Murfreesboro (December 26–30).

1862, December 31–1863, January 2. Battle of Stones River (Murfreesboro). Spurred to take action, both commanders attacked, each planning to envelop the other's right flank. Bragg, with 38,000 men, struck first, with outstanding initial success, but dilatory and blundering use of his reserve spoiled his exploitation. Rosecrans, who had some 44,000 troops, was able to hold a new defensive line. Both sides bivouacked on the field that night, and held their respective positions next day. Bragg made one more attack, but was repulsed (January 2). He withdrew the next day. The tactically drawn battle was a strategic victory for the North. Federal losses were 12,906; Confederate, 11,740.

Union Advance Down the Mississippi, February–June, 1862

1862, February–March. New Madrid and Island No. 10. The northern attack started as an amphibious operation; Major General John Pope, with some 23,000 men, moved on New Madrid and Island No. 10, supported by Flag Officer Foote's gunboats. Pope drove the Confederate garrison out of New Madrid (March 13). Two gunboats made daring runs past the heavy batteries on Island No. 10 (April 4–5, 6–7) and escorted Pope's troops across the river, cutting land communication with the island, whose garrison surrendered (April 8). Sixty miles to the south downriver lay Fort Pillow, north of Memphis. Pope's army, ferried down, invested it, while gunboats and mortar schooners opened bombardment. Halleck withdrew Pope's troops for the Corinth campaign (see p. 966), but the naval bombardment continued. (His success here led to Pope's later appointment to command in the East; see p. 960).

1862, May 9. Battle of Plum Point. A flotilla of Confederate gunboats lying below the fort made a dawn attack on the Federal flotilla, now commanded by Captain **Charles H. Davis,** U.S.N. (Foote, wounded during the Donelson operation, had been evacuated.) After seriously damaging 2 Union gunboats, the Confederate flotilla withdrew. Because of Halleck's advance, Fort Pillow's garrison was withdrawn (June 5).

1862, June 6. Battle of Memphis. The Federal flotilla moved down to attack the southern gunboats off Memphis, destroying all but 1 of the Confederate vessels. Memphis surrendered and Davis' flotilla steamed down to the mouth of the Yazoo River, above Vicksburg.

Union Advance from the Gulf, March–July, 1862

1862, March–April. Farragut at the River Mouth. Meanwhile, Commodore **David Glasgow Farragut** had moved into the Mississippi River estuary from the Gulf with 8 steam sloops and corvettes, a 20-ship mortar flotilla, and 9 gunboats. General Butler with 10,000 men accompanied the expedition. The river was defended by **Forts St. Philip** and **Jackson,** mounting between them 115 heavy guns. The Confederate ironclad *Louisiana,* her engines uncompleted, was moored as a floating battery just above St. Philip. A barrier of hulks and logs below the forts barred the river to traffic.

1862, April 24. Naval Battle of New Orleans. While his mortar boats bombarded the forts, Farragut's squadron crashed through the barrier and successfully ran by the forts. Above the Forts, 11 Confederate gunboats attacked. Nine

of them were sunk. Next day Farragut steamed up and took New Orleans, which had been evacuated by all Confederate troops. Forts St. Philip and Jackson—bombarded by mortar boats and surrounded by Butler's troops—surrendered (April 27). Butler's troops then occupied New Orleans. Farragut moved upriver. Baton Rouge and Natchez surrendered, but Vicksburg, heavily fortified, repelled his squadron (May 23). Returning to New Orleans, Farragut received peremptory orders from Washington to open up the river, and the squadron retraced its steps to Vicksburg, accompanied by mortar boats.

1862, June 28. Run-by at Vicksburg. Farragut's squadron ran a 3-mile gantlet, with some casualties and considerable damage to the vessels, linking with Davis' flotilla off the mouth of the Yazoo River (July 1).

1862, July 15. The *Arkansas* vs. the Union Fleet. The Confederate ironclad ram *Arkansas* debouched from the Yazoo (a strategic error, for so long as she remained in place she menaced Union control of the river) and battered her way to Vicksburg through the entire Union squadron. Farragut ran by the forts again in an unsuccessful attempt to destroy the *Arkansas* (July 21–22) and then returned to the Gulf, to resume command of the Gulf blockading squadron. The misused *Arkansas* was later destroyed by her crew near Baton Rouge, after her engines broke down.

Land Operations Against Vicksburg, November–December, 1862

1862, November–December. Grant's Advance. Grant having concentrated the Army of the Tennessee at Grand Junction, Tenn., started south toward Vicksburg (November 13), pushing back General **John C. Pemberton,** now commanding all Confederate forces in the region. Grant also sent Major General **William T. Sherman** with 40,000 men down toward Vicksburg in an amphibious operation supported by Rear Admiral **David D. Porter,** now commanding naval units in the Memphis area (December 20). But Grant's own advance was harassed by Forrest's raids in northwest Tennessee, and Van Dorn's capture of the Federal supply depot at **Holly Springs,** Miss. (December 20).

1862, December 14. Butler Replaced by Banks. Meanwhile, at New Orleans, General Nathaniel P. Banks had replaced Butler, and in coordination with Farragut was moving slowly up the river to threaten Port Hudson.

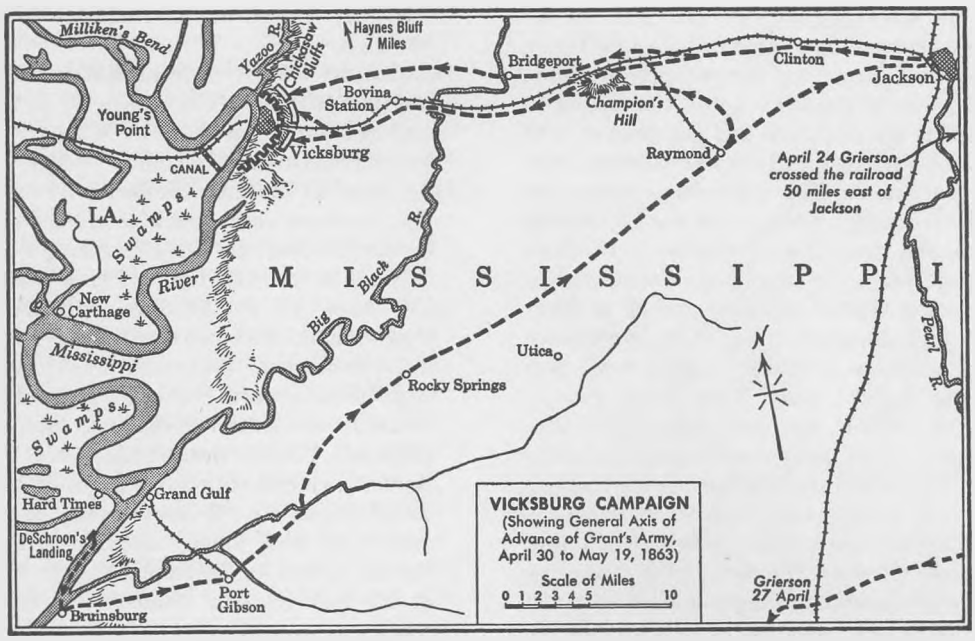
1862, December 25–29. Chickasaw Bluffs Operation. The Sherman-Porter expedition entered the Yazoo River and Sherman attempted unsuccessfully to assault the Chickasaw Bluffs north of Vicksburg, manned by 13,800 of Pemberton's veterans. After a 3-day action (December 27–29), Sherman admitted defeat, retiring to the mouth of the Yazoo. Federal losses were 1,776; Confederate, only 207. Thus the year ended with the Mississippi from Vicksburg to Baton Rouge still under Confederate control.

War in the East, 1863

1863, January 26. Hooker to Command. He was appointed to command the Army of the Potomac in place of Burnside.

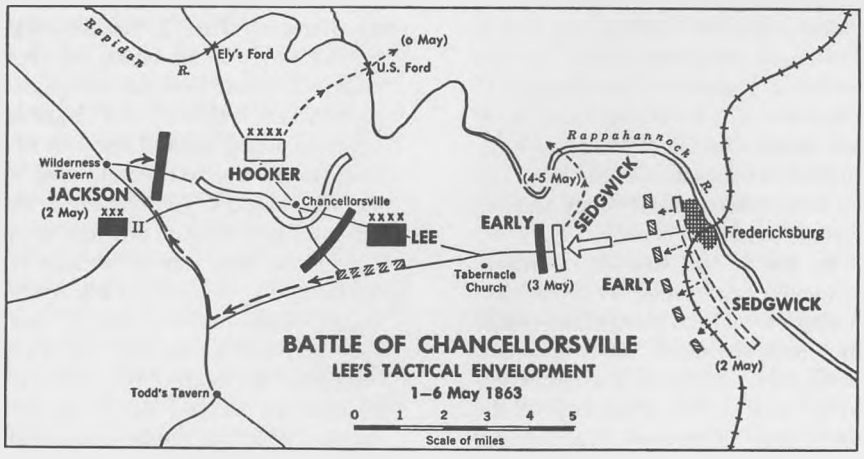
Chancellorsville Campaign, April–May

1863, April 27–30. Preliminaries to Chancellorsville. Hooker moved to attack Lee from the Federal positions east of the Rappahannock and opposite Fredericksburg. Major General **John Sedgwick** with 40,000 men was to demonstrate by forcing a crossing of the river at Fredericksburg itself. Meanwhile, Hooker with 73,000 more would cross the river above, into the Wilderness, and circle Lee's left. The Federal cavalry under Major General **George Stoneman** would ride wide westward, then sweep south to cut Lee's communications with Richmond. Lee's Army of Northern Virginia was reduced to 60,000—high in morale, but short of equipment, rations, and clothing.



Longstreet's corps and much of Stuart's cavalry was away, gathering provisions and forage in the lower James River area. Stuart's remaining cavalry harrassed and contained Stoneman's men and quickly identified Hooker's intentions. Lee, although surprised by the skill and rapidity of this movement, reacted swiftly.

1863, May 1–6. Battle of Chancellorsville. Leaving Major General **Jubal Early** with 10,000 men on Marye's Heights to contain Sedgwick's Fredericksburg attack, Lee moved rapidly west to meet Hooker's main offensive. At first contact (May 1), Hooker, despite his tremendous superiority in numbers, halted and went on the defensive. Early next day, Lee sent Jackson with 26,000 men in a wide envelopment while Lee with only 17,000 held the front. Just before dusk Jackson assaulted—his



line perpendicular to the right flank of the Federal entrenchments. He rolled up the Union right flank, completely demoralizing the entire right wing of Hooker's army. Attempting to complete the operation and cut Hooker from his Rappahannock ford communications, Jackson rode into the night in person to reconnoiter and was mortally wounded by the fire of some of his own troops. Next day (May 3) the Confederate attacks resumed, but were slowed by increasing Federal resistance, while at Fredericksburg Sedgwick, reduced to 28,000 men by detachment to Hooker's main body, was driving Early's small force from Marye's Heights. Hooker, with only part of his troops engaged, could still have retrieved the situation, but he had no fight left in him. Leaving Stuart to hold Hooker near Chancellorsville, Lee hastened east to defeat Sedgwick at **Salem Church** (May 4). The Army of the Potomac withdrew across the Rappahannock (May 5–6). Union losses were 16,792 killed, wounded, or captured. The South lost a total of 12,754. Lee had won a tremendous victory, but had lost the one man he could not spare; Jackson died of his wounds (May 10).

Gettysburg Campaign, June–July

1863, June 3. Lee Prepares to Invade the North. Lee reorganized his army, replacing the former 2 corps (wings) with a 3-corps structure, elevating Generals Richard Ewell and A. P. Hill to corps command. Some analysts believe that the inexperience of Ewell and Hill as corps commanders had a strong influence on the outcome of the campaign. (This is doubtful.) Determined to maintain the initiative, Lee moved over to the Shenandoah Valley, leaving Stuart to screen his movements.

1863, June 9. Battle of Brandy Station. Hooker discovered Lee's move when his cavalry, under Major General **Alfred Pleasonton** crossed the Rappahannock and surprised Stuart's cantonment. Rallying, the Confederates fought the attackers to a standstill in the largest cavalry battle of the war. Pleasonton of 12,000 men engaged, incurred more than 900 casualties. Stuart, out of 10,000, lost almost 500 men.

1863, June 13–15. Second Battle of Winchester. Ewell's II Corps (formerly Jackson's) smashed General **Robert H. Milroy**'s Union forces in the lower Shenandoah Valley.

1863, June 15–24. Lee Crosses the Potomac. The Southern army—80,000 strong—pushed northward into Pennsylvania through Chambersburg to reach Carlisle and York (June 28).

1863, June 13–27. Hooker Follows Lee. When finally convinced that Lee was making a major movement, Hooker and his 113,000 men began to move north (June 13). The movement of the Army of the Potomac was rapidly and efficiently carried out, Pleasonton's cavalry skillfully screened this move in a succession of small actions with Stuart's cavalry along the line of the Blue Ridge Mountains. Although Hooker missed repeated opportunities to strike at the stretched-out Confederate army, his army was well concentrated and deployed to protect Washington. More importantly, Hooker's whereabouts were almost unknown to Lee. Hooker's army reached Frederick at the same time that he discovered that Halleck (who remembered the discrepancy between Hooker's plan and Hooker's actions at Chancellorsville) had overruled his plan to trap Lee with a 2-pronged strategic envelopment (June 27). Hooker offered his resignation, which—to his surprise—was accepted before dawn next day.

1863, June 26–July 2. Stuart's Raid. Screening Lee's right flank during the crossing of the Potomac, Stuart took advantage of discretionary orders to take his 3 best brigades and swing wide on a raid around the rear of the Union army in central Maryland. Two brigades remained behind to guard the Blue Ridge passes, leaving 2 overworked brigades to operate with Lee's main body. Stuart became entangled in the marching columns of the Army of the Potomac, whose movement north had interposed itself between Stuart and Lee. Determined to complete his circuit of the Union army, Stuart pushed on, slowed down by 125 captured wagons which he insisted on keeping.

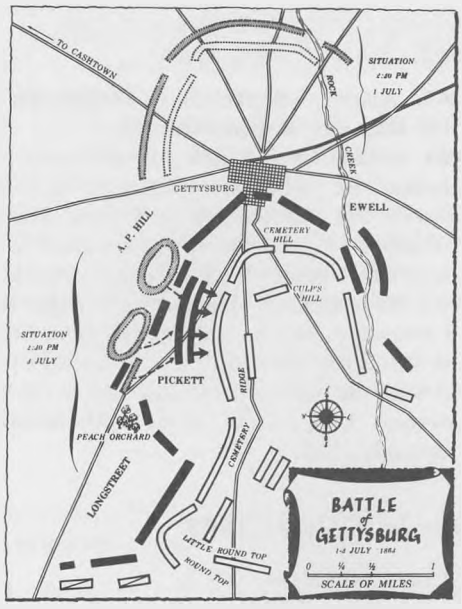
1863, June 28. Major General George C.

Meade Takes Command. He was the Army of the Potomac's fourth commander in 10 months. Lee, deprived of reconnaissance intelligence due to Stuart's absence, learned the general whereabouts of the Army of the Potomac—and its change of command—late the same day. Immediately he began concentration near Cashtown.

1863, June 30. Meeting Engagement. Meade, trying to coax the Confederates to give battle south of the Susquehanna, probed cautiously toward Emmitsburg and Hanover. A Confederate infantry brigade, moving southeast toward Gettysburg, met a Union cavalry brigade reconnoitering to the northwest. From that unexpected clash built up, piecemeal, the greatest battle ever to be fought on American soil.

1863, July 1. Battle of Gettysburg (First Day). A. P. Hill's Confederate III Corps opposed **John F. Reynolds'** Union I Corps and **Oliver O. Howard's** XI Corps, north and northwest of Gettysburg itself. Ewell's II Corps, moving south from Heidlersburg, outflanked the Union right. The Union troops rallied south of the town on Cemetery Hill and Culp's Hill, while the Confederates held Gettysburg and Seminary Ridge to the southwest. Through the night the remainder of the Army of the Potomac marched up and moved into position facing west along Cemetery Ridge. The famous Union "fishhook" was taking shape (see map). Lee decided that he would envelop the Union left next day, using Longstreet's I Corps, which had not yet arrived on the field.

1863, July 2. Battle of Gettysburg (Second Day). Longstreet's attack was delayed until afternoon, but drove back **Daniel E. Sickles'** III Corps from an exposed position in a peach orchard and almost turned the Union left. Brigadier General **Gouverneur K. Warren,** Meade's engineer officer, discovering that Little Round Top was unoccupied, deftly diverted a nearby brigade and artillery battery to this key point and saved the situation. Desperate fighting to the south ended with the Union troops anchored firmly along the ridge from Round Top to Culp's Hill—which latter point Ewell had failed to wrest from Union hands.



1863, July 3. Battle of Gettysburg (Third Day). Lee decided on a penetration of the Union center. Covered by a tremendous artillery bombardment, 10 brigades were launched in the assault known as "Pickett's Charge," although Major General **George E. Pickett** was but 1 of 3 division commanders involved. Some 15,000 men pressed for a half-mile through Union cannonading that blew great gaps in their line. Reaching the Union line, the surviving Confederates briefly broke in only to be thrown back by Meade's reserves. Survivors of the charge (barely half of those who started) reeled back to Seminary Ridge, where Lee, accepting responsibility for the disaster, waited for a counterattack which never came. Union casualties for the 3 days were 3,155 killed, 14,529 wounded, and 5,365 missing. The Confederate army lost 3,903 killed, 18,735 wounded, and 5,425 missing.

1863, July 4–14. Lee's Retreat. This was accomplished without serious hindrance through mud and rain, and despite the swollen Potomac. Meade followed cautiously. Lincoln was gravely disappointed by Meade's failure to exploit his victory.

Inconclusive Operations in the East, August–December

1863, August—September. Stalemate on the Rapidan-Rappahannock.

1863, October 9–14. Lee Advances to Manassas. He jabbed at Meade's left in a long sweep, but was checked at **Bristoe Station** (October 14), and the armies returned to the Rapidan-Rappahannock triangle (November).

1863, November 27–December 1. Mine Run Campaign. Meade made several inconclusive thrusts across the Rappahannock at Lee's position on the west bank of Mine Run in the Wilderness. Union losses were 1,653; Southern casualties, 745.

War in the West, 1863

Vicksburg Campaign

1863, January—March. Probing at Vicksburg. The Holly Springs experience (see p. 968) had convinced Grant that, with the forces available to him, overland operations against Vicksburg were impracticable at the end of a long line of communications from Cairo. He distrusted the capabilities of Major General **John A. McClernand,** who, as senior in rank, had superseded Sherman as commander of the river expedition against Vicksburg (see p. 968). McClernand had then gone on a useless diversion up the Arkansas River to capture **Fort Hindman** at **Arkansas Post** (January 11). Ordering McClernand to return to the vicinity of Vicksburg, Grant went down the river to assume personal command at Milliken's Bend, La. (January 30). Through the winter and early spring Grant probed at the increasingly formidable defenses of Vicksburg, keeping his army busy, but accomplishing little else. Actually he was waiting for the cessation of the rains and falling of the flooded rivers.

1863, February–March. Gunboats on the River. Admiral Porter, working closely with Grant in the probes at Vicksburg, also sent the gunboats *Queen of the West* and *Indianola* in daring runs past the Vicksburg batteries to interfere with Confederate river traffic between Vicksburg and Port Hudson. Honors were about even; Confederate river activities were seriously disrupted, but the *Queen* was eventually captured and the *Indianola* destroyed.

1863, March 14. Port Hudson. Carrying out his part of a jointly planned operation with General Banks, Farragut steamed upriver past the powerful defenses of Port Hudson. Only his flagship, USS *Hartford,* and 1 other vessel were able to fight their way past, all other Union ships being repulsed. Banks failed to cooperate. But Farragut with his 2 ships quickly swept southern shipping off the central Mississippi.

1863, April. Grant Completes His Preparations. Pemberton's forces defending Vicksburg numbered about 50,000, scattered on the east bank of the Mississippi from Haines's Bluff, 10 miles above Vicksburg, to Grand Gulf, 40 miles below. (Farther south, the 15,000-man garrison at Port Hudson was immobilized by the threats of Farragut and Banks.) Grant had about 50,000 men on the west bank. Leaving Sherman's corps above Vicksburg, Grant moved the rest of his army overland to Hard Times, below Vicksburg, opposite Grand Gulf. At about the same time (April 17), in a series of spectacular night actions, Porter began to run gunboats and transports past the Vicksburg batteries to Grant's new base at Hard Times.

1863, April 18–May 3. Grierson's Raid. To further confuse the Confederates, Grant dispatched Colonel **Benjamin H. Grierson,** with 3 regiments of cavalry, from La Grange, Tenn., on a skillful, destructive ride through the entire length of Mississippi to the Union base at Baton Rouge.

1863, April 30. Crossing the Mississippi. While Sherman's corps and some gunboats demonstrated up the Yazoo, near the Chickasaw Bluffs above Vicksburg, the remainder of Grant's army was ferried unopposed by Porter's vessels to Bruinsburg, 10 miles below Grand Gulf (which Porter's gunboats had bombarded the previous day).

1863, May 1. Battle of Port Gibson. The Confederate Grand Gulf garrison, attempting to resist the Union advance inland, was driven off.

Grant then waited while Sherman hurried down from his demonstration to join the remainder of the army east of the Mississippi (May 3).

1863, May 7–19. Big Black River Campaign. In addition to Pemberton's 35,000 in the vicinity of Vicksburg, Joseph E. Johnston (recovered from his wounds and now overall Confederate commander in the West) had gathered 9,000 men at Jackson, Miss., 45 miles east. Grant, with 41,000 men, now abandoned his communications and marched eastward between these two Confederate forces. While Pemberton probed vaguely for the nonexistent Union line of communications, Grant drove Johnston out of **Jackson** (May 14). Leaving Sherman there to complete destruction of supplies and railroads, and to block Johnston, Grant then turned west again on Pemberton.

1863, May 16. Battle of Champion's Hill. Pemberton, with 22,000 men, held a strong position east of the Big Black. Grant, to rectify errors of McClernand, his leading corps commander, took personal command and drove the Confederates from the field. Pemberton for a few hours held a bridgehead over the Big Black River, but next day McPherson's corps stormed it. At the same time Sherman crossed the river farther north. Pemberton retreated into the Vicksburg defenses (May 19).

COMMENT. *In 19 days, Grant had marched 200 miles, living off the country, and defeated detachments of a numerically superior enemy in 5 distinct engagements and several skirmishes. He had inflicted losses of about 8,000 men at a loss to himself of less than 4,400 casualties. He had now locked up his principal opponent and some 30,000 men in a fortress. The Big Black River campaign was the most brilliant ever fought on American soil.*

1863, May 19–July 4. Siege of Vicksburg. After 2 unsuccessful assaults (May 19 and 22), Grant buckled down to siege operations, leaving Sherman's corps as a mobile force shielding any possible attempt by Johnston to relieve the city. The Federal investment closed in gradually, with continual bombardment from siege guns on land and from Porter's ironclads on the river. Vicksburg's defenders and the civilian population, burrowing in caves and threatened by starvation, kept up a gallant but hopeless fight, which excited as much admiration in the North as in the South.

1863, July 4. Surrender of Vicksburg. Learning that Grant was preparing a general assault, Pemberton surrendered. Grant immediately rushed rations to the famished civilians and soldiers in the city. Repulse of a Confederate attack on **Helena,** Ark., that same day was an anticlimax, as was the surrender of Port Hudson to Banks (July 9).

COMMENT. *As Lincoln put it, the Mississippi now "flowed unvexed" to the sea; the Confederacy had been split in two.*

Tullahoma, Chickamauga, and Chattanooga Campaign.

1863, June 23–July 2. Tullahoma Campaign. After 6 months of inaction at Murfreesboro, while Bragg sat at Tullahoma—and Grant campaigned near Vicksburg—Rosecrans was finally prodded to action by Halleck's threats to replace him. In a well-planned, well-conducted, bloodless maneuver, Rosecrans forced Bragg to withdraw to Chattanooga.

1863, August 16. Offensives of Rosecrans and Burnside. After another long delay, Rosecrans advanced from Tullahoma. That same day Burnside, with the Army of the Ohio, moved from Lexington, Ky., toward Knoxville. Swinging wide to the southwest, Rosecrans crossed the Tennessee River near Bridgeport, Ala., threatening Bragg's line of communications to Atlanta. The Confederates abandoned Chattanooga (September 7); Rosecrans, with 60,000 men, pursued into northwestern Georgia. President Davis now rushed Longstreet's corps from Virginia by rail; these and other reinforcements brought Bragg's army up to 70,000.

1863, September 19–20. Battle of Chickamauga. Knowing that Rosecrans was widely strung out in pursuit, Bragg attacked across Chickamauga Creek, attempting to turn the Union army's left and cut its line of communi-

cations to Chattanooga. Both armies were hampered by the densely wooded terrain; Rosecrans held firm on the 19th. Confederate assaults continued next day. While Rosecrans was shifting divisions, a garbled order left a gap in his center through which Longstreet plunged, cutting the Union army in two and driving its center and right from the field in disorder. Only the resolute resistance of the left, under Major General **George H. Thomas** (who held the field until nightfall to win the soubriquet of "Rock of Chickamauga"), and the timely arrival of Brigadier General G. Gordon Granger's reserve corps, which marched without orders to Thomas's assistance, prevented total disaster. Bragg, irresolute, made no effort to pursue, and Rosecrans' Army of the Cumberland clung to Chattanooga. Federal casualties were 1,657 killed, 9,756 wounded, and 4,757 missing. Bragg's Army of Tennessee lost 2,312 killed, 14,674 wounded, and 1,486 missing.

1863, September–October. Siege of Chattanooga. Bragg invested Chattanooga, cutting Rosecrans off from all communication either with Burnside at Knoxville, Tenn., or with Hooker's 2 corps of the Army of the Potomac, rushed by rail 1,192 miles to reinforce him. Hooker's troops remained at Bridgeport, 30 miles from Chattanooga. The Union-held mountain trails north of the Tennessee River were too rugged to support a supply line. Only a telegraph wire linked Rosecrans' army with the North. Rosecrans' troops and the inhabitants of the city neared starvation.

1863, September–October. Burnside Stalled at Knoxville. His army could not obtain supplies over the atrocious roads back through Cumberland Gap and was unable to advance on Chattanooga.

1863, October 17. Grant to Overall Command in the West. Lincoln put him over all Union forces between the Mississippi and the Alleghenies.

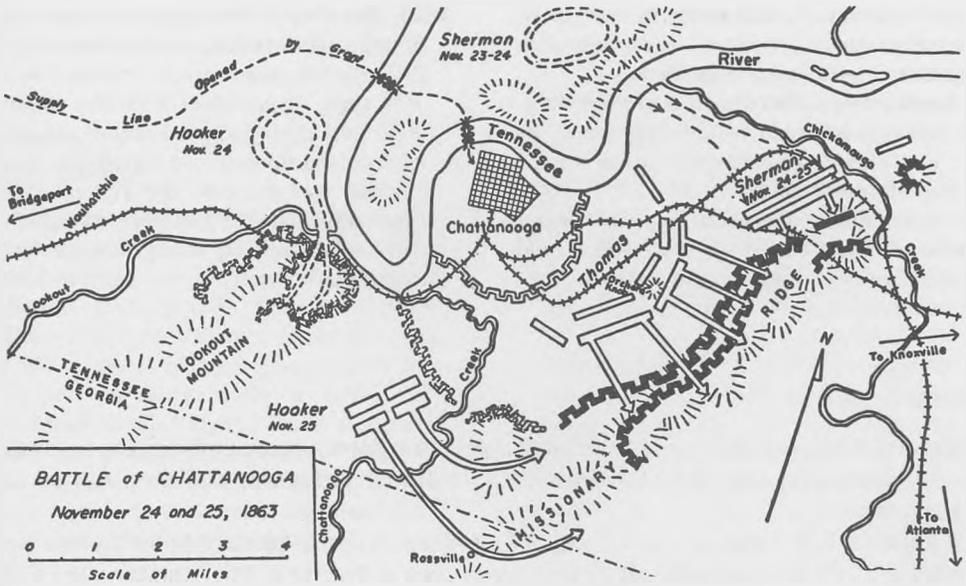
1863, October 17–27. Relief of Chattanooga. Grant hastened to Chattanooga, en route relieving Rosecrans by telegram, replacing him with Thomas. Arriving by mule trail in Chattanooga (October 23), 4 days later Grant slipped a portion of Thomas' troops on pontoon boats past the Confederates on Lookout Mountain and opened a gap in the blockading line. Hooker's troops advanced through this gap, bringing with them an adequate supply of food. At the same time Grant ordered Sherman up from Memphis with the Army of the Tennessee.

1863, November–December. Siege of Knoxville. Bragg, meanwhile, was so confident of the impregnability of his fortifications on Lookout Mountain and Missionary Ridge, overlooking Chattanooga, that he sent Longstreet and 20,000 men to besiege Burnside, whose forces were soon brought to the verge of starvation. Halleck and Lincoln wired frantic appeals to Grant to send relief to Burnside.

1863, November 24. Battle of Lookout Mountain (First Day, Battle of Chattanooga). With the arrival of Sherman—after a month's march—Grant had 61,000 men to oppose Bragg's well-entrenched 40,000. He immediately sent Hooker's 2 corps, on his right, to attack Lookout Mountain, while Sherman—without a pause to rest his weary troops—moved against the northern end of Missionary Ridge. Sherman was repulsed, but Hooker stormed Lookout Mountain in "the battle above the clouds," against light resistance.

1863, November 25. Battle of Missionary Ridge (Second Day, Battle of Chattanooga). Sherman renewed his assaults against the Confederate right, while Hooker somewhat dilatorily advanced against Bragg's left. In the afternoon Thomas' Army of the Cumberland began a limited attack against the front of the 3-tiered Confederate works. Taking the first line, Thomas' men, without orders, swept to the top of the ridge in a spontaneous assault. Bragg's troops, seized with panic, fled. Federal losses in the two days' combat were 753 killed, 4,722 wounded, and 349 missing. The Confederates lost 361 killed, 2,160 wounded, and 4,146 missing. Next day Grant sent Sherman's army to relieve Burnside at Knoxville.

1863, December 6. Relief of Knoxville. Sherman arrived to find that Longstreet had abandoned the siege 2 days previously, after the failure of a desperate assault on the Federal



fortifications (this assault was noteworthy in that it was the first occasion in which wire entanglements were used to impede an attacker's movements; telegraph wire had been strung at knee-level in front of the Union fortifications). With Tennessee now cleared of southern troops, the way was open for the next move—marching into Georgia.

Naval Operations, 1863

Coastal

By this time the Union naval blockade was slowly strangling the Southern economy, despite the handicaps plaguing the blockaders. Monotonous cruising in all weathers was relieved only by hurried trips to coaling stations. Deep-water ships and sailors had no love for shoal waters and treacherous banks over which shallow-draft blockade runners could slip from hot pursuit. Up to June 1863, Lincoln's net had bagged 885 runners, but the mesh was wide and blockade running had become big business. Specially built, speedy ships were operating out of Nassau in the Bahamas, Bermuda, Halifax, N.S., and Havana, Cuba. While the gulf ports took some of this traffic, Charleston and Wilmington, N.C., had become the principal ports of entry. It was evident that to dry up the flood the ports must be occupied. Union interest now centered on Charleston in particular, whose retention had become a symbol in Southern eyes. Its defense was ably planned and vigorously conducted by General Beauregard.

1863, April 7. Repulse at Charleston. Rear Admiral Samuel F. du Pont attacked the fortified harbor with a squadron of 9 Union ironclads, but was decisively repulsed by the forts and shore batteries, bristling with guns.

1863, July–September. Union Bombardment. Rear Admiral **John A. Dahlgren,** succeeding du Pont (July 10), kept up bombardment of the Charleston defenses, in cooperation with land attacks by the troops of Major

General **Quincy A. Gillmore.** Fort Wagner, principal target, repulsed several assaults with sanguinary losses (July–August).

1863, September 6. Occupation of Fort Wagner. it was evacuated by the Confederates. Its loss diminished Charleston's value as a blockade-runner's haven.

1863, September–December. Continued Bombardment. The other fortifications held out. Southern ingenuity now turned to the submarine boat.

1863, October 5. Submarine Attack on *New Ironsides.* CSS *David,* a semisubmersible cigar-shaped craft, steam-driven, manned by a crew of 4 men, approached USS *New Ironsides* at night and exploded a 60-pound copper-cased torpedo, manipulated on a long spar. Extensive damage was done to the Federal ship. The *David* returned safely to port, though 2 of her crew, washed off by the spouting water, were captured.

The High Seas

Confederate commerce destruction during the period centered principally on the operations of 2 vessels constructed especially for the service in British shipyards and then turned over to Southern crews.

CSS **Florida** had ravaged the Atlantic coast since August, 1862. One of *Florida*'s prizes, converted to a warship, actually sailed into the harbor of Portland, Me., and blew up a Federal revenue cutter before being captured. Finally, *Florida,* a steam corvette, was cornered in Bahia Harbor (October 7) and, in disregard of Brazilian neutrality, was boarded and captured by USS *Wachusett.*

CSS **Alabama,** single-screw sloop of war, whose career also started in August, 1862, was still ranging the high seas on a history-making cruise under daring Captain **Raphael Semmes** as the year drew to a close.

Total War, 1864

1864, March 9. Grant General in Chief. Already partly choked by the constantly increasing pressure of naval blockade, the South now faced dismemberment by a gigantic coordinated turning movement planned by Grant. In the East, Meade's Army of the Potomac (under Grant's immediate supervision) would engage the Army of Northern Virginia while the western armies, under Sherman, swept into the deep South. Grant immediately prepared to bring the war to the speediest possible conclusion. His order (April 17) ending prisoner exchange was a severe blow to Southern manpower capability. Lincoln, realizing that at last he had found a general who could translate political objectives into vigorous, effective military strategy, wrote Grant: "The particulars of your plan I neither know nor seek to know . . . I wish not to obtrude any constraints or restraints upon you."

War in the East, 1864

1864, February 20. Battle of Olustee. In Florida, Confederate General **Joseph Finegan,** with 5,200 men, defeated an invading Union force of equal strength under Brigadier General **Truman Seymour.**

1864, February 28–March 2. Kilpatrick-Dahlgren Raid. An ill-conceived dash on Richmond by Major General **Judson Kilpatrick** with 4,500 cavalrymen ended in disaster. Publication of papers allegedly found on the body of Colonel **Ulric Dahlgren,** indicating intention to burn Richmond and assassinate Jefferson Davis and his cabinet, aroused keen Southern resentment. Meade, queried by

Lee under a flag of truce, disclaimed such intentions. The papers were probably forgeries.

WILDERNESS—SPOTSYLVANIA—COLD HARBOR CAMPAIGN

1864, April–May. Grant's Plan. He intended to lead Meade's Army of the Potomac—almost 105,000 strong—into the dense thickets of the Wilderness, seeking Lee's Army of Northern Virginia—about 61,000 men deployed watchfully along the Rapidan-Rappahannock line. Leaving administrative duties to Halleck, his chief of staff in Washington, Grant planned to operate directly against Lee's army "wherever it may be found," seeking its right flank and dislocating it from Richmond. His own line of communications, based on tidewater Virginian ports, would be secured through the assistance of the Union Navy. Far on the Union flanks—to prevent concentration of outlying Confederate forces against the main effort—Butler (from Fortress Monroe) would move up the James toward Richmond, while Major General **Franz Sigel** was to advance southward up the Shenandoah Valley.

1864, May 4. Crossing the Rapidan. Grant began to implement his plan.

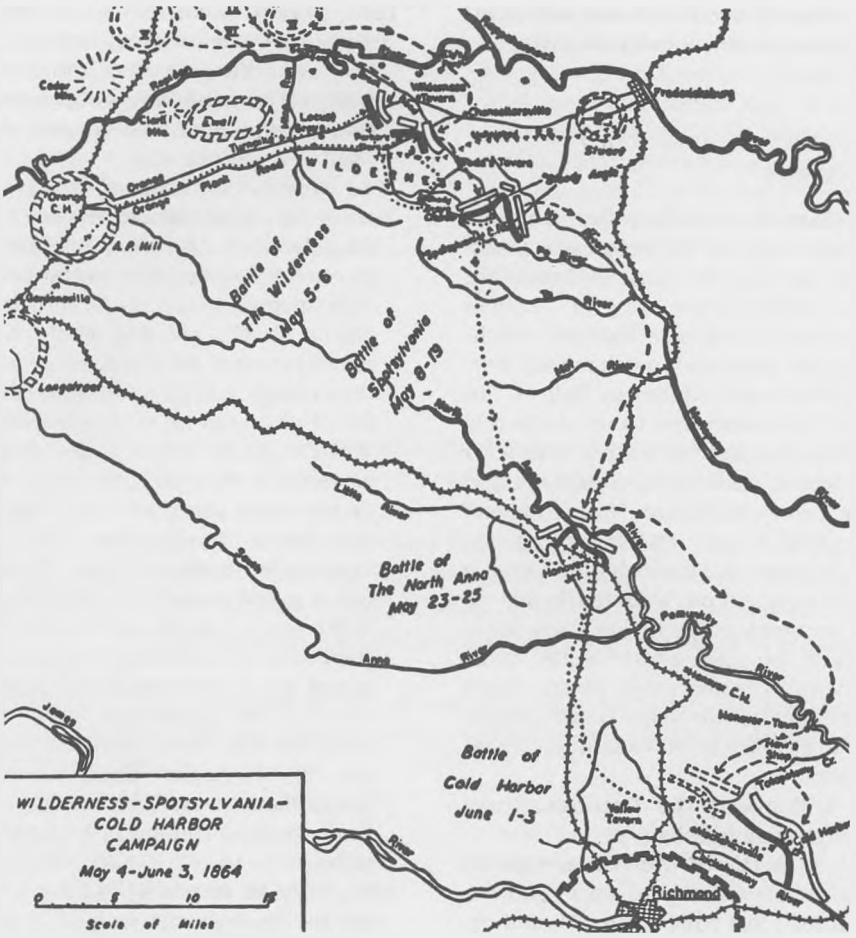
1864, May 5–6. Battle of the Wilderness. As soon as Grant moved, Lee began to concentrate. The armies met while Grant was still entangled in second-growth thickets of the Wilderness, 14 miles long by 10 miles wide. The first day's fighting consisted of 2 separate indecisive engagements between bewildered units. Grant forced a general offensive next morning, to be met by determined counterattacks. Longstreet was seriously wounded near the spot where Jackson had fallen a year previously. By nightfall the confused, furious combat was still undecided; the contenders spent the next day quelling forest fires and attempting to rescue wounded trapped in the blazing brush. The Union Army had lost 2,246 killed, 12,037 wounded, and 3,383 missing. Confederate casualties, unrecorded, are estimated at over 12,000.

1864, May 7. Grant Sticks to His Plan. He slipped around Lee's right and moved south. Lee, correctly estimating the situation, had rushed a covering force to Spotsylvania Court House before the Union advance elements arrived at dawn next day.

1864, May 8–18. Battle of Spotsylvania. Now on more maneuverable terrain, both armies struggled for 5 days (May 8–12) in a series of piecemeal engagements, while Lee's position built up into an immense V, with its apex—the "Mule Shoe"—pointing north. A promising envelopment of the Confederate left, by Hancock's corps, was unaccountably aborted in favor of an assault on the Confederate center by Warren's corps. This was decisively repulsed. At dusk, a well-planned attack by Colonel Emory Upton penetrated the "Mule Shoe," but was forced to withdraw when supporting troops failed to advance (May 10). After a day's lull, a grand assault was made by Hancock's entire corps. Initially successful, Hancock was stopped by a Confederate counterattack. Stalemated, the 2 armies battled for hours across the width of the earthworks. Casualties were so great that the "Mule Shoe" became known as the "Bloody Angle." Grant, searching for the hostile flanks, was for 6 more days thwarted by Lee's splendid shifting of his reserves. Union losses were 14,267; Confederate, over 10,000.

1864, May 11. Battle of Yellow Tavern. During the Spotsylvania struggle, Major General **Philip H. Sheridan**'s cavalry corps, 10,000 strong, raided south toward Richmond. At Yellow Tavern, on the outskirts of the city's fortifications, he met Stuart, with 4,500 sabers, in pitched battle. The Confederate horsemen were driven from the field and Stuart himself was mortally wounded, a body blow to Lee. Sheridan lost some 400 men; Confederate losses—untabulated—were about 1,000.

1864, May 20. Grant Again Moves South. As before, he went around Lee's right, toward Hanover Junction. Lee, recognizing Grant's stubborn intention to cut him off from Richmond, cleverly shifted from Spotsylvania to a strong position on the North Anna River (May 22) one day before Grant arrived.



1864, May 23–31. North Anna and Haw's Shop. Grant probed the position, but found it too strong for a major assault (May 23). Once more he sidestepped eastward around Lee's right flank. A 2-day delay crossing the Pamunkey River (May 27–29) gave Lee time to interpose once again between Grant and Richmond. Sheridan's cavalry engaged with entrenched Southern horsemen near Haw's Shop (May 28), while Lee was taking new positions south of Totopotomy Creek, near Mechanicsville. Again Grant probed and again he shifted to find Lee's right flank—this time to the vicinity of Cold Harbor, close to the Seven Days' battlefields of 1862.

1864, June 3–12. Battle of Cold Harbor. Grant, reinforced to a strength of 100,000 men, determined to split Lee's army, which he believed to be overextended on a 6-mile line (June 2). Delays in troop movements postponed the attack for 24 hours. Lee, feverishly improving his field fortifications, was himself reinforced by 14,000 men, drawn from the successful opponents of Sigel in the Valley and Butler on the James (see p. 979). Grant's assaults were snubbed by confident, veteran de-

fenders in a well-fortified position, strong in artillery. After losing nearly 7,000 men in less than an hour, Grant called off the attack. The defenders suffered fewer than 1,500 casualties. Other Union probes were also beaten back. Over all losses in the 10-day battle: Union, 13,078; Confederate, approximately 3,000.

FAILURES OF BUTLER AND SIGEL

1864, May 5–16. Bermuda Hundred. Butler, with the Army of the James, 30,000 strong, moved (May 4) from Fortress Monroe upriver by boat. Charged with the occupation of City Point as preliminary to his final objective—Richmond (in coordination with Grant's advance)—Butler instead landed at Bermuda Hundred. His timid and vacillating movements now did little more than stimulate the close-in defense of Richmond.

1864, May 15. Battle of Drewry's Bluff. Cleverly defeated by Beauregard, Butler was thrown back to his Bermuda Hundred position, where he remained corked up until Grant advanced south of the James.

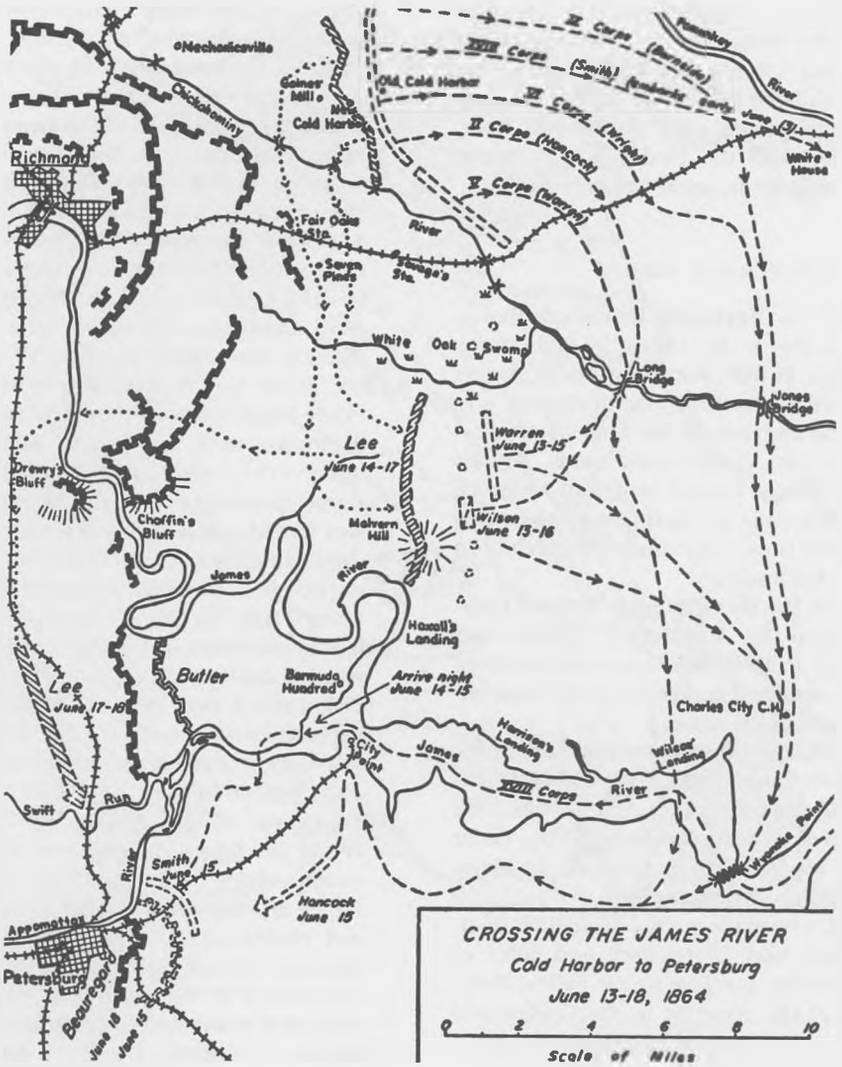
1864, May 15. Battle of New Market. In the Shenandoah Valley, Sigel, with 10,000 Union troops, had started south in coordination with Grant's drive (May 4). Advancing from Cedar Creek, he was attacked by Confederate Major General **John Breckenridge,** with 5,000 men. Sigel, who made use of only half his original strength, was driven back and failed to maintain further pressure in the Valley. Noteworthy was the presence in the Confederate line of the cadet corps of Virginia Military Institute.

FROM COLD HARBOR TO PETERSBURG

1864, June 11–12. Battle of Trevilian Station. Grant, determination unshaken, prepared to cross the James River, again circling Lee's right. As a diversion, Sheridan's cavalry raided westward toward Charlottesville with the mission of uniting with old General **David Hunter,** who had replaced Sigel and had pushed up the Valley to Staunton after a successful engagement at nearby **Piedmont** (June 5). The combined force would then drive southeast to meet Grant. Lee matched the threats by sending **Wade Hampton** with 2 cavalry divisions after Sheridan and transferring Early's corps to the Valley to check Hunter. The opposing cavalry forces met (June 11) at **Trevilian Station.** After a confused 2-day conflict, Sheridan withdrew. Hunter, menaced by the arrival of Early, began withdrawal westward across the Alleghenies after some skirmishing near Lynchburg (June 17–18).

1864, June 13–18. Crossing of the James. While Warren's V Corps and Wilson's cavalry demonstrated as if to attack Richmond, the Army of the Potomac faded south from its Cold Harbor positions to the James River. One corps was ferried across by naval transport, another shipped to Bermuda Hundred; but the bulk of the troops crossed on a pontoon bridge erected (June 14) by the Union engineers in 8 hours, a feat unsurpassed in military engineering. Lee was still deployed in expectation of a full-scale Union attack over the old Seven Days' battlefields when the last of the Army of the Potomac had passed south of the James in one of the great feats of the war.

1864, June 15–18. Battle of Petersburg. While the James crossing was in full swing, Grant ordered Butler, with his Army of the James at Bermuda Hundred to capture fortified Petersburg, 8 miles away and—at the moment—scantily garrisoned. Butler and his subordinate **W. F. Smith** botched the job in 2 piecemeal attempts, while Beauregard, Confederate commander south of the Richmond defenses, rushed all available reinforcements. Grant, arriving on the scene, ordered a major attack as the remainder of the Army of the Potomac began coming up. Meanwhile Lee, finally realizing that Grant had crossed the James, hurried down. Grant, attacking with 65,000 men (June 18), was stopped by 40,000 veterans manning fortified lines. The siege of Petersburg began. This 3-day conflict cost the Union 8,150 casualties. Confederate losses totaled 4,752.



EARLY'S VALLEY CAMPAIGN

1864, July 2. Early Crosses the Potomac. Driving remaining Union forces before him from Winchester to the Potomac, Early's II Corps—Jackson's old command, some 13,000 strong—invaded Maryland; he levied from Hagerstown $20,000, from Frederick $200,000.

1864, July 9. Battle of the Monocacy. Early then struck toward terrified Washington, sweeping out of his way Major General **Lew Wallace**'s extemporized force of 6,000 on the Monocacy River. While Grant hurried the VI Corps up from the Richmond-Petersburg area to protect Washington, Early reached Fort Stevens, inside the District line (July 11).

1864, July 11–12. Action in Washington's

Outskirts (Battle of Fort Stevens). The next day elements of the VI Corps arrived, reinforcing the ill-assorted units of the XIX Corps, the normal garrison of the city. Early, after a demonstration, hurriedly retreated, leaving 400 wounded behind him, but carrying his cash booty safely back up the Valley. Procrastinating and contradictory orders from Washington prevented any coordinated pursuit.

1864, July 23–30. Early Invades Again. This time he smashed Major General **George Crook**'s Army of West Virginia aside at **Kernstown** and **Winchester** (July 23–24), then he lunged as far as Chambersburg, which he burned (after the town refused to pay $100,000 in gold) as reparation for the burning of Virginia Military Institute by Hunter.

1864, August 7. Sheridan's Army of the Shenandoah. Grant, realizing that so long as a Confederate army stood in the Valley the capital was unsafe, secretly ordered the VI and XIX Corps (48,000) to leave the defenses of Washington and to concentrate near Harpers Ferry, safe from politicians' meddling. He placed Sheridan in command. Sheridan's mission was to destroy Early's command and to "eat out Virginia clean and clear . . . so that crows flying over it for the balance of the season will have to carry their own provender."

1864, September 19. Battle of Opequon Creek (Third Battle of Winchester). Sheridan's 41,000 men began with cautious probings. Early started north with some 19,000 men, meeting Sheridan headlong. After initial Confederate success, the Union cavalry turned Early's left, while Sheridan's personal leadership sparked the main Federal effort. Early, attempting to stand just outside Winchester, was thrown back to Fisher's Hill, 12 miles south. Union losses were 5,000; Confederate, 4,600.

1864, September 22. Battle of Fisher's Hill. Sheridan assaulted the Southern position in frontal attack, while his cavalry smashed in Early's left. The Confederates were driven back to Waynesboro; they lost about 1,250 men; Union casualties were negligible.

1864, September–October. Devastation in the Valley. Sheridan moved back down the Valley, systematically turning it into a vale of desolation. Confederate guerillas on his flanks were extremely annoying, but neither they nor Early's troops, hanging on the Union rear, had any effectual result. By mid-October the 31,000-man Army of the Shenandoah, its work completed, bivouacked along Cedar Creek, 20 miles south of Winchester, Sheridan left his command for a conference in Washington about the future disposition of his troops.

1864, October 19. Battle of Cedar Creek. Early, reinforced to 18,400-man strength, sneaked his main effort through the Massanutten Mountain nose to surprise the Federal left and rear at dawn. His cavalry at the same time fell on both Union flanks, and his massed artillery sprayed the front. The daring move was almost successful. The Union VIII Corps stampeded (and would not be rallied for 48 hours). Major General **H. G. Wright,** commanding in Sheridan's absence, fought the XIX and VI Corps in 3 successive delaying positions. By noon, the Union army was defeated, it seemed, but Sheridan, returning from Washington, galloped up the pike from Winchester, "twenty miles away." He rallied his men in an extraordinary display of personal leadership. Regrouping on the battlefield, Sheridan's counterattack drove Early all the way back to New Market. Union casualties were some 5,600. Confederate losses were only 2,900, but the back of Southern resistance in the Shenandoah Valley had been broken. Early's effort, however, had prolonged the war in the East for some 6 months. Most of his troops now returned to Lee at Petersburg.

1865, March 2. Battle of Waynesboro. Early, with but a shadow of his command—some 1,000-odd men—was overrun by Major General **George A. Custer**'s cavalry.

Siege of Petersburg—Phase One, 1864

1864, June 19–December 31. Operations South of Petersburg. Grant immediately began to move against the railroads south of Petersburg to isolate Lee from his sources of supply. Operations dragged on through the rest

of the year, combining trench warfare with spectacular sorties and maneuvers as Grant slowly extended his partial encirclement of the Richmond-Petersburg complex.

1864, June 22–23. Weldon R.R., Burke's Station, Ream's Station. A Union infantry attack under Generals **D. B. Birney** and H. G. Wright from the Jerusalem Plank Road toward Globe Tavern on the Weldon R.R. was combined with a longer-range cavalry raid of Generals **J. H. Wilson** and **A. V. Kautz** to Burke's Station, 15 miles farther west. The infantry were thrown back by A. P. Hill's counterattack, while the Union cavalrymen, initially successful, were severely handled and barely escaped capture as they returned by way of Ream's Station.

1864, July 30. The Petersburg Mine (Battle of the Crater). A cleverly devised Union mining operation ended with the explosion of 4 tons of gunpowder under the Petersburg defense systems. The blast—a complete surprise—ripped a great crater, through which Burnside's IX Corps was to assault. Shockingly mismanaged, the assaulting troops gathered in the crater without competent leadership. The rallying defenders poured cannon and rifle fire into the milling mass and sealed the break. This operation was one of the great tragic fiascos of the war, comparable to Burnside's previous fiasco at Fredericksburg. (In fairness to Burnside, last minute changes to the plan, dictated by Grant, had created some of the problems.) Union casualties were 3,793; Confederate (including the victims of the blast), 1,182.

1864, August 14–20. Deep Bottom. To keep the Confederates off balance, Grant tested the Richmond defenses north of the James. Lee shifted troops from Petersburg to meet the threat. Six days of hammering along Bailey's Creek cost the Union 2,900 men. Confederate losses are not recorded.

1864, August 18–21. Globe Tavern. Grant now struck southwest of Petersburg again, overrunning the Weldon R.R., despite A. P. Hill's bitter counterattack. Union losses were 4,455, against Confederate casualties of 1,619, but a vital supply line had been cut.

1864, August 25. Ream's Station. An extemporized Southern railhead farther south was cut off by a Union infantry-artillery force under Hancock. Lee's immediate reaction was a counterattack by Major General Wade Hampton, surprising the Union force as it was wrecking the line. Hancock, rallying, threw him back and completed destruction of a long stretch of railroad.

1864, September 29–30. Chaffin's Bluff. Covered by a demonstration on the southern end of the investment, 2 Union corps attacked the Richmond sector. Lee withdrew forces from Petersburg to counterattack, but Fort Harrison, at the Bluff, fell into Union hands.

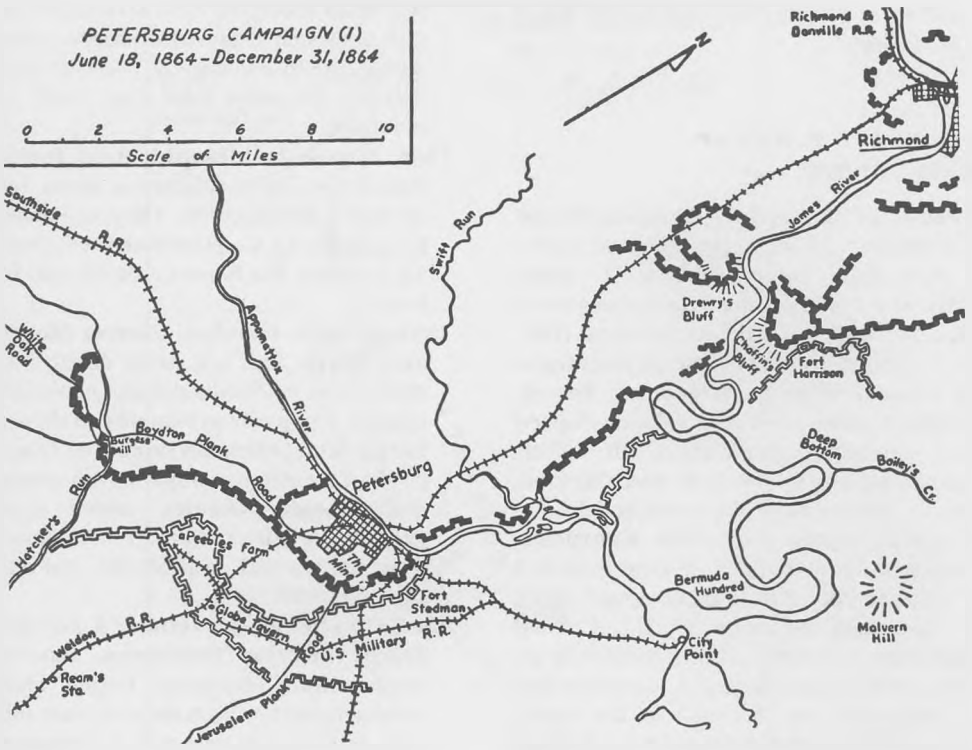
1864, September 30. Peeble's Farm. A simultaneous attack southwest of Petersburg inched the Union investment a bit farther east, but could not penetrate the main defensive position.

1864, October 27–28. Boydton Plank Road. Grant's full-scale blow to cut the Southside R.R., last Confederate rail link, was repulsed by Hill. Butler's diversionary demonstration east of Richmond was rebuffed by convalescing Longstreet. Further mobile operations ceased as winter closed down, and siege became an artillery duel while the semistarved military and civilian population of the Richmond-Petersburg area tightened their belts. Behind the entrenchments of the well-fed, well-housed besiegers, a military railroad belt line, 21 miles long, linked every inch of the front to Grant's huge base at City Point.

War in the West, 1864

WEST OF THE MISSISSIPPI

1864, March–May. Red River Expedition. Before Grant became General in Chief, Halleck (with Lincoln's approval) ordered General Banks and Admiral Porter to undertake an overland invasion of Texas via the Red River. One objective was to discourage the French (then controlling Mexico; see p. 000) from any intervention through Texas. Porter managed to get 12 of his Mississippi gunboats above the



rapids at Alexandria, La., and headed up the winding stream toward Shreveport, while Banks with 30,000 men marched along the river bank. At Grand Ecore, Banks struck across country toward Shreveport. Ambushed at **Sabine Cross Roads** (April 8) by Generals **Richard Taylor** and Edmund Kirby Smith, Banks retreated hastily to Alexandria, while part of his command delayed Confederate pursuit at **Pleasant Hill** (April 9). Banks lost 3,500 out of 25,000 men engaged in both actions; Southern losses were 2,000 out of 14,300. Porter, abandoned by Banks, steamed back on a falling river, sniped at by Confederate cavalry and artillery. At Alexandria he discovered the water over the rapids was now too low to float his vessels. Banks, bluntly ordered by Grant to remain at Alexandria until Porter got out, assisted in constructing a flume and dam through which the Union gunboats shot to safety. Alexandria was then evacuated (May 14).

1864, September–October. Price in Missouri. During 1863 and 1864, Confederate Major General **Sterling Price** had been operating in Arkansas against Union Major General **Frederick Steele** with mixed success. He now decided to invade Missouri. Crossing the Arkansas River between Little Rock and Fort Smith (September 1), Price with 13,000 veterans and 20 guns headed for St. Louis. Finding that city unexpectedly reinforced, he then struck west toward Kansas City. He defeated Major General **James G. Blunt** at **Lexington** (October 19). Continuing west, Price again drove Blunt back at **Independence** (October 22). But Blunt's stubborn resistance permitted Union troops, pursuing from St. Louis, to reach the scene.

1864, October 23. Battle of Westport. Still engaged with Blunt along the Missouri-Kansas line, Price was struck in the rear by Pleasanton's cavalry and defeated. He was driven back

into Arkansas, ending major operations west of the Mississippi.

OPERATIONS OF N. B. FORREST, FEBRUARY–OCTOBER, 1864

1864, February 22. Battle of Okolona. Forrest had a handful of Confederate troops in northern Mississippi. Union General **W. Sooy Smith,** with 7,000 cavalry, two to three times Forrest's strength, moved from Memphis (February 11) into northern Mississippi, planning to meet General Sherman at Meridian. Forrest, entrenched amid wooded swamps, stopped Smith, who withdrew (February 20). Forrest pursued, catching the Federals near Okolona, drubbing them in an all-day running fight.

1864, March–April. Raid into Kentucky. Sweeping as far as Paducah, Forrest assaulted and captured **Fort Pillow** on his return (April 12). That black soldiers of the U.S. Colored Troops there were killed after surrendering remains a matter of hot dispute. It is possible that the "massacre" was the result of the frenzy typical of the aftermath of assaults on fortified positions throughout history. However, it is also likely, and inexcusable, that at least a part of this killing frenzy was a result of Confederate hatred stemming from the Union use of black troops.

1864, June 10. Battle of Brice's Cross Roads. Union Major General Samuel D. Sturgis, under orders from Sherman to find and defeat Forrest, advanced from Memphis with 3,400 cavalry, 2,000 infantry, 12 guns, and a train of 250 wagons. Forrest, who had about 3,000 men, held the Union troops with a thin skirmish line, undertook a double envelopment, and sent a detachment on a wide envelopment to strike the Union rear. The Northerners were routed, abandoning all their wagons and all but 2 guns; they suffered 617 casualties, in addition to 1,623 captured by Forrest, who lost about 500.

1864, July 14–15. Battle of Tupelo. General **A. J. Smith,** with 14,000 troops, undertook another expedition from Memphis against Forrest, who had been reinforced to 10,000. Forrest again seized the tactical offensive in a bitterly contested 2-day drawn battle, but was repulsed. Smith withdrew, having lost 674 men; Forrest's casualties were over 1,300; he was wounded.

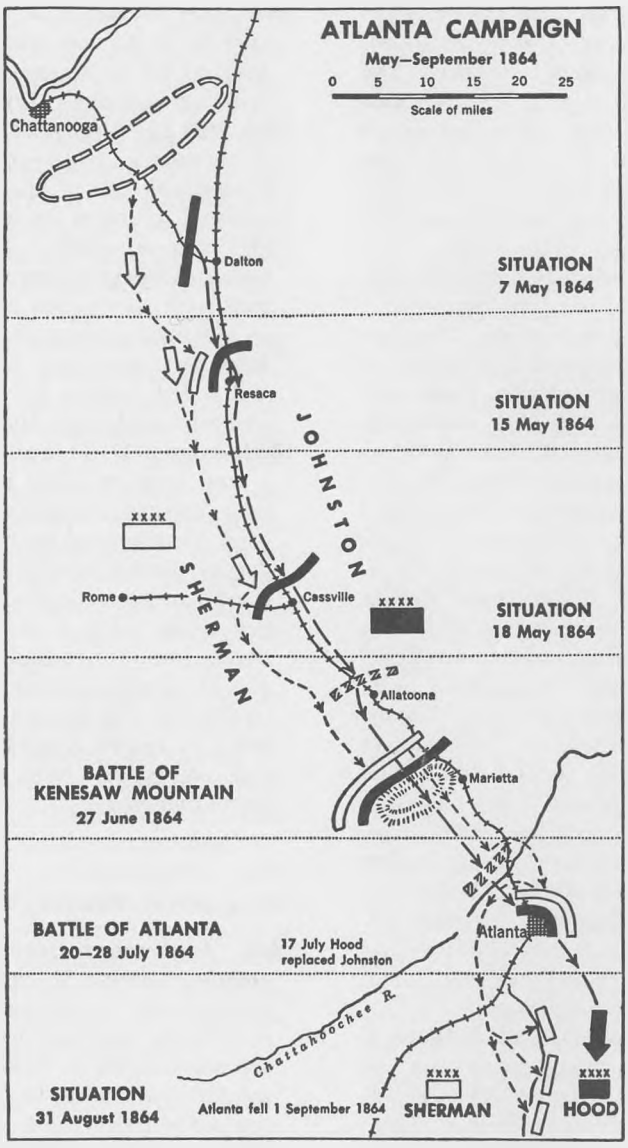
1864, August 21. Memphis Raid. Forrest penetrated the Union defenses at dawn, reaching the Union headquarters. The commander, Major General **C. C. Washburn,** escaped in his nightclothes, but Forrest rode off with his uniform.

1864, August–October. Forrest Moves East and North. This was partly due to increased concentration of Federal troops in western Mississippi, and partly in response to the crisis resulting from Sherman's capture of Atlanta (see p. 986). Forrest, in company with young General **Joseph Wheeler,** raided vigorously against Sherman's line of communications from Atlanta back to Nashville, and thence to the Ohio River.

1864, October 29–November 4. Naval Operations on the Tennessee. Raiding into northwestern Tennessee, Forrest ambushed Federal naval forces on the river near Johnsonville, capturing a gunboat and 5 transports. His troops manned these river craft for several days, but abandoned them after the Union Navy concentrated overwhelming force on the lower Tennessee. Forrest was now ordered to go east again to join Hood in the Franklin-Nashville Campaign, in which he again distinguished himself (see p. 987).

ATLANTA CAMPAIGN, MAY–AUGUST, 1864

1864, May 5. Advance into Georgia. Sherman's army group left Chattanooga: Thomas' Army of the Cumberland, 61,000 strong; **James B. McPherson's** Army of the Tennessee, 24,500 men; and **John M. Schofield's** Army of the Ohio, mustering 13,500. In front of Sherman was Johnston's Army of Tennessee, 60,000 strong. In his rear, from the Mississippi to the Appalachians, Confederate cavalrymen **John H. Morgan** and Nathan B. Forrest roamed, hampering communications and be-



deviling Union garrisons. Johnston, outnumbered, skillfully opposed Sherman in a series of delaying positions. Sherman, equally skillful, outmaneuvered him by turning movements at **Dalton** (May 9), **Resaca** (May 15), and **Cassville** (May 19). Each time the maneuver was the same: a holding force in front and a wide Union turning movement around the Confederate left. Then Sherman drove due south, bypassing Johnston's position at **Allatoona** (May 24). Johnston, retiring to Marietta, placed himself directly in Sherman's path.

1864, June 27. Battle of Kenesaw Mountain. After a series of indecisive combats near **Dallas**

and **New Hope Church** (May 25–28), Sherman made a frontal assault on Kenesaw Mountain, the key to Johnston's positions. The attacks were repulsed at all points, Sherman losing some 3,000 men, while Johnston's losses were only 800. Once again Sherman (July 2) turned his opponent's left, and Johnston (July 4) took up a powerful entrenched line north of the Chattahoochie River.

1864, July 9. Crossing of the Chattahoochie. Again Sherman turned the Confederate position. Johnston fell back on Peachtree Creek, just north of Atlanta, and prepared for a counterattack. He was summarily relieved from command (July 17) as an ungrateful administration's reward for a really remarkable delaying campaign against far superior forces. For 2½ months he had, with a minimum of losses, held Sherman to an average advance of 1 mile per day. Impulsive **John B. Hood** succeeded him.

1864, July 20. Battle of Peachtree Creek. Johnston had already foreseen that Sherman's advance on Atlanta, on a 10-mile front, offered possibility for a successful counterstroke. Hood seized the opportunity, falling on Thomas' army. Although surprised, the Union forces were alert and the attack was repulsed. Some 20,000 men on each side were involved. Southern casualties were about 2,500; Union losses were 1,600. The Union advance continued (July 21), forcing Hood to withdraw into the Atlanta defenses. Sherman, hoping to follow his foe into the city, sent his left-flank cavalry division eastward to cut the railway. Hood, however, had recoiled to strike again.

1864, July 22. Battle of Atlanta. William J. Hardee's corps—the elite of Hood's army—together with **Joseph Wheeler**'s cavalry division hit the open left flank of McPherson's army. Surprise was complete, but the veteran Federal troops reformed, despite the death of McPherson in the melee. The assault was repulsed with Confederate losses of some 8,000 men. Federal casualties were 3,722. Sherman—his strength insufficient for a siege—determined to swing entirely around to the westerly side of Atlanta and operate against the railroads. Sending most of his cavalry raiding south (July 27), he started the move next day.

1864, July 28. Battle of Ezra Church. An assault by Hood was repelled—mainly by the Army of the Tennessee—with 4,300 southern casualties against 632 Union losses.

1864, July 28–August 22. Cavalry Raids. Part of Sherman's cavalry—6,000 strong, moving around both sides of Atlanta—failed in its dual mission: cutting of the railroad and liberation of Union prisoners at Andersonville. Major General **George Stoneman** and some 2,000 men were surrounded and captured (August 4). Meanwhile, Sherman's strength built up on Atlanta's western face. Another Union cavalry raid ended (August 22) in failure to cut rail communication with Atlanta.

1864, August 27–31. Fall of Atlanta. Leaving 1 army corps to guard his own communications, Sherman swung his 3 armies forward in a great wheel toward the railroad lines south of the city, driving Wheeler's cavalry before them. Hood sent Major General **W. J. Hardee,** with half of his army, to hold the railroads, but Hardee was thrown back at **Jonesboro** (August 31). Hood's communications line was cut. Destroying ammunition and supply stores, Hood evacuated Atlanta that night, moving east and south. Next morning Sherman's troops marched in.

THE MARCH TO THE SEA

1864, September–October. Maneuvering around Atlanta. Sherman, making Atlanta a military base, found further movement hampered by the need to protect his 400-mile line of communications to Nashville. In addition to the daring and successful depredations of Forrest and Wheeler, Hood moved west and north with his entire army (October 1) to attack these communications, hoping to force Sherman's withdrawal. After a vain chase of Hood through **Allatoona** (October 5) as far as Baylesville, Ala. (October 22), Sherman came to the conclusion that further efforts to get to grips with the elusive Confederates would nullify Grant's giant pincers concept.

1864, November 15–December 8. March from Atlanta. Sherman solved the problem—

with the somewhat reluctant approval of Grant—by sending Thomas' Army of the Cumberland back to Nashville and Chattanooga, while he deliberately abandoned his line of communications and marched eastward from Atlanta toward Savannah with 68,000 veterans. With him were 2,500 wagons and 600 ambulances carrying supplies (mostly ammunition); otherwise, his men lived off the country. With practically no opposition, he cut a 50-mile-wide swath of "scorched earth" to the sea, 300 miles away. He was deliberately making "Georgia howl" as he devastated crops and the war-supporting economy of central Georgia; noncombatants were scrupulously respected, although depradations by the so-called "bummers" (stragglers, deserters, and other outlaws) following in his wake were less scrupulously conducted. He ignored Hood's efforts to distract him by a full-scale invasion of Tennessee (see below). To his front, Beauregard, assisted by Hardee, endeavored to organize effective resistance to protect Savannah and Charleston.

1864, December 9–21. Operations against Savannah. Arriving in eastern Georgia, Sherman discovered that Hardee held fortified Savannah with 15,000 men. Sherman stormed **Fort McAllister** at the mouth of the Ogeechee River, 15 miles from Savannah (December 13). Then, establishing communications with Union naval forces, he began an investment of the city. With his lines of communication about to be cut, Hardee evacuated, and Sherman moved in at once (December 21), presenting the city (in a ship-borne and telegraph message) as "a Christmas gift" to Lincoln.

FRANKLIN AND NASHVILLE CAMPAIGN

1864, November 14. Hood Invades Tennessee. Reinforced by Forrest's cavalry, Hood crossed the Tennessee River and moved rapidly north toward Nashville with 39,000 veteran troops. Thomas, building an extemporized army at Nashville about his own hard core of veterans, did not wish to withdraw garrisons from key points in Tennessee; he sparred for time. Major General John M. Schofield, with 2 corps and Wilson's cavalry division—about 34,000 men—was directed to delay the Southern advance. Schofield, slipping away from Hood's attempts to box him in at **Columbia** (November 26–27), and fighting his way through Confederate enveloping forces in a night battle at **Spring Hill** (November 29), stood in previously prepared defenses at Franklin, 15 miles south of Nashville.

1864, November 30. Battle of Franklin. Hood, impetuous, attacked piecemeal, with but two-thirds of his army. He was thrown back with shocking casualties—6,300 out of some 27,000 men actually engaged. Included in the losses were 12 general officers, including Major General Patrick Cleburne, the Irish-born "Stonewall of the West." This loss of general officers was unequalled in any other battle of the war. Schofield out of 32,000 men, lost 2,300. Having successfully performed his mission, Schofield retired that night to Nashville.

1864, December 15–16. Battle of Nashville. Hood stood before the Nashville defenses from December 2, while Washington fumed at the seeming procrastination of Thomas, whose numerical strength was superior. But methodical Thomas, busy training his largely recruit army—particularly Wilson's new cavalry corps—would not be budged. Finally he struck, shattering Hood's left flank, exposed because Hood had sent Forrest away raiding toward Murfreesboro. Attempting to continue the fight next day, Hood found Thomas enveloping both his flanks. Wilson's cavalry, striking behind the Confederate left, delivered the final blow. Federal losses, out of 49,773 men engaged, were 3,061; Confederate, 5,350 out of 31,000 on the field, but Hood's army had become a fleeing rabble.

COMMENT. *This was the most decisive tactical victory gained by either side in a major engagement in the war.*

Coastal and High Seas Operations, 1864–1865

1864, February 17. Sinking of USS *Housatonic.* Submarine warfare claimed its first victim

when CSS *H. L. Hunley,* a real submarine boat, torpedoed and sank the steam sloop *Housatonic* of the Federal squadron blockading Charleston Harbor. The *Hunley* sank with her prey.

1864, June 19. *Kearsarge* vs. *Alabama.* Semmes's Confederate sea raider was sunk by U. S. S. *Kearsarge,* off Cherbourg Harbor, after a 1-hour battle. The *Alabama* had just completed a 75,000-mile cruise, practically around the world, in 23 months. She had sunk 1 Federal warship and captured 62 prizes. While the ships were theoretically of nearly equal strength, the *Alabama* was a tired ship and her gun crews lacked practice. The *Kearsarge,* kept in peak condition by Captain **John A. Winslow,** riddled her opponent. Three men only of the *Kearsarge*'s complement were wounded. Forty-odd of sinking *Alabama*'s crew were casualties; 70 were rescued by the *Kearsarge.* The remaining 42, including Captain Semmes, were rescued by a British yacht and avoided capture.

1864, August 5. Battle of Mobile Bay. Lashed to the rigging of his flagship *Hartford,* Admiral Farragut, with 4 ironclad monitors and 14 wooden warships, ran by the cross fire of Mobile Harbor's heavily gunned defenses. When his leading monitor, *Tecumseh,* was blown up by a mine, stopping the fleet under the guns of **Fort Morgan,** Farragut turned his own ship into the minefield (his "Damn the torpedoes!" has gone down in naval history) to clear the way. The other mines failed to go off and the Union ships passed safely into the bay. There Confederate Admiral **Franklin Buchanan** in the ironclad ram *Tennessee* attempted to take on the entire Union squadron, but was finally pounded into submission. Farragut's victory practically ended blockade running in the Gulf of Mexico.

1864, October 27. Destruction of CSS *Albemarle.* This powerful ironclad ram, constructed up the Roanoke River, had dominated the North Carolina sounds for several months. She took a major part in a successful joint Confederate Army-Navy assault on the Union blockade base at **Plymouth,** N.C., sinking 1 Union gunboat, driving off another, and supporting the land attack (April 18). Later the *Albemarle* dispersed a squadron of 7 Union gunboats (May 5). She was a menace to all Union coastwise operations, since her shallow draft enabled her to evade large warships and she outgunned Union small craft. Lieutenant **William B. Cushing,** U.S.N., in a specially designed launch carrying a powerful torpedo, daringly attacked and sank the *Albemarle* at Plymouth.

1864, December. First Expedition against Fort Fisher. Wilmington, N.C., last remaining Atlantic blockade-runners' haven, had become the overseas supply link of the Army of Northern Virginia. With the *Albemarle* disposed of, Admiral Porter moved against Wilmington's elaborate defenses. Two divisions of Butler's army, under Butler's personal command, took part. An attempt to destroy the principal fortification—Fort Fisher—by exploding a powder ship under its walls failed (December 23).

1864, December 23–25. First Attack on Fort Fisher. Porter's squadron opened a bombardment supposed to cover a landing by Butler's command of 6,500 men, 2,000 of whom went ashore Christmas Day. After a brief demonstration, Butler hurriedly reembarked and sailed back to Fort Monroe. Porter was furious. Grant sacked Butler and provided Porter with able and cooperative Major General **Alfred H. Terry.**

1865, January 13–15. Assault of Fort Fisher. Terry's force, now augmented to 8,000, landed north of the fort (January 13) and prepared to attack in coordination with an intensive naval bombardment. While a navy-marine landing force assaulting the sea face was repulsed, Terry's troops swept over the outer works, covered by naval gunfire. Colonel **William Lamb** and his remaining 2,000 men surrendered after 7 hours of bitter fighting. Union losses were 1,341; Confederate, 500-odd. With Fort Fisher's fall, the last sea gate of the Confederacy closed. Richmond and the Army of Northern Virginia were doomed.

Closing Campaigns, 1865

The year opened with Grant still constricting Lee in the Petersburg-Richmond sector, while Sherman started north through the Carolinas from Savannah.

1865, January 31. Abortive Peace Conference. President Lincoln met Confederate peace commissioners, led by Vice President **Alexander H. Stephens,** on a Union warship in Hampton Roads. Lincoln offered complete amnesty if the South rejoined the Union and abolished slavery. The Confederates insisted on independence. The conference failed.

1865, February 3. Lee General in Chief. With the Union pincer jaws closing around the Confederacy, Jefferson Davis (far too late) appointed Lee to supreme command of the Confederate Army. Lee at once restored Johnston to command scattered southern elements in the Carolinas.

Campaign in the Carolinas

1865, February 17. Burning of Columbia, S.C. The city was almost entirely destroyed the night that Sherman's troops marched in, probably ignited by cotton stores fired by the departing defenders, but the South blamed Sherman. That same day Hardee abandoned Charleston. (His troops, like those of Bragg and Beauregard, were now placed under Johnston's new command.) Sherman, at Fayetteville, learning of Johnston's return, cut loose from the seacoast (March 15) and marched on Goldsboro to break up the Confederate concentration.

1865, February 22. Fall of Wilmington. Grant, maintaining unremitting pressure against the collapsing Confederacy and exploiting Union command of the sea, sent Schofield, with troops from Thomas' army, to land at Fort Fisher to operate against Bragg near Wilmington. Driving the Confederates from the city, Schofield began to advance into central North Carolina to join Sherman.

1865, March 19–20. Battle of Bentonville. Sherman, moving north with his 60,000 men on a broad front, was surprised by Johnston, who had only 27,000, but who hoped to defeat the Union left wing before Sherman could concentrate. Sherman's left was driven in, as planned, but Johnston was unable to smash the Union veterans or to fully exploit the success. Sherman concentrated early the next day, and Johnston withdrew. Union casualties were 1,646, Confederate losses probably twice as great. Sherman, continuing the advance, reached Goldsboro (March 23), where he was joined by Schofield. Sherman, whose troops had marched and fought for 425 miles since leaving Savannah, decided to rest for 3 weeks, planning to join Grant near Petersburg in mid-April after muddy roads had dried somewhat.

Selma Campaign

1865, March 18. Advance into Alabama. Wilson's cavalry corps—13,500 strong—was sent by Thomas into Alabama to destroy the important Confederate supply depot at Selma. Crossing the Tennessee River at Eastport, Ala., Wilson's swift-moving expedition brushed Forrest's 3,000 men aside from 3 delaying positions. Forrest fell back on Selma, a fortified city ringed by bastioned earthworks. Here he stood, reinforced to a strength of 7,000 by local militia.

1865, April 2. Battle of Selma. Wilson's cavalry assaulted the works. Fighting on foot, they clambered over the earthworks, gained a toehold, and won the town. Forrest, with a few of his men, escaped. Union casualties were some 400; Confederate, including prisoners, were about 4,000. Wilson, after destroying foundries, ammunition dumps, and stores, crossed the Alabama River (April 10). When hostilities ceased, he had already swept through Montgomery into Georgia as far as Macon. His troopers later captured Jefferson Davis (May 10).

Petersburg Campaign (Conclusion)

1865, January–March. Grant Increases the Pressure. While supervising the hammer blows his subordinates were dealing around the periphery of the dwindling Confederacy, Grant maintained about 90,000 men in the Armies of the Potomac and of the James around the defenses of Petersburg and Richmond. Lee, who was able to scrape together about 60,000 poorly fed, poorly equipped soldiers, held a front of 37 miles of entrenchments. Their continuing high quality, however, was demonstrated when A. P. Hill threw back still another Union probe on the Southern extreme right flank at **Hatcher's Run** (February 5–7). But it was obvious to Lee that he could not stretch his overextended forces further.

1865, March 25. Battle of Fort Stedman. Lee, in a desperate gamble to break Grant's grip, threw nearly half his mobile force in a surprise assault on the Union right opposite Petersburg. He hoped that this would force Grant to so weaken his left that the Army of Northern Virginia could slip out, west of Petersburg, to join Johnston in North Carolina. Major General **John B. Gordon** conducted the assault. The fort was taken, but Union veterans promptly rallied and regained the position after a desperate 4-hour battle, in which they also captured several Confederate advanced posts. Lee's situation was now worse than ever. Confederate losses were about 4,000, Union losses half as great.

1865, March 26. Arrival of Sheridan. Next day Sheridan—his work in the valley completed—joined Grant with his cavalry corps and an infantry corps. Grant now had about 122,000 fighting men, Lee less than 60,000. Grant decided to "end the matter."

1865, March 29–31. Battle of Dinwiddie Courthouse and White Oak Road. While 2 Union infantry corps struck the Confederate right, Sheridan's cavalry corps rode wide to the west to encircle the flank. Lee's brilliant reaction was to encircle the encirclers. Pickett, with 2 divisions and **Fitzhugh Lee**'s cavalry, marched west outside of Sheridan's orbit to attack his left flank at Dinwiddie Courthouse. At the same time A. P. Hill hit the left flank of the Union infantry on White Oak Road. The Union advance was checked, but Sheridan increased his infantry and cavalry pressure against Pickett, who retired to Five Forks and entrenched.

1865, April 1. Battle of Five Forks. Sheridan, with infantry reinforcements, struck Pickett in front and flank with far superior force; the Southern position collapsed in panic, exposing the entire right of the Confederate line. Grant at once ordered a general assault.

1865, April 2. Assault on Petersburg. While Sheridan swept northwest over and behind the vital Southside R.R., 3 Union infantry spearheads broke through Lee's thin lines west of Petersburg. Gallant A. P. Hill was killed trying to rally his men. Only Gordon, at Petersburg itself, was able to hold his positions. Lee rushed Longstreet down from Richmond to bolster Gordon until nightfall. He then commenced an orderly evacuation of the Richmond-Petersburg defenses.

Appomattox Campaign

1865, April 3. Lee's Withdrawal. The Confederates converged on Amelia Courthouse in abominable weather. Lee's desperate plan was to join Johnston south of Danville, where Jefferson Davis had set up a temporary capital. Grant, blocking the move, marched west—south of and parallel to Lee's movement. Both armies were exhausted, but both responded magnificently to the inspiration of their leaders. Sheridan reached Jeetersville just in time to block Lee's planned movement to the southwest (April 5). Lee, in a night march, continued westward. Sheridan's cavalry harassed the retreat incessantly.

1865, April 6–7. Battle of Sayler's (Saylor's) Creek. Anderson's and Ewell's corps took up a delaying position, hoping to check the pursuit long enough to let the Confederate artillery and trains get safely across the Appomattox River. The halt was fatal. Sheridan's cavalry and horse

artillery dashed behind the Confederate position along the creek, while the Union VI Corps pressed frontally. Ewell surrendered his entire corps—barely 4,000 strong—and a third of Anderson's 6,000 was also captured. Lee's strength was now reduced to less than 30,000. Thanks to his foresight, rations were waiting at Farmville for his half-starved men. He resumed the march, pointing for Lynchburg, via Appomattox. Sheridan, realizing Lee's intentions, reached Appomattox as Lee's advanced guard approached Appomattox Courthouse, 2 miles northeast (April 8).

1865, April 9. Battle of Appomattox. Fitzhugh Lee and Gordon, at Lee's orders, attacked the Union cavalry, but the attack was broken off when masses of Union infantry, arriving after an all-night march, deployed for battle. Lee sent a request to Grant for a cease-fire and a conference on terms.

1865, April 9. Lee's Surrender. The leaders met at Appomattox Courthouse, in the home of Wilmer McLean (who had fled from Manassas in 1861 to get out of the path of war). The Army of Northern Virginia, 28,356 strong, was surrendered at 3:45 P.M. To all intents and purposes the war was over.

1865, April 14. Assassination of President Lincoln. Shot by John Wilkes Booth, Lincoln died next day. The outrage curdled Northern sensibilities and interfered with acceptance of Johnston's surrender to Sherman (April 18) until April 26. All other Confederate forces had laid down their arms by May 26.

1865, May 29. Proclamation of Amnesty. President Andrew Johnston's proclamation officially ended the Civil War.

Epilogue

1864–1865. Cruise of the *Shenandoah*. British-built raider CSS. *Shenandoah,* turned over to the Confederate Navy at Funchal, Azores (October 1864), under Commander **James I. Waddell,** ranged the high seas around the Cape of Good Hope to Australia, thence north to the Bering Sea. There Waddell destroyed the U.S. whaling industry, capturing 32 whalers and merchantmen, burning 27, and sending the remainder under cartel, with prisoners, to San Francisco. His last 8 victims were destroyed 7 weeks after Appomattox (June 28). Waddell, learning from a British ship off the California coast (August 2) that the war was over, dismounted his guns and sailed for England via Cape Horn. He arrived in Liverpool and surrendered to British authorities 6 months after the war's end (November 6). The *Shenandoah* was turned over to the U.S.; the crew was offered asylum in England.

1872, August 25. Settlement of the *Alabama* Claims. An international arbitration tribunal (representatives of Italy, Switzerland, Brazil, the U.S., and Great Britain) awarded the U.S. $14.5 million in damages from Great Britain in partial reparation for the depredations of British-built raiders (*Florida, Alabama,* and *Shenandoah*) upon the U.S. merchant marine.

The United States, 1865–1900

Wars with the Indians, 1865–1898

National expansion westward brought about incessant clashes between Indian and white man. Between 1865 and 1898, the Regular Army fought 943 actions in 12 separate campaigns and a number of disconnected bickerings. The official campaign listings are:

1865–1868—Southern Oregon, Idaho, northern California, and Nevada.

1867–1875—Against Comanches, Sioux, and confederated tribes in Kansas, Wyoming, Colorado, Texas, New Mexico, and Indian Territory. (Noteworthy were a series of bitter battles near Fort Phil Kearny in northern Wyoming; Captain **William Fetterman** and 82 other

soldiers were overrun and massacred near here by 2,000 Sioux under **Crazy Horse** and **Red Cloud** [December 21, 1866]; Red Cloud and 1,500 warriors were repulsed by Captain **James Powell** and 31 men in the **"Wagon Box Fight"** [August 2, 1867]).

1870–1871—Against the Apaches in Arizona and New Mexico.

1872–1873—The Modoc War. (Major General E. R. S. Canby was treacherously murdered during preliminary negotiations.)

1873—Against the Apaches in Arizona. (Major General **George Crook** gained special distinction and won the admiration and respect of the Indians.)

1876–1877—Against the Northern Cheyennes and Sioux (see below).

1877—Nez Percé War (see p. 993).

1878—Bannock War.

1878–1879—Against the Northern Cheyennes.

1879—Against the Sheep-eaters, Piutes, and Bannocks.

1885–1886—Against the Apaches in Arizona and New Mexico (principal leaders were Apache chieftain **Geronimo** and U.S. Generals Crook and **Nelson A. Miles**).

1890–1891. Against the Sioux in South Dakota (see p. 993).

All this was guerrilla-type, fast-moving, light-marching warfare against a savage, brave, and crafty enemy. The Plains Indians—Sioux, Cheyennes, and Comanches—were as good light cavalry as the world has seen. The Apache preferred to fight on foot, using his horse as transportation. All could cover ground at an amazing rate of march. Three campaigns are worthy of specific note.

Sioux and Northern Cheyenne War, 1876–1877

1876, February–June. Powder River–Big Horn–Yellowstone Campaign. The refusal of the northern Sioux tribes to go onto their assigned reservations led to the most serious Indian uprising since that of Tecumseh (see p. 870). The uprising was led by Chief Crazy Horse of the Oglala Sioux; a leading instigator was the Prairie Sioux chief and medicine man, **Sitting Bull.** The Sioux were joined by the related Cheyennes. Taking the field with a mounted force of 800 men in bitterly cold weather, Brigadier General George Crook made a long, rapid march through the Big Horn Mountains to mount a surprise attack on Crazy Horse's winter hideout at **Slim Buttes** on the Powder River (March 17). The Indian camp was destroyed and the Sioux scattered, when a panicky subordinate ordered a withdrawal. Crazy Horse rallied his braves and renewed the fight. Seriously outnumbered and short of supplies, Crook was forced to retire. Overall command of the campaign was now entrusted to Major General Alfred H. Terry, who ordered 2 other columns to converge with Crook on the Yellowstone River.

1876, June 17. Battle of the Rosebud. Crook again caught up with Crazy Horse, who had now assembled a force of 4,000–6,000 warriors. Against odds of at least 5-1, Crook fought a bitterly contested drawn battle. The Indians, aware of the convergence of Terry's forces, withdrew; Crook also fell back to refit and reorganize his badly mauled command. Terry, out of communication with Crook and unaware of the Rosebud battle, crossed Crazy Horse's trail. He sent Lieutenant Colonel George A. Custer's 7th Cavalry to pursue and to get south of the Indians, to assure that they would be boxed in between the converging columns.

1876, June 25. Battle of the Little Big Horn. Custer impetuously followed the trail and

caught up with Crazy Horse, confidently waiting battle. Dividing his small command (about 600 men) into 3 columns, Custer led 1 of these into the center of the Indians. He and the entire column were wiped out (212 officers and men); the remainder of the regiment took refuge in nearby hills and despite heavy losses were able to hold out for 2 days until Terry and the main body caught up. Crazy Horse and his jubilant warriors escaped; Terry's entire campaign had been ruined. For several months, despite intensive efforts, the U.S. forces were unable to regain contact with the elusive Indians.

1876, November 25–26. Battle of Crazy Woman Fork. Crook, discovering a large Indian encampment, sent Colonel **Ranald S. Mackenzie,** with 10 troops of cavalry, to destroy it. Mackenzie, in a surprise night attack in subzero weather, accomplished his mission.

1877, January 8. Battle of Wolf Mountains. Colonel Nelson A. Miles, with some 500 infantrymen and 2 light guns mounted in covered wagons, located Crazy Horse's village on a commanding bluff. The surprise shelling of the height by Miles's guns stampeded the Indians and ended the campaign, Crazy Horse surrendering shortly afterward.

Nez Perce War, 1877

1877, June. Defiance of the Nez Percés. Under their young leader, **Chief Joseph** (Thunder-Rolling-Over-the-Mountain), the highly civilized Nez Percés defied government orders to evacuate their rich homeland in the Wallowa Valley, Ore., coveted by greedy whites. Continuing incidents led to the death of 3 whites; a small Army detachment attempted to herd the Nez Percés into a reservation in Idaho. Joseph defeated the white soldiers in **White Bird Canyon** (June 17), then with his entire tribe of 700 people—only 300 warriors—he marched eastward into Idaho and Montana, looking for a new home.

1877, July–August. Battles of the Clearwater and of the Big Hole Basin. After repulsing a pursuing force of soldiers under Brigadier General **Oliver O. Howard** on the Clearwater (July 11), Joseph and his people crossed the Bitterroot Mountains into Montana. In this and other minor engagements, the white soldiers discovered to their surprise that the Nez Percés and their leader fought with the skill and discipline of regular soldiers, while retaining the traditional elusiveness, guile, and stoic courage of Indians. In the Big Hole Basin, Joseph and his people were surprised by the attack of a new white force under Colonel **John Gibbon,** coming unexpectedly from the east. Rallying, in an unparalleled example of Indian discipline, Joseph and his men surrounded and besieged Gibbon's force, withdrawing only when Howard and his men arrived (August 8–11).

1877, August–October. March through Yellowstone and Montana. Joseph now tried to escape to Canada. Eluding or fighting his way past and around more Army forces trying to close in on him, Joseph reached the Bear Paw Mountains, in northern Montana, only 30 miles from the Canadian border. Here, on **Eagle Creek,** after an anabasis of nearly 2,000 miles, he was brought to bay by Generals Nelson A. Miles and Howard. After fighting against 10-1 odds for 4 days, Joseph surrendered (October 5).

COMMENT. *Chief Joseph must be ranked among great American military leaders.*

Sioux War in South Dakota, 1890–1891

1890, December 15. Death of Sitting Bull. The aging warrior again stirred up unrest among his people against the white man. Trying to escape capture, he was killed in a skirmish on the Grand River.

1890, December 29. Battle of Wounded Knee. Leadership of the Sioux now devolved on Chief **Big Foot.** His braves resisted efforts of Colonel **James W. Forsyth** on the 7th Cavalry to return them peacefully to the reservation, and were defeated in the ensuing fight, following a botched attempt to disarm them. Frequently mis-termed a "massacre," a more

accurate term would be "tragedy." Wounded Knee was a murderous, close combat, with an estimated 146 Indians (62 noncombatants) killed and 51 wounded. The 7th Cavalry suffered 25 killed and 39 wounded. Forsyth was relieved by General Nelson A. Miles for bungling the affair. However, Forsyth was later reinstated by the War Department.

End of the Indian Wars

1898, October 4–7. Engagement at Leech Lake, Minnesota. This final Indian uprising—a minor disturbance—was suppressed by the U.S. 3rd Infantry.

Spanish-American War, 1898

1898, February 15. Blowing Up of the *Maine*. The American people, already exercised over Spanish cruelty in suppressing a Cuban revolt (see p. 1001), were enraged when the battleship USS *Maine*, moored in Havana Harbor, was blown up and sunk by a mysterious explosion, with the loss of 260 men. A naval court of inquiry asserted the explosion came from outside the battleship's hull (March 21). Spain was blamed.

1898, April 25. American Declaration of War. The U.S. War Department, completely unprepared, increased the Regular Army from 28,000 to 60,000 men, and tried to organize and train these recruits as well as 200,000 volunteers flocking to the colors. The U.S. Navy, ready, immediately went into action.

Pacific Operations

1898, April 27. Dewey Sails for the Philippines. The U.S. Asiatic Squadron—5 cruisers and 2 gunboats—under Commodore **George Dewey,** left China waters and steamed into Manila Bay at night (April 30), ignoring the danger of submarine mines.

1898, May 1. Battle of Manila Bay. Dewey's squadron attacked the Spanish squadron of Admiral **Patricio Montojo**—4 cruisers, 3 gunboats, and 3 other decrepit vessels. The Spanish squadron, inferior in armament, was anchored off the fortified naval yard of Cavite, supported by land batteries. Dewey's squadron completely destroyed the Spanish force, with only 8 men wounded; Spanish losses were 381 sailors killed or wounded. After shelling the shore batteries into submission, Dewey took possession of Cavite. Blockading the City of Manila, he then awaited the arrival of sufficient troops to capture it.

1898, June 30. Arrival of the Army. General **Wesley Merritt,** with 10,000 men—part regulars, part volunteers—arrived in Manila Bay from San Francisco and began debarkation at Cavite.

1898, August 13. Manila Capitulates. Merritt's force, supported by Filipino guerrillas under Emilio Aguinaldo, having invested the city, attacked, supported by the fire of Dewey's squadron. After a short, nominal defense, to satisfy Spanish honor, the city surrendered.

Atlantic Operations

1898, April 29. Cervera Sails for Cuba. Admiral **Pascual Cervera,** with the cream of the Spanish fleet—4 modern cruisers and 3 destroyers—left the Cape Verde islands bound for the Caribbean. Rear Admiral **William T. Sampson,** commanding the U.S. Atlantic Fleet, who had instituted a blockade of Havana, was unsuccessful in intercepting Cervera, who gained the safety of fortified **Santiago de Cuba** (May 19). Sampson had 5 battleships, 2 armored cruisers, and several smaller vessels, including the "Flying Squadron" of Commodore **Winfield Scott Schley.**

1898, May–July. Blockade of Santiago. Sampson at once blockaded the harbor. Lieutenant **Richmond P. Hobson** and a crew of 7 volunteers entered the harbor mouth with the collier *Merrimac,* which they sank there in a gallant but unsuccessful attempt to stopper the channel (June 3).

1898, June 14. Expedition to Cuba. The V Corps, 16,888 strong, consisting of 3 ex-

temporized divisions commanded by Major General **William R. Shafter,** left Tampa under naval escort. The hurriedly mounted expedition included most of the available Regular Army troops (15 regiments), plus 3 regiments of volunteers (including the 1st Volunteer Cavalry, "Roosevelt's Rough Riders"). There were few horses for the 6 cavalry regiments—they would have to fight on foot—and there were serious shortages of equipment.

1898, June 22–25. Debarkation near Santiago. This took place at Daiquirí, an open roadstead, utilizing the small boats of the transports and naval craft. There was no opposition. Shafter then moved on Santiago, after a slight skirmish at **Las Guásimas** (June 23). Shafter and Sampson were unable to agree on coordinated action against Santiago, so Shafter decided to attack without naval assistance.

1898, July 1. Battle of San Juan and El Caney. Although there were some 200,000 Spanish troops on the island, less than 35,000 were in the Santiago area, and the actual garrison of the fortified city was but 13,000. General **Arsenio Linares,** passively defensive, made no attempt to concentrate his forces against the American threat. Barring the road to Santiago was the San Juan Ridge, with Kettle Hill in front of it, an organized position manned by 1,200 defenders. Northeast of the city, on the American right, was the isolated position of El Caney, held by 500 men. Shafter's plan was to assault both positions simultaneously. The troops were slow in maneuvering and tardy in assault, but finally took both works. The colorful charge of the "Rough Riders" up Kettle Hill, led by Lieutenant Colonel **Theodore Roosevelt,** would in particular become an American epic, although the assault was delivered with equal gallantry by all units engaged. By evening the Americans held the ridge and the fate of Santiago was sealed. The total cost of both battles was 1,572 Americans killed and wounded. Estimated Spanish losses were 850. Cuban patriot forces in the area took no part in the action. The entire operation was characterized by poor reconnaissance and lack of control, compensated by the raw gallantry of the troops and American unit commanders' reckless and inspiring leadership.

1898, July 3. Battle of Santiago Bay. Cervera led his squadron toward the open sea. Overwhelmed by the firepower of the superior American force, the 4 Spanish cruisers and 2 destroyers were forced ashore. The American ships turned to the work of rescue. Spanish losses: 474 killed and wounded and 1,750 prisoners. U.S. losses: 1 killed, 1 wounded. In the subsequent bitter "Sampson-Schley Controversy," Commodore Schley claimed dubious credit for the victory.

1898, July 17. Santiago Capitulates. General **José Toral,** who had succeeded Linares (wounded in the San Juan battle), surrendered, unaware that the American forces surrounding the city were rapidly disintegrating through yellow fever, malarial fever, and dysentery.

1898, July 25. Landing on Puerto Rico. Major General Nelson A. Miles, with some 5,000 men, landed and, in a well-planned, well-executed operation, had almost eliminated Spanish forces when hostilities ended (August 13).

1898, December 10. Treaty of Paris. Spain relinquished sovereignty over Cuba, ceded Puerto Rico and Guam to the U.S., and sold the Philippine Islands to the U.S. for $20 million.

1899–1902. Philippine Insurrection. **(See pp. 950, 1106.)**

Canada

1866, June 18. Battle of Fort Erie. Fenian raiders into Canada from Buffalo, N.Y., were arrested by U.S. troops but released due to political pressure.

1867, July 1. Federal Union. Canada became fully self-governing, the prototype of later British dominions.

1870, May 25–27. Fenian Raids Fail. U.S. and Canadian troops halted attempts to invade Canada near Frankfort, Vt., and Malone, N.H.

1869–1870. First Riel Rebellion. Louis Riel, French Canadian with Indian blood, led a group, mostly half-breeds, in armed revolt

(October) when the Hudson's Bay Company turned over what is now Manitoba to Canada. They seized **Fort Garry** (Winnipeg; November), and set up a provisional government with Riel as President (December 29). There were occasional clashes with settlers of English descent in the region. An expedition under Colonel Garnet Wolseley captured Fort Garry without opposition (August 24, 1870); Riel had fled. No effort was made to arrest him, and he later became a member of Parliament.

1885, March–May. Second Riel Rebellion. Upon appeal of the frontier half-breeds (who had now moved to the region of Saskatchewan), Riel came to their aid in western Canada. Again he denounced the authority of the dominion, appealed to the Indians to join his revolt, and set up a provisional government. After several armed clashes and considerable loss of life, the rebellion was suppressed by government troops under General **Frederick Middleton** in a severe action near **Batoche,** Saskatchewan (May 12); Riel was captured (May 15). He was tried and hanged for treason.

LATIN AMERICA

Instability and unrest marked the growth of Latin America during the period, from the Rio Grande down to the tip of Cape Horn. Of the interminable succession of wars, insurrections, and clashes with foreign powers which racked the area, a few are worthy of note.

Mexico

1857–1860. Civil War in Mexico. Struggle between the Conservative party, under **Félix Zuloaga,** and the Liberal party, under **Benito Juárez.** The Conservatives held the seat of government at Mexico City; the Liberals established a government at Veracruz. Juárez was recognized by the U.S. (April 6, 1859). The Conservative party was defeated at the **Battle of Calpulalpam** and Juárez assumed full control of the country (December 22, 1860). Mexico's finances had been disorganized by the war, and payments of foreign debts were suspended.

1861, December 17. Allied Occupation of Veracruz. To protect their interests and to obtain satisfaction for their debts, Spain, France, and Britain sent a joint expeditionary force to Mexico. The foreign troops moved to Orizaba. Napoleon III, desirous of establishing a puppet Mexican empire, seized the opportunity presented by U.S. involvement in the Civil War to meddle in Mexican politics.

1862, April 8. Spanish and British Withdrawal. This resulted from Napoleon's intrigues and was followed by further French reinforcements.

1862, May 5. Battle of Puebla (or Cinco de Mayo). The French advance toward Mexico City was checked by Mexican Generals **Ignacio Zaragoza** and **Porfirio Díaz.**

1862, September. Reinforcement of the French Expedition. An additional 30,000 French troops, under General **Elie F. Forey,** arrived in Mexico.

1863, February 17. French Offensive. Advancing from Orizaba, the French again moved on Puebla, defended by Zaragoza. Investing Puebla, the French found themselves involved in incessant guerrilla operations on their line of communications from Veracruz.

1863, April 30. Defense of Camerone. Heroic defense of a homestead by a company of the Foreign Legion. For 10 hours, 3 officers and 62 men fought off a Mexican force of some 2,000 men. In contrast to the Alamo massacre (see p. 882), the Mexicans hailed the last 3 surviving legionnaires as heroes and returned them to French control.

1863, June 12. Enthronement of Maximilian. Having captured Puebla (May 17),

Napoleon's troops entered Mexico City (June 7). He placed Archduke **Maximilian,** brother of Austrian Emperor Francis Joseph, on the Mexican throne. The puppet emperor, an honest man, entered on his duties in all sincerity, but the majority of the Mexican people, led by Juárez, wanted none of him.

1863–1865. Continuing Guerrilla War. This was conducted with savagery on both sides. The U.S. refused to recognize Maximilian, and continued to recognize Juárez, who had taken refuge in the United States, and then returned to Mexico to lead the war with his principal military officer, General **Mariano Escobedo.**

1865–1866. U.S. Demands French Withdrawal. The U.S. threatened to intervene, backing its demand by mobilizing a 50,000-man veteran army under General Sheridan on the Rio Grande. After prolonged negotiations, Napoleon, realizing U.S. determination and impatience, backed down.

1867, February 5. French Withdrawal Begins. Marshal Bazaine, who had superseded Forey, evacuated all French troops, and Maximilian's puppet regime began to crumble.

1867, March–June. Defeat of Maximilian. He refused to abdicate and desert his Mexican followers. Besieged at **Querétaro** by Escobedo he was betrayed by one of his own men, captured (May 14), courtmartialed, and executed (June 19). Juárez restored order and reassumed his post as President until his death (1872).

1871–1877. Turmoil in Mexico. A revolt of Díaz against Juárez was almost suppressed when Juárez died. Disorder continued until Díaz, having defeated his principal opponent, **Sebastian Lerdo de Tejada,** at **Tecovac** (November 16, 1876), was elected President (May 12, 1877).

1877–1911. Dictatorship of Díaz. Mexico's "strong man" ruled a prosperous Mexico, maintaining law and order (see p. 1107).

Central America

1855–1860. William Walker in Nicaragua and Honduras. Walker, a U.S. soldier of fortune from Nashville, Tenn., with 56 followers, went to Nicaragua on invitation of one of several local factions (May 4). Seizing a U.S. steamer on Lake Nicaragua, he took control of Granada in a surprise move, proclaimed himself president, and opened Nicaragua to slavery. His regime was recognized by President Franklin Pierce (May 1856). **Cornelius Vanderbilt,** who wanted to monopolize travel to California and its gold across Nicaragua, incited opposition. Walker finally surrendered to U.S. naval control (May 1, 1857). Taken to San Francisco, he soon returned (November 25, 1857) and was again deported. Entering Honduras (August 1860) in another bid for power, he was arrested by British naval authorities and turned over to Honduran control. He was tried and executed by a firing squad (September 12, 1860).

COMMENT. *The Walker episode was one of the principal instances of meddling by U.S. citizens in Latin American affairs, prime cause for continued resentment against "Yankee" aggression.*

1871. Revolution in Guatemala. Miguel Garcia Granados and **Justo Rufino Barrios** overthrew the government of General **Vicente Cerna.** Granados soon retired, leaving Barrios as President.

1885. Barrios Attempts to Unify Central America. After several peaceful efforts to bring about a Central American union, Barrios tried force. Conflict rose between Guatemala and Honduras on the one hand and Costa Rica, Nicaragua, and El Salvador on the other. Barrios was killed at **Chalchuapa** (April 2) during an invasion of Salvador, and his forces defeated.

South America

1843–1852. Argentine Intervention in Uruguay. (See p. 896.)

1860–1861. Civil War in Colombia (New Grenada). Victorious rebel leader **Tomás Cipriano de Mosquera** proclaimed himself president (July 1861).

1863. Ecuador-Colombia War. Long-standing

border disputes between Colombia then New Grenada) and Ecuador culminated in war after President Cipriano de Mosquera supported Ecuadorans rebelling against conservative dictator **Gabriel Garcia Moreno.** Elderly General Juan José Flores invaded New Grenada but was repulsed (December 6). Fighting ended; a treaty composed differences.

War of the Triple Alliance (Lopez War), 1864–1870

Francisco Solano Lopez, having become perpetual dictator of Paraguay (1862), turned his country into an isolated despotism. He then plunged into war against Argentina, the Banda Oriental (Uruguay), and Brazil. The war offers no military lesson, but does demonstrate the remarkable bravery of the Paraguayan people. In the end, they were conquered by sheer pressure of numbers and by economic strangulation. Lopez' megalomania reduced the Paraguayan population from about 1,400,000 to some 221,000 (29,000 adult males, 106,000 women, and 86,000 children). His allied opponents lost an estimated 1,000,000 men. The combat area was the Paraguay River Valley from Corrientes north to Coimbra; the principal actions occurred between the confluence of the Paraguay and Paraná Rivers and Asunción.

1864, December 26. Invasion of Brazil. Lopez, who had raised an army 80,000 strong, seized the upper Paraguay River and invaded Brazil at Corumbá, in an area disputed by both nations. This move isolated the Matto Grosso region from communication with eastern Brazil, overland access being impossible across the intervening mountains and marshy jungle land.

1865, March 18. War on Argentina Declared. When Argentina refused to permit Paraguayan troops to cross its territory to invade southern Brazil, Lopez declared war. A Paraguayan river expedition, moving in captured Argentinian vessels, took **Corrientes** (April 13), and Colonel **Antonio L. Estigarribia** then moved overland through Encarnación to invade southern Brazil.

1865, May 1. Establishment of the Triple Alliance. Brazil, Uruguay, and Argentina agreed to destroy the Lopez government and to open the Paraguay and Paraná rivers to free navigation. The 3 nations began organizing new armies for joint operations under Argentina's **Bartolomé Mitre,** Uruguay's **Venancio Flores,** and Brazil's **Louis Osorio.** Naval operations were confided to Brazilian Vice Admiral **Viscount Tamandare.**

1865, July–October. Operations in Southern Brazil. Estigarribia's force reached the Uruguay River and moved south to **Uruguayana,** where it was surrounded by an allied force of 30,000 and a gunboat flotilla; part of his force was destroyed. He surrendered (September 18). The allied army moved north, threatening Paraguayan communications at Corrientes, which was evacuated at once. Lopez concentrated 25,000 men below the Paraguayan fortress of Humaita, in the peninsula between the Paraguay and Paraná rivers.

1866, January–May. Allied Invasion. The allied army, now 45,000 strong, crossed the Paraná and advanced slowly. Lopez attacked (May 2), but was thrown back.

1866, May 24. Battle of Paso de Patria. Surrounded on both flanks by superior force, Lopez' army was shattered after an all-day battle, losing 13,000 casualties. Allied losses were 8,000. No attempt was made to exploit this allied success, and Lopez was allowed to reorganize.

1866, September 22. Battle of Curupayty. After long delay and establishment of a base, the allies attempted to drive Lopez out of his entrenchments at Curupayty, on the Paraguay River, but were repulsed with great loss; 9,000 were killed and wounded. Paraguayan losses were but 54 men. Lopez failed to exploit his

victory. For 14 months, operations dragged in stalemate; cholera ravaged both sides.

1867, May. Brazilian Invasion in the North. A Brazilian attempt to invade northwestern Paraguay, through the Matto Grosso, was a complete failure.

1867, July–August. Operations around Humaita. Despite Lopez' efforts, Brazilian monitors moved up the Paraguay, running Humaita's batteries. Asunción was abandoned. Lopez instituted a "scorched earth" policy as he withdrew his mobile forces north from Humaita to Angostura, with his right flank on the river, his left on Lake Ypoa. Humaita, now garrisoned by only 3,000 men, surrendered after an attempt to evacuate proved unsuccessful (August 2). The allied army moved slowly up both banks of the Paraguay, the Brazilians on the east, the Argentines on the west, the gunboat and monitor flotilla accompanying. The advance was stopped by the Angostura defenses, south of Asunción.

1867, August–December. Operations around Angostura. North of Angostura, at Ypacarai, Lopez concentrated his last 10,000 troops. Allied pressure slowly increased. Balloon observation pinpointed the Paraguayan batteries. The allied flotilla turned the Angostura position, while a Brazilian column, passed to the west side by boat, marched up through the Chaco and was then retransported to the east, threatening Lopez' rear at Ypacarai. A succession of assaults on the Paraguayan position was repelled at great cost to both sides.

1867, December 25. Battle at Ypacarai. A general assault breached Lopez' position and, except for the batteries in Angostura itself, the defense collapsed. Lopez fled north with a handful of cavalry. Angostura surrendered (December 30), and Asunción was occupied and sacked by the Brazilians next day.

1868–1869. Partisan War. Lopez continued a largely partisan campaign, maintaining himself in northern and eastern Paraguay. He rallied several thousand followers in the Cordillera area of eastern Paraguay, briefly threatening Asunción (1869). By this time a provisional government had been organized, and Argentina had withdrawn her forces. The Brazilian army of occupation, under **Gaston de Bourbon, Comte d'Eu,** instituted a mopping-up campaign, which slowly drove Lopez north to the Aquidaban River.

1870, March 1. Death of Lopez. The dictator was surrounded by a detachment of Brazilian lancers and killed. Peace came finally through U.S. mediation (June 20). Paraguay ceded some 55,000 square miles of territory to Brazil and Argentina.

Peruvian Hostilities with Spain, 1864–1866

Long-standing differences with Peru, whose independence Spain had not recognized, came to climax when a Spanish squadron under Admiral **Pinzon** seized the Chincha Islands, 12 miles off Pisco on the Peruvian coast, in retaliation for maltreatment of Basque immigrants (April 14, 1864). Spain later (January 27, 1865) concluded a treaty with President **Juan Antonio Perez,** but its provisions aroused Peruvian resentment.

1866, January 14. Peruvian Declaration of War. Perez was driven from office and his successor, General **Mariano Ignacio Prado,** declared war. Defensive alliances were concluded with Chile, Bolivia, and Ecuador. Wholesale deportations of Spanish subjects followed.

1866, March 31. Bombardment of Valparaiso by a Spanish squadron under Admiral **Nuñez** caused considerable damage. The Spaniards lost 1 gunboat to a Chilean cutting-out party.

1866, May 2. Bombardment of Callao. Nuñez attacked the port, but its shore defenses, under Prado's direct command, repelled the attackers. Spain now ceased hostilities (May 9). U.S. mediation brought peace (1871). The net result was a hurried naval program instituted by Chile to modernize and improve her sea power.

War of the Pacific, 1879–1884

This was a struggle for control of the guano—and nitrate-producing provinces of Tacna, Arica, and Tarapacá (Peru) and of Atacama (Bolivia). Atacama was Bolivia's only outlet on the coast. Chilean companies engaging in exploitation of nitrate were so heavily taxed by Peru and Bolivia that Chile went to war.

1879, February 14. Chile Opens Hostilities. A Chilean naval expedition seized Antofagasta; the nearby country was quickly occupied. Chilean blockade of coastal ports followed. Captain **Miguel Grau** in the Peruvian turret ironclad *Huascar* having successfully harassed Chilean warships off Iquique, the entire Chilean Navy hunted him down.

1879, October 8. End of the *Huascar*. Five Chilean warships—2 of them ironclads—surrounded Grau off Antofagasta. In a running fight lasting for 1½ hours, the *Huascar* was battered into submission, with her turret disabled, steering gear shot away, and 64 of her 193-man crew casualties. Among the killed were Grau and the 4 other officers who rapidly succeeded to command in the action. Command of the sea now fell to Chile.

1879, November 1. Chilean Invasion of Bolivia and Southern Peru. Landing an expeditionary force at Pisagua, the Chileans pushed through heavy Bolivian-Peruvian opposition at **Sán Francisco** (November 16). At **Tarapacá** (November 27) they suffered a repulse, but the allies made no attempt to exploit their success. With the Bolivian seacoast and all of Peru's Tarapacá Province in their hands, the Chileans turned their attention northward.

1880, January–June. Blockade of Arica and Callao. Peruvian defensive measures included submarine mines and ineffective torpedos. A Chilean force of 12,000 men landed at Pacocha near Arica and moved inland. At **Questa de Los Angeles** (March 22), Bolivian General **Narciso Campero** with 9,000 allied troops defended a defile until outflanked by Chilean General **Manuel Baquedano.** Allied casualties were 530; Chilean, 687.

1880, May 26. Battle of Tacna. Initial Chilean piecemeal assaults were at first repulsed, but Baquedano finally concentrated his effort against the Peruvian left, and swept the field. Casualties were severe: nearly 3,000 allied and 2,000 Chilean. With allied opposition in this area completely dissolved, the Chilean army moved on **Arica,** taking it in a general assault (June 7).

1880, November–December. Lima Campaign. Disembarking at Pisco (November 18) with more than 22,000 men, Baquedano 6 weeks later began moving up the coast on Lima, where some 22,000 defenders were installed behind 2 successive lines whose flanks could not be turned. In a frontal attack, the Chileans overran **Chorrillos,** the first position, taking losses of 3,000 men. Two days later, while negotiations for peace were in progress, an inadvertent Chilean movement resulted in a daring Peruvian counterattack. The action, hotly contested for 4 hours, ended with complete Chilean victory. Total casualties in the 2 battles: Chilean, 5,443; Peruvian, 9,000. Lima was occupied (December 17). Peruvian resistance having now completely broken down, the Chilean army was withdrawn, leaving only a small occupation force for mopping up.

1883, October 20. Treaty of Ancón. Peru formally ceded Tarapacá Province to Chile and agreed to Chilean occupation of Tacna and Arica for a 10-year period, to be followed by a plebiscite. (Tacna, as it turned out, would be returned to Peru in 1929; see p. 1149.) The **Treaty of Valparaiso** (April 4, 1884) recognized Chile's permanent possession of the Bolivian littoral.

1889, November 15. Brazilian Empire Ended. Led by General **Manuel Deodoro da Fonséca,** a military junta quietly removed Emperor Dom **Pedro II** from his palace and shipped him and his family off to Portugal. A

provisional government was quickly followed by establishment of the United States of Brazil. Unrest continued, however, culminating in an insurrection in the province of Rio Grande do Sul (September 1891).

1893–1895, September 6. Naval Revolt at Rio. Admiral **Custodio de Mello,** commanding Brazilian naval vessels in the harbor of Rio de Janeiro, demanded the resignation of President **Floriano Peixoto.** On refusal, Mello shelled the city. Mediation by foreign ministers prevented further destruction. Mello joined forces with the insurgents in the south, led by **Gumercindo Saraiva.** The government purchased warships abroad and mobilized the national guard. Admiral **Saldanha de Gama,** now commanding the rebellious squadron in Rio Harbor, abandoned his ships to take refuge with his men on board two Portuguese warships, which transported them to Montevideo. Mello and Saraiva fell out. The rebel army was dispersed. Mello, after an unsuccessful attack on the town of Rio Grande do Sul, steamed to Buenos Aires and surrendered to Argentine authorities. Government troops put down the last traces of revolt in the south (July 1895), de Gama—who had returned from Montevideo—being killed.

1895–1896. Venezuelan-British Boundary Dispute. Disagreements about the boundary between British Guiana and Venezuela led to a crisis between the U.S. and Great Britain (December 1895). This was settled by negotiations; an international board of arbitration agreed generally with the British claims.

West Indies

Cuba

1849–1851. Lopez Expeditions. Narciso I. Lopez, a Spanish general and leader of Cuban refugees in the U.S., mounted 3 abortive revolutionary expeditions from the U.S. The first collapsed (August 11, 1849) when U.S. federal authorities intervened. The second, which included a number of Southern volunteers, made a landing at Cárdenas (May 19, 1850), but was driven off. Lopez' third attempt, mounted from New Orleans—again with a number of American volunteers—effected a landing near Havana (August 11–21, 1850), but when no sympathetic Cuban uprising materialized, the filibusters were all captured. Lopez and 51 Americans were tried by court-martial and executed at Havana.

1868–1878. Ten Years' War. Cuban revolts attracted American sympathy and support. The former Confederate blockade runner *Virginius,* sold to a group of Cuban supporters, was captured by the Spanish warship *Tornado* off Morant Bay, Jamaica (October 1, 1873).

1895–1898. Cuban Insurrection. Discontent with the superficial reformation of Spanish colonial policy came to a head when constitutional guarantees were suspended (February 23). Open revolt brought stringent but unsuccessful retaliation; compartmentation of the island by *trochas*—lines of barbed wire, entrenchments, and blockhouses—isolating the insurgents. Finally Spanish Captain General **Valeriano Weyler** established concentration camps in which noncombatants, swept from their homes, were confined under abominable conditions. In the U.S., where sympathy with the rebels ran high, popular indignation was followed by a formal request for Weyler's removal. Spain acquiesced (October 1897), but rising tension between the U.S. and Spain was climaxed by the still-mysterious blowing up of the battleship USS *Maine* in Havana Harbor (February 15, 1898; see p. 994).

1898, April 25. Spanish-American War. (See p. 994.)

1898, December 10. Treaty of Paris. Spain relinquished Cuba to the U.S. in trust for its inhabitants. Military government under General **Leonard Wood** began grooming Cuba for permanent independence.

Haiti and the Dominican Republic

Revolutionary ferment continued throughout the entire island. Haiti's successive revolutions—in 1867, 1870, 1874, 1876, and 1888–1889—ended in partial restoration of law and order. In the Dominican Republic, estranged from its western neighbor, fear of Haiti resulted in another Spanish annexation (1861), requested by the people. However, revolution soon broke out (1864) as the result of harsh rule, and Spain then relinquished all claim (1865). A Dominican effort to obtain annexation to the U.S. was rejected by the U.S. Senate (1868–1870). For the remainder of the period, the country was relatively tranquil.

AUSTRALASIA

New Zealand

1860–1870. Second Maori War. The Maori tribes—sturdy, belligerent, and freedom-loving—rose again against continued encroachments by British settlers on their preserves. The result was a 10-year guerrilla war, reminiscent in principle of the U.S. struggle with the Plains Indians. Both regular British troops and local militia were involved in this wilderness war. In the end it was quelled more through diplomacy than by force of arms. As a result, the Maoris became a respected element of an integrated nation.

XIX

WORLD WAR I AND THE ERA OF TOTAL WAR:

1900–1925

MILITARY TRENDS

General

The period was one of amazing transitions and sharp contrasts. The Russo-Japanese War (see p. 1008) was typical limited war—fought with armies of unprecedented size. World War I, with even larger armies, was total war. The appearance of the gasoline internal-combusiton engine, combined with the sharp upward curve of destructiveness of improved weaponry, brought about a quickening of tempo and enlargement of scope that strained man's physical and intellectual capability to wage war.

Leadership

The quality of leadership developed during the period will always be moot. On the civilian side, France's premier, **Georges Clemenceau**—"the Tiger"—was the embodiment of ferocity and indomitable patriotism, capable of rallying an entire nation in its fight for existence. Outstanding among the military were France's **Joffre** and **Foch;** America's **Pershing;** Britain's **Haig** and **Allenby;** Germany's **Hindenburg, Lundendorff,** and **Falkenhayn;** Russia's **Nicholas** and **Brusilov;** Turkey's **Kemal;** Japan's **Oyama** and **Togo;** and Poland's **Pilsudski.** The administrative and military capability of Soviet Russia's **Leon Trotsky** slowly forged a capable Red Army from a mass of ignorant peasants and disgruntled soldiery. In general terms, the professional standards of military leadership of the German Army were unquestionably the highest in the world in this period. French, British, and American standards, however, were not far behind.

By the time World War I began, all of the major powers had adopted a general-staff system more or less along lines of the concept used so successfully by Prussia and Germany under von

Moltke (see p. 898). Both Britain and America had long resisted the introduction of a general staff system, since to many people in the Anglo-Saxon democracies this appeared to be a step toward militarism. But embarrassing evidences of military inefficiency appeared in both countries in relatively minor wars at the turn of the century. In Britain after the Boer War, the Esher Committee and Lord Haldane were able to convince most of their countrymen that a general staff was a military necessity that would not jeopardize the fundamental liberties of a free people (see p. 1087). In the United States, at about the same time, Secretary of War Elihu Root achieved a similar result, permitting action to redress the inadequacies so clearly demonstrated in the Spanish-American War (see p. 994).

Strategy

The Napoleonic concept of the nation in arms was replaced by that of the nation at war. The ability to the nation to produce and supply its fighting forces with weapons and food became more important than mere man power in uniform. This was demonstrated in World War I by Russia, whose millions of cannon fodder were relatively ineffectual when they could not be armed and maintained on the battlefield. Britain's surface blockade of the Central Powers—and Germany's submarine campaign against the maritime pipelines of Allied supply—equaled, if they did not in fact exceed, the importance of purely military might, since they were intended to strangle the respective populations on whom the armies and navies depended for food and munitions.

This meant that political and economic considerations inevitably dictated military decisions; no longer could war be reserved to the military. Success in total war depended as much on the farmer and the factory worker as on the warrior. That lesson, clear in the American Civil War, was relearned.

As exemplified by the stalemate on the Western Front, strategy in the field was greatly inhibited by weapon power. It would not be correct to conclude from this, however, that the deadlock of trench warfare meant either a decline in competence of military leadership or a decay in the broad strategic concept of maneuver, using both mobility and firepower to effect a decision.

The bloody stalemate on the Western Front was caused as much by territorial limitations as by the tactical effect of improved firepower. The war started in the West with maneuver (the Schlieffen Plan), and its first decisive clash was won by maneuver (Joffre at the Marne). Only when the maneuvering opponents came to the end of the available land mass (after the "Race to the Sea") did the struggle turn into a stalemate, with frontal attack and penetration the only possible solutions.

Through costly trial and error the tactical penetration evolved into a strategic maneuver, employed by both sides, yet never decisively. To be successful against defense in depth required not only the initial power to break through the defense but also the supplemental power, through the use of reserves and continuing firepower support, to erode the flanks of the gap—much as flood waters enlarge the original break in dam or levee—then to sweep with undiminished ferocity over the countryside beyond. Yet despite several instances of momentary breakthrough, the theoretical analogy to the flood was never fully realized on the Western Front. With existing means of transportation, neither side was able to solve the problems of

combat movement, mobile firepower support, or logistical support in order to carry tactical exploitation to its logical, decisive conclusion before the defender could shift reserves to close the gap. On other major fronts there were comparable stalemates; but because of vast distances, tactical breakthrough and strategic maneuver were more feasible on the Eastern Front.

Weapons, Doctrine, and Tactics on Land

Military men had all noted the increasing deadlines of weapons during the latter half of the 19th century. With few exceptions, however, the leading military thinkers of Europe paid inadequate attention to the lessons of the American Civil War (and failed to note that these lessons were corroborated by the Russo-Japanese War). Their attention was focused on European experience, which they generally misinterpreted, due in part to the brevity of European wars during that half-century.

At the outset of the 20th century, the tactical doctrines of the two leading military nations of Europe—Germany and France—stressed the importance of seizing and maintaining the initiative in battle. Their example was followed by most other armies. The *élan,* or offensive spirit, of troops was to be nurtured. The greatest exponent of this doctrine of the offensive was General **Ferdinand Foch,** Commandant of the French École Supérieure de la Guerre, who was convinced that an indomitable will to win was the major ingredient for victory, and that enhanced fire-power was as advantageous to attacker as to defender. Foch also insisted upon the importance of high professional standards of training in employment of weapons, use of cover, security, and tactical maneuver. His disciples, however—led by Colonel **Louis Loizeau de Grandmaison**—perverted this concept of the importance of the offensive into a blind doctrine of attack at all costs, at all times, and under any circumstances—*l'offensive à l'outrance.* German doctrine, though also stressing the importance of offensive action, never reached such extremes as existed in France in the years just before World War I.

A few soldiers had some reservations about a doctrine which envisaged mass frontal attacks against modern firepower. American observers of the Russo-Japanese War noted, for instance, that neither the fanatically aggressive Japanese nor the stubbornly stolid Russian could be persuaded to repeat suicidal frontal attacks against field fortifications. As in the American Civil War, a few costly lessons forced commanders to resort to tactical maneuver in seeking a decision.

But most military men ignored the doubts expressed by a civilian—Warsaw banker and economist **Ivan S. Bloch**—in a 7-volume book, *The Future of War in Its Economic and Political Relations: Is War Now Impossible?* This was published in St. Petersburg in 1898, and began to circulate in the West in the early years of the 20th century. After study of the best works on military affairs, the author came to the conclusion that the increased power of modern firearms had made war impossible, "except at the price of suicide." Bloch overestimated the power of the weapons of his day. But he was probably closer to the mark than military men of the Grandmaison ilk.

The deadlines of modern weapons caused vital changes in tactics during World War I—though, as usual, the lessons were not fully digested until after the war was ended. The machine gun and the modern artillery piece, in combination with field fortifications and barbed wire, inhibited frontal attack and ended forever the shock value of horse cavalry. Organization in

depth became the *sine qua non* of the defense. Fire and movement—as in the American Civil War—were the fundamental basis of the Hutier tactics (see p. 1064), which finally broke the trench stalemate. The infantry-artillery team became the basic tactical element of land warfare in the first half of the 20th century.

The tank—born during the war—emerged as the most important new development in land warfare. Poison gas was another innovation, although prompt countermeasures reduced gas to a weapon of harassment.

Motor transport became of great importance, although horse transport still predominated. In World War I, psychological warfare was for the first time used systematically, although, by present standards, amateurishly. Propaganda campaigns stimulated efforts on the respective home fronts, and subversive leaflets, dropped over enemy lines, were intended to weaken the soldiers' morale. The German long-range gun which bombarded Paris (see p. 1071) was a psychological weapon.

War became three-dimensional as the airplane and the dirigible developed from their initial role of reconnaissance into lethal weapons. By the end of the period the air arm had become a major factor in both land and sea combat.

French light tank, 1918

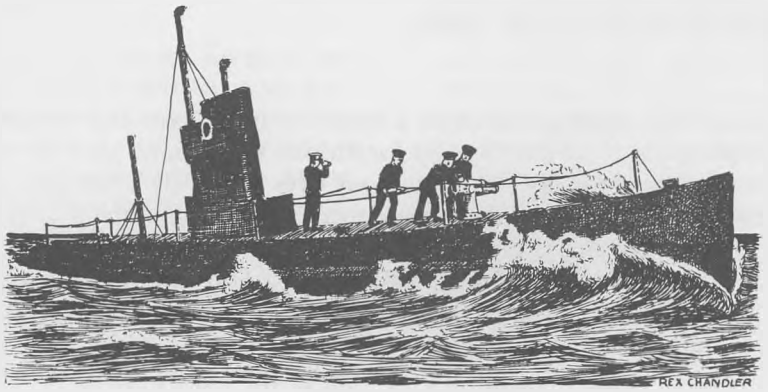
Weapons and Tactics at Sea

Britain's *Dreadnought* (see p. 1087), (prototype of a class of heavy warships ever afterwards called "dreadnoughts"), combining heavy armor, immense weight of metal hurled by a ho-

mogeneous group of large caliber guns, 12-inch or more, and all-around fire capabilities, rendered obsolete all previously constructed battleships. In consequence, the great powers—including England herself—were forced into an armament race. Naval designers, searching to combine firepower and mobility, then brought out the battle cruiser, gunned to near equality with the dreadnought but lacking—a sacrifice to achieve speed—its protective armor belt. But the battle cruiser, like most naval hybrids, proved its inefficiency at Jutland, and by the end of the period was disappearing from the world's navies.

H.M.S. *Queen Elizabeth*, superdreadnought battleship

The most significant development in naval warfare, however, was the introduction of the submarine as a weapon of blockade and counterblockade. Although British supremacy on the surface of the waves was only challenged once—and was never seriously jeopardized—the German U-boat offensive against merchant shipping came close to bringing Britain to her knees in 1917. Sinkings by submarines at one point actually threatened to starve England into



German submarine

surrender. The introduction of the convoy system, however, permitted the British to ride out the crisis.

The Concept of Disarmament

The increasing cost, pervasiveness, and frightfulness of war caused many to consider seriously and hopefully man's age-old dreams of creating an eternally peaceful world. It soon became obvious, however, that the urge for peace was less compelling on nations and statesmen than the prior claims of assuring national security. The **First Hague Peace Conference** (May–July 1899) had been called by the Czar of Russia, whose interest in disarmament, it soon became clear, was mainly to save economically backward Russia from matching the military expenditures of Germany and Austria. International jealousies and suspicions prevented this, or its successor, the **Second Hague Peace Conference** (June–October 1907), from doing little more than defining and codifying some of the laws of war and establishing an international court of arbitration. Additional rules, pertaining to naval warfare, were elaborated at the **London Naval Conference** (1908–1909), but what the convention agreed to at the conference was never ratified by the participating governments.

The fourth of Wilson's Fourteen Points (see p. 1069) gave hope to a war-weary world (January 1918) that some kind of regulation of armaments would be achieved to establish perpetual peace after World War I. Embodied in the Covenant of the League of Nations, it stimulated the League to a series of disarmament studies in the postwar period. Some regulations on the size and numbers of warships of the leading naval powers were agreed to at the **Washington Conference** (1921–1922).

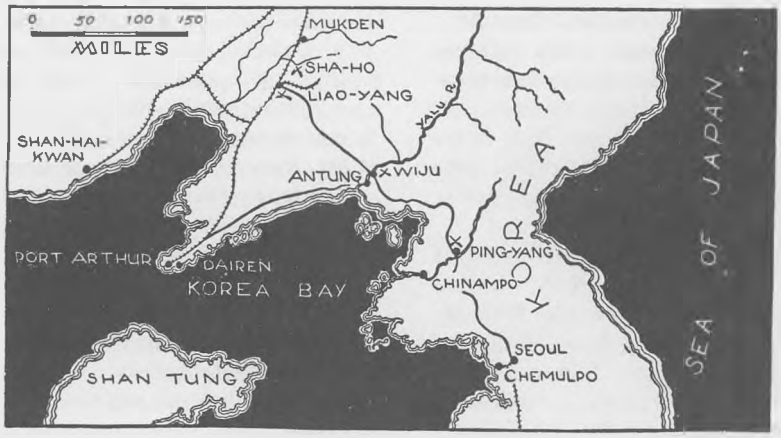
Realistic statesmen were dubious if true control of armaments would ever be possible. But, heeding popular demands for peace, they tried—just so long as their respective nation's security could be guaranteed absolutely. But, somehow, such guarantees could never be reconciled with arms-control measures satisfactory to potential foes.

MAJOR WARS PRIOR TO 1914

Russo-Japanese War, 1904–1905

Background

Between 1900 and 1903, Japan prepared for a limited war in Korea and Manchuria to crush growing Russian power there, to gain revenge for Russian interference after the Sino-Japanese War (see p. 946), and to ensure her own hegemony over Korea. By 1904 Japan was ready to act. Japanese deployment on the mainland was dependent upon command of the sea, hence it was deemed an essential first step to destroy the Russian Far East Fleet and capture its base, Port Arthur, on the tip of Manchuria's Liaotung Peninsula. Since Port Arthur was Russia's only year-round ice-free port on the Pacific coast, its capture would also deprive the Russians of any winter naval base should they send their Baltic Fleet into the Pacific. The second step in the Japanese plan was to destroy Russian land forces in Manchuria, thus inducing Russia to abandon the war. The Japanese well knew the sole Russian supply line was the Trans-Siberian



Russo-Japanese War, 1904–1905

Railway—a 5,500-mile single-track line between Moscow and Port Arthur. A 100-mile gap in the line at Lake Baikal complicated Russian logistical difficulties. Despite Russia's tremendous man power (the overall strength of her army was 4,500,000 men), east of Lake Baikal the Russians could dispose immediately only 83,000 field troops with 196 guns, plus some 50,000 garrison troops and railway guards. Given command of the sea, Japan could quickly place on the mainland against this force her entire standing army of 283,000 men and 870 guns, and soon reinforce this with 400,000 trained reserves. Russian naval strength in the Far East consisted of 7 elderly battleships, 9 armored cruisers, 25 destroyers, and some 30-odd smaller craft. The main fleet was based on Port Arthur; 2 cruisers lay at Chemulpo (Inchon), Korea, and 4 more cruisers at Vladivostok. Japanese naval strength consisted of 6 up-to-date battleships, homogeneous in type and carrying 12-inch guns. There were also 1 older battleship, 8 fine armored cruisers, 25 lighter cruisers, 19 destroyers, and 85 torpedo boats, plus 16 smaller craft. The Japanese Army and Navy both were superior to the Russians in doctrine, training, and leadership.

Opening Moves

1904, February 8. The Attack on Port Arthur. Without previous declaration of war, Japanese torpedo boats launched a surprise attack on the Russian fleet at anchor in the harbor of Port Arthur, causing severe damage. At the same time, the main Japanese battle fleet of Vice-Admiral **Heihachiro Togo** appeared off the port to engage the Russian shore batteries and fleet at long range. Togo then instituted a close blockade of the port.

1904, February 9. Naval Action at Chemulpo. The Japanese armored cruiser squadron of Vice-Admiral **Hikonojo Kamimura,** escorting the transports of an expeditionary force, entered the harbor of Chemulpo (Inchon), Korea, and attacked 2 Russian cruisers there. One of these was sunk, the other so severely damaged that it was scuttled by its crew.

1904, February 10. Declaration of War.

1904, February 17. Chemulpo Landing. General **Tamesada Kuroki's** Japanese First Army began debarkation, followed by a northward advance through Korea to the Yalu River, to cover operations at Port Arthur.

1904, March 8–April 13. Naval Operations off Port Arthur. Energetic and capable Russian Admiral **Stepan Makarov** arrived from Russia to take command of the fleet (March 8).

At once he began a series of sorties to harass the blockading Japanese cruisers, while avoiding Togo's battle fleet. Returning from one of these sorties, Makarov's flagship, *Petropavlovsk,* struck a Japanese mine and sank with all on board (April 13). Thereafter the Russian ships remained passively in port. The loss of Makarov was a catastrophe for the Russians.

1904, April–May. Russian Dispositions and Plans. General **Alexei Kuropatkin,** who had been Russian minister of war, and who assumed command of all field forces in the Far East, recognized Russian unreadiness for war. He anticipated Japanese efforts to obtain an early victory. He began concentrating all available forces in 3 groups south of Mukden. General **Stakelberg,** with 35,000 men, lay in the area Hai-cheng-Kaiping, directly north of Port Arthur. General Count **Keller,** who had 30,000, guarded the passes west of the Yalu River, with an advance guard of 7,000 under General **Zasulich** covering the Yalu crossings. Kuropatkin himself, with 40,000 men, lay in reserve at Liaoyang. An additional force of nearly 40,000 under General **Anatoli M. Stêsel** comprised the garrison of the powerful fortress of Port Arthur. Recognizing the initial Japanese numerical advantage, Kuropatkin planned to permit the Japanese temporarily to besiege Port Arthur—which he felt sure could hold out for several months—while he fell back slowly toward Harbin, delaying the Japanese advance into Manchuria until reinforcements arrived from Russia. He anticipated that the Trans-Siberian Railway could bring him about 40,000 men per month. By the end of the summer, therefore, he felt he would be strong enough to return southward to relieve Port Arthur, and to drive the Japanese from Manchuria. However, incompetent Admiral **Evgeni Alekseev,** Viceroy of the Far East, appointed as Russian generalissimo by the Czar, insisted upon an immediate offensive, ordering Kuropatkin to abandon his sound defensive-offensive plan.

1904, April 30–May 1. Battle of the Yalu. Kuroki's First Japanese Army, arriving at the Yalu near Wiju (Uiju or Gishu), was confronted by Zasulich, who stupidly gave battle against overwhelming odds. Zasulich was routed, losing 2,500 casualties; Japanese losses were 1,100 out of the 40,000 engaged. Kuroki advanced into Manchuria.

1904, May 5–19. Japanese Landings on the Liaotung Peninsula. The Second Army, under General **Yasukata Oku,** began landing at Pitzuwu, only 40 miles northeast of Port Arthur. Moving south, he was halted by a powerful Russian defensive position based on Nanshan Hill, at the narrowest part of the peninsula. While this was taking place, the Japanese Fourth Army, under General **Michitsura Nozu,** began disembarking at Takushan, west of the Yalu River. As the Japanese net tightened around Port Arthur, Admiral Alekseev fled north to Kuropatkin's headquarters at Liaoyang.

The Siege of Port Arthur, 1904–1905

1904, May 25. Battle of Nanshan. Nanshan Hill, outpost of the Port Arthur defenses, was garrisoned by some 3,000 men. Oku's troops, assaulting frontally, were repulsed. Then the Japanese right wing, wading through the surf, turned the Russian left; the defenders were forced to withdraw hastily. In ferocity the fight was a prototype of future Japanese assaults. Oku's losses were 4,500 men out of 30,000 engaged. Russian losses were 1,500. The loss of Nanshan Hill uncovered the port of Dalny (Dairen), which became a Japanese base. Port Arthur was now ringed both by land and by sea. The Japanese Third Army, under General **Maresuke Nogi** (captor of Port Arthur from the Chinese in 1894), began concentrating at Dalny. Nogi was entrusted with the investment of Port Arthur, while Oku's Second Army turned northward to confront Stakelberg's offensive, reluctantly initiated by Kuropatkin on Alekseev's order (see p. 1012).

1904, June 1–22. The Opposing Forces at Port Arthur. While Nogi's strength built up, Stêsel—a most incompetent man—awaited attack in a dither. The fortress complex consisted

of 3 main lines: an entrenchment surrounding the old town itself; the so-called Chinese Wall, some 4,000 yards beyond, composed of a ring of permanent concrete forts linked by a network of strong points and entrenchments; and beyond that, outer works consisting of a series of fortified hills—some fully organized, others still incomplete. The garrison, not counting the fleet personnel, amounted to about 40,000 men and 506 guns. The food supply was insufficient for a long siege, but danger of starvation was far from immediate. Outside the fortress, Nogi's strength was gradually increasing. By the end of July, the Third Army had waxed to more than 80,000 men with 474 field and siege guns, an imposing force, but—given a competent opponent—insufficient for a successful assault against such a formidable fortified position.

1904, June 15. Japanese Naval Losses. Accidents and the loss of 2 battleships to Russian mines left Togo with only 4 battleships and a reduced cruiser force.

1904, June 23. Russian Naval Sortie. Admiral **Vilgelm Vitgeft,** Makarov's successor, whose damaged ships had been repaired, made a sortie, causing Togo some uneasiness due to his weakened strength. He prepared to meet the Russians, but Vitgeft evaded action and returned to port.

1904, June 26. Russian Land Sortie. Stëssel attempted a sortie, which was quickly checked.

1904, July 3–4, 27–28. Japanese Probings. These led to heavy but inconclusive fighting along the outer ring of forts.

1904, August 7–8. First Japanese Assault. Spurred by the evidence that the Russian fleet was still capable of action, Nogi attacked the eastern hill masses of the outer defense, which were captured after furious fighting.

1904, August 10. Naval Battle of the Yellow Sea. The Czar now ordered Vitgeft to break out and join the Vladivostok squadron, which was still at large, despite the searches by Kamimura's armored-cruiser squadron. Vitgeft steamed out with 6 battleships, 5 cruisers, and 8 destroyers. Togo closed with him by afternoon. Japanese gunnery was far superior to the Russian, and his 4 modern battleships threw more metal than their Russian counterparts. Both fleets suffered severe damage. After an hour and a half of action, a 12-inch shell struck Vitgeft's flagship *Czarevich,* killing the admiral. A confusion of orders followed and the Russian ships fled in disorder. One cruiser was sunk; several others ran for neutral ports and were interned. Most of the Russian ships got back into Port Arthur.

1904, August 14. Naval Battle of Ulsan. Kamimura's 4 armored cruisers fell on the 3 remaining ships of Admiral **Jessen**'s Vladivostok squadron in the Korea Strait, sinking the cruiser *Rurik.* The other 2 ships got away. Japan now had complete command of the sea.

1904, August 19–24. Second Assault. In close-packed frontal attack, the Japanese struck both the Chinese Wall fortifications on the northeast and 174 Meter Hill on the northwest. Russian machine-gun fire mowed the attackers down again and again. Much of the fighting was at night, but Russian searchlights and rockets sought out the Japanese. Both sides fought with reckless bravery. Nogi called off the attacks after losing more than 15,000 men. He had captured 174 Meter Hill and one of the outlying batteries of the eastern defenses. Otherwise the Russian position was unimpaired. Russian losses were but 3,000 men. Nogi, calling for heavy siege artillery, set himself to systematic sapping and mining of the fortifications.

1904, September 15–30. Third Assault. Nogi, having pushed siegeworks close to outlying hill positions on the north and northwestern faces of the fortress, made another close-massed frontal assault. The northern objectives were carried (September 19) and next day one of the northwestern positions. But 203 Meter Hill, the key point of the entire defense system, resisted all attacks. The assault columns were swept away again and again until the hill slopes were covered with Japanese corpses.

1904, October 1. Arrival of Japanese Siege Artillery. This included 19 28-cm. howitzers throwing 500-lb. projectiles 10,000 yards. Continuous bombardment hammered the

Russian defenses, while sapping and mining operations lapped about 203 Meter Hill. On the eastern face, Nogi prepared for a mass frontal attack.

1904, October 30–November 1. Renewed Assault. Beginning at 9 A.M., the Japanese struck the northern and eastern works simultaneously. Once more the Japanese infantry, in close columns, attempted to claw through a rain of machine-gun, artillery, and hand-grenade fire. Once more they were repelled with tremendous losses. The same slaughter operation was repeated next day. Within the fortress food was running short, while the sick list mounted, but news that the Russian Baltic Fleet had steamed from Libau (October 15) brought some cheer. The same news spurred the besiegers; at all costs the ships in Port Arthur must be destroyed lest the fleets unite and defeat Togo.

1904, November 26. Fifth General Assault. This was repulsed by the Russians at all points, costing 12,000 more Japanese casualties. Nogi now concentrated on the 203 Meter Hill position, which consisted of a huge redoubt, surrounded by barbed wire and flanked on both sides by smaller hills, also fortified. Some 2,200 men, under Colonel **Tretyakov,** manned the complex, which looked down on the harbor, only 4,000 yards away. In Japanese hands it would seal the fate of the Russian fleet.

1904, November 27–December 5. Capture of 203 Meter Hill. Following an all-day bombardment, the assault troops advanced in the dusk, reaching the barbed-wire entanglements, where they managed to hold all the next day, despite Russian fire. Meanwhile, bombardment of the crest continued. Until December 4, in assault after assault, the living attackers came stumbling over the dead in successive waves. Twice Russian counterattacks brushed back detachments that had gained footholds in the fort. The last handful of defenders was overrun after about 11,000 Japanese had died. Next day Japanese artillery fire from the hill began demolishing the Russian fleet in the harbor below. Togo's fleet steamed home to refit, preparatory to meeting the Baltic Fleet.

1905, January 2. Surrender of Port Arthur. Japanese assaults continued against the northern defenses of the fortress, despite freezing weather and heavy snows. The last fort fell on New Year's Day. Stëssel surrendered about 10,000 able-bodied but starving survivors of his garrison next day. The Japanese captured a vast quantity of guns, small arms, and foodstuff (a shocking indictment of Stëssel's mismanagement). Japanese losses in the siege totaled some 59,000 killed, wounded, and missing, with approximately 34,000 more sick. The Russians had lost 31,000. Nogi prepared to join the other Japanese armies in the north.

Operations in Central Manchuria

1904, June 14–15. Battle of Telissu. Stakelberg's advance toward Port Arthur was halted, and he entrenched, when confronted by Oku's Second Army. Oku attacked. Following a sharp encounter Stakelberg retreated to avoid envelopment. Russian losses were 3,600 out of 25,000 men engaged; Japanese casualties were 1,000 out of 35,000. Oku, advancing, attacked a Russian covering force at **Tashichia** under General **Zarubayev,** who successfully beat off the Japanese in a delaying action (June 24). Oku lost 1,200 men in the fight.

1904, July 17–31. Battle of the Moteinlung River. Keller's defensive group southeast of Liaoyang attacked Kuroki, who was advancing from the Yalu, but was repulsed. Kuroki, attacking in turn (July 31), met sharp opposition.

1904, August 1–25. Russian Retirement. Kuropatkin began pulling back all his advance detachments on Liaoyang, toward which point Kuroki, Nodzu (who had moved up from the coast), and Oku converged.

1904, August 25–September 3. Battle of Liaoyang. Field Marshal **Iwao Oyama,** now commanding all Japanese field forces, gathered his 3 converging armies against Kuropatkin's well-organized positions about Liaoyang. Oyama's strength totaled 125,000 against the 158,000 Russians, who had been reinforced by an army corps from Europe. Kuropatkin took

the offensive, but was checked within his own outpost zone. The Russian launched another assault, massing his main effort against Kuroki's First Army, on the Japanese left. Through mismanagement, the stroke was repulsed. As usual, aggressive Japanese tactics overcame preponderance in numbers. The results were indecisive; the Japanese had lost 23,000 men against the Russian 19,000. However, Kuropatkin believed himself defeated and began a systematic, well-managed withdrawal north toward Mukden. Oyama followed, his efforts at pursuit repulsed by effective Russian rear guards.

1904, October 5–17. Battle of the Sha-Ho. Kuropatkin, reinforced to 200,000 men, turned on Oyama's 170,000, concentrating his main effort against Kuroki's First Army, now on the Japanese right. While Kuroki dug in to hold the Russian attack, Oyama threw the weight of his strength violently against the weakened Russian center. The Japanese assault was so severe that Kuropatkin checked his own assault to reestablish his center (October 13). Both sides soon renewed their efforts (October 16–17) without decisive results. Russian losses totaled 40,000 men; the Japanese lost 20,000. Exhausted, both armies dug in.

1905, January 26–27. Battle of Sandepu (Heikoutai). Reinforced to 300,000 men, and with his troops organized in 3 armies—**Linievich, Grippenberg,** and **Kaulbars**—Kuropatkin took the offensive in an effort to crush Oyama's 3 armies, 220,000 strong, before Nogi's Third Army arrived from Port Arthur. Attacking in a heavy snowstorm, the Russians came close to victory. Had Kuropatkin pressed his initial advantage vigorously, the outcome of the war might have been completely different. As it was, after 2 days of most bitter action, Oyama's counterattacks brought a temporary stalemate.

1905, February 21–March 10. Battle of Mukden. The opponents, each entrenched and each about 310,000 strong, faced one another on a 40-mile front. Oyama, seeking an envelopment, attempted to turn the Russian right with Nogi's Third Army. By the end of the first day's fighting, the Russian right—Kaulbars' army—was forced back until it faced west, instead of south. Attack and counterattack followed in quick succession, Kuropatkin shifting his reserves to backstop his crumbling right. Oyama's envelopment was unsuccessful, though Japanese troops actually entered Mukden during two weeks of violent battle. Bringing up his reserves, Oyama reinforced Nogi, permitting him to again try to envelop Kaulbars. After 3 days of fighting (March 6–8), the Russian right flank had been pushed back so far that Kuropatkin feared for his line of communications. He disengaged in workmanlike manner and fell back on Tieling (Teihling) and Harbin, defeated but not routed. Some 100,000 Russians had fallen; much matériel was abandoned. Japanese losses were 70,000 or more. There was no further concerted action on land.

The Naval Campaign of Tsushima

1904, October 15–1905, May 26. Voyage of the Baltic Fleet. Commanded by incapable Admiral **Zinovy P. Rozhdestvenski,** the Baltic Fleet left its home ports of Revel (Tallin) and Libau (Liepaja). It met its first mishap a few days later in the North Sea, where a false alarm of Japanese torpedo attack brought down a hail of Russian gunfire on a British fishing fleet near Dogger Bank. Several British trawlers were damaged, at least 7 fishermen killed. This incident almost brought war with Britain, and British cruisers trailed the Russian armada until it had passed the Bay of Biscay. Two battleships and 3 cruisers were detached to pass through the Suez Canal, while the main body went around the Cape of Good Hope. Problems of coaling and repairs in neutral ports continually vexed the Russians' creaking progress. Reuniting at Madagascar, after a prolonged delay, the fleet finally started across the Indian Ocean (March 16). One last stop was made at Van Fong Bay in French Indochina, where the Russians prepared for battle. Then heading for Vladivostok, and accompanied by supply ships

and colliers, the fleet sailed north (May 14). As it approached Tsushima Strait, Rozhdestvenski's fleet comprised 8 battleships, 8 cruisers, 9 destroyers, and several smaller craft. Although imposing in paper strength, the force was a conglomeration of obsolescent or obsolete vessels, whose personnel was inferior in gunnery, discipline, and leadership to Togo's waiting fleet, which consisted of 4 battleships, 8 cruisers, 21 destroyers, and 60 torpedo boats.

1905, May 27. Battle of Tsushima. Rozhdestvenski entered the strait in line-ahead formation. To the northwest, Togo was steaming in similar formation. Both admirals led their respective main bodies—Rozhdestvenski in *Suvorov,* Togo in *Mikasa.* The Japanese turned to head northeast, hoping by superior speed to cross the Russian "T." Rozhdestvenski altered course to the northeast and then east, to avoid being raked. The action opened in early afternoon at 6,400 yards' range. Togo, at 15-knot speed, overhauled the 9-knot Russians and in less than 2 hours put 2 battleships and a cruiser out of action. The toll mounted as Togo brilliantly maneuvered his faster force around the hapless Russians. By nightfall, Rozhdestvenski had been wounded, 3 battleships (including his flagship) were sunk, and the surviving Russians, now under Admiral **Nebogatov,** were fleeing in confusion. Togo turned loose Kamimura's armored cruisers, the destroyers, and the torpedo boats to harry the exhausted Russians through the night. Next day, the destruction was completed. One cruiser and 2 destroyers escaped, to reach Vladivostok; 3 destroyers got to Manila and internment. The remainder of the Russian fleet was sunk or captured. The Japanese lost 3 torpedo boats. Russian casualties mounted to 10,000 killed and wounded; the Japanese lost less than 1,000 men in all.

Conclusions

1905, September 6. Treaty of Portsmouth, N.H. Both sides were ready to make peace. Japan's limited war objectives had been won, while Russia, seething with internal discontent, had no stomach for continuing. Through the efforts of President Theodore Roosevelt, peace negotiations led to a treaty. Russia surrendered Port Arthur and one-half of Sakhalin, and evacuated Manchuria. Korea was recognized as being within Japan's sphere of influence.

COMMENT. *Tactically, the war on land made plain the enormous defensive value of the machine gun and the offensive value of indirect artillery fire. Strangely, western observers failed to grasp fully the lesson of the machine gun. The Russian soldier once more proved his stoic courage in adversity, regardless of the incapacity of most of his officers. The Japanese displayed considerable professional skill and fanatical devotion to duty. The Battle of Tsushima—first and last great fleet action of the ironclad predreadnought era—was also the greatest naval battle of annihilation since Trafalgar. It emphasized that both seamanship and gunnery were still essential to victory at sea. Psychologically and politically, Japan's victory in the war marked a turning point in world history. Asia woke to the fact that the European was not always invincible; "white supremacy," as such, became a shibboleth.*

Italo-Turkish War, 1911–1912

1911, September 29. Italy Declares War. Italy's objective was to conquer Libya and gain a foothold in North Africa, so as to counterbalance the French colonial empire in Algeria, Tunisia, and Morocco.

1911, September 29–30. Italian Bombardment of Preveza. During the attack on the Epirus coast town, the Italian fleet sank several Turkish torpedo boats.

1911, October 3–5. Italian Bombardment of Tripoli. During the bombardment, Turkish forces evacuated the Libyan capital; an Italian naval landing force then seized the town (October 5). At the same time another naval force was occupying Tobruk (October 4).

1911, October 11. Italian Expeditionary Force Reaches Tripoli. Italian troops took over from the navy. At the same time other landings were made at Homs, Derna, and Benghazi. Turkish resistance was spotty.

1911–1912. Stalemate in Libya. Turkish propaganda so inflamed the Moslem population that cautious Italian General **Carlo Caneva** confined his activities to the coastal zone.

1912, April 16–19. Italian Naval Demonstration off the Dardanelles. The Turks closed the straits and hastily prepared for an invasion; the Italians withdrew without further action.

1912, May. Seizure of the Dodecanese. Italian naval forces occupied Rhodes and other islands.

1912, July–October. Italian Offensive in Libya. Finally pushing out of their coastal enclaves, the Italians began a systematic expansion of their control in Libya, which culminated in clear-cut victories over outnumbered Turkish forces at **Derna** and **Sidi Bilal** (near Zanzur).

1912, October 15. Treaty of Ouchy. The threatened outbreak of the Balkan War (see below) caused Turkey to seek peace, which was concluded after 2 months of negotiations. Libya and (after further negotiations) Rhodes and the Dodecanese Islands were ceded to Italy. The conduct of the war against negligible opposition had not enhanced Italian military prestige.

The Balkan Wars, 1912–1913

The First Balkan War, 1912–1913

Outbreak of the War

1912. Formation of the Balkan League. Bulgaria, Serbia, and Greece, seeking to eliminate Turkish power in the Balkans and to increase their own territorial areas, entered into military alliance in the hope of taking advantage of Turkey's war with Italy. Tiny Montenegro was informally associated. The pretext for war was Turkish misrule in Macedonia. Turkey had about 140,000 troops in Macedonia, Albania, and Epirus; another 100,000 were in Thrace. The allies were rightly confident that Greek command of the Aegean would prevent rapid and direct transfer of other Turkish forces to the Balkans. Bulgar active strength was approximately 180,000, Serb 80,000, and Greek 50,000, and each had about an equal number of trained, readily mobilizable reserves. Montenegrin militia strength, capable only of guerrilla operations, was about 30,000. Courage and stamina of the opposing forces were equal, but Turkish tactical leadership was inferior to that of the allies, despite recent German assistance in reorganization of the Ottoman Army.

1912, October 17–20. The Allied Invasions. Almost simultaneously the allies moved into Turkey's European provinces. Three Bulgar armies under General **Radko Dimitriev** invaded Thrace, moving generally on Adrianople. In Macedonia, General **Radomir Putnik**'s 3 Serbian armies from the north and Crown Prince **Constantine**'s Greek army from the south converged on the Vardar Valley with the intention of compressing hastily grouping Turkish elements between them.

Operations in Macedonia

1912, October 20–November 5. Greek Advance. While a small force invaded Epirus in the west, Constantine's main army pressed on to the lower Vardar Valley. He defeated the Turks at **Elasson** (October 23). Most of the Turkish force withdrew toward Monastir, but Constantine did not pursue since, contrary to prior agreements, a Bulgarian division (ostensibly aiding the Serbian invasion) was advancing toward Salonika, which was coveted by both Bulgars and Greeks. Constantine headed eastward to try to forestall the Bulgarians. Turkish resistance in unexpected strength at **Venije Vardar** at first held up the Greek advance (November 2–3). At the same time other Turkish units defeated Constantine's flank detachments at **Kastoria** and **Banitsa.** Despite these setbacks, Constantine finally overwhelmed the Turks at **Venije** (November 5) and pressed on to Salonika. The isolated Turks to his northwest withdrew to Yannina (Ioannina).

1912, October 20–November 4. Serbian Advance. The Serbs met and defeated a Turkish covering force at **Kumanovo** (October 24). Turkish resistance stiffened in the **Babuna**

Pass, near Prilep, and checked the Serbs until a threatened double envelopment in the hills forced the Turks to evacuate Skoplje and to retreat on Monastir. There, reinforced to a strength of 40,000, they again gave battle.

1912, November 5. Battle of Monastir. A Serb division impetuously stormed commanding ground to threaten an envelopment of the Turkish left. An Ottoman counterattack, with reinforcements drawn from the center of their line, retook the height, almost annihilating the Serb division. But the Turk center was so weakened that a Serbian frontal attack broke through. Faced with a threatened Greek advance from the south, Turkish resistance collapsed. Nearly 20,000 Turks were killed or captured. The remainder, scattering to the west and south, finally reached the fortress of Yannina, where they were besieged by the Greeks.

1912, November 9. Capture of Salonika. In the face of Greek preparations for an all-out assault, the Turkish garrison of 20,000 surrendered. Constantine occupied the city 1 day before the frustrated Bulgarian division arrived. This incident, and the subsequent dispute over possession of Salonika, worsened relations between the Bulgarians and the Greeks.

1912–1913. Sieges of Yannina and Scutari. By the end of the year, the only Turkish forces still holding out west of the Vardar were the garrisons of Yannina (besieged by the Greeks) and Scutari (Shkodër; besieged by the Montenegrins).

Operations in Thrace

1912, October 22–December 3. Bulgarian Advance. The First, Second, and Third Bulgarian armies advanced on a broad front. Simultaneous meeting engagements with Turkish forces under **Abdalla Pasha** took place at **Seliolu** and **Kirk Kilissa** (October 22–25). The fighting at Kirk Kilissa was particularly severe, but the Turks were defeated in both actions. Falling black, Abdalla regrouped, facing west along the 35-mile-long line from Lüle' Burgas (Lüleburgaz) to Bunar Hisar (Pinahisar), with his right anchored in the mountains. The Bulgarian Second Army, on the right, invested Adrianople, while the other 2 armies wheeled eastward against the Turkish position.

1912, October 28–30. Battle of Lüle' Burgas. A Bulgarian piecemeal attack on the north was repulsed, but as the battle spread along the overextended Turkish front, Abdalla was forced to fall back. The Turks reorganized behind the permanent fortifications of the Chatalja (Çatalca) Line, between the Black Sea and the Sea of Marmora, protecting Constantinople.

1912, November–December. Siege of Constantinople. The Bulgars, launching a premature assault, were driven back with heavy loss (November 17–18). A stalemate continued along the Chatalja Line until an armistice temporarily ended hostilities (December 3). Adrianople remained in Turkish possession. Greece and Montenegro ignored the armistice.

Concluding Operations

1912, December 17–1913, January 13. London Peace Conference. Representatives of the combatants and of the European Great Powers vainly endeavored to settle their conflicting aims with respect to the Balkans and the crumbling Turkish Empire; the conference collapsed.

1913, January 23. Coup d'État at Constantinople. The Turkish government was overthrown by the Young Turk nationalistic group, led by **Enver Bey.** The Young Turks at once denounced the armistice, and hostilities resumed (February 3).

1913, March 3. Fall of Yannina. The Turkish garrison of 30,000 surrendered to Crown Prince Constantine.

1913, March 26. Fall of Adrianople. A combined Bulgar-Serb siege operation ended with a 2-day assault against the eastern face of the fortress, breaching the Turk lines, despite an allied loss of 9,500 men. **Shukri Pasha** surrendered his garrison of 60,000.

1913, April 22. Fall of Scutari. A Serb force had

come to the assistance of the irregular Montenegrin besiegers, but left after a month of continuing disagreements (April 16). The Turks then surrendered to the Montenegrins.

1913, May 30. Treaty of London. The Great Powers finally imposed an uneasy peace on the combatants. Turkey lost all of her European possessions save the tiny Chatalja and Gallipoli peninsulas. Bitter squabbles broke out between Bulgaria, on the one hand, and the Greeks and Serbs, on the other, over the division of conquered Macedonia. Montenegro was forced to abandon Scutari to the newly established state of Albania.

Second Balkan War, 1913

Bulgaria's 5 armies were arranged as follows: the First faced the Serbs between Vidin and Borkovitsa, with the Fifth on its left. The Third lay above Kustendil, the Fourth about Koccani and Radaviste (Radovic). The Second faced the Greeks between Strumitsa (Strumica) and Serres (Serrai). The Serb Second Army was on the old Serb-Bulgar frontier; the First, in the center, at Kumanovo and Kriva Palanka. The Third, on the right of the First, was concentrated along the Bregalnica. The Greeks were assembled between the lower Vardar and the mouth of the Struma.

1913, May 30–June 30. Bulgarian Attacks. The Fourth and Third armies, moving to the Vardar, attacked the Serbs without a declaration of war. The Second Army drove in Greek advance elements. Both Serbs and Greeks were disposed in depth, however, and the Bulgar attack lost its momentum.

1913, July 2. Allied Counterattack. Putnik, responsible for the Serbian defensive success, now seized the initiative. While the Third Serbian Army checked the Bulgars on the upper Bregalnica, the First Army broke through, driving on Kyustendil and pushing the Bulgars back in a northeasterly direction. The Greeks (July 3–4) forced the Second Bulgarian Army back, outflanking the Bulgar left (July 7) and driving them north up the Struma Valley. A counteroffensive by the Third and Fourth Bulgarian armies against the Serbian Third, toward the upper Bregalnica, was soon checked (July 10).

1913, July–August. Rumanian and Turkish Intervention. Rumania declared war against Bulgaria (July 15) and moved her troops, practically unopposed, toward Sofia. At the same time the Turks issued from the Chatalja Line and from Bulair (Bolayr) to reoccupy Adrianople. A Bulgar attempt to regroup and attack the Greeks in the Struma Valley was unsuccessful. Bulgaria sued for peace (July 13) and hostilities ended (**Treaty of Bucharest,** August 10).

COMMENT. *Bulgaria's success in the First Balkan War caused her to underestimate her former allies' military capacity. The end result of the Second Balkan War was to deprive the Bulgars of all gains made in the previous conflict.*

WORLD WAR I

The Background

1914, June 28. Assassination of Archduke Franz Ferdinand. The heir to the Austro-Hungarian throne and his wife were murdered by a Serb terrorist in Bosnian Sarajevo. This toppled the power balance between Europe's 2 armed camps—the Triple Alliance of Germany, Austria-Hungary, and Italy vs. the Triple Entente of France, Russia, and Great Britain. Austria-Hungary, eager to expand in the Balkans and relying on German support,

delivered an ultimatum to Serbia (July 23), which was accepted only in part. Serbia mobilized (July 25).

1914, July 28. Austro-Hungarian Declaration of War.

1914, July 28–August 6. The Initial Line-up. Russia ordered mobilization against Austria, whereupon Germany declared war against her (August 1), but (in accordance with her Schlieffen Plan; see p. 1020) began invasion to the west through neutral Luxembourg and Belgium, and declared war against France (August 3). Great Britain declared war on Germany because of invasion of neutral Belgium (August 4), Austria-Hungary against Russia (August 6). Italy temporarily remained neutral, cynically pitting her desire to be on the winning side against her obligations to the Triple Alliance, which she claimed were void due to Austrian initiation of the war. Overseas, the United States, stirred by conflicting ancestral urges, became a much-confused spectator.

The Opposing Forces

Except for Britain, the troops of each of the combatants were conscripts, welded by a hard core of career officers and noncoms. Fifty percent of German youth reaching military age were conscripted for 2 years' service; France, with a smaller population, called 80 percent of her available youth for 3 years' service. These men remained in reserve cadres after leaving active service; the German system was more highly organized than was the French.

The normal continental infantry division was approximately 16,000 strong, organized in 2 infantry brigades (4 3-battalion regiments), an artillery brigade of 12 6-gun batteries of light and medium guns, and supporting engineer, signal, medical, and supply units. Usually, 1 cavalry regiment was attached. An army corps consisted of 2 or 3 divisions. Small independent cavalry divisions, normally organized in corps of 2 or more divisions each, were standard in continental armies.

The best-equipped and trained army of 1914 was the German; its preponderance of available medium and heavy artillery was a great advantage. Behind the army was a well-knit industrial organization. Despite an offensive doctrine, units were also trained in defensive tactics.

The French Army, with one vital exception, ranked second to the German in general efficiency. French doctrine of the period was based on complete dedication to the offensive; defensive tactics were almost completely disregarded. The French were unskilled in defensive organization of the ground, field fortification, and defensive application of machine-gun fire.

The French did possess the finest field gun of its time—the famous French 75-mm.—prototype of 20th-century pre-atomic artillery. But, secure in the knowledge that this weapon surpassed anything possessed by their opponents, the French had neglected medium and heavy artillery. Actually, in the beginning there were but some 300 French pieces of larger caliber than 75-mm. to oppose 3,500 German heavier weapons. French battery organization—4 guns against 6—was another handicap.

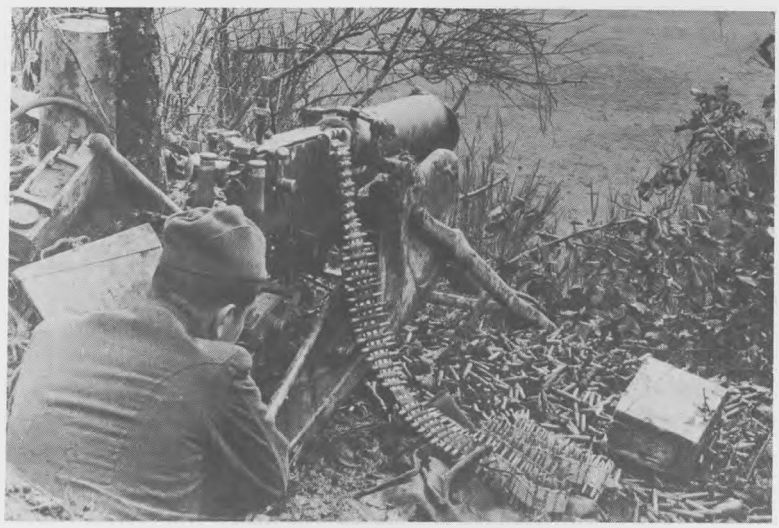
The Austro-Hungarian Army was patterned on the German, but a poor general staff and the language barrier—75 percent of the officers were of Germanic origin, while only some 25 percent of the enlisted men could understand the language—were handicaps. Greatest bar to efficiency was the poor morale of its many discontented Slavic racial groups, with little or no loyalty to the Hapsburg Crown, many of them sympathizing with Russia.

The Russian Army, strong in docile, hardy, and fatalistically brave man power, suffered from severe shortages in matériel and munitions. Its high command, except for Grand Duke

French 75 and American artillerymen

Nicholas, who was suddenly made commander in chief on August 3, and a very few others, was careless and incompetent, as was its general staff.

In sharp contrast to the continental forces, the British Regular Army was composed of volunteers enlisted for a 7-year period. Under well-qualified career officers, its morale, discipline, and steadiness were high; individual marksmanship and fire discipline were excellent. The British Expeditionary Force (BEF) of 150,000 men—6 infantry and 1 cavalry divisions,



German machine gun

with supporting troops—would play a role in the opening campaign far beyond that indicated by its strength. Behind the regulars was the Territorial Army, a volunteer militia, inadequately trained and equipped.

All these armies entered the war with tactical indoctrination differing little from that of the Franco-Prussian War, but with new and improved weapons. Despite the example of the Russo-Japanese War, the latent power of the machine gun had not been appreciated—2 to each infantry battalion being the general rule. But the thorough Germans had conducted exercises in defense and in the attack and reduction of fortifications. And they had an almost perfect strategical plan, evolved in 1905.

Plans and Preparations

German Preparations; The Schlieffen Plan

Germany put into effect a modified version of the plan which had been evolved by General Count **Alfred von Schlieffen,** former chief of the German General Staff (1891–1906), for use in the event of a 2-front war against France and Russia. It was to hold the slowly mobilizing Russians on the east in check with a minimum of force, while the full weight of the German Army would crush France, the more dangerous enemy, in the west.

Schlieffen, who retired in 1906 shortly after his plan was adopted, correctly deduced that upon a declaration of war France would attack immediately; she would not violate the neutral territories of the Low Countries or Switzerland; and French concentration would take place generally between Belfort and Sedan, with the objective of seizing Alsace and German Lorraine.

Schlieffen planned a German feint and then withdrawal in Alsace-Lorraine to further entice the French into a major offensive there. Meanwhile, the bulk of the German field forces, 35 1/2 corps in 5 armies, pivoting on the fortified region of Thionville-Metz, would envelop the entire French Army by a wide sickle movement, which would drive through Belgium and the Netherlands and whose outer tip would pass well to the west of Paris. The French, thus attacked from the rear behind their left flank, would be rolled up to destruction against the German fortified positions in Alsace-Lorraine, or driven into Switzerland and internment.

Meanwhile, in East Prussia, small forces would withdraw slowly in the face of a Russian advance. By the time these had been forced back to the Vistula, Schlieffen expected that France would be defeated. The main German armies would then be transported eastward by Germany's excellent railroad system to crush the Russians in another lightning campaign.

If carried out as conceived, this plan might have ended the war in a few weeks. However, Schlieffen's successor, General **Helmuth von Moltke** (nephew of the hero of the Franco-Prussian War), began tinkering with it. His first modification was to refrain from violating Dutch neutrality. Thus the 2 northernmost (and strongest) of the 5 enveloping German armies would be crowded and slowed up through the Liège bottleneck in Belgium. Then Moltke, reluctant to surrender any German territory, limited the proposed strategic withdrawal of the left-wing armies before the French advance in Alsace-Lorraine. For similar reasons, he planned diversion of additional forces to East Prussia, which was to be defended near the frontiers, instead of a slow withdrawal to the Vistula in the delaying campaign envisaged by Schlieffen. As a result, the revised plan on which the Germans operated put only 60 percent of German

mobile field forces in the right-wing blow against France instead of Schlieffen's proposed 90 percent. The right wing totaled about 1,500,000 men; the left-wing armies in Alsace and Lorraine were 500,000 strong; there were about 200,000 men in the army defending East Prussia, and another 200,000 along the remainder of Germany's eastern frontiers.

French Preparations; Plan XVII

France planned on a concentration along her eastern frontier and an immediate attack through Alsace-Lorraine, exactly as Schlieffen had anticipated. This concept was the essence of French "Plan XVI" in 1911. Then General **Victor Michel,** the new commander in chief of the French Army, believing that any German invasion would come through Belgium rather than across the difficult terrain of Alsace-Lorraine, proposed a radical reorganization. He projected a French invasion through Belgium, regardless of her neutrality, to forestall the Germans. Had the Michel Plan been accepted, the opposing major offensives would have met head on. But this concept was rejected and Michel was relieved of command, General **Joseph J. C. Joffre** replacing him. A watered-down straddle, "Plan XVII," was adopted. The French main effort would be an immediate 2-pronged offensive into Alsace-Lorraine, passing both north and south of the Thionville-Metz area. At the same time, 2 French armies were to be prepared to shift westward if the Germans did in fact violate Belgian neutrality.

Joffre placed too much reliance on the ability of the Russian Army to engage Germany in the east. He relied also on close coordination with the BEF, which was expected to reinforce the French left flank. He also gambled—successfully—that Italy would leave the Triple Alliance. But above all, he and his general staff grossly underestimated the immediately available German strength. The French believed the German active Army to be too weak to drive west of the Meuse, and did not believe that they would employ their reserves without some refresher training. Actually, the German reserve elements were in such advanced training that they were immediately available for first-line use, thus giving them a substantial and unexpected 3-2 numerical edge over the 1,300,000 French in the opening battles.

The Russian Plan

This called for immediate, simultaneous offensives against both Germany and Austria, disregarding the fact that slow Russian mobilization could not be completed for 3 months. After the outbreak of war, Grand Duke **Nicholas,** the Czar's newly appointed commander, was coaxed by pressure from the French high command into speeding up these precipitate offensives. The result was to be disastrous defeat in East Prussia, but the premature Russian offensives into Galicia would be partially successful because of greater Austrian ineptitude.

Austrian Plans

General **Franz Conrad von Hötzendorf,** dynamic Austrian Chief of Staff, had evolved 2 plans: Plan B for war against Serbia alone, Plan R for war against both Serbia and Russia. He chose the former, then changed his mind after concentration began. As a result, 1 of his 6 armies would not be available for action on either front when Conrad ordered advances into Serbia

and into Galicia against the Russians. Even if it had been, it is doubtful that Austria would have had sufficient superiority of force to justify 2 simultaneous offensives.

The Naval Situation

The British Navy commanded the seas—28 dreadnoughts and battle cruisers to Germany's 18. Above all, the British Navy was ready to fight, thanks to the fore sight of First Lord of the Admiralty **Winston Churchill** and the First Sea Lord, Prince **Louis of Battenberg.** The German Navy had comparable standards of efficiency, but was hampered by deficiencies in bases as well as numbers. The Russian, French, and Austrian navies were limited in strength and were to play only minor roles.

COMPARATIVE NAVAL STRENGTHS—AUGUST, 1914

	BRITISH			GERMAN		
	Total	*Home Waters*	*Grand Fleet*[a]	*Total*	*Home Waters*	*High Seas Fleet*
Dreadnoughts[b] (modern battleships)	20	(20)	(20)	13	(13)	(13)
Battle Cruisers[c]	8	(4)	(4)	5	(4)	(4)
Old Battleships[b]	40	(38)	(10)	22	(22)	(10)
Cruisers[d]	102	(48)	(21)	41	(32)	(17)
Destroyers	301	(270)	(50)	144	(144)	(80)
Submarines	78	(65)	(9)	30	(30)	(24)[e]

[a] Numbers of cruisers and destroyers in the Grand Fleet are approximate, and varied considerably during early days of war.

[b] Dreadnoughts were modern, big-gun ships, completely outclassing all old battleships (see discussion in text). Britain had 2 more dreadnoughts completed, but not yet ready for action, and 15 under construction (including 3 that had been intended for other nations). Germany had 3 more completed, but not yet ready for action, and 4 under construction.

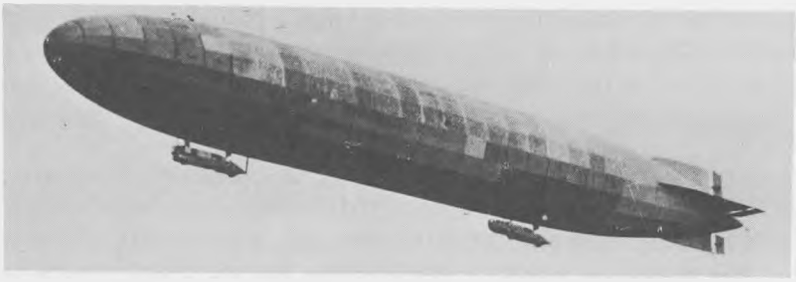
[c] Vessels carrying heavy guns similar to dreadnoughts, but with thinner armor and greater speed. Britain and Germany each had one additional battle cruiser completed but not yet ready for action. Britain had 1 building; Germany had 2 building.

[d] Included old armored cruisers and smaller, but faster and better armed, light cruisers.

[e] Records are conflicting on exact number of German submarines in commission. This figure is approximately correct.

Air Power in 1914

Negligible at the outset, aviation gradually would develop from a reconnaissance into a combat role. Lighter-than-air craft, particularly the German Zeppelin rigid dirigibles, were used from the beginning for both reconnaissance and bombing roles. Captive balloons for artillery observation were also used from the outset.



German Zeppelin dirigible

Operations in 1914

Western Front

The Opening Battles

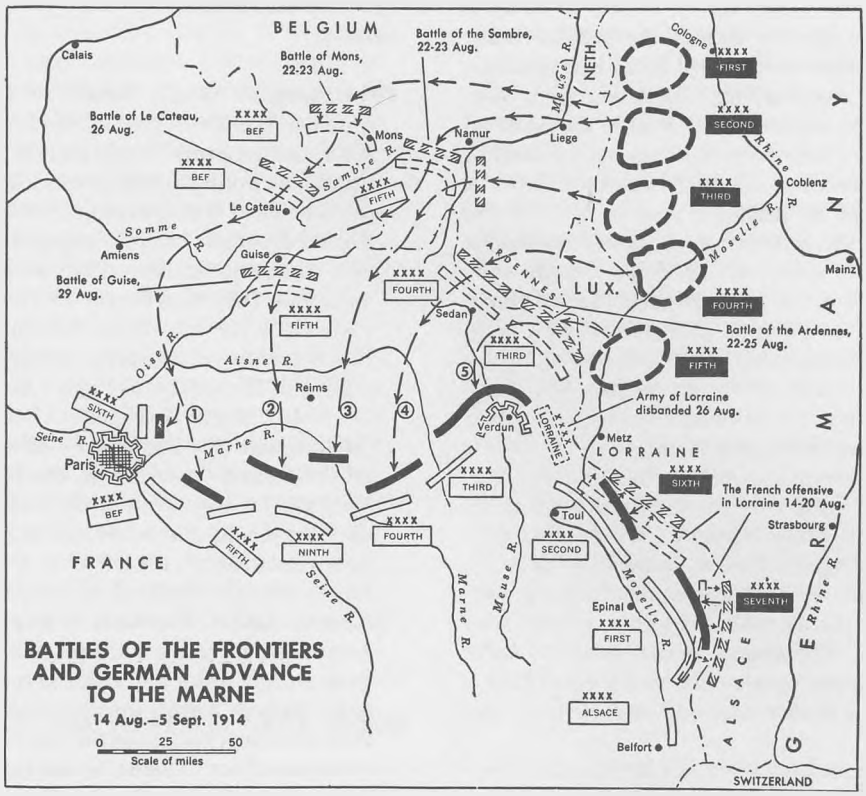
1914, August 3–20. Belgium Overrun. A specially trained German Second Army task force of about 30,000 men under General **Otto von Emmich** crossed the Belgian frontier between the Ardennes and the Dutch border, a narrow corridor guarded by Liège, one of the strongest fortresses of Europe. A night attack (August 5–6) penetrated the ring of 12 outlying forts. Heavy fighting followed, in which German Major General **Erich F. Ludendorff** distinguished himself, as did the Belgian commander, General **Gérard M. Leman.** German bombardment by 42-cm. howitzers (heaviest used to this time) systematically reduced the concrete and steel cupolaed defenses. Liège surrendered (August 16). The German First Army (General **Alexander von Kluck**) and the Second (General **Karl von Bülow**) poured through the Liège corridor and across the Meuse. Hastily mobilized Belgian field forces were brushed aside to the north of **Tirlemont** (August 18–19) and Brussels occupied (August 20). After some skirmishing along the Meuse (August 12–16), the Belgians, personally commanded by King **Albert,** fell back on the fortress of Antwerp.

1914, August 14–25. Battles of the Frontiers. The Germans and the Anglo-French armies met each other head on in 4 almost simultaneous actions.

1914, August 14–22. Battle of Lorraine. An early advance to Mulhouse in Alsace (August 8) by the French right-wing Army of Alsace (General **Paul Pau**) was followed by a full-scale offensive southeast of Metz by the French First (General **Auguste Dubail**) and Second (General **Noël de Castelnau**) armies (August 14–18). After planned withdrawals, the German Sixth (Prince **Rupprecht** of Bavaria) and Seventh (General **Josias von Heeringen**) armies turned in violent converging counterattacks. The French were thrown back to the fortified heights of **Nancy,** where they barely managed to stop the German drive. The French XX Corps, under General Ferdinand Foch, played a decisive role in holding Nancy.

1914, August 20–25. Battle of the Ardennes. The advancing French Third (General **Pierre Ruffey**) and Fourth (General **Fernand de Langle de Cary**) armies met headlong the German Fourth (Duke **Albrecht of Württemberg**) and Fifth (Crown Prince **Wilhelm**) armies, comprising the pivot of the Schlieffen Plan maneuver. After 4 days of furious fighting, the outnumbered French were repulsed with shocking losses, falling back to reorganize west of the Meuse, with their right flank on the fortress of Verdun.

1914, August 22–23. Battle of the Sambre. To the north, the German First, Second, and Third (General **Max von Hausen**) armies



were beginning to sweep west and southwest. In accordance with the contingency provisions of Plan XVII, Joffre ordered the French Fifth Army (General **Charles Lanrezac**) into the Sambre-Meuse angle to meet this unexpected move. The German Second and Third armies struck Lanrezac southwest of Namur, defeating him and forcing him to retreat. The Belgian defenders of **Namur** were hammered into submission by some of Bülow's troops and siege guns after a brief siege (August 20–25).

1914, August 23. Battle of Mons. The British Expeditionary Force (Field Marshal Sir **John French**), 4 divisions and over 100,000 strong, had promptly and efficiently crossed the Channel and concentrated in the vicinity of Le Cateau, left of the French Fifth Army. Upon Joffre's request, the BEF moved into Belgium in cooperation with Lanrezac's advance toward Namur (August 21). Near Mons the British were struck by the full weight of aggressive von Kluck's First German Army. Outnumbered, the British fought back stoutly, their fire discipline taking heavy toll of the close German formations. Sir John French was prepared to continue the fight next day, but the retreat of Lanrezac's Fifth Army from the Sambre left him without support; the BEF therefore withdrew during the night. French was bitter about Lanrezac's unannounced withdrawal, which he believed had jeopardized the existence of his own BEF.

COMMENT. *The French offensive had failed completely—at a cost of some 300,000 casualties. But Moltke overestimated the extent of the German victory. His communications with his armies were poor, his information faulty. Believing that the success in*

Lorraine was a decisive victory, he ordered his left to continue its offensive against the fortified Nancy heights, hoping thus to obtain a double envelopment of the entire French field forces. The Ardennes and Sambre battles he also considered decisive, and so he renewed the orders for his right-wing armies to continue their sicklelike sweep, with the First Army still to swing west of Paris. He decided to send to the Sixth and Seventh armies reinforcements originally intended for the right-wing armies, to provide more weight to his new offensive in Lorraine. Confident that the French armies were on the verge of destruction, he also detached 2 corps from the right to hasten by railroad to the Eastern Front, where the Russians had shown unexpected initiative. (Ironically, these 2 corps, whose absence would vitally affect the outcome of the Battle of the Marne, were still en route at the time the Battle of Tannenberg made their presence unnecessary in the east.) As a result of these and other detachments to contain the Belgian Army at Antwerp and to besiege the French fortress of Maubeuge, the 3 German right-wing armies had been bled from a total strength of 16 corps to 11. The already watered-down Schlieffen Plan—dependent upon a right-wing hammer blow—was thus still further modified from the concept of its creator.

Joffre, on the other hand, had kept close touch with his subordinate commanders and was well aware of the actual situation. He knew that, despite tactical defeats, morale of his troops was still high. He was now also aware of the German plan. Seemingly oblivious of the disastrous results of his own Plan XVII, he calmly prepared for a counterattack. This would be a Schlieffen Plan in reverse, pivoting about Verdun and the Nancy heights, where his First and Second armies were ordered to hold on at all costs. While the Third, Fourth, and Fifth armies and the BEF were to continue their southwesterly withdrawals, Joffre drew units from his embattled right flank and from reserves in the interior of France to create 2 new armies. The Sixth, under General **Michel J. Maunoury,** *was to assemble—first near Amiens, later in and around Paris—west of the German right wing, prepared to attack east. The Ninth, under General Foch, would be gathered in close support behind and between the Fourth and Fifth armies to provide weight for a counterattack against the German main effort. This attack was to be launched when the 4 Allied left-flank armies had fallen back to the general line of the Somme River-Verdun.*

1914, August 25–27. Battle of Le Cateau. Marshal French's BEF, hard-pressed by the German First Army, fought daily rear-guard actions. Attempting a stand (August 27) to relieve his exhausted II Corps troops, General **Horace Smith-Dorrien** became engaged in the biggest battle the British Army had fought since Waterloo. This corps fought off a double envelopment by the full strength of Kluck's army; the survivors successfully disengaged when night fell. The price was high: 7,800 casualties out of 40,000 men engaged.

1914, August 29. Battle of Guise. Joffre, to relieve German pressure on the BEF, ordered the Fifth French Army, itself pressed hard by the German Second Army, to make a 90° shift westward to attack the left flank of the German First Army. The initial attack got nowhere, but General **Louis Franchet d'Esperey,** commanding Lanrezac's I Corps, smartly moved from reserve to hit and halt the pursuing German Second Army, thus achieving the first French tactical success in the campaign. Bülow called on Kluck (August 30) for help.

1914, August 30–September 2. Kluck's First Dilemma. The German First Army had driven the BEF from its front; for the time being—as Kluck saw it—the British were out of the picture. On the right, some slight clashes had occurred with French troops (actually part of Maunoury's assembling Sixth Army, but in Kluck's opinion unimportant scattered elements). Bülow on the left had called for help. Aggressive Kluck, thinking the French Fifth Army now to be the left-flank unit of the opposing field forces, and unable to communicate with Moltke, threw the remnants of the Schlieffen Plan into the discard. He shifted his direction of march to the southeast to roll up the Fifth Army (August 31). This change would cause him to pass east of Paris; he knew nothing of the French concentration in the fortified area of the capital. By September 2, Kluck's left flank was on the Marne at Château-Thierry, his right on the Oise, near Chantilly.

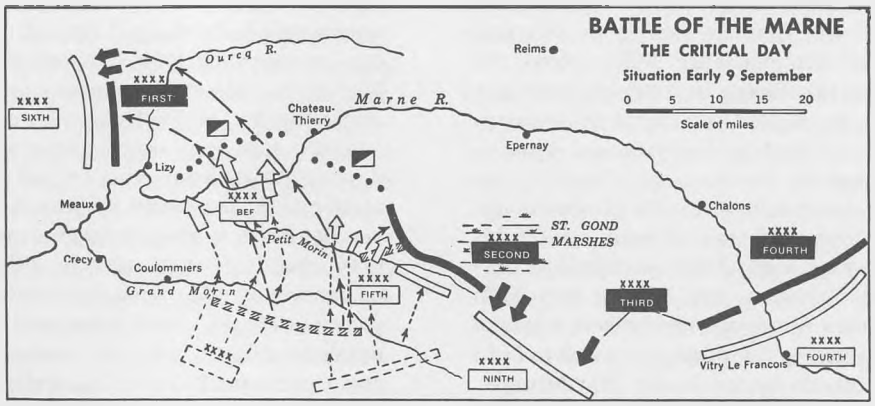
1914, September 1–2. Joffre's Reaction. Aware of the German change in direction through air reconnaissance, Joffre ordered the Sixth Army to complete its concentration in the Paris area. He ordered the general retirement to continue until the Fifth Army was out of immediate danger of envelopment. Thus he was forced to abandon his originally planned counterstroke from the Somme-Verdun line. Foch's newly forming Ninth Army continued its concentration between the Fourth and Fifth armies. Joffre was concerned by British lack of responsiveness to his orders, but a visit to Field Marshal French by the British War Minister, Field Marshal **Lord Kitchener,** soon changed Sir John's attitude and he began to cooperate.

1914, September 3–4. Kluck's Second Dilemma. Belatedly Moltke sent a message to Kluck, agreeing to the move east of Paris, but complicating matters by ordering Kluck to guard the right flank of the Second Army, which would thus become the spearhead of the modified German wheel. But Moltke, whose intelligence had informed him of the French concentration near Paris, did not realize that his First Army had been moving at amazing speed under Kluck's driving leadership, and that its advance units were much farther south than those of the slower-moving Second Army. And Moltke failed to explain the reason for his order. For Kluck to have obeyed the order would have meant halting his army for 2 days, which he believed would permit the French either to escape or to rally. Again being unable to communicate directly with his commander, unaware of the situation in Paris, and trying to act in accordance with the apparent intention of Moltke's order, Kluck reasoned that its purpose was to assure that the French were driven southeast of Paris. His own First Army was ideally situated for this task. Accordingly, pugnacious Kluck continued southward, across the Marne, his right flank wide open, just east of Paris.

Battle of the Marne, September 5–10

Joffre's counterattack order (September 4) directed the Sixth Army to attack eastward toward Château-Thierry; the BEF was to move on Montmirail, with the Fifth Army, supported by the Ninth, prepared to conform. The Fourth Army would hold, prepared to advance, and the Third would strike westward from Verdun. On the success of this proposed double envelopment of the German right wing, as Joffre well knew, rested the fate of France. September 6 was to be D day.

Meanwhile, Maunoury's Sixth Army, temporarily under the regional command of General **Joseph S. Galliéni,** energetic military governor of Paris, had begun to carry out Joffre's warning orders by an advance from Paris toward the Ourcq River, where Kluck's right flank lay invitingly open. Only the aggressive initiative of the German right-flank corps commander, General **Hans von Gronau,** saved Kluck's army from surprise envelopment (September 5). As it was, Kluck believed that the French activity on his right was only a spoiling attack and merely detached one additional corps to help Gronau to repel it, while pressing southward with the rest of his army in pursuit of the BEF and the French Fifth Army. Not until this **Battle of the Ourcq** had raged for 2 days did Kluck realize the French intentions (September 7). By this time most of his army was south of the Marne. Pulling back north of the river, Kluck rapidly changed his front and turned his entire army westward in savage counterattacks that halted the French and forced Maunoury to fall back on the defensive (September 7–9). Only the arrival of reinforcements rushed from Paris by Galliéni—some in commandeered taxicabs—permitted Maunoury to stem the impetuous German advance.



By this time the action had become general along the entire front west of Verdun. Kluck's westward shift, undertaken on the assumption that the BEF was no longer a threat, widened the already existing gap between his army and that of von Bülow, which was still moving south. Into this gap now moved the BEF, slowly, since Marshal French underrated the recuperative powers of his troops. Franchet d'Esperey's Fifth Army (Lanrezac had been relieved) battered at part of the German Second Army along the **Petit Morin.**

Farther southeast, Foch's Ninth Army, attacking north at **St.-Gond,** found itself confronting the rest of the Second Army while Hausen's Third Army struck its right. A surprise night bayonet attack by 4 divisions of Hausen's army threw part of Foch's army into confusion (September 8). Foch's response was to order an immediate renewal of his own assault; the German advance was halted, but Foch's position was precarious.

At **Vitry-le-François,** Langle de Cary's Fourth Army battled desperately but indecisively with the Duke of Württemberg's Fourth Army and part of the Third. At Revigny in the Argonne Forest, General **Maurice Sarrail's** Third Army (Ruffey had been relieved) stopped the Crown Prince's Fifth Army, while at **Nancy** and along the Alsace frontier the French First and Second armies—even though attenuated by drafts for Joffre's new formations to the west—clung successfully to the heights, despite a succession of attacks by the reinforced German Sixth and Seventh armies. (Schlieffen had warned against any such attacks.)

Moltke, worried by rumor and pessimistic fragmentary reports from his subordinates, sent a general staff officer, Lieutenant Colonel **Richard Hentsch,** to inspect the front (September 8). Hentsch's orders were oral; they still remain somewhat of a mystery. He arrived at the Second Army's headquarters just as news was received that its right flank was being turned by a vigorous night attack by Franchet d'Esperey's Fifth Army. This was probably the turning point of the battle. Bülow—personally defeated—was about to retreat. Kluck's First Army was making headway in the northwest against Maunoury's left, but the BEF's advance through the gap threatened Kluck's own left and rear.

Hentsch tacitly approved Bülow's planned retreat and, later the same day, in Moltke's name ordered Kluck also to withdraw (September 9). Moltke, now realizing that his offensive had failed, ordered a general retirement to the line Noyon-Verdun. Within 5 days the Germans, having disengaged without serious interference from the exhausted Allies, were organizing their new positions. The Battle of the Marne thus ended as a strategic Allied victory and Joffre

emerged as savior of France. That same day Moltke was relieved, General **Erich von Falkenhayn** replacing him (September 14).

COMMENT. *France's initial offensive plan had failed because it was entirely unrealistic in concept and in execution. The German plan—sound and workable—failed because of the inefficiency of Moltke, who first emasculated the plan, then lost all personal touch with his army commanders and with their progress. Joffre, on the other hand, emerged as a strong and capable leader, who kept in close touch with his subordinates. His reconstruction of a counterattack upon the wreckage of his initial plan was masterful, its execution assisted by the marvelous resiliency of the French Army. The BEF's part was that of a sound professional soldiery. The clash of personalities and mutual distrust existing between Sir John French and Lanrezac prevented better use of the BEF, as did French's excessive caution in the counterattack. Casualties on both sides were enormous: the Allies lost about 250,000 men; German losses were somewhat greater. In 3 weeks of war, each side had lost more than half a million men in killed, wounded, and captured. The Battle of the Marne, tactically indecisive, was a clear-cut strategic victory for the Allies. Had it ended differently, the history of the 20th century would have been altered fundamentally. It was the world's most decisive battle since Waterloo.*

The "Race to the Sea," September 15–November 24

1914, September 15–18. First Battle of the Aisne. Slow in their pursuit, the Allied armies, seeking to envelop the German right, were rebuffed from the hastily prepared German field fortifications. Both sides now extended their operations northward, attempting each to outflank the other. Both failed, in bitter fighting in **Picardy** (September 22–26) and **Artois** (September 27–October 10). Meanwhile, behind the German lines, beleaguered **Maubeuge** had fallen (September 8) and the fortress of **Antwerp,** systematically bombarded (October 1–9), surrendered. The Belgian Army fell back to the west along the coast. An extemporized British naval division, rushed to reinforce the Antwerp garrison, also escaped, but with loss of 1 of its 3 brigades.

1914, September 22–25. Verdun and St.-Mihiel. Farther south, repeated German attacks against Verdun were repulsed (September 22–25), but the Germans did seize the strategic **St.-Mihiel** salient (September 24), to which they would cling until 1918.

1914, October 18–November 24. Battles in Flanders. The final actions of the "Race to the Sea" were the **Battle of the Yser** (October 18–November 30) and the bloody **First Battle of Ypres** (October 30–November 24), in which the BEF was nearly wiped out in a successful, gallant defense against a heavily reinforced German drive, ordered by Falkenhayn, who expected to capture the Channel ports. The British were aided by French troops, under Foch, rushed north by Joffre.

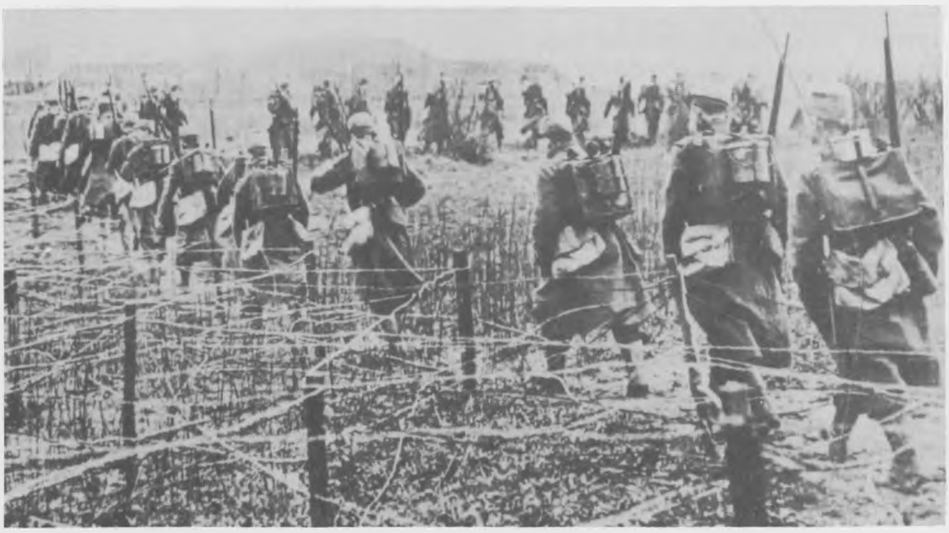
1914, December 14–24. General Allied Attack. From Nieuport to Verdun an allied offensive beat unsuccessfully for 10 red days against the rapidly growing German system of field fortifications. The era of stabilized trench warfare had begun: the spade, the machine gun, and barbed wire ringing down the curtain on maneuver, from the North Sea to the Swiss border. A costly French attempt at breaking through in Champagne—the **First Battle of Champagne** (December 20)—was still in progress as the year ended. By this time, operations on the Western Front had cost the Allies nearly 1 million casualties. German losses were almost as great.

Eastern Fronts

Operations in East Prussia

The Russian Offensive

1914, August 17–19. Invasions of East Prussia. The Russian Northwest Army Group under



French poilus march single file through a dense field of barbed wire

General **Yakov Grigorievich Jilinsky,** consisting of General **Pavel K. Rennenkampf**'s First and General **Alexander Samsonov**'s Second armies, advanced into East Prussia. Opposing them was German General **Max von Prittwitz**' Eighth Army, widely disposed from the Baltic south to Frankenau, and based on the fortress of Königsberg (Kaliningrad). Its mission was one of elastic defense and delay in accordance with the modified Shclieffen Plan.

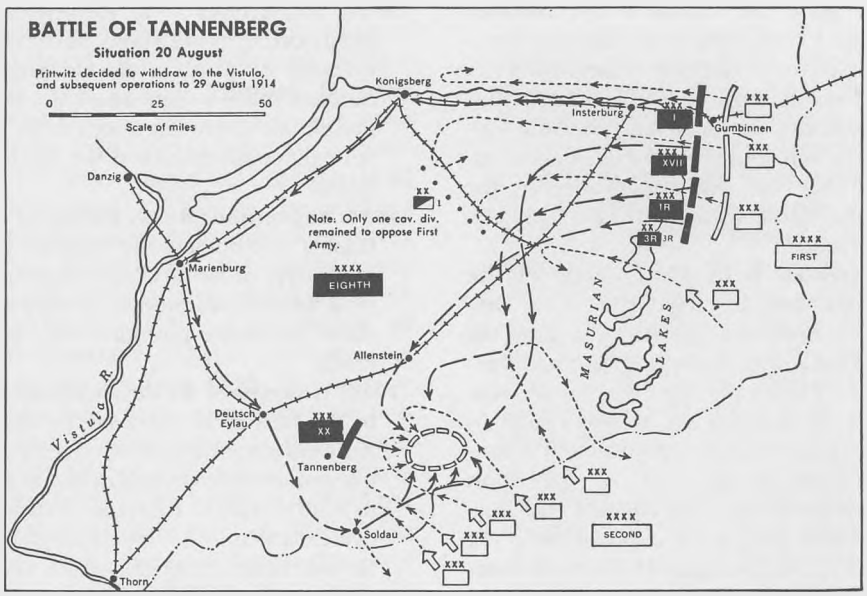
1914, August 17. Battle of Stallupönen. The center of Rennenkampf's widely strung advance met General **Hermann K. von François**'s I German Corps, was badly mauled by the alert François, and was thrown back to the frontier with loss of 3,000 men. François then retired on Gumbinnen.

1914, August 20. Battle of Gumbinnen. Slowly the Russians advanced again. Prittwitz, aware also of the Russian Second Army's advance far to his southern flank, feared envelopment. Aggressive François persuaded him to attack. François's own corps smashed in the Russian right flank, driving it back for 5 miles. Other German attacks were not successful, and a drawn battle resulted.

THE TANNENBERG CAMPAIGN

1914, August 20. German Change in Command. Prittwitz, in near panic after his unsuccessful attack against Rennenkampf, and with Samsonov's army posing a potential threat to his line of communications, telephoned Moltke, at Coblenz, to report his decision to withdraw to the Vistula and to request reinforcements to be able to hold that river line. Moltke at once relieved Prittwitz of command, appointing in his place elderly General **Paul von Hindenburg,** called from retirement, with brilliant General Erich Ludendorff, hero of Liége (see p. 1024), as his chief of staff. Thus was created a team destined for world renown.

1914, August 22. Ludendorff's Plan. After studying reports from the east, Ludendorff telegraphed orders to the individual corps commanders, directing a concentration against Samsonov's Second Army, while delaying



Rennenkampf's First Army farther east. Joining Hindenburg later that day for the rail trip east, Ludendorff reported his actions; Hindenburg approved. When they arrived at Marienburg, Eighth Army Headquarters, next day, they discovered that Lieutenant Colonel **Max Hoffmann,** Prittwitz' capable chief of operations, had already prepared for practically the same movements and dispositions that Ludendorff had ordered (August 20). (The coincidence is especially interesting as evidence of the uniform thought process of the German Army General Staff in dealing with an unexpected situation.) While one lone cavalry division was delaying fumbling Rennenkampf, the bulk of the German army was shifting south, by rail and road, against the equally incompetent Samsonov.

1914, August 24. Battle of Orlau-Frankenau. Advancing without reconnaissance or cavalry screen, Samsonov's central corps suddenly ran into entrenched units of the German XX Corps. Severe fighting raged all day, but the Russian center was unable to advance. Next day, while the Russian army rested, the XX Corps withdrew from Frankenau to Tannenberg, while other units of the Eighth Army hastened up to its right and left. The Germans, who had been listening to Samsonov's uncoded radio messages, now knew the locations of all Russian units, and were aware of their projected moves for the next day.

1914, August 26–31. Battle of Tannenberg. Samsonov's right flank was pushed in from the north by the German XVII and I Reserve Corps; his left was enveloped and turned by François's hard-driving I Corps; his center was struck by the XX Corps. By nightfall of August 29, the encirclement was complete as François stretched his corps across the entire Russian rear. The rest was butchery of disorganized streams of rabble trying to escape the net. Not until the 27th had Jilinsky realized that his Second Army was in real danger; his orders to Rennenkampf to move to its assistance were obeyed only in shadow. Samsonov disappeared the night of the 29th; evidently he committed suicide. Russian losses totaled 125,000 men

and 500 guns; the Germans lost between 10,000 and 15,000 men. Aside from its strategic significance, the German victory was a tremendous psychological coup; Allied confidence in Russia was shattered, while the German nation was roused to such a pitch of enthusiasm that the true significance of the Battle of the Marne, which ended 2 weeks later, was overlooked.

1914, September 9–14. First Battle of the Masurian Lakes. Turning northeast, the German Eighth Army promptly moved against the Russian First Army. Again the vigorous François and his I Corps provided the *coup de grâce*, driving in the Russian left. Rennenkampf finally disengaged under cover of a stout 2-division counterattack, spoiling the German effort to gain another double envelopment. The Russians retreated, having lost 125,000 men, 150 guns, and half their transport. German losses were about 40,000.

COMMENT. *Incompetent leadership, faulty reconnaissance, lack of secrecy, and poor communications, added to an astounding state of unpreparedness and shortage of materiel, all contributed to the Russian defeats. Russia never completely recovered from these disasters.*

Austrian Invasions of Serbia

1914, July 29. Bombardment of Belgrade. The first military action of the war, this Austrian bombardment of the Serbian capital had little effect other than to enrage the Serbs.

1914, August 12–21. Battle of the Jadar. Austrian forces totaling more than 200,000 men, commanded by General **Oskar Potiorek,** crossed the Save and Drina rivers to invade Serbia from the west and northwest. They were opposed by slightly smaller numbers of tough, hardy Serb troops, inadequately equipped but battlewise from their Balkan Wars experience (see p. 1015), commanded by able Marshal **Radomir Putnik.** A Serb counterattack (August 16) punished the Austrians so severely that Potiorek withdrew across the Drina.

1914, September 7–8. Renewed Austrian Invasion. Ignoring a bold, but limited, Serbian invasion of Austrian Bosnia (September 6), Potiorek made a night attack across the Drina. Putnik withdrew his troops from Bosnia and strongly counterattacked the Austrian bridgeheads.

1914, September 8–17. Battle of the Drina. Unable to eliminate the Austrian bridgeheads in 10 days of vicious, bitter fighting, and running short of ammunition, Putnik withdrew to more defensible positions southwest of Belgrade.

1914, November 5–30. Austrian Offensive. In the face of an offensive by the reinforced Austrian armies and short of ammunition, Putnik withdrew slowly and deliberately, planning to counterattack after the Austrians became overextended in the rough mountain country. He evacuated Belgrade, which the Austrians occupied (December 2). At the end of the month, ammunition, sent from France, arrived by rail from Salonika.

1914, December 3–9. Battle of Kolubra. With the Kolubra River, behind the Austrian front, in flood, Putnik launched a vigorous counterattack. The Austrian forces collapsed in the face of determined Serb assaults and were driven from Serbian terrain, their retreat covered by Austrian monitors on the Danube and Save rivers. Belgrade was recaptured (December 15). Potiorek was relieved of his command and replaced by Archduke **Eugene.** Austrian casualties in this savagely fought campaign were some 227,000 out of 450,000 engaged. Serbian losses were approximately 170,000 out of 400,000.

Operations in Poland

THE GALICIAN BATTLES

1914, August 23–September 2. Austrian Offensive. The advance into Russian Poland from Galicia was coordinated directly by General Conrad, the Austrian chief of staff. The

First, Fourth, and Third armies (from left to right) moved north and east from the vicinity of Lemberg (Lvov) on a 200-mile front, to clash headlong with General **Nikolai Ivanov**'s Southwestern Russian Army Group (the Fourth, Fifth, Third, and Eighth armies) southwest of the Pripet Marshes. At the **Battle of Krasnik** (August 23–24) on the northern flank, the Russian Fourth Army was driven back by the Austrian First. The conflict spread as the Austrian Fourth Army struck and drove back the Russian Fifth in the **Battle of Zamosc-Komarów** (August 26–September 1). But on the southern flank, the Austrian Third Army (with some elements of the Second, belatedly arriving from the Serbian front) was thrown back on Lemberg by the Russian Third and Eighth in the Battle of **Gnila Lipa** (August 26–30). The Austrians, held on the defensive, were defeated again—this time decisively—at **Rava Ruska** (September 3–11), when the Russian Fifth Army penetrated between the Austrian First and Fourth. Abandoning Lemberg, the Austrians fell back 100 miles to the Carpathian Mountains, leaving a garrison in the key fortress of Przemysl. With all the remainder of Galicia now in their hands, the Russians prepared for further advances into the Carpathians. Austrian losses in this campaign amounted to more than 250,000 killed and wounded and 100,000 prisoners. There is no record of Russian losses, which must have been comparable.

OPERATIONS IN WESTERN POLAND

1914, September 17–28. German Movement to Assist Austrians. Falkenhayn ordered Hindenburg to assist the defeated Austrians in Galicia and to prevent a Russian invasion of Silesia. With extraordinary efficiency, 4 corps were transferred by rail in 750 trains from the Eighth Army to the vicinity of the Austrian north flank, near Cracow. There they became the Ninth German Army, commanded directly by Hindenburg. A general Austro-German advance followed (September 28). Meanwhile, as the Germans expected, the Grand Duke Nicholas, reorganizing his armies, was preparing for a general offensive through Poland into Silesia, the heart of Germany's mineral resources. His proposed movement consisted of the Fifth, Fourth, and Ninth armies.

1914, September 28–October 31. Hindenburg's Southwest Poland Offensive. The German Ninth Army hit the Russians west of the Vistula (September 30), attaining the river line south of Warsaw (October 9). Here, with but 18 divisions to oppose the Russian 60, the German offensive was checked (October 12). Hindenburg withdrew skillfully (October 17), leaving behind him a countryside systematically ravaged, vastly impeding fumbling Russian pursuit. Meanwhile, the Austrians to the south had made some advance, but were checked at the River **San.** By the end of October, the Austro-German armies had fallen back to their original line, but had seriously delayed the projected Russian advance.

1914, November 1. Hindenburg Appointed Commander in Chief of the Austro-German Eastern Front. He was told he could expect no reinforcements, despite the fact that the Russians had renewed their forward movement. Skillfully, in accordance with Ludendorff's plan, the German Ninth Army—the only mass of maneuver available—was shifted northwest again to the Posen-Thorn area, leaving another wide gap of "scorched earth" in front of the overwhelming Russian concentration southwest of Warsaw.

1914, November 11–25. Battle of Łódź. The German Ninth Army, now commanded by General **August von Mackensen,** struck southeast between the First and Second Russian armies, which were protecting the northern flank of the Grand Duke's planned offensive. The Russian First Army (still under Rennenkampf) was crushed and the Second, near Łódź, was embraced by an attempted double envelopment. The key element of the German stroke was the XXV Reserve Corps, commanded by General **Reinhard von Scheffer-Boyadel.** It rolled through the gap

between the Russian armies and turned south and west. The movement was foiled by the Grand Duke's prompt counterattack. The Russian Fifth Army from the south and an improvised group from the northern forces checked the German advance. Scheffer's corps was completely surrounded. In an amazing display of leadership, Scheffer not only broke through to safety but also brought back with him 16,000 prisoners and 64 captured guns. This corps marched and fought continuously for 9 days in subzero weather with a net loss of 1,500 killed and 2,800 wounded, who were also brought safely back. While Lōdz was tactically a Russian victory, for the Germans it was a strategic success, since the Russian offensive was now called off, Lōdz was evacuated, and the Russians fell back in a general retirement, never again to menace the German homeland. German losses in the Lōdz campaign were about 35,000 killed and wounded. Russian losses are not known; a conservative estimate would be 90,000 in all. The year ended in stalemate on the Eastern Front.

The War at Sea, 1914

The British Grand Fleet, poised in its bases at Scapa Flow and Rosyth, kept the German High Seas Fleet bottled up behind the highly fortified Heligoland-Jade littoral in the North Sea. Neutral Denmark locked the Baltic gateway to both contestants by mining the Skagerrak.

Germany had 10 major warships at large around the world, based on far-flung colonial ports. Six small British overseas expeditions—4 from England and 2 from Australia and New Zealand—moved (August) to dry up the German naval bases. **Togoland,** the **Cameroons, Southwest Africa, Samoa,** and some of the German Pacific islands were taken in late 1914 or early 1915. In **German East Africa,** however, Colonel (soon General) **Paul von Lettow-Vorbeck** repulsed a British landing effort at **Tanga** (November 3–4) and would carry on an amazing offensive-defensive campaign for 4 years. Except as an example of indomitable leadership, Lettow-Vorbeck's operations were of no significance in the war. Japan, entering the war on the Allied side (August 23), besieged **Tsingtao,** the only German base on the China coast, taking it November 7. Japan also occupied Germany's Marshall, Mariana, Palau, and Caroline island groups.

The 10 scattered German cruisers, deprived of their bases, waged a gallant and aggressive hit-and-run war until overwhelmed or blockaded. The High Seas Fleet at home was limited to sporadic cruiser raids, mine sowing, and submarine warfare.

1914, August 4. The *Goeben-Breslau* Incident. In the Mediterranean, the German battle cruiser *Goeben* and light cruiser *Breslau,* under the command of Vice Admiral **Wilhelm von Souchon,** shelled the French Algerian ports of Bône and Philippeville. Then, in anticipation of a British declaration of war, the German vessels headed east toward Turkey, Germany's secret ally. They met the British battle cruisers *Indomitable* and *Indefatigable* steaming west. The British commander, following instructions from Vice-Admiral Sir **A. Berkeley Milne,** made no effort to stop the Germans, knowing that, although France and Germany were already at war, Britain's ultimatum to Berlin would not expire until midnight. Admiral von Souchon, knowing that the British warships had superior firepower, also refrained from action. The opposing squadrons passed one another at close range without saluting, like two strange dogs; each side was cleared for action, each had shotted guns trained on the other. The British then

attempted to follow Souchon, but he skillfully eluded them after a brush with the cruiser squadron of Rear Admiral **E. C. Troubridge** southwest of Greece (August 6–7) and reached the Dardanelles safely (August 10). Both German ships and their personnel then passed into the Turkish Navy, giving that nation naval supremacy in the Black Sea and contributing to her later entry into the war on the side of the Central Powers (October 29; see p. 1036).

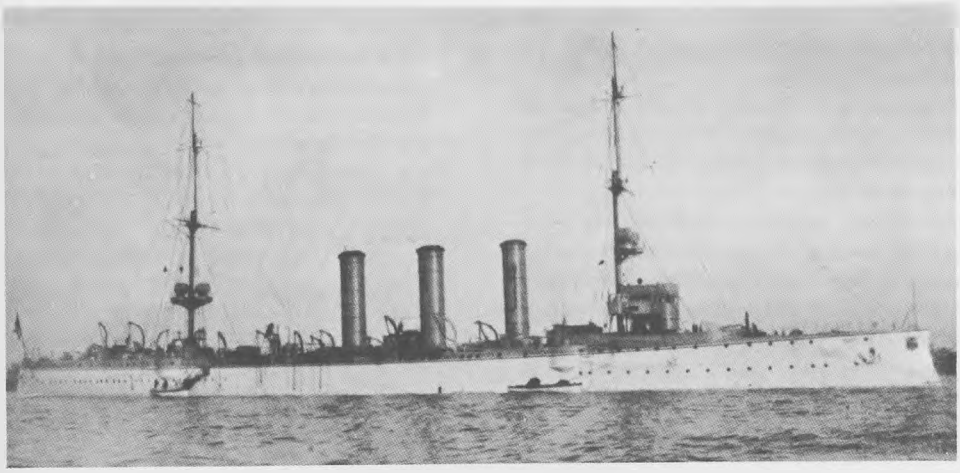
1914, August 28. Battle of Heligoland Bight. British light cruisers raided into German waters, coaxing a fight. German cruisers emerged, whereupon Vice Admiral Sir **David Beatty**'s battle-cruiser squadron, lurking in support of his light cruisers, drove them back with loss of 4 ships and some 1,000 men.

1914, August–October. Cruise of the *Königsberg*. The German light cruiser, stationed on the East African coast, engaged and sank the British light cruiser *Pegasus* off Mombasa (August 6). She was later cornered by other British naval units and forced to seek refuge up the Rufiji River, German East Africa (October 30), where she remained blockaded.

1914, August–November. Cruise of the *Emden*. This fast light cruiser was detached from the China Squadron of German Admiral **Maximilian von Spee** (August 22). Under daring Captain **Karl von Müller,** she sailed into the Indian Ocean, where she harassed British shipping, taking 21 prizes and destroying ships and cargo valued at over $10 million. She bombarded Madras (September 22). The end of this gallant lone-wolf cruiser came when she was sunk in a hard-fought action with the Australian cruiser *Sydney* at the Cocos Islands (November 9).

1914, September–October. German Submarine Operations. *U-9,* off the Dutch coast, sank in quick succession the British cruisers *Aboukir, Hogue,* and *Cressy,* with a loss of 1,400 lives (September 22). A U-boat raid on Scapa Flow (October 18), while unsuccessful, resulted in the temporary transfer of the British Grand Fleet to Rosyth on the Scottish coast, while anti-submarine nets were installed at Scapa. The cruiser H.M.S. *Hawk* was torpedoed and sunk (October 15). The battleship *Audacious* struck a German mine, laid by a submarine off the Irish coast, and sank (October 27).

1914, November 1. Battle of Coronel. After the outbreak of war, Admiral von Spee's China Squadron—2 heavy and 3 light cruisers—crossed the Pacific to the Chilean coast, refueling from colliers. Off the west coast of South



German cruiser *Emden*

America, British Vice Admiral Sir **Christopher Cradock,** with 2 elderly heavy cruisers and 1 light cruiser, plus a converted merchantship auxiliary cruiser, searched for the German squadron. Despite Admiralty orders, Cradock had discarded the old battleship *Canopus* as being too slow to hunt the speedy Germans. The 2 squadrons met off Coronel. On paper the firepower of the 2 forces was about equal, but Cradock had only 2 9.2-inch guns (on his flagship, the *Good Hope*), while Spee had 16 8.2-inchers on the *Scharnhorst* and *Gneisenau*. The more numerous British light guns never had a chance to get into the fight because Spee—foiling all efforts of the British ships to close—systematically battered them at long range with his 2 heavy cruisers. He sank the 2 British heavy cruisers with all on board. The light cruiser *Glasgow,* and the auxiliary cruiser *Otranto* obeyed Cradock's orders to run for it and escaped. News of the disaster shocked Britain. The Admiralty feared that Spee would take his squadron around Cape Horn into the South Atlantic. The battlecruisers *Invincible* and *Inflexible,* under Vice Admiral Sir **F. D. Sturdee,** were rushed from home waters to seek Spee.

1914, November 3, December 16. German Coastal Raids against Britain. German cruisers raided the British east coast off Gorleston, but were driven off (November 3). In another raid, German heavy cruisers bombarded Scarborough and Hartlepool (December 16). These "hit-and-run" affairs killed and wounded many civilians.

1914, December 8. Battle of the Falkland Islands. Spee, planning to run into Port Stanley, Falkland Islands, to raid the British wireless and coaling station, discovered Sturdee's squadron there, refueling. The surprised Germans took to their heels. Sturdee, pursuing, destroyed the German ships at long range. The light cruiser *Dresden* escaped and remained at large for 3 more months. Most of the crews of the sunken German ships perished—some 1,800 men—although a few were rescued by the British.

1914, December 25. Loss of the *Jean Bart.* The French battleship was torpedoed by an Austrian submarine in the Straits of Otranto.

SUMMARY. *By year's end, except for the High Seas Fleet in the Jade, and the Baltic command based on Kiel, the German flag had been practically swept from the seas. Allied maritime traffic was uninterrupted, while Germany was already feeling the pinch of naval blockade. The German naval high command now focused its attention on the one major weapon left to it on the high seas: the submarine.*

The Turkish Fronts, 1914

1914, October 29. Turkish Declaration of War against the Allies. This was proclaimed by the guns of the Turkish fleet (including the erstwhile German *Goeben* and *Breslau*), now commanded by German Admiral von Souchon, in a bombardment without warning of Odessa, Sevastopol, and Theodosia on the Russian Black Sea coast. This Turkish alignment with the Central Powers closed the Dardanelles to the Allies, thus physically separating Russia from them.

Caucasus Front

1914, November–December. Turkish Offensive. Against the sage advice of General **Otto Liman von Sanders,** chief of the German military mission to Turkey, **Enver** Pasha, Turkish war minister, began an invasion of the Russian Caucasus.

1914, December 29. Battle of Sarikamish. The Turkish advance toward Kars was halted and rebuffed with severe losses by Russian General **Vorontsov** in winter snows. The struggle here continued as the year ended.

Mediterranean Region

1914, November–December. British Reaction. Britain announced the annexation of Cy-

prus (November 5). Declaring a protectorate over Egypt (December 18), the British began moving troops there for the defense of the Suez Canal. Meanwhile, British cruisers shelled the Dardanelles forts without effect (November 30).

MESOPOTAMIAN FRONT

1914, October 23. British Landings. British Indian Army troops, who had already been rushed to Bahrain to protect oil refineries there, began an invasion of southern Mesopotamia. Local Turkish garrisons were driven back; **Basra** was captured by the British (November 23).

OPERATIONS IN 1915

The Global Situation

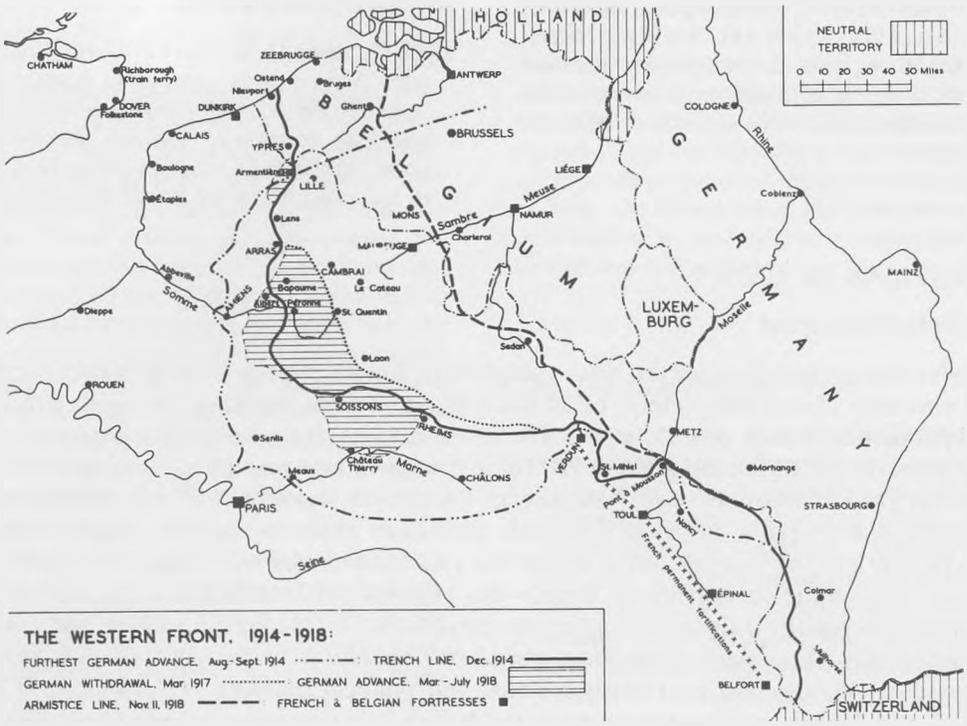
Turkey's entrance had changed the war's complexion. Russia, already shaken by the reverses of 1914, was now almost completely cut off from Franco-British war supplies, upon which she was dependent for a long-continued war. The western Allies, at the same time, were anxious to regain access to the Ukrainian grain fields. These considerations prompted a strategic debate in Britain between "Easterners" and "Westerners." A strident segment of British officialdom, led by capable and energetic Winston Churchill, First Lord of the Admiralty, urged immediate action to seize the Dardanelles and to restore the vital Mediterranean—Black Sea supply route to Russia through the Turkish Straits. British War Minister Field Marshal Horatio Herbert, Lord Kitchener, was equally insistent that a decision be obtained on the Western Front, and deplored any diminution of strength there for a peripheral operation in the east. He was strongly supported in this position by French military and political opinion. Nevertheless, in early January, after lengthy and heated debate in the British War Council, an amphibious operation against the Dardanelles was grudgingly approved.

In the Central Powers' camp also, strategical opinion was divided. The Hindenburg-Ludendorff team urged an all-out effort against faltering Russia. Falkenhayn, though reconciled to the fact that the war had become one of attrition, believed that it would have to be won in the west; he predicted that tactical victories in the east would be meaningless because of the space of Russia and her vast man-power resources. The Kaiser sided with Hindenburg. Accordingly, the Germans adopted a defensive posture in the west, while seeking a decision against Russia.

Western Front

1915, January 1–March 30. Allied Offensive in Artois and Champagne. This, a continuation of the **First Battle of Champagne** (see p. 1029), was a major effort by Joffre to liberate the extensive and valuable areas of France held by the Germans. A series of attacks against the western face of the Noyon salient and in the area between Reims and Verdun were unsuccessful. Limited German counterattacks along the La Bassé Canal and near Soissons stabilized the situation (January 8–February 5). Renewed Allied assaults (March) made little headway. The British made an initial breakthrough in a well-planned attack at **Neuve Chapelle** (March 10), but poor management prevented an adequate follow-up; the Germans quickly reestablished the line (March 13). French casualties approached 400,000 during this period; British and German losses were also heavy.

1915, January 19–20. First German Air Raids on England. Bombing attacks by Zeppelin dirigible airships (under German Navy control) caused relatively minor casualties and



more anger than panic. Eighteen more such raids occurred during the year. The largest of these was a mass attack on London (October 13).

1915, April 6–15. Battle of the Woëvre. Repeated French assaults against the north face of the St.-Mihiel salient were repulsed with heavy losses.

1915, April 22–May 25. Second Battle of Ypres. Allied preparations for another coordinated offensive were spoiled by a surprise German attack preceded by a cloud of chlorine gas emitted from some 5,000 cylinders. This was the first use of poison gas in the west. Two German corps drove through 2 terrorized French divisions and bit deeply into British lines, creating a wide gap. The Germans, however, had made no preparations to exploit such a breakthrough and had few reserves available because of their build-up in the east. Local counterattacks by the British Second Army finally stemmed the German advance after bitter fighting. German losses were some 35,000 men; the British lost 60,000, the French about 10,000.

1915, May–June. Battles of Festubert and Souchez (Second Battle of Artois). After limited gains, the British were stopped near Festubert (May 9–26). The French did only slightly better in their efforts to seize the commanding height of **Vimy Ridge** near Souchez (May 16–June 30). The Allies, exhausted by their costly and unsuccessful assaults during the first half of the year, spent the rest of the summer in resting, reorganizing, and reinforcing. The Germans, who had also suffered severely, were happy to take advantage of the lull, and by the end of the summer had also reinforced the west with troops from their successful operations in the east. Both sides had

come perilously close to expending their ammunition reserves and were now waiting for munitions production to catch up with consumption.

1915, September 25–November 6. Renewed Allied Offensives in Artois and Champagne. This was another major coordinated effort planned by Joffre, and was again unsuccessful. In the **Second Battle of Champagne** the French lost more than 100,000 men and the Germans some 75,000. At the same time, in the **Third Battle of Artois,** the French continued their attacks against **Vimy Ridge** (September 25–October 30) while the British, a few miles north, smashed at **Loos** (September 25–October 14). The minor gains made were out of proportion to the casualties suffered: more than 100,000 French, 60,000 British, 65,000 German.

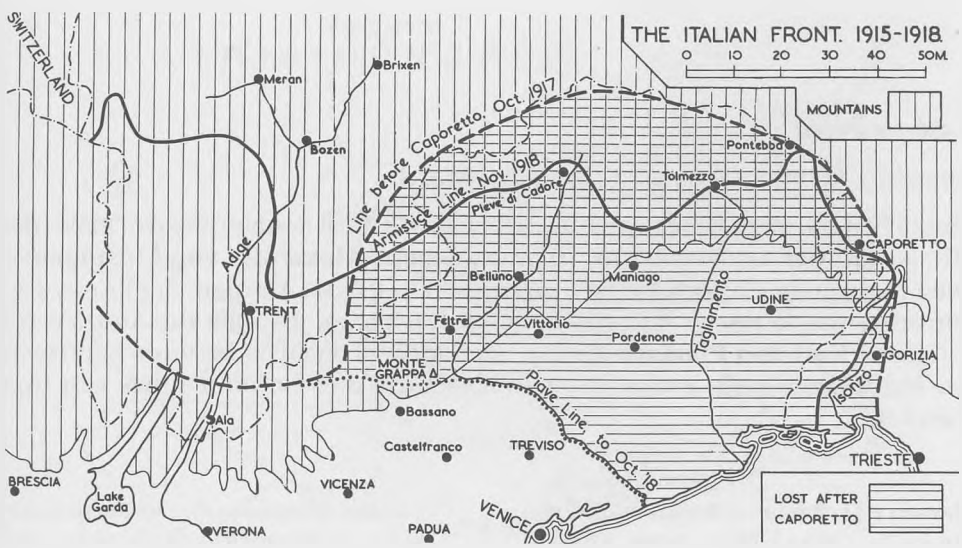
1915, December 17. Change in British Command. Blamed for the failure at Loos, Field Marshal French was relieved and General Sir **Douglas Haig** was placed in command of the BEF, which now comprised 3 armies.

COMMENT. *Increase of lethal firepower, both machine gun and field artillery, had revolutionized combat tactics and had given the advantage to the defense, which was able to bring up reserves to limit a penetration before the attackers could move forward sufficient reserves and artillery to exploit a breakthrough. This was particularly critical on the Western Front, where a continuous battle line prevented classical offensive maneuvers. The Germans, recognizing the change long before the Allies, had adopted an elastic defense, in 2 or more widely separated lines, highly organized with entrenchments and barbed wire, heavy in machine guns, and supported by artillery echeloned in depth. Assaulting troops broke through the first line only to be decimated by the fire from the succeeding lines and pounded by artillery beyond the range of their own guns.*

Appalling losses had been suffered during 1915 on both sides: 612,000 German, 1,292,000 French, and 279,000 British. The year ended with no appreciable shift in the hostile battle lines scarring the land from the North Sea to the Swiss Alps.

The Italian Front

1915, May 23. Italy Declares War on Austria. Adroit Allied diplomacy, offering substantial territorial gains, caused Italy to abrogate the



Triple Alliance and to enter the war. The total strength of the Italian Army, commanded by General **Luigi Cadorna,** was about 875,000, but it was deficient in artillery, transport, and ammunition reserves. The Italian plan was to hold the Trentino salient into Italy by offensive-defensive action, while operating eastward offensively in the Isonzo salient projecting into Austrian territory. The immediate objective was Gorizia, but Italian military men dreamed of advancing through Trieste to Vienna.

Austrian Dispositions. Despite the Triple Alliance, Austria had heavily fortified the entire mountain frontier with Italy. Austrian Archduke Eugene was in overall command of the Italian front. General **Svetozan Borojevic von Bojna,** with some 100,000 men, held the critical Isonzo sector.

1915, June 23–July 7. First Battle of the Isonzo. The Italian Second Army (General **Pietro Frugoni)** and Third Army **(Emanuele Filiberto, Duke of Aosta**), totaling approximately 200,000 men and 200 guns, battered in vain against the Austrian defenses.

1915, July 18–August 3. Second Isonzo. Cadorna, bringing up more artillery, tried again. The Austrians, reinforced by 2 additional divisions, held firm. The Italians broke off the struggle when their artillery ammunition gave out. Italian losses in these two battles amounted to about 60,000 men; the Austrian casualties totaled nearly 45,000.

1915, October 18–November 4. Third Isonzo. The Italians, reorganized and strengthened, and supported now by 1,200 guns, struck once more at Gorizia and were again repulsed.

1915, November 10–December 2. Fourth Isonzo. This was really a continuation of the third battle. When the offensive broke off, no material gain had been made to show for the Italian loss of 117,000 men in the 2 battles. The Austrians had lost almost 72,000 men.

COMMENT. *As in France, the invulnerability of highly organized positions to frontal assault had been proven. The Austrian defense was skillful; the Italian offensive tactics were inept, despite the gallantry shown by their infantry on many occasions. The Italian strategic objective—capture of Trieste, thence on the road to Vienna through the Ljubljana Gap and the Danubian Plain—was sound. It was, in fact, the only offensive open to Italy, since successful northern movement of major forces through the Alps not only led nowhere but was patently impossible. Germany took no part in this campaign, since Italy was technically not at war with her; this did not increase Austro-German cordiality.*

The Eastern Front

Hindenburg's Winter Offensive, January–March

The Central Powers, reinforcing their armies, launched a great double offensive under Hindenburg. The Austro-German South Army (German General **Alexander von Linsingen**) struck northwest through the Carpathians on Lemberg. On its left the Austrian Third Army (General von Borojevic) was to rescue Przemysl from siege, while on the right the Austrian Seventh Army (General **Karl von Pflanzer-Baltin**) supported the main effort. From East Prussia the German Eighth and Tenth armies under Hindenburg's direct control struck east from the Masurian Lakes.

1915, January 31. Battle of Bolimov. This was a feint by the German Ninth Army, aimed at Warsaw, designed to distract Russian attention. Poison gas was used for the first time. The inno-

vation was not impressive; the gas was not very effective in freezing temperatures and the Russians did not report the gas attack to the other Allies (see p. 1038).

1915, February 7–21. The Winter Battle (or Masuria, or Second Masurian Lakes). Farther north, the Eighth Army, in a blinding snowstorm, began Hindenburg's offensive by hitting the left flank of Baron **Siever**'s Russian Tenth Army (February 7). Next day the new German Tenth Army (General **Hermann von Eichhorn**), to the north, rolled up the Russian right. Despite desperate defense, the Russians were rapidly driven back into the **Augustow Forest.** There the Russian XX Corps, after resisting heroically, was surrounded and surrendered (February 21); its defense had enabled the other 3 corps of its Tenth Army to escape encirclement. Some 90,000 prisoners were taken. In all, Russian casualties were about 200,000 men in this campaign, an impressive tactical victory for the Germans but without great strategic value. A newly formed Russian army—the Twelfth (General **Wenzel von Plehve**)—counterattacking Hindenburg's right (February 22), halted further German progress after a 70-mile advance.

1915, February–March. Austrian Failure in Galicia. Linsingen's Carpathian advance broke down in freezing snow on a poor road net. Pflanzer-Baltin was initially more successful, capturing **Czernowitz** with 60,000 prisoners (February 17), but his further progress was halted by a Russian counterattack. Borojevic's efforts to relieve Przemysl failed.

1915, March 22. Surrender of Przemysl. After a siege of 194 days, the fortress and its garrison of 110,000 men surrendered to the Russians.

1915, March–April. Russian Counteroffensive. Following these defensive successes, the Russians resumed their advance through the Carpathians, but were checked by the Austro-German South Army (April 2–25).

The German Spring–Summer Offensive, May–August

1915, April. German Build-up in the East. Under instructions from the Kaiser, Falkenhayn now gave full priority to the Eastern Front. Sending reinforcements, he came east to assume direct overall command. While Hindenburg's army group kept the Russians busy north of Warsaw, the new Eleventh German Army, under General August von Mackensen, supported by Austrian units, was to make the main effort farther south between Tarnow and Gorlice.

1915, May 2–June 27. The Gorlice-Tarnow Breakthrough. Concentrating superior force for the main effort, the Austro-German armies crashed through the Russian Third Army on a 28-mile front, following a 4-hour bombardment. The southern face of the great Russian Polish-Galician salient began to crumble. Przemysl was retaken (June 3), Lemberg occupied (June 22), and the Dniester crossed (June 23–27).

1915, June–September. Russian Retreat. Thrusting into northern Poland, General **Max von Gallwitz'** new German Twelfth Army advanced toward Warsaw, which was abandoned by the Russians (August 4–7). The entire Russian front was in complete collapse; another Cannae seemed to be inevitable as the salient melted back to the Bug (August 18). Brest Litovsk fell (August 25) and Grodno (September 2). The occupation of Vilna (September 19) marked the high-water mark of the colossal 300-mile advance. Skillfully, however, Grand Duke Nicholas preserved his armies intact, and they withdrew in fairly good order, evading German attempts at envelopment. Autumn rains finally turned roads into quagmires, and the reeling Russians were able to halt the German advance. By year's end the Eastern Front was a line running north and south from Riga on the Baltic to the eastern end of the Carpathians.

COMMENT. *In sharp distinction from the Western Front, this had been a war of movement on a grand scale, part of it in mountainous terrain, all of it hampered by primitive road conditions. The winter campaign was particularly arduous. German operations had been both methodical and brilliant. Excellent staff coordination enabled surprise, facilitated by employing short, intensive artillery preparations and by moving assault troops into position only at the last possible*

moment—usually at night. Austrian operations were spotty, due partly to lower professional standards and partly to friction between the German and Austrian high commands. The Austrians resented German arrogance. On the Russian side, poor troop leadership and lack of weapons, munitions, and supplies were jointly responsible for defeat. Only the marvelous capacity of the Russian soldier to fight while enduring incredible hardships, and the ability of the Grand Duke Nicholas to piece and patch together his baffled, defeated armies, prevented loss of the war in mid-1915. His reward was to be relieved of command (August 21) and banished to the Caucasus front. Czar **Nicholas II** *assumed personal command of the Eastern Front, with General* **Mikhail Alekseyev** *his chief of staff. Russian casualties on this front in 1915 were more than 2 million men, of whom about half had been captured. Combined German and Austrian casualties were in excess of 1 million.*

The Balkan Front, 1915

Direct communication between Turkey and her allies was essential to the Central Powers if the Turkish Straits were to be held and Russia kept isolated from the western Allies. The direct railway line passing through Serbia had been closed since the beginning of the war; munitions from Germany passed through neutral Rumania until June, when Rumania closed the channel. Both sides pressured Bulgaria to join the war; Germany won when the Gallipoli invasion was repulsed (August 15; see p. 1046). The Central Powers at once prepared to renew the attack on Serbia. Her call for assistance was answered by Greek mobilization against threatening Bulgaria; Greece requested 150,000 Allied troops to aid her in assisting Serbia. Small French and British expeditionary forces soon disembarked at Salonika (October 9). On the same day a political upheaval in Greece completely changed the situation; pro-German King **Constantine** dismissed his pro-Allied prime minister, **Eleutherios Venizelos,** and announced he would keep Greece neutral.

1915, October 6. Austro-German-Bulgarian Invasion of Serbia. Meanwhile 2 armies—1 Austrian (General **Hermann Kövess von Kövesshåza**) and 1 German (General von Gallwitz)—drove south across the Serbian Save-Danube border. Two Bulgarian armies struck west (October 11); 1 on Nish, the other on Skoplje. Newly promoted Field Marshal von Mackensen was in overall command of the joint campaign; the plan was Falkenhayn's. Putnik's Serbian Army, struck in front and flank by forces nearly double its strength—330,000 men—escaped envelopment but was rolled up and driven southwest in a series of bitter encounters. General **Maurice P. E. Sarrail,** commanding the French element of the allied force at Salonika, made a tentative stroke up the Vardar Valley to link with the Serbs, but was turned back by superior Bulgarian forces. General Sir **Bryan T. Mahon,** commanding the British element, got no farther than the Bulgarian border.

1915, November 24. Serbian Retreat. While the Allied Salonika forces entrenched against Bulgarian pressure, the Serbian Army withdrew into Montenegro and Albania. After a dismal retreat through the snow-covered mountains, the remnants of the Serbian Army, accompanied by a horde of civilian refugees, reached the Adriatic, pursued by Austrian General Kövess. Serbian losses were more than 100,000 killed or wounded, 160,000 taken prisoner, and 900 guns. The survivors were transferred by Italian and French ships to the

island of Corfu (January), where they were refitted by the Allies. Montenegro was also occupied by the Austrians.

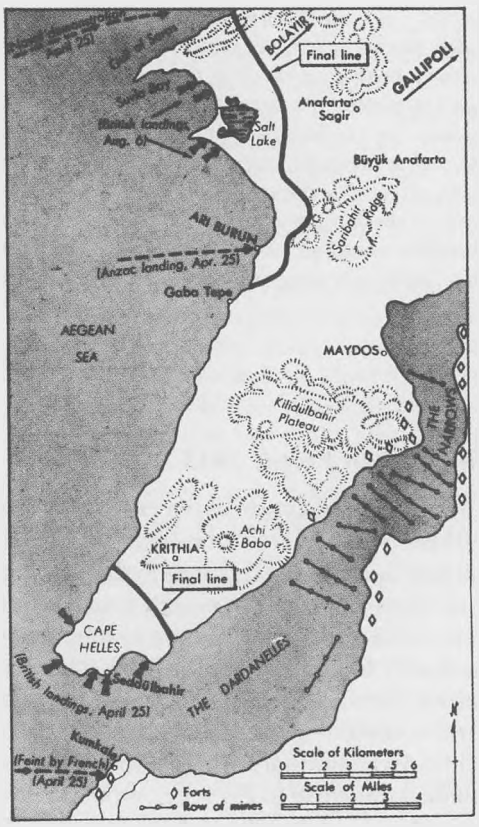
COMMENT. *Serbia was doomed when Bulgaria entered the war. Allied intervention attempts were too little, too late, and further complicated by disunity of command. Sarrail and Mahon at Salonika were acting under separate instructions from their respective governments. To make matters worse for them, they were in the unenviable situation of occupying neutral territory, with the Greek Army potentially threatening their rear.*

The Turkish Fronts

The Dardanelles and Gallipoli

THE PRELIMINARIES

1915, February—March 18. Allied Naval Assault. A Franco-British fleet under British Vice Admiral **Sackville Carden** attempted a systematic reduction of the formidable fortifications lining both sides of the narrow straits. More than 100 medium- and heavy-caliber Turkish guns swept the surface in cross fire, with 11 mine belts and an antisubmarine net below the surface. Long-range Allied bombardment of the outer forts (February 19) was followed by a second (February 25), which silenced them. After preliminary shelling and mine sweeping, the principal fortifications at the Narrows were attacked (March 18). Carden having broken down physically, Rear Admiral **John de Robeck** took command. He had, besides smaller craft, 16 battleships—including the *Queen Elizabeth*, most powerful superdreadnought then afloat, carrying 8 15-inch guns. By midafternoon the Turkish Narrows batteries were also silenced. Then 3 old battleships were suddenly sunk in an undetected minefield and 3 others were disabled, 1 of them by gunfire. Actually, at this time, the Turks were at the end of their resources; their ammunition was nearly expended, some batteries had been demolished, and all fire-control communications put out of action. But de Robeck did not know that.



Gallipoli campaign

He called off the attack and hurried his 10 remaining capital ships out of the Strait.

1915, March–April. Assembling of the Army Expedition. Meanwhile, a hastily gathered British expeditionary force (including 1 French division) under General **Ian Hamilton** was en route from England and Egypt to the Gallipoli Peninsula. Hamilton himself was at this moment an observer on board a British warship. The total strength of his force was 78,000 men. As the first elements gathered at Mudros Bay on the island of Lemnos (mid-March), it was discovered that the contingent from England had been loaded haphazardly, with guns and ammunition on separate ships. The transports had to move (March 25) to Alexandria, Egypt, where they were combat-

loaded (by unit) with men, their guns, ammunition, and equipment all on the same ship. This caused a month's delay, while the Turks, fully alerted to the impending landings, improved their dispositions. German General Liman von Sanders, in command, had some 60,000 men on the peninsula, disposed in an elastic defense.

THE FIRST LANDINGS, APRIL 25

The plan provided for 2 daylight assaults, with naval gunfire support. One of these landings was to be at Cape Helles on the tip of the peninsula; the other—beyond mutual-support distance—was to be about 15 miles farther north at Ari Burnu, on the western side of the peninsula. At the same time, the French division was to make a diversionary landing on the Asiatic side of the Strait, while a naval demonstration at Bulair—the neck of the peninsula, 50 miles northeast of Helles—distracted Sanders' attention.

At Ari Burnu the Anzacs (Australian and New Zealand Army Corps), landing in force, moved up the slopes toward **Chunuk Bair,** a height dominating the entire peninsula and the Narrows beyond. But a young Turkish reserve division commander with an eye for terrain moved first. Personally leading a battalion, **Mustafa Kemal** rushed for the height, the remainder of his division quickly following. Even though his troops were outnumbered, Kemal's vicious counterattack from the ridge drove the Anzacs back to the beach with a loss of 5,000 men. Here, ordered by Hamilton to hold on, the Anzacs dug in to retain a narrow beachhead.

At Helles, the 29th British Division landed on 5 beaches in a welter of mismanagement, incurring murderous losses. But a part of the division, overwhelming the Turkish beach defense, made its way gallantly almost to its objective, **Achi Baba,** a dominant hill mass. The division commander, safe on his command ship offshore, was not on the spot to handle the situation. Lacking further orders, the British troops stopped to brew tea below the still-unoccupied height. When they renewed their advance, it was too late. The Turks had occupied the hill in force.

Chunuk Bair and Achi Baba would never be taken by the British. Without either of these 2 critical heights the landings were doomed to failure. As the Turks ringed the tiny beachheads with entrenchments, the British found themselves involved in the same kind of trench warfare they had known on the Western Front—but with even less room for maneuver.

THE SECOND LANDING, AUGUST 6–8

Following 3 months of the bitterest kind of fighting on the rocky slopes of the peninsula, Hamilton, reinforced by 3 more British divisions, attempted a coordinated assault. Meanwhile, although British submarines had actually penetrated the Straits and sunk some Turkish craft, German submarines and Turkish destroyers accounted for 3 more British battleships off the Gallipoli coast. The Allied capital ships sought protected harbors; the *Queen Elizabeth* herself was ordered home. So Hamilton's second assault was made without adequate naval gunfire support.

The Anzacs at Ari Burnu were to make the main effort with a night attack, driving for Chunuk Bair and other heights on the Sari Bair ridge. The new divisions, landing at Suvla Bay

to the north, were to make a secondary attack. From the Helles position a holding attack was to pin down Turkish reserves.

The holding attack fulfilled its mission, but the Anzac attack bogged down in the darkness. Only the Suvla Bay landing, made without serious opposition, promised success. But General Sir **Frederick Stopford,** the corps commander, lacked vigor and drive. The advance lagged until Turkish reinforcements had time to come up, and again it was too late.

The entire operation had failed. Russia was permanently cut off from her allies. Hamilton was relieved (October 15), General Sir **Charles Monro** taking his place. Monro's recommendation for an evacuation was approved (November 23). Excellent planning, staff coordination, and prompt execution did the rest. By December 10, all supplies and many of the troops had been moved out. The remaining crust of 35,000 men slipped away under the eyes of the unsuspecting Turks, completing (January 8–9, 1916) a masterpiece of deception without loss of a single man.

Allied casualties for the entire Dardanelles campaign amounted to 252,000. The Turks lost almost as many: 251,000, but of these 21,000 died of disease.

COMMENT. *With possible exception of the Crimean War, the Gallipoli expedition was the most poorly mounted and ineptly controlled operation in modern British military history. Surprise had been lost even before the inception of the plan, for a premature bombardment of the outer Dardanelles defenses by a British naval force early in the war (November 1914) had awakened both Turks and Germans to the danger. Under Liman von Sanders' competent direction the fortifications had been vastly strengthened. The prize was a rich one, for success would mean keeping Russia in the war and probably knocking Turkey out; its attainment should have been confided to a single commander, provided with the best of means. Instead, with improvised organizations, both naval and army commanders worked independently.*

De Robeck's decision to break off the naval action (March 18) when success was practically in his hands was particularly questionable. He had suddenly lost 6 of his 16 capital ships. But he knew a supporting expeditionary force was on the way. Under those conditions, if only one battleship had survived to run the gantlet and place Constantinople under its guns, his mission would have been fulfilled. But Nelsons and Farraguts are few and far between.

Back in the War Office, Kitchener failed to assure compliance with logistical, strategic, and tactical fundamentals in mounting the expeditionary force. And he refused Hamilton's requests for adequate forces and staff officers.

Hamilton possibly erred in the landing operations by trying to direct them by remote control from a warship. It has been suggested that he should have been ashore to see for himself and to whip his erring subordinates into decisive action. He should not have put up with the incompetence of some of these. However, it can be argued that he did as competent a job as was possible under the circumstances, and with the limited means and subordinates provided him by Kitchener.

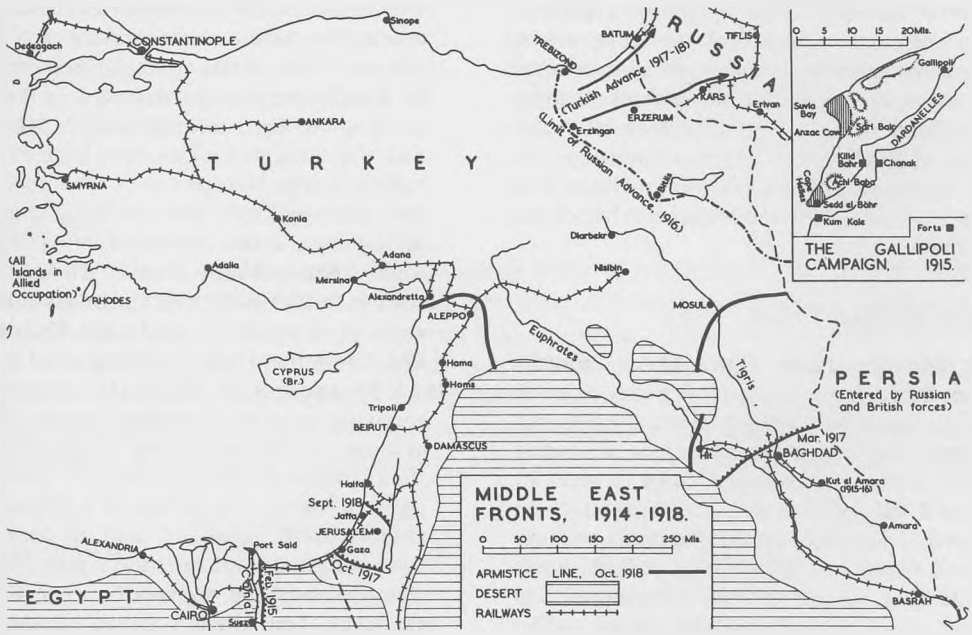
Sharply contrasting with all the previous fumbling was the planning of the evacuation by General Monro and its execution by General **William Birdwood.**

On the Turkish side, German Liman von Sanders conducted a brilliant active defense. Mustafa Kemal, his chief subordinate, shone as an aggressive field commander. The fighting men on both sides performed wonders under most arduous conditions.

The Caucasus Front

1915, January 1–3. Battle of Sarikamish (continued). Russian General Vorontsov, with about 100,000 men, lay in the vicinity of Kars to oppose Enver's advance. Colossal mismanagement of a winter campaign had frittered away at least 15,000 of Enver's 95,000 strength through frostbite and desertion before the battle had begun. The Turk's dream of a wide envelopment of the Russians was spoiled by a Russian counterattack, which smashed his army (January 3). The Turks lost 30,000 dead, while thousands more froze to death in retreat. Only about 18,000 effectives reached Erzerum. Enver gave up the field command and returned to Constantinople. Vorontsov failed to seize advantage by a pursuit; he was replaced by General **Nikolai Yudenich,** who had more initiative.

1915, April–May. Armenian Revolt. Turkish massacres of Armenians, on suspicion they were aiding the Russians, precipitated an Armenian revolt. The rebels seized the fortress of Van (April 20), holding it until the arrival of the Russians (May 19).



1915, July. Battles of Malazgirt and Kara Killisse (Karakose). The new Turkish commander, **Abdul Kerim,** struck and defeated a Russian corps north of Lake Van (July 16), near the site of the Battle of Manzikert (see p. 329). The Turks cautiously advanced eastward, but Yudenich sent a force of 22,000, mainly Cossacks, under General **N. N. Baratov,** to strike the Turk left, causing Kerim to withdraw after sustaining heavy casualties.

1915, August 5. Turkish Recapture of Van. In the ebb and flow of fighting in the Armenian mountains, the Russians were forced to evacuate Van, which the Turks promptly reoccupied.

1915, September 24. Arrival of Grand Duke Nicholas. Appointed Viceroy of Caucasia, Nicholas retained Yudenich in field command, though taking active part in planning. Preparation for a large-scale offensive began.

Egypt and Palestine

By the opening of 1915, British defense of the vital Suez Canal was partly organized. However, General Sir **John Maxwell**'s plans utilized the canal more as an obstacle to possible invasion than as a base for future operations to the northeast.

1915, January 14–February 3. Thrust against the Canal. Djemal Pasha, Turkish Minister of Marine, personally led a force of 22,000 men secretly across the Sinai Peninsula from Beersheba. German General Baron **Friedrich Kress von Kressenstein,** Djemal's chief of staff, had set up an efficient organization. Advance elements of the force struck across the canal in German-type ponton boats (February 2), but the assault was broken up by the defenders. Djemal retired to Beersheba with a loss of 2,000 men. No further Turkish attack was made against the canal, but the threat held much-needed British reinforcements back from Gallipoli.

Mesopotamian Front, 1915

1915, January–June. Tigris River Expedition. British forces in the Tigris Valley of lower Mesopotamia were reinforced to a strength of 2 infantry divisions, a cavalry brigade, and some heavy artillery, all commanded by General Sir **John E. Nixon,** at Basra. A Turkish attack on **Qurna,** a fortified post west of Basra, was repulsed (April 12–14). Another Turkish attack on **Ahwaz,** an outpost some 50 miles north of Basra, was driven off (April 24). Nixon, under orders from India to explore the possibility of an advance on Baghdad, sent Major General **Charles V. F. Townshend** with a reinforced division and a small naval flotilla up the Tigris. After overwhelming a Turkish outpost near Qurna in an amphibious assault (May 31), Townshend continued upriver to Amara, occupying it (June 3).

1915, July 24. Battle of Nasiriya. Major General **George F. Gorringe** with a small expeditionary force moved up the Euphrates to protect Townshend's flank and communications by wiping out a Turkish defensive position at **Nasiriya.** Turkish resistance was strong and only after a month of campaigning was Gorringe successful. British casualties were 533; the Turkish unknown. But they left 1,000 prisoners and 17 guns.

1915, August–September. Advance to Kut. Townshend was now reinforced and ordered to take Kut-el-Amara at the confluence of the Tigris and Shatt-el-Hai rivers. By September 16 his attack force was concentrated on the south bank of the Tigris near Sannaiyet, just below Kut. His communications were strained by insufficient river transport over the almost 300-mile winding Tigris, and one of his 2 infantry divisions was scattered downriver to protect the route. **Nur-ud-Din** Pasha, Turkish commander, with 10,000 men and 38 guns, held an entrenched position astride the Tigris below Kut. Townshend had 11,000 men and 28 guns.

1915, September 27–28. Battle of Kut. After receiving supplies, Townshend made a demonstration on the south bank (September 26), then crossed the river, driving the Turks from their positions with the loss of 5,300 men (including 1,300 prisoners) and all their guns. They retreated unmolested to a prepared position at Ctesiphon, midway between Kut and Baghdad. Townshend's troops, lacking land transport, could not pursue, and the naval flotilla was delayed by the shallows of the dry season. British losses were 1,230. After lengthy debate, the British high command finally ordered Nixon and Townshend to continue on to Baghdad, despite Townshend's plaint that his force was inadequate. There were no reinforcements available, however.

1915, November 11–22. Advance to Ctesiphon. Townshend advanced (November 11) with improvised camel and donkey transport supplementing the river boats. Arriving before Ctesiphon he discovered that the Turks had

fortified extensively and that Nur-ud-Din had been reinforced to a strength of 18,000 regulars and additional Arabs, with 45 guns. Townshend, having added one of the communications line brigades to his forces, mustered some 10,000 infantry, 1,000 cavalry, and 30 guns. He also had, for the first time in that theater, a squadron of 7 airplanes.

1915, November 22–26. Battle of Ctesiphon. Townshend attacked savagely to turn the Turkish left. But he pressed his luck too far, for he held out no reserve. The first Turkish line was taken and held against repeated counterattacks, but Townshend's troops could do no more. After 4 days of battle, during which more Turkish reinforcements arrived, Townshend decided to withdraw after sending back his wounded. He had lost 4,600 men; the Turks, 6,200. Turkish pursuit was not vigorous, and after a rear-guard action at **Umm-at-Tubal** (December 1) the force arrived at Kut (December 3). Feeling now that his infantrymen were too exhausted to retreat farther, Townshend sent his cavalry away, remaining at Kut to await reinforcements. He had more than 2 months' food supply. Kut was soon invested by the Turks (December 7).

COMMENT. *Townshend's campaign is an example of military "absentee landlordism" at its worst. Operations in Mesopotamia were originally under the direction of the Indian Army. In the last stages the British War Office stepped in. Neither agency was in touch with the situation; both relied on the recommendations of Nixon at Basra, who, to say the least, held an exaggerated view of the capabilities of men in protracted combat at the end of an insufficient supply line.*

Persian Front

At the outset of the war, Russian troops occupied most of northern Persia, despite Persian declaration of neutrality. When Turkey entered the war, the British occupied the northwestern Persian Gulf coast to protect their oil interests and to obtain a base for operations in Mesopotamia. At the same time the Turks seized most of Persian Kurdistan. During the Battle of Sarikamish (see p. 1047), Turkish forces seized **Tabriz** from the Russians (January 7), but were soon forced to withdraw (January 30). Sporadic minor fighting continued through the year in western Persia on the flanks of the operations taking place in the Caucasus and Mesopotamia.

The War at Sea

1915, January 24. Dogger Bank Action. The German battle-cruiser squadron under Vice Admiral **Franz von Hipper** moved out (January 23) to raid the English coast and harass the British fishing fleet. Warned by radio intercepts, the Grand Fleet steamed to meet an expected full-dress attack. British Admiral **David Beatty**'s battle-cruiser squadron fell in with Hipper off the Dogger Bank, midway between England and Germany. Beatty had 5 ships, Hipper 3. Both were accompanied by lighter cruisers and destroyers. Hipper wisely fled. Beatty, with superior speed, overhauled him, disabling a heavy cruiser and damaging Hipper's flagship, *Seydlitz*. Then HMS *Lion*, Beatty's flagship, was damaged and fell out of the line. Through misunderstanding of signals, the remainder of the British squadron contented itself with sinking the disabled heavy cruiser, allowing Hipper's remaining ships to get away. The Kaiser ordered his fleet to avoid further risks of losing major warships.

1915, February 4. Initiation of German Submarine Campaign. This was directed against merchantmen in waters surrounding the British Isles. Neutrals were also attacked; a Norwegian ship was sunk (February 19) and—despite American warning to Germany—the American tanker *Gulflight* torpedoed, causing the death of 2 of her crew (May 1).

1915, May 7. Sinking of the *Lusitania*. The British luxury liner was torpedoed without

warning by *U-20* off the Irish coast. Among the 1,198 lost were 124 Americans. Feeling in the U.S. ran high, despite the facts that the liner carried a war cargo, including gold and ammunition; was under orders not to halt if hailed; and, prior to her departure from New York, the German Embassy in Washington had publicly warned Americans not to travel in the ship. A vehement U.S. protest was filed.

1915, August 19. Sinking of the *Arabic*. When this British liner was sunk with loss of 4 more Americans, reaction became so hostile that Germany announced (September 1) cessation of unlimited submarine war. However, by year's end German U-boats, operating all over, had accounted for almost one million tons of Allied shipping.

Operations in 1916

The Global Situation

The year opened with the Central Powers and the Allies at approximately equal strength, although Germany was perhaps better organized. The man-power drain in France was serious. Britain was on the verge of instituting compulsory service to fill her expanding armies. Unrest in Ireland was approaching rebellion. Russia, with plenty of man power, hoped for time to reorganize and supply it.

In a reversal of the previous year's strategy, Germany now sought decision on the Western Front because, as Falkenhayn told the Kaiser, even if the goal were not reached, France would be "bled white" to prevent it. Germany, too, expected to act aggressively at sea, including submarine warfare.

Joffre, feeling that the Allies' worst failure had been lack of coordination, had held a conference at Chantilly (December 1915) and succeeded in getting agreement from Britain, Russia, Italy, and Rumania that coordinated offensives would be launched on the Western, Eastern, and Italian fronts, probably about June, when Russia would be ready. Mutual-support measures were also framed.

In Britain a totally new and revolutionary weapon was being developed: the armored, track-laying tank, conceived partly by Colonel **Ernest Swinton** and partly by imaginative First Lord of the Admiralty Winston Churchill, who supported the new project when the War Office refused to sponsor development.

The Western Front

1916, January–December. Zeppelin Raids on England. The German aerial attacks continued, causing increasing numbers of casualties as their size and effectiveness increased. It was not until late in the year that the first Zeppelin was shot down over England by a British plane (September 3). Two more were soon afterward shot down by antiaircraft fire (September 26). As more were lost to British planes and antiaircraft artillery, German air raids over England were drastically reduced in numbers.

The Battle of Verdun, February 21–December 18

Both Joffre and Falkenhayn planned great offensives to break the deadlock in the West. But the Germans struck first.

Following an enormous bombardment, the Crown Prince's Fifth German Army attacked the fortified, but lightly garrisoned, region of Verdun, lying in the middle of a salient jutting into the German zone, whose southern face was framed by the countersalient of St.-Mihiel. Through the city ran the Meuse gorge, with the rocky escarpment of the Meuse Heights to the east. Beyond lay the Woëvre, a flat clay plain. The front line itself ran some 3 miles beyond the outer forts on the Meuse Heights.

The German assault, on an 8-mile front, bit through the outlying mobile defense zone on the east. Failure of the retiring French to secure a key position, **Fort Douaumont,** was almost fatal. But Joffre, prohibiting further retreat, determined to hold Verdun at all costs as a symbol of French determination as much as to retain an anchor for his battle lines. He sent General **Henri Philippe Pétain** to assume command and retrieve the situation (February 26). By that time the German assault had reached its first limited objective and halted. Pétain, reorganizing his command, brought up large reinforcements and more artillery.

The next German attack (March 6), launched against the western face of the salient, was at first successful, but was checked when Pétain ordered counterattacks to regain "every piece of ground lost." For the rest of the month a series of attacks and counterattacks heaped the ground with corpses. Rapid rotation of units restored French combat troops exhausted in battle, and Pétain got 2 capable lieutenants: Generals **Robert Nivelle** and **Charles Mangin.** Pétain's watchword for the defense (also attributed to Nivelle) became France's motto for the remainder of the war: "*Ils ne passeront pas!*" ("They shall not pass!")

With all other communications—road and rail—cut off, Verdun's only link with the French rear areas was a 40-mile-long secondary road to Bar-le-Duc. Over it Pétain methodically organized a supply system. Despite persistent German artillery harassment, an endless chain of military trucks moved over this road—called "*La Voie Sacrée*" (Sacred Way)—at 14-second intervals in and out of the salient. Permanent road gangs filled shell craters as fast as they were made.

On April 9 the third German offensive struck both sides of the salient, only to be checked again. Successive attacks and counterattacks followed, until the western German effort petered out (May 29). Pétain, meanwhile, had been promoted to army-group command; he was succeeded by Nivelle at Verdun (April). Savage German assaults continued on the east against **Fort Vaux** and **Thiaumont Farm.** Vaux finally capitulated (June 9) after its water had given out and its interior was churned to rubble. The German Crown Prince personally congratulated its commander, Major **Raynal,** on his heroic defense.

Renewed German assaults on the western salient face in late June and early July almost broke the French line. Phosgene gas was used here for the first time. Pétain recommended abandonment of the western Meuse line, but Joffre refused to permit it. The Somme Offensive was about to begin (see below), and he could not afford to lose the Meuse. The French clung to their positions, and the Germans hesitated. Pressing demands for replacements to meet the Brusilov Offensive on the Eastern Front (see p. 1053) then drained 15 German divisions from Verdun. Falkenhayn was relieved of command a little later (August 29) and the Hindenburg-Ludendorff team, replacing him, decided to cut their losses and to go on the defensive in the west.

In the fall the French—now under Mangin—went over to the offensive, retaking Forts Douaumont (October 24) and Vaux (November 2). After a lull of several weeks, Mangin again

attacked, pushing the French front forward almost to the lines held in February, capturing over 11,000 prisoners and 115 guns (December 15–18). This brought the campaign to a close. The casualties in this bitterly fought battle were approximately 542,000 French and 434,000 German.

The First Battle of the Somme, June 24–November 13

Joffre's long-planned offensive—delayed for several months by the crisis at Verdun—was finally launched by a stupendous 7-day artillery preparation, but—again due to Verdun—with the British playing the leading role, instead of the joint operation initially planned by Joffre. The main effort was to be made by the British Fourth Army (General **Henry S. Rawlinson**), north of the Somme, with General **Edmund Allenby**'s Third Army farther north also attacking. South of the river, armies of Foch's Army Group of the North would make a holding attack.

On July 1 the British infantry, following a rolling artillery barrage, dashed themselves against the highly organized defensive positions of the German Second Army. Small gains were made, but by nightfall the British had lost about 60,000 men, 19,000 of them dead—the greatest one-day loss in the history of the British Army.* The French, surprisingly, made greater advances, since the Germans had not expected them to take part in the initial assault and so were surprised by the attacks south of the Somme.

Despite the appalling losses of the first day, the British continued to forge ahead in a series of small, limited attacks. Falkenhayn, determined to check the threat, began shifting reinforcements from the Verdun front. To this extent, therefore, Haig had accomplished one objective of the offensive.

A British night attack on July 13 cracked the German second line. British cavalry rode into the gap—the last time horse cavalry was used on a large scale in Western Europe. But other reserves were slow to arrive, and the horsemen were soon mowed down by machine guns, then engulfed by a German counterattack, which again sealed the line. The Allied offensive deteriorated into a succession of minor but costly small actions.

Haig launched another major offensive on September 15, southwest of Bapaume. The British tanks had been secretly shipped to the front, and spearheaded the attack. Despite the surprise their appearance caused to the Germans, the tanks were underpowered, unreliable, too slow, and too few in number to gain a decisive victory. (Out of 47 brought up, only 11 got into the battle.) The British made substantial gains, but a breakthrough eluded them. Nevertheless, British and French continued attacks gained small bits of ground through mid-November.

British losses in this campaign were 420,000; French, 195,000. German casualties, which included a great proportion of prewar officers and noncommissioned officers, came to a shocking total of some 650,000.

COMMENT. *The British armies—brave, well-equipped, and gallantly led—could not stand up to machine-gun fire interlacing a defensive zone echeloned in depth for miles. In 4 1/2 months of almost continuous attacks, they were able to advance only a little more than 8 miles. Aerial operations were the most extensive yet seen in war. The British use of tanks was premature, like the German use of gas at Ypres the year before. In both cases the user did not anticipate the effect of a new and fearsome weapon, and so was unprepared to exploit. The German defensive role was magnificent, but repeated German*

* A comparison with the Normandy landing, largest assault operation of World War II, reveals that the combined Anglo-American armies fought for 20 days in Normandy before sustaining 60,000 casualties.

counterattacks proved even more costly than Allied assaults. The Somme bled Germany white in experienced small-unit leaders. That army would never be the same again.

The Italian Front

1916, March 11–29. Fifth Battle of the Isonzo. Like its predecessors, this was a succession of blunt-nosed inconclusive conflicts. The Italian offensive was broken off when the Austrians attacked elsewhere.

1916, May 15–June 17. Austrian Trentino (Asiago) Offensive. Long planned, the attack caught the Italians unprepared. Archduke Eugene's Eleventh and Third armies overran General **Roberto Brusati**'s First Army. Terrain difficulties and Italian reinforcements finally checked the drive (June 10). An Italian counteroffensive and the need to rush troops eastward to stem the Brusilov Offensive (see below) caused Eugene to withdraw from some of the conquered terrain to defensive positions. Italian losses were more than 147,000 (including 40,000 prisoners), 300 guns, and great stores of supplies. Austrian losses were 81,000 (including 26,000 prisoners).

1916, August 6–17. Sixth Battle of the Isonzo. Cadorna, rapidly shifting forces on interior lines, struck the Austrian Isonzo front, depleted for the Trentino Offensive. **Gorizia** was taken, but no breakthrough effected. Psychologically, the operation boosted Italian morale, lowered by the previous heavy losses in the Trentino. Italian losses were approximately 51,000 against the Austrians' 40,000.

1916, September 14–November 14. Continued Italian Offensives. Three more Italian assaults, dubbed the **Seventh** (September 14–26), **Eighth** (October 10–12), and **Ninth** (November 1–14) **Battles of the Isonzo,** did little more than to exhaust Austrian powers of resistance. The Italians lost in these operations 75,000, the Austrians 63,000, including more than 20,000 prisoners.

The Eastern Front

1916, March 18. Battle of Lake Naroch. Responding to French appeals, the Russians launched a 2-pronged drive in the Vilna-Naroch area to counter the German Verdun assault in the west. Despite a 2-day preliminary bombardment—the heaviest yet seen on the Eastern Front—the Russian assault broke down in the mud of the spring thaw. Its cost—between 70,000 and 100,000 casualties and 10,000 prisoners—did not improve Russian morale. German losses were about 20,000 men.

1916, June 4–September 20. Brusilov Offensive. The Austrian spring offensive against Italy (see above) brought another appeal to Czar Nicholas for help. In response, capable and courageous General **Alexei A. Brusilov,** commanding the Russian Southwestern Army Group, attacked on a 300-mile front, forgoing any prior massing of troops, or preliminary artillery preparation, in order to gain surprise. Well planned, rehearsed, and executed, his assaults bit through the Austro-German line in 2 places. The Austrian Fourth Army was routed, the Seventh unraveled, 70,000 prisoners were taken, the vital rail junction of Kowel endangered. However, Brusilov received little or no help or cooperation from the 2 other Russian army groups on the front, and a counteroffensive by German General Alexander von Linsingen's army group (June 16) checked his northern thrust. Under orders from Alekseyev, Brusilov renewed the offensive (July 28), making further gains, until slowed down by ammunition shortages. His third assault (August 7–September 20) brought him into the Carpathian foothills. The offensive ended in sheer exhaustion, as German reinforcements hurried from Verdun (see p. 000) bolstered the shattered Austrians. Had it not been for these reinforcements, Austria probably would have been knocked out of the war in 1916.

COMMENT. *The Brusilov Offensive was the most competent Russian operation of World War I. Its strategic consequences may be summed up as weakening the Central Powers' offensives in Italy and at Verdun, contributing to the downfall of Falkenhayn, and elim-*

inating Austria forever as a major military power. But the Russians had lost one million casualties, more even than that populous nation could afford. The Brusilov Offensive did not cause the Russian Revolution, but it probably made revolution inevitable. Austrian losses were even greater, and the defeat contributed more than any other single factor to the disintegration of the Hapsburg Empire.

1916, August–December. Rumanian Participation in the War. After long haggling with the Allies for a promise of rich territorial gain, Rumania was so impressed by the early success of the Brusilov Offensive that she declared war on Germany and Austria (August 27). Rumanian armies at once invaded coveted Transylvania. Falkenhayn, demoted from Chief of the Imperial German General Staff to army commander, met them with the German Ninth Army and threw them back, while Mackensen, up from the Salonika front with the German-reinforced Bulgarian Danube Army, drove north through the Dobruja and crossed the Danube (November 23). Penned in a salient, Rumanian General **Alexandru Averescu** attempted to envelop Mackensen's left flank with a portion of his forces, while the remainder checked Falkenhayn's advance. Russian cooperation was essential to success, but was not forthcoming. The German armies linked; the Rumanians were disastrously defeated in the **Battle of the Arges River** (December 1–4). Bucharest was occupied (December 6), and by year's end the remnants of the Rumanian armies had been driven north into Russia, holding one tiny foothold in their own country. The bulk of Rumanian grain- and oil-producing areas were in German hands. Rumanian losses are estimated at from 300,000 to 400,000 (more than half non-battle casualties), and the campaign cost the Central Powers some 60,000 combat casualties and almost the same number of sick.

The Balkan Front, 1916

The Allied forces now held a fortified position—the "Bird Cage"—around Salonika. Sarrail was technically in command, but the British took orders from their home government. The Central Powers' strategy was one of containment. The Greek political situation complicated matters. Sickness decimated the Allied forces. The reconstituted Serbian Army, 118,000 strong, joined (July) and with additional reinforcements the Allied strength rose to more than 250,000. Sarrail decided on an offensive up the Vardar Valley. But the Bulgarians struck first.

1916, August 17–27. Battle of Florina. Bulgar-German attacks drove in the Allied forces to the **Struma River** line.

1916, September 10–November 19. Allied Counteroffensive. Sarrail slowly pushed northward, taking **Monastir** (Bitolje, November 19). Operations dwindled to a stop as Sarrail bickered with his subordinates. The year's campaign had cost the allies some 50,000 men. Bulgar-German losses were approximately 60,000.

1916, July–November. Operations in Albania. During the year an Austrian corps opposed an Italian corps along the Vayusa River in indecisive semi-independent operations. The Italians finally (November 10) pushed the Austrians north and linked with Sarrail's main body at **Lake Ochrida.**

The Turkish Fronts

Egypt-Palestine-Arabia

1916, January–July. Sinai Bridgehead. British operations in Egypt under General Sir **Archibald Murray** focused upon eastward extension of Suez Canal defenses into the Sinai Desert, a tremendous plan involving water supply, communications, and fortifications. Meanwhile, insurrection of the Senussi tribes in western Egypt necessitated a diversion of force until it was suppressed (March 14). Several

minor actions occurred in the Sinai as British covering troops met Turkish resistance.

1916, June 5. Arab Revolt in the Hejaz. This was the result of Franco-British political negotiations with Arab chieftains, aimed at undermining Turkish strength. The Turkish garrison at **Medina** was attacked. **Hussein,** Grand Sherif of Mecca, proclaimed Arab independence. **Mecca**'s garrison surrendered (June 10) and the Turkish forces opposing Murray now found themselves hampered by Arab dissidence threatening their entire line of land communications north through Syria to the Taurus Mountains.

1916, August 3. Battle of Rumani. German General Kress von Kressenstein with 15,000 Turkish troops and German machine gunners struck the British Sinai railhead in a surprise attack. He was repelled, losing more than 5,000 men; British casualties were 1,100. As the year ended, the British had progressed to El Arish.

Mesopotamia

1916, April 29. Fall of Kut-el-Amara. Townshend's besieged force (see p. 1049) vainly waited for rescue while British General **Fenton J. Aylmer** with 2 newly arrived Indian divisions battered futilely against the heavy Turkish contravallation (January). General **George F. Gorringe,** succeeding Aylmer, attempted a surprise attack (March 7) on the south bank of the Tigris, but was repulsed by elderly (73) but capable German General **Kolmar von der Goltz,** commanding the Turkish Sixth Army. Continued efforts to break through were unsuccessful. The food supply in Kut failed. With starvation near, Townshend capitulated, surrendering 2,070 British and some 6,000 Indian troops as a half-hearted Russian attempt to move from Persia on Baghdad bogged down. The unsuccessful British relief force suffered more than 21,000 casualties. Von der Goltz died of cholera just prior to the surrender; **Halil** Pasha succeeded him.

1916, December 13. British Advance. British General Sir **Frederick S. Maude,** appointed to the Mesopotamian command (August), had found himself reduced to a defensive role while the War Office and the Indian Army command debated pros and cons of possible British withdrawal from the theater. After chafing on the defensive for more than 2 months, Maude received permission to resume the offensive. He now began movement up both banks of the Tigris with a combat strength of 166,000 men, two-thirds of them Indians.

The Caucasus

1916, January–April. Russian Winter Offensive. General Yudenich (see p. 1047), one of the few really capable Russian commanders, advanced from Kars on Erzurum on a broad front (January 11). The Turkish Third Army (Abdul Kerim) was rapidly rolled up at **Köprukoy** (January 18), narrowly escaping envelopment. Kerim retreated to Erzerum, with loss of some 25,000 men—a great number by frostbite in the subzero mountain climate. Yudenich stormed **Erzerum,** rapidly breaking through its ring of forts in a 3-day battle (February 13–16). Meanwhile, he launched a subsidiary offensive along the Black Sea coast, supported by Russian naval craft. **Trebizond** (Trabzon) was captured (April 18), facilitating Russian logistical support.

1916, June–August. Turkish Counteroffensive. Enver Pasha contemplated a dual drive: the Third Army (now under **Vehip** Pasha) along the Black Sea littoral, and a new Second Army (**Ahmet Izzim** Pasha) to advance on Bitlis and turn Yudenich's left. Yudenich, moving with characteristic rapidity and judgment (July 2), split the Third Army at **Erzinjan,** routing it completely (July 25). The Turks lost 34,000 casualties. Yudenich then turned on the Turkish Second Army. Kemal, hero of Gallipoli and now a corps commander, scored the only Turkish successes, capturing **Mus** and **Bitlis** (August 15), but Yudenich retook them (August 24). Both sides went into winter quarters early.

The Persian Front

Russian forces in this area were comparatively small; General N. N. Baratov, with some 20,000 men and 38 guns, moved on Kermanshah to divert Turkish forces from Mesopotamia. Reaching Karind (March 12), he announced his intention to move on Baghdad. The day he started, Kut fell (April 29; see p. 1055). **Halil** Pasha thereupon shifted most of his forces from the Kut area to protect Baghdad. Baratov attacked at **Khanikin** (June 1), was repulsed, and withdrew to Karind. Halil took the offensive and by August had retaken Kermanshah. Then this front quieted down again.

The War at Sea, 1916

The Submarine Campaigns and Cruiser Raids, January–May

1916, February 21. Extended German Submarine Campaign. Germany proclaimed that after March 1 armed merchantmen would be treated as warships. Sinking of the British passenger liner *Sussex* (March 24), with loss of several American lives, brought vigorous protest from the U.S.

1916, May 10. Sussex Pledge. Germany announced abandonment of the extended campaign, and stated that passenger ships would not be sunk without warning.

1916, April 24–25. German Cruiser Raids. Yarmouth and Lowestoft were bombarded in hit-and-run raids.

The Battle of Jutland, May 31–June 1

The German High Seas Fleet under Vice Admiral **Reinhard Scheer** put to sea, cruising north toward the Skagerrak (May 30). Von Hipper's scouting fleet, 40 fast vessels built around a nucleus of 5 battle cruisers, led the way. Well behind was the main fleet of 59 ships, 16 of them dreadnoughts and 6 others older battleships. Warned of the sortie by imprudent German radio chatter, the Grand Fleet under Admiral Sir **John R. Jellicoe** at once put to sea. Leading was Beatty's scouting force of 52 ships, including his 6 battle cruisers and Admiral **Hugh Evan-Thomas'** squadron of 4 new superdreadnoughts. Jellicoe's main fleet, following, was composed of 99 vessels, 24 of them dreadnoughts. Over all, the British had 37 capital ships at sea; 28 dreadnoughts, and 9 battle cruisers; the Germans had 27 capital ships: 16 dreadnoughts, 6 older battleships, and 5 battle cruisers.

Beatty's 2 divisions steaming east, line ahead, with his battle cruisers on the right and Evan-Thomas' dreadnoughts to the left, next afternoon sighted Hipper's force, also in line ahead, steaming south (he had already sighted Beatty and was returning toward the German main fleet). It was now 3:31 P.M. As Hipper hoped, Beatty turned on a parallel course to the German squadron, signaling Evan-Thomas, whom Hipper had not yet sighted, to follow. Both battle-cruiser forces opened fire at 16,500-yard range, with the German gunnery more accurate. Beatty's flagship, *Lion,* leading, received several hits. Then in succession came mortal blows to the thin-skinned British battle cruisers. A salvo from *Von der Tann* tore into *Indefatigable*'s vitals; she blew up and capsized. *Derfflinger*'s accurate salvos sent *Queen Mary* to the bottom 20 minutes later.

THE FLEETS—BATTLE OF JUTLAND

Type	NUMBER AT JUTLAND	
	British	*German*
Battleships[a]	28	16
Battle Cruisers[b]	9	5
Battleships, Second-Line[c]	0	6
Armored Cruisers	8	0
Light Cruisers	26	11
Destroyer Leaders (Big Destroyers)	5	0
Destroyers	73	61
Minelayers	1	0
Seaplane Carriers	1	0
Submarines	[d]	[d]
Total	151	99

[a] These were the modern, fast, heavily armored all big-gun ships known as dreadnoughts, after the first one commissioned by the British in 1906: HMS *Dreadnought*. They carried 8 or 10 guns of 12- to 15-inch caliber.

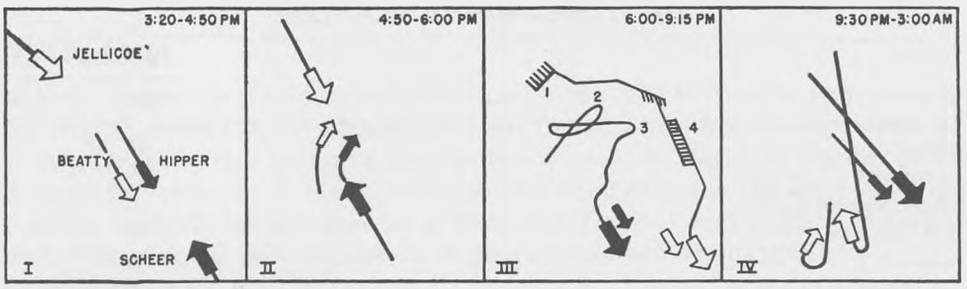
[b] These were very fast versions of the dreadnoughts, carrying fewer, slightly smaller guns—usually eight 11.5- to 13-inch caliber—and with lighter armor protection to give them more speed.

[c] These were older vessels, still big and powerful, but with fewer big guns, and slower in speed.

[d] The British and Germans each had about 45 submarines available, but none were used.

Beatty, with but 4 ships left to oppose the German 5, and Evan-Thomas still out of range, tersely signaled: "Engage the enemy closer." He remarked to his flag captain: "There seems to be something wrong with our bloody ships today. Turn two points to port." and *Lion*, badly damaged but still fighting, swung closer to the Germans.

Soon afterward, at 4:42, Beatty sighted the German main fleet approaching; he at once turned north to join Jellicoe, in his turn hoping to lead the German fleet behind him. Hipper had already turned and was firing accurately at Beatty's ships and those of Evan-Thomas, who was slow in turning and was now being pounded by Scheer's main battle line. For over an hour the chase to the north continued, much damage being done on both sides. Shortly after 6 P.M., Beatty sighted Jellicoe's 6 divisions approaching from the northwest in parallel columns, preceded by Rear Admiral Sir **Horace Hood**'s battle squadron—3 battle cruisers and 2 light cruisers. The British main fleet was still over the horizon from the Germans, but Beatty, still heavily engaged, turned generally eastward, in front of the Germans, to get himself into line in front of Jellicoe, whose 6 columns now also turned behind Beatty. Both British admirals were hoping to swing entirely around Scheer and block him from his base. Shortly before 6:30, Scheer sighted Hood's squadron to his right front, just as British dreadnought shells began to fall around the German battle line. Within minutes practically every major ship in both fleets was within range and a furious general engagement was taking place. The German battle cruisers caught the worst of the storm; Hipper's flagship *Lutzow* was hammered out of action. On the British side, at 6:34 Hood's flagship was sunk with all on board by *Derfflinger*'s accurate gunnery, and the cruisers *Defence* and *Warrior* also went down.



THE PHASES OF THE BATTLE OF JUTLAND

Phase I: The Battle Cruiser Action—the Run to the South.

Phase II: The Run to the North.

Phase III: The Main Fleet Action:

1. Jellicoe's battle line deploys into column.
2. Jellicoe caps Scheer's "T."
3. The Crisis. Jellicoe again caps Scheer's "T."
4. Jellicore turns away.

Phase IV: The Night Action.

The High Seas Fleet was now inside the converging arc of the Grand Fleet and taking heavy punishment. At 6:35, Scheer, under cover of a smoke screen and destroyer attacks, suddenly reversed course by a difficult and perfectly executed simultaneous 180-degree turn, headed west, and in a few minutes his ships were out of range of most of the surprised British. Jellicoe, instead of pursuing, continued southward, since he knew his fleet was now between the Germans and their bases. Then, at 6:55, Scheer made another 180-degree fleet turn back toward the British, apparently thinking Jellicoe had divided his fleet. Suddenly the entire German fleet was again under the guns of the entire Grand Fleet. This time it seemed that the Germans could not escape destruction in the hail of great projectiles.

A second time Scheer made a simultaneous turn away, while the 4 remaining German battle cruisers, under Captain **Hartog** of *Derfflinger,* most gallantly charged toward the British line to cover the withdrawal. (Hipper had transferred to a destroyer and was trying to catch up with his battle cruisers.) *Von der Tann,* her guns already out of action, remained in line only to spread the British fire. Both *Seydlitz* and *Derfflinger* broke into flames but remained in action as the German battle cruisers swung past the British battle line at short range. Then German destroyers sped in toward Jellicoe's battleships to make a torpedo attack and spread a smoke screen. Jellicoe, wary of torpedoes, saved Scheer by himself turning away. By the time he had resumed his battle line, the German High Seas Fleet had disappeared westward into the dusk as Scheer made another 180° turn. Amazingly, none of the German battle cruisers had been sunk in their courageous "death ride."

But the battle was not over. Scheer knew that the British fleet was now between his fleet and its home ports, and that Jellicoe was steaming to cover the entrances to those ports. Scheer also knew his fleet could not survive a renewed general battle. After dark he boldly turned to the southeast, deliberately crashing into the formation of light cruisers at the tail of Jellicoe's

southbound fleet. He finally battered his way through in a chaotic midnight battle of collisions, sinkings, and gunfire. The British cruiser *Black Prince,* suddenly engulfed in the midst of the Germans, was sunk in 4 minutes. The German predreadnought battleship *Pommern* was cut in two. By dawn, Scheer was shepherding his cripples toward the Jade anchorage, and Jellicoe realized that his quarry had escaped.

The British now turned back to their bases. They had lost 3 battle cruisers, 3 cruisers, and 8 destroyers; they had 6,784 casualties. The Germans lost 1 old battleship, 1 battle cruiser, 4 light cruisers, and 5 destroyers; casualties were 3,039.

COMMENT. *Jutland marked the end of an epoch in naval warfare. It was the last great fleet action in which the opponents slugged it out within eyesight of one another. A drawn battle tactically, it made no change in the strategic situation, other than to make the Germans realize that they had no chance of defeating the Grand Fleet. Of the commanders engaged, Beatty, Hipper, and Hartog stand out, gifted with that "Nelsonian touch," which neither Jellicoe nor Scheer (both able professionals) appeared to have. In general, both sides behaved with the utmost gallantry.*

Subsequent Naval Operations, June–December

The remainder of the year saw one timid sortie of the High Seas Fleet (August 18), which ended as a fiasco, both opponents running home without making contact—Scheer deceived by a false airship report, Jellicoe because he feared a submarine ambush. Two German light-cruiser raids were made on the British coast (August 19 and October 26–27), and several auxiliary cruisers slipped through the British blockade to ravage Atlantic commerce. But in the main, German naval effort was now concentrated on submarine activities. Tremendous toll was taken of Allied shipping: 300,000 tons per month by December.

Operations in 1917

Global Situation

Allied strength had grown during 1916. Toward the end of the year, at another Allied conference called by Joffre at Chantilly, there had been general agreement to continue a policy of joint Anglo-French large-scale operations on the Western Front in conjunction with simultaneous Russian and Italian offensives. These would have priority over all operations elsewhere, although new British Prime Minister **David Lloyd George** decided to undertake a major campaign in Palestine as well.

The western Allies at this time did not realize the extent of Russia's instability. The retirement of Joffre (December 31, 1916), who was succeeded by Nivelle, the hero of Verdun, immediately complicated the coordination of the Allied operations. Unity of command was nonexistent. Nivelle, planning a giant joint Anglo-French offensive, to be carried out with "violence, brutality, and rapidity," clashed with Haig on their command relationship. The French government supported Nivelle and the British were divided. British Prime Minister Lloyd George, who distrusted Haig and admired charming, English-speaking Nivelle, placed the BEF under Nivelle's command, to the horror of Haig and of Sir **William Robertson,** the new Chief of the Imperial General Staff. Through this bickering, and Nivelle's own imprudent announcements, secrecy was lost.

Ludendorff, aware of the Allied preparations and particularly fearing for over-extended German lines in the west, deliberately chose a defensive attitude on both major fronts, while forcing Austria (with German assistance) to take decisive action against Italy, which he believed could be defeated in 1917. The Kaiser approved this strategic concept, and also concurred in the inauguration of unrestricted submarine warfare, regardless of American opinion. He virtually granted unlimited authority to the military high command.

United States Entry

1917, January 31. Germany Proclaims Unrestricted Submarine Warfare. To offset growing hostility in the U.S., covert negotiations were already in process by German diplomats for a German-Mexican-Japanese alliance.

1917, February 3. The U.S. Severs Relations with Germany. This was a protest against unrestricted submarine warfare. Brazil, Bolivia, Peru, and other Latin American nations followed suit, as did China (March 14).

1917, March 1. Zimmermann Note. Publication of a proposed German defensive alliance with Mexico in case of war between Germany and the U.S., with the proviso "that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona" caused a wave of American fury. **Alfred Zimmermann,** German Foreign Secretary, had sent the coded proposition, which contained the further suggestion that Mexico urge Japan to join the Central Powers, to **von Eckhardt,** German Minister to Mexico (January 19). British naval intelligence, intercepting and decoding it, gave a copy (February 24) to **Walter Hines Page,** U.S. ambassador to Brittain. He immediately turned it over to the State Department, which released it to the press (March 1). U.S. intelligence sources later verified the authenticity of the note.

1917, March 13. U.S. Merchantmen Armed. President Wilson's decision to arm for self-defense all vessels passing through war zones was announced by the State and Navy departments.

1917, April 6. The U.S. Declares War against Germany. This followed the sinking of several American ships and President Wilson's war message to Congress (April 2). War against Austria-Hungary was not declared until 8 months later (December 7).

1917, April–June. U.S. Preparations. The Army would have to be built. Major General **John J. Pershing** was selected to command the American Expeditionary Force (AEF) and the 1st Division (an amalgamation of existing Regular Army units) was shipped to France (June). Pershing's plan called for a 1-million-man army overseas by May 1918, with long-range provision for 3 million men in Europe later. A draft law—the Selective Service Act—was passed (May 19) and the nation went into high gear. The Navy was ready (see p. 1067).

The Western Front

1917, February 23–April 5. German Withdrawal. Ludendorff had prepared a much shorter, highly organized defensive zone—the Hindenburg Line, or Siegfried Zone—some 20 miles behind the winding, overextended line from Arras to Soissons. Hindenburg approved, and decided to withdraw to the new line, which could be held with fewer divisions, thus providing a larger and more flexible reserve. Behind a lightly held outpost line heavily sown with machine guns lay 2 successive defensive positions, heavily fortified. Behind these again lay the German reserves concentrated and prepared for counterattack. Each successive defensive line was so spaced in depth that, should one be taken, the attackers' artillery would have to displace forward before progressing against the next. Between the original line and the new zone, the countryside had been devastated; towns and villages were razed, forests leveled, water sources contaminated, and roads destroyed. The actual withdrawal, conducted

in great secrecy, began February 23 and was completed by April 5.

1917, April 9–15. Battle of Arras. This was the British preliminary to the Nivelle Offensive. The British First (General **H. S. Horne**) and Third (General Sir Edmund Allenby) armies, following a heavy bombardment and gas attack, crashed into the positions of the German Sixth Army (General **L. von Falkenhausen**). British air supremacy was rapidly gained. Canadian troops stormed and took **Vimy Ridge** the first day. The British Fifth Army (**Hubert Gough**), assisting on the south, made little progress. The British advance was finally slowed down in succeeding days of battle. Although this was a British tactical victory, there was no break-through. British casualties were 84,000; German, about 75,000.

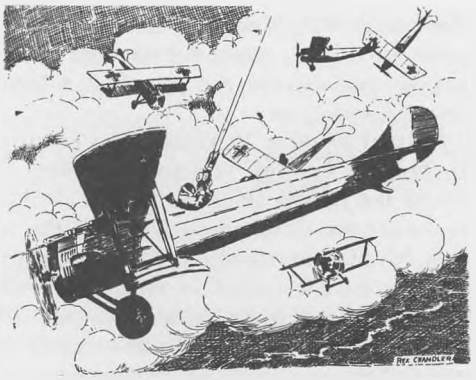
1917, April 16–20. Nivelle Offensive (Second Battle of the Aisne, Third Battle of Champagne). The French Reserve Army Group (**Alfred Micheler**), heavily reinforced, assaulted on a 40-mile front between Soissons and Reims to take the **Chemin des Dames,** a series of wooded, rocky ridges paralleling the front. The Sixth (Mangin) and Fifth (**Olivier Mazel**) armies were closely supported by the Tenth (**Denis Duchêne**), and backed by the First (**M. E. Fayolle**). French strength in the attacking armies totaled 1,200,000 men and 7,000 guns. The German Seventh (**Max von Boehn**) and First (**Fritz von Below**) armies held the sector, fully cognizant of French plans as a result of Nivelle's confident public boasts of victory. Just before the attack, German flyers swept the sky of French aerial observation and German artillery fire destroyed French tanks still in march column. The French rolling artillery barrage moved too fast for the infantry, who met preplanned artillery and machine-gun fire, and sectional counter-attacks. With exceptional gallantry, however, the French managed to reach and take the first German line, but were then stopped. Repeated attacks gained little ground. The whole affair was a colossal failure, costing the French nearly 120,000 men in 5 days. German losses, despite 21,000 captured, were much less. Compared with similar attacks in previous years, such losses might not have seemed excessive, had Nivelle not promised a break-through and victory.

1917, April 29–May 20. Outbreak of Mutiny in French Armies. Widespread mutiny followed the Nivelle Offensive disaster. Political repercussions simultaneously shook the nation. Nivelle was replaced by Pétain (May 15). After a 2-week period in which the entire Western Front was nearly denuded of French combat troops, Pétain quelled the mutiny and restored the situation with a combination of tact, firmness, and justice. By amazingly efficient censorship control, French counter-intelligence agencies completely blotted out all news of the mutiny. When it finally trickled to Ludendorff, it was too late; renewed British attacks to distract his attention had already drawn German reserves to the northern front. The full extent of the mutiny was not known to the outside world for more than a decade.

1917, June–July. British Offensive in Flanders. Haig, after an abortive renewal of the fighting around Arras to relieve German pressure on the French, had determined to break through between the North Sea and the Lys River. The Ypres salient was selected, but success could only be gained after first taking the dominating Messines Ridge. Plans for an assault had been begun many months earlier by competent, methodical General Sir **Herbert Plumer,** Second Army commander.

1917, June 7. Battle of Messines. After a 17-day general bombardment, British mines packed with 1 million pounds of high explosive tore a wide gap in the German lines on the Ridge. Under cover of this surprise and of British aerial superiority, in a carefully planned and organized attack, Plumer's Second Army successfully gained the position at cost of 17,000 casualties. German losses were 25,000, including 7,500 prisoners. Elbowroom had been gained for the main offensive, and the clear-cut victory bolstered British morale.

1917, July 31–November 10. Third Battle of Ypres (Passchendaele). Following an inten-



German pursuit planes attacking Allied observation planes

sive bombardment, the British Fifth Army (Gough) assaulted northeast against the German Fourth Army (**Friedrich Sixt von Armin**). The French First Army (**François Anthoine**), on the left, was the pivot of maneuver; on the right, Plumer's Second Army covered the main effort. The low ground, sodden with rain, had been churned to a quagmire by a 3-day bombardment. Overhead the Allies had won temporary air superiority. All surprise had been lost, however, by the long preparation, and the German defense in depth was well organized. After some early gains, the attack literally bogged down. Haig now placed Plumer in command of the operation. After typical careful planning, a series of limited attacks on narrow fronts began (September 20); the British inched forward against determined counterattacks. Mustard gas was used here by the Germans for the first time, while German planes flew low to strafe British infantry with machine guns. The taking of Passchendaele Ridge and Passchendaele village (November 6) concluded the offensive. The British-held Ypres salient had been deepened for about 5 miles, at great cost—some 300,000 British and 8,528 French casualties. German losses are estimated at 260,000. But Haig, still determined to keep pressure on the Germans to permit the French armies to recover from the mutiny, had another card to play.

1917, November 20–December 3. Battle of Cambrai. General **J. H. G. Byng**'s British Third Army struck General **Georg von der Marwitz'** German Second Army positions in front of Cambrai in complete surprise and under most favorable terrain conditions. At dawn, some 200 tanks followed a sudden burst of artillery fire into the German wire. Behind them moved wave after wave of infantry. The German defense collapsed temporarily and the assault bit through the Hindenburg Line for 5 miles on a 6-mile front, except at **Flesquières,** where German artillery knocked out tanks and the British infantry was unable to close in support. Although 2 cavalry divisions were poised to exploit the breakthrough, infantry reserves were weak, and too many tanks had been put in the first waves. Crown Prince Rupprecht of Bavaria, commanding the defending army group, rushed reinforcements to Marwitz. A large proportion of the British leading tanks became casualties—more from mechanical breakdown than by artillery fire—and the advance slowed down. German counterattacks fell on the salient (November 30) and Haig ordered a partial withdrawal (December 3). Casualties on both sides were approximately equal: about 45,000. The British took 11,000 prisoners; the Germans, 9,000. Cambrai marked a turning point in Western Front tactics on 2 counts: successful assault without preliminary bombardment and the first mass use of tanks.

COMMENT. *The most important lesson emerging from the entire western campaign of 1917 was the necessity for unity of command. Haig and Nivelle between them in two disjointed offensives had squandered more than one-half million men and exhausted the resources of 2 splendid war machines without appreciable effect. In Haig's defense, however, it should be noted that his persistent costly attacks in Flanders and Artois were largely intended to attract German attention from the weakness of the French armies farther south; in this he was successful, and to him must go at least part of the credit for France's survival through 1917.*

As the year ended, acquisitive eyes in both Britain and France turned to the as yet untouched human resources of the United States.

The Italian Front

1917, April. Allied Planning. Cadorna feared that the Germans would send troops to aid the Austrians in an offensive on the Italian front. Because of this, Nivelle sent Foch to meet Cadorna to work out plans for French and British assistance in such an event. Franco-British-Italian staff officers worked out a program for reinforcements to be rushed into Italy in emergency.

1917, May 12–June 8. Tenth Battle of the Isonzo. Cadorna, despite promises to aid the Allied offensive, did not get started until after the battles of Arras and the Aisne were over. Once again the Italians attempted to batter their way through, over mountainous terrain. After a 17-day battle, gains were small but losses huge: some 157,000 Italian casualties against about 75,000 Austrians. Following some minor give and take on both Isonzo and Trentino fronts, Cadorna decided to make a supreme effort with 52 divisions and 5,000 guns.

1917, August 18–September 15. Eleventh Battle of the Isonzo. The Italian Second Army (General **Luigi Capello**), heavily reinforced, assaulted north of Gorizia, while the Third (Duke of Aosta), to its south, drove into the rocky hills between Gorizia and Trieste. The southern assault was speedily stopped by the left wing of Austrian General Borojevic's Fifth Army, but Capello's Second Army on the north made a clear-cut advance, capturing the strategically important Bainsizza Plateau. Outrunning their artillery and supply, the Italians were then forced to stop. The net result was an incipient collapse of Austrian arms. The Austrians asked for German help.

1917, October 24–November 12. Battle of Caporetto (Twelfth Battle of the Isonzo). A new Fourteenth Austrian Army (7 of its divisions and much of its artillery were German), under German General **Otto von Below,** was concentrated behind the Tolmino-Caporetto-Plezza zone. Using novel "Hutier tactics" (see p. 1064), it suddenly crashed against the Italian Second Army. Surprise bombardment, with clouds of gas and smoke shells, disrupted Italian signal communications. Then the German assault elements loomed through mist and rain on the demoralized defenders. Cadorna, having learned of the projected assault, had ordered defense in depth, but Capello—a capable officer—was ill and the acting commander of the Second Army ignored the instructions. Bypassing strong points which would be mopped up later by reserves, the German assault elements streamed through the zone, uprooting the Second Army. The Austrian Tenth Army on the right and the Fifth Army on the left supported the main effort. The Italian Third Army withdrew in good order along the coast, but part of the so-called Carnic Force on the northern Alpine fringe was trapped. Farther west the Italian Fourth Army hurriedly fell back to conform with the situation as the battered Second Army was driven in succession from defensive lines along the Tagliamento and Livenza rivers. By November 12, Cadorna managed to stabilize his defense from Mt. Pasubia, south of Trent, to the Piave and along that river to the Gulf of Venice. There the Austro-German offensive slowly ground to a halt, having outdistanced its supply. The catastrophe cost the Italians 40,000 killed and wounded plus 275,000 prisoners, 2,500 guns, and huge stores of goods and munitions. Austro-German losses were about 20,000. By this time French and British reinforcements, in accord with the plan prepared earlier in the year, were moving in, 11 divisions in all, under British General Plumer. Cadorna was now removed from command, being replaced by General **Armando Diaz.**

COMMENT. *Caporetto is a prime example of the military principles (or virtues) of surprise, objective, mass, and economy of force. Below had but 35 divisions in all against the Italian 41, but was far superior in strength at the point of impact. Had he possessed cavalry and armored cars to exploit his success, the battle might have been decisive. As it was, the Italians were badly shaken, but still capable of carrying on the war. A direct result of this disaster to Allied arms was the Rapallo Conference (November 5), which set up a* **Supreme War Council,** *the first attempt to attain overall Allied unity of command.*

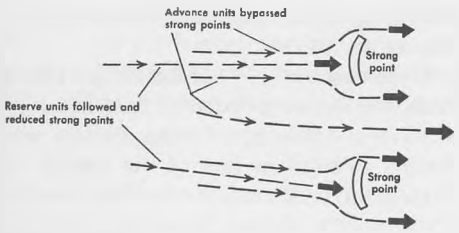
The Eastern Front

1917, March 12. Russian Revolution. Mutiny of the Petrograd garrison (March 10) was followed by establishment of a Provisional Government. Nicholas II abdicated (see p. 1098). The new regime, bickering with the Bolshevik-dominated **Petrograd Soviet** (Council of Workers and Soldiers' Deputies), pledged itself to continue war against the Central Powers until an Allied "victorious end" was attained. The Soviet (March 14), fearing counterrevolutionary measures by the officer corps, issued on its own authority the notorious "Order No. 1," depriving officers of disciplinary authority. Broadcast throughout the armed forces, and despite the counterorders of the Provisional Government, it produced the result desired by the Bolsheviks—breakdown of all military discipline. The Russian Army and Navy collapsed like an ice jam in a spring thaw. Mutinous soldiers and sailors murdered many officers; others were simply deposed by soldiers' councils. By mid-April an estimated 50 percent of the officer corps had been eliminated, among them most of the best men. **Nikolai Lenin** and other Bolshevik agitators were smuggled into Russia by Germany to undermine the Provisional Government. **Leon Trotsky** (Bronstein) joined them. Germany, halting all offensive movements on the Eastern Front lest the Russians reunite in defense of the homeland, took advantage of the lull to send troops to the Western and Italian fronts. Despite all the turmoil, **Alexander Kerensky,** appointed minister of war (May 16), and pressured by the alarmed Allies, attempted to mount an offensive on the Galician front. Brusilov, now chief of staff, commanded.

1917, July 1. Kerensky (or Second Brusilov) Offensive. Brusilov attacked toward Lemberg with the few troops still capable of combat operations. The Eleventh and Seventh Russian armies penetrated German Count **Felix von Bothmer**'s composite South Army (4 German, 3 Austrian, and 1 Turkish division) for 30 miles on a 100-mile front. On the Russian northern flank, the Austrian Second Army was roughly handled. On the south, General **Lavr Kornilov**'s Russian Eighth Army rocked the Austrian Third Army and threatened the oil fields of **Drohobycz** (July 5). But Russian enthusiasm and discipline faded quickly as German resistance stiffened and their own supply system broke down.

1917, July 19. German Counterattack. General **Max Hoffmann,** commanding on the Eastern Front, had quickly obtained reinforcements from the west. Preceded by a most intensive bombardment, the German assault, beginning on the northern flank, rolled up the now demoralized Russian armies in quick succession. They disintegrated; south of the Pripet Marshes no Russian Army now existed. The Germans halted their advance on the Galician border simply because they lacked sufficient reserves and logistical resources to occupy more territory.

1917, September 1. Hutier's Riga Offensive. German General **Oscar von Hutier**'s Eighth Army attacked the northern anchor of the Russian front. While a holding attack on the west bank of the Dvina River threatened Riga, 3 divisions crossed the river to the north on pontoon bridges, encircling the fortress, while exploiting elements poured eastward. Actually, this highly successful attack was but a dress rehearsal of new German assault techniques to be used again, 6 weeks later, at Caporetto. Long preliminary bombardment was eliminated. Instead, a short, sharp concentration of fire was followed immediately by infantry assaults, both guns and troops being brought into position at the last possible moment to ensure surprise. Heavy concentrations of gas and smoke shells masked known enemy strong points, while infiltrating elements—infantry and light guns—bypassed them. This was the first application of what would become known as "Hutier tactics." The Russian Twelfth Army streamed eastward in complete panic. Only 9,000 prisoners were taken; casualties on both sides were minimal. At this same time a small German amphibious force occupied Osel and Dago islands in the Gulf of Riga, and effected a landing on the mainland.



1917, September–October. Chaos in Russia. The Kerensky government (Kerensky had become head of the Provisional Government July 20) fled Petrograd for Moscow, and the Bolsheviks began to take over. A brief flurry of counterrevolution under General Kornilov petered out (September 9–14).

1917, November 7 (October 25 O.S.) Bolshevik Revolution. Lenin and Trotsky seized power and began dickering for peace with Germany.

1917, December 15. Armistice of Brest Litovsk (Brest). After 12 days of bickering between Bolshevik and German negotiators, armistice terms were agreed, ending hostilities on the Eastern Front. (For further operations, including the Allied invasions of north Russia and Siberia, see p. 1092.) Russia had been permanently erased from the Allied ranks.

The Balkan Front, 1917

1917, January–June. Stalemate. Sarrail, with some 600,000 men on paper, could only muster about 100,000 for combat duty, as malaria and other disease kept the hospitals full. Behind his lines Greece seethed as King Constantine's government continued to conciliate the Central Powers. Several inconclusive Allied attacks failed, at **Monastir** and the **Battle of Lake Prespa (Djoran)** (March 11–17) and the **Battle of the Vardar** (May 5–19). French and British commanders were at cross purposes, while the reconstituted Serbian Army distrusted both. German aerial supremacy added to the Allies' woes.

1917, June 12. Abdication of Constantine. This was the result of Allied pressure. New King **Alexander** appointed pro-Allied **Venizelos** as premier, clarifying the situation (June 26). At the same time, Allied troops moved into Thessaly. A French force occupied the Isthmus of Corinth.

1917, June 27. Greece Enters the War. Greek troops began to swell the Allied strength. However, no real offensive developed.

1917, December 10. Relief of Sarrail. Georges Clemenceau, new French premier, appointed General **M. L. A. Guillaumat,** competent and battle-tried commander, who at once began reorganizing the Allied forces.

The Turkish Fronts

The Caucasus

1917, March. End of Russian Pressure. With the first Russian Revolution in March, Turkish troops were freed to support other fronts.

Palestine

1917, January 8–9. Battle of Magruntein. The Sinai Peninsula was cleared of all organized Turkish forces. British losses were 487; they captured 1,600 prisoners and a few guns. Sir Archibald Murray was now authorized to begin a limited offensive into Palestine, where the Turks were established in defensive positions along the ridges between Gaza and Beersheba, the 2 natural gateways to the region.

1917, March 26. First Battle of Gaza. General Sir **Charles M. Dobell** attacked, but, through defective staff work and a communications breakdown between his mounted force and infantry, the attack failed. The British withdrew. Out of forces nearly equal in strength (about 16,000), British losses were 3,967; Turkish, 2,447. Murray's report, unfortunately, presented the action as a British victory. Accordingly, he was ordered to advance without delay and take Jerusalem.

1917, April 17–19. Second Battle of Gaza. Dobell tried again, this time in frontal assault

against the now well-prepared defensive Turkish position, and was thrown back, losing 6,444 men against the Turkish loss of about 2,000. Murray relieved Dobell. An exasperated War Office in turn relieved Murray. In his place came General Allenby, fighting cavalryman with the gift of leadership and tactical ability. His instructions were to take "Jerusalem before Christmas." His first step was to move British headquarters from Shepheard's Hotel in Cairo to the fighting front. Insisting on reinforcements, Allenby built up an efficient combat force of 7 infantry divisions and a cavalry element—the Desert Mounted Corps (horse cavalry and camel). Total British strength was 88,000.

Opposing the British was the Turkish Eighth (Kress von Kressenstein) and the incomplete Seventh Army. With some additional German machine-gun, artillery, and technical units, this force totaled 35,000. Basic Turkish weakness was the long and tenuous supply line from Constantinople. Basic British weakness was water supply for the offense; the efficient transport and pipeline extended only to their rear echelon.

1917, October 31. Third Battle of Gaza (Battle of Beersheba). Reversing his predecessor's plans, Allenby left 3 divisions demonstrating in front of Gaza and secretly moved against Beersheba. Surprise was complete, but success was predicated on the ability of the attackers to capture the city's wells; failure would mean collapse of the mounted elements and probably the entire offense. While the infantry assailed Turkish defenses in frontal attack, the Desert Mounted Corps swung wide to the east, then turned on the city. An all-day battle culminated at dusk in the mounted charge of an Australian cavalry brigade through and over the Turkish wire and trenches into Beersheba itself, capturing the coveted water supply. Hastily evacuating, the Turkish Seventh Army now lay with its left flank open. Allenby struck north (November 6), splitting the 2 Turkish armies, and launched the Desert Mounted Corps across country toward the sea. The Turks evacuated Gaza in time to avoid the trap, the Eighth Army retreating up the coast, the Seventh falling back on Jerusalem.

1917, November 13–14. Battle of Junction Station. Pursuing closely, despite logistical difficulties and shortage of water, Allenby struck a hastily established line of the Eighth Army, driving the Turks back north along the railroad. Turning now toward Jerusalem, Allenby was held up by the appearance of Turkish reserves from the Aleppo area (the so-called Yilderim Force) and the arrival of General von Falkenhayn to assume command. Falkenhayn reestablished a front from the sea to Jerusalem. A bitter slugging match in the Judean hills followed.

1917, December 9. Fall of Jerusalem. In the face of Allenby's determined attack against Jerusalem (December 8), the Turks evacuated the city, which was occupied by the British next day. A Turkish counterattack was repulsed (December 26). During this campaign Allenby had 18,000 casualties; Turkish losses were about 25,000, including 12,000 captured and 100 guns lost.

Mesopotamia

1917, February 22–23. Second Battle of Kut. Maude skillfully assaulted after preliminary feints against the Turkish left. He crossed the Tigris on the Turkish right and then pressed the attack on both flanks. **Kara Bekr** Bey, Turkish sector commander, fell back to the vicinity of Baghdad, interposing skillful rear-guard resistance to Maude's pursuit. Then the Turkish Sixth Army (Halil Pasha) attempted a stand.

1917, March 11. Fall of Baghdad. After several days of fighting along the **Diyala River,** Maude entered the city, the Turkish forces retreating in some disorder. Maude now launched 3 exploiting columns up the Tigris, Euphrates, and Diyala rivers, securing his hold on Baghdad. A Turkish effort to retake Mesopotamia collapsed when the troops earmarked for the expedition—Yilderim Force—were diverted to bolster the Palestine front (see above).

1917, September 27–28. Battle of Ramadi. As the summer heat subsided, Maude struck

sharply northwestward up the Euphrates River. He pursued the Turkish survivors into central Mesopotamia. Brilliant Maude, his objective the oil fields of Mosul, prepared to continue his advance, but died of cholera (November 18), General Sir **William R. Marshall** succeeding to command.

Persia

Russian forces in Persia were of concern to the Turks in the beginning of the year, having moved to the vicinity of Saqqiz-Kermanshah, where they were a potential threat to the Mosul oil fields. Maude, in liaison with the Russians, hoped for joint operations against the Turkish Sixth Army, but this hope faded following the Russian Revolution.

War at Sea

The Submarine Crisis

1917, February–April. German Unrestricted Submarine Campaign. After careful calculations, the German naval command had come to the conclusion that unrestricted submarine warfare would force Britain to sue for peace in 5 months. The danger of American intervention was recognized (see p. 1060), but the potential influence of the U.S. on the war at sea or on land was evaluated as negligible for 2 or more years. By then the submarine campaign, combined with operations on land, was expected to have brought victory to the Central Powers. It almost worked. British shipping losses soared to 875,000 tons per month (April). British and neutral merchant sailors began to refuse to sail. The diversion of most of his light warships from the Grand Fleet for the purpose of seeking and sinking submarines caused great concern to Admiral Beatty (now commanding that fleet) in event of a new sortie of the German fleet, but no such sortie was made. Recommendations for instituting convoys were rejected by the Admiralty as an un sound waste of available cruisers and destroyers. The efforts to sink submarines were disappointing, however. Admiral Jellicoe (now First Sea Lord) calculated that Britain would run out of food and other needed raw materials by July.

1917, May 10. Institution of Convoy System. Insistence of Prime Minister Lloyd George, combined with the strong recommendations of American Admiral **William S. Sims** and of Beatty, finally forced adoption of the convoy system. The results were spectacular. British escort vessels, joined by American destroyers (May), provided adequate protection to merchant ships and at the same time were able to sink more submarines, since these were forced to attack the convoys. Unquestionably the convoys saved Britain. Although shipping losses by the end of the year exceeded 8 million tons, Allied shipbuilding programs more than offset the losses.

Other Naval Actions

1917, February–April. German Destroyer Raids in the Channel. The first of these 3 raids was uneventful (February 25). In the second the Germans sank 2 British destroyers and a small coastal merchant vessel, with no loss to themselves (March 17). The third was foiled by the gallantry of Commander **E. R. G. R. Evans,** whose destroyer HMS *Broke* sank 2 German destroyers singlehanded in a thrilling sea fight.

1917, May–June. British Raids on Ostend and Zeebrugge. Naval bombardment of the German destroyer and submarine bases caused some damage, but failed to interfere seriously with German U-boat operations.

1917, May 15. Action off Valona. In the Adriatic, Austrian Captain **Miklós Horthy** (later dictator of Hungary) led an Austrian squadron on a raid against Italian transports off

the Albanian coast. The Austrians were able to sink 14 of the small merchantmen, and then to escape successfully after a spirited action with British, French, and Italian warships.

1917, July 15. British Raid on German Coastal Shipping. British destroyers sank 2 German merchant ships and captured 4 more off the Dutch coast, stopping coastal trade with Rotterdam.

1917, November 17. Action off Heligoland. Poor British staff work aborted a battle-cruiser raid against German minesweeping operations in Heligoland Bight; the German squadron protecting the minesweepers was able to withdraw without damage.

1917, December. German Raids on British Scandinavian Convoys. These inflicted serious losses on British merchant shipping, forcing Beatty to use a squadron of battleships as a covering force for future convoys.

Operations in 1918

Global Situation

The Allies entered the year in a state of frustration. The rosy promises of early 1917 had been unfulfilled. Except in the Near East, where Allenby's dynamic leadership had culminated in the capture of Jerusalem—with its tremendous psychological uplift to Christendom—Allied offensives had bogged down in a welter of cross-purpose and disunity of command. Russia had collapsed. The German U-boat campaign still threatened the maritime pipeline of supply from America. Finally, many months would still pass before American armed forces could bolster up lost Allied man power. Both Britain and France were therefore on the defensive. The Supreme War Council did no serious planning. Haig (who had been refused reinforcement by Lloyd George) and Pétain agreed among themselves on mutual support should a German offensive be launched. Some attempt at organization of defense in depth was made.

Nor had the Central Powers been successful. They all felt the strangulation of Allied naval blockade. Austria was at the end of her resources, Turkey and Bulgaria were wobbling, and the burden of the war fell heavier and heavier on Germany. Hindenburg and Ludendorff had established a virtual military dictatorship over Germany, and exercised almost as complete authority over the subservient governments of Austria, Bulgaria, and Turkey.

The American Build-up

Having entered the war without previous preparation, the U.S. was faced with organizing, equipping, training, transporting, and supplying an expeditionary force in Europe. The little Regular Army provided the leaven for 2 successive waves of man power: the National Guard and the draftees produced by the Selective Service Act (May 19, 1917). From a strength of 200,000 men and 9,000 officers (including 65,000 National Guardsmen then serving on the Mexican border), the Army swelled to over 4 million men, including 200,000 officers. Some 2 million in all served overseas. Based on Pershing's recommendations, a divisional organization of approximately 28,000-man strength was adopted. It consisted of 2 infantry brigades of 2 regiments each, an artillery brigade, an engineer regiment, 3 machine-gun battalions, and trains and supporting services. Forty-two of these divisions, which were nearly double the strength of their European counterparts, reached France. Though Pershing understood the need and importance of entrenchments, he eschewed what he considered to be a defeatist concept of

trench warfare. Training was predicated on the spirit of the offensive—mobile combat—with stress on individual marksmanship.

Overseas, the Service of Supply became an empire in itself, manning 9 base sections. Pershing chose the Lorraine area east of Verdun as the American combat zone. The pipeline of supply from the United States went to ports in southwestern France, and movement overland conflicted little with the Allied efforts farther north. Except for small arms, ordnance needs were filled by America's allies. So too with airplanes; American production was limited to the Liberty engine.

Overseas transportation, the province of the U.S. Navy, was in part provided by the German merchant fleet seized in American ports, plus an improvised fleet of the American merchant marine—much of it built with remarkable celerity, some British ships, and neutral shipping sequestrated or leased. The combined fleet carried more than a million American soldiers to France without loss of a single vessel—on eastbound voyages. (The remaining million shipped overseas went on Allied ships, mostly British.)

The Navy, whose personnel waxed to 800,000, was primarily concerned in antisubmarine and convoy activities, though a division of 5 battleships joined the British Grand Fleet and 3 other battleships operated in Irish waters against surface raiders. In all, some 79 American destroyers took part in convoy work, and 135 subchasers also operated in European waters. An important part of U.S. Navy participation was in the laying of 56,000 of the 70,000 mines comprising the North Sea mine belt—from Scotland to Norway. Naval air squadrons took part in bombings of German submarine bases along the Belgian coast. A Marine brigade became part of the AEF.

American combat participation in World War I was based on "co-operation," as Pershing's directive put it. The U.S. was not technically an ally. Its expeditionary force was to be "a separate and distinct component of the combined forces, the identity of which must be preserved." Pershing's directive ran counter to the Allies' desires. They distrusted the inexperienced Americans' military ability, and they were short of man power. From the beginning Pershing was cajoled, coaxed, and finally threatened, in fruitless efforts to have him turn the AEF over *in toto* as a replacement reservoir for the French and British armies. War Secretary Newton D. Baker and President Wilson upheld Pershing when Clemenceau and Lloyd George went over his head to Washington with their demands.

The Fourteen Points

In an address to Congress on January 8, 1918, President Wilson laid down his "only possible program" for peace. The policy included (1) open covenants, openly arrived at; (2) freedom of the seas in war and peace; (3) removal of trade barriers; (4) national armament reductions; (5) impartial adjustment of colonial claims; (6) evacuation of Russian territory and independent solution by Russia of her political development and national policy; (7) evacuation and restoration of Belgium; (8) evacuation and restoration of all occupied French territory and return of Alsace-Lorraine; (9) readjustment of Italian frontiers on lines of nationality; (10) autonomy for the peoples of Austria-Hungary; (11) evacuation of Rumania, Serbia, and Montenegro, restoration of occupied territories, and Serbian access to the sea; (12) Turkish portions of the Ottoman Empire to be assured secure sovereignty, but other nationalities under

Turkish domination to be freed; (13) independence of Poland, to include territories with predominantly Polish population, with free Polish access to the sea; (14) formation of an association of nations ensuring liberty and territorial integrity of great and small alike.

Operations on the Western Front

Ludendorff's Offensives

During the winter of 1917–1918, Ludendorff realized that Germany's only hope of winning the war lay in a decisive victory in the west in 1918, before the weight of American man power could have a significant effect. With Russia knocked out of the war, he believed that this could be done. Shifting most German forces from the east, he instituted an intensive training program in preparation for an all-out offensive to be launched as early as possible in the spring. The best units were developed into "shock troops," to be spearheads of the planned assaults. His intention was to smash the Allied armies in a series of hammer blows. Recognizing the divergent interests of the French (concerned with protection of Paris) and the British (interested in maintaining their lines of communications with the Channel ports), he intended to drive a wedge between the two Allied armies and then destroy the British in subsequent assaults. Preparations were made with remarkable efficiency.

THE SOMME OFFENSIVE

1918, March 21. The First Offensive. The Germans began their drive at dawn in heavy fog. Three German armies—Seventeenth (Otto von Below), Second (Marwitz), and Eighteenth (Hutier), from north to south—struck the right flank of the British sector—the Third (Byng) and Fifth (Gough) armies—on a 60-mile front between Arras and La Fère. The objective was to break through, dislocate, and roll up the British, wheeling to the north and splitting them from the French on their right. Following a surprise 5-hour bombardment by more than 6,000 cannon, the specially trained German shock elements rolled through the fog, using

"Hutier tactics"—infiltration behind a rolling barrage and passing of strong points which would be later mopped up by reserves, accompanied by artillery neutralization of battery positions and observation posts (see p. 1064). No limits were set to the advance; each division pressed as far and as fast as possible, with close-support elements passing through and taking up the advance whenever a local assault should bog down. Gough's Fifth Army, spread thin on a 42-mile front lately taken over from the French, collapsed, exposing the Third Army's right and forcing its withdrawal, but Byng, better organized in depth, held the German Seventeenth and Second armies to limited gains. Hutier, continuing on Gough's heels, reached and passed the Somme. All British reserves were committed to plug the gap and some French units also reinforced. But Pétain was more concerned with protecting Paris than he was with assisting Haig. The British commander hastily appealed to the new British Chief of Staff, General Sir **Henry Wilson,** and the War Minister, Lord **Milner,** for the appointment of "Foch or some other French general who will fight" to take supreme command.

1918, March 23–August 7. Artillery Bombardment of Paris. A remarkable long-range German cannon began a sporadic bombardment of Paris from a position 65 miles away. This amazing achievement of German ordnance technology seriously hurt morale of Parisians and inflicted 876 casualties, but did not significantly affect the war. Actually there were 7 "Paris Guns," with a caliber of about 9 inches, the barrels 117 feet long, with a maximum range of 80 miles.

1918, March 26. Foch Appointed Allied Coordinator. In an emergency meeting of the Supreme War Council at Doullens, Foch was appointed coordinator for the Western Front.

1918, April 3. Foch to Supreme Command. At Beauvais, the War Council appointed Foch commander in chief of the Allied forces in France. Pershing, who had already (March 27) generously offered his 8 available divisions in France to Foch in the emergency, agreed in principle to the appointment.

1918, April 5. End of the Offensive. Meanwhile, the German drive, after gaining a 40-mile-deep salient, lost momentum. Paris had been bombarded by long-range artillery (75 miles; March 21-April 6). Foch's shifting of reserves checked the German assault after it reached Montdidier, and Ludendorff brought it to a halt. Allied losses mounted to about 240,000 casualties (163,000 British, 77,000 French), including 70,000 prisoners and 1,100 guns. German casualties were almost as high, most of them in the specially trained shock divisions. Over Haig's protests, Gough was relieved by the British government; his shattered Fifth Army was taken over by General Sir **Henry Rawlinson**'s Fourth Army headquarters.

COMMENT. *The most serious consequence of the offensive, from the German point of view, had been the institution of an Allied unified command. Thus, despite its initial brilliant tactical success, the offensive was a strategic failure. There were 3 main reasons for this:* (*1*) Lack of logistical mobility. *Once a breakthrough had been made, the Germans found themselves advancing across land devastated by 4 years of war, particularly by their own "scorched earth" measures at the time of the withdrawal to the Hindenburg Line* (*see p. 1060*). *They did not have the means of keeping up a flow of ammunition, food, and other supplies to their troops advancing through a veritable quagmire.* (*2*) Lack of strategic mobility. *The same problem prevented them from fully exploiting the gap with fast-moving mobile forces, or even from providing adequate reinforcements and replacements to the breakthrough troops.* (*3*) Lack of mobile tactical fire support. *Once the breakthrough was made, the front-line infantry quickly outran its artillery, which was unable to advance in any significant numbers through the roadless morass. Thus, when the British were finally able to move reserves into the gap, the Germans lacked sufficient firepower to maintain the momentum of their drive or to deal adequately with the British fighter planes strafing them.*

THE LYS OFFENSIVE

1918, April 9. Ludendorff's Second Offensive. Again the Germans struck the British

sector, this time in Flanders on a narrower front, threatening the Channel ports. The German Fourth Army (Sixt von Armin) struck Plumer's Second Army in a Hutier-type attack. (Plumer had returned from Italy at Haig's request.) **Ferdinand von Quast**'s German Sixth Army on its left clawed through the positions of Horne's First Army, demolishing a Portuguese division.

1918, April 12. "Backs to the Wall." Haig's order forbidding retirement galvanized British resistance. The German drive was halted (April 17) after a 10-mile advance which included recapture of Messines Ridge. Foch, gathering a reserve force behind the British, placed only part of it in the line (April 21), much to Haig's dissatisfaction. After a series of further attacks and counterattacks, Ludendorff finally called the operation off. Again, and for the same reasons as before, he had achieved tactical success but strategical failure. No breakthrough had been effected, and the Channel ports were safe. The cost had been great—another 100,000 British casualties—but again German losses had been almost as great. Ludendorff's carefully trained and prepared shock troops were sadly depleted, the morale of the survivors badly shaken.

THE AISNE OFFENSIVE

1918, May 27. Third German Offensive. This time Ludendorff struck along the Chemin des Dames, a diversion against the French preparatory to a planned final and decisive blow to be struck against the British in Flanders. The German First (**Bruno von Mudra**) and Seventh (Boehn) armies attacked the French Sixth Army (Duchêne) with 17 divisions in the assault, preceded by tanks. Duchêne's 12 divisions (3 of them British) were surprised in shallow defenses along a lightly held 25-mile front and collapsed. By noon the Germans were crossing the Aisne; by evening they were crossing the Vesle, west of Fismes, and reached the Marne (May 30).

1918, May 28. Battle of Cantigny. Meanwhile, as Pershing was rushing the 2nd (Major General **Omar Bundy**) and 3rd (Major General **J. T. Dickman**) divisions to reinforce the French, the first American offensive of the war took place at **Cantigny,** 50 miles northwest. The 1st U.S. Division (Major General **Robert Lee Bullard**) attacked the village, a strongly fortified German observation point, taking all its objectives, and then repulsed a series of violent German counterattacks (May 28 and 29). While only a local operation, its success, against veteran troops of Hutier's Eighteenth Army, boosted Allied morale.

1918, May 30–June 17. Battles of Château-Thierry and Belleau Wood. The U.S. 2nd and 3rd divisions were flung against the nose of the German offensive along the Marne, moving into position through the retiring troops of the French Sixth Army. The 3rd Division held the bridges at Château-Thierry against German assaults, then counterattacked, and, with assistance from rallying French troops, drove the Germans back across the Marne at Jaulgonne. The 2nd Division, taking over the sector of the French XXI Corps between Vaux and Belleau, west of Château-Thierry, checked German attacks. Ludendorff called off his offensive (June 4). The 2nd Division then counterattacked, spearheaded by its Marine brigade. In 6 successive assaults the Germans were uprooted from positions at Vaux, Bouresches, and Belleau Wood, losing some 9,500 men and more than 1,600 prisoners.

COMMENT. *The net result of the third German drive had been to make a serious dent in the Allied front, a salient some 30 miles wide and more than 20 miles deep. Ludendorff determined to exploit this success by another diversionary drive, prior to his proposed Flanders stroke. It would be a 2-pronged affair converging on Compiègne, the Eighteenth Army attacking southwesterly, the Seventh Army westerly.*

FOURTH AND FIFTH GERMAN OFFENSIVES

1918, June 9–13. Noyon-Montdidier (Fourth) Offensive. Forewarned by German deserters, Foch and Pétain were ready. French defenses were organized in depth. A counterpreparation artillery bombardment disrupted the Eighteenth Army's assault. Some gains were made, but a Franco-American counterattack

halted the advance (June 11). The Seventh Army's attack was quickly snubbed (June 12). By this time, 25 American divisions were in France, 7 of them at the front. French and British leaders were making strenuous efforts to incorporate American troops into their respective armies permanently; Pershing was resisting this.

1918, July 15–19. Champagne-Marne (Fifth) Offensive. Ludendorff, clinging to his plan for an all-out drive against the British in Flanders, attempted one more preliminary offensive in Champagne to pinch out the strongly fortified Reims area. Boehn's Seventh Army would advance up the Marne through Epernay to meet Mudra's First Army and **Karl von Einem**'s Third attacking south toward Châlons. Foch, already planning a major counteroffensive, was again warned of the blow by deserters, aerial reconnaissance, and prisoners. German shock troops were tripped by an Allied artillery counterpreparation (night of July 14–15). East of Reims the attack was halted in a few hours by **Henri Gouraud**'s French Fourth Army.

1918, July 15–17. Second Battle of the Marne. West of Reims, where the defenses were neither so strong nor so deep, the German Seventh Army penetration carried to the Marne, some 14 divisions crossing the river. The stout defense of the U.S. 3rd Division again snubbed the attack there. Then Allied aircraft and artillery destroyed the German bridges, disrupting supply and forcing the attack to halt. Ludendorff, admitting defeat, now prepared for a general withdrawal from the Soissons-Château-Thierry-Reims salient to reduce the front held by his depleted forces. In 5 months he had lost half a million casualties. Allied losses had been somewhat greater, but American troops were now arriving at a rate of 300,000 a month.

The Allied Counteroffensive

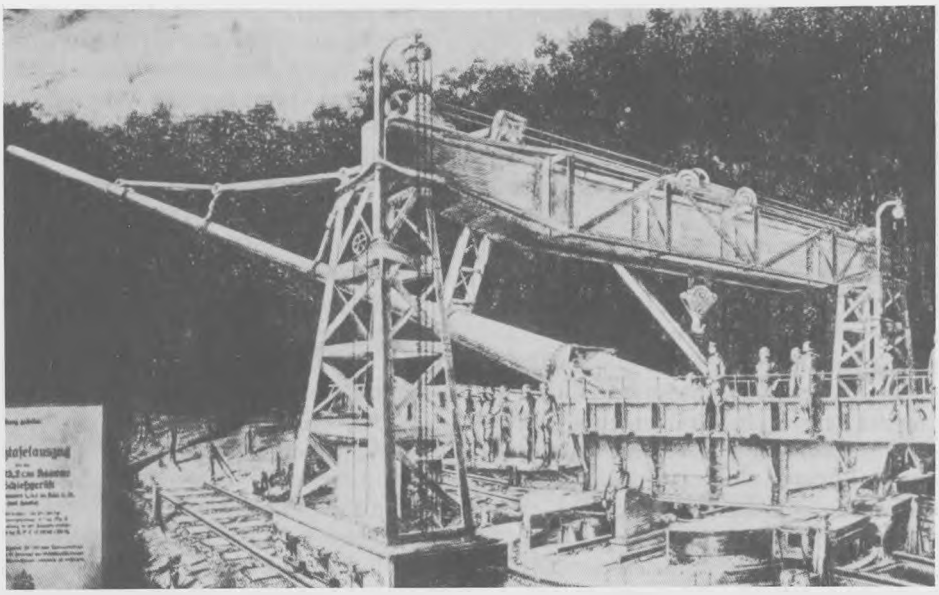
THE AISNE-MARNE OFFENSIVE

1918, July 18–August 5. Allied Aisne-Marne Offensive. The French Tenth (Mangin), Sixth (**Jean M. J. Degoutte**), and Fifth (**Henri M. Berthelot**) armies, from left to right, assaulted the Marne salient. The Ninth Army (**M. A. H. de Mitry**) was in reserve. In a series of smashing attacks, the Germans were rolled back all along the line, despite desperate resistance and skillful handling. The U.S. 1st and 2nd divisions spearheaded the Tenth Army's attack—the main effort. The 1st Division captured 3,800 prisoners and 70 guns from the 7 German divisions it encountered. Its casualties were 1,000 killed and 6,000 wounded. The 2nd Division, capturing 3,000 prisoners and 75 guns, suffered 5,000 casualties in all. Six other American divisions also took part—the 4th, 26th, and 42nd in Major General **Hunter Liggett**'s I Corps with the French Sixth Army, and the 3rd, 28th, and 32nd in Major General Bullard's III Corps with the Ninth Army (which moved into line between the Sixth and Fifth armies). Ludendorff called off his proposed Flanders drive (July 20), concentrating his efforts to stabilize the situation along the Vesle. The Marne salient no longer existed. In reward for the victory, Clemenceau promoted Foch to Marshal of France (August 6).

COMMENT. *The entire July operation, German offensive and Allied counteroffensive, is sometimes called the* **Second Battle of the Marne.** *Strategically, it was the turn of the tide; the initiative had been wrested from the Germans. Ludendorff's gamble to conclude the war successfully had failed. The front had been shortened by 28 miles, the important Paris-Châlons railway line reestablished, and all menace to Paris ended. On the Allied side, troops of 4 nations—France, Great Britain, the United States, and Italy—had successfully participated in a unified operation. Allied morale soared as German dropped. Ludendorff had lost 30,000 more prisoners, more than 600 guns, 200 mine throwers, and 3,000 machine guns.*

THE AMIENS OFFENSIVE, AUGUST 8–SEPTEMBER 4

1918, August 8–11. First Phase. Haig, in conjunction with the French Aisne-Marne offensive, threw Rawlinson's British Fourth Army and the French First Army (**M. Eugène Debeny,** attached by Foch to Rawlinson's



The Paris gun

command) against the German Eighteenth (Hutier) and Second (Marwitz) armies. Expecting an Allied attack farther north in Flanders, the Germans were caught off guard by a well-mounted assault secretly prepared. The Canadian and Anzac corps jumped off without preliminary bombardment, preceded by tanks, and bit deep through a dense fog. More than 15,000 prisoners and 400 guns were captured. On their right, the French bombarded first, then advanced. Despite near panic among their front-line troops, the Germans managed to re-establish a position 10 miles behind the former nose of the salient. The French Third Army (**Georges Humbert**), on the right of the First, entered the action (August 10), forcing the evacuation of Montdidier. Haig cautiously paused (August 11) to regroup, despite Foch's wishes to maintain unremitting pressure on the Germans. Both Allied and German air forces took part in the initial fighting after the fog cleared.

1918, August 21–September 4. Second Phase. Progressively, the British Third Army on the left and the French armies on the right took up the assault. The British Fourth Army in the center joined in (August 22), followed by the British First Army (Horne) on the far left. Ludendorff ordered a general withdrawal from both the Lys salient in Flanders and the Amiens area. His plans were disrupted when the Anzacs penetrated across the Somme (August 30–31), taking **Péronne** and threatening **St.-Quentin.** The Canadian corps, shifted to the north flank, broke through near **Quéant** (September 2). The entire German situation deteriorated, necessitating retirement to the final position—the Hindenburg Line. By this time Haig had expended his reserves and could not further exploit his victory. German casualties were more than 100,000, including some 30,000 prisoners. Allied losses were 22,000 British and 20,000 French. Tactically and strategically, the Allies had gained another major victory, cracking German morale.

COMMENT. *Ludendorff's bitter statement that August 8 had been the "Black Day" of the German Army tells the story. He said flatly: "The war must be ended!"*

ST.-MIHIEL OFFENSIVE, SEPTEMBER 12–16

Pershing's insistence on a separate and distinct United States Army operating on its own assigned front was reluctantly accepted by Foch (July 24). Reduction of the St.-Mihiel salient was the first mission. The U.S. First Army, with the French II Colonial Corps attached, took over the sector (August 30). Foch, planning an all-out Allied offensive, then attempted to change Pershing's plan and divide part of the American forces between the French Second and Fourth armies. After sharp disagreement, Foch accepted Pershing's position, but the American agreed to shift his army and attack with the French in the Argonne Forest immediately upon conclusion of the St.-Mihiel operation.

Ludendorff, well aware of the threat, started evacuation of the salient (September 8).

Supported by a conglomerate Allied air force of some 600 planes—American, French, Italian, and Portuguese—under American Colonel **William Mitchell,** the First Army attacked both faces of the salient (September 12). The French corps held the nose. The assault—both ground and air—was completely successful; the converging attacks met at Hattonchatel by nightfall on the first day, and the salient was entirely cleared (September 16); more than 15,000 prisoners and some 250 guns were taken. American casualties numbered 7,000. The strategic importance of the victory was great; since 1914 the St.-Mihiel salient in German hands had constituted a standing threat to any Allied movements in Champagne. In addition, the First Army proved itself to both friend and foe to be a competent entity. This was the largest American operation since the Civil War. Pershing at once turned to the tremendous job of shifting his entire army some 60 miles, and entering another major offensive without any rest.

Foch's Final Offensives

THE CONCEPT

Foch planned a double penetration, in 2 major assaults. One of these was to be a Franco-American drive from the Verdun area toward Mézières, a vital German supply center and railroad junction. The other was to be a British offensive between Péronne and Lens, with the railroad junction of Aulnoye as its objective. Seizure of these 2 vital railroad junctions would jeopardize the entire German logistical situation on the Western Front. Supplemental assaults would be made in Flanders by a combined British-Belgian-French army group, and between La Fère and Péronne by another Franco-British force.

THE MEUSE-ARGONNE OFFENSIVE, SEPTEMBER 26–NOVEMBER 11

1918, September 26–October 3. First Phase. Having efficiently shifted by night more than a million men with tanks and guns over an inadequate road and rail net, Pershing launched the First Army—3 corps abreast—in attack at 5:25 A.M. On its left the French Fourth Army (**H. J. E. Gouraud**) attacked also. The American zone lay astride the Meuse Valley, including the Argonne Forest on its left, the Aire Valley, and the heights on both sides of the Meuse. The German defenses (Gallwitz's army group to the east, the Crown Prince's to the west) consisted of 3 heavily fortified lines taking clever advantage of the rugged and heavily wooded terrain. Initial rapid advance was finally slowed in the Argonne Forest and in front of **Montfaucon** as the Germans rushed in reinforcements. The

Lieutenant Frank Luke, American ace, with his Spad

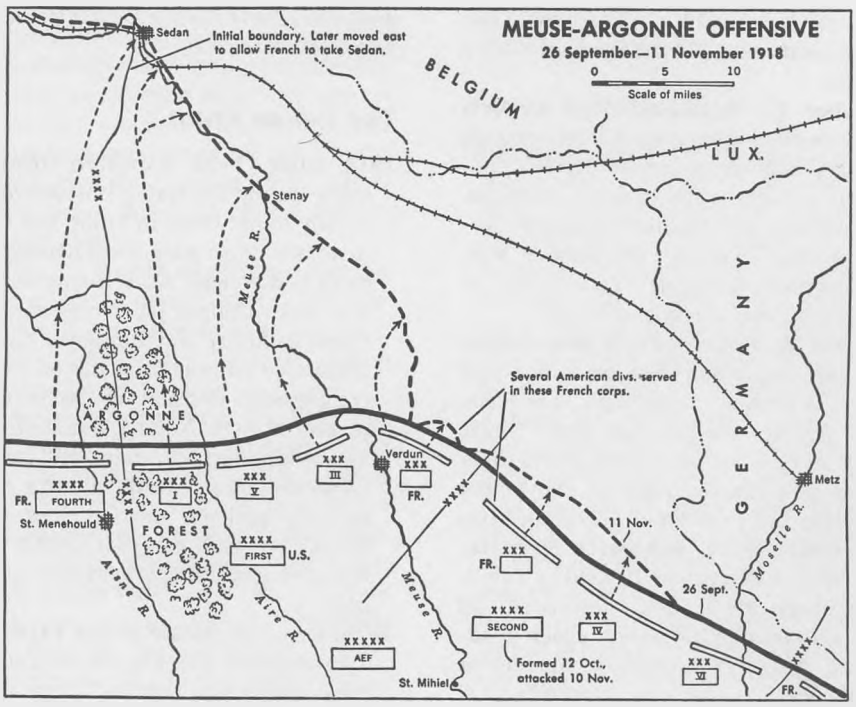
American drive lost momentum on the line **Apremont-Brieulles** (October 3), having penetrated the first 2 German positions.

1918, October 4–31. Second Phase. Replacing a number of his assault divisions by veteran troops from the St.-Mihiel operation, Pershing renewed the offensive. There was no room for maneuver; the First Army battered its way slowly forward in a series of costly frontal attacks, and the actual combat zone was widened to include the east bank of the Meuse, where the Germans had excellent observation from the Heights of the Meuse. The Argonne Forest was cleared, facilitating the advance of the French Fourth Army, on the left, to the Aisne River. Pershing regrouped his forces into a group of 2 armies (October 12). The newly constituted Second Army, commanded by Bullard, prepared for an offensive northeast, between the Meuse and the Moselle, while the First Army, now under Liggett, continued its slow northward battering-ram progression. Clemenceau, exasperated by the Americans' slow progress, tried unsuccessfully to have Pershing relieved. Foch, aware of the nature of the opposition, well knowing that the American offensive—threatening the part of the front most vital to the Germans—was drawing all available German reserves from elsewhere for its defense, declined to support Clemenceau. As October ended, the First Army had punched through most of the third and final German line.

1918, November 1–11. Final Phase. With rested divisions replacing tired ones, the First Army jumped off again, smashing through the last German positions northeast and west of Buzancy, thus enabling the French Fourth Army to cross the Aisne. In the open now, American spearheads raced up the Meuse Valley, brushing aside last-ditch German defensive stands, reaching the Meuse before Sedan (November 6) and placing destructive artillery fire on the Mézières-Montmédy rail line, vital artery of supply for the entire German front. A spectacular drive on Sedan by the U.S. 1st Division was abruptly checked by orders from higher authority, to permit the French the honor of taking the city and erasing the stain of the 1870 disaster (see p. 914). Bullard's Second Army launched its final attack (November 10), driving for Montmédy. Next day the armistice ended all hostilities.

FINAL BRITISH, FRENCH, AND BELGIAN OFFENSIVES

1918, September 27–October 17. Storming the Hindenburg Line. One day after the be-



ginning of the American offensive, Haig's army group flung itself against the Hindenburg Line. Trading space for time on this front, Boehn's army group managed to withdraw after a succession of costly and gallant British attacks drove through the last of the Hindenburg Line positions (October 5). To Haig's surprise, he had been unable to achieve a complete breakthrough, and the momentum of his drive slowed down in the face of skillful German defense.

1918, September 28–October 14. Offensive in Flanders. British-Belgian troops of King Albert's army group swept over the Ypres Ridge, but then slowed down as swampy country choked all supply, and Rupprecht's army group fought back grimly.

1918, October 17–November 11. Advance to the Sambre and the Scheldt. Because of American progress in the Meuse-Argonne, a German retreat all along the line became necessary. Ludendorff hoped that he could reestablish a new line west of the German border and by a determined defense through the winter force the Allies to grant generous terms. But his hopes were foiled by the pressure being maintained all along the Allied lines. In a renewed British assault, Rawlinson's Fourth Army broke through German defenses on the Selle River (October 17). Byng's Third Army forced a crossing lower down (October 20). The drive threw back Boehn's army group with the loss of 20,000 prisoners. At the same time the Belgians and British began to move again in Flanders. The German Army began to crack.

THE GERMAN COLLAPSE

1918, October 6. Request for an Armistice. As the front lines began to crumble, the new German chancellor, Prince **Max of Baden,** sent a message to President Wilson, requesting an armistice on the basis of Wilson's Fourteen Points (see p. 1069). An exchange of messages concluded (October 23) with Wilson's insis-

tence that the U.S. (and the Allies) would not negotiate an armistice with the existing military dictatorship.

1918, October 27. Resignation of Ludendorff. Just before formal dismissal, Ludendorff resigned to permit the desperate German government to comply with Wilson's demand. Hindenburg, however, retained his post as German commander in chief, with General **Wilhelm Groener** replacing Ludendorff as Quartermaster General (Chief of Staff).

1918, October 29–November 10. Revolution in Germany. Inspired by the Communists and sparked by a mutiny of the High Seas Fleet, disorders, revolts, and mutinies flared inside Germany. A new Socialist government took power and proclaimed a republic (November 9). The Kaiser fled to Holland (November 10).

1918, November 7–11. Armistice Negotiations. A German delegation, headed by a civilian, **Matthias Erzberger,** negotiated an armistice with Foch in his railway coach headquarters on a siding at Compiègne. Agreement was finally reached at 5 A.M., November 11, 1918. The terms, which were in effect a German surrender, provided that the German Army must immediately evacuate all occupied territory and Alsace-Lorraine; immediately surrender great quantities of war materiel (including 5,000 guns and 25,000 machine guns); evacuate German territory west of the Rhine, and three bridgeheads over the Rhine, to be occupied by the Allies; surrender all submarines; intern all other surface warships as directed by the Allies.

1918, November 11. The Armistice. Hostilities ceased at 11 A.M.; the terms of the armistice immediately became effective.

COMMENT. *Comparisons are invidious. The American Expeditionary Force was the vital factor in the final Allied victory; the Meuse-Argonne offensive was decisive; 6 other American divisions played important spearhead roles elsewhere on the front during the final Allied advances. But the question whether Allied victory could have been achieved without the Americans should not be debated. The American role was to add a final increment of numbers and fresh initiative, permitting the much larger, and more experienced, Allied armies to achieve equally spectacular successes in the final weeks of the war.*

The Italian Front

1918, June 15–22. Austrian Offensive. Germany during the spring transferred her troops in Italy to the Western Front, insisting that the Austrians crush Italy singlehanded. The argument had weight, since Russia was out of the war. Both Conrad (now commanding on the Trentino front) and Borojevic, on the Piave, demanded command of the decisive effort. A compromise decision by Archduke **Joseph** permitted them to attack simultaneously. Since the mountainous terrain and lack of lateral communications would prevent mutual support, the available reserves were split between them. The result was that neither commander had sufficient strength to exploit any initial success.

1918, June 15. Battle of the Piave. Following a diversionary attack in the west at the **Tonale Pass,** which was repulsed (June 13), the twin Austrian drives were launched; Conrad's objective was Verona; Borojevic's, Padua. Forewarned by deserters, Diaz was well prepared. Conrad's Eleventh Army, striking the Italian Sixth and Fourth armies, made some slight gains, but was then checked and thrown back by counterattacks. His troops took little further part in the offensive. Borojevic, attacking along the lower reaches of the Piave, forced a wide crossing and penetrated positions of the Italian Third Army for about 3 miles. The mirage of success failed when unexpected high water and Italian aerial bombing attacks disrupted the Austrian supply line. Diaz, who had kept one entire army in reserve—the Ninth—promptly shifted reinforcements over lateral lines and snubbed the attack. Borojevic, unable to obtain reinforcements from Conrad, withdrew during the night (June 22–23). Diaz, much to Foch's disgust, made no counterattack.

1918, July–October. Italian Counteroffensive Preparations. Diaz, marking time until sure of eventual Allied success on other fronts, finally prepared a double offensive. The Italian

Fourth Army was to penetrate the center of the Austrian front. The Eighth Army, supported by the new Tenth and Twelfth armies (mostly containing British and French divisions), was to attack across the Piave on Vittorio Veneto. This diversion of force was based on the demoralized condition of the Austrian forces, whose home government, falling to pieces, was requesting an armistice.

1918, October 23. Battle of Monte Grappo. Showing unexpected determination, the Austrian Belluno Group, defending the key point on the center front, threw back the Italian Fourth Army with heavy loss.

1918, October 24–November 4. The Battle of Vittorio Veneto. The Austrian Sixth Army halted the Italian Eighth on the Piave River line. However, French troops of the Twelfth Army (commanded by French General **Jean Graziani**) clawed a footing on the left, while on the right British troops of the Tenth Army (commanded by British General **Frederic Lambert, Earl of Cavan**) gained a large bridgehead (October 28), throwing back part of the Austrian Fifth Army and splitting the front. One American regiment, the 332nd Infantry, took part in this action. The penetration reached **Sacile** (October 30). Next day, as Italian reinforcements exploited the ever-widening gap, Austrian resistance collapsed. Belluno was reached (November 1) and the Tagliamento (November 2), while in the western zone British and French troops of the Sixth Army drove through to Trent (November 3). Some 300,000 Austrians became prisoners.

1918, November 3. Capture of Trieste. The city was seized by an Allied naval expedition in the Gulf of Venice.

1918, November 3. Armistice Signed. Hostilities were to be concluded the next day (November 4).

The Balkan Front

1918, September 15–29. Battle of the Vardar. Brilliant French General Franchet d'Esperey, who succeeded the capable organizer Guillaumat (July), was given grudging assent by the Supreme War Council to mount a major offensive. He nominally had nearly 600,000 men—Serb, Czech, Italian, French, and British—of whom some 200,000 were available for duty. Opposing him were about 400,000 Bulgars (practically all German troops had been withdrawn except for command and staff). Covered by heavy artillery support, the First and Second Serb armies attacked the center of the front, debouching between elements of the French Orient Army. The penetration was successful, the Serbs pushing north while the French exploited the gap on both flanks. A British diversionary attack (September 18) on the right gained some ground. Gaining momentum, the penetrating assault reached the Vardar (September 25), splitting the Bulgarian front. The British drive reached Strumitsa (September 26), and French cavalry, passing through the main effort, took **Skoplje** (September 29). Allied air forces brought panic to the fleeing Bulgars.

1918, September 29. Bulgarian Armistice. Energetic Franchet d'Esperey kept his Serbian and French troops moving north.

1918, November 10–11. Crossing of the Danube. Franchet d'Esperey had freed the Bulkans and was prepared to march on Budapest and Dresden when Germany's armistice halted hostilities.

The Eastern Front

Although hostilities had ended, Russian-German wrangling dragged on for 2 months over the conference tables at Brest-Litovsk. Germany insisted upon autonomy for the former Russian territories of Poland, Finland, Estonia, Latvia, Lithuania, and the Ukraine, all of which were in revolt against the Bolshevik government of Russia (see p. 1092). Trotsky, the chief Russian negotiator, refused to accept these terms and to sign a peace treaty. Finally the Germans called

the Soviet bluff and marched eastward (February 18). Unable to offer military opposition, the Bolsheviks hastily signed a peace treaty (March 3) whose terms were even stiffer than the Germans had originally offered. German troops continued on to occupy the Ukraine, which provided grain to save the German people from starvation in 1918. As Cyril Falls has written: "Russia lay at the mercy of the Central Powers for the rest of the war. It was Foch and Haig who saved Bolshevik Russia."*

The Turkish Fronts

The Caucasus

1918, January 27. British Advance on Baku. Under Major General **L. C. Dunsterville,** British troops moved northeast from Baghdad, reaching **Enzeli** (Pahlevi) on the Caspian (February 17). An advance battalion crossed the Russian border and entered **Baku** (August 4).

1918, February 24. Turkish Advance into Armenia. The Turks raced the British for possession of the oil wells of western Persia after the Russian collapse. Reoccupying **Trebizond,** the Turks in quick succession reached **Erzerum** (March 12), **Van** (April 5), **Batum** (April 15), and **Kars** (April 27). A German force, landing at **Poti** on the Black Sea (June 12), pressed east to take **Tiflis** (Tbilisi) (June 12), while the Turks reached **Tabriz. Baku** was abandoned by the British after vigorous Turkish attacks (August 26–September 14).

Palestine and Syria

1918, January–September. Lawrence of Arabia. While Allenby at Jerusalem was restricted to minor operations because of drafts on his force to the Western Front, Arabia to the south and east was in flames. Colonel **T. E. Lawrence,** with a small group of other British officers, reaped a harvest of Arab rebellion against Turkish rule. Lawrence's guerrillas played hob with the Hejaz Railway, running for some 600 miles from Amman, Palestine, to Medina (Al Madinah) in Arabia, the southernmost Turkish garrison. In all, Lawrence's activities kept more than 25,000 Turkish troops pinned down to blockhouses and posts along this line. By September, Lawrence, with Emir **Faisal,** son of Sherif **Hussein,** self-styled "King of the Hejaz," had isolated Medina by destroying the railway line and was moving north to operate on Allenby's right flank. The Arab strength totaled about 6,000 men. The Arab irregulars had been reinforced with small British armored-car detachments and light guns, and British gold coaxed the fickle Arabs to remain in ranks.

1918, September 18–October 30. Allenby's Offensive. Reinforced during the late summer, Allenby prepared meticulously for what was to be the decisive blow. The Turkish defensive line, skillfully fortified, lay from the Mediterranean, north of Jaffa, to the Jordan Valley. Liman von Sanders, who had replaced Falkenhayn in command, had the Turkish Eighth, Seventh, and Fourth armies in line from right to left, a total of some 36,000 men and 350 guns. Allenby's plan was to mass his main effort on the seashore, burst open a gap, and then let his cavalry corps through while the entire British line swung north and east like a gate, pivoting on the Jordan Valley. Utmost secrecy was kept. British planes cleared the sky of all enemy observation. Dummy camps and horse lines indicated to the Turks that the British cavalry was concentrated near Jerusalem. Elaborate plans for a race meet on the day of the offensive were widely publicized. Allenby's strength was 57,000 infantry, 12,000 cavalry, and 540 guns. Of these, 35,000 infantry and 400 guns were concentrated in the main effort against 8,000 Turkish infantry and 130 guns.

1918, September 19–21. Battle of Megiddo. At 4:30 A.M. an artillery concentration fell, followed immediately by the advance of the entire British line. The XXI Corps on the left tore a wide gap along the seacoast, through

* *The Great War, 1914–1918, New York, 1959, p. 287.*

which the Desert Mounted Corps poured. At the same time the RAF bombed rail junctions and all Turkish army headquarters, completely paralyzing communications. The cavalry raced northward through the disintegrating Turkish Eighth Army, reaching the plain of Esdraelon early next morning. The great eastward wheel of the infantry was completed by dawn (September 20). By this time the Turkish Eighth Army (**Jerad** Pasha) had ceased to exist, and the Seventh (Kemal) was falling back eastward in disorder toward the Jordan. The British cavalry then swept through Nazareth—Sanders himself narrowly escaping capture—and turned east to reach the Jordan just south of the Sea of Galilee (September 21). Alone of the Sanders army group, the German Asia Corps (2 regiments) retained some semblance of order in the rout that followed.

1918, September 22–October 30. The Pursuit. Hordes of fugitives were bombed by the RAF as the Turkish Fourth Army in the Jordan Valley joined the torrent. On the desert flank to the east, Lawrence and Faisal cut the railway line at Deraa (September 27), while Allenby pressed to take Damascus (October 1) and Beirut (October 2). The Desert Mounted Corps continued to spearhead the advance, reaching Homs (October 16) and Aleppo (October 25).

1918, October 30. Turkey Leaves the War. Turkey signed an armistice (October 30) at Mudros.

COMMENT. *Allenby's victory at Megiddo was a set piece of fire and movement, perfectly planned and executed. It was one of the most brilliant operations in the history of the British Army. In 38 days, Allenby's troops had advanced 360 miles, fighting continuously. Three Turkish armies were destroyed, 76,000 prisoners (4,000 of them Germans and Austrians), 360 guns, and a vast amount of other material captured. British casualties—mostly incurred during the initial breakthrough—were 853 killed, 4,482 wounded, and 385 missing.*

MESOPOTAMIA

1918, January–September. Dunsterville Operation against Baku. **(See p. 1080.)**

1918, October 23. Tigris Offensive. A British force of all arms was hurriedly pushed north from Baghdad to secure the Mosul oil fields as a *fait accompli* prior to the expected Turkish collapse. Lieutenant General **A. S. Cobbe** dislodged the Turkish Tigris Group (General **Ismael Hakki**) from its outpost position at Fat-ha. Hakki fell back to the vicinity of **Sharqat,** where Cobbe's forces converged on him after some sharp fighting. A British assault (October 29) was only partially successful, but next day Hakki surrendered, with 11,322 prisoners and 51 guns. British casualties were 1,886. Cobbe now hurried his cavalry to the outskirts of Mosul (November 1). Despite the provisions of the October 30 armistice, Cobbe was ordered to take the place. After some squabbling, the Turkish garrison of Halil Pasha agreed to march out and the British remained (November 14).

COMMENT. *The entire checkered Mesopotamian campaign had hinged upon the oil fields and their protection. The war's end found Britain in possession, at a total cost of 80,007 casualties. Of these 15,814 had been killed in action; an additional 12,807 died from disease.*

1918, November. Capture of Baku. A British flotilla, extemporized on the Caspian Sea, drove the Turks from Baku.

1918, November 12. Envoi. The Allied fleet steamed through the Dardanelles, to arrive off **Constantinople** (Istanbul) next day.

War at Sea

1918, April 23. Zeebrugge and Ostend Raids. The German submarine warfare, contained though it was by this time by the Allied convoy system, was nevertheless still a menace. U-boats operated from bases at Zeebrugge and Ostend, and from the shelter of the canal port of Bruges. British Rear Admiral **R. J. B. Keyes,** commanding the Dover Patrol, organized a raid against the bases, some 75 ships taking part. With the utmost gallantry the light cruiser *Vindictive* (Captain **A. F. B. Carpenter**) dashed into Zeebrugge, with destroyer and submarine

escort. The ship laid alongside the mole and demolition parties debarked. At the same time a British submarine loaded with high explosive was blown up against the lock gates and two blockships were also sunk. The *Vindictive* and her landing parties got away after inflicting some damage, but the base was not entirely blocked. A raid against Ostend at the same moment failed. Another raid (May 9) into Zeebrugge was made by the *Vindictive;* the cruiser was deliberately sunk against the lock gates. While not a complete success, these exploits went far to lower German morale. Several German light cruiser and destroyer raids against the British coast and against North Sea convoys were but minor irritations to the British.

1918, January 20. Sortie from the Dardanelles. The *Goeben* and *Breslau* sailed into the Aegean Sea, but the voyage ended in disaster; the *Goeben* was badly damaged by British mines, and the *Breslau* was sunk. However, the *Goeben,* despite British aerial bombing, was salvaged.

1918, June 9. Austrian Sortie from Pola. This effort against Allied blockading craft was repelled when 2 Italian midget submarines attacked the Austrian squadron, sinking the battleship *Szent-Istvan,* the only dreadnought sunk in action during the war.

1918, October 29. Mutiny of the High Seas Fleet. Hipper (who had succeeded Scheer in August) planned a desperate sortie to bring on a final battle with the British Grand Fleet. The crews mutinied, refused to sail, and seized control of the warships, ending the war at sea.

Operations in East Africa

Despite the most intensive efforts, the British had been unable to overcome elusive and brilliant von Lettow-Vorbeck in 4 years of continuous search and pursuit. They drove him into Portuguese East Africa (1917), where he continued an active and aggressive guerrilla campaign, capturing Portuguese military posts and maintaining his small command by captured supplies. He then reentered German East Africa and, though he had only 4,000 men and was opposed by forces totaling 130,000, succeeded in capturing several small posts before marching into British Northern Rhodesia. Finally, after the British were able to inform him of the Armistice, he stopped hostilities (November 14) and surrendered his command (November 23).

Postarmistice

1918, November 17. German Evacuation of Allied Territory. Allied troops began to reoccupy those portions of France and Belgium which had been held by the Germans since 1914.

1918, November 21. The Internment of the High Seas Fleet. The German fleet sailed into the Firth of Forth, between the lines of the British Grand Fleet. It later was shifted to Scapa Flow.

1918, December 1. Allied Movement into the Rhineland. In accordance with the Armistice terms, Allied and American troops followed the withdrawing Germans into Germany.

1918, December 9. Bridgehead Occupation. The British were at Cologne, the Americans at Coblenz, the French at Mainz. The bridgeheads were 18 miles deep in radius beyond the Rhine.

1919, May 7–June 28. Treaty of Versailles. The terms as presented to and signed by the German representatives (no discussion was permitted them): (1) admission of German war guilt; (2) Germany was stripped of her colonies, Alsace-Lorraine, the Saar Basin (subject to a plebiscite in 1935), Posen, and parts of Schleswig and Silesia; (3) reparations were required, later fixed at $56 billion (4) Germany was dis-

The Cost of the War[a]

[a]Many of these figures (compiled from various sources) are approximations or estimates, since official figures are often misleading, missing, or contradictory.

[b]Includes only killed in action or died of wounds.

[c]Figures vary greatly; deaths from epidemic disease and malnutrition, probably not completely attributable to the war, are included in some instances and not in others. See specific notes below.

[d]Includes war expenditures, property losses, and merchant-shipping losses.

[e]About two-thirds of these were lost to U-boats, the remainder to naval and aerial bombardment.

[f]Includes approximately 500,000 Poles and Lithuanians.

[g]No reliable figures available; there was relatively small loss.

[h]Approximately 80,000 additional were nonbattle deaths: typhus, influenza, malnutrition, frostbite.

[i]Asserted by German sources to be due to the Allied blockade through 1919; a handful of deaths was caused by Allied air raids.

[j]At least two-thirds of these were Polish; many of the remainder have been attributed to Allied blockade.

[k]More than half of these were Armenian; most of the remainder were Syrian or Iraqi.

[l]At least 25,500 additional were nonbattle deaths.

armed. The Covenant of the proposed League of Nations was attached to the treaty. The U.S. Senate rejected the League Covenant despite the frantic efforts of President Wilson, which resulted in his physical breakdown. Finally (May 20), the Congress by joint resolution declared the end of war with Germany and Austria-Hungary, reserving for the U.S. any rights secured by the Armistice, the Versailles Treaty, or as a result of the war. Separate U.S. treaties concluding peace with Germany, Austria, and Hungary were later ratified (October 18, 1920).

1919, June 21. Scuttling of the High Seas Fleet. Most of the ships of the German fleet were scuttled by their own crews at Scapa Flow, in defiance of the terms of the Versailles Treaty.

1923, January. End of the American Occupation in Germany. The U.S. Occupation Force evacuated Coblenz to return home. The British and French still remained in occupation of the Rhineland as the period ended.

MAJOR WARS AFTER 1918

Russo-Polish War, 1920

1920. Prelude. During the Russian Civil War, Poland (see p. 1092) had occupied areas of mixed Polish-Russian population in undefined frontier areas bordering White Russia and the Ukraine. The Soviet government now disputed this Polish action, and began to build up its forces in the west. The Poles decided to attack before the Red Army seized the initiative. North of the Pripet Marshes was Russian Marshal **Mikhail N. Tukhachevski**'s Bolshevik Army of the West, opposed by a smaller Polish army under General **Wladyslaw Sikorski.** South of the Marshes, Russian General **Yegorov**'s Army of the Southwest was opposed by the numerically superior army of General **Józef Pilsudski,** overall Polish commander. Total forces on each side approached 200,000.

1920, April 25–May 7. Pilsudski's Offensive. The Polish general drove for Kiev, with the support of a mixed force of anti-Bolshevik Ukrainians under Hetman **Simon Petlyura** on his right flank. Capturing **Kiev** (May 7), Pilsudski prepared to swing north, behind the Pripet Marshes, to hit Tukhachevski's left rear. His plan, however, was too ambitious for the force and logistical backup available to him.

1920, May 15. Tukhachevski's Offensive. Striking southwestward, the Russian Army of the North pinned back Pilsudski's left wing. At the same time, General **Semën M. Budënny** of Yegorov's Army of the Southwest drove northwest against Pilsudski's right flank, with a Cossack cavalry corps some 16,000 strong with 48 guns. Budënny reached **Zitomir,** southwest of Kiev, almost bagging Pilsudski's right wing. By June 13, the Polish left was also in full retreat as the Cossack horde swept on to the outskirts of **Lemberg** (Lvov). North of the Pripet area, Tukhachevski advanced (July 4) westerly toward Warsaw. Polish troops fell back on both fronts. Tukhachevski reached Vilna (July 14) and Grodno (July 19), while Budënny's Cossacks kept up pressure on the southern front. By July 25 the Polish forces lay in 2 groups—1 near Warsaw, whose fall appeared imminent (Tukhachevski expected to take it August 14), the other around Lvov. In all, some 180,000 Poles faced approximately 200,000 Russians.

1920, July–August. Polish Counterattack Plan. France's General **Maxime Weygand** arrived at Warsaw to advise Pilsudski, who needed munitions more than advice. Weygand favored a counterattack north of Warsaw against the Russian right, launched from behind the defensive lines of the Vistula. Pilsudski had a better plan. The Bolshevik advance had outrun all supply; the Russians were living off the country, and could not stop. A halt would be disastrous. So, while the seemingly irresist-

ible Russian right lapped westward, passing to the north of Warsaw, Pilsudski prepared a daring counterattack against Tukhachevski's center.

1920, August 16–25. Battle of Warsaw. Its weight concentrated at Deblin, 50 miles south of Warsaw, Pilsudski's assault crashed through the weakly held Russian center, along the axis of the Warsaw-Brest Litovsk road. Pilsudski accompanied it in person. The left of the Russian Sixteenth Army was shattered. Ignoring the Russian elements south of his penetration, Pilsudski turned north, threatening in turn the Third, Fifteenth, Sixteenth, and Fourth armies. At the same time the Polish forces north of Warsaw under Sikorski also advanced, despite desperate Russian resistance. Caught between the Polish pincers, Tukhachevski's command disintegrated. Some 30,000 or more fled north over the East Prussian border and were there disarmed. The remainder reeled eastward, closely pursued. Tukhachevski managed to rally (August 25) along the line Grodno-Brest Litovsk-Wlodawa, where the pursuit ended. The Poles captured 66,000 prisoners and more than 230 guns, 1,000 machine guns, and 10,000 vehicles. Total Russian casualties were approximately 150,000; the Poles lost 50,000 men.

COMMENT. *The Battle of Warsaw ranks among the decisive battles of the 20th century. It was as much a check to the Communism's first overt westward thrust as was Charles Martel's victory at Tours a check to the Moslem surge into Europe* (*see p. 222*).

1920, September 12—October 10. Continued Polish Offensive. The Poles continued their advance on broad fronts on both sides of the Pripet Marshes. Sikorski, now commanding in the south, reached Tarnopol (September 18). Pilsudski again defeated Tukhachevski in the **Battle of the Niemen** (September 26), driving the Russians from the river-line defensive positions and destroying their Third Army. The Poles next entered Grodno (September 26). Next day, in the **Battle of the Shchara** (Szczara), Pilsudski drove Tukhachevski's beaten troops back to Minsk. In these last 2 battles, the Russians lost some 50,000 prisoners and 160 guns.

1920, October 12. Armistice. Hostilities were brought to a close.

1921, March 18. Treaty of Riga. The Russians conceded all of Poland's territorial claims.

Graeco-Turkish War, 1920–1922

1918–1919. Allied Disagreements over Turkish Peace Settlement. While the Allies squabbled, Turkey was collapsing in anarchy. A Greek army was landed by the Allies at Smyrna (May 15, 1919) to act as an agent for Allied interests. An Italian force also landed in southwest Anatolia. Long-standing national antipathies precipitated incidents, leading to atrocities against the Turkish civilian population by the Greeks.

1919, June–September. Turkish Nationalist Movement. Aroused by Greek action, a group of patriotic Turks, led by General Mustafa Kemal, banded together to form a new national government. Despite opposition of the Allies (who still occupied Constantinople), Kemal set up his new government in Ankara (April 1920).

1919, June 22. Greek Offensives in Anatolia and Thrace. Greek Prime Minister Venizelos' offer to act as the Allies' agent in suppressing the Nationalist movement was warmly accepted by British Prime Minister Lloyd George. In Thrace, Greek troops occupied Adrianople (July 25). In Anatolia, a major eastward movement placed the Greeks at Ushaq (Usak), 125 miles from Smyrna (June 29). A flanking operation captured Panderma (Bandirma) and Brusa (Bursa), south of the Sea of Marmora (July 9). There was no effective Turkish opposition.

1919, August 20. Treaty of Sèvres. The Allies imposed terms on the Sultan's government; Turkey again lost all Asiatic possessions outside of Anatolia, and all of European Turkey except the Chatalja Peninsula and Constantinople. Armenia was established as an independent republic. The treaty was not recognized by the Nationalists.

1919, October. Nationalist Offensive against Armenia. Repeated Armenian raids into Anatolia caused the Nationalists to retaliate. A Turkish drive quickly resulted in the capture of **Kars** (October 21) and the massacre of a number of Armenians in counterrevenge for earlier vengeance atrocities against Turks. A truce was soon negotiated with the Armenian and Soviet governments, ending hostilities in northeast Anatolia.

1919, October 25. Political Changes in Greece. The unexpected death of King Alexander of Greece brought his warrior-father **Constantine** (hero of the Balkan Wars, villain of World War I) back to the Greek throne, changing the entire political complexion of the war. Pro-German Constantine was not trusted by the Allies, who withdrew their former support of Greek activities in Turkey. He nevertheless determined to continue operations to gain permanent Greek control of western Anatolia and Thrace.

1921, January. First Battle of Inönü. Greek General **Papoulas,** advancing on Eskisehir, was repulsed at Inönü, 20 miles to the west, by Turk forces under **Ismet** Pasha. The Greek offensive was temporarily halted.

1921, January–March. Kemal's Diplomacy. Negotiations by Kemal resulted in the withdrawal of Italian forces from Anatolia (March 13) and an understanding with the Soviet government (March 16). The Soviets received Batum, and Kemal recognized the independence of the Soviet Armenian Republic in exchange for the return of Kars and Ardahan to Turkey.

1921, March 23. Renewed Greek Offensive. Papoulas' strength had now been built up to 150,000, of whom two-thirds were disposed along his line of communications to Smyrna. He now launched a full-scale attack.

1921, March 28–30. Second Battle of Inönü. Papoulas drove the Turks (**Refet** Pasha) out of **Afyon Karahisar (Afyon).** However, Refet's right, under Ismet Pasha, at Inönü and Eskisehir, held its ground, threatening the Greek left. Three successive Greek attacks were thrown back and Papoulas broke off the offensive (April 2). Kemal replaced Refet by Ismet (who later adopted the name of the victory as his own, and is known to Turkish history as Ismet Inönü).

1921, July 16–17. Constantine's Offensive. The Greek king now assumed personal field command, and moved skillfully against the Turkish positions from Eskisehir to Afyon. A feint at the Turkish right distracted Ismet's attention. The Greek main effort then fell on his left flank at Afyon. The Greeks then shifted direction northward, rolling up the Turkish left and center in a combination of frontal assault and envelopment. Despite Ismet's counterattack, **Eskisehir** fell (July 17). Ismet prepared to fight to the finish, but Kemal sagely ordered a retreat. Ismet's army disengaged at great cost, falling back northward about 30 miles to the Sakkaria (Sakarya) River. As Kemal had expected, the Greeks were too exhausted to pursue. Turkish losses were over 11,000, Greek about 8,000. Constantine regrouped and moved against the Sakkaria line (August 10), which had now been reinforced through Kemal's strenuous efforts.

1921, August 24–September 16. Battle of the Sakkaria. When the attempted Greek turning movement against the Turkish left was stopped, the battle turned into a slugging match. The Greek main effort next shifted to the center, advancing 10 miles in as many days; then the offensive slowed. Kemal, assuming personal command, made a daring enveloping attack with a small force against the Greek left (September 10). Although the success was slight, the psychological effect of the move was immense. With his 350-mile line of communications threatened, his troops facing a deadlock, and the Anatolian winter coming on, Constantine disengaged. The Greeks fell back along the railway line toward Eskishehir and Afyon. Kemal did not pursue closely, undoubtedly fearing this might stimulate Allied intervention in favor of the Greeks.

1921–1922, October–July. Kemal Consolidates Politically and Militarily. While active operations lagged, Kemal built up military strength and mended diplomatic fences; France

withdrew her troops from Cilicia (October 20). While the overextended Greek army in the field was weakening. Turkey's internal and international position rapidly improved.

1922, August 18–September 11. Turkish Counteroffensive. Kemal struck, taking **Afyon** (August 30). His main effort then drove westward along the railway toward Smyrna, while a large detachment attacked north, capturing **Brusa** (September 5). The shattered Greek army fell back in confusion, attempting to avenge their defeat in an orgy of burning, pillaging, and murdering. About 1 million Turkish civilians were made homeless, further embittering a conflict already notable for atrocities. Kemal pursued closely, and the Greek army soon disintegrated into a horde of terrified refugees. No arrangements had been made for evacuation by sea; thousands of Greek soldiers were captured—and many massacred—by the Turks. **Smyrna** was captured by assault (September 9–11); the Greek sections of the town were sacked and burned, and many Greek civilians were massacred by the Turks.

1922, September–October. Advance on Constantinople. Kemal, now confident of his own strength, advanced on Constantinople, which was still occupied by a small Allied garrison. The Allies were as anxious to avoid a clash as he was. Diplomatic negotiations at the **Convention of Mudania** (October 3–11) promised the restoration of Thrace and Adrianople to Turkey, and provided for neutralization of the Straits. Kemal proclaimed abolition of the Sultanate; the Sultan fled in a British warship (November 1).

1923, July 24. Treaty of Lausanne. This superseded the Treaty of Sèvres (see p. 1085), formally restoring to Turkey her Thracian territory to the Maritza River. The Allies then evacuated Constantinople (August 23). The Turkish Republic was officially established, with Mustafa Kemal, surnamed Atatürk ("Chief of the Turks"), as its first President (October 29).

COMMENT. *By his charismatic inspiration, firm determination, political skill, and brilliant military genius, Kemal had revived and unified his dismembered, prostrate nation, while at the same time carrying on a victorious war against Greece. Casualty figures for the war are not available. Turkish losses were probably less than 100,000 men. Greek casualties were upward of 200,000, of whom at least half were lost during the flight to Smyrna in August–September, 1922.*

EUROPE, 1900–1925

Western Europe

The United Kingdom of Great Britain and Ireland

1904. Committee on Imperial Defense (Esher Committee). An evaluation of the British military system, in the light of Boer War experiences, resulted in recommendations for major reorganization.

1905–1910. Haldane Reforms. Richard Burdon, Viscount Haldane, civilian Secretary for War, achieved a military reorganization generally along the lines recommended by the Esher Committee. As a result, Britain developed the finest army for its size in the world. The vital role of the British Expeditionary Force in the initial Marne Campaign (see pp. 1025–1028) was due in large measure to the Haldane reforms.

1906, February 10. Launching of HMS. *Dreadnought*. This new warship, for which First Sea Lord Admiral Lord **John Fisher** was primarily responsible, was the first all-big-gun battleship, carrying 10 12-inch guns. She revolutionized the navies of the world.

1907, August 31. Anglo-Russian Entente. This fused earlier Anglo-French and Franco-Russian military agreements in the Triple Entente, offsetting the Triple Alliance of Germany, Austria, and Italy (see p. 920).

1914, March 20. Curragh "Mutiny." Brigadier General **Hubert Gough** and other officers at

the Curragh military base in Ireland submitted their resignations rather than obey orders to force the loyal population of Ulster to accept Home Rule under the separatists of southern Ireland. This incident seriously shook the morale of the British Army on the eve of World War I. All officers were later reinstated, however, and Ulster was permitted to remain directly under the crown.

1914, July 26. Semimobilization of the British Fleet. After the conclusion of normal extended maneuvers in home waters, First Lord of the Admiralty **Winston Churchill** ordered the fleet not to disperse to peace-time stations. As the war clouds rolled over Europe, Churchill and the First Sea Lord, Admiral Prince **Louis of Battenberg,** sent the fleet to the wartime anchorage of Scapa Flow in the Orkneys.

1914, August 4. Britain Declares War on Germany. **(See p. 1018.)**

1914–1918. World War I. **(See p. 1024.)**

1916–1921. Anglo-Irish Civil War. After years of violence and unrest in Ireland, armed rebellion broke out in **Dublin** on Easter Monday (April 24, 1916), largely inspired by Sir **Roger Casement,** Irish nationalist leader, who had been landed on the Irish coast by a German submarine. British action soon suppressed this uprising (May 1); Casement and other leaders were tried and executed (August 3). Sporadic fighting continued throughout the country as the Sinn Fein, Irish patriotic society, fanned the flames of revolt, and later declared Irish independence (January 21, 1919). Open rebellion again broke out later in the year (November 26). As violence spread, the "Black and Tans" (a special British constabulary force) were moved to Ireland, along with British troops (1920). The insurrection continued with increased ferocity, marked by sabotage, arson, and murder, with the illicit Irish Republican Army active in guerrilla warfare against the British forces of law and order. Atrocities were committed by both sides. In all the British employed some 100,000 men—regulars and constabulary—in the conflict. The struggle between the Protestant northern provinces (Ulster) and the Catholic population of southern Ireland continued after peace was formally established (December 6, 1921) upon British promise of dominion status to southern Ireland. The Irish Free State was officially proclaimed a year later.

1919, January 11. Trenchard Appointed Chief of Air Staff. Major General Sir **Hugh Trenchard,** who had been first Chief of the Air Staff when the Royal Air Force was established (April 1918), and who had later commanded the Independent Air Force for the strategic bombardment of Germany (June–November 1918), returned to the head of the RAF. Trenchard's concepts for the exploitation of air power through strategic bombardment became the basis of RAF doctrine. He was later made the first Marshal of the RAF.

France

1894–1906. Dreyfus Affair. Captain **Alfred Dreyfus,** an officer of the French General Staff, unjustly accused of treason as a German spy, was tried and sentenced to imprisonment on Devil's Island. Important information that would have exonerated him was deliberately withheld from evidence in this and later trials by senior officers of the General Staff who were convinced of Dreyfus' guilt and refused to believe the evidence. The case became a *cause célèbre* within and without the army, involving overtones of anti-Semitism. Eventually it became a major political issue, particularly among liberals eager to sieze an opportunity to smash extreme conservatism and the arrogance of many aristocratic French army officers. With the support of politician **Georges Clemenceau** and the writer **Émile Zola,** the case was finally reopened; Dreyfus was exonerated and restored to duty as a major. The morale and cohesiveness of the French officer corps were severely shaken.

1900–1925. Colonial Wars. These are discussed under various geographic divisions in which the wars took place.

1904, April 8. The Anglo-French Entente. This agreement, which took almost 10 months to negotiate, resolved outstanding differences and colonial rivalries between the 2 traditional

enemies, leading later to the Triple Entente (see p. 1087).

1906, January 10. Anglo-French Military Conversations. These established the basis for later military collaboration against Germany in World War I.

1911, July. Agadir Incident. The appearance of the German cruiser *Panther* at Agadir, Morocco, almost precipitated war between France and Germany over rival colonial interests in Morocco. Firm British support of France caused Germany to back down.

1914, August 3. Germany Declares War on France. (See p. 1018.)

1914–1918. World War I. (See p. 1024.)

Italy

1911–1912. Tripolitan War against Turkey. (See p. 1014.)

1914, August 3. Italian Declaration of Neutrality. Despite its membership in the Triple Alliance, Italy abjured its understanding with Austria and Germany.

1915, May 23. Italian Declaration of War against Austria. (See p. 1039.)

1915–1918. World War I. (See pp. 1018, 1039.)

1919, September 12. Fiume Coup. Gabriele d'Annunzio, Italian World War I hero, writer, and nationalist, with a band of volunteers seized **Fiume.** Italy disavowed his action. Diplomatic wrestling between Italy and Yugoslavia for the disputed area was ended temporarily by the **Treaty of Rapallo** (November 12), granting Fiume independence. D'Annunzio thereupon declared war on Italy. The *opera bouffe* ended when Italian troops bombarded Fiume and ejected him (December 27).

1921. Retirement of Douhet. Colonel **Giulio Douhet**'s criticisms of the Italian Army in World War I had led to his court martial and imprisonment (1916). The Caporetto disaster (see p. 1063) vindicated his criticisms; Douhet was released from prison and made chief of the Italian Army's aviation arm. He was promoted to general shortly before his retirement (1921). After retirement he published his book, *The Command of the Air,* elucidating his doctrine of winning wars by the use of airpower to break the enemy's will through violent and destructive bombardment of enemy cities. In order for airpower to perform its war-winning task, Douhet insisted that it must be completely independent of, and coequal with, surface forces. Through this and subsequent writings Douhet became the leading theoretician of air warfare, and the apostle of airpower.

1922. Rise of Fascism. Benito Mussolini's "Black Shirt" movement culminated with the **"March on Rome"** (October 28) and grant to him by the king and parliament—under armed pressure—of dictatorial powers (November 25). A virtual Fascist Reign of Terror followed as Mussolini consolidated his power (1923–1925).

1923, August–September. The Corfu Incident. Seizing upon the assassination of Italian members of an international border commission on the Greek-Albanian frontier, Italy sent warships to bombard and to occupy the Greek island of Corfu. After Greek appeal to the League of Nations, Italy withdrew from Corfu under pressure from Britain and other powers.

Spain

Not directly affected by World War I, Spain was involved militarily only in minor colonial operations during the early part of this period. Long-standing unrest in Spanish Morocco, however, broke out into full-scale revolt, in which Spanish arms suffered one disaster and several additional defeats (1921–1925; see pp. 1098–1099). One result of these setbacks was to revive internal frictions in Spain itself. A military revolt in Barcelona led to the assumption of dictatorial power by General **Miguel Primo de Rivera,** who was able to restore order temporarily (1923).

Portugal

Portugal was wracked by a series of minor revolts during most of this period. She joined the Allies in World War I (March 9, 1916).

Central and Northern Europe

Germany

1891–1906. Count Alfred von Schlieffen, Chief of General Staff. **(See p. 1020.)**

1900–1913. Colonial Activities. Military operations prior to World War I were confined to colonial areas, and are discussed under the respective geographical sections of this chapter. During this period there were repeated colonial crises in Morocco, leading to the brink of war with France (see p. 1098). Also Germany exerted an intensive, and generally successful, effort to achieve a position of predominating military and civilian influence in Turkey.

1900–1914. Prewar Civil-Military Relations. Militaristic Emperor **Wilhelm II** relied more and more on military advisers, ignoring competent German civilian statesmen. Since the General Staff was not subordinate to or responsible to the chancellor, or the defense minister, or any other element of the parliamentary government, the German Army became a "state within a state." Though most professional German soldiers eschewed politics, their single-minded devotion to the nation's military security had the gravest political implications, which they either did not realize or ignored.

1914–1918. World War I. **(See p. 1024.)**

1914–1918. Wartime Civil-Military Relations. The wartime requirements of military necessity still further increased the ascendancy of the military in Germany. Hindenburg and Ludendorff used the special constitutional status of the General Staff, and their own enormous prestige, to create a virtual military dictatorship (1916–1918; see p. 1060). Civilian governments were overruled or dismissed by the emperor at their demand. Their threats to resign always caused Wilhelm to comply abjectly with their wishes, thus making himself completely their puppet. Though the motives of these 2 able military men were patriotic and impersonal, their insistence upon military objectives ahead of the overall political interests of the state contributed greatly to the complete post-war collapse of Germany.

1919–1925. Civil-Military Relations under the Weimar Republic. The shaky government was undermined by a number of revolts, both Communistic and nationalistic. At the same time Allied demands under the Treaty of Versailles strangled the nation financially. During a particularly violent period of revolt and military mutiny, General **Hans von Seeckt** was appointed commander of the army. In effect he thus was Chief of the General Staff, even though this organization had officially been abolished under the terms of the Treaty of Versailles. A typically apolitical, aristocratic Prussian professional, Seeckt was distrustful of the republican regime. He was, however, loyal to Germany, and thus faithfully supported and defended the government. He was able to prevent the civilian chancellor and defense minister from exercising any authority over the army, and virtually recreated the prewar situation of an independent military. He was thus the most powerful figure in Germany, but made no effort to seize personal power. Although he hated Communism, he led Germany toward a *rapprochement* with Soviet Russia as a way eventually to regain the Polish provinces lost under the Treaty of Versailles, and thus to eliminate the hated Polish Corridor (see p. 1082). In personal understandings with the Russian commander, Marshal **M. N. Tukhachevski,** he undertook extensive secret military collaboration with the Red Army.

1923, January 11. Occupation of the Ruhr. Because of Germany's default in reparations payments, French and Belgian troops invaded and occupied the heartland of Germany's heavy industry. Britain abstained. Germany, fi-

nanced by the **Dawes Plan,** met most of her financial obligations and the Ruhr was evacuated (August 1925). The **Treaty of Locarno** (October 5–16) seemingly guaranteed peace in Europe, but France started feverishly constructing the **Maginot Line** of fortifications along her eastern border for protection against future German aggression.

1923, November 8–11. The "Beer-Hall Putsch." Adolph Hitler, Austrian ne'er-do-well, leading a new German nationalist movement, together with General Ludendorff, representing the reactionary military element, tried to overthrow the Bavarian government in Munich. The rising was crushed and Hitler sent to jail, where he spent nearly a year, writing *Mein Kampf.* On release, Hitler resumed his activities.

1925, April 26. Hindenburg Elected President. With its war hero as its leader, the course of German military rehabilitation was accelerated.

Austria, 1918–1925

This tiny remnant of the once-mighty Hapsburg Austro-Hungarian Empire (dismembered by the **Treaty of St. Germain,** part of the overall Versailles settlement; September 10, 1919) became a republic after a series of Communist disorders (1919). There was strong sentiment in the country for union with Germany (forbidden by the Treaty of St. Germain), resulting in a quasi alliance with her northern neighbor.

Czechoslovakia, 1918–1925

1918, November 14. Republic Established at Prague. Tomás Masaryk became the first President.

1919, March. Conflict with Hungary. (See below.)

1919, May-1920, May. Teschen Dispute with Poland. Clashes between regular and irregular forces of the 2 republics continued sporadically until they agreed to divide the territory.

1920–1921. Creation of the Little Entente. This was an alliance concluded with Yugoslavia (August 14, 1920) and Rumania (April 23, 1921), directed primarily against Hungary and the possibility of a Hapsburg revival. Czechoslovakia built up respectable military strength as the strongest minor European state.

Hungary, 1918–1925

1918, November 16. Proclamation of a Republic. This followed a brief revolution under Count **Michael Karolyi,** who became first President.

1919, March 21. Establishment of Communist Regime. After the resignation of Karolyi, pro-Bolshevik **Béla Kun,** sent from Russia by Lenin, seized power and established a dictatorship.

1919, March 28. Declaration of War with Czechoslovakia. Hungarian troops invaded Slovakia.

1919, April 10. Rumanian Invasion of Hungary. This was begun to forestall threatened Hungarian efforts to reconquer Transylvania, which Rumania had occupied after World War I. With Hungary torn by an anti-Communist counterrevolution, Rumanian troops advanced rapidly.

1919, August 1. Flight of Béla Kun. The Communist leader fled to Vienna just before the Rumanians occupied Budapest (August 4).

1920, June 4. Treaty of Trianon. This confirmed Hungary's acceptance of the Versailles—St. Germain settlements.

1921, March and October. King Charles Attempts to Restore Monarchy. The last Hapsburg emperor failed in 2 abortive military attempts to regain his Hungarian throne. He was permanently exiled.

The Scandinavian States

Untouched by direct impact of World War I, neutral Denmark, Sweden, and Norway confined postwar military efforts to the development of mutual security.

Eastern Europe

Russia

Prerevolutionary Period, 1900–1917

1904–1905. Russo-Japanese War. **(See p. 1009.)**

1905, December 22–1906, January 1. Moscow Insurrection. Endemic unrest seethed into open, armed violence, largely Communist-inspired, as the Moscow workers revolted in protest against the government inefficiency revealed in the conduct of the Russo-Japanese War. The uprising was quelled by regular troops in a succession of street fights. Later revolutionary movements in the provinces were also put down by vigorous and ruthless army action.

1907–1914. Continuing Unrest. The growing revolutionary movement led to sporadic outbreaks throughout the country, suppressed by the army.

1914–1918. World War I. **(See p. 1024.)**

The Russian Revolution, 1917

1917, March 8–15. Overthrow of the Empire. Following the outbreak of strikes and riots in Petrograd (Leningrad, formerly St. Petersburg), the military garrison of the capital mutinied (March 10), joining the revolting workers. A provisional government was established (March 12), and Czar **Nicholas II** abdicated.

1917, March–September. Continuation of the War. The new regime, dominated by the Socialist Minister of War Alexander Kerensky, pledged itself to continue the war against Germany, but suffered severe reverses (see p. 1064).

1917, September 9–14. Kornilov Revolt. Alarmed by growing Bolshevik domination of the government, under **Vladimir Lenin** and **Leon Trotsky,** the army commander, General **Lavr Kornilov,** marched against Petrograd. He was defeated by a combination of his own defecting troops and by armed workers.

1917, November 6–7. The Bolshevik Revolution. Under the leadership of Lenin, troops and workers in Petrograd overthrew the Kerensky regime and established a new Soviet government. (See p. 1065.)

The Great Russian Civil War, 1917–1922

THE GENERAL SITUATION

War seethed both inside Russia and around the periphery of her immense land mass, as the Bolshevik regime strove to establish itself. In the struggle were involved both the residual backwash of World War I (see p. 1093) and a number of serious counterrevolutionary movements, all of them uncoordinated. The principal areas of unrest were Poland (see pp. 1084, 1096), Finland, southern Russia and the Ukraine, White Russia and the Baltic States, and Siberia.

SOUTH RUSSIA AND THE UKRAINE

Here, within a 12,000-mile-long tortuous loop from the Black to the Caspian seas, were fought the major campaigns of the Civil War. The area was embraced within a winding arc from Odessa on the west, through Kiev, Orel, Voronezh, and Tsaritsin (Stalingrad) to Astrakhan and the Volga estuary.

1917, December 9. Revolt of the Don Cossacks. Expropriation of their lands by Bolshevist decree caused the first insurrection. Gathering in force to the standards of Generals **A. M. Kaledin** and Kornilov, the Cossacks moved north through the Kuban and the Don Basin, colliding with Red militia in a number of indecisive fights. Between them Kaledin and Kornilov organized their impromptu armies into a fighting force of sorts, while at the same time Trotsky's efforts were slowly welding the Bolshevik militia into what would become the Red Army.

1918, April–May. The Caucasus. Georgia, Armenia, and Azerbaijan declared their independence (April 22 and May 26). Bolshevik efforts to retain the oil lands of the area brought resentment, then sporadic revolt.

1918, November–December. The Ukraine. German-supported General **Pavel Skoropadski** had been overthrown by Ukrainian socialists under General **Simon Petlyura** after the withdrawal of German troops (November 15). France garrisoned Odessa as a base of supply to feed the growing counterrevolution (December 18).

1919, February 3. Communist Capture of Kiev. Bolshevik forces moving into the vacuum left by the German withdrawal (see p. 1083) reached and took Kiev. They then pushed down the valley of the Bug and, lapping westward, drove the French out of Odessa (April 8).

1919, January. The Caucasus. Bolshevik troop movements into the oil fields turned insurrection into full-fledged war. General **Anton Denikin** rallied the White counterrevolutionaries and drove the Bolsheviks out. The conflict had now spread throughout the wide expanse of southern Russia. When, in the central sector, Kaledin committed suicide (February 13) and Kornilov was killed in action (April 13), Denikin came out of the Caucasus to assume—in name at least—command over the entire White fighting front. General **Peter N. Krasnov,** hetman of the Don Cossacks, assisted him.

1919, May. The Line-up. From left to right the Whites were now assembled in 4 groups—the Kiev, Volunteer, Don, and Causasus armies. Against them the Bolshevik array became the Twelfth, Fourteenth, Thirteenth, Ninth, and Tenth Red armies. Trotsky was now faced with a multifront major dilemma, for Kolchak's White offensive (see p. 1094) along the axis of the Trans-Siberian Railway had now penetrated the Urals and reached the line Ufa-Perm. Another White army was assembling in the Baltic provinces under General Nikolai Yudenich (see p. 1096). At the same time Allied forces had landed in some strength in north Russia and eastern Siberia (see pp. 1094–1095) with apparent intent to help the White Russians. Considering Kolchak to be the most pressing danger, Trotsky took the offensive in the east, with General Tukhachevski in command, and went on the defensive in south Russia and in the north.

1919, May–October. Denikin Offensive. The 4 White armies pushed northward in an ever-diverging course. **Kiev** was recaptured (September 2). General **Peter Wrangel**'s Caucasus Army drove for Tsaritsin, hoping to make contact with Kolchak. However, Wrangel was delayed by lack of supply, and by the time Tsaritsin fell (June 17), Tukhachevski's Red offensive had rolled Kolchak back through the Urals. The Reds now turned in force against Wrangel, who was in turn forced back. Krasnov's Don Army reached **Voronezh** (October 6), only to be hit in flank and rolled back

(October 24) by Tukhachevski, who then drove westward against the Volunteer Army, which had reached Orel (October 13). The White offensive crumbled. The Kiev Army was then pried out of Kiev (December 17) and the disorganized Whites driven back to the Black Sea.

1920, March 27. Evacuation of the White Armies. This was done by sea from Novorossisk, mostly in British ships hurried there for the purpose. Only Wrangel, with a small force, held out in the Crimea.

1920, April. Red Penetration of the Caucasus. Soviet armies reached Baku (April 28). Bolshevik efforts to gain control of the Caspian Sea were temporarily foiled by a British flotilla based on Persian Caspian seaports (see p. 1102).

1920, June–November. Wrangel Offensive and Defeat. Taking advantage of Red preoccupation in the Russo-Polish War (see p. 1084), indomitable Wrangel suddenly pressed north from the Sea of Azov, but it was too late. The war with the Poles had ended, and the Reds, concentrating again, drove Wrangel back into the Crimea (November 1). The remnants of his White forces were evacuated—again by the British—by sea to Constantinople (November 14). Soviet Russia had come of age.

COMMENT. *Disunity of command on the White side, and the administrative and strategic ability of Trotsky on the Red, decided the issue. Both sides started as hordes of peasant guerrillas and amateur militiamen. Trotsky welded his masses into a professional fighting force through a process of trial and error. The Whites, lacking competent overall leadership, and with a command shot through by corruption and stupidity, failed. Wrangel was probably the best of the Whites, and Tukhachevski stood out amid the mediocrity of the Red leadership.*

SIBERIA AND EAST RUSSIA

1918, June. The Czech Legion. Approximately 100,000 Czech, or Bohemian, prisoners of war from the Austro-Hungarian Army seized control of the Trans-Siberian Railway when their proposed repatriation via Vladivostok was interfered with by the Soviets. Capturing arms from local Bolshevik units, the Czechs organized themselves into an efficient army and marched westward along the railroad into eastern Russia, where they captured **Ekaterinburg** (Sverdlovsk, July 26) just after the massacre of the Czar and his family there. They then opened negotiations with the Soviets and with the liberal anti-Bolshevik government which had been established at Omsk.

1918, November 18. Kolchak Seizes Power in Siberia. Admiral **Alexander Kolchak** of the Imperial Russian Navy seized control of the Omsk government and proclaimed himself "Supreme Ruler of Russia." He allied himself with the Czechs and advanced from Siberia with an army into eastern Russia, capturing Perm and Ufa (December).

1919–1920. Bolshevik Counteroffensive. Under Trotsky's dynamic leadership, the Bolsheviks counterattacked Kolchak's troops and recaptured Ekaterinburg (January 27). Despite the active support of the Czech Legion and the moral support of Britain, France, and Japan, Kolchak's troops were slowly driven back into Siberia. Omsk was captured (November 14); Kolchak lost control of the situation, and was later captured and executed by the Soviets (February 7, 1920). Upon the collapse of the Kolchak regime, the Czechs fought their way eastward along the Trans-Siberian Railway, brushing aside both Red and White Russian units in their way, to reach that portion of eastern Siberia controlled by an American expeditionary force (see below). They were then transported to Vladivostok and evacuated by ship. Though fighting continued, the Bolsheviks gradually consolidated their control over all those parts of Siberia not controlled by American and Japanese forces.

ALLIED INTERVENTION, 1917–1922

1917, December 30. Japanese Occupation of Vladivostok. A large Japanese force under General **Otani** landed at Vladivostok. The apparent Japanese intention of annexing the Rus-

sian Maritime Provinces caused alarm in Washington, London, and Paris.

1918–1919. Allied Invasion of North Russia. Small British-French-American expeditionary forces, under British command, seized Murmansk (June 23, 1918) and occupied Archangel (August 1–2). Their nominal objective was to retrieve Allied supplies and munitions which had been contributed to the Czarist government. Actually the ridiculous underlying concept was that these small forces would invade Russia, striking south and east to link with the Czech Legion at the Urals. This, some Allied visionaries argued, would contribute to a united White Russian counterrevolution and topple the Bolshevik regime. The American contingent was one reinforced infantry regiment. For more than a year of minor but hard-fought undeclared war, the Allied force bickered with Bolshevik troops along the Vologda River. The Americans were then evacuated (August 1919); the remaining Allied troops left shortly afterward (September–October).

1918, August. American Siberian Expedition. Partly to succor the Czechs, and also to prevent Japan from gobbling the Maritime Provinces, 2 American regiments, under Major General **William S. Graves,** landed at Vladivostok. Graves's instructions were explicit: to refrain from interference with Russian internal affairs, and to rescue the Czechs. He was soon at odds not only with the Japanese but also with British and French military missions, with the Bolsheviks, and with Kolchak's White Russian forces. Continuing tension between Americans and Japanese frequently came close to violence, but conflict was averted by Graves's combined firmness and diplomacy. Britain, France, and Japan all expected the Americans to join in support of Kolchak. Refusing, Graves hewed to his directive. American troops guarded the Trans-Siberian Railway from Lake Baikal to Vladivostok. Several clashes with partisan White and Red Russian forces occurred, the Americans successfully maintaining their control of the railroad in each instance. After the collapse of the Kolchak regime, the Americans held their positions until the arrival of the Czechs, who were evacuated by sea from Vladivostok. The American expedition then left Siberia (April 1920). This left eastern Siberia, save for the vicinity of Vladivostok, under Soviet control. In the face of the growing strength of the Soviet Far Eastern Republic, the Japanese later evacuated (October 25, 1922).

Finland and the Baltic States

Finland

1917, December 6. Independence of Finland.

1918, January 18. Mannerheim to Command. The new Finnish government appointed Baron **Carl Gustaf Mannerheim,** former Russian cavalry general, to organize and command its army. Bolshevik forces had already seized Helsingfors (Helsinki) and a native Red Guard was in process of formation. Vasa (Vaasa), where Mannerheim had his headquarters, contained a Russian garrison.

1918, January 28. Outbreak of Hostilities. A Red revolution broke out throughout Finland, despite the opposition of most of the Finnish people. Mannerheim the same day seized Vasa from the ineffectual Russian garrison and armed his rising levies from its large stock of weapons and munitions. He then moved south with his extemporized army, taking **Tammerfors** (Tampera), but further progress was checked by a large Red Guard force (March 16).

1918, April 3. German Intervention. A force of 10,000 men, under General **von der Goltz,** landed at Hanko (Hangö) in a surprise move. The Germans drove through and seized Helsingfors (April 18), cutting the Red-held area in two, while Mannerheim's rapidly growing forces moved east and cut off the Karelian Isthmus from Russia (April 19). An attempt of the remaining Russian forces to break out near **Vyborg** ended with the surrender (April 29) of 12,000 Reds and much booty. Desultory fighting with Bolshevik forces along the frontier continued.

1920, October 14. Treaty of Dorpat (Tartu). This finally secured Finnish independence.

ESTONIA

1917–1918. Bolshevik and German Occupations. Following its declaration of independence (November 28, 1917), Estonia was trampled first by Bolshevik and then by German troops (see p. 1065). The latter were in occupation when the Treaty of Brest-Litovsk was effected (see p. 1065).

1918, November 22. Renewed Bolshevik Invasion. Following the German evacuation (November 11), the Soviets returned. Sharp resistance by Estonian forces, assisted by a British naval squadron in the Baltic, caused Russian withdrawal (January 1919).

1919, October. Yudenich Coup. Capable and energetic White Russian General **Nicolai Yudenich,** who had been gathering a counter-revolutionary army in northeast Estonia, crossed the Russian border (October 6) near Narva in a bold bid to capture Petrograd (Leningrad). Although he had no more than 20,000 men, he reached the outskirts of the city (October 19), causing near panic. Trotsky's frenzied rallying of all available forces, including workers, turned Yudenich back, and he retired into Estonia.

1920, February 2. Treaty of Dorpat. This brought freedom to Estonia through Russian recognition of independence.

LATVIA

1919, January. Russian Invasion. Immediately following Latvian declaration of independence (November 18, 1918), Bolshevik troops moved across the border. Riga was taken (January 4) and a Soviet government set up. With Allied approval, German-Latvian forces drove the Bolshevist invaders back (March). A German attempt to take over the Riga government resulted in confused fighting and occupation of Riga, ending in armistice (April 16–May 22). Fighting broke out again (October 20) between the Latvians and both German and Russian elements. Allied insistence on adherence to the provisions of the Treaty of Versailles (see p. 1082) forced German withdrawal (November 20).

1920, January. Russian Withdrawal. The last of the Bolshevik troops were expelled. An armistice with Russia followed (February 1).

1920, August 11. Treaty of Riga. Russia recognized Latvian independence.

LITHUANIA

1918. Bolshevik Invasions. Immediate Soviet invasion followed Lithuanian declaration of independence (February 16), but the Russians were soon driven out by the Germans (see p. 1065). However, the evacuation of German troops (November 11) was followed by another Bolshevik invasion.

1919, January 5. Russian Capture of Vilna. This led to Polish intervention and the outbreak of the Russo-Polish War (see p. 1084).

1920, July 12. Treaty of Moscow. This ended the Russo-Lithuanian hostilities; Russia recognized Lithuanian independence.

1920, October 9. Polish Seizure of Vilna. **(See p. 1097.)** League of Nations efforts to mediate and to hold a plebiscite satisfactory to both sides proved unsuccessful. Peace was reestablished 7 years later (December 1927).

1923, January 11. Insurrection in Memel (Klaipeda). A predominantly German city, Memel had been under inter-Allied control since 1918. Upon the outbreak of an uprising sponsored by Lithuania, Lithuanian troops occupied the city, forcing a French garrison to withdraw. The Allies later recognized this high-handed seizure.

Poland, 1914–1925

1914, August 16. Pilsudski's Legions. One of the principal prewar Polish revolutionaries against Russian rule of central Poland, **Józef Pilsudski,** organized Polish legions in Galicia (Austrian Poland) to fight beside the Central Powers against Russia.

1916, November 5. Central Powers Proclaim Polish Independence. This only applied to

former Russian Poland. The country remained occupied by German and Austrian troops, however.

1917, March 30. Russia Recognizes Polish Independence. The Provisional Russian Government stated that its recognition applied to all lands with Polish majority populations, thus including German and Austrian Poland.

1918, November 11. De Facto Polish Independence. German troops were disarmed and expelled. Pilsudski, Commander in Chief of all Polish forces, became virtual dictator of the new country. With frontier wars already breaking out in all directions, he devoted all of his energies to building up an effective army; in this he was favored by the many Polish veterans of World War I, who had fought on all fronts and on both sides.

1918, November–1919, May. War with Ukraine. Ukrainian troops entered Galicia to establish a West Ukrainian Republic at Lvov. After 6 months of fighting, the Ukrainians were expelled from Galicia.

1918, December–1919, February. Fighting in Poznan. Threatened outbreak of war between Germany and Poland was halted by Allied pressure.

1919, January–February. Dispute over Teschen. Precipitated by a Czech attack on Polish forces in Teschen, the fighting was quickly ended by Allied pressure.

1919, January–November. Undeclared Conflict with Russia. Poland, insistent upon returning to pre-1772 boundaries, reacted violently when Soviet troops (following the withdrawing Germans) occupied Vilna (January 5) and continued on to the line of the Bug River (February). An undeclared war broke out, and the Poles drove the Russians back, reoccupying **Vilna** (April 1919). Desultory fighting continued along the front, which brought Polish troops to the Berezina River and into the northern Ukraine. A lull of several months followed.

1919, December 8. The "Curzon Line." The Allied Supreme Council established a provisional eastern frontier for Poland, generally following the Bug River. This line, later called the "Curzon Line," was totally unsatisfactory to Poland. As Soviet forces began to build up in western Russia, the Poles determined to fight for the formerly Polish regions east of the Bug.

1920, April–October. Russo-Polish War. **(See p. 1084.)**

1920, October 9. Polish Reoccupation of Vilna. During the Russo-Polish War, the Soviets had ceded Vilna to Lithuania (July 12). Upon Soviet evacuation, after the Battle of Warsaw, the Lithuanians occupied the city (August 26). This precipitated a dispute between Poland and Lithuania, which led to fighting when Polish General **Lucian Zeligowski** occupied the city. A state of war, without active fighting, persisted between Poland and Lithuania for another 6 years (see p. 1096).

1921. Fighting in Silesia. A dispute between Germany and Poland over the results of the Silesian plebiscite broke out into open fighting (May 3). The Inter-Allied Commission forced a cessation of hostilities (June 24).

Turkey

1900–1909. Disintegration of the Ottoman Empire. The Young Turk nationalistic movement urged constitutional reform and fomented insurrection while the Great Powers and the Balkan States nibbled at the outer fringes of the empire of despotic Sultan **Abdul Hamid II.**

1909, April 13. Military Revolt at Constantinople. The I Army Corps (mostly Albanian) seized control of the capital. The uprising was put down by troops from Macedonia after a 5-hour fight within the city. Other disorders in Anatolia, involving Armenians, were ruthlessly suppressed by Turkish troops, who massacred a number of Armenian demonstrators.

1909, April 26. Deposition of Abdul Hamid. The Young Turks appointed his inept brother, **Mohammed V,** as sultan.

1910, April–June. Albanian Insurrection. The uprising was brutally stamped out by Turkish troops.

1911–1912. War with Italy. **(See p. 1014.)**

1912–1913. The Balkan Wars. **(See p. 1015.)**

1913, January 23. Young Turk Coup d'État. After brief turmoil, "strong men" Enver, **Taalat,** and Djemal came to power. They secretly wooed Germany.

1913, November–December. Liman von Sanders Crisis. The appointment of this German general to reorganize the Turkish Army aroused Russian and French resentment and suspicion.

1914, August 2. Secret Alliance with Germany. This foreshadowed Turkey's entry into the war on the side of the Central Powers.

1914–1918. World War I. **(See p. 1024.)**

1919. Internal Turmoil and Allied Intervention. Defeat in World War I still further weakened the power of the Sultan (now **Mohammed VI**). Increasing nationalist activity resulted from the Sultan's cooperation with the Allies. To curb the Nationalists, Italian troops were landed at Adalia (April 29) and Greek troops at Smyrna (May 14). Atrocities committed by the Greeks aroused Turkish resentment.

1920, March 16. Allied Occupation of Constantinople. An Allied force under British General **George F. Milne** landed to support the Turkish government against the Nationalists, to keep open the straits as a supply line for White Russian counterrevolutionaries, and to protect the Armenians.

1920, April 23. Provisional Nationalist Government at Ankara. Mustafa Kemal, war hero and Nationalist leader, was selected to be President. A military agreement was then reached with Soviet Russia to ensure supplies. (See p. 1086.)

1920, June 20. Treaty of Sèvres. This stripped Turkey of all European territory except Constantinople, and gave complete Armenian independence. The terms of the treaty were rejected by the Nationalists, increasing their popular support.

1921–1923. Greco-Turkish War. **(See p. 1085.)**

AFRICA

Morocco

1900–1906. Colonial Friction. Rival colonial interests in North Africa of France, Germany, England, Spain, and Italy were composed to some degree by the **Algeciras Conference** (January 16, 1906–April 7, 1907), recognizing special rights of both France and Spain in Morocco.

1907, July 20. Bombardment of Casablanca. Serious unrest was violently quelled when a French squadron opened fire on the city. French occupation of the Moroccan Atlantic coastal area followed.

1909, July–October. Riff Attacks against the Spanish. Riff Berber tribesmen clashed with the Spanish at **Melilla** on the Mediterranean.

1911, April 26. French Occupation of Fez. This followed a Berber attack on the city.

1911, July 1–November 4. The Agadir Incident. Germany sent the gunboat *Panther* to Agadir, allegedly to protect German nationals and their interests. War was averted by diplomatic horse-trading. In return for a free hand in Morocco, France ceded part of her Congo holdings to Germany.

1912, March 30. Treaty of Fez. This established a French protectorate over Morocco. General **Louis H. G. Lyautey,** forceful and tactful, appointed Resident General (May 24), began a successful, progressive program of political and economic betterment cementing French and Moroccan interests.

1912–1921. Troubles in Spanish Mediterranean Zone. In the west, bandit chieftain **Raisuli** (who gained international notoriety by kidnaping an American citizen in 1904) by 1920 was harassing the area south to Tetuán, while a Riff chieftain, **Abd el Krim,** was whip-

ping up hostility south and east of Melilla. Spanish General **Dámaso Berenguer** attained success in pacifying the western area, but in the east General **Fernandes Silvestre** met disaster.

1921, July 21. Battle of Anual. Silvestre, with about 20,000 men, was moving southwest into the Riff mountains. Apparently reconnaissance was inadequate and security dispositions faulty. Abd el Krim's tribesmen had attacked and captured a frontier post at Abaran. The garrison of the next post fled to Anual, to meet Silvestre's column. At the same time the Riffians opened fire on both Silvestre's flanks. The resulting confusion turned to panic and then to slaughter. Silvestre and some 12,000 of his men were killed, several thousand more made prisoner. Dissidence flared throughout the Spanish zone, all frontier posts were either captured or abandoned, and the Spaniards were forced back to fortified coastal zones directly around Melilla and Tetuán. The Anual disaster rocked Spain, leading to the downfall of the government and rise to power (September 13, 1923) of "strong man" General **Primo de Rivera,** who became—with the king's blessing—virtual dictator of Span. Abd el Krim, establishing a "Republic of the Riff," prepared to drive out the French and control all Morocco. Between the tribesmen and a number of foreign adventurers he organized a force of 20,000 men, well armed and provided with artillery and machine guns captured from the Spanish.

1925, April 12. Riffian Advance Southward. Abd el Krim's forces, debouching secretly from the mountain border, swept south to overwhelm the chain of French border posts from Taza to Fez. Forty-three of the 66 blockhouses dotting the 50-mile span were captured and most of their garrisons killed after desperate and gallant resistance. Lyautey had expected attack, but his resources were limited. Skillful handling of his existing reserves checked the Riff advance within sight of Fez. France and Spain, forgetting their former rivalry in Morocco, agreed (July 26) to a joint counteroffensive. Reinforcements raised the French Army strength in Morocco to more than 150,000 men, while Spain prepared an expeditionary force of more than 50,000, commanded by General **José Sanjurjo.**

1925, September 8–9. Joint Counteroffensive. The Spanish expedition began landing in the **Bay of Alhucemas** under cover of French and Spanish warships. Ajdir was captured (October 2). The stage was set for an immense converging movement, with Targuist—Abd el Krim's headquarters—as target. While small Spanish forces struck from the Tetuán and Melilla zones respectively, Sanjurjo's main force advanced almost directly south. At the same time Marshal Pétain, commanding the French field forces, moved 6 converging columns, within mutual supporting distance of one another, into the Riff-held territory between Tafrant and Taza.

1925, September 24. Resignation of Lyautey. Exhausted in health, Lyautey's resignation ended a most brilliant career of pacification and organization. Pétain succeeded him, and General **Boichut** took field command. Despite desperate resistance, Abd el Krim's troops were progressively forced north by the French hammer against the slower-moving Spanish anvil. Delayed by seasonal winter rains, the advance was renewed in the spring.

1926, May 26. Surrender of Abd el Krim. A French spearhead under Colonel **André G. Corap** came thrusting into Targuist, and Abd el Krim gave up the fight.

COMMENT. *The original success of Abd el Krim testifies to the fallacy of cordon defense. Neither the French nor the Spanish frontier could withstand the initial blows, and the loss of one blockhouse led inevitably to the loss of the others. The European counteroffensive, particularly the French operations, consisted of a rapidly moving advance on a wide front, utilizing the terrain and taking advantage of crest lines to avoid ambush. Abd el Krim's own campaigns were an example of development of guerrilla warfare into that of a conventional force. He was overwhelmed by a combination of superior force and sage leadership.*

Africa

During this period there were almost continuous military operations on the part of the forces of Britain, France, Germany, Italy, and Portugal to stabilize and pacify their colonial empires in Africa. These were generally successful, and by the end of the period most of Africa was relatively peaceful. Listed below, in summary form, are some of these operations.

1899–1920. Operations against the "Mad Mullah" (Somaliland). Somali chieftain **Mohammed ben Abdullah** waged almost constant small war against the Italians, British, and Ethiopians. He and his fierce desert tribesmen proved themselves to be extremely able warriors. His raids ended only with his death.

1899–1902. The Boer War. (See p. 933.)

1900, March–November. Ashanti Uprising (Gold Coast, or Ghana). The Ashantis briefly besieged Kumasi before being suppressed by British troops. The British established a protectorate on January 1, 1902.

1900, April 22. Battle of Lakhta (Kusseri). French troops defeated **Rabah Zobeir,** raider and slave trader, in the eastern French Sudan, or Chad, region. (See p. 938.)

1900, May. French Conquest of Northern Sahara. Culminating protracted desert warfare, the French established themselves firmly in the main oases of the northern Sahara.

1900–1903. British Conquest of Northern Nigeria. The British revoked the Royal Niger Company's charter, and some 2,500 troops under Lagos Protectorate Governor-general Sir Frederick Lugard (see p. 937) invaded the Sokoto Caliphate, capturing Kano (February 3, 1903) and Sokoto itself (March 15) before a protectorate was proclaimed that autumn.

1902. Uprising in Angola. Suppressed by the Portuguese.

1903. Hottentot Uprising in German Southwest Africa.

1904. Insurrection in Southern Nigeria.

1904–1905. Insurrection in Cameroons. Suppressed by the Germans.

1904–1908. Uprising in German Southwest Africa. Led by the Herero tribe, this revolt was joined by many of the Hottentots. It was suppressed by the Germans only with difficulty. Its influence spread to Angola.

1905. Uprising in the French Congo.

1905. Insurrection in German East Africa.

1906. Religious Insurrection in Sokoto (Northwest Nigeria).

1907. Uprising in Angola. Largely inspired by the Herero uprising in German Southwest Africa.

1908–1909. French Conquest of Mauretania.

1909–1911. French Conquest of Wadai (mountainous, desert region of eastern Chad or central Sudan).

1914, October-1915, February. Boer Uprising. Boer extremists, led by former Boer General Christiaan De Wet and others, rose in protest against the Union of South Africa's declaration of war against Germany. The rising was suppressed by Prime Minister—and former Boer General—**Louis Botha,** assisted by former Boer commando leader **Jan Smuts.**

1914–1917. Unrest and Civil War in Ethiopia. Menelek nominated as his successor **Lij Yassu,** who came to the throne on Menelek's death in 1906. However, he proved an unpopular ruler, supporting Islam against the Coptic Church, as well as backing the "Mad Mullah" of Somalia (see p. 929 and above). Because of his support for Islam, Yassu was excommunicated by the *abuna* (primate of the Ethiopian Coptic Church) in September 1916, and the provincial chiefs and nobles (*ras*) formally deposed him soon after. Yassu's father Ras **Mikael** raised a Galla army to aid his son, but this was defeated at the **Battle of Sagalle** near Addis Ababa (October 27, 1916). Yassu fled (as did Ras Mikael), first to Danakil and then to Tigré province; Yassu was captured in 1921 and imprisoned until his death in 1935. The victorious rases selected Menelek's daughter **Zauditu** as empress (*nequs nagasti,* or "king of kings"), and made **Ras Tafari** (son of Menelek's nephew) regent.

SOUTH AND SOUTHWEST ASIA

The Arab States

Arabia, 1900–1925

1900–1919. Rise of Ibn Saud. A chief of the Wahhabi sect, or tribe, of southern Nejd (central Arabia), **Ibn Saud** established himself as undisputed ruler of the Nejd in a prolonged civil war (1900–1906). He then consolidated his control and annexed outlying regions to establish his authority over all non-Turkish portions of central and northern Arabia. He entered into an alliance with Britain during World War I and fought briefly against the Turks (1915).

1916, June. Arab Revolt against the Turks. Inspired by the British, the Arab tribes of Hejaz (western Arabia) revolted against the Turks under Hashemite Sherif **Hussein.** Under the leadership of his son, Emir **Faisal,** and British Captain (later Colonel) T. E. Lawrence, Arab forces fought successfully against the Turks for the remainder of the war (see p. 1055).

1919–1925. Struggle for Control of Arabia. A prolonged conflict broke out between Ibn Saud and the Hashemite Dynasty. After a series of Wahhabi victories over the Hashemites and independent Arab chieftains, Hussein abdicated (October 1924) in favor of his son **Ali.** Ibn Saud captured **Mecca** (October 13, 1924) and continued to press the war. He captured **Medina** (December 5, 1925), Sherif Ali abdicated (December 19), and Ibn Saud then captured **Jidda** to complete his conquest of Hejaz (December 23).

Syria, 1918–1925

1918, October 5. French Occupation of Beirut. A French naval squadron seized the port from the Turks as Allenby's troops were conquering the remainder of Syria (see p. 1081). By secret Allied understandings, Syria was to be France's share of the dismembered Ottoman Empire. French claims, however, were soon disputed by Emir **Faisal,** commander in chief of the Arab armies with T. E. Lawrence (see p. 1080 and above).

1919–1920. Dispute between France and Faisal. After the British formally turned the administration of Syria over to France (September 1919), open fighting broke out between Arabs and French (December). Though Faisal was proclaimed King of Syria (March 1920), he was unable to obtain support and was forced to flee. French troops occupied Damascus (July 1920). Faisal, for consolation, was made King of Iraq by the British (see below).

1925–1927. Insurrection of the Druses. An Arab tribe of southeastern Syria, the Druses became restive under French administration. They revolted (July 1925) and soon seized control of most of southern Syria. Aided by a revolt in Damascus, they forced the French to evacuate the city (October 1925). As the period closed the French were near defeat in Syria.

Iraq, 1919–1925

1919–1920. Unrest in Mesopotamia. Many Arabs objected to British occupation following the Mesopotamian campaign of World War I (see p. 1081).

1920, July–December. Arab Insurrection. Arab nationalists, hoping for the independence of Mesopotamia, rose against the British, who suppressed the uprising, but sought ways to satisfy Arab demands and aspirations.

1921, August 23. British Protectorate over Iraq. The British proclaimed Faisal (former King of Syria) as King of Iraq. The country was given a measure of self-government, but Britain retained control.

1922, June–1924, July. Insurrection in Kurdistan. The Kurds, traditionally semi-independent mountain people of the border region between Iraq, Turkey, and Iran, rose to throw off the control of the British and Arabs. The British, concerned about the rich Mosul oil fields, eventually suppressed the rebellion and granted considerable autonomy to the Kurds.

Persia (Iran)

1905–1909. Persian Revolution. This was a combination of political activity and scattered insurrections against the corrupt and despotic rule of Shah **Mohammed Ali.** Open warfare against the central government was stimulated by a revolt in Tabriz (1908), which was then besieged by the Shah's army (1908–1909). To protect Russian interests, and nominally to assist the Shah, a Russian army intervened and captured Tabriz, brutally suppressing the revolt (March 1909). Meanwhile, other rebel forces took the field in northern and central Persia. A rebel army under **Ali Kuli Khan** captured Teheran (July 12, 1909), forcing the abdication of the Shah in favor of his 12-year-old son, Sultan **Ahmad** (July 16).

1911, June 17–September 5. Abortive Return of Mohammed Ali. With Russian connivance, Mohammed Ali landed on the Caspian coast of northeast Persia at Gumish Tepe, and was soon joined by dissident forces. He was quickly defeated by loyal troops and forced to flee again.

1911, November. Russian Occupation of Northern Persia. On the pretext of restoring order in Persia, and to protect their financial interests, Russian forces occupied the northern part of the country and established a virtual protectorate over it. To protect their oil interests, the British occupied much of southwest Persia, but despite strained relations did not break with their Russian allies because of the threat of European war.

1914–1918. World War I. **(See p. 1024.)** The war ended with British troops in occupation of much of western Persia.

1919, May 21. Battle of Alexandrovsk. A British flotilla on the Caspian (see p. 1094) defeated a Bolshevik naval force. The British flotilla was later turned over to White Russians, who were then defeated by the Bolsheviks (1920).

1920, May 18. Russian Naval Invasion. A Russian flotilla captured **Enzeli** (Pahlevi) and then seized Resht. British troops withdrew from the Caspian coastal region to avoid a clash. Persian troops briefly recaptured **Resht** (August 24), but were repulsed from Enzeli, then driven south of the mountains.

1921, January. British Withdrawal. Upon negotiation of a treaty between the Soviet government and Persia, British troops began to withdraw from northern Iran.

1921, February 21. Coup d'État of Reza Khan. Widespread disgust with the incompetence and corruption of the oligarchy in Teheran led Persian general **Reza Khan,** commanding the Cossack Brigade, to seize power in Teheran; he soon established himself as virtual dictator. He quickly ratified a treaty with Russia (February 26), whereupon Russian troops began withdrawing from the northern and coastal regions.

Afghanistan

1914–1918. World War I. Neutral Afghanistan was in turmoil as Turkish and German interests provoked anti-Allied religious agitation. England, by subsidies, held the government in line, and after the war Russian interest was resumed.

1919, February. Accession of Amir Amanullah. Placed on the throne by the army and the Young Afghan radical party after the assassination of his father, **Habibullah** (February 19), Amanullah declared the country independent of all foreign control.

1919, May. War with Britain. Amanullah proclaimed a jihad (religious war) against Britain. Afghan levies broke across the Indian border near Landi Khana and occupied **Bagh** (May 3). Immediate mobilization of British Indian troops followed. A punitive expedition moved through the Khyber Pass to **Landi Kotal** and drove the invaders out of Bagh (May 11). The expedition then advanced into Afghanistan, and reached Dakka. British planes bombarded **Jalalabad** and **Kabul.** Amanullah sued for an armistice (May 31), and nominal peace resulted from the **Treaty of Rawalpindi** (August 8). Renewed British recognition of Afghanistan's independence (November 22, 1921), was accompanied by cessation of British

subsidies. Sporadic guerrilla warfare continued along the Afghan-Indian border.

1926, August 31. Treaty with Soviet Union. The Soviet Union and Afghanistan signed a neutrality and nonaggression treaty in which they pledged benevolent neutrality and noninterference in each other's domestic politics.

India, 1900–1925

1903–1904. Expedition to Tibet. Under the leadership of Colonel **Francis Younghusband,** a small British expedition entered Tibet to force the **Dalai Lama** to negotiate a treaty to stabilize the northern frontier of India. When the Tibetans refused to negotiate, Younghusband marched to Lhasa, which he reached after several severe engagements (August 3, 1904). A treaty was signed (September 7).

1914–1918, World War I. Indian troops—some 1,400,000 men in all—volunteered for service, taking active part on the Western Front, in the Near East and Africa.

1919, April 13. Amritsar Massacre. Religious conflicts between Moslems and Hindus, plus **Mahatma Gandhi**'s passive non-cooperation with the government, brought open rebellion in the Punjab. Several Europeans were killed during a riot at Amritsar (April 12). Brigadier General **Reginald Dyer,** commanding the garrison, paraded his troops to enforce order. When an unarmed mob failed to disperse, Dyer's troops fired on them, killing 379 and wounding 1,208 others. The incident aroused British public opinion. Dyer was denounced in the Commons, but the House of Lords upheld him on the ground that he had saved British rule in the Punjab. The Army Council, taking the middle ground, decided his act was "an error of judgment."

1919, May—August. Afghan War. **(See p. 1102.)**

1919, November. Revolt in Waziristan. Excesses committed by Masud tribesmen incited by the Afghans brought a punitive expedition of 30,000 men under General **S. H. Climo.** Concentrating on the **Tank Zam** (December 13), Climo's troops were attacked by the Masuds (December 17), who were repelled. The uprising was quelled (February 1, 1920).

1920–1925. Operations on the Northwest Frontier. Frequent small operations were undertaken to pacify Pathan tribesmen from Afghanistan, who periodically raided across the frontier.

EAST ASIA

China

The Boxer Rebellion, 1900–1901

1899–1900. Rising of the Boxers. Antiforeign elements in the Chinese government, angered by the Great Powers' nibbling of her territory, incited a fanatical secret organization called the Society of the Righteous Harmonious Fists (thus Boxers) to wide-scale depredations against foreign missionaries and their Chinese converts to Christianity. The government of Dowager Empress **Tzu Hsi,** professing inability to control the Boxers, was actually inciting and supporting them. Protests of foreign diplomats brought further violence. Warships of foreign nations began gathering off Tientsin (June 1900) and military detachments of several nations, totaling 485 men, were sent to Peking to guard the legations.

1900, June 10–26. First Relief Expedition. As the situation worsened, a small allied force of some 2,000 marines and bluejackets, including 112 Americans, was landed under control of British Admiral **E. H. Seymour,** senior officer present. Its movement to Peking was repulsed by much superior Chinese strength at **Tang Ts'u.** The force returned to their ships (June 26), having suffered 300 casualties.

1900, June 17. Capture of the Taku Forts. After receiving an ultimatum, the forts guard-

ing the river gate to Tientsin opened fire on the foreign ships. The fire was immediately returned, and landing parties captured the forts.

1900, June 20–August 14. Siege of the Peking Legations. Mob reaction culminated in the murder of Baron **Klemens von Kettler,** German Minister, and the siege of the legations. Russian, British, French, Japanese, and U.S. detachments were hurried to Taku, where an Allied Expeditionary Force was formed to go to the relief of Peking. (The first American contingent came from the Philippines, with reinforcements sent from San Francisco.)

1900, July 23. Taking of Tientsin. The expeditionary force, now numbering some 5,000 men, stormed the city walls and captured the fortress. The U.S. 9th Infantry Regiment in particular took heavy loss, including its commander, Colonel **E. H. Liscum.** By August 4, the expeditionary force included 4,800 Russians, 3,000 British, 2,500 U.S. (2 infantry and 1 cavalry regiments, a battalion of Marines, and a field battery, under Major General **Adna R. Chaffee**), and 800 French troops. Other detachments brought the total strength to 18,700. No overall commander was appointed; actions were taken on a cooperative basis.

1900, August 4. Advance on Peking. The Second Relief Expedition began its overland march along the rail and river line. A Chinese force estimated at 10,000 men was driven back at **Yang T'sun** (August 5–6). Here the French contingent remained to protect the line of communications. The other troops pushed on, driving off desultory resistance and arriving before Peking's outer walls (August 13). An immediate and precipitate attack by the Russians, who were in the lead, was thrown back from the Tung Pien Gate.

1900, August 14. Taking of Peking. A Japanese attack on the Ch'i Hua Gate was repulsed. The American force joined the Russians in front of the Tung Pien, and took it. At the same time 2 companies of the U.S. 14th Infantry assaulted the northeast corner of the outer wall. Bugler **Calvin P. Titus,** first to scale, hoisted the American flag. The defenders were driven off. The British troops waded under the wall through the Water Gate and the combined attack pushed on to relieve the diplomatic group, penned in the British Legation compound. This group of civilian men and women and the legation guards had resisted constant fire and assault for 8 weeks. Casualties among the civilian volunteers were 12 killed and 23 wounded, while the guard detachments lost 4 officers and 49 men killed and 9 officers and 136 men wounded. Rescued also were the defenders of the P'ei Tang, compound of the Catholic cathedral. There 40 French and Italian marines, a handful of priests and nuns, and some 3,000 of their Chinese Christian converts had also held out against incessant Boxer attacks. Seven marines, 4 priests, and an estimated 400 of the Christian Chinese had been killed in the fighting.

1900, August 15. Attack on the Imperial City. American field artillery blasted open the Ch'i Hua Gate, First Lieutenant **Charles P. Summerall** walking under Chinese fire to chalk an aiming spot on its timbers for his gunners. As a diplomatic sop to the Chinese government, the Imperial City was not immediately occupied, but the troops moved in later (August 28).

1900, September 4–October 10. Russian Occupation of Manchuria. This was a further blow to Chinese prestige. The Dowager Empress, from her refuge in Sian, accepted all the Allied demands (December 26).

1900, September–1901, May. Allied Punitive Missions near Peking. Of these, 35 were by German troops under Field Marshal Count **Alfred von Waldersee,** a late arrival (September 12).

1901, September 12. Boxer Protocol. Signed by 12 powers, this laid a crushing penalty on China, the most important item being an indemnity of 450 million taels (approximately $739 million). The United States set aside its share for education of Chinese students in the United States.

COMMENT. *Military operations in China, nominally under a joint command of mutual agreement between the various national commanders, was actually a hit-or-miss affair. Neither the Japanese nor Russian com-*

manders gave more than lip service to joint agreements. Had the Chinese been well trained, well led, and well armed, the expedition would have been doomed to failure. It is interesting to note that the British contingent included a Chinese regiment under British officers; it performed well.

Turmoil in China, 1901–1925

1904–1905. Russo-Japanese War. This took place mainly on Chinese soil (see p. 1008).

1905–1910. Rise of Chinese Nationalism. Pressures of the European powers and of Japan following the Russo-Japanese War resulted in new territorial demands on China. National dissatisfaction with the government flared; revolutionary sentiment was widespread.

1911, October 10. Outbreak of the Chinese Revolution. Mutiny broke out among troops in Wuch'ang, leading to widespread revolt. Marshal **Yuan Shih-k'ai,** overall military commander, after some perfunctory moves to suppress the risings, joined the movement (December). This led to the abdication of the child emperor and the establishment of the Republic of China under the presidency of Yuan (February 12, 1912). During this time Tibet rose against Chinese rule and drove the Chinese garrison out of the country. Britain prevented any subsequent Chinese efforts to reestablish authority in Tibet by force.

1913, July–September. The "Summer Revolution." An uprising in the Yangtze Valley was easily suppressed by Yuan.

1915, December–1916, March. Rebellion against Restoration of Empire. In protest against plans of Yuan to re-establish the empire, with himself on the throne, rebellion broke out in Yunnan and spread through China. Yuan's announcement of a change in plans did not completely restore order, but the issue was resolved by his death 3 months later (June 6, 1916). He was succeeded as President by **Li Yuan-hung.**

1917, May–August. Revolt of the Northern Military Governors. Dissatisfied with the parliamentary government operating under President Li, the northern military governors (*tuchuns*) revolted and established a rival government at Tientsin. One of their number, **Chang Hsün,** on the pretense of mediating with Li, overthrew the Peking government and briefly reestablished the Manchu Dynasty (July 1–12). He was repudiated by his military colleagues, who occupied Peking, overthrew the empire, forced Li to resign, and installed **Feng Kuo-chang** as the new President.

1917, August 4. China Declares War on Germany and Austria-Hungary. China took no active combat part in the war, but did send labor battalions to France, Mesopotamia, and Africa. In return China secured the termination of all German and Austro-Hungarian concessions and rights in China.

1920–1926. Rise of the War Lords. The military governors and other military leaders became almost completely independent of nominal central authority. They carried out a series of complex internecine struggles while the central government became weaker and weaker.

1924, January 21. Congress of the Kuomintang (National People's Party). Under the leadership of **Sun Yat-sen,** the Nationalists met at Canton to prepare for the liberation and unification of the country. Soviet political and military advisers were prominent. At about this time a new Whampoa Military Academy, with Russian and German advisers, was established by the Kuomintang, under young General **Chiang Kai-shek.**

Mongolia

The overthrow of the Manchu Empire in China led Mongolia, under the nominal leadership of the "Living Buddha" of Urga (Ulan Bator) to declare its independence. The following decades were chaotic in Mongolia, which felt the impact of both the Chinese and Russian Revolutions,

as well as the tides of Japanese expansionism in East Asia. Russian Communism finally prevailed over the other conflicting forces attempting to take advantage of Mongolian weakness, and the Mongolian People's Republic became the first, and possibly most loyal, of Moscow's satellites. The principal events were:

1911, November 18. Outer Mongolia Proclaims Independence. A theocratic Lamaistic government was established under the *Jebtsun Damba Khutuktu* ("Living Buddha"). Russian influence increased, with Mongolia becoming a virtual Russian protectorate (November 3, 1912).

1919, October. Return of Chinese Control. The warlord government of Peking took advantage of confusion caused by the Russian Civil War to reassert control by sending a small army to occupy Urga.

1920, October–1921, July. White Russian Invasion and Occupation. A force under Baron **Roman von Ungern-Sternberg** invaded Outer Mongolia, and drove the Chinese out of Urga (February 3, 1921). At first welcomed as a liberator from the hated Chinese, sadistic Ungern-Sternberg instituted a reign of terror and aroused popular opposition.

1921, March 13. Establishment of Revolutionary Provisional Government of Mongolia. This was set up at Kiakhta, just inside Siberia, across the border from Mongolia, with Russian Communist support, by Nationalist patriots **Sükhe Bator, Dunzan,** and **Khorloghiyin Choibalsan.** A joint Russian-Mongolian military force was assembled; Sükhe Bator led the small Mongolian contingent.

1921, June–July. Russian-Mongolian Invasion of Mongolia. Ungern-Sternberg was defeated, **Urga** was captured (July 6). Later Ungern-Sternberg was captured and executed. Although nominally part of a joint force, the Soviet troops virtually occupied the country. Nevertheless, to avoid undue antagonism to China, the U.S.S.R. professed to recognize Chinese suzerainty over Outer Mongolia (May 31, 1924).

1924, November 26. Proclamation of Mongolian People's Republic. The death of the Living Buddha (May 20) provided the Mongolian Communists and their Soviet masters with an opportunity to complete the transition of Mongolia to a satellite and consolidate control (1924–1928). After the deaths of Sükhe Bator and Dunzan, Choibalsan became the sole leader of Communist Mongolia.

Japan

Japan participated in 3 military ventures during the period: Boxer Rebellion (1900–1901; see p. 1103); Russo-Japanese War (1904–1905; see p. 1008); and World War I (1914–1918; see p. 1034). Her participation in each was coldly calculated for her own aggrandizement. The Russo-Japanese War is particularly important from the standpoint of military history, since it marked the admittance of Japan into the coterie of the Great Powers. Japanese war potential was expanded as rapidly as possible under chauvinistic, expansionist, militaristic leadership.

The Philippines

1901–1902. Continuation of Philippine Insurrection. (See p. 950.) The capture of **Aguinaldo** through a ruse, by Brigadier General Frederick Funston and a detachment of Filipino troops in U.S. service (March 23, 1909), ended the formalized rebellion, though guerrilla warfare continued for more than a year. However, thanks to General **Arthur MacArthur's** wise and just military rule, the Christian Filipinos were gradually won over (1902).

1902–1905. Moro Campaigns. Operations in the southern islands, **Mindanao** and **Jolo** in particular, continued for 3 years. The fanatic Mohammedan tribesmen were not subdued until after serious, though small, campaigns successfully led by Colonel **John W. Duncan** and Captains **John J. Pershing** and **Frank R. McCoy,** among others.

COMMENT. *Suppression of the Philippine Insurrection necessitated the employment of 100,000 American troops, whose casualties amounted to 4,243 killed and 2,818 wounded in action. Filipino losses were some 16,000 killed and approximately 100,000 more died of famine.*

Netherlands East Indies

1900–1908. Continuation of the Achenese War. (See p. 944.) The pacification of Sumatra was finally completed when the Dutch subdued rebellious forces in Acheh (December 1907).

THE AMERICAS

The United States

1899–1905. Philippine Insurrection. (See pp. 950 and 1106.)

1900, June 17. Boxer Rebellion in China. (See p. 1103.)

1900–1903. Army Reforms. Efforts of **Elihu Root,** secretary of war, brought about establishment of the Army War College (1900), the Command and General Staff School (1901), and the Army General Staff (1903).

1903, November 3. Panamanian Revolt against Colombia. (For U.S. involvement, see p. 1108.)

1906, October 2. Army of Cuban Pacification. (See p. 1109.)

1907–1909. U.S. Fleet Sails around the World.

1912. Intervention in Honduras and Nicaragua. (See p. 1108.)

1914, April 9–21. Tampico and Veracruz Incidents. U.S. military action against Mexico (see below).

1914, August 4. U.S. Neutrality Declared at Outbreak of World War I.

1915, July 29. Intervention in Haiti. (See p. 1109.)

1916–1917. Mexican Border Operations. (See p. 1108.)

1916, November 29. Intervention in Dominican Republic. (See p. 1109.)

1917, April 6. Declaration of War on Germany. (See p. 1160.)

1921, November 12–1922, February 6. Washington Naval Conference. (See p. 1008.)

Mexico

1911–1914. Revolutionary Era. Overthrow of President **Díaz** (May 25, 1911) was followed by internecine war between numerous rival leaders. **Francisco Madero,** who succeeded Díaz, was defeated and killed by **Victoriano Huerta** (February 22, 1913). Huerta's regime (which was not recognized by the U.S.) was challenged by one of his many rivals, **Venustiano Carranza.**

1914, April 21. American Occupation of Veracruz. Arrest of unarmed U.S. sailors at Tampico (April 9) was followed by the shelling of Veracruz by a U.S. naval force and the landing of a small expeditionary force, which occupied the city. Huerta's government severed relations with the U.S. South American states attempted mediation. U.S. troops were withdrawn later in the year (November 25).

1914, August 15. Carranzists Capture Mexico City. Carranza assumed leadership of Mexico.

1914–1915. Revolt of Zapata and Villa. Emiliano Zapata and **Francisco (Pancho) Villa,** bandit-revolutionist leader who dominated northern Mexico, revolted. Villa briefly captured Mexico City, but was driven out by Carranza's General **Alvaro Obregón,** who won a climactic victory at **Celaya** (April

13–15). Carranza was recognized by the U.S. as the President of Mexico (October 15, 1915). Following a falling-out of Zapata and Villa, each continued separate, small-scale insurgencies until the death of Zapata in a government ambush (April 10, 1919) and the surrender of Villa (July 27, 1920; see below).

1916, March 9. Villa Raids across the U.S. Border. Villa's band of 500 men made a night attack on **Columbus,** N.M. Surprising the town and its garrison of U.S. cavalry, Villa killed 14 American soldiers and 10 civilians before he was driven off with a loss of 100 men. To prevent repetitions of the outrage, President Wilson sent Regular and National Guard troops to protect the border. (Eventually this force reached a strength of 158,000 men—most of the active military strength of the U.S. at the time.)

1916, March 15. Punitive Expedition. Under President Wilson's directive, Brigadier General **John J. Pershing** with 10,000 troops (mostly cavalry) struck into Mexican territory to pursue Villa. Carranza's reluctant consent soon turned to open antagonism. In addition to several skirmishes with Villistas, the Americans were also engaged on several occasions with regular Mexican troops, notably at **Carrizal** (June 21). Despite all his efforts, Pershing was not able to catch the elusive Villa. The expedition was withdrawn (February 5, 1917).

1916, July 24. The Zimmermann Note. **(See p. 1060.)** Though German efforts to exploit Mexican anti-American sentiment failed, coolness between the U.S. and Mexico persisted throughout World War I.

1920, April–July. Renewed Civil War. Carranza was overthrown and killed (May 21) in a revolt led by Generals Obregón, **Adolfo de la Huera,** and **Plutarco Elías Calles.** Villa later surrendered to the victors. Obregón was elected President (September 5) and was later recognized by the U.S. (August 31, 1923). Stabilization of the country began.

Central America

1903, November 3. Panama Revolution. U.S. efforts to purchase from Colombia the territory necessary for the proposed and congressionally authorized Panama Canal had been rebuffed (October 31). The Colombian province of Panama rose in revolt (November 3), while U.S. warships stood offshore to discourage effective Colombian reaction. The U.S. recognized Panamanian independence (November 6) and 10 days later received Panama's new Minister to the U.S., **Philippe Bunau-Varilla** (formerly associated with the old Panama Canal Co.). A treaty granting the present Canal Zone to the U.S. was signed November 18. The coup was obviously engineered by U.S. President **Theodore Roosevelt** in the paramount interests of national defense. The canal was intended as a bypass for strategical shifts of the U.S. Navy between the Atlantic and Pacific oceans.

1907, February–December. War between Nicaragua and Honduras. Honduras was defeated and **Tegucigalpa,** Honduran capital, occupied by the victorious Nicaraguans.

1909–1911. Civil War in Honduras. Former President **Manuel Bonilla** led a revolt against President **Miguel Danila.** A stalemate resulted in an armistice (February 8, 1911). Bonilla was elected president (October 29), but disorders continued.

1912, January. U.S. Marines Land in Honduras. Their mission was to protect U.S. property.

1912, July. Civil War in Nicaragua. U.S. Marines were landed to stop hostilities and assure free elections. This small contingent was not withdrawn until 1925.

1917–1918. World War I. All Central American nations declared war upon Germany, following U.S. entrance into the war.

1921, February–March. Panama—Costa Rica Dispute. Armed clashes took place in disputed territory, but U.S. political pressure averted war.

South America

During World War I, Argentina, Chile, Paraguay, Colombia, and Venezuela remained neutral. Brazil declared war against Germany (October 26, 1917). Her warships actively cooperated in antisubmarine activities, and much foodstuff was furnished the allies. Uruguay, Bolivia, Peru, and Ecuador severed relations with Germany, but did not declare war. The period was generally quiet in South America, save for civil wars or revolutions in Colombia (1900–1903), Peru (1914), Ecuador (1924–1925), and Brazil (1924).

West Indies

Cuba

1906–1909. American Army of Cuban Pacification. Political unrest which created chaotic conditions caused President **Theodore Roosevelt** to send a force of 5 regiments of infantry, 2 of cavalry, and several field batteries to Cuba. Normal conditions were restored without friction or incident of any sort. The expedition evacuated the island.

1917, February–March. Revolt in Cuba. American forces landed at Santiago to restore order.

Dominican Republic

1916, May. U.S. Intervention. Following internal disorder threatening national bankruptcy, U.S. Marines were landed and U.S. officials took control of fiscal matters. The situation worsening, full military occupation began (November 29). The Marines were withdrawn in 1924.

Haiti

1915, July 3. U.S. Forces Intervention. This followed widespread disorders and economic claims against Haiti by European countries. A protectorate was proclaimed (September 16). Under Marine supervision, a constabulary was organized and conditions quieted.

1918, July 12. Haiti Declares War on Germany.

1918–1919. Revolt against the U.S. Occupation. Disorders were suppressed by the Marines.

XX

WORLD WAR II AND THE DAWN OF THE NUCLEAR AGE:

1925–1945

MILITARY TRENDS

General

A new era in warfare and a new era in history dawned in the closing days of this period: the nuclear age, ushered in by the first atomic bomb drop, on Hiroshima, August 6, 1945. Its mushroom-shaped cloud became a question mark. Was nuclear power to become arbiter of future world strategy and diplomacy, a possibility indicated by its unprecedented potentiality for cataclysmic destruction, or was this power merely another, more powerful, addendum to military arsenals?

Meanwhile, the dramatic surge of military technology, noted in the two previous periods, continued to accelerate. To mention only a few of the most obvious projects of this trend, one must note the perfections in internal-combustion engines which led to amazingly improved tanks and warplanes; the reappearance of rocket weapons, from the simple, hand-carried "bazooka" to the highly complex long-range German V-2; and, perhaps even more significant, the tremendous burgeoning of electronics, particularly in the form of radar and of improved radio communications.

Thanks to such developments and also to the vertical-assault potentialities of air warfare, the heretofore rigid compartmentalization of land and sea operations disappeared. Three-dimensional warfare multiplied possible strategic and tactical combinations. Success in this new, coordinated "triphibious" warfare depended upon ever-closer affiliation of civilian science and industry on the one hand, and military competence and genius on the other. Victory went to the nation which could best combine the disparate elements of such a team in exploitation of all available resources.

Improvements and refinements in weaponry, transport, and communications brought vast changes in tactics and techniques of warfare. However, man and his reasoning power—the ultimate weapons, and also the basic limitations, in warfare—were unchanged, as were the fundamental principles governing the application of force to human conflict.

A most remarkable development was the joint, unified Allied command, epitomized in the Anglo-American alliance of World War II. This encompassed a totally unprecedented pooling, by the British Empire and the United States, of leaders, staffs, troops, and resources. Never before had integrated armies, navies, and air forces entered combat together, willingly subordinating individual national characteristics, doctrine, and training to a unified command directed against common objectives.

Logistics developed into a science in itself, on land and sea. The U.S. Navy's Logistic Support Groups solved one of the most annoying problems of naval warfare: the necessity that vessels return to some land base for fuel, supply, and repair. The necessary withdrawal from action of naval fighting units became a matter of but a few days or even hours, instead of weeks and months, when sea trains of fast cargo ships and floating repair shops became components of each task force. On land, such things as the artificial harbors off the Normandy coast (see p. 1210), flexible fuel pipelines laid under water or along the ground, and the use of cargo planes extended the mobility of combat forces. Organized logistical elements, especially trained—like the Navy's Seabees, the Army's port troops and railroad and airborne Engineers—reduced to routine supply problems which, a short quarter-century before, would have been insuperable obstacles to mobility.

Leadership

Significant was the propensity of heads of state to exercise more and more the role of strategical military leadership. Britain's **Churchill** and America's **Roosevelt** dominated both their respective national military planners and the Combined Chiefs of Staff, not always for the best. **Stalin** in the U.S.S.R., **Chiang Kai-shek** in China, and Germany's **Hitler** exercised direct overall command of their respective armed forces. Hitler's frenetic vagaries, as we shall see, assisted greatly in bringing defeat to Germany.

In military leadership we believe that one man—**Douglas MacArthur**—may have risen to join the thin ranks of the great captains of history. Such evaluation is complicated by political and personal controversies which swirled about MacArthur in this and the subsequent period, and we are too close to the events to be certain that we can assess them with sufficient historical objectivity.

Two other excellent Allied soldiers—**Eisenhower** and **Montgomery**—achieved such notable and deserved victories as to present to their people ideal images of the quintessence of charismatic military leadership. We do not believe, however, that they can objectively be ranked above such other superb soldiers as America's **Bradley,** Britain's **Wavell,** and Germany's **Manstein, Model, Rundstedt,** and **Kesselring,** who were outstanding among the numerous leaders of army groups, nor indeed above America's **Patton** and Germany's **Rommel,** who as tacticians shone above all other army commanders.

Given the paucity of revealed evidence, it is impossible to evaluate the leadership of individual Russian commanders; but certainly someone—or some small group of men—possessed

sufficient leadership qualities to bring about the remarkable achievements of the armies of the U.S.S.R. There seems to be reason to single out **Zhukov** as the man most responsible.

On the naval side, America's **Nimitz** as an overall commander, and **Spruance** as a fleet commander, were both outstanding exemplars of the highly competent officer corps of the U.S. Navy, as were superb Admirals **Cunningham** and **Ramsay** for the Royal Navy.

In air warfare, America's **Arnold** was the first individual who had an opportunity actually to apply the theories of long-range strategic air warfare which had been voiced by air prophets Trenchard, Douhet, and Mitchell a few decades earlier. The results were stupendous, though still inconclusive until the atomic bombs presaged weapons of hitherto-unimagined orders of magnitude. Germany's airmen, whose tactical and technical competence was perhaps unsurpassed, failed to visualize the opportunities for long-range strategic warfare, which were understood and exploited by British and American airmen like **Harris** and **Spaatz.** Other airmen particularly worthy of mention are Britain's **Dowding** (whose victory in the Battle of Britain was the most decisive of World War II) and **Tedder,** and America's **Kenney,** these latter two demonstrating exceptional competence not only in independent air operations but also in providing support to surface forces.

Strategy

Obviously, economic and political considerations dictated major strategy not only in World War II but also in the relatively minor wars which preceded it. The principle of the "nation at war," so clearly demonstrated in World War I (see p. 1004), was dominant during 1939–1945. So too were its limitations, though not immediately apparent. Japan, seeking the wherewithal to provide strategic material for prosecution of her aim, overreached herself totally in the advance into the Southern Resources Area. Hitler's preoccupation with the Russian oil fields was equally fatal (see p. 1191). On the Allied side curious contrasts are found. Churchill's determination to dispute control of the Mediterranean even when Britain was seemingly beaten to her knees (see pp. 1167–1168) was correct; it proved to be the salvation of the Allied cause. His fascination for attacking the "soft underbelly" of the Axis, which became a bone of contention between American and British planners throughout the war, was politically sound in its aim to curb Russian domination of Eastern Europe. However, the logistical problems would have been stupendous. The question is moot; it will be long debated, as will the opposing, perhaps shortsighted, American strategy, concerned with winning the immediate war rather than with long-range political objectives.

Roosevelt's dictum of "unconditional surrender" in all probability extended the war with Germany far beyond its normal end. Eisenhower's remark, at a press conference (February 28, 1945) that the policy faced the German high command with the choice of being hanged or jumping into a clump of bayonets, was a correct estimate.

Wars of the period were all wars of maneuver; World War II was one of maneuver vast in space, personnel, matériel, and logistics. Air power emerged as a combat force coequal with land power and sea power. Earlier, the Spanish Civil War (see p. 1127) became a testing ground for German, Italian, and Russian theories. The Douhet theory that decision could be attained by air power alone was tested during the siege of Madrid and found wanting, although its efficacy against a primitive nation (Ethiopia; see p. 1138) was high. The citizens of Spain's capital city

surmounted their terror, and the decision was reached by ground forces in a war of movement along the Ebro River (see p. 1130).

While the value of fortifications—both fixed and temporary—as springboards for maneuver was again attested throughout the period, sieges *per se* had no appreciable effect other than psychological.

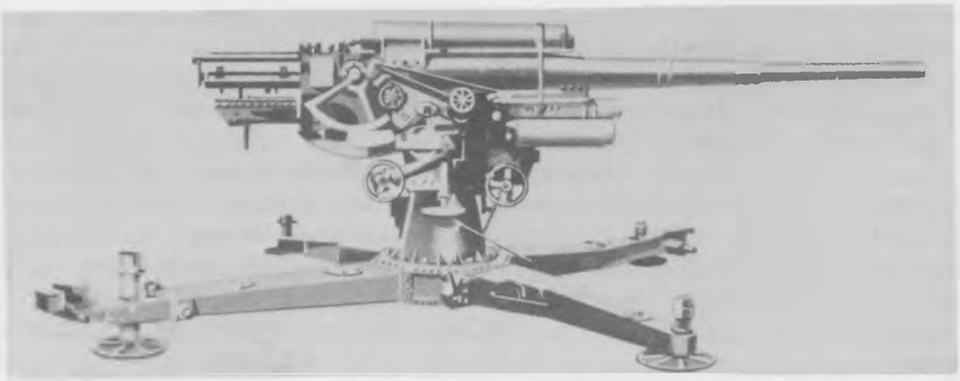
Japan's brilliant and successful opening moves in the Pacific in 1941–1942 (see p. 1232) furnished a lesson of utmost importance to military planners. Consensus of American military thought had been that the Philippines would be the initial target for any Japanese aggression. Defense plans were therefore predicated upon a stout defense of Luzon pending the irresistible counterattack of the U.S. Pacific Fleet. The elimination of that fleet at Pearl Harbor wrecked the entire strategic plan, necessitating an immediate reassessment and readjustment in the midst of war's confusion. British military thought presupposed an initial naval attack on Singapore, essential base for the logistically "short-legged" ships of the Royal Navy and the focal point for successful naval operations in defense of the eastern Indian Ocean and western Pacific areas. The Japanese assault upon the unprotected land side of the fortress (see p. 1236) pricked that balloon.

Both cases were tragic, and almost fatal, instances of the unfortunate tendency of military planners to rely on crystal-ball assumptions of *enemy probable intentions* rather than examining *the worst thing the enemy can do* and providing for such contingency. Proved again, too, was the dictum of Frederick the Great that there is no dishonor in hard-fought defeat, but that there can be no excuse for being surprised.

Weapons, Doctrine, and Tactics on Land

We have noted that amazing inventions and refinements in technique emerged from the crucible of World War II. Among these were such things as the proximity fuse, "shaped" charges, bazookas, recoilless rifles, rockets (returning from a century of oblivion), and concomitant refinements in artillery fire direction and control. Vastly improved mobile ordnance, fast tanks and tank destroyers, and other cross-country vehicles combined to produce a doctrine of mobile warfare at speeds heretofore impossible. With this came wide dispersal of units and elaboration of the "Hutier tactics" of World War I—the sweeping advance which bypassed strong points for later reduction by slower-moving elements; this, in turn, necessitated defensive zones of great depth, so-called "hedgehog" formations, which could themselves become points of support for fast counterattack.

Between the World Wars the Germans intensively studied ways and means of overcoming the deficiencies which had stopped their 1918 offensives just short of victory. They came to the conclusion that the tank provided the answer to maintaining the momentum of a breakthrough, and that self-propelled artillery and air support would provide the firepower required when the tanks and other attacking units moved too fast for conventional artillery to keep up. As to resupply and reinforcement, other track-laying vehicles and cross-country trucks were designed to assure resupply and reinforcement to the armored spearheads, while the speed of the advance was expected to avoid the shell-cratered morasses of World War I battlefields. As a result of these studies, when the war began the Germans were far ahead of any other country in tank doctrine. They also enjoyed a slight technical superiority in tank design and construction,



German 88

which they were able to maintain throughout the war, despite intensive efforts by the British, Americans, and Russians to catch up. The Germans also had a substantial superiority in antitank guns. Almost accidentally they discovered that their high-velocity 88-mm antiaircraft gun was the best antitank gun in the world, and was also useful in the normal artillery role in level or rolling areas where its flat trajectory was not a handicap. Probably the most effective use made of the 88-mm gun was by General Erwin Rommel in the desert fighting in North Africa, where he aggressively sent batteries of 88s forward with his tanks, to form deadly firepower bases around which his tanks maneuvered rapidly, to the dismay of his British opponents.

German tank used by the Afrika Korps

While the Germans were rectifying the shortcomings of their 1918 offensives, the major maritime powers were somewhat less intensively studying the Gallipoli campaign as an example of how not to combine land and sea forces in amphibious operations. The British, Ameri-

cans, and Japanese, quite independently, began to devise weapons, equipment, and techniques to improve assault landings. All three developed shallow-draft, ramp-unloading landing craft that would get troops to the edge of the beach, and enable them to unload rapidly. (It is not known whether Byzantine examples had any influence on these developments.) During the war the British and Americans intensified this effort, even producing ocean-going vessels such as the Landing Ship Tank (LST) and Landing Ship Infantry (LSI) that such could carry assault troops across an ocean and land them in combat-ready formation on hostile beaches.

Although inhibited by lack of funds and shortages of personnel, the United States Army was making the most significant development in the enhancement of artillery firepower since the time of Gustavus Adolphus. Elaborating concepts and techniques improvised on the battlefield by Major General **Charles P. Summerall** in the closing days of World War I, the U.S. Field Artillery School developed the technique of massed fires, whereby a single Fire Direction Center could rapidly and accurately shift the fire of many batteries, and sometimes many battalions, across a wide front, multiplying artillery effectiveness many times. This capability, and particularly the massing of the multi-volleyed fires of large numbers of guns on one target in a demoralizing crescendo of destructiveness, gave the Americans a firepower superiority on the battlefield that was not matched by any other nation in the war.

Naval Weapons, Doctrine, and Tactics

The effectiveness of bomber and torpedo aircraft against surface warships was so pronounced from the outset of the war—in European waters as well as in the Pacific—that it soon became evident that air superiority also automatically included surface superiority, almost regardless of the relative strength in surface warships of opposing forces. This was demonstrated beyond all doubt in the dramatic American naval victory of Midway (see p. 1254). Thus it was apparent early in the war that carrier-based aircraft were not mere supporters of surface naval forces, but were in fact the primary striking element. The carrier, providing the weapon to destroy enemy surface forces—an extension of firepower—and thus quickly displaced the battleship as the capital ship of the fleet, at the very moment that the all-big-gun super-dreadnought reached its apogee of firepower and of invulnerability to gunfire in such formidable warships as the German *Bismarck* and the Japanese super-battleships *Yamato* and *Musashi.* The change started with the Japanese carrier blow at Pearl Harbor (see p. 1233). Before the period ended, great fleet actions were contested and won in the air by bombs and torpedoes delivered by airplanes launched from surface vessels which never sighted one another, nor fired other than antiaircraft artillery.

Yet, while the loss of HMS *Renown* and *Prince of Wales* (see p. 1235) early in the Pacific war demonstrated the inability of surface vessels to resist properly delivered air strikes—either land- or carrier-based—the period also saw a number of other naval actions in which surface vessels slugged it out with gunfire. Notable were the Battles of the River Plate (see p. 1153) and the Komandorski Islands (see p. 1272), while the Battle of Surigao Strait, in itself a contest of surface maneuver-*cum*-gunfire, was a component of the large-scale Battle of Leyte Gulf in which carrier air power played the major role (see p. 1288).

The submarine loomed large as a component of sea power, its primary mission being commerce destruction. Germany's U-boat Atlantic campaigns almost, but not quite, weighted

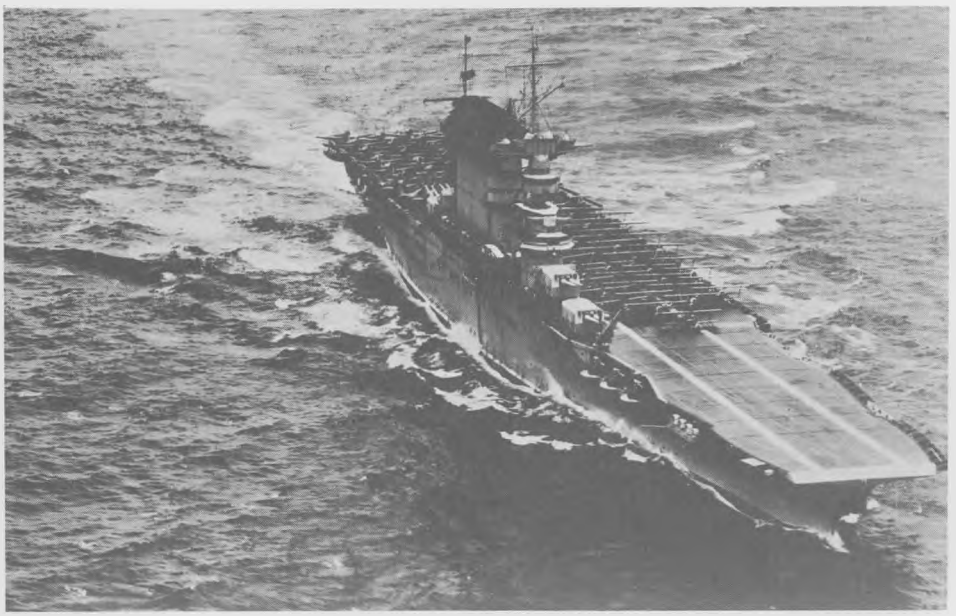
American LST (Landing Ship Tank) in action

the scales in favor of Nazi victory. In the Pacific, where Japan never quite understood the strategic employment of the submarine and ignored antisubmarine procedure, the U.S. submarine campaign strangulated the Nipponese merchant marine. What emerged from the conflict was the sound premise that submarine warfare, in both offense and defense, was a highly specialized affair and—like all military operations of the period, for that matter—demanded professional competence and vision of high order. As a result, despite the fact that at the outset of World War II Japan possessed in the "Long Lance" torpedo, technically the best weapon of its category, her underwater strategy was erroneous.

The use of submarines to evade surface blockade, first attempted by the U.S. Navy during the opening Luzon campaign, became highly developed by the Japanese in the Southwest Pacific. Underwater vessels carried troops and materiel, supplementing the use of fast destroyer-transports for the same purpose.

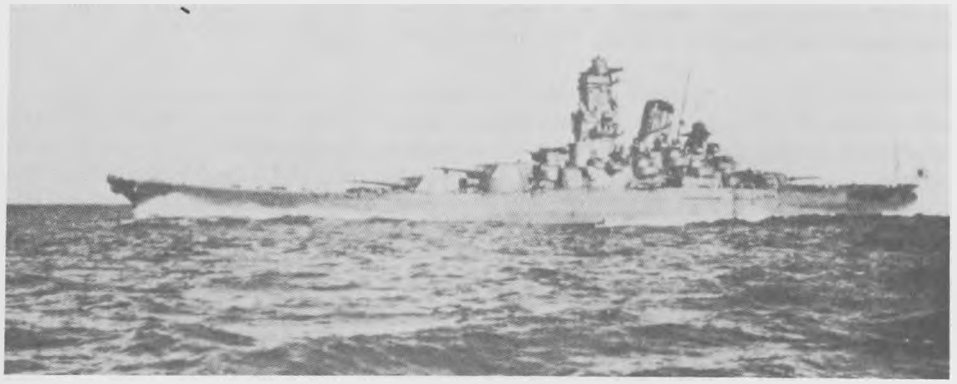
A striking development in surface operations was the use of naval firepower in support of landing operations. Refinements in fire control and direction enabled U.S. naval craft to put down most effective gunfire support to ground troops during the initial sensitive period prior to debarkation of the assaulters' artillery.

Technological inventions—radar and sonar in particular—played a great part in naval

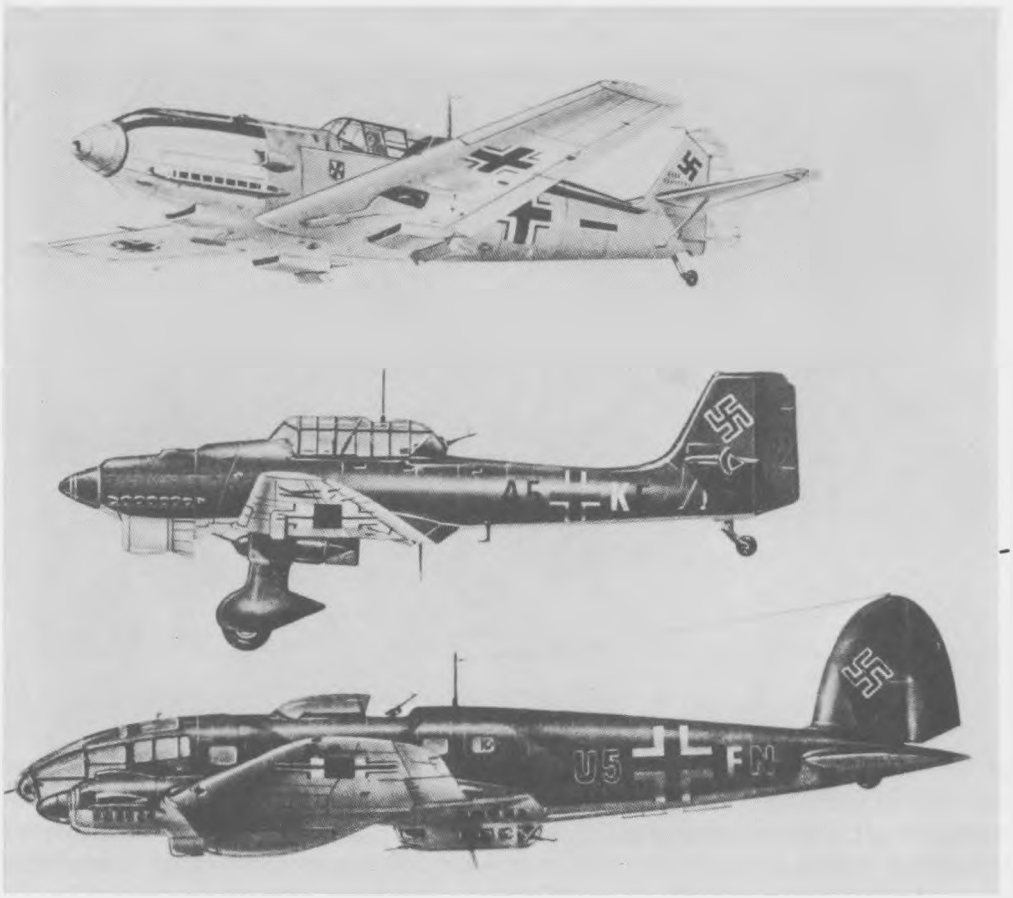


Aircraft carrier USS *Lexington*

operations. Together with other electronic communications innovations, they constituted a vast and delicate refinement in command control. An important result of this development was the emergence of the command ship in U.S. Navy procedure. In fleet actions, no longer were the admiral and his staff an irritating excrescence on some unfortunate capital ship. In amphibious operations the floating command post enabled close personal cooperation between the naval commander, responsible for putting the ground forces ashore, and the ground commander, who assumed control once the troops gained a toehold on the beach.



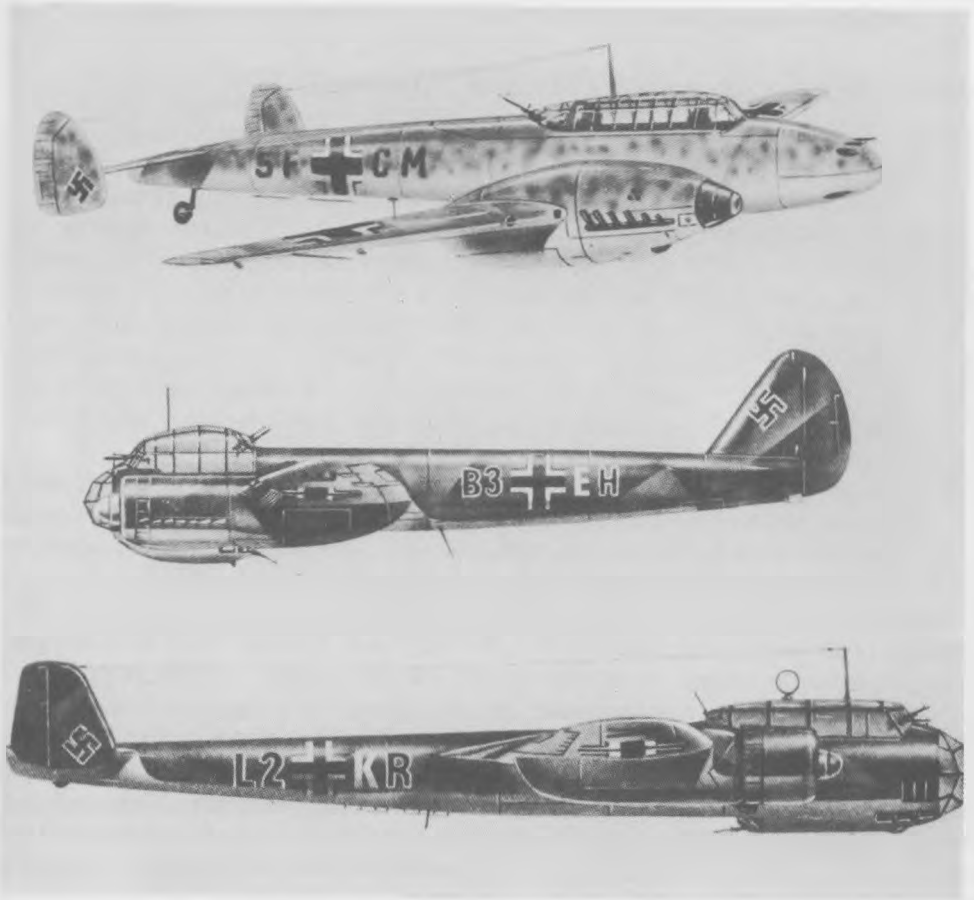
Japanese battleship *Yamato*



Top: Messerschmitt ME-Bf109 E-4. A formidable opponent for the RAF's Spitfires and Hurricanes—but over-extended by the long-range flights over Britain, forced to cover ME-110 fighters as well as the bombers, and finally grossly misused as a fighter-bomber. *Speed:* 357 mph. *Max range:* 412 miles. *Armament:* two 20-mm cannons and two 7.92-mm machine-guns.

Middle: Junkers JU-87 A-1 Stuka. In close support of the German Army during the Blitzkrieg Campaigns in Poland and France, the Stuka had made history as "flying artillery." It could pinpoint targets with deadly accuracy, but only in the absence of fighter opposition—and it therefore suffered drastic losses in the Battle of Britain. *Crew:* two. *Speed:* 199 mph. *Max range:* 620 miles. *Bomb load:* 1,100 lbs (pilot only). *Armament:* two 7.92-mm machine-guns.

Bottom: Heinkel HE-111 H-3. The Battle of Britain was the first campaign which rammed home Germany's failure to develop a long-range heavy bomber to do the work done by planes such as the HE-111 medium bomber. Like the JU-88, it was also used as an anti-shipping strike aircraft. *Crew:* five. *Speed:* 254 mph. *Max range:* 1,100 miles. *Bomb load:* 4,000 lbs. *Armament:* five 7.92-mm machine-guns, one 20-mm cannon.



Top: Messerschmitt ME-Bf110 C-1. Goering hoped that "destroyer" formations of ME-110s would carve through all fighter opposition, cleaving a path for the bombers—but the 110 was far too heavy and sluggish to "mix it" with the Spitfire and Hurricane, and suffered accordingly. *Crew:* two. *Speed:* 349 mph. *Max range:* 565 miles. *Armament:* five 7.92-mm machine-guns and two 20-mm cannons.

Middle: Junkers JU-88 A-2. Maid-of-all-work for the Luftwaffe, serving as dive-bomber, level bomber, night-fighter, and reconnaissance. It also served with distinction in the torpedo-bombing role against Allied convoys. It suffered—like all German bombers—from a chronic weakness in defensive armament. *Crew:* four. *Speed:* 286 mph. *Max range:* 1,553 miles. *Bomb load:* 3,963 lbs. *Armament:* four 7.92-mm machine-guns.

Bottom: Dornier DO-17 Z-2. The DO-17 was a lighter, slimmer plane than the HE-111. Like the Heinkel, it had been blooded in the Spanish Civil War; like all Luftwaffe's bombers, the Battle of Britain forced it to carry out operations which proved the inadequacy of its design. *Crew:* five. *Speed:* 265 mph. *Max range:* 745 miles. *Bomb load:* 2,200 lbs. *Armament:* six 7.92-mm machine-guns.

Weapons, Doctrine, and Tactics in the Air

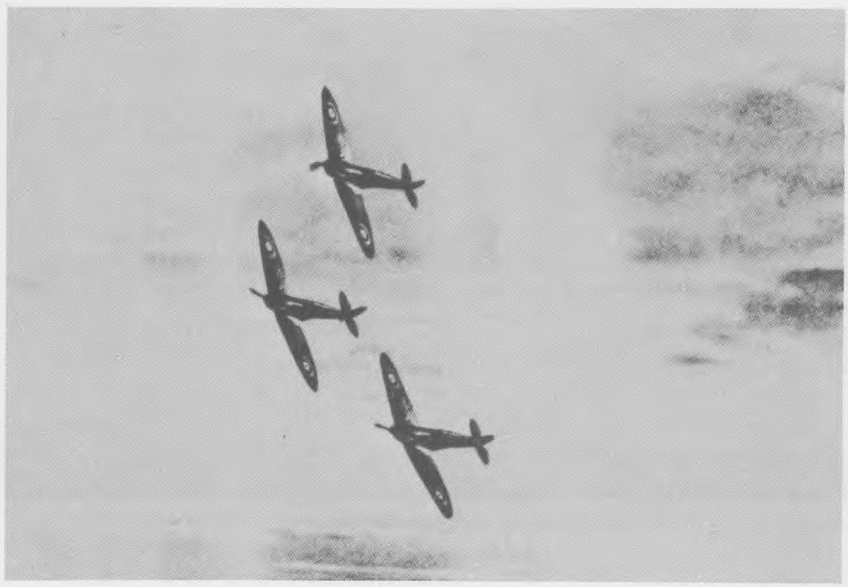
The violence and effectiveness of air bombardment, and of close support of ground forces by fighter planes, were clear after the Italian conquest of Ethiopia (see p. 1138) and the Spanish Civil War (see p. 1127). But the full potentialities of air weapons against ground targets were first clearly demonstrated in the German blitzkrieg campaigns in Poland, Norway, the Low Countries, and France in 1939–1940 (see p. 1149 ff.). Yet for all of the superb tactical efficiency demonstrated by the Luftwaffe in these campaigns, the Germans had not grasped the full implications of air power as a new concept of warfare; they employed their air forces essentially as adjuncts of land forces. The British, though still fumbling in the development of their air doctrine, were nevertheless ahead of the Germans in their air-power concepts. It was this doctrinal advantage—as well as important technical and tactical factors—which more than anything else brought the RAF victory in the Battle of Britain.

As developed by the British, with some later American refinements, by the end of World War II air doctrine had resolved itself to encompass three closely related but nonetheless distinct major functions: command of the air, long-range (so-called "strategic") bombardment directed against the enemy's warmaking potential, and direct support to surface forces.

Command of the air, or "air superiority," was not only essential to effective offensive employment of air units in the other two functions but was also important in two negative, or defensive, aspects. Command of the air, or at least the capacity to effectively dispute the enemy's control of the air, was important for the defense of a nation's economic strength against long-range bombardment by the enemy, as well as for protecting surface forces against enemy air strikes. And because of the terrorizing effect of air attacks on both civilian and military personnel, command of the air was an important morale factor. Command of the air was achieved in several ways: defensive air combat, attrition of enemy fighter strength through repeated long-range strikes, attacks against air installations and (more slowly, and really as a part of the second function) against aircraft industry.

Strategic bombardment was the function which had been visualized as the decisive role of air power both by Douhet (see p. 1089) and by Mitchell (see p. 1147). Long-range bombardment aircraft permitted for the first time military operations against a nation's warmaking capacity by more direct and more rapid means than attrition and the traditional blockade. Despite their substantial numerical inferiority in aircraft, and despite the necessity for concentrating on the development of their defensive fighter strength in the early days of the war, the British never lost sight of their objective of offensive air warfare of this sort, and were actually conducting long-range strikes against German industrial and commercial targets even during the Battle of Britain. Quickly improved German fighter defenses, however, forced the British to conduct these attacks at night, when visual conditions were poor, and they had to be content with relatively inaccurate area bombardment of large industrial areas.

American bombers, protected by armor plate and carrying numerous guns—as epitomized in the so-called Flying Fortresses—were better able to bomb in daylight and, thanks also to a more effective bomb sight, were able to strike targets with considerably greater precision. An incidental function of such raids was to entice the German defensive fighters into the air and thus to help reduce German command of the air over Germany by attrition. American losses to the Germans in these daylight raids grew to alarming proportions, however, and could be contin-

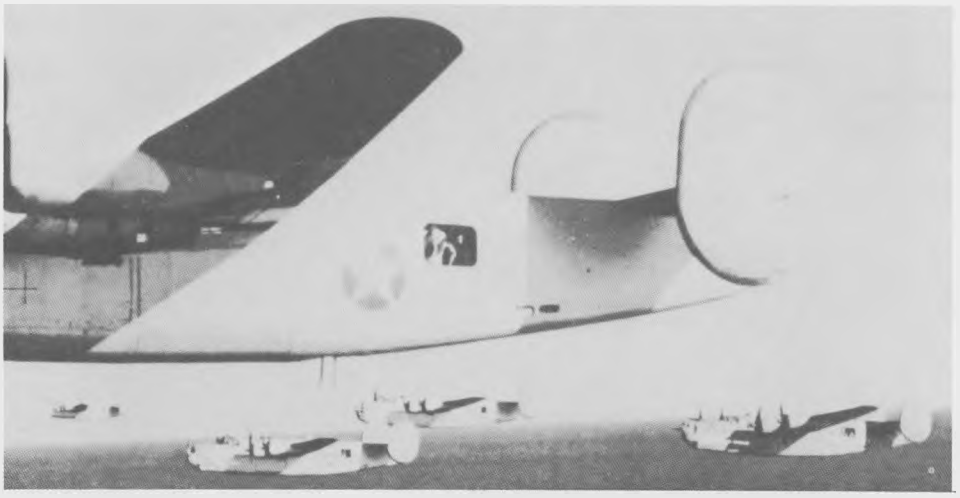


British Spitfire fighters

ued in 1944 and 1945 only because of the development of new longer-range fighter aircraft that could accompany the bombers on their raids into the heart of Germany. Till the end of the war in Europe, therefore, Britain's RAF Bomber Command struck area targets at night, while American long-range units attacked during the day. The Combined Bomber Offensive was a major factor in hastening the collapse of Germany.

Though the details were different (see p. 1292), the development of American strategic bombardment tactics against Japan followed a similar course, with the final effectiveness of the air offensive being in large part due to the ability of long-range fighters to accompany and protect the bomber planes.

Flying Fortress—B-17F



Liberators—B-24

The tactical doctrine for close air support of ground forces, as it emerged from World War II, was largely the development of cooperative efforts of Air Marshal Tedder's Desert Air Force and General Montgomery's Eighth Army in 1942. The essential feature of this doctrine was in its command arrangements, whereby the air commander at all times retained full control over all his subordinate units, which were never attached to ground-force commanders. This permitted a degree of flexibility in meeting the ground-force requirements, and in coping with unexpected threats, which was impossible in the German system, for instance, where air units were generally assigned to ground-force command. At the same time, however, it inhibited full integration of air-support units into the land-warfare team.

It is important to note that an essential aspect of this doctrine of support was the dual capability of the fighter-bomber aircraft type. These light, speedy, maneuverable planes were not only the best implements for relatively precise, low-level bombing and strafing attacks against ground targets; they were also the only weapons which could be used with real effectiveness against comparable enemy types. This was why the first mission of these fighter aircraft—assisted by light and medium bombers attacking enemy air installations—had to be the achievement of local air superiority. Otherwise, neither they nor any other aircraft types (reconnaissance, cargo, troop-carrier, etc.) could carry on other missions in support of the ground troops without suffering prohibitive losses from enemy fighters.

At sea the aircraft mission of support of surface forces was similar in concept, though it differed in some important details. This is discussed under naval tactics (see p. 1115).

As the period ended, professional opinion upon the capabilities and limitations of air power was widely divided, despite the consensus that it had become an indispensable member of the combat team.

Meanwhile, although various types of aircraft proliferated, the basic categories of combat planes resolved into heavy long-range bombers for offensive purposes, fighters for defense of

friendly bombers and use against hostile intruders, fighter-bombers for both air combat and close support, and a variety of reconnaissance, spotting, and other combat auxiliary types.

Airborne operations, initiated in and by the German vertical assault on Norway and Western Europe in 1940 (see pp. 1156, 1159) and on Crete during 1941 (see p. 1177), became a common practice later of U.S. and British offensives. The troops were transported in planes (to be parachuted to the ground) and towed gliders (for "crash" landings), and were escorted by combat aircraft.

The development of heavy cargo planes permitted logistical air support to ground forces. Allied operations in the Burma and China theaters completely depended upon it.

The weaponry of air combat resolved itself into machine guns, light cannon, bombs, rockets, and torpedoes. Development of a bomb sight of superior accuracy (American) and of radar (mainly British) were twin inventions of enormous importance.

As the war was coming to a close, both Britain and Germany were developing a radically new jet aircraft engine for interceptor aircraft, which would be far faster and more powerful than the conventional propeller-driven aircraft. The Germans actually succeeded in producing a number of such interceptors, which proved their effectiveness in combat against Allied bombers over Germany. Their appearance was too late, however, to prevent Germany's overall military collapse.

Disarmament

During this period was initiated an intensive effort to achieve disarmament (or at least arms control) as a means to assuring world peace. The League of Nations, which had started the effort earlier (see p. 1008), continued to take leadership in this field. Although the United States was not a member of the League of Nations, it participated informally in most of the League activities during this period. The results of disarmament efforts were disappointing (see below).

INTERWAR INTERNATIONAL EFFORTS TO MAINTAIN PEACE, 1925–1939

Closely related to the new international attention being focused upon arms control and disarmament in general were the efforts of the major powers—mainly the victors of World War I—to ensure continuation of the postwar peace within the framework established by the Treaty of Versailles (see p. 1082). These efforts are summarized as follows:

1925, June 17. Arms Traffic Convention. This was convened by the League of Nations at Geneva in an effort to control international trade in arms and munitions. One result was the **Geneva Protocol,** prohibiting use of poison gas in warfare. The U.S. did not sign.

1925, October 5–16. Locarno Conference. The resulting treaties (signed December 1) included (1) a treaty of mutual guaranty of the Franco-German and Belgo-German frontiers signed by Germany, France, Belgium, and Great Britain, (2) arbitration treaties between Germany and Poland and Germany and Czechoslovakia, (3) arbitration treaties between Germany and Belgium and Germany and France, (4) a Franco-Polish and a Franco-

Czechoslovak treaty for mutual assistance in case of attack by Germany. The treaties helped create a sense of security among the European powers.

1925, December. Establishment of Disarmament Preparatory Commission. This was created by the League to prepare for a World Disarmament Conference. The commission wrestled for 7 years with issues that plagued disarmament efforts throughout the interwar period, including France's demand for security guarantees as a prerequisite for arms reduction, Germany's demand for equality in armaments, Great Britain's insistence on arms of the kind and number needed to defend her scattered possessions, and American opposition to the concept of collective security (entangling alliances) and inability to recognize the complexities of disarmament problems faced by other nations.

1927, January 31. Dissolution of Inter-Allied Military Control Commission. Germany had consistently flouted the injunctions of the commission and obstructed its procedures. None of the Allies was willing to use force to obtain compliance. The problem of German armament was henceforth placed under League jurisdiction.

1927, June 20–August 4. Three-Power Naval Conference. Great Britain, the United States, and Japan met at Geneva in an effort to agree on the question of establishing a ratio for strengths in cruisers, destroyers, and submarines as a step beyond the Washington Naval Treaties (see p. 1008). The conference failed to reach agreement.

1928, August 27. Kellogg-Briand Pact (Pact of Paris). This was signed at Paris by the United States, France, Great Britain, Germany, Italy, Japan, and a number of other states. This pact renounced aggressive war, but made no provisions for sanctions.

1930, January 21–April 22. London Naval Conference. This led to a treaty signed by Great Britain, the United States, France, Italy, and Japan, regularizing submarine warfare and limiting the tonnage and gun caliber of submarines. The limitation on aircraft carriers provided for by the Washington Treaty (see p. 1008) was extended. Great Britain, the United States, and Japan also agreed to scrap certain warships by 1933, and allocated tonnage to other categories. An "escalation clause," permitting an increase over specified tonnages if the national needs of any one signatory demanded it, was included. These agreements were to run until 1936. The treaty gave Britain and the United States equality in overall cruiser combat effectiveness, which was to be determined by formula. Japan's relative naval position was strengthened. The treaty was to expire at the end of 1936.

1932–1934. World Disarmament Conference at Geneva. The Preparatory Commission's draft treaty included provision for inspection and control, but no relative force ratios had been agreed on. The optimistic atmosphere created by the Kellogg-Briand Pact of 1928, by which all nations had renounced war, and by the London Naval Treaty, had been dissipated by Japan's 1931 invasion of Manchuria (see p. 1145), the international economic depression, and the rising strength of aggressive nationalism in Germany. France's "Tardieu plan," providing for an international police force, stronger security guarantees, and the placing of all powerful weapons "in escrow," to be used only at the direction of the League or to repel an invasion, was too extreme to win acceptance by the other powers. Germany made it clear that she would not accept this or any proposal that did not provide for German equality. Britain introduced a counterproposal providing for proportionate reduction and also "qualitative" reduction—prohibition of aggressive weapons. This proposal failed of adoption, as did a U.S. proposal for the abolition of all "offensive" weapons and another U.S. plan to reduce all armaments by one-third. Failure was certain after Japanese withdrawal from the League of Nations (March 1933; see p. 1142) and German withdrawal from the conference and the League (October 1933; see p. 1132). The conference soon adjourned without agreement (June 1934).

1934, December 19. Japan Denounces

Washington and London Naval Treaties. She gave the required 2 years' notice that she was withdrawing from the Washington Naval Treaty of 1922 and assurance that, when the London Treaty expired at the end of 1936, there would be no naval limitations agreement unless a new treaty could be achieved. This followed refusal of the U.S. and U.K. to agree to Japanese demands for equality.

1935, March 16. Germany Denounces Disarmament Clauses of Versailles Treaty. Germany claimed this was due to the failure of other nations to disarm. She announced a massive rearmament program.

1935, December. Five-Power Naval Conference. Representatives of the United States, Great Britain, Japan, France, and Italy met in London with little hope of producing a treaty. Japan soon left the conference. America, Britain, and France did agree to "qualitative" limitation, with restrictions on certain kinds of ships and caliber of guns. Advance notification of construction programs was also to be given, and should one nation build in excess of treaty restrictions, others were freed of restrictions. After 2 years the treaty was discarded, as accelerated Japanese naval construction and the aggressive acts of the revisionist powers forced Great Britain and the United States to rearm as fast as possible.

WESTERN EUROPE BETWEEN WORLD WARS

Great Britain

1935, June 18. Anglo-German Naval Agreement. German tonnage (including submarines) would not exceed 35 percent of British naval tonnage. This separate agreement estranged France from Britain.

1935, September. Britain and the Ethiopian Crisis. (See p. 1138.) Great Britain assumed guidance of the League of Nations in the imposition of sanctions, but shrank from adopting extreme measures (such as oil sanctions) and the League action failed.

1937, January 2. Anglo-Italian Mediterranean Agreement. This affirmed the independence and integrity of Spain, and international freedom of passage through the Mediterranean, but in the long run did not dispel British suspicion aroused by Italian activity in the Mediterranean and Near East.

1938, September 15–28. Attempts to Mediate German-Czech Crisis. (See p. 1136.) Prime Minister **Neville Chamberlain** twice flew to Germany to confer with Hitler.

1938, September 29. Munich Agreement. (See p. 1136.) Chamberlain returned with a peace pact with Germany, which he rated highly, though it was not universally viewed with such acclaim.

1939, March 31. British Guarantee to Poland. After German dictator **Adolf Hitler** seized Czechoslovakia (see p. 1136), the British government pledged aid in case of any aggressive action endangering Poland's independence. Following the Italian conquest of Albania (see p. 1138), similar guarantees were also given to Greece and Rumania, a mutual assistance pact was concluded with Turkey, and the British government began to try to bring Russia into the "peace front."

1939, September 3. Outbreak of War with Germany. (See p. 1149.)

Ireland

1933–1938. Internal Disorder and Conflict.

1935, July. Anti-Catholic Riots in Belfast. They led to expulsion of Catholic families, to reprisals by the Free State government, and to increased friction with Britain.

1938, April 25. Agreement with Great Britain. This resolved a number of outstanding issues for at least 3 years, including turning over to the Free State (Eire) the coast defenses of Cobh, Bere Haven, and Lough Swilly. It improved relations between England and Eire.

France

1925, April. Beginning of Insurrection in Morocco. (See p. 1099.)

1925, July. Rising of the Druses in Lebanon. (See p. 1140.)

1935, January 7. Franco-Italian Agreement on Africa. France made several concessions to Italy in the hope of establishing a strong front against increasing German strength.

1935, May 2. Alliance with Russia. The French government, unable to bring Germany and Poland into an eastern pact (which would include Russia) to maintain the *status quo,* hastened to ally itself with Russia, after announcement of German rearmament. There was much opposition from conservative elements in France.

1936, June. France Begins Rearmament. This followed the German reoccupation of the Rhineland, the Italian victory in Ethiopia, the collapse of the League system (on which France had depended heavily), plus the outbreak of civil war in Spain. (See pp. 1127, 1132, 1139.)

1938, September. The German-Czechoslovak Crisis. (See p. 1136.) The French Army and Navy were partially mobilized and ready for war. However, the country was strongly in favor of a peaceful settlement and Premier **Edouard Daladier** received a warm reception on his return from Munich. French preponderance on the Continent had been definitely replaced by that of Germany.

1938, December 6. Franco-German Pact. This guaranteed existing frontiers.

1938, December. Franco-Italian Crisis. This arose from Italian demands for French colonies; France took an uncompromising attitude toward any cession of territory.

1939, March. Guarantees to Poland, Rumania, and Greece. France joined Britain in these guarantees, and used all her influence to draw Russia into the nonaggression system.

1939, August 20–September 1. The Danzig-Polish Crisis. (See p. 1136.)

1939, September 3. France Declares War on Germany. (See p. 1149.)

The Low Countries

Belgium

1936, October 14. Belgium Denounces Military Alliance with France. She resumed liberty of action, following German reoccupation of the Rhineland, in order not to become embroiled against Germany through connection with the Franco-Russian alliance.

1937, October 13. German Guarantee to Belgium. The inviolability and integrity of Belgium were guaranteed so long as the latter abstained from military action against Germany.

1939, August 23. King Leopold Appeals for Peace. This was on behalf of Belgium, Holland, and the Scandinavian states. The appeal was in vain. Belgium mobilized, but proclaimed neutrality in the European war that broke out on September 3.

The Netherlands

1926, November–1927, July. Serious Revolt in Java, Dutch East Indies.

1937–1938. Dutch Naval Forces Increased in Far East. Japan's advance in China exposed the Netherlands East Indies to possible Japanese aggression.

The Iberian Peninsula

Spain

Prelude to Revolution

1930, January 28. Primo de Rivera Resigns from Quasi Dictatorship. His replacement, General **Dámaso Berenguer,** irritated the Spanish people, who held him responsible for the disaster in Morocco at Anual (see p. 1099).

1930, December 12–13. Mutiny at Jaca. The garrison demanded a republic. The ringleaders were executed, but the virus of revolt spread among the military.

1931, April 14. Overthrow of King Alfonso XIII. After a near-bloodless revolt, **Alcalá**

Zamora, Republican leader, set up a provisional government and was elected President (December 10).

1932, August 10. Reactionary Revolt in Seville. This was led by General **José Sanjurjo;** it was speedily suppressed. Regional interests began a tussle for autonomy, especially in Aragon and the Basque country. Extreme parties of the right and left gained more influence and resorted increasingly to violence.

1933, January 8. Radical Uprising in Barcelona. This quickly spread to other large cities and was repressed only with difficulty by government troops.

October 6, 1934. Miners' Revolt in Asturias, Rising in Catalonia. An Anarchist-sponsored miner's revolt in Asturias was ruthlessly suppressed by the Conservative Madrid government, under news-blackout conditions. Claims of atrocities, uncorroborated by accurate news reports, inflamed emotions and hastened the political polarization of Spain. The Catalonian uprising was also repressed, but less harshly.

1936, February 16. Leftist Coalition Takes Power. Elections gave a majority to a Communist-influenced popular front. The new Socialist Cortes voted to remove Zamora for exceeding his powers, and replaced him with Left Republican **Manuel Azaña** (April 10).

The Spanish Civil War, 1936–1939

1936, July 18. Military Revolt. Simultaneously, the military garrisons in 12 cities of the mainland and 5 in Spanish Morocco rebelled, following a clash between a unit of the Spanish Foreign Legion and a Communist-led mob in Melilla, Spanish Morocco. General **Francisco Franco,** erstwhile chief of staff, but exiled by the Socialist government to command of the Canary Islands, flew to Melilla to take command. While Spanish troops in Morocco were air-lifted to Algeciras and La Línea, the garrisons of Burgos, Saragossa, and Huesca in northern Spain concentrated at Burgos, under General **Emilio Mola.** An uprising at Barcelona failed; its leader, General **Manuel Goded,** was captured by the Loyalists and shot. Madrid, the east-coast seaports, and part of the Basque regions remained loyal to the government, but Seville and Cádiz proclaimed for the rebels, as did the cadets of the military academy at **Toledo,** who rallied around their commander, Colonel **José Moscardo,** in the Alcazar fortress, which was lackadaisically besieged by Loyalist militiamen (July 20–September 28). About half the ships in the Spanish Navy joined the revolt.

1936, July–August. Advance on Madrid. Franco, with some 30,000 regular troops (Spaniards and Moroccans), struck north toward Badajoz; Mola with 15,000 more regulars began moving south. The rebel plan was to converge on Madrid.

1936, August 15. Rebels Capture Badajoz. They then began to advance eastward up the Tagus Valley and through Talavera and Toledo, which was relieved by troops under General **José Varela** (September 28) after a 10 weeks' siege.

1936, September. International Involvements. Soviet Russia supplied and reinforced the Loyalists; Germany and Italy lent material aid to Franco. The first tangible aid to arrive was a contingent of Luftwaffe Junker bombers and pursuit planes. An Italian expeditionary corps with light tanks and aircraft followed. Small anti-Communist volunteer contingents arrived from other countries as well. Meanwhile, Soviet aircraft, pilots, advisers, artillery, and tanks soon reached the east-coast ports to aid the Loyalists. The Soviets and other Communists also organized 6 "International Brigades," recruited from anti-fascist volunteers outside Spain. Some 2,900 Americans eventually served in the "Abraham Lincoln Battalion," part of the 35,000 who served in the Brigades at one time or another, including French, Italians, Germans, Poles, Britons, Czechs, Yugoslavs, and others.

1936, September 4. Popular Front Government Formed in Madrid. The new Loyalist leader was **Francisco Largo Caballero;** Catalan and Basque Nationalists were represented.

Anarchist-Syndicalists later were included in the government (November).

1936, October. Franco Appointed Chief of the Spanish State by the Insurgents. Four rebel columns under Mola continued to converge on Madrid; he said he had a "fifth column" in the city. This was the origin of this as a term for subversive activity.

1936, November 6. Insurgents Lay Siege to Madrid. The Loyalist government moved to Valencia. Despite heavy fighting in the suburbs of the city and intensive air bombardments, Loyalist troops under General **José Miaja** held the capital. After nearly four months of incessant combat, there was a brief lull in the struggle for the city (February–March 1937).

1936, November 18. Franco Government Recognized by Germany and Italy. France, Great Britain, and the United States continued their policy of nonintervention and nonassistance toward both factions. A nonintervention committee was set up in London; 29 nations, including Italy and Germany, made an attempt to patrol the Spanish coast and limit the war.

1937, February 8. Rebels Capture Málaga. Troops under General **Gonzalo Queipo de Llano** were assisted by Italian troops. Meanwhile, the siege of Madrid continued. Soviet equipment and the newly-arrived International Brigades went far to stiffen the defenses, and the Abraham Lincoln Battalion first saw action at **Jarama** (February 6–15).

1937, March 8–16. Italian Disaster of Guadalajara. Two Italian divisions, accompanied by 50 light tanks, made a surprise penetration of Loyalist lines, in an effort to isolate Madrid. Rain had turned the countryside into a sea of mud, so the Italians advanced in a long road column, with little opposition. Russian ground-attack fighters took them by surprise and after repeated attacks the Italians became a disorganized mob, scattered across the countryside. Most, however, escaped, and eventually returned to their own lines.

1937, March 18. Loyalist Victory over Italians at Brihuega. This was largely a result of

Guadalajara. Large stores were captured. The insurgents, frustrated in their efforts to cut off Madrid, turned north.

1937, April 1. Rebels Invest Bilbao. Surrounding Basque Loyalist resistance was soon crushed.

1937, April 25. Guernica Massacre. World opinion was shocked by the ruthless bombing of this northern village by Franco's Luftwaffe pilots with loss of many noncombatant lives. The towns of **Durango** and **Guernica** were occupied (April 28).

1937, April 30. Rebel Battleship *España* Sunk by Loyalist Planes.

1937, May 3–10. Anarchist Uprising in Barcelona. This was put down with considerable bloodshed by Loyalist troops, and caused a crisis in the government.

1937, May 17. The Largo Caballero Regime Falls. A new Loyalist government was formed under **Juan Negrín.**

1937, May 31. German Planes Bomb Almería. This was in retaliation for a Loyalist strike which damaged the German pocket-battleship *Deutschland* at Ibiza in the Balearic Isles.

1937, June 3. Death of General Mola. He died in an air crash.

1937, June 15 and 18. Submarine Attacks on German Cruiser *Leipzig*. These attacks, allegedly by Loyalist submarines, off Oran on the Algerian coast, resulted in Germany and Italy quitting the international patrol.

1937, June 18. Bilbao Captured by Rebels. This followed an 80-day siege. Rebel troops under General **Fidel Dávila** then moved to conquer **Santander** (August 25). By the end of the year all of northwestern Spain was under rebel control.

1937, July 6–25. Loyalist Offensive from Madrid. After some success, this was repulsed by Varela, commanding the investing forces. There was no further serious fighting on this front for nearly 2 years.

1937, August–September. Loyalist Offensive in Aragon. This was repulsed by the rebels at **Saragossa, Teruel,** and **Huesca.**

1937, September. Nyon Conference. The intense submarine attacks on ships destined for the Loyalists drew protests of piracy from France and England as these ships were supposed to be carrying non-contraband supplies. A 9-power conference was called at Nyon, Switzerland (Germany and Italy abstained). A new system of maritime zone patrols was established. An Anglo-French naval patrol was authorized to attack any submarine, surface vessel, or aircraft illegally attacking a non-Spanish vessel.

1937, October 28. Loyalist Government Moves to Barcelona. It had earlier taken over control of the Catalan government (August 12), following the Anarchist uprising in May.

1937, November 28. Franco Announces a Naval Blockade. This covered the entire Spanish coast, and was operated from the island of Mallorca.

1937–1938, December 5–February 20. Battle of Teruel. A Loyalist counteroffensive captured Teruel after a bitter struggle. This diverted the rebels from operations to the northeastward, but the government forces were unable to sustain the offensive. A rebel counteroffensive retook the city (February 15–20).

1938, February–June. Rebel Offensive. Franco's forces drove eastward in great strength, reaching the seacoast at **Vinaroz** (April 15), and isolating Catalonia from the remainder of Loyalist-held territory. An advance on Barcelona was checked by desperate Loyalist resistance along the Ebro River.

1938, July 24–November 16. Loyalist Ebro Counteroffensive. This effort by forces in Catalonia to restore communications with the rest of Republican Spain was hampered by insufficient resources. The attack was halted within a week, but the battle for the Loyalist bridgehead raged for 113 days, costing 70,000 Loyalist casualties before their tattered forces withdrew.

1938, August–November. Stalemate. The rebels, who now held most of Spain, prepared for a major offensive to end the war. Meanwhile, in accordance with the Anglo-Italian agreement, Mussolini withdrew some troops from Spain, but kept at least 40,000 troops there.

September 21, 1938. Withdrawal of International Brigades Announced. Bowing to British and French pressure, the Loyalist government announced the withdrawal of the International Brigades, badly battered in combat. Their farewell parade in Madrid took place on November 15.

1938, December 23. Beginning of Rebel Offensive in Catalonia. This cracked the Loyalist defense. Government troops retreated in growing disorder on Barcelona. Both sides were hampered by atrocious weather conditions.

1939, January 26. Rebels Capture Barcelona. They were assisted by Italians. Some 20,000 Loyalist troops, completely routed, fled across the French border, where they were disarmed and interned. Resistance continued at Madrid, Valencia, and in scattered areas of eastern Spain.

1939, February 27. France and Great Britain Recognize Franco Government.

1939, March 5–13. Disorder in Madrid. Following the loss of Catalonia, most Republican military officers, Socialists, and Republicans favored an end to the war, but Negrín and the Communists wanted to keep fighting. An anti-Communist coup installed the Republican-Socialist *junta* of Colonel **Sigismundo Casado** (March 5), and Communist resistance ended within a week.

1939, March 22–April 1. End of the War. Negotiations with the Burgos government failed (March 22–25). Nationalist troops entered Madrid (March 28), and all Republican forces surrendered (March 26–April 1), thereby ending the war. The struggle had cost some 120,000 combat deaths, 10,000 from air raids, 50,000 from disease and malnutrition, and perhaps 100,000 from wartime political reprisals on both sides. Franco at once set up special tribunals and courts which convicted and executed thousands of Loyalists, despite international efforts to ensure moderation. The final death toll for the war and its aftermath probably lies around 600,000.

COMMENT. *The war, prosecuted with the ferocity common to Spanish civil wars, presented at least one object lesson to military observers: the transformation in 3 short months of the Loyalist mob of militia into reasonably efficient soldiers (at least in defensive combat) thanks to Soviet instruction. The military of Germany, Italy, and the U.S.S.R. learned much from their respective participation—actually dress rehearsals for airing their doctrines and their matériel for the war to come.*

However, the lesson of Madrid, battered, bombed, and wrecked, with heavy loss of noncombatant life during a 28-month siege—all to no appreciable result—was not taken seriously; the Douhet theory of terror bombing as the ultimate weapon of war had been seemingly disproved, but its advocates the world over remained undaunted. The extent of foreign participation in the war was considerable. Foreign contingents in Spain numbered 40,000–60,000 Italian troops, some 20,000 German, and perhaps some 40,000 Soviet and Communist-inspired volunteers from various nations.

1939, April 7. Spain Joins the Anti-Comintern Pact. **(See p. 1132.)**

1939, September 3. Spanish Neutrality Proclaimed.

Portugal

1925–1932. Internal Disorders. This was a period of repeated revolts, military coups, and dictatorships, finally brought under control when **Oliveira Salazar** became premier and dictator (July 5, 1932).

1936, July. Portugal Aids Spanish Rebels. With the outbreak of the Spanish Civil War (see p. 1127), Salazar's government immediately sided with the rebels against the republican government. Portugal became one of the main routes by which supplies reached Franco from Germany and elsewhere. Subsequent British pressure forced Portugal to close her borders (April 1937), but by that time Franco was able to get his supplies through the north Spanish coast towns.

1939, March 18. Nonaggression Pact with Fascist Spain. Portugal soon after reaffirmed her traditional alliance with Britain (May 22).

1941–1945. Portuguese Neutrality in World War II. While ostensibly neutral during World War II, Portuguese grant of bases in the Azores

(October 13, 1943) to Great Britain and the U.S. was of much assistance to the Allies in combating the Atlantic submarine menace (see p. 1194); she finally severed diplomatic relations with Nazi Germany (May 6, 1945).

Italy

1926–1930. Treaties of Friendship with Spain, Hungary, Greece, Ethiopia, and Austria. This was part of the Fascist policy of dictator **Benito Mussolini** of rallying the "revisionist" states against the Little Entente and its supporter, France.

1930, April 30. Italy Begins a Great Naval Program. This was the result of failure to secure recognition of Italian parity from France. During the following years, Italian naval and air forces were built up to imposing dimensions.

1934, March 17. Rome Protocols between Italy, Hungary, and Austria. These provided for closer trade relations and established a Danubian bloc under Fascist auspices to counterbalance French influence with the Little Entente.

1934, July. Abortive Nazi Coup in Vienna. **(See p. 1133.)**

1935–1936. Ethiopian War. **(See p. 1138.)**

1936, July. Outbreak of the Spanish Civil War. **(See p. 1127.)** Italian action in Spain aroused the apprehensions of Great Britain and France and served to increase the tension in the Mediterranean. Under these circumstances, Mussolini felt compelled to draw closer to Germany.

1936, October 27. Italian-German Agreement regarding Austria. This served as a foundation for Italo-German cooperation and may be regarded as the beginning of the Rome-Berlin Axis. Germany recognized the conquest of Ethiopia by Italy (October 25).

1937, January 2. Anglo-Italian Agreement. **(See p. 1125.)**

1937, March 25. Italian-Yugoslav Treaty. This guaranteed existing frontiers and the maintenance of the *status quo* in the Adriatic, ending a long period of friction between the 2 powers. It was a serious blow to the Little Entente structure and to French influence.

1937, November 6. Italy Adheres to the Anti-Comintern Pact. **(See p. 1132.)** This completed the triangle of states (Rome-Berlin-Tokyo Axis) engaged in upsetting the peace treaties and the *status quo.* In line with this policy, the Italian government announced the withdrawal of Italy from the League of Nations (December 11).

1938, March. Italy Accepts German Annexation of Austria. Italian commitments in Ethiopia, Libya, and Spain made any alternative course impossible. Mussolini was growing increasingly dependent on Germany.

1938, September. German-Czechoslovak Crisis. Mussolini remained in the background until the situation reached critical proportions, when he made a series of threatening speeches; in the final analysis, he appears to have done his utmost to bring about the Munich meeting and the accord, which entailed the sacrifice of a large part of Czechoslovakia to Germany.

1938, November 30. Franco-Italian Relations Strained. This resulted from agitated demands in the Italian Chamber for the cession by France of Corsica and Tunisia.

1939, April 7. Italian Invasion and Conquest of Albania. **(See p. 1138.)**

1939, May 22. Political and Military Alliance with Germany. Much exchange of military men and technical experts followed.

1939, September 1–3. Italy Declares Neutrality. This surprised most of the world, but one motive was evidently the thought of serving Germany as a channel for supplies.

Germany

1927, September 18. Hindenburg Repudiates German Responsibility for World War I. President Hindenburg in effect renounced a major provision of the Versailles Treaty (see p. 1082).

1928, January 29. Treaty with Lithuania. This confirmed frontiers, including the status of Memel as part of Lithuania, and provided for arbitration.

1929, February 6. Germany Accepts the Kellogg-Briand Pact. (See p. 1124.)

1929, June 7. Young Plan Agreement. Germany accepted the plan for stabilizing her finances, subject to promise of complete Allied evacuation of the Rhineland by June 1930.

1929, September–1930, June. Allied Evacuation of the Rhineland.

1930, September 14. Nazis Gain in Reichstag Elections. This marked the emergence of Hitler's National Socialists as a major party. Hitler's program was opposed to all provisions of the Versailles Treaty, particularly reparations. A period of disorder followed, with numerous clashes between the National Socialists (Nazis) and the Communists.

1931, December 12. Allied Evacuation of the Saar.

1932, April 13. Chancellor Brüning Bans Nazi Storm Troops.

1932, June 16. Ban on Nazi Storm Troops Lifted. The National Socialist movement gained new momentum, thanks to this decision by the government of Chancellor **Franz von Papen.**

1932, July 20. Coup d'État in Prussia. Von Papen removed the Socialist prime minister and other officials. The cities of Berlin and Brandenburg were put under martial law, the activities of the Nazi Storm Troops having made it almost impossible for the civil authorities to maintain order.

1932, November 17. Resignation of von Papen. This was the result of growing disorders and political unrest.

1932, November 24. Hitler Refuses Chancellorship. Hindenburg offered him the post, but would not grant Hitler's demand for full power.

1933, January 30. Hitler Becomes Chancellor. He accepted the post after 2 months of political crisis.

1933, February 27. Reichstag Fire. Hitler denounced the fire as a Communist plot to disrupt new elections (scheduled for March 5). As a result, President von Hindenburg issued emergency decrees outlawing the Communist party and suspending the constitutional liberties of free speech and free press as well as other liberties. This enabled Nazi Storm Troops to intimidate all opponents without fear of legal opposition. The result was a National Socialist victory in the elections. Later evidence showed that the Nazis were responsible for the fire.

1933–1938. Nazi Dictatorship Firmly Established. All opposing political parties were liquidated under government pressure. The German state governments were shorn of all effective power, and Germany became a national rather than a federal state. The legal system was radically changed, and dangerously wide powers were given to the People's Court, which was set up in May 1934. Concentration camps were set up for detainment of political opponents. Racial pressures increased upon the Jewish population and, to a lesser extent, on the Christian churches protesting this racial persecution.

1933, October 14. Germany Withdraws from the League of Nations. (See p. 1124.)

1934, January 26. Treaty with Poland. This provided for nonaggression and respect for existing territorial rights for 10 years.

1934, June 30. The Great Blood Purge. Some 77 persons, many of them leaders high in the Nazi party, were executed because of an alleged plot against Hitler and the regime.

1934, July 25. Nazi Putsch in Vienna. (See p. 1133.)

1935, March 16. Hitler Denounces Disarmament Terms of Versailles Treaty. (See p. 1125.)

1935, June 18. Anglo-German Naval Agreement. (See p. 1125.)

1936, March 7. Reoccupation of the Rhineland. Simultaneously, Germany denounced the Lacarno Pacts of 1925. France, without support from Britain, decided not to intervene. Later evidence shows that German generals would have deposed Hitler and withdrawn from the Rhineland if France had responded with force.

1936, October 27. Establishment of the Berlin-Rome Axis. (See p. 1131.)

1936, November 25. Conclusion of the German-Japanese Anti-Comintern Pact. This was an extension of the Berlin-Rome

alignment to counterweight the Franco-Russian Alliance.

1937, November 5. Hitler's Goals. At a top-secret meeting with heads of armed forces and his foreign minister, he announced his intentions of gaining for Germany *Lebensraum* (territorial expansion) in Europe by force of arms. Austria and Czechoslovakia were to be seized, then Poland; finally, the Soviet Union. Target date—1938–1943.

1938, March 12–13. The German Invasion and Annexation of Austria. (See p. 1134.) This added over 6 million Germans to the Reich and paved the way for future expansion of influence in the Danube River Valley.

1938, September 7–29. The German-Czech Crisis. (See p. 1136.) This culminated with the Munich Agreement, annexing over 3 million Sudeten Germans to Germany. Hitler's success made Germany the dominant power on the Continent, politically shattered the Little Entente, and broke down the French alliance system in Eastern Europe.

1939, March 10–16. Annexation of Bohemia and Moravia. This blatant violation of the Munich Agreement obliterated the Czechoslovak state and left Slovakia nominally independent.

1939, March 23. Annexation of Memel. Following this, rigid demands were made on Poland regarding Danzig and Pomorze ("Polish Corridor"). Polish firmness, backed by a pledge of Anglo-French aid (March 31; see p. 1125) deterred immediate German action.

1939, May 23. Hitler Plans Attack on Poland. He informed his military commanders at a secret conference. He discounted danger of a conflict with England and France. A small special staff was set up in the General Staff (OKW) to implement the planning. Secret negotiations were begun for a nonaggression pact with the U.S.S.R. Military and naval preparations included calling of a quarter-million reservists to the colors for "training," and preparation to send the pocket battleships *Graf Spee* and *Deutschland* to sea, together with 21 submarines.

1939, June–August. Tense Relations with Poland. Frequent border incidents caused repeated warnings from France and England.

1939, August 22. Hitler Orders Invasion of Poland. While Foreign Minister **Joachim von Ribbentrop** rushed to Moscow to conclude a nonaggression pact, Hitler gathered his military commanders in a secret meeting at Berchtesgaden to order preparation for war. Troop concentration began behind the Polish border. Warships put to sea.

1939, August 23. German-Russian Pact Signed at Moscow.

1939, August 31. Gleiwitz Incident. A group of SS men, disguised in Polish uniforms, seized the radio station at Gleiwitz in Upper Silesia, just inside Germany, broadcast threats of invasion in the Polish language, then disappeared. One dying man (actually an inmate of a German concentration camp) was left behind as "evidence" of Polish aggression. The incident, long planned, was Hitler's fig leaf of respectability before world opinion.

1939, September 1. Germany Invades Poland. World War II began (see p. 1149).

1940, September 27. Rome-Berlin-Tokyo Axis. A 10-year mutual assistance alliance.

Austria

1927. Private Political Armies. The Christian Socialists organized their private army, the Heimwehr, while the Social Democrats organized the Schutzbund.

1930, February 6. Friendship Treaty with Italy.

1933. Nazi Unrest. This was stimulated by the National Socialists' triumphs in Germany. Nazi agitators staged occasional demonstrations until the Nazi party was dissolved (June 19). Campaigns of agitation and terrorism continued.

1934, July 25. Assassination of Prime Minister Engelbert Dollfuss. Growing Austro-German enmity was culminated by a Nazi *Putsch* in Vienna, resulting in the murder of Dollfuss. German intervention was stymied by the mobilization of Italian and Yugoslavian

forces on the border. Hitler disavowed connection with the murder and repudiated his Austrian followers.

1936, July 11. German-Austrian Agreement. Mussolini instigated this agreement to assure himself of German support.

1936, October 10. Prime Minister Kurt Schuschnigg Assumes Dictatorial Powers. He dissolved the Heimwehr and established a **Fatherland Front** militia. Renewal of Nazi activity led Schuschnigg to seek pledges of support from France and members of the Little Entente.

1938, March 11–12. German Invasion. Hitler took formal possession in Vienna, annexing Austria to Germany. A reign of terror followed.

The Scandinavian and Baltic States

Denmark, Norway, and Sweden

With the rebirth of Germany as a powerful military state, Scandinavian efforts to achieve mutual cooperation and solidarity were intensified and collective security became a common goal.

Finland and the Baltic States

Finland

Finland followed primarily the same policies as the other Scandinavian states. Recognizing the altered situation in the Baltic region after Hitler's ascendancy, she attempted to maintain a balance between Germany and the U.S.S.R.

The Baltic States

The successes of Nazi Germany prompted Lithuania, Latvia, and Estonia to improve their relations with the Soviet Union for the purpose of establishing a strong front against possible German intervention in the name of the German minorities. All 3 Baltic states soon adopted some form of dictatorship in order to offer stronger regimes for resistance to Germany.

Soviet Russia

1924–1926. Power Struggle. Conflicts among Communist party leadership followed the death of Lenin (January 21, 1924).

1926, July–October. Triumph of Stalin. Trotsky, Zinoviev, Radek, and others were expelled from the political bureau of the party. Trotsky was later banished (January 1929).

1926, August 31. Treaty with Afghanistan. **(See p. 1103.)**

1929, February 9. Litvinov Protocol. This was an analogue of the Kellogg-Briand Pact, signed by the U.S.S.R., Poland, Rumania, Estonia, and Latvia at Moscow.

1929, December 22. Agreement with China. This settled disputed claims to the Chinese Eastern Railway (see p. 1144).

1932, July 25. Nonaggression Pacts with Poland, Estonia, Latvia, and Finland. A similar agreement with France followed (November 29). Uneasiness about the deterioration of relations with Japan prompted Stalin's government to amend relations with its European neighbors. Entrance into the world's political arena was further signaled by the U.S.S.R.'s

active participation in the Disarmament Conference (see p. 1124) and general international cooperation.

1933, November 17. The United States Recognizes the U.S.S.R. Trade relations were opened.

1934, April 4. Extension of Nonaggression Pacts with Poland and the Baltic States. These became 10-year agreements.

1934, September 18. The U.S.S.R. Joins the League of Nations. She became an active exponent of collective security by supporting a French plan for an Eastern European pact.

1935, May 2. Franco-Russian Alliance. This was rightly regarded in Germany as a pact against Hitler's regime.

1935, May 16. Russian-Czechoslovakian Alliance. This further angered the Germans, who feared that the Soviets would make Czechoslovakia an air base for operations against Germany.

1935, July 25–August 20. Meeting of the Third International. The U.S.S.R. decided to side with the democracies against the Fascist states. Communist opposition to military appropriations in other countries was to cease and the governments were to be supported.

1936, July. Soviet Support to Loyalist Spain. (See p. 1127.)

1938–1939. Undeclared War with Japan. (See p. 1142.)

1938, September. German-Czech Crisis. The U.S.S.R. proffered assistance to the Czechs in resisting German demands (see below). Britain and France favored appeasement rather than Communist support and reached a compromise solution at Munich. As a result, the Franco-Soviet Alliance was all but abrogated and the U.S.S.R. was almost isolated in Europe.

1939, March–June. Britain Negotiates with Russia. The German annexation of Czechoslovakia and Memel caused this reversal in British policy. The U.S.S.R. was urged to join a common peace front against attack upon Poland and Rumania. The Russians negotiated for a complete offensive alliance as well as for guarantees for the Baltic States.

1939, May 3. Soviet Policy Changes. Foreign Minister **Maxim Litvinov,** generally considered to be pro-West, was suddenly replaced by **Vyacheslav Molotov,** whose public criticisms of Britain and France implied that the U.S.S.R. was considering a change of policy. Negotiations with England and France continued, but the U.S.S.R. voiced her distrust of the western powers by rejecting draft after draft at the conference table (June–August).

1939, August 27. Nonaggression Pact with Germany. This confirmed western suspicions of an unbelievable diplomatic union between 2 incompatible enemies.

1939, September 1. German Attack on Poland. The Soviet Union was a benevolent neutral.

1939, September 17. Soviet Invasion of Poland. That country was partitioned with Germany as the result of a secret treaty clause. (See p. 1151.)

1939, November 30. The U.S.S.R. Attacks Finland. (See p. 1154.)

1939, December 14. The U.S.S.R. Expelled from League of Nations.

1940, June 15–16. Soviet Occupation of Lithuania, Latvia, and Estonia.

1941, April 13. Nonaggression Treaty with Japan. Stalin's desire to assure peace in the East, in light of growing danger of German invasion, coincided with Japanese desires to obtain similar freedom to initiate adventures in Southeast Asia (see p. 1231).

Czechoslovakia

1933, February. Reorganization of Little Entente. This was because of the potential danger of the new National Socialist Germany.

1933–1938. Subversion of Sudetenland. The 3 million Sudeten Germans in Czechoslovakia became a hotbed for Nazi agitation.

1935, May 16. Mutual Assistance Pact with the U.S.S.R. This guaranteed Soviet support against attack if it were preceded by French support (see above).

1936, September 10. Beginning of German Propaganda Campaign. Czechoslovakia was

accused of basing Soviet planes for operations against Germany. The Czechs intensified their frontier defense program.

1938, March–September. Growing German-Czech Crisis. Recognizing the strategic danger created by the German annexation of Austria, Czechoslovakia undertook partial mobilization and a series of negotiations with the Sudeten German leaders.

1938, September 15. Hitler Demands Cession of Sudetenland. He threatened war otherwise. Chamberlain flew to Berchtesgaden in an attempt to mediate a peaceful settlement.

1938, September 24–29. Czechoslovakian Mobilization.

1938, September 29. Conference and Agreement at Munich. Hitler was accorded practically all his demands as Czechoslovakia was dismembered by Hitler, Ribbentrop, Mussolini, Ciano, Chamberlain, and Daladier. Czechoslovakia was deserted by the Little Entente and the larger powers. Only the U.S.S.R. (not represented at Munich) appeared ready to aid against German aggression. France and Britain, cognizant of their military inadequacies and unpreparedness (especially in air power), acquiesced in a move establishing German hegemony in Central Europe and subsequently the Danubian area.

1939, March 10–16. Hitler Annexes Remainder of Czechoslovakia. Britain and France were shocked by this breach of the Munich Agreement. Yet no resistance was offered; Hitler emerged undisputed victor of a bloodless battle.

Hungary

1927, April 5. Friendship Treaty with Italy.

1938, March. German Annexation of Austria. This brought the Reich to the frontier and increased the restlessness of the German minority in Hungary.

1938, September. German-Czech Crisis. Hungary supported the Germans, and was awarded 5,000 square miles of territory in southern Slovakia for her cooperation with Germany (November 2). Occasional conflict in the annexed region continued throughout the winter of 1938–1939.

1939, March 15. Annexation of Carpatho-Ukraine (Ruthenia). This result of cooperation with Germany in the destruction of Czechoslovakia gave Hungary a long-sought-after common frontier with Poland.

1939, April 11. Hungary Withdraws from the League of Nations.

Poland

1926, May 12–14. Military Coup. Marshal **Józef Pilsudski** established a dictatorship.

1929, February 9. Litvinov Protocol. **(See p. 1134.)**

1934, January 26. German-Polish Nonaggression Treaty. **(See p. 1132.)**

1938, October 2. Occupation of Teschen. Poland settled her old dispute with Czechoslovakia during the German-Czech crisis.

1939, March–April. German Demands for Polish Corridor. The German annexation of Memel (March 23) was accompanied by stiff demands on Poland for annexation of Danzig and the construction of an extraterritorial motor road through Pomorze in return for a German guarantee of Polish independence. These demands provoked the Anglo-French pledge of aid to Poland, which later became a pact of mutual assistance (April 6).

1939, April 28. Hitler Denounces the German-Polish Agreement of 1934 and the Anglo-German Naval Agreement of 1935.

1939, June–August. A Period of Rising Tension. **(See p. 1133.)**

1939, September 1. German Invasion of Poland. **(See p. 1149.)**

Rumania

1926, March 26. Alliance with Poland.

1926, June 10. Treaty of Alliance and Nonaggression with France.

1926, September 16. Friendship Treaty with Italy.

1929, February 9. Litvinov Protocol. **(See p. 1134.)**

1933, July. Nonaggression Pact with the U.S.S.R. This implied Soviet recognition of the Rumanian possession of Bessarabia.

1934, February 8–9. Balkan Pact. This treaty, concluded between Rumania, Yugoslavia, Greece, and Turkey, bound the signatories to consult with each other if their security was threatened.

1934, June 9. Mutual Guarantees with Czechoslovakia and the U.S.S.R. They agreed to guarantee each other's frontiers.

1939, April 13. Britain and France Guarantee Rumanian Independence. This followed the German annexation of Czechoslovakia. Soon afterward, Rumania straddled the fence and concluded a commercial agreement with Germany.

1939, September 4. Rumania Declares Its Neutrality.

Bulgaria

1925. Greek-Bulgarian Border Clashes. The League of Nations' mediation temporarily settled the crisis (October 21). Further incidents in 1931 (January, February) necessitated intervention by the powers.

1929, March 6. Friendship Treaty with Turkey.

1934, February 9. Bulgaria Rejects the Balkan Pact. She thus indicated that she did not endorse the *status quo* in the Balkans. (See above.)

1934, May 19. Military Coup d'État. The resulting military dictatorship was soon overthrown by King **Boris,** who established a royal dictatorship.

1937, January 24. Friendship Treaty with Yugoslavia.

1938, July 31. Rearmament Program. Bulgaria's right to rearm was recognized by the Balkan Entente through agreement with Greece. An Anglo-French loan of $10 million financed the program.

Yugoslavia

1926, September 18. Friendship Treaty with Poland.

1927, May. Border Clashes with Albania.

1927, November 11. Treaty of Friendship with France.

1929, January 5. King Alexander Proclaims Dictatorship. This was the result of internal disorders, particularly Croatian nationalistic agitation.

1934, February 9. Balkan Pact. **(See above.)**

1934, October 9. Murder of King Alexander. The murderer, a Macedonian revolutionary, was believed to be in Hungarian pay, and the slaying brought Yugoslavia and Hungary to the verge of war. The League of Nations arranged a settlement.

1937, January 24. Treaty of Friendship with Bulgaria.

1937, March 25. Nonaggression and Arbitration Pact with Italy. This indicated closer ties with the Axis powers.

Greece

1925, December 4. Greek-Bulgarian Border Clashes. **(See above.)**

1928, September 23. Friendship Treaty with Italy.

1930, October 30. Treaty of Ankara. This pact with Turkey advocated naval parity in the eastern Mediterranean and the acceptance of territorial *status quo.*

1933, September 15. Ten-Year Nonaggression Pact with Turkey.

1934, February 9. Balkan Pact. **(See above.)**

1935. Military Coup. King **George II** was restored to the throne.

1939, April 13. British and French Pledge of Support against Aggression. This followed the Italian conquest of Albania.

Albania

1925, January 21. Albania Proclaimed a Republic.

1926, November 20–26. Rebellion in the North. Despite Yugoslavian aid to the rebels, this was suppressed.

1926, November 27. Treaty of Tirana. Italy and Albania pledged themselves to the maintenance of territorial *status quo*.

1927, November 22. Second Treaty of Tirana. This put Albania under Italian protection by establishing a 20-year defense alliance and providing for military cooperation. Italy obtained important rights, especially in oil, road construction, military supervision, and education.

1928, September 1. President Ahmed Bey Zogu Proclaimed King.

1934. Growing Friction with Italy.

1937, May 15–19. Rebellion in the South. This was in protest against the dictatorial measures of King **Zog.** It was suppressed.

1939, April 7. Italian Invasion. Albania was soon occupied and annexed by Italy.

AFRICA

Egypt and the Sudan

1927. Draft Treaty with Great Britain Rejected. This proposed British military occupation for 10 years, but was rejected by the Egyptian Parliament as inconsistent with Egyptian independence.

1931, April 22. Friendship Treaty between Egypt and Iraq.

1936, August 26. Treaty between Egypt and Great Britain. This granted full independence to Egypt, while retaining the minimum requirements for the strategic security of the British Empire. A 20-year defensive alliance provided for the withdrawal of British troops, except for 10,000 men of land and air forces who would be assigned to the Suez Canal Zone. England was permitted to maintain a naval base at Alexandria for a maximum of 8 years, and Egyptian troops were to return to the Sudan.

1937, May 26. Egypt Admitted to the League of Nations.

Ethiopia

1928. Coup. Ras Tafari (see p. 1100), backed by Harer provincial troops, mounted a successful coup and coerced Zauditu into yielding to him most executive power. Although Zauditu remained titular *neggus* until her death (1930), Ras Tafari had himself crowned *neggus* as **Haile Selassie I.**

1928, August 2. Twenty-Year Friendship Treaty with Italy. This gave Ethiopia a free zone in the Italian-controlled port of Assab in return for the concession of constructing certain roads.

1929. Reorganization of the Ethiopian Army. This was to be done by a Belgian military commission.

1934, December 5. Clash at Ualual. Ethiopian and Italian forces clashed in a disputed zone on the Italian Somaliland border. Approximately 100 Ethiopians and 30 Italian colonial troops were killed in the incident. The Ethiopian government requested an investigation of the incident and the Italians demanded reparation.

1935, September 3. Arbitration by the League of Nations. The arbitral board was unable to establish the responsibility for the clash at Ualual.

Ethiopian-Italian War, 1935–1936

1935, October 3. Outbreak of Hostilities. The Italians invaded Ethiopia without a declaration of war. Well supported by artillery and air forces, they captured Aduwa (October 6).

1935, October 7. Italy Declared to Be an Aggressor. The League debated the imposition of sanctions.

1935, November 8. Italians Capture Fortress of Makalle.

1935, November 18. Sanctions Imposed on Italy. Fifty-one nations joined in embargoes on

arms, credit, and raw materials and the restriction of imports. The failure of the League to apply oil sanctions, to deny the movement of Italian troops and matériel through the Suez Canal, or to prevent the German reoccupation of the Rhineland (see p. 1132) gave Mussolini a free hand in Ethiopia with a united Italy backing him.

1935, December-1936, April. Lull in Operations. Field Marshal **Pietro Badoglio** reorganized the expeditionary forces.

1936, April–May. Italy Renews Offensive. Italian air forces, which were unimpeded, systematically spread terror and destruction on a brave but completely outclassed enemy, who fought in a medieval style against bombings and poison gas. Badoglio's ground forces advanced.

1936, May 5. Capture of Addis Ababa. Emperor **Haile Selassie I** fled; Ethiopian resistance collapsed.

1936, May 9. Italy Annexes Ethiopia. It was added to Eritrea and Italian Somaliland to make up Italian East Africa. The Italian king assumed the title of "Emperor of Ethiopia." Germany, Austria, and Hungary recognized the conquest at once, England and France a year later.

COMMENT. *The most important result of this war was to give both Mussolini and the Italian nation a much exaggerated opinion of their military prowess.*

North Africa (Morocco, Algeria, Tunisia, and Libya)

The North African colonies suffered acutely from the economic depression of the 30s. The severity of the situation fostered the growth of unrest and nationalism.

West Africa

This was a period of consolidation of European colonial administrations.

Liberia

1942, March 31. Agreement with the U.S. Only native African state to retain independence during the colonial era, Liberia granted base rights to U.S. forces, both for air transit and for operations against German submarines.

South Africa and Southwest Africa

In South Africa, the Union was established as a sovereign independent state by the Westminister Statue (1934).

MIDDLE EAST AND SOUTHWEST ASIA

Turkey

1925, February–April. Insurrection in Kurdistan. Finally suppressed by **Mustafa Kemal.**

1925, December 17. Alliance with the U.S.S.R.. Close political and economic relations were established.

1928, May 30. Five-Year Nonaggression Pact with Italy.

1928, June 15. Treaty with Persia.
1929, March 6. Treaty with Bulgaria.
1929, December 17. Soviet Alliance Renewed. But Mustafa Kemal continued firm repression of communism.
1930, October 30. Treaty of Ankara. After an exchange of populations, Turkey and Greece agreed to territorial *status quo* and naval parity in the eastern Mediterranean.
1930, December 23. Dervish Revolt in Western Anatolia. This protest against Mustafa Kemal's westernization was soon suppressed.
1931, March 6. Russian-Turkish Naval Agreement. This prohibited any changes in the respective Black Sea fleets without 6 months' notice.
1931, October 30. Five-Year Extension of the Turco-Soviet Alliance.
1931, May 25. Five-Year Pact with Italy.
1931, July 18. Turkey Joins the League of Nations.
1932, January 23. Agreement with Persia. Outstanding border disputes were settled.
1933, September 15. Ten-Year Turco-Greek Nonaggression Pact.
1934, February 9. Balkan Treaty. A mutual security agreement of Balkan frontiers between Greece, Rumania, and Turkey.
1934, May. Turkish Rearmament. Turkey distrusted Italy's east Mediterranean policy.
1936, July 20. Treaty of Montreux. An international conference approved Turkey's request to refortify the straits.
1937, July 9. Southwest Asian Treaty. A nonaggression pact (**Saadabad** Pact) with Iran, Iraq, and Afghanistan in an Asiatic analogue of the Balkan Pact.
1937, December-1938, July. Alexandretta Crisis. Turk claims to Alexandretta brought tension and threat of war. The crisis ended in agreement to hold elections, which gave Turkey virtual control.
1938, November 10. Death of Kemal Atatürk.
1939, May 12. British-Turkish Mutual Assistance Agreement. This identified Turkey with the British bloc.
1939, June 23. Agreement with France. This resulted in the incorporation of Hatay (Alexandretta) into Turkey.

The Arab States

Arabia

1925–1930, May 20. Ibn Saud Consolidates Power. He now controlled most of Arabia.
1930, February 22. Peace in Northern Arabia. King Ibn Saud of Hejaz and Nejed made peace with King Faisal of Iraq (former Emir of Hejaz; see pp. 1080, 1101) on board HMS *Lupin* in the Persian Gulf, ending part of the Saudi-Hashemite dynastic feud.
1932, May–July. Unrest in Northwest Arabia. This came from opposition to the pro-western policies of Ibn Saud.
1932, September 22. Adoption of the Name Saudi Arabia.
1933, July 27. Treaty with Transjordan. This terminated years of dynastic animosity between the Saud and Hashemite families.
1934, February 14. Treaty of Sanaa. A 40-year treaty was signed with Great Britain.
1936, April 2. Nonaggression Treaty with Iraq. This became the basis of efforts to achieve Arab brotherhood and unity.
1936, May 7. Treaty with Egypt. This advanced Pan-Arabism and brought closer political cooperation.

Syria and Lebanon

1925, July 18. Beginning of Druse Rebellion. Under **Sultan el-Atrash** the Druses threatened French control.
1925, October. Bloodshed at Damascus. The French withdrew from the city (October 14). A 2-day bombardment (October 18–19) of the city, with air and tank attacks, took several hundred civilian lives.
1926, July 18. Druse Rebellion Again Sweeps Damascus. French forces, in fortified encampments outside the city, again unleashed a 48-hour period of artillery and aerial bombing, inflicting great damage and loss of life.

1927, June. Collapse of Druse Rebellion. Despite an amazing display of bravery, which included charges of horsemen against French tanks, the rebellious tribesmen were finally subdued, and Druse leaders fled to Transjordan.

1927, May 23. French Declare Lebanon a Republic.

1936, September 9. Franco-Syrian Treaty of Friendship and Alliance. This and a Franco-Lebanon treaty (November 13, 1936) brought comparative peace to the area. Syria and Lebanon were to be independent states after a 3-year period; France was to retain a privileged position for 25 years.

1937, September 8. Pan-Arab Conference in Syria. This was held to organize the defense of Arab interest in Palestine. Syria became a center of Palestine rebel activity.

Palestine and Transjordan

Jewish-Arab enmity kept the area in a turmoil with continuous fighting during this period. In Palestine, Great Britain was trying without much success to satisfy the opposite aspirations of Arabs and Zionists by an implementation of the Balfour Declaration (November 2, 1917) and the establishment of separate Jewish and Arab states.

1923, May 26. Autonomy for Transjordan. This Hashemite kingdom was relatively stable during the years preceding World War II because of the wisdom of King **Abdullah,** and because it was exempted from the clauses in the British mandate dealing with the establishment in Palestine of a national home for the Jewish people.

1936–1939. Arab Revolt. This resulted from opposition to a partition of Palestine. The Arabs controlled the country in most parts outside the large cities and the Jewish settlements. The revolt was suppressed by the British only after the loss of several thousand lives.

Iraq

1930, November 16. Independence of Iraq. Great Britain agreed to support her admission to the League of Nations in 1932. Britain was to obtain a lease on new air bases, the use of Iraqi transportation and communication facilities, and British officers were to train the Iraqi Army.

1930, September 11–1931, April. Kurd Rebellion. Sheikh **Mahmud** led the uprising, which was eventually suppressed with British assistance.

1932, April–June. Renewed Kurd Rising. This was suppressed by the Iraqi forces backed by the British air patrol.

1932, October 3. Iraq Admitted to the League of Nations.

1936, April. Nonaggression Treaty with Saudi Arabia.

1936, October 29. Military Revolt. General **Bakir Sidqi** established a military dictatorship. His assassination (1937) ended the direct intervention of the army in politics.

1937, July 8–9. Treaty of Saadabad. **(See p. 1140.)** Pact with Iran, Turkey, and Afghanistan.

Iran (Persia)

1926, April 22. Treaty with Turkey and Afghanistan.

1930, June–July. Kurd Uprising. This stimulated Persian-Turkish efforts to establish an agreed boundary.

1932, January 23. Treaty with Turkey. The border was revised around Mt. Ararat and relations between Turkey and Persia improved.

1937, July 8–9. Treaty of Saadabad. **(See p. 1140.)** Pact with Iraq, Turkey, and Afghanistan.

SOUTH ASIA

Afghanistan

1928, November. Tribal Insurrection. This forced the abdication of the king.

1929, January–October. Civil War. A bandit leader, **Habibullah Ghazi,** captured Kabul (January), but was defeated and executed by General **Mohammed Nadir Khan,** who took the name **Nadir Shah.** Aided by the British, he reformed his army and restored stability.

1933, November 8. Assassination of Nadir Shah. He was succeeded by his son **Mohammed Zahir Shah.**

1934. Afghanistan Joins the League of Nations.

1937, July 8–9. Treaty of Saadabad. (See p. 1140.) Pact with Iran, Iraq, and Turkey.

India

The years 1923–1932 witnessed political assassinations and renewed internationalist terrorist activity. In 1930, Gandhi began a second Civil Disobedience Campaign. This precipitated rioting, violence, and numerous arrests, which eventually led to the Government of India Act of 1935: Burma and Aden were separated from India and became crown colonies; Indian local government was reorganized.

EAST ASIA

Japan

1925, January 20. Treaty with the U.S.S.R. Diplomatic relations were established with the U.S.S.R. Japan evacuated North Sakhalin.

1927–1929. Japanese Interventions in Shantung. (See pp. 1143, 1144.)

1930, April 22. London Naval Treaty. (See p. 1124.) This was finally ratified by Japan, despite strong political and naval opposition (October).

1931, September 19. Mukden Incident. (See p. 1145.) Beginning of Japanese conquest of Manchuria.

1932, January–March. First Battle of Shanghai. (See p. 1145.)

1932, February 18. Nominal Independence of Manchukuo. This made Manchuria a virtual colony of Japan.

1933, May 27. Japan Withdraws from the League of Nations. (See p. 1124.)

1933, May 31. Japanese Invasion of Jehol. (See p. 1145.)

1936, February 26. Mutiny. A group of young army officers, impatient at apparent hesitation of politicians to press ahead with the conquest of China, attempted to set up a military dictatorship. Finance Minister **Makoto Saito** and several other high officials were assassinated. The rebellion was promptly suppressed.

1936, November 25. Anti-Comintern Pact with Germany. (See p. 1132.)

1937, July 7. Outbreak of War in China. (See p. 1229.)

1938, July 11–August 10. Undeclared Hostilities with the U.S.S.R. Severe fighting broke out because of a dispute over the poorly defined frontier where Manchuria, Korea, and Siberia meet. **Changkufeng Hill,** near the mouth of the Tumen River, had been occupied and fortified by Soviet troops. Japanese efforts to dislodge the Soviets failed; a truce ended

the episode, with the Soviets retaining the hill.

1939, May–September. Nomonhan (Khalkin Gol) Incident. Renewed Japanese-Soviet hostilities resulted from a frontier dispute near the Khalkin Gol (River) claimed by the Japanese as the boundary between Manchuria and easternmost Outer Mongolia. After Soviet troops occupied the disputed territory between the river and Nomonhan, 20 kilometers to the east, the Japanese attacked with a reinforced division and were initially successful. In mid-August a Soviet counteroffensive by 3 divisions, 5 armored brigades, and some Mongolian units—commanded by General **Georgi K. Zhukov**—drove the outnumbered Japanese (28,000 to 65,000) back to Nomonhan. Japanese Kwantung Army commander, General **Kenkichi Ueda,** concentrated 3 fresh divisions for a counteroffensive, but a ceasefire agreement, forced cancellation (September 15). The Soviets admitted 9,824 casualties, but their losses were probably comparable to the Japanese admitted 17,405 casualties. This dispute and the Changkufeng dispute (see above) were settled by treaty (June, 1940).

1939, August 23. Japan Renounces the Anti-Comintern Pact with Germany. This result of outraged reaction to the Nazi-Soviet Treaty (see p. 1133) undoubtedly contributed to the Japanese decision to end hostilities with the U.S.S.R. in Outer Mongolia.

1941, April 13. Treaty with the U.S.S.R. (See p. 1231.)

China

1925. "May Thirtieth Incident." The British used gunfire to break up student demonstrations in Shanghai (May 30) and Canton (June 23). As a result, a strike and boycott of British goods were in effect for over a year. A wave of antiforeignism swept the country.

1926, July. Nationalists Begin Northern Offensive. The Canton-based National Government sent its army, under General **Chiang Kai-shek,** with the military advice of Russian General **Vasily K. Blücher** (known as **B. K. Galin** to the Chinese), to the north to unify the country. Chiang advanced into the territory of warlord **Wu Pei-fu. Hankow** was captured (September 6); **Wuch'ang** was besieged (later captured, October 10). The National Government moved from Canton to Hankow. Chiang turned east into territory of warlord **Sun Ch'uan-fang,** in the lower Yangtze Valley. **Nanking** was captured by the Nationalists (March 24), amidst Communist-formented riots. Six foreigners were killed; the Chinese portion of Shanghai was seized by local Communists and trade unionists in the name of the National Government. (The International Settlement was protected by an international force of 40,000, mostly Japanese.)

1927, April 12. Chiang's Seizure of Shanghai. Suspicious of subversive collusion between Communist leaders in Shanghai and the radical elements (Communists and Kuomintang leftists) in the National Government at Hankow, Chiang seized the Chinese portion of Shanghai. All known Communists and trade union leaders (about 5,000) were killed.

1927, April 18. Split in Kuomintang. Denounced for the Shanghai incident by the leftist and Communist-influenced Hankow government, Chiang established a separate National Government at Nanking.

1927, April–May. Nationalist Campaigns against Northern Warlords. Independent campaigns north of Yangtze were fought by Hankow and Nanking regimes, against the northern warlords, now joined by Marshal **Chang Tso-lin,** warlord of Manchuria and northeast China. Hankow troops fought inconclusively against Wu Pei-fu and **Chang Hsueh-liang** (son of Chang Tso-lin) in northern Hupeh and southern Honan. Chiang advanced steadily through Anhwei toward Hsuchow against Sun Ch'uan-fang.

1927, June. Intervention of Feng Yu-hsiang. The so-called "Christian General" advanced southeastward from Shensi through the T'ungkuan Pass. Wu and Chang hastily retreated to northern Honan.

1927, June 21. Alliance of Feng with Chiang. Feng, visiting Chiang at recently captured Hsuchow, agreed to support Chiang's Nationalist regime. Temporary Japanese occupation of Shantung (May–June) blocked Chiang's northward advance.

1927, July. Hankow Nationalist Break with the U.S.S.R. and Communists. Aware of Communist plans to seize control, Kuomintang leaders of the Hankow regime purged Chinese Communists from the government and expelled Soviet political and military advisers.

1927, August 1. Nanchang Insurrection. Following the purge at Hankow, Communist elements of Hankow forces mutinied at Nanchang, hoping to spark a nationwide Communist revolution. Leaders were Generals **Yeh T'ing, Ho Lung,** and **Chu Teh.** They were driven out by loyal troops, and pursued by cooperating Hankow and Nanking Nationalist troops to southeast China coast, where the rebels dispersed. Chu Teh escaped to mountains of western Kiangsi with one small organized remnant. This was the real beginning of the 22-year Chinese Civil War.

1927, August–September. "Autumn Harvest Uprising." Attempts of Communist leader **Mao Tse-tung** to organize a peasant revolt in Hunan failed. He fled to the mountains of western Kiangsi, where he was later joined by Chu Teh.

1927, August 8. Chiang Resigns. Despite pleas of his adherents, Chiang refused to seek accommodation with Kuomintang radicals at Hankow. To permit party peace, and a unified front against resurgent northern warlords, he resigned and went to Japan. Soon afterward the Hankow regime moved to Nanking to join the regime there.

1927, September–October. Northern Counteroffensive. Taking advantage of the confusion in the south caused by Communist uprisings and the Kuomintang split, the northern warlords began a southward drive into Yangtze Valley. Sun Ch'uan-fang with 70,000 troops crossed the Yangtze west of Nanking, but was defeated by Nationalist General **Li Tsung-jen,** aided by Nationalist river gunboats, in the 5-day **Battle of Lungtan.** Sun, after losing 20,000 killed and 30,000 prisoners, retreated to Hsuchow. The warlords' offensive was called off.

1927, December 11–15. Canton Commune. A Communist uprising in Canton was ruthlessly suppressed by Nationalist troops.

1928, January 6. Chiang Returns. Reappointed Commander in Chief of the Nationalist Army, and Chairman of the Kuomintang Central Executive Committee, Chiang quickly restored stability, and prepared to renew the northern offensive to unify the nation.

1928, April 7–June 4. Nationalist Northward Drive. Under field commanders Li Tsung-jen, Feng Yu-hsiang, **Pai Ch'eng-hsi,** and **Ho Ying-ch'in,** and the newly allied warlord of Shansi, **Yen Hsi-shan,** the Nationalist armies, some 700,000 strong, defeated the three opposing northern warlords, who had about 500,000 troops, and advanced across the Yellow River. Despite Japanese interference (see below) the Nationalists continued on to capture **Peking** (June 4). The name of the city (which had meant "Northern Capital") was changed to Peiping (meaning "Northern Peace"). Retreating to Manchuria, Chang Tso-lin was assassinated when the Japanese blew up his private train near Mukden (June 4). His son, "Young Marshal" Chang Hsueh-liang, became warlord of Manchuria, and acknowledged Nationalist authority.

1928, May 3–11. Sino-Japanese Clash at Tsinan. The Japanese, again claiming special interests in Shantung, drove out the Nationalists and seized most of the province. Most Japanese troops were withdrawn a year later (May 20, 1929), after an agreement with the Chinese.

1928–1930. Consolidation. Chiang attempted to strengthen China for expected war with Japan. Simultaneously, the Communists were recovering strength in the mountain regions of Kiangsi and Fukien.

1929–1930, October–January. Dispute with Russia. As a result of conflicting claims to ownership and control of the Chinese Eastern Railway, Soviet troops invaded Manchuria,

forcing China (and in particular the warlord governor, Chang Hsuehliang) to acknowledge that the U.S.S.R. retained Imperial Russia's share in control of the line. Russian troops withdrew.

1930, July–August. Li Li-san's Communist Revolt. Communist Party Chairman Li Li-san, believing that the time was ripe for a revolt of the Chinese urban proletariat, ordered the Communist guerrilla forces in Kiangsi and Fukien to seize the principal cities of central China. Mao Tse-tung, believing that Communist success depended upon a peasant uprising rather than an urban revolt, protested, but was overruled. Troops under Communist General **P'eng Teh-huai** briefly seized **Ch'ang-sha** (July 28), then withdrew. Li ordered a renewed and reinforced offensive against Ch'angsha, but forces under P'eng, Mao Tse-tung, Chu Teh, and Ho Lung were bloodily repulsed by reinforced Nationalist defenders. The Communists retreated to their mountain strongholds. Li was soon recalled to Moscow. Mao's influence increased.

1930–1934. Nationalist Anti-Communist "Extermination Campaigns." (Also called "bandit suppression" campaigns.) The first two efforts (December 1930–January 1931; and April–May 1931) were repulsed by aggressive Communist guerrilla tactics. Chiang personally led the third (July–September 1931), and Nationalists were converging on the Communist capital of Juichin when word of the Mukden Incident (see below) caused Chiang to halt the offensive. After agreement was reached with Japan, a peripheral offensive against Oyuwan Soviet (Anhwei-Honan-Hupeh border area) was successful (summer, 1932). The fourth main campaign (April–June 1933), was also disrupted by need to respond to renewed Japanese activity in the north, and by skillful Communist exploitation of this distraction. The fifth campaign (December 1933–September 1934) began after careful preparation, assisted by advice from a German military mission, led by General **Hans von Seeckt,** recently retired Chief of the German General Staff. This well-coordinated, converging offensive, using entrenchments and a chain of blockhouses, was successful. Communist losses were heavy. The Communist Central Committee approved Mao Tse-tung's recommendation to evacuate the area.

1931, September 19. The Mukden Incident. Alleging that the Chinese had plotted to blow up the railroad from Port Arthur to Mukden, Japan's Kwantung Army in "night maneuvers" seized the arsenal at Mukden and adjacent towns. Chinese troops were forced to withdraw. The Japanese continued their aggressive movements and in a few months all Manchuria was under their domination (February 1932). The only effective weapon the Chinese had was the boycott, which they invoked at great cost to Japanese trade.

1932, January 28–March 4. First Battle of Shanghai. In a move to stop the Chinese boycott, a Japanese army, 70,000 strong, landed at Shanghai. In a surprisingly effective and valiant resistance, the Chinese 19th Route Army held up the Japanese near the waterfront for about a month, but were finally driven out of their positions in the vicinity of the International Settlement. China agreed to end the boycott.

1932, February 18. Manchukuo (Manchuria) Declared Independent. The Japanese placed **Pu Yi** (former Emperor of China) on the throne of a puppet state, and announced a protectorate over it.

1933–1937. Growing Tension between China and Japan. Chiang Kai-shek attempted to unify and modernize his backward nation (while simultaneously fighting Communist and dissident warlords) in the face of increasingly aggressive Japanese actions.

1933, January–March. Japanese Invasion of Jehol. The pretext was that this Inner Mongolian province was really part of Manchuria. When Peiping (Peking) was threatened, the Chinese signed an armistice at Tangku (May 31), which required their evacuation of the Tientsin area and establishment of a demilitarized zone in eastern Hopei.

1934–1935. The Long March. The Communists, finally driven from their position by Chiang's Nationalist forces, organized a long

retreat (October 1934), marching and fighting (against sporadic opposition) across southern and western China to northern Shensi. The longest distance, 6,000 miles, was covered by Chu Teh's First Front Army—accompanied by Mao Tse-tung as political commissar—in 13 months. This was the longest and fastest sustained march ever made under combat conditions by any army of foot troops, and has been exceeded in rate of march over a long distance only by a few Mongol expeditions of the 13th century. The Second Front Army, commanded by Ho Lung, and the Fourth Front Army, commanded by **Hsu Hsiang-ch'ien,** marched somewhat shorter distances. Total Communist strength at the beginning of the march was about 200,000 troops. They suffered over 100,000 casualties and noncombat losses during the march. About 40,000 men were left behind along the route of march as underground cadres. About 50,000 recruits joined on the march. The total Communist force in Shensi at the end of 1935 was nearly 100,000 men.

1934–1937. Japanese Expansion in Northern China. Japanese troops continued to press westward in the Inner Mongolian province of Chahar into northern Hopei.

1938–1939. Japanese-Soviet Frontier Clashes. (See p. 1142.)

1936, Summer. Renewed "Bandit Suppression Campaign." Following a Communist foray into Shansi, Chiang Kai-shek decided to renew efforts to eliminate the Communists. An army of 150,000 was assembled, under Marshal Chang Hsueh-liang, with headquarters at Sian.

1936, December 12–25. Sian Mutiny. Disappointed by inactivity of Chang's "bandit suppression" effort, Chiang flew to Sian (December 7). Chang urged Chiang to call off the campaign; he and his troops wanted to fight the Japanese rather than other Chinese. When Chiang refused, he was taken into "protective custody." The results of the subsequent negotiations, in which Communist **Chou En-lai** participated, have never been revealed. Chiang was released, taking Chang with him as a prisoner. He then called off the anti-Communist campaign.

1937, July 7. Outbreak of Hostilities between China and Japan. (See p. 1229.)

Mongolia

The Mongolian People's Republic continued to be a satellite of the U.S.S.R., although the Republic of China still stubbornly refused to recognize Mongolian independence from China. The principal events were:

1936, March 12. Soviet-Mongolian Mutual Assistance Pact. This 10-year treaty was a response to the growing Japanese threat in Manchuria and Inner Mongolia. With Soviet assistance, the Mongolian army was maintained at 90,000 men, 10 percent of the population.

1939, May–September. Border Hostilities with Japan. (See p. 1143.) Mongolian forces made up a major portion of the Soviet-Mongolian army, which repulsed the Japanese.

1941–1945. Mongolian Neutrality in World War II. Actually Mongolia gave full support to the Soviet Union.

1945, August 10. Declaration of War against Japan. Mongolian troops participated in the successful Soviet invasion of Manchuria and Inner Mongolia (see p. 1298).

1946, January 5. China Recognizes Mongolian Independence. China had promised to do this at the time of signing its treaty of friendship with the U.S.S.R. at the end of World War II (see p. 1423), but had insisted on a plebiscite first. The Mongols had voted virtually unanimously for independence (October 20, 1945).

THE AMERICAS

The United States

1925–1939. Military Retrenchment. The post–World War I reaction against American involvement overseas continued. In a period of pacifism and isolationism, the military services were largely ignored. Dwindling appropriations declined still more rapidly during the period of the Great Depression (1929–1938). Even the Navy, traditional "First Line of Defense," was neglected. In February 1929, a bill was passed authorizing the construction of 15 cruisers and 1 aircraft carrier in 3 years at a cost of $27 million. By March 1933, only 8 of the cruisers were completed. Although President **Franklin D. Roosevelt** obtained additional appropriations, construction still lagged far behind America's treaty rights. Once World War II broke in Europe, the U.S. Navy initiated a large-scale building program of warships, merchant ships, landing craft, and planes (1939–1941).

1925, December. Mitchell Trial. An avid crusader for the development of military aviation, Brigadier General **William Mitchell,** chief of the U.S. Army's Air Corps, provoked worldwide repercussions by challenging the traditional American military and naval hierarchy, and by his advocacy of the theories of Douhet (see p. 1089). His outspoken criticism of his superiors resulted in his demotion to colonel (April 1925). Later, Mitchell charged the War and Navy Departments with "incompetency, criminal negligence and almost treasonable administration of the national defense" (September). He was court-martialed by order of President Coolidge, found guilty, and ordered suspended from rank and duty for 5 years. He resigned from the Army (January 1926) and continued a writing and lecturing campaign in his effort to obtain public support for his concepts of air power.

1929, January 15. Pact of Paris Ratified. (See p. 1124.) The Senate did not consider the Kellogg-Briand Treaty to impair the right of self-defense.

1930, January 21–April 22. London Naval Conference. (See p. 1124.)

1933, November 17. U.S. Diplomatic Recognition of Russia.

1934–1936. Nye Committee Munitions Investigation. This gave the American public the impression that the entry of the U.S. into World War I had been to save the bankers and to protect the arms trade. These hearings had an appreciable adverse effect on national defense and helped to incite resurgent isolationism.

1935, April. Neutrality Act. This forbade Americans to furnish munitions or loans to foreign belligerents and refused protection to Americans sailing on belligerent ships. Japanese aggression in China, Italian aggression in Ethiopia, and the Spanish Civil War brought the program of neutrality into sharp focus, resulting in a compromise: the War Policy Act (May 1, 1937). The act retained the mandatory provisions of the Neutrality Act, but gave the president wide discretion, especially in determining if the law was to be put into effect by proclamation that a war actually existed.

1939, January 12. End of Military Retrenchment. President Roosevelt asked Congress for $552 million for defense spending.

1939, September 5. U.S. Neutrality Declared. This followed Roosevelt's fireside chat (September 3), stating, "This nation will remain a neutral nation, but I cannot ask that every American remain neutral in thought as well." He proclaimed a limited national emergency (September 8).

1939, November 4. Arms Embargo Lifted. Congress, removing the arms embargo at Roosevelt's urging, authorized "cash and carry" exports of munitions and arms to belligerent nations. The intent was to assist the Allies.

1940. Defense Measures. Roosevelt called for appropriations (January 3 and May 31) totaling approximately $3.4 billion for national defense, and in response to Churchill's call for help released to Britain more than $43 million

worth of surplus stocks of arms, planes, and munitions (June 3). A National Defense Research Committee was established, headed by Dr. **Vannevar Bush** (June 15). **Henry L. Stimson** was named Secretary of War and **Frank Knox** Secretary of the Navy (June 20). Congress adopted defense tax measures and raised the national debt limit to $49 billion (June 22). In defense matters Roosevelt particularly relied upon the advice of U.S. Army Chief of Staff, General **George C. Marshall.**

1940, September. The U.S.–British Destroyer Base Agreement. Great Britain received 50 badly needed destroyers (see p. 1167) in return for leases for American naval bases at 8 points on British territory along the Atlantic coast from Newfoundland to British Guiana.

1940, September 16. Initiation of Conscription. The Selective Service Act was passed by Congress.

1940, December 20–29. Roosevelt Speeds Defense. The Office of Production Management was established to extend all aid short of war to Great Britain and all other anti-Nazi belligerents.

1941, March 11. Lend Lease. The act opened mutual aid between all anti-Nazi nations and the U.S.

1941, July 7. Defense of Iceland. American forces landed in Iceland at the invitation of the Danish and Icelandic governments, relieving British troops defending the island.

1941, September. Renewal of Selective Service. The act, violently opposed by isolationists, passed the House of Representatives by one vote.

1941, December 7. Attack on Pearl Harbor. **(See p. 1235.)**

Mexico

1927, October. Insurrection. A rebellion spread through the provinces, but was crushed within 2 months.

1929, March–April. Renewed Rebellion. Insurrection broke out again in 1929 because of widespread political and religious discontent.

1934. Beginning of Stability. President **Lázaro Cárdenas,** supported by the army, established himself as the undisputed ruler of Mexico and undertook an ambitious program of reforms.

Central America (Panama, Costa Rica, Nicaragua, Honduras, Salvador, Guatemala)

Internal political conditions were unstable and numerous insurrections and depositions occurred. In Nicaragua (1925) a bloody civil war erupted; U.S. intervention resulted in a supervised election and a relatively clam administration until the renewal of rebel activities by General **César Augusto Sandino** (1931). U.S. Marines organized and trained the Guardia Nacional under General **Anastasio Somoza.** After the Marines withdrew (January 2, 1933), Somoza became president (1937) and was virtual dictator until his death (1956).

West Indies (Cuba, Haiti, Dominican Republic, Puerto Rico, Virgin Islands)

1934, May 29. The Platt Amendment Abrogated. The U.S. lifted limits on Cuba's sovereignty.

1934, August 6. Withdrawal of U.S. Marines from Haiti. The culmination of arrangements between the United States and the Haitian Assembly (see p. 1109).

1937, October. Border Dispute between Haiti and the Dominican Republic. This resulted in the death of many immigrant Haitians. An American-inspired conciliation treaty led to settlement.

1939. Expansion of Military Facilities in Puerto Rico. The island became the keystone of a U.S. Caribbean defense system.

South America (Argentina, Chile, Paraguay, Uruguay, Bolivia, Peru, Ecuador, Colombia, Venezuela, Brazil)

The Latin American scene was punctuated with jealousy and war between neighbors, widespread internal turbulence, and 2 major international clashes.

1921–1929. Tacna-Arica Dispute. A legacy of the War of the Pacific (see p. 1000), Chile's dispute with Peru over this rich nitrate region resulted in several armed clashes. Bolivia, meanwhile, maintained that neither Chile nor Peru was entitled to the provinces. Through United States arbitration, the dispute was solved by compromise: Arica was awarded to Chile; Peru received Tacna. Bolivia's complaints were assuaged somewhat by allocation to her of a railway outlet to the Pacific between La Paz and Arica (1929).

1932, June–August. Disorders in Brazil. The federal government reestablished order in São Paulo State.

1932–1935. Chaco War. Armed clashes between Paraguay and Bolivia over the possession of the Chaco region began in 1928 and gradually developed into open war (1932). Efforts of other states and the League to mediate were unsuccessful and the struggle continued despite the economic strain on both sides. The Paraguayans soon gained *de facto* control over much of the region. Bolivia employed a German general, **Hans von Kundt,** to train and command its armies and to establish military posts in territory claimed by Paraguay. When Bolivia captured **Fort Lopez** (Pitiantuta) in central Chaco (June 15, 1932), she seemed to have accomplished her objective of gaining the Paraguay River as an outlet to the ocean. At this point the Paraguayans initiated a remarkable national military effort. While frontier troops recaptured **Pitiantuta** (mid-July), the Paraguayan Army began an expansion from 3,000 to 60,000 men. A supply line was established via Puerto Casado in preparation for a major offensive. This was initiated by Colonel **José Felix Estigarribia,** and the Paraguayans steadily forged their way through the jungle region. In the next year and a half they conquered most of the disputed region, captured the Bolivian headquarters, and took more than 30,000 prisoners. A truce was then signed and active hostilities ceased (June 12, 1935). By the **Treaty of Buenos Aires** (July 21, 1938) an arbitral decision awarded Paraguay three-quarters of the disputed area; Bolivia, however, was provided an outlet to the Atlantic Ocean via the Paraguay River.

1936, December 1–23. Buenos Aires Conference. Meeting of the Pan-American Conference for the maintenance of peace accepted the principle of consultation in case the peace of the continent was threatened. A common policy of neutrality was drawn up in case of conflict between the American states.

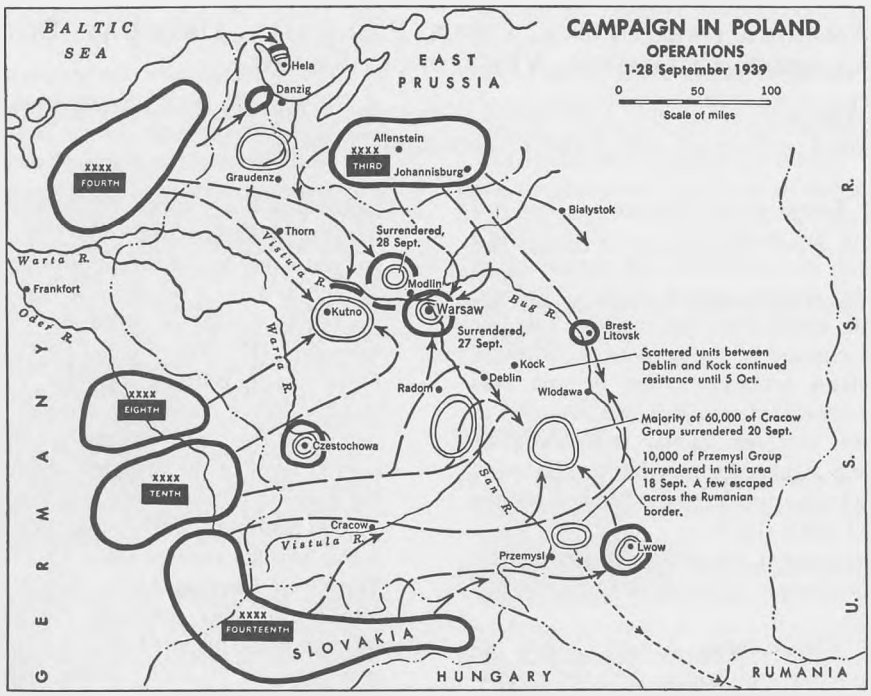
1938, December 24. Declaration of Lima. This reaffirmed the absolute sovereignty of the various American states and expressed their determination to oppose "all foreign intervention or activity." This was manifest of a determination to defend Latin-American territory from both external aggression and internal subversion.

WORLD WAR II IN THE WEST

Operations in 1939

Polish Campaign, September 1–October 5, 1939

1939, September 1–5. Invasion. Covered by predawn air bombardment, without declaration of war, General **Walther von Brauchitsch**'s 1,250,000 men in 60 divisions—9 of them armored—struck from north, west, and south. The German plan was a double envelopment, gripping the 6 Polish armies, spread in cordon defense, between pincers closing down



first on the Vistula River line, and later on the Bug, farther east. General **Fedor von Bock**'s army group—the Third and Fourth armies—converged from both sides of the Polish Corridor; General **Gerd von Rundstedt**'s group of 3 armies swept eastward and northeastward across Upper Silesia and Galicia. Some 1,600 Luftwaffe planes undertook terror bombings of all principal cities, destruction of air fields and railway centers, systematic sweeping of main highways to dislocate traffic, and close support to the ground troops. With 2 million German sympathizers in the Polish population, fifth-column and intelligence activities were well organized. Flat Poland, with no major terrain obstacles, in the pleasant, dry autumn weather offered ideal terrain for the use of tanks. German armored spearheads slashed through the thin screen of 6 Polish armies, some 800,000 men, commanded by Marshal **Edward Smigly-Rydz,** like knives through butter. By the third day the Polish air force ceased to exist. All communication between general headquarters and the field armies was ended, further mobilization rendered impossible. Informed by spies, the Luftwaffe learned the location of Polish headquarters and bombed it continuously, even though the Poles moved frequently. In the Gulf of Danzig, a German naval force disposed of the little Polish Navy—4 destroyers, a mine sweeper, and some submarines. Poland was paralyzed, its civilian population terrified.

1939, September 5–17. Battles of Warsaw and Kutno-Łódź. On the north, Bock's left-flank army pressed down on Brest-Litovsk; on the south, Rundstedt's right-flank army streamed northeasterly past Cracow. In the center, Rundstedt's Tenth Army (General **Walther von Reichenau**), with the majority of the armored divisions, approached the Vistula below Warsaw. The interior ring of the double double envelopment was closing on the Vistula River line, the outer ring on the Bug. The Polish armies, fighting with futile gallantry (in some cases horse cavalry charged German tanks), were rolled up in several clusters, each com-

pletely surrounded and without any overall direction. Reichenau's Tenth Army tanks attempted to enter Warsaw (September 8), but local Polish counterattacks drove them off. Principal Polish resistance now centered around Warsaw-Modlin and farther west around Kutno and Łódź. The Polish Kutno-Łódź forces made a gallant but unsuccessful attempt to break out, then, after incessant air and ground attacks—their supplies and ammunition exhausted—surrendered (September 17). Meanwhile, the outer encirclement ring had closed, as German Third and Fourteenth armies met, south of Brest-Litovsk.

1939, September 17. Soviet Invasion of Poland. In conformity with the Nazi-Soviet Pact (see p. 1135), Soviet troops swept over Poland's eastern border, north and south of the Pripet Marsh area, ending any Polish hopes of a last-ditch stand in the southeast. The government and the high command took refuge in Rumania.

1939, September 17–October 5. Collapse of Poland. One by one the Islands of resistance succumbed. Warsaw, facing starvation and typhoid, fell (September 27); Modlin, just across the Vistula, next day. Up on the Baltic, the naval base of Hel capitulated (October 1). The last organized Polish resistance ended at Kock, where 17,000 Poles surrendered (October 5). Polish losses were about 66,000 killed and at least 200,000 wounded. The greater part of their armed forces was captured—some 694,000 men. A few escaped through Rumania. German losses were 10,570 killed, 30,322 wounded, and 3,400 missing. Germany and Russia divided the country between them, while the German armies slowly recoiled to prepare for a later move against Western Europe.

COMMENT. *The whirlwind campaign was a spectacular demonstration of fire and movement, utilizing the latest developments in weapons, aerial and ground. German adherence to the principles of the offensive, surprise, mass, and maneuver was irresistible. Weak spots or gaps in the Polish defensive ring were exploited by speedy armored columns with unlimited objectives and disregard for flank protection. Fast-moving infantry formations encircled Polish units isolated by the breakthroughs; the demoralized Poles never had time to recover. The pattern of blitzkrieg was set. Contributing factors to German success were the Polish tactical dispositions in cordon defense, and the inertia of France and Britain in the west, permitting undivided German attention to the eastern campaign. Thoroughly documented by scores of cameramen, the film story of the Polish debacle was distributed throughout Europe and the United States—a major weapon in Germany's propaganda war of terror. Hitler—convinced that he, rather than his professional soldiers, had achieved success—began to believe himself to be a military genius. But most western military men, deeply impressed by the German victory, nevertheless wrongly assumed that its magnitude was due mainly to Polish ineptitude.*

War in the West, 1939

Amazing inactivity marked the situation along Germany's western border. France and Great Britain began lethargic mobilization behind the partial shelter of the great concrete, steel-turreted Maginot Line, stretching from the Swiss border northward to Montmédy. From that point to the North Sea, along the Belgian border, extended an outmoded system of unconnected fortresses—relics of pre-World War I defenses. Belgium and Holland both maintained strict neutrality—a fatal concession to political expediency, for it prevented any cooperation with French and British military planners. The British Expeditionary Force, nearly 400,000 strong, was moved across the Channel and concentrated as part of the Allied line in the general area Arras-Lille. Across the German border the Westwall lay quiescent, with supporting mobile troops stripped to a minimum to the benefit of the Polish front. A strong Allied punch might

well have broken through and ended Hitler's grandiose scheme of world conquest. Instead, the only overt move was a tentative French probe toward Saarbrücken. The Allies were relying on a policy of blockade, economic strangulation, and defensive fortification to exhaust German strength. From that groundwork, it was believed would eventually come an Allied offensive—as yet only a dream. "Sitzkrieg" and "phony war" were the derisive terms applied to this negation of Germany's blitzkrieg.

The Naval War, 1939

Great Britain proclaimed a naval blockade of Germany immediately after her declaration of war (September 3). The German Navy, under the direction of Grand Admiral **Erich Raeder,** was prepared to prosecute only one type of strategy: commerce destruction. There could be no thought of fleet action against Britain by Germany's small fleet (see table, below). But Germany had 98 submarines against Britain's 70, and the United Kingdom was dependent upon sea transport for both food and war matériel. Already 2 pocket battleships, the *Deutschland* and the *Graf Spee,* were at sea, together with a score of U-boats, with supply ships scattered strategically around the globe. The first German submarine blow shocked the world, and led immediately to Britain's adoption of the convoy system for her merchant marine.

COMPARATIVE NAVAL STRENGTHS[a]—SEPTEMBER, 1939

	Britain	*France*	*Germany*[b]	*Italy*
Battleships and Battle Cruisers[c]	18	11	4	6
"Pocket" Battleships[d]	—	—	3	—
Aircraft Carriers	10	1	1	—
Heavy Cruisers (8-inch guns or more)	15	18	4	7
Light Cruisers (6-inch guns or less)	62	32	6	15
Destroyers	205	34	25	59
Destroyer Escorts, Torpedo Boats, etc.	73	30	42	69
Motor Torpedo Boats	39	9	17	69
Submarines	70	72	98	115

[a] Includes ships built or nearing completion.

[b] All German vessels were newly built, and with few exceptions were more modern, faster, bigger, and generally more powerful than comparable types of other nations.

[c] Battle cruisers were as big as battleships and carried the same kind of heavy guns (usually 14- to 16-inch in caliber). But they carried less armor protection, and usually fewer heavy guns, so that, being lighter in weight, they could go faster than battleships. Thus they could hit as hard as battleships, but could not take as much punishment; they sacrificed protection for speed.

[d] Under the provisions of the Versailles Treaty after World War I, Germany was forbidden to build ships larger than 10,000 tons. The pocket battleships were really small battle cruisers; they carried 11-inch guns, were very fast, but did not have much armor, not to exceed the weight limit. (In fact, they displaced more than 11,000 tons.) They could beat any cruiser in the world, but could not stand up to a real battleship.

1939, September 3. Sinking of the *Athenia.* This British passenger liner, bound from Liverpool to Montreal with 1,400 passengers, was sunk without warning by *U-30,* 200 miles west of the Hebrides; 112 died.

1939, September 17. Loss of HMS *Coura-*

geous. Cruising with 4 escorting destroyers off the southwestern coast of England on antisubmarine duty, the carrier was torpedoed at dusk by *U-29,* sinking immediately with loss of 515 lives.

1939, September–December. Cruise of the *Graf Spee.* This German pocket battleship, under Captain **Hans Langsdorff,** cruised the South Atlantic between Pernambuco, Brazil, and Cape Town, South Africa, even venturing into the Indian Ocean, capturing and sinking 9 British merchantmen between September 17 and late November. Making secret rendezvous with the supply ship *Altmark,* she then took on fuel and supplies and transferred to her some 300 prisoners. Resuming his cruise, Langsdorff captured 2 more British ships. Meanwhile, a British aircraft carrier, a battle cruiser, and 6 cruisers, together with 2 French cruisers and some 10 Allied destroyers, were scouring the seas for the *Graf Spee.*

1939, October 14. Sinking of HMS *Royal Oak.* German Lieutenant Commander **Guenther Prien,** commanding *U-47,* at night daringly threaded elaborate antisubmarine defenses and treacherous tide rips to enter Scapa Flow, where the British Home Fleet lay concentrated. Firing 2 spreads of 4 torpedoes each against the nearest large vessel, he scored several hits on the battleship *Royal Oak.* She went down in 2 minutes, taking with her 786 officers and men. Prien then brought his submarine safely out of the harbor, successfully concluding a most gallant exploit.

1939, December 13. Battle of the River Plate. A British squadron—heavy cruiser *Exeter,* 6 8-in. guns, and the light cruisers *Ajax* and *Achilles,* 8 6-in. guns each—under Commodore **Henry Harwood** caught up with the *Graf Spee* off the mouth of the River Plate (early December 13). Langsdorff, confident that his 6 11-in. and 8 5.9-in. guns could blow the lighter British ships out of the water, closed with them, instead of standing off and destroying them with his heavy battery, which outranged their armament by nearly 10,000 yards. Harwood's squadron carried the fight to the German in preplanned maneuvers that prevented the *Graf Spee* from concentrating fire on any one ship. At the end of 80 minutes, the *Exeter* was completely silenced and on fire, the *Ajax* had half of her guns out of action, and the *Achilles* was severely damaged. But the *Graf Spee,* too, had been badly hit, so Langsdorff broke off the fight and made for neutral Montevideo, where he hoped to land his wounded and make emergency repairs. Harwood, following with his 2 serviceable ships (the *Exeter* limped for the Falkland Islands), stood off the port and waited, radioing for reinforcements. Langsdorff was refused more than 72 hours sanctuary by the neutral Uruguayan government. Meanwhile, the British heavy cruiser *Cumberland,* 8 8-in. guns, arrived to join Harwood; other British vessels were converging. Langsdorff, leaving most of his crew on board a German merchantman in the harbor, steamed out with a skeleton crew and blew up his vessel. He and his party then returned in their lifeboats to internment. Heartbroken, Langsdorff committed suicide 3 days later.

1939, mid-December. Other German Raiders. In the North Atlantic the pocket battleship *Deutschland,* after some success in commerce destruction (among her prizes was the neutral American freighter *City of Flint,* whose seizure created an international incident), was forced by engine trouble to make for home. The German Naval Staff sent out the battle cruisers *Scharnhorst* and *Gneisenau* to cover the *Deutschland's* withdrawal and continue pressure against Atlantic shipping.

1939, December 23. Sacrifice of HMS *Rawalpindi.* The *Scharnhorst* and *Gneisenau* successfully evaded British patrols east of Scotland, but were sighted December 23 between the Faeroe Islands and Iceland by HMS *Rawalpindi,* a merchant liner converted into a cruiser and mounting 4 6-in. guns. Radioing an alarm, the *Rawalpindi* gallantly engaged the giant warships with her popguns, hoping to delay them sufficiently to ensure their interception. Literally blown to bits in a few moments, the *Rawalpindi* and her valiant crew nevertheless had fulfilled their mission, for the German warships returned immediately to port.

Finnish-Soviet War, November 30, 1939–March 1, 1940

The U.S.S.R., following the division of Poland, and obviously fearful of Germany, began consolidating a Baltic sphere of interest. Mutual defense pacts with Latvia, Estonia, and Lithuania were followed by immediate inrush of Russian troops for their "defense" (October–November). From Finland, the U.S.S.R. demanded a similar agreement, including occupation of the southern portion of the Karelian Isthmus and other island and mainland base areas. Finland, rejecting these demands, mobilized forces along her frontier, under the command of aging, still brilliant Marshal Baron **Carl Mannerheim,** veteran of 3 wars. The U.S.S.R. demanded immediate withdrawal of Finnish troops.

1939, November 30. Bombardment of Helsinki and Viipuri. A Soviet air attack, without declaration of war, initiated hostilities.

1939, November 30–December 15. The Russian Invasion. Armies totaling nearly a million men smashed at Finland from east and southeast, and in amphibious invasions across the Gulf of Finland. They were opposed by Finnish forces totaling 300,000, of which about 80 percent were mobilized reservists. All the amphibious attacks on the southern coast were repulsed. In the far north a Soviet column seized Petsamo, pressed a short distance south, and then was stopped. The main Soviet attacking force, driving into the Karelian Isthmus, was hurled back with heavy loss at the Mannerheim Line—a World War I system of field fortifications, all cleverly knitted into the rugged terrain and heavily wooded areas. Other Soviet columns pressed into the vast lake and forest region of eastern and central Finland, opposed by mobile defense units of battalion or smaller size habituated to independent action in the forests. The heavy snows and subzero temperature of the Finnish winter had little effect on Finnish troops or their mobility. All were skiers; all were warmly clad. The Soviets soon bogged down. Meanwhile, Soviet air raids had been ineffective, and Communist fifth-column activities quickly collapsed.

1939, December—1940, January. Battle of Suomussalmi. In eastern Finland, the Soviet 163rd Division moved in 2 columns over narrow woods roads, which converged at the village of Suomussalmi. Deep snow impeded its advance and temperatures dropping to −40° bit deep into men fresh from the Ukraine and lacking arctic clothing. On the Soviet flanks, Finnish civil guard units in white smocks swooped silently on skis, sniping at supply vehicles and field kitchens. The Soviet columns joined at the village, but then paused to attempt reconnaissance (December 7–11). Arriving infantry elements of the Finnish 9th Division attacked without waiting for their artillery (December 11). The Russians clung to the village, but both their supply routes were blocked and ambushed, cutting off all supply. The Soviet 44th Division, motorized, attempted to cut through to the 163rd's assistance, but was itself immobilized by harassing civil-guard attacks, and dug in on the road some 5 miles east of Suomussalmi. On Christmas Eve both Soviet divisions vainly attempted to cut their way out. The Finnish 9th Division, its artillery now up, then made a coordinated assault upon the 163rd, and annihilated it (December 27–30). Turning then on the 44th Division, the Finns systematically cut it into smaller groups, each of which was in turn mopped up (January 1–8). Soviet losses were about 27,500 killed or frozen to death. Captured were 1,300 others, together with 50 tanks and the entire artillery and equipment of both divisions. Finnish casualties were 900 killed and 1,770 wounded.

1940, January 1–February 1. Soviet Regrouping. This followed humiliating repulses. (Soviet spearheads had been checked and re-

pulsed in 6 areas along the eastern frontier, with astounding losses—a division and a tank brigade captured; 3 other divisions almost destroyed.) The Soviets now prepared to assault the Mannerheim Line, the only sector against which overwhelming strength could be concentrated. Meanwhile, France and England were preparing to mount a strong expeditionary force to Finland's assistance, but neutral Norway and Sweden refused to permit its passage.

1940, February 1–13. Assault on the Mannerheim Line. The Soviet Seventh and Thirteenth armies, totaling 54 divisions, began incessant attacks—4 or 5 per day—against the Mannerheim Line, covered by tremendous artillery bombardments and air support. Wave after wave of assault troops dared the devastating defense fire. The Finns were sickened by the slaughter they inflicted. Finally a breakthrough was effected near Summa (February 13). The Finnish right wing and center were rolled back to Viipuri (March 1).

1940, March 12. Finland Capitulates. Her armed forces were exhausted and all hope for foreign assistance was gone. The Soviet terms of peace were practically identical with the orginal demands. Stalin had evidently no intention of tempting foreign intervention by further aggression, nor had he any stomach for a future guerrilla war in Finland. Finnish losses in the war were about 25,000 killed and 43,000 wounded. Soviet losses have never been published, but they probably were about 200,000 killed and 400,000 more wounded.

COMMENT. *The Finnish defense was conducted by well-led, disciplined soldiers, familiar with the terrain and weather conditions and utilizing tactics geared to those conditions. The Soviet offensive was amateurishly planned, without regard to terrain, weather, or the logistical problems involved. It was finally successful only because the Soviet government was willing to utilize cannon fodder in overwhelming masses without regard to casualties. As a result of the Soviet blundering, Hitler and his generals assumed that the Soviet Union, inferior in leadership, tactics, and weapons, would be a pushover for the German war machine. This opinion was unfortunately shared by many foreign observers, including the United States War Department.*

Operations in 1940

Conquest of Denmark and Norway

Sweden's iron ore, vital to German heavy industry, flowed in 2 channels: via the Baltic Sea and down the coast from Narvik in northern Norway. The latter route was threatened by the British naval blockade. German possession of Norway would permit use of land-based air power against the blockade and provide a springboard for aerial attacks against the British Isles. Hitler determined to seize both Norway and Denmark. The Germans began to make plans for a campaign against Scandinavia (January 1940), and Hitler gave the final order to go ahead on April 2.

Meanwhile, the British had made plans to mine Norwegian waters in order to force ore carriers from Narvik into the open sea where they could legitimately be attacked. The British and French had been frustrated by Norway's refusal to permit Allied aid to reach Finland during the Winter War (March 1940), on the legitimate grounds that it would compromise Norwegian neutrality.

1940, February 16. *Altmark* Incident. British blockaders discovered the *Graf Spee's* auxiliary heading home along the Norwegian coast with 299 British merchant seamen captured by the *Graf Spee*. The Admiralty ordered their rescue at all costs. Captain **Philip Vian,** in HM destroyer *Cossack,* pursued the *Altmark* into Jossing Fjord near Stavanger and despite Norwegian protests

boarded and captured her, releasing the prisoners. Norwegian protests of this violation of territorial waters died away in face of British proof that Norway had permitted an armed vessel to take refuge in neutral Norwegian waters.

1940, April 8–10. Naval Actions along the Norwegian Coast. In early April Churchill ordered mines laid in Norwegian territorial waters to deny their use by Germany. British destroyers approaching the Norwegian coast encountered German naval vessels convoying troop transports and warships toward Kristiansand, Stavanger, Bergen, Trondheim, and Narvik. Several violent engagements took place. The German warships successfully protected their convoys, but suffered losses. HM destroyer *Glowworm* deliberately rammed the heavy cruiser *Hipper,* damaging her severely, but was herself blown up. In a duel of battle cruisers the German *Gneisenau* was badly damaged by the *Renown.* Two other German cruisers were sunk, and the pocket battleship *Lützow* was damaged near Oslo by British ships and submarines. The German convoys all reached their objectives.

1940, April 9. Conquest of Denmark. German troops dashed across the border into Jutland. A battalion of infantry, hidden on a merchant ship in Copenhagen harbor, landed to seize king and government. Thus fell Denmark, almost without bloodshed.

1940, April 9. Invasion of Norway. The Germans planned simultaneous landings along the coast and parachute assaults at Oslo and Stavanger; they expected to paralyze the nation and to seize king and government by surprise as in Denmark. But the Norwegian armed forces, about 12,000 strong, were more substantial and better prepared than the Danes and had the brief warning provided by distance and size. The Army was a well-trained militia with a small cadre of permanent officers and men, in 6 infantry brigades and supporting artillery, plus local defense units. The Army needed 4 days to mobilize fully, and since the government was distracted by other events, not least of them the British minelaying operations (begun on April 8), the order for mobilization was not issued until the small hours of April 9. The Navy, including coast defense artillery, was small and efficient, but ships and equipment were old. Support elements included some fighter and torpedo planes. There were trained reserves of 120,000.

1940, April 9–10. Capture of Oslo. Shore batteries in Oslo Fjord gallantly repulsed the German invasion flotilla; the German cruiser *Blücher* and a smaller vessel were sunk and 2 small craft were damaged. Airborne troops seized Oslo airport, over-whelming the small AA detachment. Norwegian fighter planes shot down 5 Germans before they were driven from the sky. The air-transported troops quickly seized the city, while troops landed from ships overran the coastal defenses.

1940, April 9–10. West Coast Operations. At Kristiansand and Bergen the Germans landed only after suffering heavy casualties at the hands of determined, outnumbered defenders. At Bergen, coast defense guns damaged the cruiser *Königsberg,* which British bombers then sank. Near Stavanger an infantry battalion vainly tried to stop history's first combat airborne assault. Only at Trondheim and Narvik did German efforts at surprise succeed.

1940, April 10–13. Actions at Narvik. Five British destroyers in surprise attack entered the fjord and sank 2 of 10 German destroyers which had carried the assault troops, then withdrew, having also lost 2. H.M. battleship *Warspite* with 9 destroyers went in and wiped out the remaining German destroyers (April 13). Seven U-boats remained.

1940, April 10–30. German Exploitation. With all initial objectives taken, German troops under General **Nikolaus von Falkenhorst** fanned out over the countryside. An intensive airlift brought more troops from Germany. Luftwaffe units from Norwegian airfields attacked British warships off the coast. Overcoming initial surprise and confusion, Norwegian troops under newly appointed Major General **Carl Otto Ruge** fought stubbornly. About 50,000 reservists were mobilized. For three weeks the Norwegians tried to hold south-

central Norway. But the Germans were too strong and overwhelmed them or drove them into northern Norway. A small "fifth column" led by traitor **Vidkun Quisling** gave the Germans some help.

1940, April 14–19. Allied Landings. Some 10,000 French and British troops that had been assembled in British ports for a possible attempt to aid Finland (see p. 1154) were hastily embarked and landed at Namsos and Andalsnes to try to take Trondheim and retain a foothold in Norway. A smaller force landed near Narvik (April 14–15).

1940, April 20–May 2. German Reaction. Germans at Trondheim held off the Allies while reinforcements hurried from Oslo. The Luftwaffe struck Allied troops, landing areas, and support ships in continuous violent attacks. Unable to fight effectively, the Allies evacuated Namsos and Andalsnes (May 1–2). King **Haakon VII** and the government meanwhile had moved to northern Norway (May 2), as Norwegian forces withdrew from the central and southern parts of the country.

1940, April 24–May 26. Battle for Narvik. While the Allied force hesitated, the Germans prepared hastily for defense (April 14–23). On Churchill's urging, the attack began. Despite powerful naval support, the Allied force, now 25,000 men, was unable to dislodge the stubborn Germans. Norwegian troops, trained for mountain fighting, spearheaded the attack, but coordination between the Anglo-French force and the Norwegians was poor. Under Allied pressure the exhausted Germans withdrew and the Allies quickly occupied Narvik (May 28).

1940, June 7–9. Allied Evacuation of Narvik. Because of catastrophe in Western Europe (see below), the Allies evacuated Narvik, which was quickly reoccupied by the Germans, thus completing the conquest of Norway. The Allied force evacuating the area by sea was escorted by H.M. carrier *Glorious* and 2 destroyers. The *Glorious*, surprised by the German battle cruisers *Scharnhorst* and *Gneisenau*, with all her planes on deck, was promptly sunk. So, too, were the destroyers, but one of them succeeded in badly damaging the *Scharnhorst* by a torpedo. A few days later, a British submarine damaged the *Gneisenau*. Both German ships would be out of commission for 6 months. King Haakon and his government accompanied the withdrawing Allies and set up a government in exile in London.

COMMENT. *The German invasion was efficiently and daringly carried out in the face of possible destruction by the Royal Navy. Then speedy operation of the Luftwaffe from the captured bases gave the world its first realization of the value of air power in naval warfare. The net result of the audacious invasion was to loosen the British naval blockade of Germany, ensure the Reich's iron ore supply, and gain tremendous prestige for the German war machine. On the other hand, the German Navy was seriously crippled for several months to come. The performance of the Norwegians was commendable, particularly in their successful offensive efforts in and near Narvik.*

Campaign in the West, 1940

Background

By early May some 2½ million Germans (104 infantry divisions, 9 motorized divisions, 10 armored divisions) had assembled along Germany's western borders. These were organized in 3 army groups: the northernmost—Army Group B, General Fedor von Bock—comprised 2 armies from the North Sea to Aachen. Army Group A, General Gerd von Rundstedt, consisted of 4 armies and a powerful armored (Panzer) group or army, in a relatively narrow zone between Aachen and Sarrebourg. Most of Germany's 2,574 tanks were concentrated in Army Group A. Army Group C, General **Wilhelm J. F. von Leeb,** consisted of 2 armies facing the French defenses in eastern Lorraine and along the Rhine River. Supporting the ground troops

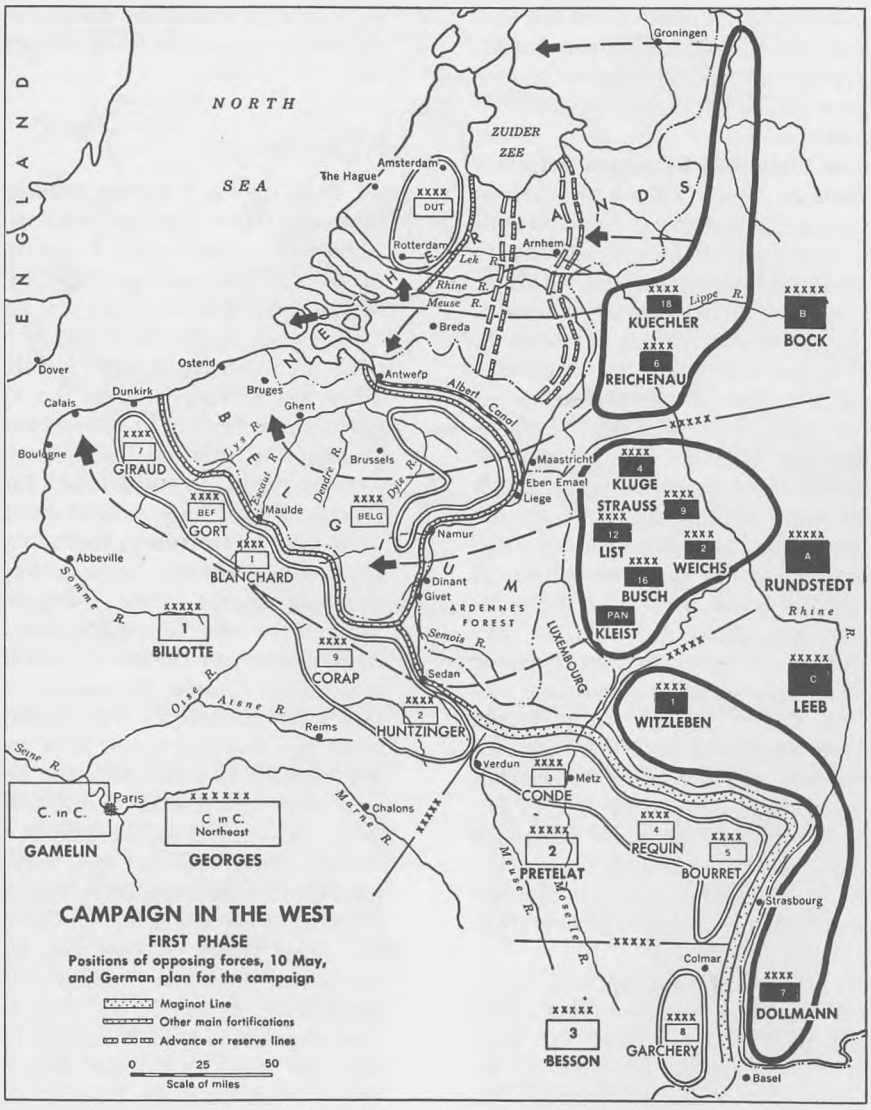
were 2 air fleets, consisting of 3,500 combat planes. Overall command was exercised by Hitler, as commander in chief, with General **Wilhelm Keitel** as his chief of staff. Directly commanding the army was Brauchitsch, who had also been in command of the invasion of Poland.

The opposing Allied forces (over 2 million men, mainly French) were assembled in 3 army groups behind the French borders. The First Army Group behind the French borders. The First Army Group (General **Gaston Billotte**), from the English Channel to Montmédy, consisted of 5 armies, including the British Expeditionary Force (General **John Vereker,** Lord **Gort**). The Second Army Group, General **André Gaston Prételat,** of 3 armies was behind the Maginot Line from Montmédy to Epinal. The Third Army Group, of 1 army (General **Besson**), occupied the Maginot Line defenses. Overall field commander was General **A. J. Georges,** who in turn was under the Allied commander in chief, General **Maurice G. Gamelin.** Although the Allies had 3,609 tanks (substantially more than the Germans, and many more powerful than the German tanks), these were scattered among 3 armored divisions and a number of separate tank battalions attached to other units. There were exactly 100 other divisions: 9 were British, 1 Polish, and 13 fortress troops incapable of operating outside of their Maginot Line defenses. In support was the French Air Force of some 1,400 combat planes, and about 290 British aircraft. Allied ground and air equipment was generally less modern than that of the Germans.

In the neutral Low Countries, Belgium nominally had some 600,000 men in 22 divisions, under the command of King **Leopold III.** The Dutch Army theoretically comprised some 400,000 men, under the command of General **Henri G. Winkelman.** Neither was assembled in full strength. Both countries had elaborate defensive systems, made more formidable by canal networks, with further arrangements for flooding great stretches of country by opening dikes. The troops, however, were not very well trained, and their equipment was less modern and less complete than that of the French and British. The most serious deficiency, however, was lack of adequate defensive plans. In hopes that they could remain neutral, neither Belgium nor the Netherlands had dared to discuss joint defensive plans with the French and British, and had rebuffed every Allied effort to carry on even informal discussions.

German Plans. Following overwhelming bombardment, Army Group B would overrun The Netherlands. Moving more slowly into Belgium to encourage the Allied left-flank armies to rush to the assistance of the Low Countries, Army Group A would then hurl an armored drive through the Ardennes Forest and via the Stenay Gap into France. Thus splitting the Allied armies (cutting off those which had advanced into Belgium), Army Group A would continue westward to Calais and roll the northern portion of the Anglo-British forces against the anvil of Army Group B in the Low Countries. Subsequent, prompt southward exploitation of the gap would then roll the southern French armies back upon the Maginot Line, where Army Group C would be waiting.

Allied Plans. The French were still thinking in terms of the Schlieffen Plan of 1914, a southwesterly sickle movement through Belgium. The Allied plan proposed, therefore—just as the Germans expected—to meet the expected invasion on the Dyle Line of Belgium, pivoting the First Army Group about the northern tip of the Maginot Line.



Battle of Flanders, May 10–June 4

INVASION OF THE LOW COUNTRIES

1940, May 10. The German Assault. Following predawn bombardments of all major Dutch and Belgian airfields, Army Groups A and B crossed the Belgian and Dutch frontiers. Initially the main effort appeared to be on the right, by Army Group B, in the Netherlands. Paratroop drops in the vicinity of Rotterdam, The Hague, Moerdijk, and Dortrecht quickly paralyzed the interior of the Netherlands. Early in the day, glider and parachute units landed on the top of powerful Fort **Eban Emael,** northern anchor of the main Belgian defense line, neutralizing it, while other German troops crossed the Albert Canal, which should have

been defended by Eban Emael's guns. The violence and success of the initial German attacks, combined with bombings of the interior regions of both countries, threw their populaces into confusion and panic.

1940, May 10. Churchill Becomes Britain's Prime Minister. News of the early German successes aroused great alarm in Paris and London. Prime Minister Chamberlain, whose government had been tottering because of failures in Norway and general lack of popular support, resigned to permit lionhearted **Winston S. Churchill** to lead a coalition British government in the face of the German avalanche.

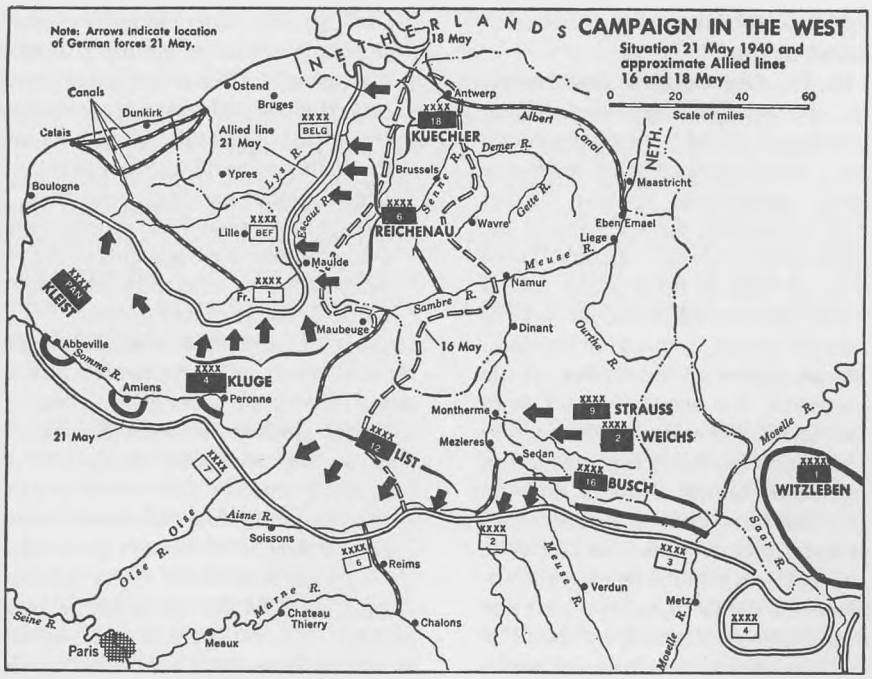
1940, May 11–14. Fall of Holland. Pressing its initial advantage, German Army Group B pressed steadily forward, despite frantic Dutch flooding of much of the countryside. By the 13th, German main elements had begun to force their way into the so-called Fortress of Holland, joining up with most of the paratroops, who had seized and held the key bridges over the Rhine estuary. At the same time, German spear-heads met advance elements of the French Seventh Army (**Henri Giraud**) near Breda, and drove them back toward Antwerp. The Queen of the Netherlands and her government escaped by ship to England from The Hague. Germany demanded complete surrender. The Luftwaffe brutally destroyed the entire business section of **Rotterdam** while negotiations were in process (May 14). Winkelman surrendered."

1940, May 11–15. Fall of Belgium. Following a similar pattern of bombings, the German Sixth Army (Reichenau) drove southwest. Fort Eban Emael fell to its audacious attackers. As the Germans poured across the Albert Canal, the Belgian Army retired to the Dyle Line, to be reinforced (May 12) by elements of the BEF and the French First Army (**Georges Blanchard**). By the 15th, some 35 Allied divisions—including most of the BEF—were in the area Namur-Antwerp, with the German Sixth Army probing the Dyle Line in their front and the Eighteenth (**Georg von Kuechler**), now turning southward from Holland, threatening their left flank. At about the same time, these Allied units realized that to their right rear the French center was being torn apart.

NORTHERN FRANCE

1940, May 10–12. Advance through the Ardennes. The German hammer blow—Rundstedt's Army Group A—moved through the difficult Ardennes simultaneously with the assaults on The Netherlands and Belgium, but by nature of the terrain and road net did not reach the Meuse until May 12. This calculated delay was sufficient to coax the Allied forces north of the Sambre in motion into Belgium. Leading the 3 German invading columns was General **Paul L. E. von Kleist**'s Panzer Group (5 armored and 3 mechanized divisions), to its north General **Hermann Hoth**'s Panzer Corps (2 armored divisions). Never dreaming that the Germans would make their main effort through the hilly, forested Ardennes, General **André-Georges Corap**'s French Ninth Army and General **Charles Huntziger**'s Second had their weakest elements in the Stenay Gap area, while the Ardennes Forest itself was screened only by small French cavalry and Belgian chasseur units, which were quickly brushed aside. With first word of the German advance, both French generals hurried their cavalry forward to cross the Meuse and delay until both armies could establish themselves on the river.

1940, May 13–15. Across the Meuse. But Corap was slow, and Huntziger's cavalry was outflanked. Supported by devastating dive-bombing attacks against accurate French artillery, one of Hoth's armored divisions forced a river crossing at Haux; General **Georg-Hans Reinhardt**'s corps of Kleist's Panzer Group was similarly getting over at Montherme and General **Heinz Guderian**'s corps at Sedan (May 13). Despite the now frantic efforts of the French, the bridgeheads were quickly expanded. The French Ninth Army was completely shattered, and the Second Army's left pulverized (May 15). The German armor, spearheaded by Stuka dive bombers, roared west on a 50-mile front, while behind them



fast-moving German infantry poured through the gap.

1940, May 16–21. The Drive to the Channel. All too late, Gamelin ordered up divisions from the French general reserve, and from the armies south of the German drive, into a new Sixth Army (General **Touchon**) to plug the gap. General Henri Giraud, succeeding the inefficient Corap, attempted to regroup the Ninth Army in the face of the tidal wave, but it was completely routed (May 17), and Giraud was captured. Brigadier General **Charles A. J. M. de Gaulle**'s 4th Armored Division made 3 successive punches into the German south flank from **Laon** (May 17–19), but after limited success (the only successful French attacks of the campaign) his gallant troops were turned back by dive bombers and counterattacks. Gamelin was relieved, General **Maxime Weygand** taking supreme Allied command (May 19). German armor reached the seacoast west of Abbeville, completely splitting the Allied forces and severing communications with the BEF's base port, Cherbourg (May 31). While the French to the south attempted to hold the line of the Somme and Aisne rivers, the severed northern grouping found itself being pinned against the sea.

1940, May 21–25. Exploitation in the North. The German armor wheeled northward in 3 prongs, from the seacoast to Arras, while the Fourth (**Günther von Kluge**), Sixth, and Eighteenth Armies pressed in from the east on the French First Army, the BEF, and the Belgian Army. Lord Gort, on the First Army left, sent a task force south behind the French to bolster the right flank and to counterattack the German armor at Arras, but this effort was repulsed by General **Erwin Rommel**'s 7th Panzer Division (May 21). Guderian's armored corps captured Boulogne and isolated the British garrison of Calais (May 22–23). Dunkirk was chosen as substitute British base. The unbearable pressure of the German attack forced the Allies off the Escault River line into an ever-shrinking perimeter, with the full force of the German armor knocking against the BEF detachment on the Allied right (May 25). Com-

plete and speedy annihilation of the penned-in Allies appeared certain.

1940, May 25–27. The Belgian Surrender. Meanwhile, on the Allied left, the Belgian Army was being pulverized by German attacks. King Leopold, deciding that further resistance was hopeless, surrendered to save further bloodshed, thus exposing the left flank of the Franco-British army to further assault. There could now be no hope of holding any part of Flanders. Churchill ordered the Royal Navy to help evacuate the British troops from Dunkirk.

1940, May 26–28. Hitler's Stop Order. By the Führer's command, the armored attack from the south was halted peremptorily. This incredible order permitted the hasty organization of perimeter defenses around Dunkirk and the equally hasty concentration of evacuation craft from the British Channel ports. The Luftwaffe was given the mission of pulverizing the Dunkirk perimeter. But the Germans in the air met an intensive, continuous attack by the RAF Fighter Command which, from bases in southern Britain, nullified German operations in a series of spectacular air battles.

1940, May 28–June 4. Evacuation from Dunkirk. Hitler rescinded his stop order and the German armor resumed assaults on the Allied right, to be checked by 3 British divisions aligned in deep zonal defense. A conglomeration of some 850 British vessels of every shape, size, and propulsion—most of them manned by civilian volunteers—converged on Dunkirk to begin the most amazing exodus in history. In 8 days, more than 338,000 men—among them 112,000 French and Belgian soldiers—were lifted. The troops streamed in orderly lines over wharves and beaches and through the surf, while overhead Spitfires of the Royal Air Force beat off most of the Luftwaffe's attempts at strafing, and their comrades along the ever-shrinking defensive perimeter held back German assaults. On the final night (June 4), General **Harold Alexander,** commanding the rear guard, personally toured the beaches and the harbor to verify the fact that the last living British soldier had been embarked, then himself got into a boat. Next morning the Germans overwhelmed the fragments of the French First Army gallantly screening the evacuation. The Battle of Flanders had ended.

COMMENT. *Aside from the duplicity and treachery of the Nazi attacks on The Netherlands and Belgium, the actual military operations of the German Army were, with one exception, clear-cut in ruthless efficiency. Hitler's strange stop order, arresting the armored assault on the boxed-in Allied armies in Flanders, cannot be charged against the German commanders. It appears to have been motivated by Goering's plea that the Luftwaffe be permitted to give the* coup de grâce *and thus have full share in the glory of victory. Added, perhaps, was Hitler's fear that miraculously the French might mount a counterattack from the south and wreck his plans of conquest.*

On the other side of the ledger, the Allied operations, having no strong, centralized control, either prior to or during the action, were disjointed and ineffective. The initial French troop distribution, with the weight of forces behind the Maginot Line defenses, was ridiculous. Friction and distrust between British and French commanders complicated the situation. Indecision was the most marked characteristic of the French high command. The over all handicap was the Allied reliance on fortifications per se, *which throttled the spirit of the offensive. Much has been made of the decay of patriotic fiber in France, sapping the warrior spirit; but the troops of the French First Army, battling without hope in front of Dunkirk while their British comrades were being evacuated, certainly behaved most gallantly.*

The Battle of France, June 5–25, 1940

With amazing precision the German armies regrouped for the conquest of France, in accordance—except for minor changes—with previously prepared plans. Bock's Army Group B was poised on the line of the Somme extended east to Bourg. Rundstedt's Army Group A continued east to the Moselle in front of the Maginot Line, and Leeb's Army Group C stretched

from there to the Swiss border. Facing it, behind the Somme, the Aisne, and the Maginot Line, the bewildered French forces were regrouping, with Army Group 3 (Besson was now on the left, Billotte having been killed in an auto accident) extending from the sea east to Rheims, Army Group 4 (Huntziger) continuing on to the Meuse and thence to Montmédy, and Prételat's Army Group 2 behind the Maginot Line. The best that Weygand could produce—with half of France's available strength already dissipated and the remainder shaken—was a defense in depth behind the Somme and Aisne. His concentration was hampered by incessant Luftwaffe bombings, dislocating rail centers and blocking troop movements on the roads. He had available only 65 divisions, 3 of them armored units already badly mauled, and 17 others fortress troops or second-line reserve units. All elements were under strength, all lacked equipment, and the general morale was very low.

1940, June 5–13. Renewed German Assault. Army Group B, spearheaded by Kleist's Panzers, struck from the Somme. Smashing through the French Tenth Army (**Félix Altmeyer**), the Germans reached the Seine west of Paris (June 9) and the armor turned westward to pin the French IX Corps and the British 51st Highland Division, one of the few remaining BEF elements still in France, against the sea at St.-Valery-en-Caux. This force surrendered (June 12). The French Seventh Army to the east put up a stiffer fight. But to restore his flank Weygand ordered Army Group 3 to withdraw to the Seine (June 8). Rundstedt's Army Group A launched its main-effort assault next day against the left of the French Group 4, east of Paris. His Panzer spearheads, under Guderian, were reinforced by Kleist's Panzers of Group B, rapidly shifted eastward. Despite valiant resistance in depth by the French Fourth Army (**Edouard Réquin**), and a series of counterattacks, Guderian's tanks crunched through at Châlons and roared southward. Kleist's armor crossed the Marne at Château-Thierry at the same time. The breakthrough was complete. The French government abandoned Paris for Bordeaux, toward which refugees in countless thousands were already pouring (June 10). Paris was declared an open city (June 13) and next day German troops marched in.

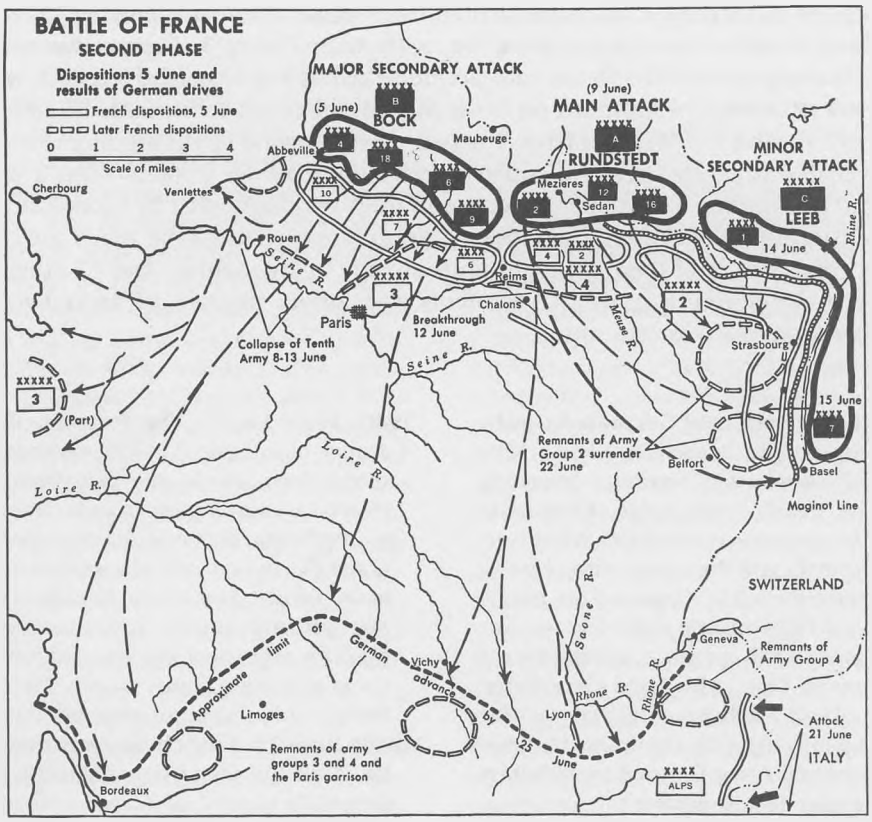
1940, June 10. Italy Enters the War. Mussolini, deciding now that France could not win, declared war and ordered an invasion of southern France.

1940, June 13–25. The Pursuit. The French armies disintegrated, while German columns spread west, south, and east. German armor swept the coastal ports from St.-Nazaire north to Cherbourg. Other Germans crossed the Loire (June 17) and easterly jabs reached the foothills of the French Alps southeast of Besançon, cutting off the French remnants behind the Maginot Line, now shattered by Army Group C's power drive (June 14–15). These isolated French troops soon surrendered (June 22).

1940, June 17. French Governmental Shuffle. After spurning Churchill's offer of an "indissoluble union" of France and Britain—to fight on forever if necessary—the French cabinet voted to sue for terms. Prime Minister **Paul Reynaud** resigned; Marshal **Henri Philippe Pétain** took his place and at once asked for an armistice.

1940, June 21. French Capitulation. General Huntziger, meeting Hitler in the railway car in Compiègne Forest where the 1917 armistice had been signed, capitulated. Hostilities officially ceased June 25. France surrendered three-fifths of her territory to German control; all French troops were disarmed. The one bright spot on France's battered military reputation shone in the Alpes Maritimes, where 6 French divisions threw back a 3-pronged invasion by 32 Italian divisions (June 21).

COMMENT. *Weygand's situation, beginning June 5, was hopeless insofar as the defense of metropolitan France was concerned. Whether he and Pétain should have accepted Churchill's offer of a Franco-English*



union, and carried on the war from Africa, is a moot question. Certainly the French fleet was intact, as was the French Army of Africa. The fall of France left Hitler the undisputed master of continental Western Europe. He now turned his eyes both northwest and east. Should he carry out his original plan and now conquer Soviet Russia, or should he tarry to invade and overwhelm seemingly helpless England?

Britain Embattled, June–December 1940

Britain, France, and the Free French

1940, June. Britain Alone. France's fall left the British Empire to face the might of the combined Rome-Berlin Axis powers. Her vital Atlantic sea lanes were menaced by German submarines, her Mediterranean lifeline by Italy's fleet and army, with Soviet Russia an Axis silent partner on the sidelines. Furthermore, there was danger that Hitler would seize the French fleet, which would provide the Axis with a clear preponderance of sea power. The Royal Navy and Royal Air Force were intact though battered, but there were insufficient destroyers in the former to carry out antisubmarine, convoy, and patrolling activities. The British Army at home was in sad state. Although the majority of the BEF personnel had been brought back from Dunkirk, they had left all their arms and other matériel behind them in France, and the remaining army troops in Great Britain (29 divisions, with little armor or artillery) were not yet combat-ready. To most neutrals it appeared that Britain must bow to

the inevitable and make peace. Hitler thought so, too, opening the door to a negotiated peace, which Churchill contemptuously slammed shut as Britain girded herself.

1940, June 23. De Gaulle and the Free French. A new element emerged from the debris of fallen France. Brigadier General de Gaulle, exponent of armored warfare, had been called from his division command (June 5) to become Undersecretary of State for National Defense in the short-lived cabinet of Paul Reynaud and had urged continued resistance. When Pétain capitulated, de Gaulle fled to England, calling on all true Frenchmen to rally and fight for freedom. The call was answered by French officers and soldiers from the world over—by driblets at first, then in mounting numbers. De Gaulle at once utilized the best of these men to organize outlying French territories. Captain **Jacques de Hauteclôche**—who protected his family by changing his name to **Jean Leclerc**—was flown to French Equatorial Africa. General **Georges Catroux** went to Cairo as Free French commander in the Middle East. Colonel **Edgard de Larminat** organized the French Congo. In England, Admiral **Émile Muselier** began organization of a Free French Navy. Although supported to great extent by the British government, this Free French movement was as yet regarded with some misgivings by both Britain and the United States, whose leaders underestimated the dynamic driving force of de Gaulle.

1940, June 24. Arms from the U.S. In response to Churchill's urgent purchase request (June 3), a large shipment of small arms, machine guns, light artillery, and ammunition arrived in England.

1940, July 3–4. Seizure of French Warships. A British squadron appeared off **Oran,** Algeria, and demanded that the French squadron there choose (a) to join England and fight Germany, (b) to turn in at an English port for internment, or (c) to sink itself in Oran Harbor. On French refusal, Vice Admiral Sir **James F. Somerville** opened fire. In a short action, 3 French battleships were sunk, a fourth escaped, and 5 destroyers fled to Toulon. British damage was light. That same day the French squadron at Alexandria—1 battleship, 4 cruisers, and 3 destroyers—disarmed itself on orders of Admiral Sir **Andrew B. C. Cunningham,** commanding the British Eastern Mediterranean Fleet. In other English ports were 2 more submarines which, on British summons, joined "Free French" forces and served with the Royal Navy throughout the rest of the war. These coups accounted for a large proportion of the French Navy. Some ships remained at the naval base of Toulon, at Algiers, Casablanca, and Dakar. The conflict at Oran, however, embittered many Frenchmen. Pétain's French Vichy government severed diplomatic relations with Britain (July 5).

1940, September 27. Rome-Berlin-Tokyo "Axis." A 3-power pact was concluded at Berlin, each partner pledging the others total aid for 10 years. The treaty did not, however, require Japan to go to war against Britain or her allies.

The Battle of Britain

Operation "Sea Lion." Hitler, against the recommendations of his army and navy chiefs, but with the Luftwaffe's enthusiastic support, had decided to invade England (June 5). Control of the sea was essential. Having no adequate surface force to oppose British naval strength, the Luftwaffe's task was first to defeat the RAF and then to neutralize the Royal Navy. French, Low Country, and Norwegian airfields were developed to maximum capability. As prelude, harassing air raids were made daily against British coastal towns and shipping during July. Meanwhile, German armies were regrouping for embarkation, and the Navy was scouring Germany and the occupied countries for landing craft.

1940, August 8–18. First Phase. Goering mustered 2,800 planes, with capability of putting up 900 fighters and 1,300 bombers in 3 fleets—Marshal **Albert Kesselring**'s Air Fleet Two, flying from northern France; Marshal **Hugo Sperrle**'s Three, from Belgian and Dutch bases; and General **Hans-Jürgen Stumpff**'s Five (mainly bombers), based in Norway. Against this force, British Air Marshal Sir Hugh Dowding's Fighter Command mustered but 650 operational fighters in 52 squadrons. German strategy was to coax the British into combat, by strafing seaports and fighter bases, and then shoot them out of the sky. However, aided by Britain's newly developed radar, Dowding was able to concentrate superior force at vital spots and the Luftwaffe's massive daily day and night attacks—1,485 sorties the first day (August 8), rising to 1,786 sorties (August 15)—were roughly handled in combats ranging in a 500-mile arc from southwest to northeast England. In continuous fighting during the rest of the period, Fighter Command still dominated the air over Britain.

1940, August 24–September 5. Second Phase. German attacks were shifted to concentrate against main inland RAF bases. Large groups of bombers, each protected by 100 fighters, crashed through by sheer weight of numbers, inflicting great damage on airfields and communication and control centers. The German high command came close to cracking Fighter Command. More than 450 British fighters were destroyed; 103 pilots were killed and 128 wounded.

1940, August 24–29. Berlin Bombed. In retaliation for a bombing of London, the RAF Bomber Command staged a night raid on Berlin. For 3 hours, 81 British planes hovered unharmed over the fog-shrouded city. Damage was small, but the psychological effect immense. The raid was repeated (August 28 and 29), despite Berlin's 2 rings of antiaircraft batteries; numerous Berliners were killed or injured. Düsseldorf, Essen, and other German cities were also attacked. Hitler and Goering, in blind rage, after undergoing a week of British reprisals, again shifted their strategy. At the moment that British air defense had reached its lowest ebb, and with victory almost in German reach, the Luftwaffe was ordered to drop its assault against British airfields and control centers.

1940, September 7–30. Third Phase. London became the target for tremendous and incessant aerial bombardment. Fighter Command, its task simplified by the German singleness of objective, was thus able to concentrate its dwindling force. The bombing of London reached its crescendo (September 15) when more than 1,000 bombers and some 700 fighters swept all day over the city in wave after wave. By nightfall, 56 assaulting planes had been downed at the expense of only 26 British aircraft. British civilian casualties were heavy during this phase—from 300 to 600 lives lost and from 1,000 to 3,000 persons injured per day in the unrelenting assaults, while a considerable portion of the city was wrecked. But English spirit refused to falter, and the Luftwaffe's losses were so great that daylight bombing had to be dropped. The aerial tide had turned.

1940, September 14–15. British Counterblow. Bomber Command, in conjunction with light naval craft, destroyed nearly 200 barges in French and Low Country ports—one-tenth of the total gathered for the proposed invasion. Hitler suspended Operation Sea Lion—scheduled for September 27. Slowly the German aerial assaults tapered off. The last daylight raid occurred September 30.

1940, October 1–30. Final Phase. Sporadic German hit-and-run raids continued, doing relatively little damage. London was lashed by another intensive air raid (October 10). Hitler now canceled Operation Sea Lion (October 12). The Battle of Britain had been won by the RAF, of whom Churchill said: "Never, in the field of human conflict, was so much owed by so many to so few." Overall losses were 1,733 German planes shot down, to 915 British.

COMMENT. *Four factors decided British victory in the air: first was an indomitable will to win; second was radar, which pinpointed enemy presence, routes, and strength; third was a well-organized, efficient*

ground-control system, which enabled concentration of superior force at the right time and place; and fourth was the German's own strategical blunder: dispersion of effort. By mid-September, Luftwaffe losses were so great that decisive victory in the air became impossible, and without air victory there could be no invasion of England.

1940, November. The Blitz Begins. While the Luftwaffe had given up its effort to gain permanent air control, sporadic night raids continued through the rest of the year. Coventry was struck (November 14–15) by about 500 German bombers and practically demolished. London was again swept by a devastating raid, causing many explosions and fires (December 29). Before the "blitz" ended (May 1941), more than 43,000 civilians—men, women, and children—had been killed and 51,000 others seriously injured.

Battle of the Atlantic

Despite the convoy system, and the addition to the British merchant marine of a number of Scandinavian vessels (most of these ships had escaped when their countries were overrun), the toll of British shipping sunk by the roving submarines kept mounting. By August 15, 2.5 million tons of shipping had been destroyed. Britain just did not have sufficient light warships to provide adequate protection for her merchant ships from the sea wolves, nor could the shipyards produce sufficient replacements.

1940, September 3. Trading Bases for Destroyers. Churchill expected his urgent shipbuilding program would in a few months produce destroyers in quantity, but until February 1941, the shortage would be tragic and perhaps fatal to Britain. U.S. President Franklin D. Roosevelt, alive to the worldwide threat imposed by Nazism, agreed to a momentous immediate exchange. For 50 old U.S. destroyers, Britain leased naval and air bases to the U.S. in its Western Hemisphere possessions—Newfoundland, Bermuda, the Bahamas, Jamaica, Antigua, St. Lucia, Trinidad, and British Guiana.

1940, September 22–25. Attack on Dakar. A British-Free French amphibious expedition attempted to take Dakar, French West Africa, to prevent its possible use by Germany as a submarine base for South Atlantic operations. General de Gaulle commanded the Free French force. Due to bad weather and Allied mistakes, the invaders were repelled by the Vichy French defenders. Churchill, hoping to avoid further bitterness between the Vichy French and Britain, ordered the attack canceled.

1940, October–December. The Surface Raiders. In late October the German pocket battleship *Admiral Scheer,* Captain **Theodor Krancke,** slipped through the blockade to pursue commerce destruction in the North Atlantic. She encountered (November 5) a 37-ship British convoy, escorted by the auxiliary cruiser *Jervis Bay,* with 4 6-in. guns, Captain **E. F. S. Fegen.** Fegen, radioing the alarm, ordered his convoy to scatter and deliberately attacked the *Scheer.* For more than an hour the unequal contest kept up until the *Jervis Bay* sank. However, 32 ships of the convoy got away. The German heavy cruiser *Hipper* also got out (November), but engine trouble later forced her into Brest for repairs. The presence of these 2 powerful vessels in the shipping lanes slowed down convoying and necessitated strengthening the escorts. The *Scheer* continued a destructive raid into the South Atlantic and Indian Oceans, returning safely to Germany 4 months later.

Operations in the Mediterranean Area, 1940

1940, June. The Situation. Control of the Mediterranean was vital to Britain. Through it ran the empire's "life line": the short sea route to

India and Australia–New Zealand. Egypt, where both the British Mediterranean Fleet and Middle East Command were based to protect the Suez Canal, was Britain's principal base securing this life line. Mussolini planned to seize the Suez Canal by a pincer movement: from Libya on the west and from Ethiopia and Italian Somaliland on the southeast. At the same time he prepared for invasion of Greece through Albania to secure the northern shore of the Mediterranean opposite Egypt. Recognizing the danger, even though Hitler was threatening to invade Britain, Churchill boldly and wisely rushed Britain's sole remaining armored division to Egypt.

Available British forces were General Sir **Archibald Wavell**'s Middle East Command, with 36,000 troops in Egypt (mostly administrative, plus the understrength armored division), 9,000 in the Sudan, 5,500 in Kenya, 1,475 in British Somaliland, 27,500 in Palestine, 2,500 in Aden, and 800 in Cyprus. His air-force contingent was very small. Admiral Sir Andrew B. C. Cunningham's Mediterranean Fleet consisted of 1 carrier, 3 battleships, 3 heavy and 5 light cruisers, and a number of destroyers. Against these forces were pitted the full strength of the Italian Navy (see table, p. 1152), the land-based Air Force, and much of the Italian Army. Italy itself lay geographically threatening Wavell's westward line of communications, while light Italian naval forces based on Ethiopian and Italian Somaliland coast ports threatened his eastern communications through the Red Sea and Indian Ocean. Mussolini's ground forces in East Africa—Ethiopia, Eritrea, and Italian Somaliland—numbered about 110,000, commanded by **Amadeo Umberto, Duke of Aosta,** while in Libya Marshal **Italo Balbo** had 200,000 men and a sizable air force.

1940, June 11. First Attack on Malta. Immediately upon declaring war, Mussolini launched 2 waves of bombers against the island of Malta—the first of many thousands of such raids.

1940, June–September. Italian Preparations. There were minor border clashes and Italian air raids as the Italians prepared for major operations against Egypt, the Sudan, Kenya, and British Somaliland.

First Western Desert Campaign, September–December 1940

1940, September 13. Graziani's Invasion of Egypt. Marshal **Rodolfo Graziani** (succeeding Balbo, killed in an air crash in June) entered Egypt with 5 divisions, moving on a narrow front along the coast. British covering forces fell back before him. Reaching Sidi Barrani (September 16), the Italians settled down in a series of fortified camps extending over a 50-mile area, while Wavell's forces—now 2 divisions strong—remained at Mersa Matruh, 75 miles east. Both sides received reinforcements. General Sir **Henry M.** ("**Jumbo**") **Wilson,** tactical commander in Egypt, made plans for attack, but operations were delayed when Wavell was ordered to occupy Crete and send part of his air force to Greece to assist in countering an Italian invasion there (see p. 1169).

1940, December 9. Wavell's Offensive. After a night approach march, Wavell's Western Desert Force, 31,000 men, 120 guns, and 275 tanks, commanded by Major General **Richard N. O'Connor,** ripped through a gap in the Italian chain of defenses. O'Connor's relatively small force—1 armored and 1 infantry division, 2 additional infantry brigades, and a battalion of the new British "I" tanks—hemstitched its way westward between the desert and the coast, gobbling in turn each Italian fortified area. Air and naval elements assisted. By mid-December, the Italians had been thrown completely out of Egypt, leaving 38,000 prisoners and great quantities of matériel in British hands. As the year ended, the Desert Force, after a pause of 2 weeks, was assaulting the perimeter of Bardia where Graziani's disorganized forces lay.

COMMENT. *This daring assault against a force 4 times its size was well planned and superbly executed. O'Connor's ground forces were ably supported by the RAF under Wing Commander* **R. Collishaw** *and by the long-range naval gunfire of Cunningham's warships along the coast. In principle the operation resembled Allenby's breakthrough in Palestine in 1917 (see*

p. 1066), in which Wavell had played a part. It must be noted, also, that at the time Wavell was launching his westward counterattack in Libya he was in process of mounting an equally daring assault into East Africa: a 2-pronged offensive to be launched simultaneously from the Sudan and from Kenya against Italian-held Abyssinia and Italian Somaliland (see p. 1173).

Greece and the Balkans

1940, October 28. Italian Invasion of Greece. General **Sebastiano Visconti-Prasca,** who had an army of 10 divisions (about 162,000 men) in Albania, advanced into Greece with 8 divisions. The Italians immediately encountered unexpectedly fierce Greek resistance. General **Alexander Papagos,** whose army numbered about 150,000 men, had disposed them in a highly organized defensive zone through the difficult mountainous border area. The Italians were thrown back by determined counterattacks. The ineffective Visconti-Prasca was replaced by General **Ubaldo Soddu** (November 9).

1940, November 22–December 23. Greek Counteroffensive. Beginning with a successful assault on Italian-held Koritza, the Greeks rolled back all opposition. Assisted by Royal Air Force detachments sent by Wavell from Egypt, the Greeks advanced into Albania. As the year ended, the Italians were clinging desperately to the line Valona-Tepelino-Lake Ochrida, immense quantities of Italian war matériel had been captured, Italian military prestige had been degraded, and British naval units were bombarding the Valona base. Marshal Pietro Badoglio, Italian Chief of Staff, was forced to resign.

1940, June–October. Other Balkan Developments. During this year, Soviet Russia seized Bessarabia and northern Bukovina (June 26–28); the Rumanian oil-field area was occupied by "protecting" German troops (October 8), and British troops from Wavell's scanty forces occupied the island of Crete (October 30). The Mediterranean area was shaping up as a major theater of war.

Naval Operations in the Mediterranean, 1940

1940, July 9. Action off Calabria. Aggressive Admiral Cunningham carried the war into enemy waters. Cruising off the Straits of Messina with 3 battleships, an aircraft carrier, 5 light cruisers, and a number of destroyers, he fell in with Admiral **Angelo Campioni**'s squadron of 2 battleships, 6 heavy cruisers, 12 light cruisers, and destroyers, returning from troop convoy to Libya. Cunningham's immediate attack drove the Italians in flight for the Calabrian coast, with serious damage to a battleship and a cruiser. British injuries were negligible, despite the intervention of land-based Italian aviation. Ten days later, HM Australian light cruiser *Sydney,* with 4 destroyers, engaged 2 Italian light cruisers off the northwestern coast of Crete, sinking 1. Meanwhile, Malta—Britain's steppingstone for air between Egypt and Gibraltar—was being strengthened, and another battleship, a carrier, and 2 cruisers were added to Cunningham's command.

1940, November 11. Naval Air Assault on Taranto. Admiral Cunningham delivered a crushing attack from carrier HMS *Illustrious* on the Italian naval base of Taranto. Three Italian battleships were left in a sinking condition, 2 cruisers badly damaged, and 2 fleet auxiliaries sunk. The British lost but 2 planes out of 21. The assault reestablished British naval supremacy in the Mediterranean. However, Italian aircraft based on Sicily, on Sardinia, and on the African coast continued interfering with British water transport. Italian submarines played a very inefficient part in these operations.

Operations in 1941

Battle of the Atlantic

The Submarine Raiders

The Wolf Packs. Under the direction of Admiral **Karl Doenitz,** German operations developed into the "wolf pack" pattern: groups of as many as 15 to 20 U-boats spread over the sea lanes approaching Britain. Any individual merchantmen were attacked at once. Convoys, however, were tracked by the discovering submarine until the pack could be assembled for several simultaneous assaults. Convoy losses mounted; by June 1941, some 5.7 million tons of British shipping had been sunk, whereas British shipyards could only build 800,000 tons of replacements. When the British intensified their long-range aerial searches, and began to use land-based air escorts in the eastern Atlantic, the wolf packs simply moved out to mid-Atlantic, beyond operational range of aircraft based in Northern Ireland or Great Britain. British bombing reprisals against U-boat bases in Germany, Norway, and France were frustrated by construction of so-called "pens," great roofs of reinforced concrete protecting submarine berths and shore installations.

The German Long-Range Bombers. Working in close coordination with the wolf packs were German long-range bombers based in Norway and France. These were able to scour the sea lanes closer to Britain, while still staying beyond the range of RAF fighter planes. Convoys that had been harassed by the wolf packs in mid-ocean suffered further serious losses from these planes as they approached Britain.

1940, September. Introduction of the Escort Carrier. Britain's answer to the combined menace of U-boats and bombers was to develop constant fighter-plane protection for convoys by means of escort carriers. The first of these, HMS *Audacity*, a merchant ship on which a flight deck was constructed, could carry 6 fighter planes. Working with destroyers and other surface warships, these planes somewhat reduced the wolf-pack menace in mid-ocean, and were able to drive off the bombers when the convoys approached the French coast. The *Audacity* was sunk in December, and U-boat sinkings began to mount again. But more escort carriers were being constructed for use in 1942.

The Surface Raiders

1941, January–March. *Gneisenau* and *Scharnhorst.* These two battle cruisers under command of Vice-Admiral **Günther Lütjens** entered the North Atlantic. Five unescorted merchantmen were sunk, but the German efforts to find a convoy unescorted by British battleships were unsuccessful until March 18. Falling on a convoy just scattering from a submarine attack, the 2 German surface craft destroyed 16 vessels in a 2-day running chase, then fled for Brest as British battleships converged on the area. An RAF bombing attack found them there in harbor and so severely damaged them that they were out of action for several months.

1941, February–April. *Hipper.* Operating from Brest, the *Hipper* undertook a successful raid into the North Atlantic (February). Later she returned to Germany, slipping past British patrols between Iceland and Scotland.

Cruise of the Bismarck, May 18–28

1941, May 18. The *Bismarck* Leaves Gdynia. This giant new German battleship, largest and most powerful warship in the world at the time,

in company with the new heavy cruiser *Prinz Eugen,* sailed to Bergenfjord.

1941, May 21. British Concentration. The *Bismarck* and *Prinz Eugen* were sighted in Bergenfjord by British reconnaissance planes. All available units of the Royal Navy—from Scapa Flow to Gibraltar—concentrated for their destruction.

1941, May 21. The *Bismarck* Puts to Sea. Admiral Lütjens took advantage of foggy weather; his 2-ship squadron sailed out, undetected by the British, heading for Denmark Strait.

1941, May 24. Battle of Denmark Strait. British cruisers sighted the German ships entering Denmark Strait (late May 23). Vice-Admiral **Launcelot Holland** in the battle cruiser HMS *Hood,* with the new battleship *Prince of Wales,* intercepted them early next morning. Fire opened at 25,000-yard range. A 15-inch shell from the *Bismarck* penetrated the *Hood's* vitals and the great ship blew up, taking all but 3 of her 1,500-man crew to the bottom with her. The *Bismarck*'s excellent gunnery then severely damaged the *Prince of Wales,* forcing her to turn out of the fight. Despite damage to his own ship, Admiral Lütjens continued westward to the open sea. The damaged *Prince of Wales* and the light cruisers *Suffolk* and *Norfolk* trailed the German vessels, while other British warships gathered.

1941, May 24–26. The Chase. Lütjens turned east for Brest, ordering the *Prinz Eugen* to slip away. The British lost contact for more than a day, but a land-based patrol plane sighted the *Bismarck* again during the morning of May 26, 700 miles west of Brest.

1941, May 27–28. Death of the *Bismarck*. H.M.S. carrier *Ark Royal* successfully attacked to slow the German ship down and enable the battleships *Rodney* and *King George V* to catch up (May 27). That night a destroyer flotilla closed, inflicting further torpedo damage. Next morning the *Rodney* and *King George V* engaged the *Bismarck* in furious gun battle, finally silencing her. The great helpless, but still defiant, hulk resisted the British 14- and 16-inch shells. Finally, the cruiser *Dorsetshire*—just arrived—sent 2 torpedoes into the blazing *Bismarck* and sank her. Nearly 2,300 German sailors went down, including Admiral Lütjens. Only 110 survivors were picked up by the *Dorsetshire* and a destroyer before the arrival of a German U-boat prevented further rescue efforts.

"Ultra"—Reading German Radio Traffic

Radios were in use by armies and navies very early in the 20th century. Since wireless, or radio, transmissions can be received by friend and foe alike, the practice of encrypting messages was well established before World War I, to make them unreadable to all except intended recipients. After that war cryptography became dependent upon extremely complex electric coding machines, in many ways the forerunners of modern computers.

The most sophisticated of these was the German "Enigma" machine. The Germans remained confident to the end of the war that this machine could never be duplicated nor its codes broken. They were wrong! Furthermore, it was duplicated just before the war by scientists in Poland, a country scorned by the Germans. In a noteworthy act of allied loyalty and generosity, while Poland was being overwhelmed by Germany in 1939, Polish scientists delivered copies of their version of the Enigma machine to French and British colleagues. The Polish machine was not an exact duplicate of Enigma, but it was workable, and could read many German messages.

France was defeated and overrun by Germany in 1940 before French cryptographers received significant benefit from the Polish machines. The British, however, had improved the Polish Enigma, and were reading a substantial proportion of intercepted German radio messages. They had established a system—now given the code name "Ultra"—for getting important

intelligence information from these messages rapidly into the hands of senior military commanders who could use it. Ultra information had already been very useful to the Royal Navy in combatting the German submarine campaign.

American Involvement, 1941

Waning of Isolationism in America. Despite reluctance to become involved in the war, most Americans began to realize the danger to the Western Hemisphere and to the world if Hitler should be able to starve Britain into surrender. President Roosevelt's cautious but deliberate steps to provide all possible assistance to Britain, short of declaration of war, were approved by most of his people.

1941, March 11. Lend Lease Act. The terms of this act empowered the President to provide goods and services to nations whose defense he considered to be vital to the defense of the United States.

1941, April 10. Protection of Greenland. Fearing the possibility that Germany might try to establish a Western Hemisphere base in this Danish possession, President Roosevelt announced that Greenland would be under U.S. protection.

1941, July 7. American Troops to Iceland. This step permitted the garrison which Britain had placed there to be withdrawn for active operations against Germany. It also paved the way for the next planned step.

1941, August 9–12. Atlantic Conference. Roosevelt and Churchill met on American and British warships in Placentia Bay, Newfoundland. In the Atlantic Charter, they pledged their countries to preserve world freedom and to improve world conditions after the war (published August 14). At the same time Roosevelt announced that American warships would escort all North Atlantic convoys west of Iceland.

1941, September 16. Beginning of American Convoys. The U.S. thus became a quasi belligerent in the war, and British warships which had been patrolling and escorting convoys west of Iceland were now free to intensify the anti-submarine war in the eastern North Atlantic. Germany promptly responded to this American quasi belligerency by attacking American warships on convoy duty. Two destroyers (USS *Kearney* and *Reuben James*) were torpedoed; the *Kearney* limped to safety, the *Reuben James* was sunk (October 17, October 31).

1941, December 24. St. Pierre and Miquelon. Free French Admiral Muselier, with a cockleboat squadron, seized the islands off the Canadian coast, depriving the U-boats of a potential base, but causing some embarrassment to the U.S. government, which was keeping a tenuous link with Vichy.

Operations in the Mediterranean Area, 1941

Wavell's Offensives in North and East Africa

1941, January 1–February 7. Campaign in Cyrenaica. The Western Desert Force resumed the offensive with the opening of the new year. **Bardia** was carried by assault (January 5) after an intensive naval bombardment, while the 7th Armored Division ("The Desert Rats") isolated Tobruk. Land assault against the southern face of **Tobruk**'s perimeter, accompanied by intensive air and naval bombardment, brought capitulation (January 22). The 7th Armored Division raced west across the desert bulge of Cyrenaica to cut off the remaining Italian troops, while the main British force pressed on along the coast road. The British armor closed the trap at **Beda Fomm,** on the Gulf of Sirte (February 5). Two days later, after an abortive effort to break through, General **Bergonzoli**'s demoralized Italians surrendered unconditionally.

COMMENT. *In 2 months' time, O'Connor's Western Desert Force had advanced 500 miles, destroyed 9 Italian divisions, and taken 130,000 prisoners, 400 tanks, and 1,290 guns. At no time did O'Connor employ more than 2 infantry divisions at once, though the "Desert Rats" were engaged throughout the operation. British casualties amounted to 500 killed and 1,373 wounded. It was a remarkable demonstration of fire and movement, aided by effective naval and air support, against an inept passive defense greatly superior in numbers.*

1941, January. British Plans against Italian East Africa. Simultaneously, Wavell launched a pincers offensive against the duke of Aosta's 110,000 troops in Ethiopia and Italian Somaliland. Lieutenant General **William Platt** with 2 South African divisions and indigenous troops was to strike east from Khartoum in the Sudan; Lieutenant General Sir **Alan A. Cunningham** in Kenya, with 1 South African and 2 African divisions and a conglomeration of Commonwealth and Free French forces, would move northeast. The combined forces totaled some 70,000 men.

1941, January 19–April 20. Invasion of Ethiopia and Eritrea. Platt crossed the frontier (January 19). He caught up with and defeated Italian General **Frusci**'s force at **Agordat** (January 31). He pursued to the defended defile of **Keren,** and broke through after severe fighting (March 3). Asmara and its seaport Massawa were occupied (April 1). Turning south, the British column now faced Amba Alagi, a 1,000-foot conical mountain, where Frusci's command planned a stand.

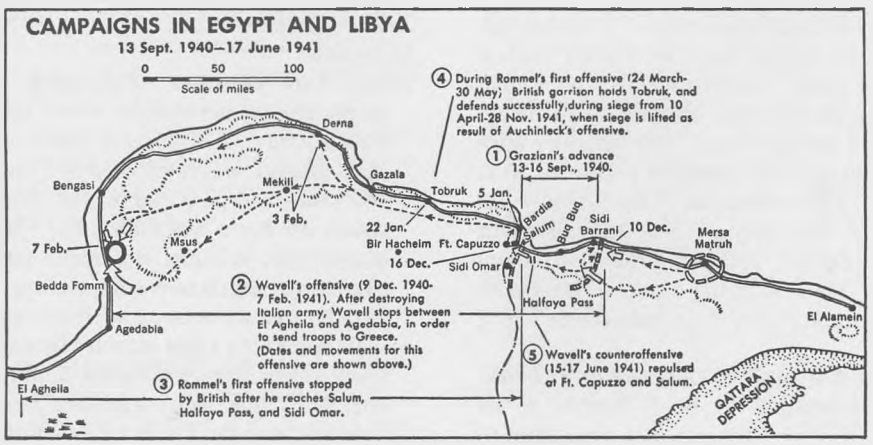
1941, January 24–March 30. Invasion of Somaliland and Ethiopia. Cunningham moved into Italian Somaliland (January 24), meeting little resistance. Occupying Mogadiscio on the Indian Ocean (February 25), he captured a huge supply depot of gasoline. The Italians began evacuating Somaliland. Reaching Jijiga (March 17), Cunningham pushed on to Harar (March 25).

1941, April 4. Capture of Addis Ababa. Turning southwest, Cunningham occupied the Ethiopian capital while the Duke of Aosta hurriedly retired northward. In an amazing advance of more than 1,000 miles, Cunningham had averaged 35 miles per day, captured 50,000 prisoners, and gained 360,000 square miles of enemy-held terrain at a cost of 135 men killed, 310 wounded, 52 missing, and 4 captured. He now moved north, occupying Dessie, 250 miles from Addis Ababa (April 20), after a brush at the **Combolcia Pass** with the Italian rear guard. Aosta's demoralized forces joined Frusci's at Amba Alagi.

1941, May 5. Return of Emperor Haile Selassie to Ethiopia.

1941, May 18. Italian Capitulation. Aosta surrendered as Platt and Cunningham pressed in.

COMMENT. *Another daring, fast-moving British*



offensive had resulted in clear-cut victory. As in Libya, the Italian high command had proven to be inept. Wavell's daring strategy securely bolted his back door, eliminating any future threat to the Suez Canal from East Africa, and secured the Red Sea as an Allied supply channel.

Germany Redresses the Mediterranean Balance

1941, January–March. Appearance of the Luftwaffe. Hitler, to bolster Mussolini, sent the Luftwaffe's Air Corps X (500 planes) from Norway to Sicily (January). By the end of February, the long-range German bombers barred use of the port of Benghazi as a base for Wavell's Desert Force. The necessity to send most of his combat troops to Greece and Crete (see p. 1175) had by this time reduced this force to 1 armored division, part of an infantry division, and a motorized brigade.

1941, March. Arrival of Rommel. Hitler sent General Rommel with his Panzer Afrika Korps to Tripolitania, charged with command of Axis operations against Egypt and the Suez Canal. (Titular commander, Italian General **Ettori Bastico,** was a mere figurehead.)

1941, March 24–May 30. Rommel's First Offensive. With the 21st Panzer Division and 2 Italian divisions—1 armored and 1 motorized—Rommel drove back the British covering force at **El Agheila** (March 24), then branched out in reverse of the original British offensive—the Italian column following the coast through Benghazi on Derna, the 21st Panzer cutting across the desert toward Tobruk. The British 2nd Armored Division, attempting to delay, was split; 1 brigade, forced into Derna because of gas shortage, was captured (April 6). Next day, most of the remainder of the division was surrounded and captured. The 9th Australian Division reached Tobruk. Brilliant General O'Connor, reconnoitering on the Barce-Derna road, was captured by a German patrol (April 17).

1941, April–December. Defense of Tobruk. Wavell determined to hold Tobruk at all costs—to deprive Rommel of a base port to support further advance into Egypt, and to threaten the Italo-German flank. By sea he threw in the 7th Australian Division and some tanks to reinforce the Tobruk garrison. Rommel (April 10) mounted an ill-prepared assault and was thrown back after a 3-day attack. Advancing part of his force to the Sollum escarpment east of Tobruk, Rommel invested the fortress, while overhauling his tanks and bringing up reinforcements. His supply problem was now serious, thanks to Wavell's decision to hold Tobruk and to the aggressive operations of the Royal Navy, which took continuous toll of Axis surface transport shuttling between Italy and Tripolitania.

1941, June 15–17. Wavell's Counteroffensive. Forced by political pressure from home to attempt the relief of Tobruk, Wavell launched a shoestring offensive against the Sollum-Halfaya passes held by Rommel—1 infantry division and an armored division participated. Split into 6 semi-independent task forces and committed piece-meal, the British attack was repulsed by Rommel after some minor successes.

1941, July 1. Wavell Superseded. General Sir **Claude Auchinleck** assumed the Middle East Command. General Wavell was transferred to India.

COMMENT. *Fifty-eight-year-old Wavell, a master of offensive-defensive strategy, was in effect made a scapegoat for the disastrous British intervention in Greece (see p. 1175), which had been added to his already monumental task of holding the Middle East for Britain.*

1941, July–October. Opposing Preparations. The Western Desert Force, renamed the Eighth Army, with General Alan Cunningham in command, was reinforced to 7 divisions and 700 tanks and prepared for the offensive. The Desert Air Force was built up to 1,000 planes. Meanwhile, Rommel was regrouping the Afrika Korps, which now comprised the 15th and 21st Panzer Divisions and the understrength 90th and 164th Light Infantry Divisions, and 6 weak Italian divisions. Bardia, Sollum, Halfaya, and Sidi Omar were organized into first-line defenses as springboards for invading Egypt. He

had 260 German and 154 Italian tanks, and was supported by 120 German and 200 Italian planes.

1941, November 18–December 20. Auchinleck's Offensive. Cunningham's Eighth Army in surprise attack struck northwest from its base at Mersa Matruh. Its new American "Stuart" light tanks sought Rommel's army south of Tobruk, while the main force swung north to isolate the Italo-German Sollum-Bardia defensive zone. In a series of uncoordinated desert tank battles around **Sidi-Rezegh** (November 19–22), the British were checked, while a sortie from Tobruk was repulsed; seemingly, the British offensive was stalled. Rommel, with reinforced air support, gathered all available tanks and struck over the frontier into the British rear areas. Near panic resulted, and Cunningham contemplated withdrawal. But Auchinleck insisted on a stand. Rommel's momentum was checked, and junction between the Tobruk garrison and a New Zealand division then split the Afrika Korps. The surrounded Germans succeeded in breaking out, and Rommel then withdrew to the west and south of Tobruk (December 7–8). Auchinleck, having retrieved the situation, replaced Cunningham by General **N. M. Ritchie.** Under continued British pressure, Rommel then withdrew his mobile forces all the way back to his original position at El Agheila (December 28–30). The Italo-German garrisons at Bardia and Halfaya were captured (January 2–17, 1942). Italo-German losses were 24,500 killed and wounded and 36,500 prisoners. British losses were about 18,000 in all. But Rommel had also lost 386 tanks and 850 aircraft.

COMMENT. *General Auchinleck's determination had for the moment removed a most serious threat to the Suez Canal and the British Empire itself. Rommel was back where he had started.*

Iraq and Syria

1941, May. Operations in Iraq. Nazi-stimulated outbreaks in both countries added to General Wavell's troubles in the Middle East. **Rashid Ali,** Prime Minister of Iraq, attacked British garrisons at **Basra** and **Habbaniya** (May 2), threatening the Iraqi oil preserves essential to the Allied war effort. At the same time Hitler sent in munitions, and finally an Italo-German air base was established at Mosul. British reinforcements from India and from Wavell's scanty Palestine garrison—already occupied in Syria (see below)—hurriedly assembled, took the offensive. RAF planes struck the Mosul air base, while ground troops moved on Baghdad. Rashid Ali fled the country, Baghdad was occupied (May 30), and stability was reestablished.

1941, June–July. Operations in Syria. Meanwhile, the 35,000 pro-German Vichy French forces in Syria, directed by German military and political advisers, threatened from the north. At Churchill's order, Wavell scraped together a 20,000-man force and invaded Syria from Palestine and Iraq (June 8). Free French troops under Catroux's command played an important part in the expedition. Damascus was soon captured (June 21). This caused the surrender of General **Henri Dentz,** French commander in Syria (July 12). Syria and the Lebanon were transferred to Free French control, most of the Vichy French troops volunteering to join Catroux's command.

Operations in the Balkans, 1941

1941, February–March. German Pressure on Yugoslavia. Hitler, planning an invasion of Russia in the summer of 1941, determined to secure his southern flank by first gaining control of Yugoslavia. (Hungary and Rumania were already German satellites.) Under intense diplomatic pressure and threats of force, Yugoslavia's Prince Regent **Paul** reluctantly agreed to join the Axis alliance (March 25).

1941, March 7–27. Arrival of British Troops in Greece. In anticipation of German intervention in the Balkans, and possibly against Greece, the British government had ordered Wavell to send his best Middle East Command troops to Greece. This 4-division force of

57,000 men was commanded by General Maitland Wilson.

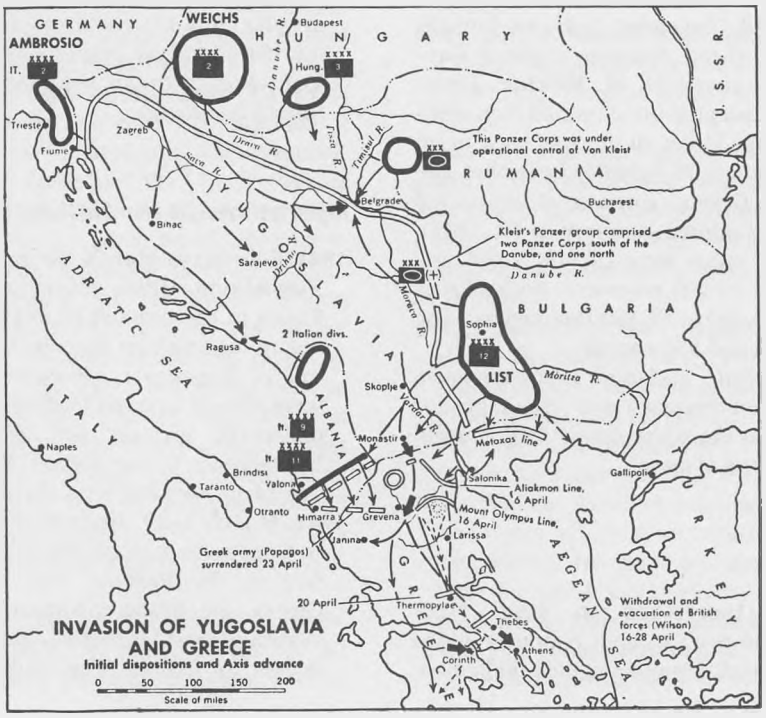
YUGOSLAVIA

1941, March 27. Coup d'État. Patriotic anti-German elements in the Yugoslav Army, encouraged by the presence of British forces in Greece, overthrew Prince Paul, established a new government, and rejected the Axis alliance.

1941, March 27–April 6. German Preparations. Hitler, infuriated by events in Yugoslavia, which he felt resulted from the failure of Italy's invasion of Greece, ordered his military staff to mount an immediate attack against Yugoslavia and Greece. The German planners did so in 10 days—an amazing demonstration of military efficiency. Marshal **Wilhelm List**'s Twelfth Army and Kleist's First Panzer Group (both in Hungary and Rumania preparatory to the Russian invasion) were shifted to southwestern Rumania and Bulgaria, opposite the Yugoslav and Greek borders. The hurriedly organized Second Army was assembled in Austria and Hungary opposite northern Yugoslavia. The Italian Second Army, from Trieste, and the Hungarian Third Army were to assist.

1941, April 6–17. Invasion of Yugoslavia. After bombing that concentrated on Belgrade, paralyzing the Yugoslav high command, German armored and infantry forces slashed into the country from north, east, and southeast. Efforts to mobilize the million-man Yugoslav Army were never completed. Zagreb fell (April 10), Belgrade (April 12), and Sarajevo (April 15). Resistance ended in unconditional surrender (April 17). German losses totaled 558 men. Yugoslav losses are unknown; more than 300,000 were captured, perhaps 100,000 killed and wounded.

1941, May–December. Yugoslav Resistance Movements. Many Yugoslav officers and soldiers, refusing to surrender, fled to mountain hideouts from which they harassed the Germans. The principal leader of these refugees,



called **Cetnici** (Chetnicks), was Serbian Colonel **Draza Mihailovic.** One of his principal Montenegrin subordinates was Major **Aleksa J. Dujovic.** About the same time, the leader of the Yugoslav Communist Party, **Josip Broz**—known to his followers as **Tito**—established the National Liberation (or Partisan) Movement, operating then in areas other than Serbia and Montenegro. Partisans and Chetnicks hated each other as much as they did the Germans. By the end of the year a bitter, bloody 3-way war was raging in Yugoslavia.

Greece

1941, April 6–9. Invasion of Greece. Simultaneously with the Yugoslav invasion, other elements of List's army smashed against Greece's fortified Metaxas Line, east of the Struma River, where Papagos mistakenly ordered his Second Army to hold. Penetrating quickly, the German spearheads reached the sea at Salonika (April 9). The Second Army, cut off, surrendered. The German Twelfth Army pressed westward toward the British, just arriving and preparing defensive positions between Mt. Olympus and Salonika. Kleist's armored group, driving south from Skoplje, struck through the Monastir Gap, held by a Greek division protecting the British left. The Greeks crumbled; after severe fighting, Wilson withdrew to new positions north of Mt. Olympus.

1941, April 12–20. Battle for Central Greece. German Spearheads forced their way through the rugged mountains of northern Greece between the British and the Greek First Army, now belatedly retreating from Albania. Gallant Papagos, convinced that success was impossible, recommended to Wilson that the British evacuate while he delayed the Germans as long as possible. Meanwhile, Wilson was forced to abandon his Mt. Olympus position, withdrawing to Thermopylae.

1941, April 21–27. Conquest of Greece. Assailed from north, east, and south, the Greek Army, after desperate resistance, was forced to surrender (April 23). Wilson abandoned Thermopylae (April 24), pulling back into the Peloponnesus, as Royal Navy warships, braving violent Luftwaffe attacks, began to move in to pick up British troops by night at eastern Greek ports. A German airborne drop at Corinth (April 26) almost closed the withdrawal route, but Wilson fought his way through with most of his remaining troops. British evacuation was completed on April 27, 43,000 troops being rescued, but all heavy equipment was abandoned. German losses in Greece were slightly over 4,500 men; the British had 11,840 casualties. Greek killed and wounded were more than 70,000; 270,000 were captured.

COMMENT. *The German operations in Yugoslavia and Greece were models of precision and efficiency, marked by bold use of tanks over terrain supposedly impassable to armor.*

Crete

1941, April 27–May 10. Preparations. About 15,500 of the British troops evacuated from Greece were landed on Crete, expected to be the next German objective. There, joined by 12,000 reinforcements from Egypt and assisted by the 14,000-man Greek garrison, they feverishly prepared the island for defense, despite severe shortages in artillery and other equipment. In command was New Zealand Major General **Bernard C. Freyberg.** The small RAF fighter force on the island was soon forced to withdraw by increasingly severe German air raids, which daily mounted in intensity. In southern Greece, the German XI Airborne Corps, commanded by Lieutenant General **Kurt Student,** prepared for an airborne assault on the island.

1941, May 20–28. The Assault. Following heavy aerial bombardment, units of the German 7th Parachute Division began landing near the principal airports of Maleme, Rethymnon, and Herakleion. The alert defenders inflicted heavy casualties, and by nightfall still controlled the fields, though a few German units had established themselves near Maleme (May 20). Regardless of casualties, the remainder of the 7th Division dropped the next day and gained control of part of Maleme airfield. Student immediately began to send in elements

of the 5th Mountain Division by plane. Most of the planes were destroyed, but enough crash-landed safely to permit the determined Germans to hold the field. The most intensive fighting continued in the following days, as German reinforcements continued to come in by plane. Two efforts to send reinforcements by sea were repulsed, with heavy casualties, by the Royal Navy (May 21–22). The airborne elements, however, with very effective air support, were able to force the British and Greeks back. Freyberg was finally forced to withdraw to the south coast (May 28).

1941, May 28–31. Conquest of Crete. Under heavy German pressure, most of the defenders withdrew to Sfakia, whence they were evacuated by the Royal Navy. Remaining elements, cut off by the Germans, were forced to surrender (May 31). British casualties were 17,325 (including 2,011 naval losses and 11,835 prisoners). The Germans admitted 5,670 casualties, mostly in the 7th Division; this does not include losses in the seaborne convoys.

COMMENT. *This was the first major airborne assault in history; despite its success, Hitler was so shocked by the losses that he never again ordered a comparable airborne operation.*

Naval Operations in the Mediterranean, 1941

1941, February 9. Surface Raid on North Italy. Daringly, British Admiral Somerville (February 9) with 2 battleships, a carrier, and a cruiser from the Gibraltar naval base swept the northeastern coast of Italy, bombarding Genoa and other ports.

1941, February–March. German Air Intervention. German planes sent to Sicily by Hitler (see p. 1174) established aerial superiority over the central Mediterranean, disrupting Allied surface and air activities. Malta was bombarded incessantly. Shipping from England had to be rerouted via the long Cape of Good Hope route into the Indian Ocean and the Red Sea. The carrier H.M.S. *Illustrious* was badly damaged and a cruiser was sunk.

1941, March 26–27. Sortie of the Italian Fleet. British troop movements from Egypt to Greece led Italian Admiral **Angelo Iachino** to attempt to intercept. The Italian fleet—3 battleships, 8 cruisers, and a number of destroyers and supporting craft—covered by Italian and German air, was divided into 3 detachments. Admiral Cunningham, learning (March 27) that the Italians were threatening several large convoys, ordered the transports back to Egypt and hurriedly steamed to meet the threat. He had 3 battleships, 1 carrier, 4 cruisers, and more than a dozen destroyers.

1941, March 28. Battle of Cape Matapan. Harassed by Cunningham's cruiser-carrier force, the Italians turned away. The battleship *Vittorio Veneto* and heavy cruiser *Pola* were damaged, however, and slowed down. After dark, Admiral Iachino sent 2 cruisers and 4 destroyers back to their assistance. At 10 P.M., Cunningham's pursuing battleship force fell in with the *Pola* and the rescuing Italian vessels, and in surprise attack sank them all. The injured *Vittorio Veneto* and the remainder of the Italian fleet escaped in the darkness. One British cruiser was slightly damaged and 1 airplane lost. From this time to the end of the war, Italian surface naval strength ceased to be an important factor; it remained mostly in port at La Spezia.

1941, April 26–June 1. Evacuation of Greece and Crete. Hitler's conquest of Greece and occupation of Crete (see above) placed an almost insuperable task on Admiral Cunningham's Mediterranean command: evacuating British troops by sea first from Greece and then from Crete. British surface craft, without air support, were subject to full-scale, determined, and incessant attack by Luftwaffe planes from Italy and Thessaly.

1941, April 26–30. Evacuation from Greece. Using all available shipping and operating under cover of darkness, the Royal Navy lifted some 43,000 of General Wilson's ill-fated Grecian expedition from the Piraeus and from Peloponnesian beaches. Some of the evacuated troops were landed on Crete. Two destroyers and 24 other vessels were lost to German air attacks, and severe damage was inflicted on other British ships.

1941, May 21–June 1. Operations off Crete. A German amphibious operation (May 21–23) to reinforce the airborne assault on Crete met complete disaster. Cunningham's war vessels fell on the small craft attempting to shuttle troops from Greece, sinking most of them. Some 5,000 German troops were lost. Continuous air attacks harassed the British ships in the waters around Crete, sinking 2 cruisers and a destroyer, and damaging 2 battleships and 2 more cruisers. Despite these losses, Cunningham's ships dared the impossible to evacuate more than 15,000 of General Freyberg's Cretan command (May 28 and 31). During this period, 4 cruisers and 6 destroyers were sunk, and 1 carrier and 3 battleships so severely damaged they would be out of action for some time. British naval casualties included 2,000 men killed.

1941, June–December. Other Operations. Arrival of 25 German U-boats in the Mediterranean further complicated the British naval situation. Cunningham's fleet, already crippled by its Greco-Cretan operations, and charged with assuring surface supply to Malta, was put on the defensive. Italian light craft attempted a raid on the Valetta harbor, but were repulsed by British coastal artillery (July). Also, German air attacks on Malta were intensified, for Malta—the "unsinkable aircraft carrier"—was severely punishing German trans-Mediterranean supply to Rommel. The German reinforcements soon made themselves felt. The *Ark Royal,* Cunningham's 1 aircraft carrier in service, was sunk while on escort duty—a disastrous loss (November).

1941, December 19. British Naval Disasters. Three Italian "human torpedo" teams—midget submarines guided by 2 men each—boldly entered Alexandria Harbor and further damaged the battleships *Queen Elizabeth* and *Valiant,* putting them completely out of action for many months. The gallant Italians escaped. That same day, a task force of 3 British cruisers and a destroyer met disaster in a mine field. One cruiser and the destroyer were sunk and the other vessels crippled for months. On Christmas Day, the battleship H.M.S. *Barham,* Cunningham's 1 remaining capital ship, was torpedoed by German submarine *U-331* and sunk with heavy loss of life. Shortly afterward, another British cruiser was torpedoed.

COMMENT. *At year's end Cunningham's fleet, reduced to 3 cruisers and a handful of destroyers, was seemingly impotent. Supply to Rommel was unimpeded. One bold move by the Italian Navy could have swept British sea power from the Mediterranean. But the move never came. Cunningham kept his handful of warships constantly and aggressively at sea and British counterintelligence blacked-out news of the damage to the battleships at Alexandria.*

Invasion of the U.S.S.R., 1941

German Plans. Hitler considered the dismemberment of the Soviet Union as the final step essential to achieving his *Lebensraum* dreams (see p. 1133). Planning for an attack on the U.S.S.R., therefore, began as soon as France was conquered. Time was of the essence, since it was evident that Stalin planned westward expansion, both in the north—Finland—and in the south—Turkey and the Dardanelles. Formal planning began in December 1940, and troops were shifted to the eastern frontier. Originally set for May 15, 1941, the invasion timetable was seriously disarranged by the necessity for the Balkan campaigns to clear the German southern flank.

In Operation "Barbarossa," Rundstedt's Army Group South—4 armies (1 Rumanian) and Kleist's First Panzer Group—was to drive on Kiev and the Dnieper Valley to envelop and destroy all Russian forces between the Pripet Marshes and the Black Sea. Bock's Army Group Center—2 armies and 2 Panzer groups (Guderian's Second and Hoth's Third)—was to follow

the traditional invasion path: Warsaw-Smolensk-Moscow. Its armored pincers were to meet on the upper Dnieper, then capture Moscow. Leeb's Army Group North—2 armies and Hoeppner's Fourth Panzer Group—was to swing northeast toward Leningrad, pinning the Soviets in its zone against the Baltic Sea. Finland allied itself with Germany, and Mannerheim's Finnish army group was to occupy the Karelian Isthmus-Lake Onega front, threatening Leningrad from the north, while still farther north, German General Falkenhorst's Norway Army was to cut the Soviets' Murmansk-Leningrad supply line. In all, 162 divisions of ground troops—approximately 3 million men—were involved, 200,000 of them from satellite nations. Hitler envisioned a typical blitzkrieg campaign of not more than 4 months' duration.

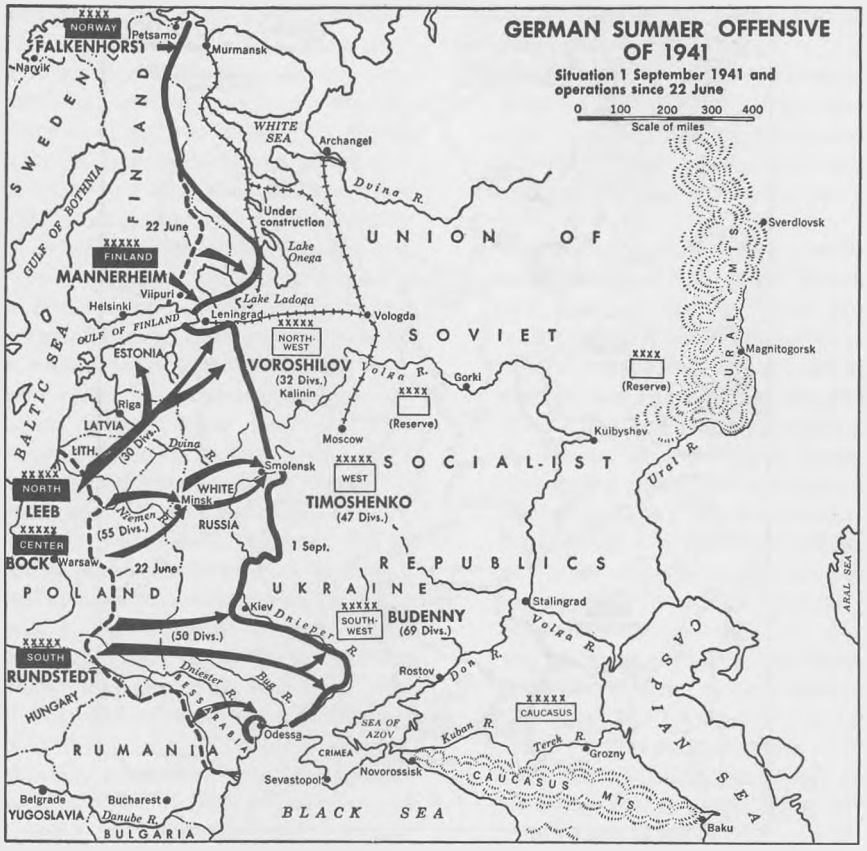
Russian Plans. Soviet forces were heavily concentrated along the western frontier in the annexed regions of Poland, Bessarabia, and the Baltic States. South of the Pripet Marshes lay Marshal **Semën M. Budënny**'s Southwest Front (Army Group), north of the Marshes and up to the Lithuanian border was Marshal **Semën K. Timoshenko**'s Western Front, and Marshal **Kliment Voroshilov**'s Northwest Front was in the Baltic countries. Soviet mobilized strength approximated 3 million on the western front, with another million scattered elsewhere. Reserves were available in great quantity. Russian matériel—tanks, cannon, and planes—was plentiful, but inferior in quality to German equipment.

1941, June 22–July 10. The Invasion. Simultaneously, along a 2,000-mile front, the onslaught started at 3 A.M. with the customary preliminary air bombardment. Though the Soviets expected an invasion, tactical surprise was complete. Center Army Group advanced spectacularly. Its armored pincers closed on **Minsk** by mid-July, enfolding 290,000 prisoners, 2,500 tanks, and 1,400 guns, then opened in another scoop as the Panzers crossed the Dnieper.

1941, July 10–19. Smolensk. Again the trap snapped, bagging an additional 100,000 prisoners, 2,000 tanks, and 1,900 guns. The remnants of Timoshenko's Western Front recoiled in disorder. One of Bock's spearheads reached Beloj, less than 200 miles west of Moscow. But Rundstedt's Army Group South had made slower progress, while difficult terrain and some errors slowed down Leeb's group on the north. The German supply system was strained to the breaking point by the immense distances, slowing the advance. Tanks and other vehicles were showing the strain of terrific pace and long marches. In all probability, however, these things would not have saved Moscow from the still fast-moving German Army Group Center had Hitler himself not intervened to check its momentum.

1941, July 19–August 21. Hitler's Changes. To bolster the slower-moving flank armies; Hitler detached both Panzer groups and 1 army away from the Army Group Center, despite the vigorous protests of his field commanders. Guderian's Second Panzer Group and the Second Army (**Maximilian von Weichs**) were to support Rundstedt's Army Group South, which by this time had almost reached Kiev. Hoth's Third Panzer Group was to join Army Group North. The immediate results of this unexpected change were favorable.

1941, August 21–September 26. The Kiev "Pocket." Guderian's Panzers from the north, slicing around the eastern edges of the Pripet Marshes, met Kleist's Panzers from the south, to press 5 Russian armies inside the great bend of the Dnieper, near Kiev. German infantry sealed the trap. A period of confused fighting followed as some Soviet units battled to break out; others of Budënny's army group sought to rescue them. Kiev itself fell (September 19), and finally some 665,000 Soviet troops surrendered. Budënny's Southwest Group seemed to have been completely shattered. Meanwhile,



on the far southern flank, the Germans reached the Crimean Peninsula, where General **Erich von Manstein**'s newly formed Eleventh Army began a drive for Sevastopol (October). By this time the Luftwaffe had destroyed 4,500 Soviet planes, while losing less than 2,000.

1941, October–November. Time, Space, and "General Mud." Rundstedt reached the Don (October 15), threatening Rostov and Kharkov. Leeb slowly progressed toward Leningrad, which was invested (early October). But the Finnish Army, after reaching the original national boundaries, refused to press farther toward Leningrad, and in the far north Falkenhorst, after initial gains, bogged down in the tundra. The Murmansk-Leningrad supply line, though partly disrupted, was never closed entirely. Hitler, meanwhile, had changed plans again and ordered an extreme effort against Moscow. Bock's Army Group Center, reinforced again by the Panzers and Luftwaffe elements taken from it to bolster the flanks, renewed its penetration, winning another tremendous victory at **Vyazma** (September 30-October 7), capturing more than 650,000 prisoners. Although rain now slowed the advance, the drive continued and reached Mozhaisk—40 miles from the Soviet capital (October 20). But the German armies were reaching the limit of their endurance. Armored units were reduced to 50 percent of their original combat efficiency; infantry divisions were scarcely in better shape. Autumn rains turned the roads into quagmires, and then the fierce Russian winter set in.

1941, November–December. Defense of

Moscow. Soviet resistance had stiffened. Budenny had been relieved, Timoshenko taking his command, and a newcomer—Marshal **Georgi K. Zhukov**—headed the central Russian forces barring the way to Moscow. These were mostly regular troops assembled from interior and eastern Russia. The losses elsewhere had been made good by newly mobilized but trained reserves, far inferior in quality to the Germans, but fresh, untired, and grimly determined. In the south a Soviet counterattack drove Rundstedt's spearheads out of **Rostov** (November 15), and Rundstedt resigned (just as Hitler relieved him), Reichenau taking his place (December 1). Kluge, now commanding the German Army Group Center, reached to within 25 miles of Moscow, and German patrols reached the suburbs in sight of the Kremlin. The Soviet government had moved to Kiubyshev. But temperatures had fallen to −40° F. The offensive ground to a halt all along the line. Hitler, infuriated, relieved Brauchitsch, Leeb, and other generals, and took personal command, by radio from Berlin.

COMMENT. *Hitler's decision virtually ruined the famed German General Staff (the Army Supreme Command, or Oberkommando des Heeres, or OKH). He kept General Franz Halder as Chief of Staff of OKH, but supervised it personally, limiting its responsibility to the Eastern Front. His own personal staff (Armed Forces Supreme Command, or Oberkommando der Wehrmacht, or OKW) was augmented and, under Field Marshal* **Wilhelm Keitel** *as Chief of Staff, directed operations in Western Europe and Africa. Thus Hitler had 2 separate general staffs, united only by his personal direction.*

1941, December 6. Russian Counteroffensive. Massively reinforced by 100 fresh divisions, by the year's end the Soviet armies were driving into the German armies at Kalinin, north of Moscow; at Tula, south of it; and at Izyum in the Ukraine. Soviet troops retook **Kalinin** (December 15) and **Kaluga** (December 26–30) despite desperate and skillful German resistance. As the year ended the stunned and frozen Germans were still yielding ground.

COMMENT. *Between July and November, Hitler's armies had accomplished one of the greatest sustained offensives in military history. About 3 million casualties had been inflicted on the Soviets (half of these prisoners), but German losses had also been tremendous—some 800,000. Moreover, the Soviet armies had not been destroyed; despite tremendous losses in men and materiel, space had been successfully traded for time. Time was what the Germans lacked, and space consumed their resources. Hitler's offensive was predicated upon quick annihilation of his enemy before the winter set in. No preparations had been made for a winter campaign. Soldiers were freezing to death in summer uniforms; tanks and trucks were immobilized as crankcases froze. German ignorance of Soviet capabilities was colossal. Hitler's own actions—the 3 weeks' delay to accomplish the Balkan sideshow, and his subsequent shifts of objectives when Moscow was almost within his grasp—combined to further handicap his worn generals and armies. Meanwhile, with most of the U.S.S.R. industrial area overrun or embattled, it was obvious to Britain and the United States that massive assistance in weapons, ammunition, and all kinds of military equipment would be essential to keep the U.S.S.R. in the war against Germany. British convoys to Murmansk started in August. U.S. Lend Lease to the U.S.S.R. was approved (November 6) a month before America became a full belligerent.*

United States Entry into the War, 1941–1942

1941, December 7. Pearl Harbor. Japan's attack on the U.S. base in Hawaii (see p. 1233) was followed by U.S. declaration of war (December 8).

1941, December 11. Germany and Italy Declare War on the U.S.

1941, December. U.S. Mobilization. Congress passed a $10-billion appropriation for defense and for Lend Lease aid (December 15), and 4 days later extended the legal age bracket for compulsory military service to include men from 20 to 44.

1941, December 22–1942, January 14. Arcadia Conference. Prime Minister Churchill and President Roosevelt met in Washington with their senior military advisers, who were officially designated as the Combined Chiefs of Staff (CCS). The new CCS began to plan and direct the Allied war effort under the two civilian leaders on February 6. Basic strategy for conducting global war was agreed: priority of effort was to be given to defeating the Western Axis; Japan was to be checked, but her defeat was to be sought only after Germany had been disposed of. Immediate and full cooperation between Britain and the U.S. in prosecuting the war followed, predicated upon the necessity for unity of command in each theater of war.

1942, July 24. Admiral W. D. Leahy, former Chief of Naval Operations, was appointed Chairman, Joint Chiefs of Staff, which assured a balance of Army and Naval Officers on the Joint Chiefs of Staff.

Operations in 1942

Battle of the Atlantic

1942, January. German Operations against Allied Supply Routes. Immediately upon the entry of the U.S. into the war, German naval efforts concentrated on barring the vital sea lanes to Allied supply. While 64 U-boats went into the Atlantic to carry the war to the American coast, German surface warships gathered along the Norwegian coast to assist the submarine-Luftwaffe blockade of the only remaining sea route to the U.S.S.R.—via Murmansk—from England and the U.S., an essential logistical pipe line if the U.S.S.R. were to be kept in the war. The great new battleship *Tirpitz* (sister ship to the *Bismarck*) went to

Trondheim Fjord (January), to be followed later by several other warships. The German vessels at Brest were ordered home, and U-boat construction was intensified.

1942, January–April. The American Coast. The U-boats, supplied by "milch cows"—large cargo- and fuel-carrying submarines—which enabled them to operate for indefinite periods, at first found rich pickings. The U.S. Navy was not yet geared for convoy operations. Hapless merchantmen crowding the coastal sea lanes, silhouetted at night by the glare of lights from coastal ports and resorts, became easy prey. Some 80 merchant ships were destroyed in the first 4 months of 1942.

1942, February 11–13. Run-by in the Channel. The battle cruisers *Scharnhorst* and *Gneisenau* and the heavy cruiser *Prinz Eugen,* under Vice Admiral **Otto Ciliax,** with destroyer escort and Luftwaffe air cover, daringly swept through heavy fog from Brest through the English Channel into the North Sea despite belated British air and surface efforts to stop them.

1942, February-July. Mounting Losses on the Murmansk Run. Allied convoys to Murmansk (and in summer to Archangel) assembled off Iceland and thence moved eastward past North Cape. Despite strenuous efforts to protect them, German U-boats, surface craft, and land-based aviation from Norway took a grievous toll. Out of 39 convoys—533 ships—participating in 1941–1942, 69 vessels were lost, most during the spring of 1942. The most disastrous trip was that of convoy PQ-17 (June–July); 23 of 37 merchant ships in the convoy were sunk by German submarine, air, and surface attackers, which included the battleship *Tirpitz,* pocket battleship *Scheer,* and heavy cruiser *Hipper.*

1942, May–August. Surface-Submarine Contest off America's Coasts. As air-sea protection—Army, Navy, and Coast Guard—improved, U-boat losses mounted. So the U-boats transferred their operations to the Caribbean, intercepting oil tankers and bauxite carriers from South and Central American ports, and also preying on Panama Canal traffic. The submarines clustered across the Halifax-Iceland-Londonderry run; their operations extended across the South Atlantic to the Cape of Good Hope.

1942, August–December. The Balance Begins to Shift. The German submarine attacks were intensified, but so were Allied countermeasures. In all, Allied merchant losses in the Atlantic and the Arctic Oceans in 1942 amounted to 1,027,000 tons. But by year's end, some 85 U-boats had been sunk. The menace had not been reduced, but the Battle of the Atlantic was no longer a clear-cut German victory. Also the graph of new American ship construction—both naval and merchant—was coming near to balance with the losses. Meanwhile, the American war effort flowed overseas in increasing volume.

Around the Periphery of Fortress Europe

Strategy, Build-up, and Controversy. Anglo-American planning recognized the necessity of keeping Russia in the war by opening a second front. The British Isles would be the springboard, but beyond that the strategic concepts of British and American planners differed widely. The U.S. Chiefs of Staff desired the earliest possible invasion of Western Europe; the British Chiefs of Staff opposed this, fearing failure by premature blows against the efficient German war machine. Churchill believed in attacking the Axis through the "soft underbelly" of the Mediterranean basin. While the planners argued, American strength in the British Isles built up as the convoy system went into high gear. Air and ground troops began moving over in large numbers by mid-1942, and the first American strategic bombing operation began in a small way with the bombing of marshaling yards at Rouen (August 17). Meanwhile, embattled Britain was carry-

ing the war to the enemy both by air and sea. Bomber Command's night blows against Germany grew heavier, and a succession of amphibious raids harassed the German-held coast of France. Three of these operations—1 by air and 2 by sea—are notable.

1942, March 28. St.-Nazaire. The destroyer *Campbeltown* (ex-American), loaded with explosives and accompanied by a small group of motor launches carrying commando troops, dashed into the harbor of St.-Nazaire under enemy fire. Despite very severe losses, the attackers wrecked the only dry dock in Europe outside of Germany capable of taking the giant *Tirpitz*.

1942, May 30–31. First 1,000-Plane Raid. A night assault by Bomber Command against the important railroad marshaling yards at Cologne caused heavy damage.

1942, August 19. Dieppe. A major amphibious raid by Anglo-Canadian troops, with some tanks, ended in complete failure after a gallant effort. Of 5,000 men put ashore, the attackers lost 3,350 killed and wounded, 28 tanks, and a number of landing craft. The lessons learned, however, were of immense value in the later Allied large-scale amphibious assaults. The disaster confirmed British views regarding German defensive capabilities and the risk that would result from a major invasion of Western Europe in 1942–1943.

Operations in the Mediterranean

Egypt and Cyrenaica

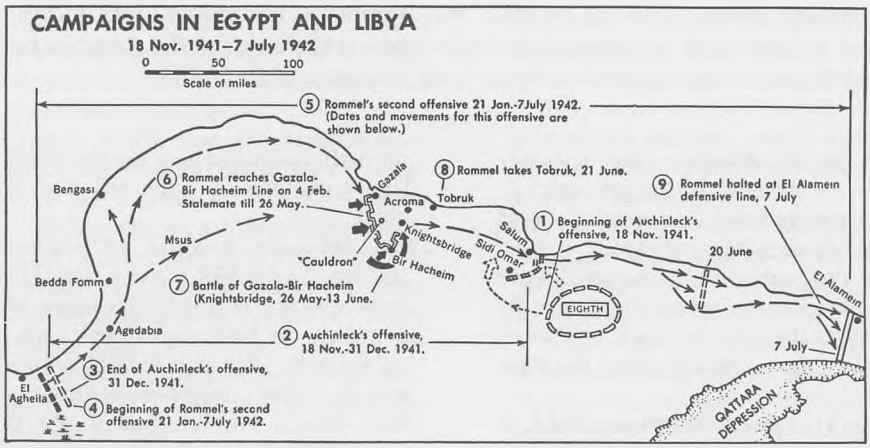
1942, January. Situation. Auchinleck's Eighth Army and Rommel's Italo-German army faced one another at El Aghelia in Cyrenaica, 800 miles from Cairo and 450 miles from the Axis base of Tripoli. The weakened British naval forces in the Mediterranean permitted German reinforcements; Rommel's build-up outdid Auchinleck's.

1942, January 21. Rommel's Second Offensive. Attacking on a narrow front, the German drive crashed through the British advanced screen, forcing immediate withdrawal. The Eighth Army, dispersed and still under strength, was rolled back beyond Benghazi and large quantities of stores fell into Rommel's hands.

1942, February 4–June 13. Stalemate at Gazala. Auchinleck made a stand, and Rommel's advance had outrun his supply line. For 4 months more both sides rested, each building up strength. The Eighth Army's fortified and heavily mined defensive positions stretched from Gazala on the coast to Bir Hacheim, nearly 40 miles south in the desert, where a Free French light division under General **J. P. Koenig** (up from French Equatorial Africa) held the British left flank. Behind Bir Hacheim, the British armor was concentrated to protect the open-desert left flank. British strength by this time was 125,000 men, with some 740 tanks and 700 aircraft. Rommel had 113,000 troops, with 570 tanks and 500 aircraft.

1942, May 28–June 13. Battle of the Gazala–Bir Hacheim Line. Rommel attacked, hoping to envelop the British desert flank and roll up the position. Italian troops were repulsed from Bir Hacheim by the French. But Rommel's Panzer divisions, circling to the south, turned north inside the British positions, despite vicious attacks by the RAF. The British line held, while behind it German and British armor battled repeatedly around a desert crossroad called Knightsbridge. Just as Rommel's tanks were running out of gas, Italian troops broke through the mine-fields between Bir Hacheim and the British Gazala positions (May 31), permitting the supply of Rommel's Panzers. Rommel created a fortress in an area called "the Cauldron" inside the British lines. The French had to evacuate Bir Hacheim (June 10–11). Then the German armor debouched from the Cauldron, threatening the rear of the entire Eighth Army. General Ritchie ordered withdrawal (June 13).

1942, June 14–30. Retreat into Egypt. The British fell back to Halfaya on the Egyptian



border, leaving the Tobruk fortress menacing the German advance. But **Tobruk** suddenly fell (June 21) to a skillfully coordinated ground and air attack by the Afrika Korps. The Eighth Army retreated in disorder as Rommel pursued. Auchinleck, assuming personal command again, rallied his troops and, after a bold delaying action at **Mersa Matruh** (June 28), fell back on the Alam Halfa ridge, a fortified line between El Alamein on the sea and the Qattara Depression some 40 miles inland. Rommel, following, was at the end of his endurance. There, after the entrenched British repulsed some tentative German probes (July), the 2 exhausted adversaries lay again in stalemate, only 60 miles west of Alexandria. Both Auchinleck and Ritchie were relieved by Churchill (August 13), General Harold R. L. G. Alexander taking the Middle East Command and Lieutenant General **Bernard L. Montgomery** the Eighth Army.

COMMENT. *Rommel's advance was a brilliant display of armored force leadership and skillful use of his 88-mm. guns in coordination with his infantry and tanks. The British at Gazala frittered away their own armor in piecemeal counterattacks, losing all but 65 of their tanks. The disaster also cost the British 75,000 casualties (including the 33,000 garrison of Tobruk), the loss of great quantities of stores, and the elimination of Tobruk as a thorn in the side of Rommel's advances. The Germans and Italians lost about 40,000 men. Despite his success, Rommel's logistical situation was worsening as Allied naval and air strength in the Mediterranean again increased (see p. 1190), and Hitler—obsessed with the Russian invasion—urged him to advance to the capture of the Suez Canal, yet failed to provide adequate reinforcement or supply. Meanwhile, British strength was rebuilding.*

1942, August 31–September 7. Battle of Alam Halfa. Rommel assaulted to try to gain another victory before British strength became too great. His plan, as at Gazala, was envelopment of the British left by the Afrika Korps. Montgomery was prepared. The Panzers, initially successful despite skillful delay by the British 7th Armored Division, reached the left rear of the British position and then thrust north, to be repulsed by a tank brigade dug in one the Alam Halfa ridge. Short of fuel and harassed by punishing British aerial attacks, Rommel began withdrawing his tanks (September 2). Montgomery refused to risk counterattack and the line stabilized again. But Rommel's failure had been a disaster—he had no further hope of offense; all he could do was defend.

1942, September–October. Preparations. Montgomery prepared methodically for attack. The Mediterranean situation had improved (see p. 1190). By October, the Eighth Army had been built up to an impressive strength—150,000 men organized in 3 army corps—7 infantry and 3 armored divisions, with 7 addi-

tional armored brigades (1,114 tanks in all), plus corps and army troops; fuel and ammunition were plentiful. Rommel at this time had 96,000 men (half of them Italians) in 8 infantry and 4 armored divisions (nearly 600 tanks); shortages in fuel, ammunition, and other supplies were severe. (This shortage was in large part due to RAF sinking of German supply ships in the Mediterranean, based on information gained from Ultra.) Rommel, ill, had temporarily flown back to Germany for medical treatment, leaving General **Hans Stumme** in command. The opponents, each with unturnable flanks, were separated by a broad zone of mine fields. On the north was the Mediterranean, and 40 miles to the south was the Qattara Depression, impassable for either wheeled or tracked vehicles. Montgomery's plan was to effect a penetration, hold off Rommel's armor while eliminating the German infantry, and only then engage in a tank battle. The RAF's Desert Air Force had gained complete air superiority, and subjected Axis forces to intensifying punishment.

1942, October 23–November 4. Battle of El Alamein. At 9:40 P.M., 1,000 British guns opened along a 6-mile front near the sea. Twenty minutes later—under a full moon—the XXX Corps struck the Axis left, while to the south the XIII Corps began a diversionary effort near the Qattara Depression. Four hours later, the X Armored Corps advanced through 2 corridors in the mine fields opened by the XXX Corps infantry. Despite initial surprise, the Italian infantry put up obstinate resistance; an almost immediate counterattack by the 15th Panzer Division nearly stopped British progress. Nor did the diversionary attack of XIII Corps make much gain. Stumme died of a heart attack; Rommel, flying back at the first word of the battle, resumed command (October 25). Next day Montgomery, halting further effort on the south, threw his weight against the coastal area, where the 9th Australian Division threatened to pin the German 164th Division against the sea. For a week a ferocious tank battle raged in the mine fields south of the coastal road and railroad, as both sides brought their armored units up from the south. The Axis armor, necessarily thrown in piecemeal, and under continuous aerial bombardment, shrank rapidly. Lack of replacements for damaged vehicles, together with shortages of fuel and ammunition, combined to take cruel toll. Meanwhile, the Australians had almost surrounded the German 164th Division along the coast. Rommel, whose existence depended on holding the coast road, committed his last reserve, extricated his infantry from encirclement, and dug in again 3 miles to the west (November 1). Montgomery quickly regrouped, then renewed his attempted breakthrough south of fortified Kidney Hill. The 2nd New Zealand Division, behind a rolling barrage, cleared a corridor through the mine fields for the British tanks (November 2). A desperate Panzer counterattack momentarily snubbed the breakthrough, but by the day's end only 35 German tanks remained in action, while British artillery and aerial bombardment neutralized the deadly German 88-mm. antitank guns. Rommel, his fuel and ammunition having reached the vanishing point, decided to withdraw, but was halted for 48 hours by Hitler's categorical and senseless command to hold at all costs. Montgomery hurled another assault against the Kidney Hill area, scoring a clean breakthrough. Rommel, disregarding Hitler's order, now disengaged the Afrika Korps, leaving the Italians behind. The entire Axis front crumbled. Cautious Montgomery delayed pursuit for 24 hours. Rommel's losses were enormous: some 59,000 men killed, wounded, and captured (34,000 of them German); 500 tanks, 400 guns, and a great quantity of other vehicles lost. The Eighth Army lost 13,000 killed, wounded, and missing, and 432 tanks had been put out of action.

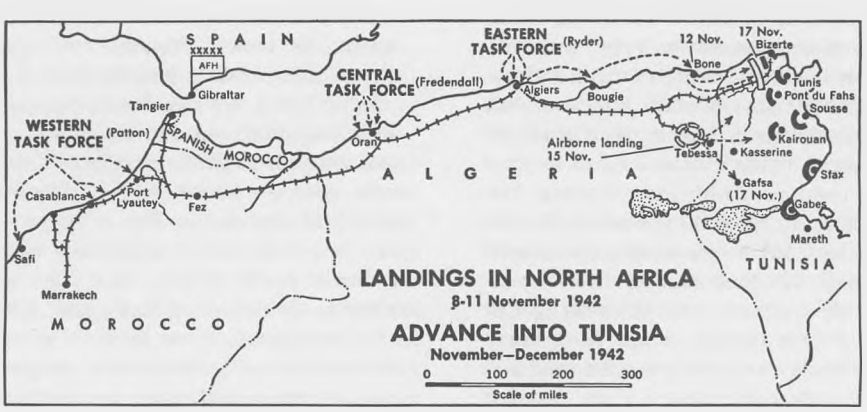
COMMENT. *Strategically and psychologically, El Alamein ranks as a decisive battle of World War II. It initiated the Axis decline. The victory saved the Suez Canal, was a curtain raiser for the Anglo-American invasion of North Africa 4 days later, and was a prelude to the debacle of Stalingrad. Allied morale soared, particularly in the British Empire, proud to have at long last a victorious army and general; Axis morale correspondingly dipped. Hitler's order that*

Rommel should stand fast (rescinded 48 hours later, after the "Desert Fox" had already started to withdraw) contributed to the ruin of Rommel's army. Ultra played a significant role in this Allied victory.

1942, November 5–December 31. Pursuit. Montgomery's slightly delayed, methodical pursuit, planned to keep unremitting pressure on Rommel's forces, fell somewhat short of its goal. Although forced to stand several times, the Afrika Korps made good its escape. The RAF in particular has been criticized for lackadaisical operation. At **Mersa Matruh** (November 7), the 21st Panzer Division, lacking fuel, made a hedgehog stand, then abandoned its last tanks. At El Agheila (November 23–December 13), Montgomery stopped to open the port of Benghazi and establish a supply line, Rommel withdrawing when again threatened by encirclement. The year ended with another delaying action at the **Wadi Zem Zem,** near Buerat. Again, Rommel skillfully evaded entrapment while Montgomery wrestled with the logistical problems of his long communications line.

Invasion of North Africa, 1942

1942, August–November. Preparations for Operation "Torch." This invasion was planned for the purpose of seizing Morocco, Algeria, and Tunis as bases for further operations. It was a compromise between widely differing British and American military strategical concepts (see p. 1184). Roosevelt finally resolved the matter in favor of North Africa. It was the largest amphibious operation attempted to that time. Supreme commander was Lieutenant General **Dwight D. Eisenhower,** then commanding American troops in England. British Admiral Cunningham was Allied naval commander, and Eisenhower had an integrated American-British staff. The operation was divided into 3 main elements. Direct from the U.S. came Major General **George S. Patton**'s Western Task Force—35,000 men in 39 vessels, escorted by a powerful squadron under U.S. Rear Admiral **Henry K. Hewitt;** its main target was Casablanca on the Moroccan Atlantic coast. U.S. Major General **Lloyd R. Fredendall**'s Central Task Force, 39,000 men in 47 ships, came from England, its strong naval escort commanded by British Commodore **Thomas H. Troubridge;** the goal was Oran, on the Mediterranean. The Eastern Task Force, under U.S. Major General **Charles W. Ryder,** 33,000 men in 34 ships, also from England, was escorted by a naval force under British Vice-Admiral Sir **Harold M. Burrough;** its objective was Algiers. Except for a British contingent in the Eastern Task Force, all the troops were American, since it was believed that the French would be less favorably disposed toward the British. Prepared and lifted in the greatest secrecy, all 3 assault



forces arrived off their respective landing zones after nightfall November 7. Despite some prior clandestine contacts, it was not known whether the French Army of Africa would resist or welcome the invasion.

1942, November 8. The Landings. *Western Task Force.* At 5:15 A.M., landings began at **Safi,** 125 miles southwest of Casablanca; at **Fedala,** 15 miles northeast of it; and at **Mehdia** and **Port Lyautey,** 70 miles to the northeast. Despite surprise, French troops resisted bravely, while at **Casablanca** itself French naval forces made a gallant sortie, promptly crushed by predominant U.S. strength. Despite French opposition, the landings were successful, and the 3 assault forces concentrated for an attack on Casablanca (November 11).

Central Task Force. Landings east and west of **Oran** met determined resistance. An attempt by 2 U.S. Coast Guard cutters at a run-by into the port itself failed dismally. An American airborne assault battalion, flying direct from England, was only partly successful in capturing the nearby airfields. However, the landings progressed; a coordinated attack penetrated Oran and the French capitulated (November 10).

Eastern Task Force. Forces landing on both sides of **Algiers** harbor converged on the city; a frontal naval assault met disaster, as at Oran. Algiers was soon ringed on the land side. The place capitulated (November 10).

1942, November 9–11. Franco-German Reactions. The Pétain regime broke diplomatic relations with the U.S. (November 9) and ordered French African forces to continue resistance. At the same time Hitler ordered immediate military occupation of "unoccupied" France, and began sending German troops by air into Tunisia.

1942, November 11. "Darlan Incident." Admiral Darlan, unexpectedly found in Algiers and taken into protective custody, broke with Vichy, ordered immediate cease-fire by all French troops, and agreed to cooperate with the Allies in driving the Germans out of Tunisia. General **Henri H. Giraud** was put in command of French forces.

COMMENT. *This cooperation with a leading figure in the Vichy regime aroused furore in the U.S. and England, and affronted de Gaulle. From a military viewpoint, the bargain was a major factor in facilitating further Allied operations in North Africa, despite Darlan's later assassination (December 24).*

1942, November 17–December 31. The Race for Tunisia. With 1,000 German troops arriving in northern Tunisia each day, the Allies, unprepared as yet for a major overland operation, attempted a piecemeal eastward rush on Bizerte, while retaining sufficient force to oppose any possible Axis move from Spanish Morocco. British Lieutenant General **Kenneth A. N. Anderson,** with advance elements of what would become the British First Army, moved into the mountainous region southwest of Bizerte, while a screen of U.S. paratroops spread southeast. Aggressive German troops under General **Walther Nehring** checked the British advance, while mud and rain delayed Allied reinforcements from Algiers, 500 miles to the west. Allied spearheads reached to within 20 miles of Tunis (November 28), but were thrown back by German counterattacks. By December, Eisenhower conceded defeat in the race. The year ended with Anderson's First Army and the Fifth Panzer Army, now under General **Jürgen von Arnim,** facing one another in stalemate in north-central Tunisia.

COMMENT. *The invasion of North Africa succeeded because of strategic surprise, effective joint military-naval planning, and Darlan's check of French resistance. However, the confused French political situation and the prompt German reaction in Tunisia combined to impede the next move. Eisenhower, involved in political repercussions of the "Darlan incident," exercised little command supervision of the eastward thrust, and Anderson's initial moves were pedestrian. There was nothing now to prevent the eventual linking of Rommel, retiring skillfully westward from the Wadi Zem Zem, with von Arnim.*

Malta and Mediterranean Air and Sea Operations, 1942

Malta, Britain's "unsinkable aircraft carrier," was the major stumbling block for Axis supply to North Africa. Incessant aerial attacks and Axis surface and submarine operations almost throttled all efforts to supply it. Of 6 convoys in 1942, 2 were repulsed and only parts of the rest reached Malta. The Mediterranean Fleet, from Alexandria, and H Force, from Gibraltar, furnished what escort they could, but until September the situation was precarious. Submarines and 2 speedy mine-layers brought driblets of supply. Malta's defenses consisted of fighter planes and antiaircraft artillery. Some 350 fighters were flown in from aircraft carriers—notably the U.S.S. *Wasp*—to replace losses incurred on the open airstrips.

Malta's fighter squadrons played hob with Axis supply throughout the campaign. One-third of Axis supply ships from Italy were sunk in September, and in November British fighters sank three-quarters of the Axis surface craft. This toll of German supply ships was a direct result of the Allies' ability to read German secret radio messages, through the highly classified British code-breaking project known as "Ultra." The Allies profited from these radio intercepts in many operations, beginning with the Battle of Britain, but nowhere was the Ultra information more effectively used than in the sinking of German ships endeavoring to support German operations in North Africa.

Without possession of Malta the Allies could not have made such effective use of the Ultra information. Thus British denial of Malta to the Axis was a major factor in Rommel's defeat. The cost was high: an aircraft carrier, several cruisers and destroyers, hundreds of planes and thousands of men. But the tide had turned. Malta's role of cutting supply by surface ship forced the Germans to send reinforcements by air. By that time much Luftwaffe strength had gone to the Russian front and the rest in this area was supporing Rommel and von Arnim in Tunisia. Furthermore, logistical support for the British Middle East Command through the Indian Ocean-Red Sea-Suez Canal route was now plentiful.

The Eastern Front, 1942

1942, January–February. Continuation of the Russian Counteroffensive. (See p. 1183.) Soviet attacks along the entire front, from Finland to the Crimea, forced the German armies into a stubborn defensive role. Only in Finland were the Russians repulsed, and the German besiegers of Leningrad still held stubbornly to their lines. Elsewhere, deep penetrations were made at many points. Hitler ordered all of his armies to stand fast. "Hedgehogs" (all-round defensive areas) checked the tide as the Soviet onslaught lost momentum. The danger of possible precipitate retreat, ending in a disaster such as Napoleon's retreat in 1812, was averted.

1942, March–May. Stalemate. Spring thaws and mud stymied movement. The Soviets had outrun their supply lines and the exhausted Germans were not yet prepared to resume the offensive.

1942, May 8–June 27. Preliminary German Offensive. Reinforced by 51 satellite divisions (Italian, Rumanian, Hungarian, and Slovak) and 1 Spanish volunteer division, the Germans resumed the offensive, to eliminate salients created by the Soviet winter drive. Despite the poor quality of replacements, and shortages of personnel and materiel in the German army units, substantial advances were made. In straightening out the lines, severe casualties were inflicted on the Soviets. General Manstein's Eleventh Army swept the Kerch Peninsula, inflicting 150,000 Russian casualties, and renewed the attacks on Sevastopol. Partisan

groups hamstringing German movements in the rear areas were partly checked.

1942, June 7–July 2. Capture of Sevastopol. An amphibious assault climaxed the siege; the Soviets lost another 100,000 men.

1942, June 28–July 7. Opening of the Summer Offensive. Following plans personally developed by Hitler, Bock's Army Group South smashed eastward from the vicinity of Kursk to capture **Voronezh** (July 6). Hitler now reorganized Army Group South; the northern armies, designated Army Group B, were under General Weichs, the southern armies, designated Army Group A, under General List. It had been originally planned for these 2 groups to cooperate in a powerful and deliberate advance, first to clear the Don and Donets valleys, capturing Rostov and Stalingrad, then to move southward to seize the Caucasus and its rich oil resources.

1942, July 13. Hitler Changes Plans. Hitler now decided to drive for Stalingrad and the Caucasus in simultaneous offensives by Army Groups B and A. This reduced the planned strength for both operations, dangerously overextending both combat and logistical organizations. Furthermore, with diverging objectives, the new plan inevitably would create a gap between the 2 army groups.

1942, July 13–August 23. Drive on Stalingrad. As the powerful attacks progressed, the growing gap between the army groups permitted most of the Soviet troops caught in the bend of the Don to escape. Although the German Sixth Army (**Friedrich Paulus**), was approaching Stalingrad, Army Group B's advance

was slowed down by Hitler's diversion of Hoth's Fourth Panzer Army to join Army Group A's advance to the south. Nevertheless, with Luftwaffe aid, Group B cleared the bend of the Don, reached the Volga north of Stalingrad (August 23), and threatened the city.

July 13–August 23. Drive on the Caucasus. Army Group A captured **Rostov** (July 23), crossed the Don on a wide front, penetrated deep into the Caucasus Mountains, and had elements within 70 miles of the Caspian Sea near Astrakhan. But Hitler blundered again. Enraged at the relatively slow progress before Stalingrad, he yanked the Fourth Panzer Army back to join the Stalingrad struggle (August 1), leaving Army Group A, badly extended, trying to maintain an offensive in the Caucasus on a 500-mile front. Worse yet, Hitler also ordered Manstein's Eleventh Army—his sole reserve in this area—up north to reinforce the siege of Leningrad. General Franz Halder, OKH Chief of Staff, daring to protest these moves, was relieved. So, too, was List; Hitler took personal command of Army Group A (exercising command from his East Prussian command post more than 1,200 miles distant) in addition to his other responsibilities. The Caucasus campaign inched forward, some German patrols actually reaching the Caspian, but this success was inconsequential.

1942, August 24–December 31. Battle of Stalingrad. Hitler now concentrated on capture of the city's 30-mile perimeter astride the Volga, whose defenses were being strengthened every moment. In a tremendous battle of attrition, the Soviet defenders resisted stubbornly from house to house as the Germans gradually closed in and the Soviet winter freeze began. Most of Army Group B was now involved in the Stalingrad battle, while Army Group A to the south (now under Kleist) bogged down in stalemate. Between them, 1 single German motorized division held a 240-mile gap, and north of Stalingrad satellite forces screened the Don. German supply was meagerly maintained by a single rail line, completely inadequate for the situation. Hitler bypassed Weichs to issue personal commands to General Paulus, whose Sixth Army was in and around Stalingrad.

1942, November 19–23. Soviet Counterattack. Cleverly planned and timed to coincide with both the frost which enabled cross-country tank movements and the opening of the Allied landings in North Africa, 4 Soviet fronts or army groups, under the overall command of Zhukov, launched a double envelopment against the Germans crowded about Stalingrad. The Voronezh, Southwest, and Don Fronts slashed in north of the city, the Stalingrad Front on the south. Behind the armored spearheads swept great bodies of cavalry. The overextended German lines gave way, the trap closed. Inside was Paulus' Sixth Army and elements from units on its flanks that had been wrenched aside in the Soviet pincers move. The remainder of Weichs' Army Group B reeled back. Despite Weichs' urging that he fight his way out, Paulus waited for Hitler's command. The Fuehrer demanded he hold in place, assuring him of supply by air, and ordered Manstein, hurriedly rushed from the Leningrad front to Army Group Don (improvised from part of Group A), to recapture immediately the lost ground. The task was impossible. Paulus' situation worsened, the Luftwaffe being unable to deliver more than 70 tons of supply each day. Manstein finally managed to reorganize 3 understrength Panzer divisions and attempted to break through in relief, actually reaching to within 35 miles of Stalingrad (December 19). Manstein radioed Paulus to make a final effort to break out, but Paulus awaited Hitler's authorization. Then the German front collapsed. The year ended with Paulus and his men battling against starvation in an ever-tightening Soviet ring, while Weichs, Manstein, and Kleist fought desperately to maintain themselves as they slowly withdrew westward under constant Soviet pressure.

COMMENT. *Hitler's fantastic changes of objective, and his insistence first on an over-extended offensive, and later on senseless retention of terrain, had wrecked his eastern armies. Almost 65,000 prisoners were lost (aside from more than 100,000 surrounded in Stalingrad) and some 1,000 tanks destroyed or captured.*

His satellite forces—Italian and Rumanian—had proved to be unreliable, and his German elements, despite amazing resiliency under appalling conditions, were completely inadequate to oppose the growing Soviet armies. On the Soviet side, Marshal Zhukov and his 4 principal subordinates, Marshal **Konstantin K. Rokossovski** *and Generals* **Nikolai Vatutin, Vasily Chuikov,** *and* **Andrei I. Yeremenko,** *conducted their counterattack efficiently, with several simultaneous penetrations and almost immediate exploitation, which never gave the Germans opportunity to reestablish themselves. The defenders of Stalingrad suffered more casualties than the Germans, but proved once again the Russian soldier's ability to endure and to hold ground. Yet absolutely essential to this great Soviet victory, one of the decisive battles of history, was the availability of weapons and equipment. Despite the great industrial effort the U.S.S.R. was making, she could not have provided the materials needed for successful defense followed by successful offense without the great quantities of equipment supplied by her Anglo-Saxon allies, particularly the U.S., by the dangerous Murmansk route, and the longer and safer routes across the Pacific and through Iran.*

Operations in 1943

Strategy and Policy

1943, January 14–23. Casablanca Conference. Roosevelt, Churchill, and the Combined Chiefs of Staff plotted their future operations. The net result was again a compromise. Britain agreed to U.S. exploitation of the Pacific initiative (see p. 1261). The U.S. agreed to postpone any cross-Channel invasion until 1944, and to the undertaking of another Mediterranean operation, with Sicily the initial objective. With the U-boat menace in the Atlantic again assuming formidable proportions, highest priority was ordered to construction of antisubmarine craft—escorts and carriers. During the conference Roosevelt proclaimed, and the British agreed to accept, nothing but the "unconditional surrender" of their enemies, a policy of dubious expediency.

1943, May 15–25. "Trident" Conference, Washington. Roosevelt, Churchill, and the Combined Chiefs of Staff reaffirmed the basic decision to concentrate primary effort against Germany in agreements (1) to greatly intensify the planned strategic bomber offensive against Germany and German-occupied Europe, and (2) to plan for a cross-Channel invasion of Europe, through France, for May 1, 1944. Other decisions were subsidiary, save for agreement for some further increase in effort against Japan.

1943, August 14–24. "Quadrant" (First Quebec) Conference. The principal decision of this conference was to wage the war against Japan with increasing force, but without relaxation of the war in Europe. Specific decisions relating to Europe were (1) to hasten the invasion of Italy because of the collapse of Mussolini (see p. 1199), (2) to draw the U.S.S.R. into full concert with the western Allies, and (3) to recognize de Gaulle's French Committee of National Liberation as representative of all Free French fighting the Axis.

1943, October 19–30. Moscow Conference. This meeting of the foreign ministers of the U.S.S.R., the U.K., and the U.S. was called primarily to lay the political groundwork for the forthcoming conference of heads of state at Teheran. They also agreed that China should be the fourth major member of the alliance, and agreed upon a postwar international organization (to become the U.N.).

1943, November–December. "Sextant-Eureka," Cairo-Teheran Conferences. Since the U.S.S.R. was not at war with Japan and was bound by a nonaggression treaty with her (April 1941), 2 separate heads-of-state conferences were necessary. At Cairo, Roosevelt and Churchill met with Chiang Kai-shek (November 22–26 and December 3–7). At Teheran, they met with Stalin (November 28–30). These were primarily political conferences. Stalin was informed that the cross-Channel invasion would take place in late May or early June 1944; he agreed to launch a general Soviet offensive at the same time.

Battle of the Atlantic, 1943

The Submarines

1943, January–March. Increasing U-Boat Toll. Admiral Raeder was relieved (early January) by an impatient Hitler. Submarine specialist Admiral Karl Doenitz took his place and stepped up an already-accelerated wolf-pack campaign. The German U-boat operational daily average rose to 116 craft. The U-boats crisscrossed the sea lanes, taking toll of every merchant convoy in a continuous battle. The worst winter storms in many years lashed the Atlantic, increasing the difficulties and dangers for surface craft. By the end of March, with 108 Allied merchantmen sunk, to a loss of only 15 U-boats, the campaign reached its climax. The United Kingdom's larder was reduced to a hand-to-mouth 3-month backlog of supply. The U-boat war was waged with success only against the slow-moving merchant convoys. The 2 other types—fast converted luxury liners operating individually without escort, and the troop convoys—were not touched. The first outran the U-boats; the second, heavily escorted, were too dangerous to attack.

1943, April 28–May 6. Gretton's Convoy. Commander **Peter W. Gretton,** R.N., commanding Convoy ONS-2—42 merchantmen—fought a running battle across the North Atlantic with 51 U-boats. Though he lost 13 of his convoy, 5 U-boats were sunk by Gretton's warships and 2 more were sunk by aircraft. This is considered to be the turning point of the Battle of the Atlantic.

1943, May. Focus on the Bay of Biscay. Air Vice-Marshal Sir **John Slessor** of Britain's Coastal Command put into full operation a scheme of air-sea cooperation against U-boats operating out of French bases. Bombers based on the south of England, in conjunction with RN corvettes, and guided by microwave radar, proved to be deadly. In this month 38 U-boats—12 more than Germany could build—were destroyed, and only 41 allied merchantmen lost.

1943, May 26. Doenitz Shifts U-Boat Operational Area. The wolf packs congregated in 3 areas: (1) west of the Azores, athwart the central Atlantic convoy route—life line for the Allied Mediterranean campaigns, (2) in the South Atlantic, and (3) in the Indian Ocean.

1943, June–December. Allied Hunter-Killer Campaign. The U.S. Navy's Tenth Fleet organized "killer groups," each comprising an escort carrier equipped with 24 fighter-bombers using bombs, depth charges, or torpedoes, and accompanied by several old destroyers or new destroyer escorts. Each group commander was given the widest latitude to hunt U-boats whenever a "fix" had been obtained. The result proved catastrophic to the U-boats and their "milch cows" not only along the central transatlantic lane but also in the South Atlantic. The German craft fought back savagely in a number of single-ship and airplane-ship actions. Remarkable was the running gun battle between USS *Borie* and *U-405,* halfway between Cape Race, Newfoundland, and Cape Clear, Ireland, in which the destroyer rammed the sub, tearing out her own plates. The German finally blew up and sank, the victor following the next day. Remarkable, too, was the raid of *U-516* in the Caribbean (November 5–December 25). The German, despite the efforts of all available American antisubmarine craft in the area, sank 6 vessels, including 2 tankers, then got safely away.

COMMENT. *By year's end the knell was sounding for the German U-boat; Allied "kills" exceeded German replacement ability. Between May and September, 3,546 merchantmen in 62 convoys had crossed the North Atlantic without loss of a single vessel. Allied merchant construction exceeded all enemy destruction by 6 million tons. The food crisis in the British Isles had ended. Acquisition of air bases in Portugal's Azores completed the aerial attack ringing the wolf packs* (*October 13*).

Naval Surface Warfare

1943, January–March. Convoys to the U.S.S.R. Murmansk convoys, strongly escorted, ran the gantlet during the first 3 months

of the year with comparatively little loss. When the Mediterranean later was opened, they were suspended; most supplies for the U.S.S.R. were sent via Iran to avoid exposing Arctic convoys to German air attacks in almost continuous daylight.

1943, March. The *Scharnhorst* Sails North. The battle cruiser, again in commission, slipped through to Norway without detection.

1943, September 6–9. Spitsbergen Raid. The *Tirpitz,* the *Scharnhorst,* and 10 destroyers successfully raided Spitsbergen, bombarding and damaging Allied coal mining and loading installations.

1943, September 21–22. Attack on the *Tirpitz*. The great ship was attacked in Alta Fjord by British midget submarines and again badly damaged.

1943, October–December. Arctic Operations. Harassing Allied carrier-borne aviation sank 9 German coastal vessels near Narvik. As the nights grew longer, Allied convoys to Murmansk resumed.

1943, December 24–26. Last Cruise of the *Scharnhorst*. Accompanied by 5 destroyers, the *Scharnhorst* steamed out of Alta Fjord to attack an Allied convoy, discovered 400 miles northwest of Trondheim. The German flotilla blundered into 2 British task forces west of the North Cape. In a thrilling chase, the *Scharnhorst,* hit at extreme range by the battleship *Duke of York,* was slowed down, battered by heavy gunfire, then finished off by a torpedo attack. Only 36 of her 1,900-man complement could be rescued. This disaster removed the last surface threat to Allied convoys on the Murmansk run.

The Combined Bomber Offensive, 1943

The U.S. Eighth Air Force and Britain's Bomber Command instituted a round-the-clock aerial offensive, codenamed operation "Pointblank," against Germany from British airfields. Bomber Command attacked the economic system and civilian morale by large-scale nighttime saturation bombing; the Eight Air Force concentrated on daylight precision bombing against aircraft industrial targets and the Luftwaffe itself. This was to be followed by later concentration of both forces against vital industries to destroy Germany's ability to make war. Both air forces used new and improved techniques—the "pathfinder" system, which located targets by radar and marked them, and "window" (myriad strips of metalized paper released in the air to jam and confuse Germany's electronic defenses).

British Air Assault

Bomber Command's night raids rocked German civilian morale by wide devastation of the Ruhr industrial area and of major cities. Highlights included:

1943, June 20–24. First Shuttle Bombing. RAF bombers from England struck Wilhelmshafen outbound, then landed in North Africa. They bombed the Italian naval base of Spezia on the return trip.

1943, July 26–29. Hamburg Incinerated. Two successive mass bombing assaults produced "a catastrophe the extent of which simply staggers the imagination" (Goebbels' diary). Much of the damage came from tornadolike fire storms. Most of the city was reduced to rubble; civilian casualties were enormous and 800,000 survivors made homeless.

1943, August 17–18. Peenemunde Bombed. British intelligence sources had revealed (May) German development of a pilotless jet-

propelled aircraft (V-1) and a rocket (V-2). The experimental installation at Peenemunde was bombed, delaying the project.

1943, October–December. Attacks on Mysterious Launching Sites. Aerial reconnaissance revealed the construction of launching sites along the Channel coast, and these, too, were bombed and the majority destroyed (December to spring, 1944), causing a 5-month setback in German plans. Operations against these projects were labeled "Crossbow."

1943, November–December. Battle of Berlin. Bomber Command concentrated its efforts against the German capital in 16 massive raids which continued through the winter and until March 1944.

U.S. Air Assault

1943, June 11. Wilhelmshaven Attacked. Eighth Air Force assault on submarine construction works was only partly successful. German interceptors prevented accurate bombing; Allied fighters did not have enough range to accompany the big B-17s and B-24s, a problem plaguing Eighth Air Force operations throughout the year.

1943, July. Attacks on German Aircraft Industrial Targets. This produced a serious, though temporary, setback in German plane production.

1943, August 1. Bombing of Ploesti. Taking off from North African bases, 178 B-24 bombers of the Eighth and Ninth Air Forces struck deep behind the German lines in the east against the Rumanian oil fields of Ploesti, whence the Axis drew most of its fuel for both Luftwaffe and ground forces. The planes were assembled in secrecy near Benghazi for the 1,000-mile flight, the longest bombing raid yet attempted. Their transit was detected by German radar in Greece, Bulgaria, and Rumania. The bombers, in low-level attack, were met by determined and accurate antiaircraft fire, causing loss of 54 planes, plus 7 damaged planes which landed in Turkey. Extensive but, as it turned out, relatively superficial damage was done to the vast complex of refineries and storage tanks.

1943, October 14. Schweinfurt Raid. Eighth Air Force bombers struck the heart of the German ball-bearing industry a cruel blow. But of the 288 planes (accompanied by short-range fighter escort as far as Aachen), 62 were lost and 138 damaged by antiaircraft and Luftwaffe fighters. Casualties were 599 men killed and 40 wounded. Despite tactical success, the raid was so costly that a temporary halt was called on further daylight bombing until longer-range fighter escorts were available.

1943, December 5. First P-51 Escorts. With these new long-range fighters of the Ninth Air Force to accompany them, the big bombers renewed daylight raids.

COMMENT. *The year ended with the German homefront morale rudely rocked, but industrial production was still potent and the Luftwaffe had improved its defensive tactics.*

The Mediterranean Area, 1943

North Africa
